

Professional Services

Providing a delivery team to move your projects to completion

Enabling Businesses to Achieve More with Eggplant

When hitting your business goals is dependent on the successful execution of specific projects, but there are barriers getting in the way of progress, you may need to look outside your organization for the right solution.

Typical obstacles to moving forward with internal projects include bandwidth challenges or skills gaps within your team. Even when you do have the right people in place, time pressures can mean that hitting a critical deadline becomes unrealistic.

When projects are delayed or extended, it becomes harder to fully realize the benefits of Eggplant software. This can have a negative impact on dependent projects and the business goals within your organization.

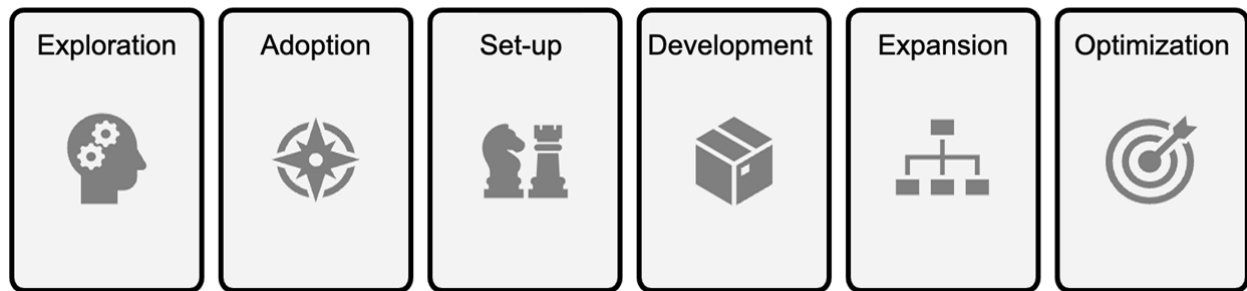

Partnering with specialist teams to make progress with defined or open-ended projects

Eggplant Professional Services can provide a carefully selected team tailored to meet the needs of your specific project or projects. Composed of Project Managers, Implementation Architects, Senior Test Automation Engineers and Test Automation Engineers, this team will come in at whichever project stage you need them - from initiating and planning through to execution and then closing out the project.

Bringing our Professional Services Team in to help with your project can help to shorten the immediate delivery cycle but also lays the groundwork for your future projects in the form of a test automation framework. This framework is designed to make your team more effective and efficient in both the maintenance of your test estate and executing inhouse projects. After your initial successful project, you can use our training services to enable the inhouse team or continue to retain the Eggplant Professional Services Team.

Working through the six stages of the automation testing lifecycle, to achieve successful project completion

Each customer navigates their test automation journey in their own unique way but generally follow six stages: Exploration, Adoption, Set-up, Development, Expansion and Optimization. Our Professional Services Team can help you at every stage to deliver success and the long-term capture of value from your investment in automation.

Quality assurance with the Keysight incremental test asset delivery process

Our incremental test asset delivery lifecycle focusses on making high quality test assets available for your production testing as soon as possible.

We assure quality through multiple layered reviews with every line of code being subject to expert scrutiny. This culminates in a rigorous 21-point quality compliance review before it can be awarded the Keysight quality certificate and then released to be used by your organization.

Realizing your vision, with a professional, hand-picked team to bring your project to completion

Your project team will have the exact mix of skills needed to deliver the project. The team can flex in order to match your business priorities - growing or contracting as necessary. We will tailor your team to your needs which will be led and managed by a senior experienced professional.

For example, we will assign a Senior Test Automation Engineer - certified by the International Software Testing Qualifications Board - to provide the technical oversight for your project to ensure the delivery of industry-leading test assets. Our Project Management Institute certified Project Manager will provide weekly updates on current status, progress, as well as discussing risks and issues.

Description	Details
