Definitions and Conditions

This data sheet provides performance information for Keysight SA6210A XA5 Signal Analyzer. The performance applies to RF 1 (one-channel or two-channel configuration) and RF 2 (two-channel configuration), unless otherwise noted.

Specifications describe the performance of parameters covered by the product warranty and apply to temperature ranges 0 °C to 55 °C for one-channel configuration, 0 °C to 40 °C for two-channel configuration, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx. 2 σ) of performance tolerances expected to be met in 95% of the cases with a 95% confidence, for any ambient temperature in the range of 20 °C to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical values (typ) describe additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80% of the units exhibit with a 95% confidence level over the temperature range 20 °C to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values (nom) indicate expected performance or describe product performance that is useful in the application of the product but are not covered by the product warranty.

The analyzer will meet its specifications when:

- Analyzer is within its calibration cycle
- Analyzer is under auto couple control, except that Auto Sweep Time Rules = Accuracy
- Analyzer is used in an environment that falls within allowed operating range; and has been in that environment at least 2 hours before being turned on.
- Analyzer has been turned on at least 30 minutes
- If the Auto Alignment Method is set to Standard, the following conditions apply: Auto Align set to Precision and Characterize Core Hardware must have been run in the last 30 days. No alerts or warning messages are shown on the front panel.
- If the Auto Alignment Method is set to Classic, the following conditions apply: Auto Align set to Normal; or, if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. Note that factory default is with the Auto Align set to Light, which (compared to Normal) allows wider temperature changes before causing Alignments to run automatically. The benefit is that Alignments interrupt less frequently. The user can change Auto Align to Normal if desired, and this setting will persist after power cycle or PRESET. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. In practice, the impact of such choices is primarily on Absolute Amplitude Accuracy.

The term "mixer level" is used as a condition for many specifications in this document. This term is conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) – Attenuation (dB).

Certification

Keysight Technologies certifies that this product met its published specifications at the time of shipment from the factory. Keysight Technologies further certifies that its calibration measurements are traceable to the International System of Units (SI) via national metrology institutes (www.keysight.com/find/NMI) that are signatories to the CIPM Mutual Recognition Arrangement.

Common Abbreviations	Function
BW	Bandwidth
FFT	Fast Fourier transform
IQ	In-phase quadrature-phase (sample data)
IVL	Individual validated license (for export to restricted countries)
LO	Local oscillator
PA	Pre-amplifier
STD	Standard path, with YIG tunable filter
WPR	Wideband preselector path
MPB	Microwave preselector bypass path
RBW	Resolution bandwidth (filter)
VBW	Video bandwidth (filter)

Marker Frequency Counter, Nominal		
Accuracy		± (marker frequency x frequency reference accuracy + 0.100 Hz)
Delta counter accuracy		± (delta frequency x frequency reference accuracy + 0.141 Hz)
Counter resolution		0.001 Hz
Frequency Span (FFT and swept mode), nominal		
Range		0 Hz (zero span), 10 Hz to maximum frequency of instrument
Resolution		2 Hz
Accuracy (Nominal)		
Stepped/Swept		± (0.1% x span + horizontal resolution) where horizontal resolution is span/(sweep points -1)
FFT		± (0.1% x span + horizontal resolution) where horizontal resolution is span/(sweep points -1)
Sweep Time and Triggering		
Range	Span = 0 Hz	1 μs to 6000 s
	Span ≥ 10 Hz	1 ms to 4000 s
Accuracy	Span ≥ 10 Hz, swept	±0.01% nominal
	Span ≥ 10 Hz, FFT	±40% nominal
	Span = 0 Hz	±0.01% nominal
Trigger delay	Span = 0 Hz or FFT	-150 to +500 ms
	Span ≥ 10 Hz, swept	0 to 500 ms
	Resolution	0.1 us

