Backwards Compatibility SCPI	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

Remote Command	:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt :DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:RPOSition?
Example	:DISP:SEM:WIND:TRAC:X:RPOS LEFT :DISP:SEM:WIND:TRAC:X:RPOS?
Preset	CENTer
State Saved	Saved in instrument state
Range	Left|Center|Right
Backwards	:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOSition

Compatibility SCPI	

Auto Scaling

Toggles the scale coupling function On or Off.

Remote Command	`:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:SEMask:WINDow[1]:TRACe:X[:SCALe]:COUPle?`
Example	`:DISP:SEM:WIND:TRAC:X:COUP ON` `:DISP:SEM:WIND:TRAC:X:COUP?`
Couplings	When **Auto Scaling** is ON and the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set a value to either "Scale/Div" on page 1380 or "Ref Value" on page 1379 manually, **Auto Scaling** automatically changes to OFF
Preset	ON
State Saved	Saved in instrument state
Range	OFF|ON
Backwards Compatibility SCPI	`:DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle`

3.5.24.3 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Points

Sets the number of points displayed in the traces. The current value of points is displayed in the bottom-right corner of the display.

Remote Command	`[:SENSe]:SEMask:SWEep:POINts <integer>` `[:SENSe]:SEMask:SWEep:POINts?`
Example	`:SEM:SWE:POIN 4001` `:SEM:SWE:POIN?`
Preset	2001
State Saved	Saved in instrument state
Min	201

Max	10001
Annotation	On second line of annotations in bottom right corner

IF Dithering

Lets you turn IF Dithering on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to enhance the rejection of images and internally-generated spurious signals.

Remote Command	`[:SENSe]:SWEep:IF:DITHer OFF | ON | 0 | 1` `[:SENSe]:SWEep:IF:DITHer?`
Dependencies	Only appears in Spectrum Analyzer Mode in VXT models
Preset	`OFF`
State Saved	Saved in instrument state

Image Protection

Lets you turn IF Protection on or off. This is a technique used in unpreselected instruments (such as Keysight's modular instruments) to detect and suppress images and spurs that may be present in non-preselected hardware.

IF Protection takes two sweeps and by correlating the data between them, provides a single, correct power-versus-frequency trace.

Remote Command	`[:SENSe]:SWEep:IMAGeprot OFF | ON | 0 | 1` `[:SENSe]:SWEep:IMAGeprot?`
Dependencies	Only appears in Spectrum Analyzer Mode in VXT model M9421A
Preset	`ON`
State Saved	Saved in instrument state

3.5.25 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write, Trace Average, Max Hold, Min Hold**) and **View/Blank** setting for the selected trace.

3.5.25.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the **Trace** menu
Dependencies	For the Swept SA measurement: – In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View – When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when **Meas Method** is `RBW`, `FAST` or `FPOWer`, **Select Trace** is disabled
Preset	Trace 1
State Saved	Yes

3.5.25.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 3048 and its update mode.

There are four Trace Types:

– **Clear/Write**

– **Trace Average**

– **Max Hold**

– **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display,** are described fully in the "View/Blank" on page 3053 control description. Essentially, when **Update** is `ON`, a trace is updating, and when **Update** is `OFF` it is not. When **Display** is `ON`, it is visible and when **Display** is `OFF` it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	`WRITe`	`:TRAC2:TYPE WRIT`	See: "Clear/Write" on page 1386
Trace Average	`AVERage`	`:TRAC2:TYPE AVER`	See: "Trace Average" on page 1387

Option	Parameter	SCPI Example	Details
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 1388
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 1388

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the "View/Blank" on page 3053 state must be set to **Active** (**Update**: ON, **Display**: ON) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: "Trace Mode Backwards Compatibility Commands" on page 1384

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|…|6:TYPE?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|3:<meas>:TYPE?`
	where `<meas>` is the identifier for the current measurement

Example	`:TRAC:TYPE WRIT` `:TRAC:TYPE?`
Couplings	Selecting a **Trace Type** (by pressing any of the Trace Type selections or sending `:TRAC:TYPE`) sets the Trace to **Active** (**Update**: ON, **Display**: OFF), even if the same trace type was already selected When Detector setting is "Auto" (`[:SENSe]:<meas>:DETector:AUTO?`), Detector (`[:SENSe]:<meas>:DETector[:FUNCtion]?`) switches aligning with the switch of this parameter: "NORMal" with WRITe (Clear Write), "AVERage" with AVERage, "POSitive (peak)" with MAXHold, and "NEGative (peak)" with MINHold
Preset	Swept SA and Monitor Spectrum: WRITe All other measurements: AVERage Following **Preset**, all traces are cleared (all trace points set to mintracevalue)
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the "Trace Modes" were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called Trace Types) are Clear/Write, Trace Average, Max Hold and Min Hold. View and Blank are set separately under "View/Blank" on page 3053.

