Configuring your InfiniiVision 1000 X-Series oscilloscope .............................................. 21

Need more bandwidth, sampling rate, and analysis?
Consider the InfiniiVision 3000T X-Series
- 350 MHz, 500 MHz and 1 GHz
- 5 GSa/s
- Uncompromised 1,000,000 waveform update rate
- Capacitive touch screen
- Industry exclusive zone touch trigger
- Additional serial decode/trigger
- Gated FFT
Leading technology in a value-priced oscilloscope (DSOX models)

Keysight’s InfiniiVision 1000 X-Series oscilloscopes are engineered to give you quality, industry-proven technology at unbelievably low prices. Now it’s easy to get professional measurements and accessible expertise at your fingertips. Don’t settle for less – and test to impress.

- 70 to 200 MHz bandwidth (DSOX models)
- Frequency response analysis (Bode gain & phase plots), included in models with WaveGen
- See more signal detail with 200,000 waveforms/sec update rate
- Have confidence in your measurements with Keysight-custom technology that leverages more than 60 years of oscilloscope expertise
- Test quickly and easily with a simple, intuitive user-interface and built-in help and training signals
- Get professional-level functionality with industry-leading software analysis including standard serial bus analysis for the most popular serial bus standards, and 6-in-1 instrument integration

1. Half-channel operation on a 4-channel model refers to two-channel operation when using channel-1 or channel-2 AND channel-3 or channel-4. Example: If viewing just channel-1 and channel-3, maximum sample rate is 2 GSa/s and maximum memory is 2 M points. But if viewing channel-1 and channel-2, maximum sample rate is 1 GSa/s and maximum memory is 1 M points.
Leading technology in a value-priced oscilloscope (EDUX models)
EDUX1052A and EDUX1052G

Provide a quality education for students and prepare them for industry with professional level instruments. The 1000 X-Series leverages the same technology as our higher-end oscilloscopes, allowing students to learn on the same hardware and software being used in leading R&D labs. Don’t settle for less – set your students up for success.

- Built-in training signals that enable students to quickly learn to capture and analyze signals.
- The educator's resource kit includes dynamic teaching labs; a comprehensive lab guide; a tutorial written specifically for undergraduate students; and an oscilloscope fundamentals PowerPoint slide set for professors and lab assistants.
- IoT systems design applied courseware. The 1000 X-Series oscilloscope can be used with the U3800A Internet of Things(IoT) Systems Design Applied Courseware.
- Bode plots are fundamental concepts. The 1000 X-Series’ frequency response analyzer capability is the perfect tool to help students understand the gain and phase performance of passive RLC circuits or active op-amps (available in “G” model only).
- BenchVue Software with the BV0004B BenchVue Oscilloscope app (standard) lets you control and visualize the 1000X-Series and multiple measurements simultaneously.

Leading technologies

Have confidence in your measurements with Keysight-custom technology that leverages more than 60 years of oscilloscope expertise.

Low-cost oscilloscopes don’t have to be low quality. Designing premier test solutions has been the goal and passion of Keysight Technologies ever since we made our first oscillator in 1939, and now we’re bringing you a professional-quality oscilloscope for a fraction of the price.

Up to 200,000 waveforms/sec update rate captures glitch easily.

6-in-1 instrument integration

Get professional-level oscilloscope functionality with industry-leading software analysis and 6-in-1 instrument integration. The 1000 X-Series gives you the following functionality that will save you money and valuable bench space.

 OSCILLOSCOPE

The 1000 X-Series is a family of low-cost oscilloscopes that don’t compromise on quality. Each model has measurement and standard software analysis capability that rivals oscilloscopes 3x the price.

 WaveGen (built-in 20 MHz function generator with modulation capability)

(EDUX1052G, DSOX1202G, and DSOX1204G models only)

The 1000 X-Series offers an integrated 20 MHz function generator with modulation capability. It’s ideal for educational or design labs where bench space and budget are at a premium. The integrated function generator provides stimulus output of sine, square, ramp, pulse, DC and noise waveforms to your device under test. Add modulation to the signal with customizable AM, FM and FSK settings. No need to buy a separate function generator when you can get one integrated into your new oscilloscope.