Time Gating	
Gate methods	Gated LO; gated video; gated FFT
Gate length range (except method = FFT)	1 μ s to 5.0 s
Gate delay range	0 to 100.0 s
Gate delay jitter	33.3 ns p-p nominal
Sweep (Trace) Point Range	
All spans	3 to 100,001
Resolution Bandwidth (RBW) (See Also IQ Analysis Section)	
Range (with -3 dB bandwidth)	1 Hz to 10 MHz (step resolution of 3 digits)
	1 Hz to 40 MHz (step resolution of 3 digits; requires N90EMWR1B)
	1 Hz to 80 MHz (step resolution of 3 digits; requires N90EMWR2B, IVL)
Bandwidth Accuracy (Power)	
RBW Range	Accuracy, Nominal
1 Hz to 100 kHz	± 0.01 dB
> 100 kHz to 1 MHz (< 8.4 GHz center frequency)	± 0.01 dB
> 1 to 2 MHz (< 8.4 GHz center frequency)	± 0.03 dB
> 2 to 3 MHz (< 8.4 GHz center frequency)	± 0.03 dB
4, 5, 6, 8, 10 MHz (< 8.4 GHz center frequency)	± 0.20 dB
20, 28, 30, 40 MHz (> 50 MHz to 8.4 GHz center frequency)	± 0.20 dB
50, 80 MHz (> 50 MHz to 8.4 GHz center frequency)	± 0.20 dB
Bandwidth Accuracy (-3 dB)	
RBW Range	Accuracy, Nominal
1 Hz to 1.3 MHz	± 1 %
> 1.3 to 3 MHz	± 1 %
4, 5, 6, 8, 10 MHz	± 4 %
20, 28, 30, 40 MHz	± 3 %
50, 80 MHz	± 3 %
Selectivity (-60 dB/-3 dB)	< 5: 1
Preselector Bandwidth	
The preselector can have a significant passband ripple. To avoid ambiguous results, the -4 dB bandwidth is characterized	
Center Frequency	Mean Bandwidth (-4 dB), Nominal
10 GHz	52 MHz
15 GHz	53 MHz
20 GHz	55 MHz
25 GHz	56 MHz
30 GHz	59 MHz
Video Bandwidth (VBW) Filters	
Range	1 Hz to 10 MHz (step resolution of 3 digits), and wide open (labeled 50 MHz)
	1 Hz to 40 MHz (step resolution of 3 digits; requires N90EMWR1B), and wide open (labeled 50 MHz)
	1 Hz to 80 MHz (step resolution of 3 digits; requires N90EMWR2B, IVL), and wide open (labeled 80 MHz)
Accuracy	$\pm 6\%$, nominal
Detector Types	
Normal, peak, sample, negative peak, log power average, RMS average, and voltage average	

Triggers and Gating

Trigger/Gate Sources

	Swept Trigger	Gate Source	Wide Bandwidth IQ Trigger	Supplemental Information
Free run	Y		Y	
External 1	Y	Y	Y	Jitter up to ~33 ns p-p (nominal)
External 2	Y	Y	Y	
External 3	Y	Y	Y	
External 4	Y	Y	Y	
External 5 (Precision)			Y	Valid when the input port is set to RF 1 In and IF Path is set to 1 GHz or 2 GHz; requires option R10 or R20
External 6 (Precision)			Y	Valid when the input port is set to RF 2 In and IF Path is set to 1 GHz or 2 GHz; requires option S10 or S20, and option 002
RF burst	Y	Y	Y	Digital RF Burst trigger (filtered ADC trigger)
Video (IF Mag)	Y		Y	ADC trigger is similar
ADC			Y	Similar to Video, but operates digitally on mag[I,Q], prior to decimation, filtering, and corrections.
Periodic	Y	Y	Y	Repetitive "frame" trigger, at precise interval, following an External or RF Burst trigger

Triggers

Video (Independent of Display Scaling and Reference Level)	Specifications	Supplemental Information
Minimum settable level	-170 dBm	Useful range limited by noise
Maximum usable level		Highest allowed mixer level (the highest allowed mixer level depends on the IF gain. It is nominally -10 dBm for preamp off and IF gain = low) + 2 dB (nominal)

Detector and Sweep Type Relationships

Supplemental Information	
Sweep type = Swept	
Detector = Normal, Peak, Sample or Negative peak	Triggers on the signal before detection, which is similar to the displayed signal
Detector = Average	Triggers on the signal before detection, but with a single-pole filter added to give similar smoothing to that of the average detector
Sweep type = FFT	Triggers on the signal envelope in a bandwidth wider than the FFT width

RF Burst

	Specifications	Supplemental Information
Level range	-40 to -10 dBm plus attenuation (nominal)	Noise will limit trigger level range at high frequencies, such as above 15 GHz

Level Accuracy

With positive slope trigger. Trigger level with negative slope is nominally 1 to 4 dB lower than positive slope.