While this provides more flexibility, it also gives rise to potential backwards compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new Trace Type command has been added. The `:TRACe:MODE` command is retained for backwards compatibility, and the `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay` commands introduced for ongoing use. The old Trace Modes are selected using `:TRAC:MODE`, whose parameters are mapped into calls to `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay`, and the old global Averaging command `[:SENSe]:AVERage[:STATe]` is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup**, **Legacy Compatibility** menu is `ON`, the following is true for traces in Max Hold and Min Hold:

- They ignore the **Average/Hold** number; **Single** for Max Hold causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- Max Hold is not cleared on a **Restart**, **Single** or `:INIT:IMM`, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the Max Hold

Preset	`WRITe`
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	`:TRACe[1]|2|…|6:MODE WRITe | MAXHold | MINHold | VIEW | BLANk` `:TRACe[1]|2|…|6:MODE?`
Backwards Compatibility Notes	The legacy `:TRACe:MODE` command is retained for backwards compatibility. In conjunction with the legacy `:AVERage` command, it works as follows: – `:AVERage ON|OFF` sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the `[:SENSe]:AVERage[:STATe]` command description below – `:TRACe:MODE WRITe` sets `:TRACe:TYPE WRITe` (Clear/Write) unless average is true, in which case it sets it to `:TRACe:TYPE AVERage`. It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHold` (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay ON`, for the selected trace

	– `:TRACe:MODE BLANk` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANk`, the query response will not be what you sent `:TRACe[n]:MODE` was formerly used to set the type or "writing mode" of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold** As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does Also, previous to X-Series: – Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence – Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case
Preset	`OFF`
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	`[:SENSe]:AVERage[:STATe] ON | OFF | 1 | 0` `[:SENSe]:AVERage[:STATe]?`
Backwards Compatibility Notes	Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command `[:SENSe]:AVERage [:STATe] ON|OFF|1|0` was used to turn Averaging on or off In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command `[:SENSe]:AVERage[:STATe] OFF|ON|0|1.` When Average is turned on, any trace in Clear/Write will get put into Average. While Average is on, any trace put into Clear/Write by the old `:TRAC:MODE` command will instead get put into Average. When Average is turned off, any trace in Average will get put into Clear/Write

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average, Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average, Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup.**

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like Center Frequency or Attenuation), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup.**

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold,** clears the trace , initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold,** clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 3048 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

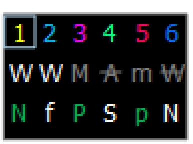
- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF; Display ON
Blank	Update OFF; Display OFF
Background	Update ON, Display OFF Allows a trace to be blanked *and* continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **Display**OFF is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **Update**OFF is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **Update**OFF, and Traces 4 and 6 have **Display**OFF.



See: "More Information" on page 1391

Notes	For the commands to control the two variables, Update and Display, see "Trace Update State On/Off" on page 1390 and "Trace Display State On/Off" on page 1390 below
Dependencies	When Signal ID is on, this key is grayed-out

Couplings	Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (Update ON and Display ON), even if that trace type was already selected Selecting a detector for a trace (pressing the key or sending [:SENS]:DET:TRAC) puts the trace in **Active** (**Update**ON and **Display**ON), even if that detector was already selected Selecting a "Math Function" on page 2604 other than OFF for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (**Update**ON and **Display**ON), even if that Math Mode was already selected Loading a trace from a file puts that trace in **View** regardless of the state it was in when it was saved; as does being the target of a **Copy** or a participant in an **Exchange**

Trace Update State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:UPDate[:STATe]?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 2 inactive (stop updating): `:TRAC2:UPD 0`
Couplings	Whenever you set **Update** to ON for any trace**,** the **Display** is set to ON for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	ON for Trace 1; OFF for 2–6
	For all other measurements:
	`1|0|0`
	ON for Trace 1; OFF for 2 &3

