Keysight E2688A, N5384A
High-Speed Serial Data Analysis and Clock Recovery Software
For Infiniium Oscilloscopes

Data Sheet
The Keysight Technologies, Inc. High-Speed Serial Data Analysis (SDA) software provides you with a fast and easy way to pinpoint signal integrity problems and validate performance for serial interface designs. Perform mask testing, characterize serial data streams that employ embedded clocks, and decode 8b/10b data.

SDA software enables engineers to verify compliance to computer, communication, and data communications standards such as PCI Express®, Serial ATA, Serial Attached SCSI (SAS), Fibre Channel, XAUI and Gigabit Ethernet.

The BER contour feature provides data valid window measurement capability with components of noise and jitter. This allows designers such as memory DDR4 and LPDDR4 to make JEDEC compliance measurements.

SDA software and the Infiniium oscilloscopes offer several features to simplify the validation of serial interface designs:

**Real-time eye display with Mask unfolding**

The real-time eye display is reconstructed from all unit intervals in the oscilloscope memory aligned by the recovered clock. In this display mode the center screen (or zero in the time base) corresponds to the active edge of the recovered clock. Each signal including channels and functions can be displayed as a real-time eye.

With the High-Speed SDA software, once you identify a failure of the eye mask, you can unfold the eye diagram to show the specific unit interval that caused the failure. When used with the 8b/10b decoding feature you can identify data dependent errors that result in eye mask violations caused by Inter-Symbol Interference (ISI).
8b/10b decoding

When used with the Infiniium Series oscilloscopes, you can perform 8b/10b decoding with the analog view of a serial data stream. You can use your oscilloscope to assist you with debugging during the link bring-up phase of development. In addition you can use the 8b/10b decode feature to help solve disparity error problems or bit error rate performance problems resulting from ISI.

BER contour analysis and measurement setup

You can perform BER contour analysis to make accurate data valid window measurements. The BER contour is computed statistically from jitter and noise components of the signal. The timing parameters specific to the BER contour in accordance to the DDR4 and LPDDR4 JEDEC specification are timing data input valid window (TdiVW) and voltage data input valid window (VdiVW).
Mask testing

When used with the Keysight Infiniium oscilloscopes, masks are provided for the following standards:

- PCI Express (2.5 Gb/s)
- Fibre Channel Electrical (1.0625, 2.125 and 4.25 Gb/s)
- Serial ATA
- Serial Attached SCSI (SAS)
- XAUI
- FlexRay

When performing a mask test, the High-Speed SDA software indicates the number of waveforms (acquisitions) and unit intervals tested, and the number waveforms and unit intervals that failed. This information helps determine your level of confidence in meeting a given target bit error ratio.

Figure 4. An example of leading a mask through SDA software.

Figure 5. An example of a mask test on a failing Serial ATA signal. The information below the mask screen helps you determine the level of confidence in meeting your desired bit error rate.
Easy measurement setup

The High-Speed SDA software extends the ease-of-use advantages of Keysight’s Infinium oscilloscopes to the analysis of serial data. A wizard walks you quickly through the steps required to setup and perform a measurement. Intuitive displays and clear labeling of information make it easy to comprehend measurement results.

SDA provides a real-time eye menu. The menu is located in the display menu under color grade view. Use this menu to change scaling, look only at worst case edges, and decide which bits you want to include in your real-time eye.

One-click real-time eye

SDA provides the ability to right-click on a waveform and quickly create a real-time eye.
Serial data trigger and search

Powerful software triggering is available for use on Infiniium oscilloscopes when combined with the 8b/10b data decoding function (that continuously scans for the occurrence of up to 4 consecutive symbols).

Setup the trigger based on symbols; specific to a given standard. Invalid codes or hex values. Solve data dependent problems fast by using your oscilloscope to monitor serial traffic and capture error conditions. Unlike any other tool, you can now combine logical errors with the analog signal view of the serial data stream at the time of the error occurrence.

Flexible clock recovery

You can choose constant-frequency, first-order phase-locked loop (PLL), or second-order PLL clock recovery. You can adjust the center frequency and bandwidth, and in the case of second-order PLL, the damping factor. For PCI Express, the clock recovery algorithm specified by the PCI-SIG® is provided. A specific clock recovery algorithm is also available for SATA, HDMI, MHL, DisplayPort, USB, PCI Express, CEI, Fibre Channel, FlexRay, and MIPI® technologies. When you choose PLL clock recovery, the clock recovery algorithm requires some time at the start of each record to lock to the data. This interval cannot be viewed or analyzed. The serial data wizard will indicate the required time period for the clock recovery algorithm to lock.