 Hardware-based serial protocol decode and triggering

The 1000 X-Series is a powerful protocol analyzer that enables hardware-based specialized serial communication analysis (standard). Other vendors’ oscilloscopes use software post-processing techniques that slow down the waveform and decode update rate, but the 1000 X-Series has faster decoding based on hardware technology that enhances scope usability and the probability of capturing infrequent serial communication errors.

The EDUX models support I2C and UART/RS232 (standard). The DSOX models support I2C, SPI, UART/RS232, CAN and LIN (standard).
6-in-1 instrument integration (continued)

**Frequency Response Analyzer (EDUX1052G, DSOX1202G, and DSOX1204G models only)**

Frequency response analysis (gain & phase Bode plots) is a critical measurement to characterize amplifiers, passive networks, and power supply feedback networks. Bode plots are also fundamental concepts that every electrical engineering student should learn. The 1000 X-Series’ frequency response analyzer capability (standard in “G” models) is the perfect tool to help students understand the gain and phase performance of passive RLC circuits and amplifiers. This capability is achieved with a gain and phase measurement versus frequency (Bode plot). Vector network analyzers (VNAs) and low-cost frequency response analyzers are typically used for these measurements, but now an easy-to-use and affordable gain and phase analysis is possible by utilizing the 1000 X-Series’ built-in WaveGen and Bode plot capability.

**Digital Voltmeter**

The 1000 X-Series has an integrated 3-digit voltmeter (DVM) inside each oscilloscope. The voltmeter operates through probes connected to the oscilloscope channels, but its measurement is decoupled from the oscilloscope triggering system so both the DVM and triggered oscilloscope measurements can be made with the same connection. You can quickly measure AC RMS, DC, and DC RMS without configuring the oscilloscope capture. The voltmeter results are always displayed, keeping these quick characterization measurements at your fingertips. The built-in DVM comes standard in 1000 X-Series oscilloscopes.

**Frequency Counter**

There is an integrated 5-digit frequency counter inside each oscilloscope. The frequency counter operates through probes connected to the oscilloscope channels so that both the counter and triggered oscilloscope measurements can be made with the same connection. You can quickly measure frequency without configuring the oscilloscope capture. The high-resolution frequency measurement results are always displayed, keeping these quick characterization measurements at your fingertips.
More productivity tools

Localized GUI and help

Operate the oscilloscope in the language most familiar to you. The graphical user interface (GUI), built-in help system, front panel overlays, and user’s manual are available in English, Simplified Chinese, Traditional Chinese, Japanese, Korean, French, German, Italian, Portuguese, Russian and Spanish. The GUI and front panel overlay are also available in Polish, Thai, and Czech, and the built-in help is also available in Polish and Thai during operation. Access the built-in help system by simply pressing and holding any button.

Probe solutions

Get the most out of your 1000 X-Series oscilloscope by using the right probes and accessories for your application. Keysight offers a complete family of innovative probes and accessories for the InfiniiVision 1000 X-Series. InfiniiVision 1000 X-Series oscilloscopes come standard with switchable 1:1/10:1 high-impedance passive probes for each channel of the oscilloscope.

Educator’s Oscilloscope Training Kit

The Educator’s Oscilloscope Training Kit (standard) provides an array of built-in training signals so that electrical engineering and physics students can learn what an oscilloscope does and how they can perform basic oscilloscope measurements. Also included in the kit is a comprehensive oscilloscope lab guide and tutorial written specifically for the undergraduate student. Keysight also provides a PowerPoint slide-set that professors and lab assistants can use as a pre-lab lecture on oscilloscope fundamentals. This lecture takes about 30 minutes and should be presented before electrical engineering and physics students begin their first circuits lab. Note that this PowerPoint slide-set also includes a complete set of speaker notes.
More productivity tools (continued)

Connectivity and remote control

Built-in USB host and USB device ports make PC connectivity easy. BenchVue Software with the BV0004B BenchVue Oscilloscope app (standard) lets you control and visualize the 1000 X-Series and multiple measurements simultaneously. Build automated test sequences just as easy as using your front panel. Save time with the ability to export measurement data to Excel, Word, and MATLAB in three clicks. Monitor and control your 1000 X-Series with a mobile device from anywhere.

Standard LAN port supports remote web-based virtual front panel to control and to save data or images.

