

BT2152A/B Self-Discharge Analyzer

Version A.04.76 Information

Released Date: June 19, 2019

Requirements category (e.g., operating system):

New Features

- Adds support for BT2152B.
- Adds in situ resistance calibration functionality.
- Adds median subtraction and median fit analysis capability.
- Changes *RST to not resetting wire calibration values to zero.
- Fixes *TST? Defect that resets wire resistance calibration values to zero.
- Bit 2 of the Standard Operation Register activates when front panel stop button pushed.
- Bit 9 of the Standard Operation Register activates when an INHIBIT EVENT occurs.
- Made numerous other enhancements and fixes.

Version A.04.37 Information

Released Date: November 28, 2017

Requirements category (e.g., operating system):

New Features

- Resolves defect causing wiring resistance values to be cleared.

Version A.04.35 Information

Released Date: October 10, 2017

Requirements category (e.g., operating system):

New Features

- Automatic external cable resistance calibration.
- Save and load external cable resistance values.
- Reduced match time and reduced warm-up time after power-on.
- Calibration verification commands added.
- Resolved minor issues.

Version A.03.78 Information

Released Date: August 15, 2017

Requirements category (e.g., operating system):

New Features

- Resolved minor issues.

Version A.03.77 Information

Released Date: August 2, 2017

Requirements category (e.g., operating system):

New Features

- Initial release.