State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:DISPlay[:STATe]?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 1 visible:
	`:TRAC2:DISP 1`
	Blank trace 3:
	`:TRAC3:DISP 3`

Couplings	Whenever you set **Update** to `ON` for any trace**,** the **Display** is set to `ON` for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	`ON` for Trace 1; `OFF` for 2–6
	For all other measurements:
	`1|0|0`
	`ON` for Trace 1; `OFF` for 2 &3

State Saved	Saved in instrument state

More Information

When a trace becomes inactive, any update from the `:SENSe` system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display**=`OFF`) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update**=`ON`), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display**=`OFF` and/or **Update**=`OFF` does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

Trace Settings Table (UXM Only)

Lets you configure the Trace system using a visual utility.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "Multi Channel Synchronous Acquisition (UXM Only)" on page 890

Input Port (UXM)

Select input port for channel configuration.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2 RFIO1 | … | RFIO8` `[:SENSe]:RADio:MCHannel:PORT[1]|2?`
Example	`:RAD:MCH:PORT2 RFIO2` `:RAD:MCH:PORT2?`
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 2456 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 2456 is OFF, the label “Channel x” changes to “Unused” Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration
Preset	RFIO1|RFIO2
State Saved	Yes
Range	RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8 or RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8|RFIO 9|RFIO 10|RFIO 11|RFIO 12|RFIO

	13|RFIO 14|RFIO 15|RFIO 16
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:PORT[1]|2`

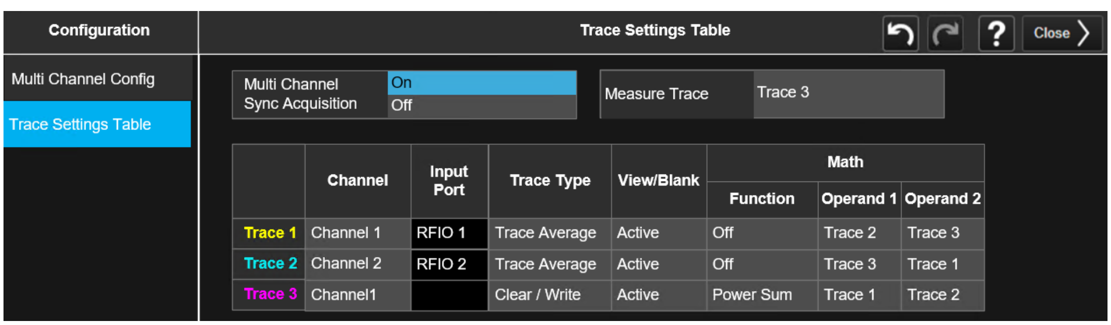
Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed OFF	ON	0	1` `[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed?`
Example	`:RAD:MCH:PORT2:LOCK ON` `:RAD:MCH:PORT2:LOCK?`
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:PORT[1]|2:LOCKed`

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.



Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "Multi Channel Synchronous Acquisition (UXM Only)" on page 890

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a :READ or :FETCh query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3 :CALCulate:<meas>:MTRace? <meas> is the identifier for the current measurement; any one of CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime
Example	Channel Power :CALC:CHP:MTR TRAC1 :CALC:CHP:MTR?
Dependencies	In the ACP measurement, this control is grayed-out when **Meas Method** is set to RBW or FAST, and only Trace 1 is enabled
Preset	TRACe1
State Saved	No
Range	Trace 1 | Trace 2 | Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 2456 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 2457 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	:TRACe[1]|2|3:<meas>:CHANnel CHANnel1 | CHANnel2 :TRACe[1]|2|3:<meas>:CHANnel?
Example	For the ACP measurement Trace 2 :TRAC2:ACP:CHAN CHAN2

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 2457 is On The unlocked channel is grayed-out
Preset	CHAN1|CHAN2|CHAN1
State Saved	Yes
Range	Channel 1|Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 890 is On This column is blank when Math Function is other than Off

3.5.25.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2610 controls.

