

IXIA GTP SESSION CONTROLLER SESSION STATE RECOVERY APPLIANCE

DATA SHEET

SESSION STATE RECOVERY APPLIANCE OPTION FOR GSC 7433

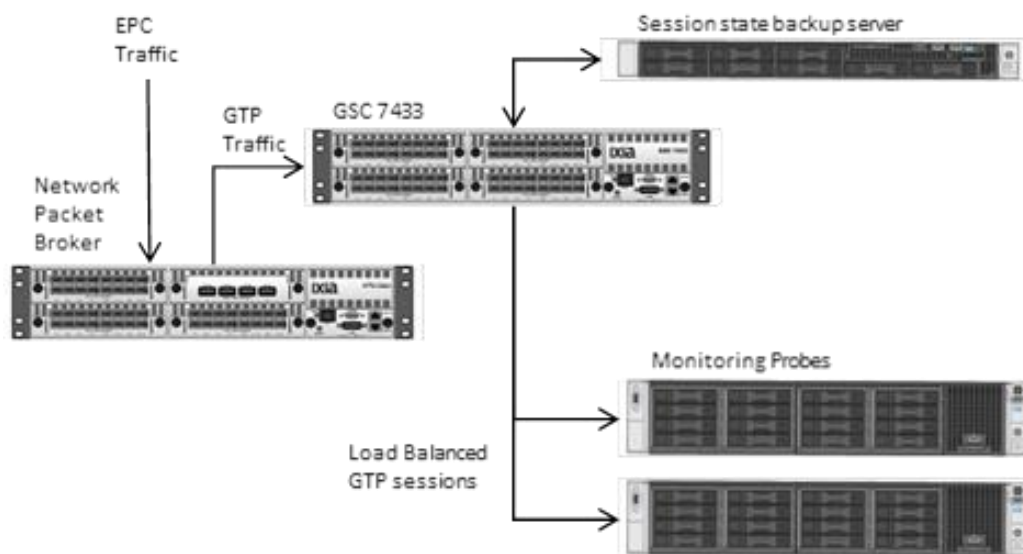

The GSC Session State Recovery Appliance is a GTP Session Controller (GSC) option that improves the integrity of mobility network visibility. The GSC delivers GTP-session-aware load distribution for large-scale mobility networks, where live subscriber sessions are in the millions. For such networks, the flexibility to redeploy or upgrade the GSC while maximizing uptime is critical to ensuring robustness of the deployed visibility solution.

HIGHLIGHTS

- Ongoing backup and automatic recovery of session distribution state
- Resume session-aware distribution within minutes of system restart
- Seamless GSC integration for easy configuration and management
- NEBS-certified, industry-standard hardware designed to easily integrate with common deployment practices

The Session State Recovery feature is licensed separately, and deployed on an external appliance. The supported appliance hardware is the HP ProLiant DL380p Gen9, which must be purchased directly from HP or an HP reseller. See the Ordering Information section for configuration details.