Offline oscilloscope analysis software

Keysight’s D9010BSEO Infiniium Offline PC-based oscilloscope analysis software lets you do additional signal viewing, analysis, and documentation tasks while you’re away from your oscilloscope. You can capture waveforms on your scope, save to a file and recall the waveforms into the Infiniium Offline software on your PC.

BenchVue oscilloscope app

The Oscilloscope App within BenchVue (standard) enables control of oscilloscopes to quickly capture and annotate screen images, record trace data and data log measurements (included in model BV0000A). Build automated test sequences just as easy as using your front panel. Save time with the ability to export measurement data to Excel, Word, and MATLAB in three clicks. Monitor and control your 1000 X-Series with a mobile device from anywhere.
A real oscilloscope

**Fast Waveform Update Rate**
Fast 200,000 waveforms/sec update rate helps you quickly see random and infrequent signal glitches and errors.

**DVM/Counter**
Integrated 3-digit voltmeter
5-digit frequency counter

**USB**
Screenshots and data can be quickly and easily saved with built-in USB port and your USB storage device.

**Training Signals**
Built-in education training kit signals with downloadable training guide.
Function Generator
Built-in generator enables you to generate the signals you need to quickly simulate your design and perform gain & phase Bode plots.

Measurements
Press the measure key to access 32 built-in automatic measurements

Analyze Features
Mask Limit Testing
DVM
Frequency Response Analysis
Serial Bus Decode
Reference waveforms (2)

Cursors
Custom measurements are easily accomplished by cursors. Measure any value or the difference using four powerful cursors.

Waveform Math Tools
Quick access to waveform math (+ – x ÷), FFT (gain and phase), and low-pass filter.

Built-in localized-help
All buttons provide instant access to language-localized help by simply holding down the button you want explained

Industry leading user Interface
Fast and easy operation with the common oscilloscope controls right at your fingertips.

1. Denotes warranted specifications; All others are typical. Specifications are valid after a 30-minute warm-up period and from ±10 °C user calibration temperature.
2. Bandwidth specifications apply for 1 mV/div to 10 V/div vertical settings. Bandwidth at the 500 µV/div vertical setting is limited to 20 MHz.
3. Half-channel operation on a 2-channel model refers to two-channel operation when using channel-1 or channel-2 AND channel-3 or channel-4.
4. 500 µV/div is a 2X digital magnification of 1 mV/div setting.

<tr>
<td></td>
<td></td>
<td>Modulation source: Internal (no external modulation capability)</td>
</tr>
</tbody>
</table>

**AM:**
- Modulation: sine, square, ramp
- Modulation frequency: 1 Hz to 20 kHz
- Depth: 0 to 100%

**FM:**
- Modulation: sine, square, ramp
- Modulation frequency: 1 Hz to 20 kHz
- Minimum carrier frequency: 10 Hz
- Deviation: 1 Hz to carrier frequency or (2e12 / carrier frequency), whichever is smaller

**FSK:**
- Modulation: 50% duty cycle square wave
- FSK rate: 1 Hz to 20 kHz
- Hop frequency: 2 x FSK rate to 10 MHz

**Sine**
- Frequency range: 0.1 Hz to 20 MHz
- Amplitude flatness: ± 0.5 dB (relative to 1 kHz)
- Harmonic distortion: ——40 dBc
- Spurious (non-harmonics): ——40 dBc
- Total harmonic distortion: 1%
- SNR (50 Ω load, 500 MHz bandwidth): 40 dB (typical); 30 dB (min)

**Square wave / pulse**
- Frequency range: 0.1 Hz to 10 MHz
- Duty cycle: 20 to 80%
- Duty cycle resolution: Larger of 1% or 10 ns
- Pulse width: 20 ns minimum
- Rise/fall time: 18 ns (10 to 90%)
- Pulse width resolution: 10 ns or 5 digits, whichever is larger
- Overshoot: < 2%
- Asymmetry (at 50% DC): ± 1% ± 5 ns
- Jitter (TIE RMS): 500 ps

**Ramp / triangle wave**
- Frequency range: 0.1 Hz to 200 kHz
- Linearity: 1%
- Variable symmetry: 0 to 100%
- Symmetry resolution: 1%

**Noise**
- Bandwidth: 20 MHz typical
Performance characteristics (continued)