– See "How trace math is processed" on page 1400

Remote Command	For option details, see "Trace Math Options" on page 1397
	For Swept SA Measurement (in SA Mode):
	`:CALCulate:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate:MATH? <trace_num>`
	where `<trace_num>` is any one of:
	`TRACE1|…|TRACE6`
	For all other measurements:
	`:CALCulate:<meas>:MATH <trace_num>, PDIFference | PSUM | LOFFset |`

	`LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate[:<meas>]:MATH? <trace_num>`
	where:
	`<meas>` is the identifier for the current measurement, and
	`<trace_num>` is any one of:
	`TRACe1|TRACe2|TRACe3`
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`
	Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB
	`:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`
	Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm
	`:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0`
	Turns off trace math for trace 1

Notes	The Trace Math Function command has 6 main set of parameters:
	- Set 1 defines the “result trace”:
	`TRACE1|…|TRACE6`
	-Set 2 defines the “function”:
	`PDIFference|PSUM|LOFFset|LDIFference|OFF`
	- Set 3 is a “trace operand” (1):
	`TRACE1|…|TRACE6`
	- Set 4 is a “trace operand” (2):
	`TRACE1|…|TRACE6`
	- Set 5 defines the “Log Offset” (in dB)
	- Set 6 defines the “Log Difference Reference” (in dBm)
	Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function
	The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message

	The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas
Dependencies	Trace Math is not available if **Normalize** is on Trace Math is not available if Signal ID is on None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated and the function does not turn on
Couplings	When a math function is changed for a trace, that trace is set to Display = `ON`; and Update = `ON`

Preset	For Swept SA Measurement (in SA Mode):
	`OFF,TRACE5,TRACE6,0,0 | OFF,TRACE6,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0 | OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE4,0,0 | OFF,TRACE4,TRACE5,0,0`
	For all other measurements:
	`OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0`

State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An "f" is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	`*OPC` can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

`DestinationTrace = 10 log(10(1/10)(FirstTrace) – 10(1/10)(SecondTrace))`

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is `mintracevalue`.

Power Sum (Op1 + Op2)

Calculates a power sum between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

`DestinationTrace = 10 log(10(1/10)(FirstTrace) + 10(1/10)(SecondTrace))`

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Log Offset (Op1 + Offset)

Calculates a log offset from the `First Trace` operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the `Offset` control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

`DestinationTrace = FirstTrace + Offset`

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in the trace operand is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the `Second Trace` operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

```
DestinationTrace = (FirstTrace - SecondTrace) + Reference
```

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at –5 dBm, and the reference is –25 dBm, then the destination trace will be –15 dBm.

Example: If the first operand trace1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in `FirstTrace` is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