Absolute	±2 dB + absolute amplitude accuracy (nominal)
Relative	±2 dB (nominal)

Bandwidth (-10 dB)

Most cases (including RF burst level type = Relative)	> 80 MHz (nominal)
Start Freq < 1000 MHz (RF burst level type = Absolute)	
Sweep type = Swept	30 MHz (nominal)
Sweep type = FFT	> 80 MHz (nominal), FFT width > 40 to 480 MHz
	30 MHz (nominal), FFT width 40 MHz

Frequency limitations	If the start or center frequency is too close to zero, LO feedthrough can degrade or prevent triggering. How close is too close depends on the bandwidth listed above.
Amplitude requirements	–65 dBm minimum video carrier power at the input mixer, nominal

Amplitude Accuracy and Range Specifications

Amplitude characteristics vary by user-selectable front-end path. Swept SA measurements are normally made with the preselector on (in circuit). These settings impact amplitude accuracy and range.

Front End Settings

	Microwave Path Control	Internal Preamplifier	Allow RF Gain Adjust	Description
1a	Standard path (STD)	Off	Off	Requires Option YF3/SY3; Settings provide lowest internally-generated distortion with degradation to DANL. Suitable for harmonics, IMD, spurious in presence of large signals, etc. unless noise-limited.
1b		Off	On	Requires Option YF3/SY3; Default selection following power-on, boot-up, or PRESET. Settings provide best dynamic range and lower DANL, compared to (1a).
1c		On, Low	N/A	Requires Option YF3/SY3 and P32/Q32. Settings provide lower DANL, compared to (1b), while preserving very good dynamic range. Suitable for distortion measurements (harmonics, IMD, etc.) when a lower noise floor is needed.
1d		On, High	N/A	Requires Option YF3/SY3 and P32/Q32; Settings provide lowest DANL, compared to (1c). Best for finding low-level spurs, oscillations, etc. near the noise floor. Operates down to 1 MHz.
2a	Wideband preselector path (WPR)	Off	Off	Settings provide lower internally-generated distortion with degradation to DANL, compared to (2b).
2b		Off	On	Default selection following power-on, boot-up, or PRESET when YF3/SY3 is not applicable. Settings provide very fast sweep speeds and equivalent dynamic range, with slightly reduced out-of-band rejection, compared to (1b). Suitable for wideband digitizer and FFT measurements up to 1 GHz analysis bandwidth.
2c		On, Low	N/A	Requires Option P32/Q32. Settings provide lower DANL, compared to (2b), while preserving very good dynamic range. Suitable for distortion measurements (harmonics, IMD, etc.) when a lower noise floor is needed.
2d		On, High	N/A	Requires Option P32/Q32. Settings provide lowest DANL, compared to (2c). Best for finding low-level spurs, oscillations, etc. near the noise floor. Operates down to 1 MHz.
3a	Microwave preselector bypass path (MPB)	Off	Off	Bypasses preselector. Settings provide lower internally-generated distortion with degradation to DANL, compared to (3b). Provides good EVM floor at mid-to-high input power region.
3b		Off	On	Bypasses preselector. Suitable for wideband digitizer and FFT measurements wider than 1 GHz analysis bandwidth.
3c		On, Low	N/A	Bypasses preselector. Requires Option P32/Q32. Settings provide best EVM at low input power region for wideband digitizer and FFT measurements wider than 1 GHz analysis bandwidth.
3d		On, High	N/A	Bypasses preselector. Requires Option P32/Q32. Settings provide best EVM floor at very low input power region for wideband digitizer and FFT measurements wider than 1 GHz analysis bandwidth.

Amplitude Range	
Measurement range	Displayed average noise level (DANL) to +30 dBm, PA off DANL to +24 dBm, PA on, Low DANL to +4 dBm, PA on, High
Input attenuator range (2 Hz to 32 GHz)	0 to 46 dB in 2 dB steps
Maximum Safe Input Level (Max Applied to RF Input Connector)	
Average total power, Input attenuator $\geq$ 10 dB	+30 dBm (1 W)
Average total power (with preamp), Input attenuator < 10 dB	+20 dBm (0.1 W)
Peak pulse power (< 10 μ s pulse width, < 1% duty cycle, and input attenuation $\geq$ 30 dB)	+50 dBm (100 W)
DC Volts	
DC coupled	$\pm$ 0.2 Vdc
Display Range	
Log scale	0.1 to 1 dB/division in 0.1 dB steps; 1 to 20 dB/division in 1 dB steps (10 display)
Linear scale	10 divisions
Scale units	dBm, dBmV, dB μ V, dBmA, dB μ A, V, W, A