The first-order PLL selection emulates a first-order PLL

You enter the nominal data rate and loop bandwidth for the clock recovery PLL

When you select second-order PLL, you can enter a damping factor in addition to nominal data rate and loop bandwidth. You can also choose between OJTF and JTF
Clock display mode
You can view the data signal superimposed with the recovered clock. This provides a display of the measured data relative to the active edge of the recovered clock.

External clock
You can choose to use an external clock as your clock reference by applying the signal to any of the oscilloscope channels. This allows you to provide your own explicit clock that can be then used for jitter analysis and to generate eye diagrams.

Deep memory for deeper insight
At a sampling rate of 20-GSa/s and an incoming data rate of 2.5-Gb/s, 1Mpts memory allows you to capture an entire $2^{16}$ pseudorandom bit sequence (PRBS) on each acquisition. The Infiniium Series oscilloscopes, both with up to 1 Gpts of memory, are currently the only real-time oscilloscopes that will allow you to capture and analyze data for patterns as large as PRBS$^{23}$. Usable deep memory is extremely important for capturing longer sequences of serial data for analysis at the maximum 40 GSa/s sampling rate.

Multiple real-time eyes
SDA provides real-time eye views on each signal. With this capability, combined with waveform areas, you can look at dozens of real-time eyes at once. Each real-time eye can have its own timebase.
Oscilloscope compatibility

For oscilloscopes with earlier software revisions, free upgrade software is available at [http://www.keysight.com/find/infiniium_software](http://www.keysight.com/find/infiniium_software).

Ordering information

To purchase the High-Speed SDA software with a new Infiniium oscilloscope, please order the option indicated in the table:

<table>
<thead>
<tr>
<th>Oscilloscope</th>
<th>Option number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9000A, 9000 H-, 90000, 90000 X Series</td>
<td>003</td>
<td>High-Speed SDA software (Installed at the factory)</td>
</tr>
<tr>
<td>Z-Series</td>
<td>E2688A-1FP</td>
<td>High-Speed SDA software</td>
</tr>
<tr>
<td>S-Series</td>
<td>N5384A-1FP</td>
<td>High-Speed SDA software</td>
</tr>
</tbody>
</table>

To enable BER contour feature, please order the option in the table in addition to the high-speed SDA software:

<table>
<thead>
<tr>
<th>Model number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>N8823B-1FP ¹</td>
<td>Fixed perpetual EZJIT Complete software for Infiniium 9000A, 9000H and S-Series</td>
</tr>
<tr>
<td>N8823A-1FP ¹</td>
<td>Fixed perpetual EZJIT Complete software for Infiniium 90000A, V-Series and Z-Series</td>
</tr>
</tbody>
</table>

To add the High-Speed SDA software to an existing Infiniium oscilloscope, please order the following:

<table>
<thead>
<tr>
<th>Model number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>N5384A-1FP</td>
<td>Fixed perpetual High-Speed SDA software for Infiniium 9000A, 9000 H-, and S-Series</td>
</tr>
<tr>
<td>E2688A-1FP</td>
<td>Fixed perpetual High-Speed SDA software for Infiniium 90000A, 90000 X-, and Z-Series</td>
</tr>

AdvancedTCA® Extensions for Instrumentation and Test (AXIe) is an open standard that extends the AdvancedTCA for general purpose and semiconductor test. Keysight is a founding member of the AXIe consortium. ATCA®, AdvancedTCA®, and the ATCA logo are registered US trademarks of the PCI Industrial Computer Manufacturers Group.

LAN eXtensions for Instruments puts the power of Ethernet and the Web inside your test systems. Keysight is a founding member of the LXI consortium.

PCI eXtensions for Instrumentation (PXI) modular instrumentation delivers a rugged, PC-based high-performance measurement and automation system.

For more than 75 years, we’ve been helping you unlock measurement insights. Our unique combination of hardware, software and people can help you reach your next breakthrough. Unlocking measurement insights since 1939.

myKeysight

www.keysight.com/find/mykeysight
A personalized view into the information most relevant to you.

Three-Year Warranty

www.keysight.com/find/ThreeYearWarranty
Keysight’s committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with three-year warranty standard on all instruments, worldwide. And, we provide a one-year warranty on many accessories, calibration devices, systems and custom products.

Keysight Assurance Plans

www.keysight.com/find/AssurancePlans
Up to ten years of protection and no budgetary surprises to ensure your instruments are operating to specification, so you can rely on accurate measurements.

Keysight Infoline

www.keysight.com/find/service
Keysight’s insight to best in class information management. Free access to your Keysight equipment company reports and e-library.

Keysight Channel Partners

www.keysight.com/find/channelpartners
Get the best of both worlds: Keysight’s measurement expertise and product breadth, combined with channel partner convenience.