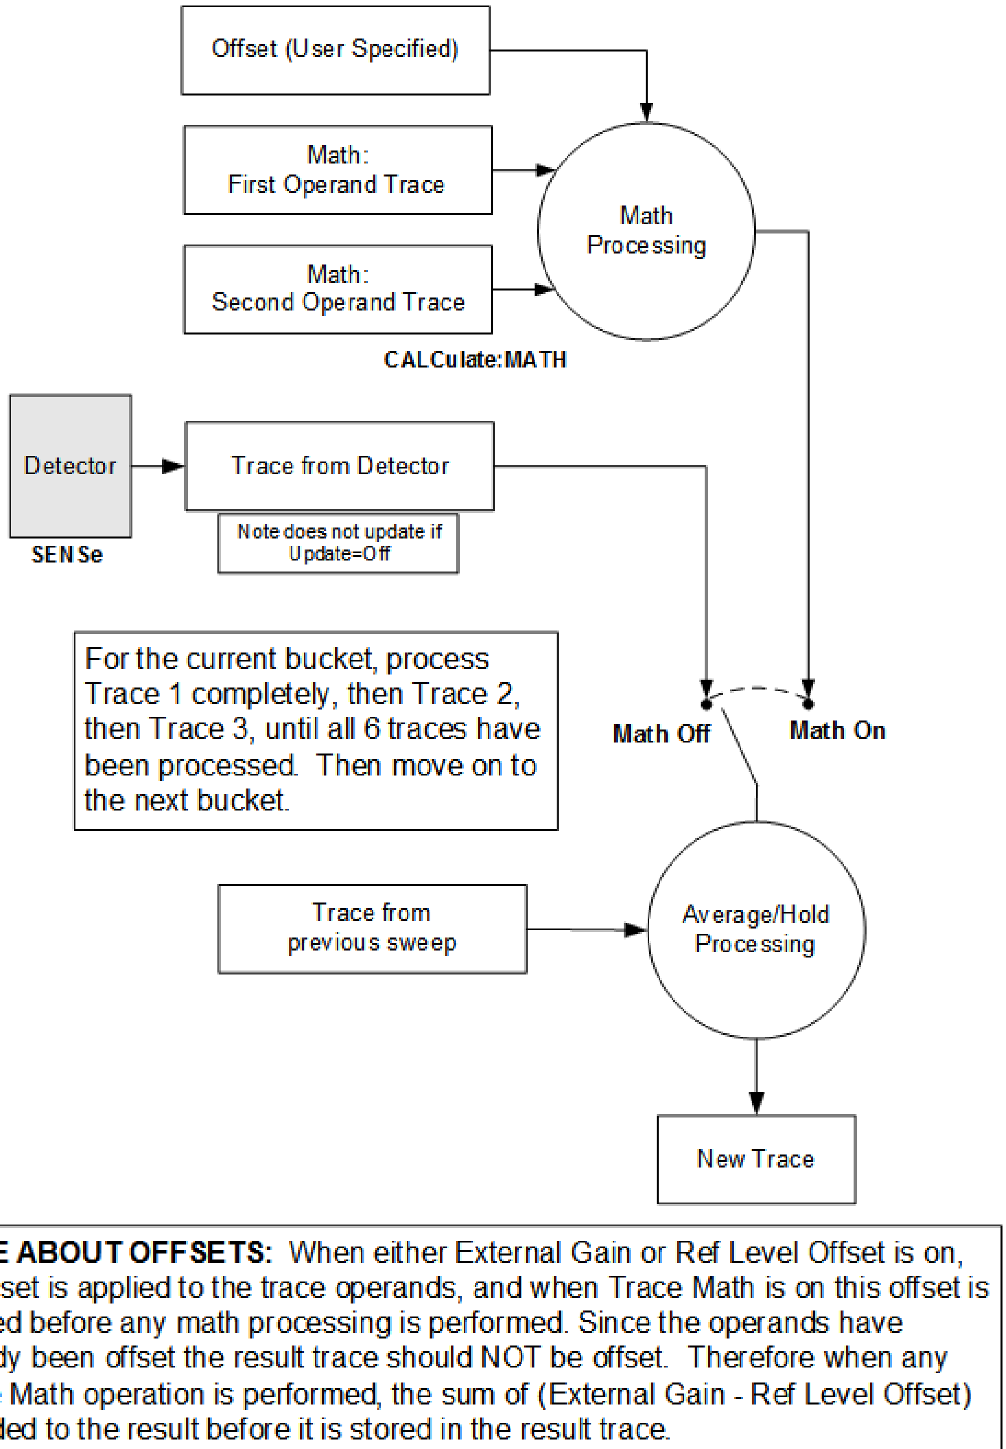
If neither of the above is true for a given point, then:

- If that point in `SecondTrace` is equal to `maxtracevalue`, the resultant point is `mintracevalue`.
- If that point in `SecondTrace` is equal to `mintracevalue`, the resultant point is `maxtracevalue`.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:



For each active trace, the current trace point is processed for `Trace 1`, then `Trace 2`, then `Trace 3`, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for `Trace 1`, `Trace 2` is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is `ON` for `Trace 4`, and its operand traces are `Trace 2` and `Trace 3`, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for `Trace 4`. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, `Trace 1` can be an average trace, which can be fed with an offset to `Trace 2`, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math `ON`, the Operand traces should have *lower* numbers than the trace (for example, using `Trace 4` as an operand for `Trace 1` will cause the data coming from `Trace 4` to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent `:CALCulate:MATH` command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	The following examples are for the Swept SA measurement
	Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:
	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`

Notes	See "Math Function" on page 2604 for how to specify Operands 1 and 2 using `:CALCulate:MATH`
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: `:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`
State Saved	The Log Offset value for each trace is saved in Instrument State
Min	–100 dB
Max	100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: `:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.5.25.4 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the "To Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	1

To Trace

Selects the trace to be copied from or exchanged with the "From Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	2

Copy

Executes a Trace Copy based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:COPY TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:COPY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On `:TRAC:COPY TRACE1,TRACE3`
Notes	The command is of the form: `:TRACe:COPY <source_trace>,<dest_trace>`
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset	For Swept SA Measurement (in SA Mode):
	`TRACE1, TRACE2`
	For all other measurements:
	`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:EXCHange TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:EXCHange TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `:TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Exchange Trace 1 and Trace 2 and put both traces in Update=`OFF`, Display=`ON`: `:TRAC:EXCH TRACE1,TRACE2`
Notes	The command is of the form: `:TRACe:EXCHange <trace_1>,<trace_2>`
Couplings	Both traces are put in **View** (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	`:TRACe[:<meas>]:PRESet:ALL`
Example	`:TRAC:PRES:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update** = `OFF`.