Dynamic Range Specifications

1 dB Gain Compression

Notes:

- Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal.
- At tone spacings smaller than 70 MHz (nominal), ADC clipping may occur at a level lower than the 1 dB compression point.
- Reference level and off-screen performance: The Reference Level (RL) behavior differs from some earlier analyzers in a way that makes this analyzer more flexible. In other analyzers, the RL controlled how the measurement was performed as well as how it was displayed. Because the logarithmic amplifier in these analyzers had both range and resolution limitations, this behavior was necessary for optimum measurement accuracy. The logarithmic amplifier in this signal analyzer, however, is implemented digitally such that the range and resolution greatly exceed other instrument limitations. Because of this, the analyzer can make measurements largely independent of the setting of the RL without compromising accuracy. Because the RL becomes a display function, not a measurement function, a marker can read out results that are off-screen, either above or below, without any change in accuracy. The only exception to the independence of RL and the way in which the measurement is performed is in the input attenuation setting: When the input attenuation is set to auto, the rules for the determination of the input attenuation include dependence on the reference level. Because the input attenuation setting controls the tradeoff between large signal behaviors (third-order intermodulation, compression, and display scale fidelity) and small signal effects (noise), the measurement results can change with RL changes when the input attenuation is set to auto.
- Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).
- Total power at the preamp (dBm) = total power at the input (dBm) – input attenuation (dB).

General Specifications

Temperature Range		
Operating	0 to 55 °C (for 1-port, Option 001) 0 to 40 °C (for 2-port, Option 001, 002)	
Storage	-40 to +70 °C	
Altitude	Operating: Up to 3,000 meters (9,842 feet) Non-operating: up to 4,600 m (approx. 15,091 feet)	
Maximum relative humidity	95% up to 40 °C, non-condensing	
Environment		
Indoor use		
Power Requirements		
Voltage and frequency (nominal)	100 to 240 V AC, 50/60 Hz	The instruments can operate with mains supply voltage fluctuations up to ± 10% of the nominal voltage
Rated input power	900 W with C20 input connector (maximum)	
	600 W with C14 input connector (maximum)	
Power consumption, on	300 W (1-port, Option 001 and B40, typical)	
	550 W (2-port, Option 001, 002, and R20, typical)	
Power consumption, standby	10 W	
Display		
Resolution	1920 x 1080	
Size	400 mm (15.6 in.) diagonal (nominal) capacitive multi-touch screen	
Data Storage		
Internal	Removable solid-state drive (≥ 480 GB)	
External	Supports USB 3.0/2.0 compatible memory devices	
CPU	Intel i7, 8-core, 4.4 GHz clock, 64 GB DDR4 DRAM	
Operating system	Windows-11, Enterprise	
Weight		
Net	26.3 kg (58.0 lbs) (1-port, Option 001, nominal)	
	33.1 kg (73.0 lbs) (2-port, Option 001 and 002, nominal)	
Shipping	37.6 kg (82.9 lbs) (1-port, Option 001, nominal)	
	44.4 kg (97.9 lbs) (2-port, Option 001 and 002, nominal)	
Dimensions		
Height	278 mm (10.9 in)	
Width	476 mm (18.7 in)	
Length	523 mm (20.6 in)	
Calibration Cycle		
The recommended calibration cycle is one year; calibration services are available through Keysight Service Centers.

Option GBE (10 Gbit Ethernet)	10GBase-T x2
Connector	RJ45 Ethernet connector

Regulatory Information

This product is designed for use in INSTALLATION CATEGORY II and POLLUTION DEGREE 2 and MEASUREMENT CATEGORY NONE.

This product has been designed and tested in accordance with accepted industry standards and has been supplied in a safe condition. The instruction documentation contains information and warnings which must be followed by the user to ensure safe operation and to maintain the product in a safe condition.

This product is intended for indoor use.

Safety and Regulatory Markings which May be on the Product

	The CE mark is a registered trademark of the European Community (if accompanied by a year, it is the year when the design was proven). This product complies with all relevant directives.
ccr.keysight@keysight.com	The Keysight email address is required by EU directives applicable to our product.
CAN ICES/NMB-001(A)	Canada EMC label. Interference-Causing Equipment Standard for industrial, scientific and medical (ISM) equipment. Matériel industriel, scientifique et médical (ISM)
ISM 1-A (GRP.1 CLASS A)	This is a symbol of an Industrial Scientific and Medical Group 1 Class A product. (CISPR 11, Clause 4)
	The CSA mark is a registered trademark of the CSA International.
	The RCM mark is a registered trademark of the Australian Communications and Media Authority.
	UK conformity mark is a UK government owned mark. Products showing this mark comply with all applicable UK regulations.
	This symbol indicates separate collection for electrical and electronic equipment mandated under EU law as of August 13, 2005. All electric and electronic equipment are required to be separated from normal waste for disposal (Reference WEEE Directive 2002/96/EC). The crossed out wheeled bin symbol indicates that separate collection for waste electric and electronic equipment (WEEE) is required, as obligated by the EU DIRECTIVE and other National legislation. Please refer to keysight.com/go/takeback to understand your Trade in options with Keysight in addition to product takeback instructions.
	China Restricted Substance Product Label. The EPUP (environmental protection use period) number in the center indicates the time period during which no hazardous or toxic substances or elements are expected to leak or deteriorate during normal use and generally reflects the expected useful life of the product.
	Universal recycling symbol. This symbol indicates compliance with the China standard GB 18455-2001 as required by the China RoHS regulations for paper/fiberboard packaging.
	More than one person is required to safely lift or carry this instrument. Alternately a mechanical lift can be used to eliminate the risk of personal injury.
	South Korean Certification (KC) mark; includes the marking's identifier code.

This symbol indicates the presence of a class 1 Laser device

Regulatory, Environmental and Certifications

EMC	Complies with the essential requirements of the European EMC Directive and the UK Electromagnetic Compatibility Regulations 2016 as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity): IEC/EN 61326-1 CISPR 11 Group 1, Class A Caution: This equipment is not intended for use in residential environments and may not provide adequate protection to radio reception in such environments. AS/NZS CISPR 11 ICES/NMB-001 This ISM device complies with Canadian ICES-001 Cet appareil ISM est conforme a la norme NMB-001 du Canada NOTE: This is a sensitive measurement apparatus by design and may have some performance loss (up to 25 dBm above the Spurious Responses, Residual specification of -100 dBm) when exposed to 3V/m ambient continuous electromagnetic phenomenon in the range of 80 MHz to 6 GHz (similar to those used in testing per IEC 61000-4-3).

Keysight Support Services

Accelerate your learning curve, enhance your test uptime, and confidently guarantee your instrument accuracy with Keysight Support Services. Keysight Services are here to support your test needs with expert technical support, instrument repair and calibration, training, alternative acquisition program options, and more.

A KeysightCare agreement provides dedicated, proactive support through a single point of contact for an extensive group of instruments, software, and solutions to ensure optimal uptime, with fast response times and resolution. Explore the services that are right for you.

Keysight Services

Offering	Benefits
KeysightCare	KeysightCare provides elevated support for Keysight instruments and software, with access to technical support experts who respond within a specified time and ensure committed repair and calibration turnaround times (TAT). KeysightCare offers multiple service agreement tiers, including KeysightCare Assured, Enhanced, and Application Software Support. See the KeysightCare data sheet for details.
 KEYSIGHTCARE	
KeysightCare Assured	KeysightCare Assured provides a commitment to respond to your engineer's technical needs quickly. When unexpected repairs are necessary, you can count on a committed repair service turnaround time to get you back up and running.
KeysightCare Enhanced	KeysightCare Enhanced includes all the benefits of KeysightCare Assured plus Keysight's accurate and reliable Calibration Services , accelerated and committed TAT, and technical response.
Keysight Support Portal & Knowledge Center	All KeysightCare tiers include access to the Keysight Support Portal, where you can manage support and service resources related to your assets, such as service requests and status, or browse the Knowledge Center.
Education Services	Build confidence and gain new skills to make accurate measurements, with flexible Education Services developed by Keysight experts. Including Start-up Assistance.
Alternative Acquisition Options	
KeysightAccess	Reduce budget challenges with a lease-based subscription service that offers low monthly payments, enabling you to get the instruments, software, and technical support you want for your test needs.

Recommended Services

Maximize your instrument uptime and confidently make accurate measurements by securing technical support, repair, and calibration services with committed response and turnaround times. High-performance instruments include 1 year of KeysightCare Assured or KeysightCare Warranty Plus. Obtain multi-year KeysightCare upfront to eliminate the need for lengthy and tedious paperwork and yearly requests for maintenance budget. Plus, you benefit from secured service for 2, 3, or 5 years.

Service	Function
KeysightCare Enhanced*	Includes Tech Support, Warranty and Calibration