Remote Command	`:TRACe[:<meas>]:CLEar:ALL`
Example	`:TRAC:CLE:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
From Trace	Trace 1
To Trace	Trace 2

	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command	`:TRACe:<meas>:PRESet:EIRP`
Example	For OBW Meas: `:TRAC:OBW:PRES:EIRP`

3.5.25.5 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	`:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
	`:CALCulate:<meas>:MTRace?`
	`<meas>` is the identifier for the current measurement; any one of `CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime`

Example	Channel Power
	`:CALC:CHP:MTR TRAC1`
	`:CALC:CHP:MTR?`

Dependencies	In the ACP measurement, this control is grayed-out when **Meas Method** is set to `RBW` or `FAST`, and only Trace 1 is enabled
Preset	`TRACe1`
State Saved	No
Range	Trace 1 | Trace 2 | Trace 3

3.6 Spurious Emissions Measurement

The Spurious Emissions measurement identifies and determines the power level of spurious emissions in certain frequency bands.

Measurement Commands

The general functionality of "CONFigure" on page 4138, "INITiate" on page 4139, "FETCh" on page 4139, "MEASure" on page 4141, and "READ" on page 4140 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

Note that, in general, `:CONF:<Measurement>` resets the specified measurement settings to their defaults. X-Series permits the addition of the `NDEFault` node to the command, which prevents a measurement preset after a measurement switch.

The tables below list measurement commands for this measurement.

Command	Function
`:INITiate:SPURious`	Initiates a trigger cycle for the `SPUR` measurement, but does not return any data. You must then use `:FETC:SPUR[n]?` to retrieve data Does not change any measurement settings
`:CONFigure?`	Returns the long form name of current measurement, in this case, `SPURious`
`:CONFigure:SPURious`	Selects `SPUR` measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 1511
`:CONFigure:SPURious:NDEFault`	Selects `SPUR` measurement *without* affecting settings

The following queries are used to retrieve data. The type of data returned depends on the value of `n`.

Command	Function
`:FETCh:SPURious[n]?`	Retrieves the data defined by n
`:MEASure:SPURious[n]?`	Switches to `SPUR` measurement, restores default values, starts the measurement, then retrieves the data defined by `n`
`:READ:SPURious[n]?`	Starts the measurement, then retrieves the data defined by n

Remote Command Results

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value `n`. Note that these queries are *not* available when viewing the Range Table.

The value of the constant `SCPI_NAN`, mentioned below, is 9.91E37.

n	Return Value
1 or omitted	Returns a variable-length (1 + 6 * Spurs – up to 1201 entries) comma-separated list containing detailed information in the following format: Number of spurs in following list (Integer) *[Repeat the following for each spur]* – Spur # – Range # Spur was located (Integer) – Frequency of Spur (Hz, Float64) – Amplitude of Spur (dBm, Float32) – Absolute Limit (dBm, Float32) – Pass or Fail (1|0, Boolean)
2 – 21 (Average Trace)	Regardless of the Trace selection, returns a comma-separated list of the average trace data for the selected range (where range number = n – 1) using Detector 1. If selected range is not active, `SCPI_NAN` is returned for each trace data element
22	Returns the number of spurs found for the selected Measured Trace
23 – 42 (Average Trace)	Regardless of the Trace selection, returns a comma-separated list of the average trace data for the selected range (where range number = n – 22) using Detector 2. If selected range is not active or Detector 2 selection is off, `SCPI_NAN` is returned for each trace data element
43 – 62 (Maximum Hold Trace)	Regardless of the Trace selection, returns a comma-separated list of the maximum hold trace data for the selected range (where range number = n – 42) using Detector 1. If selected range is not active, `SCPI_NAN` is returned for each trace data element
63 – 82 (Minimum Hold Trace)	Regardless of the Trace selection, returns a comma-separated list of the minimum hold trace data for the selected range (where range number = n – 62) using Detector 1. If selected range is not active, `SCPI_NAN` is returned for each trace data element
83-102	Reserved
103-122	Reserved
123-142 (Clear/Write Trace)	Regardless of the Trace selection, returns a comma-separated list of the clear/write trace data for the selected range (where range number = n – 122) using Detector 1. If selected range is not active, `SCPI_NAN` is returned for each trace data element
143-162 (Clear/Write Trace)	Regardless of the Trace selection, returns a comma-separated list of the clear/write trace data for the selected range (where range number = n – 142) using Detector 2. If selected range is not active or Detector 2 selection is off, `SCPI_NAN` is returned for each trace data element
163-182 (Trace 1)	Returns a comma-separated list of the trace data of Trace 1 for the selected range (where range number = n – 162). If selected range is not active, `SCPI_NAN` is returned for each trace data element
183-202 (Trace 2)	Returns a comma-separated list of the trace data of Trace 2 for the selected range (where range number = n – 182). If selected range is not active, `SCPI_NAN` is returned for each trace data element
203-222 (Trace 3)	Returns a comma-separated list of the trace data of Trace 3 for the selected range (where range number = n – 202). If selected range is not active, `SCPI_NAN` is returned for each trace data element
223	Returns "Marker Table" on page 1414 data as a series of comma separated values in the following form:

n	Return Value
	<Marker Number>,<Marker Trace>,<X>,<Y>,<Reserved>,<Reserved> Only markers that are enabled are included. <Reserved> items are returned as SCPI_NAN The data is returned in the current sort order as displayed in the **Marker Table**

3.6.1 Views

This measurement has two predefined views:

#	Name	SCPI
1	"Graph + Metrics" on page 1461	RESult
2	"All Ranges" on page 1461	ALL

These are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change, depending on which window is selected.

Remote Command	`:DISPlay:SPURious:VIEW[:SELect] RESult | ALL` `:DISPlay:SPURious:VIEW[:SELect]?`
Example	`:DISP:SPUR:VIEW RANG` `:DISP:SPUR:VIEW?`
Preset	`RESult`
State Saved	No
Range	Graph + Metrics | All Ranges

3.6.1.1 Graph + Metrics

Windows: "Graph" on page 1411,"Table" on page 1412

Select Graph + Metrics to view measurement results.

- The upper window displays a trace of the range that contains the currently selected spur
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	`:DISP:SPUR:VIEW RES`

3.6.1.2 All Ranges

Windows: "Graph" on page 1411,

Select All Ranges to view measurement results for all the ranges.

- The upper window displays a merged trace of all the ranges
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	`:DISP:SPUR:VIEW ALL`

3.6.2 Windows

The following windows are available in this measurement:

1. "Graph" on page 1411
2. "Table" on page 1412
3. "All Range Table" on page 1413
4. "Gate" on page 1414
5. "Marker Table" on page 1414

The **Gate** Window is available only when "Gate View On/Off" on page 4061 is `ON` in **Gate Settings** under **Trigger**.

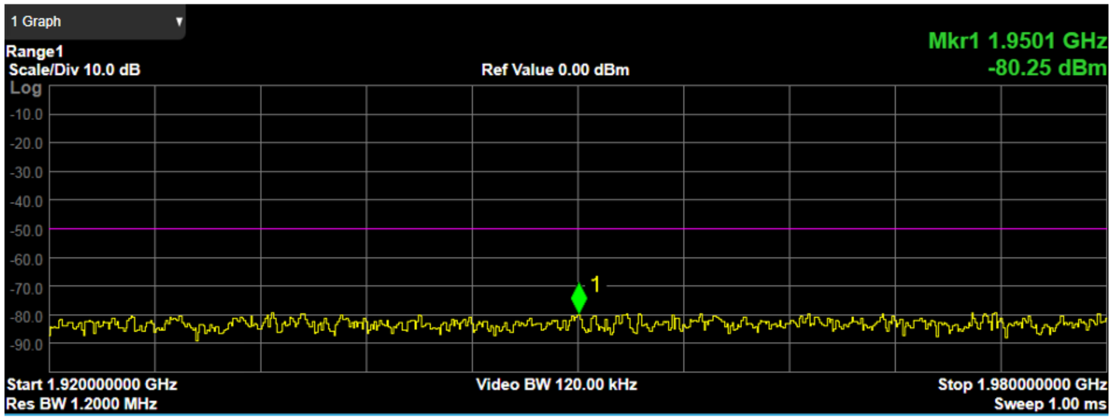
3.6.2.1 Graph

Window #1 & #3

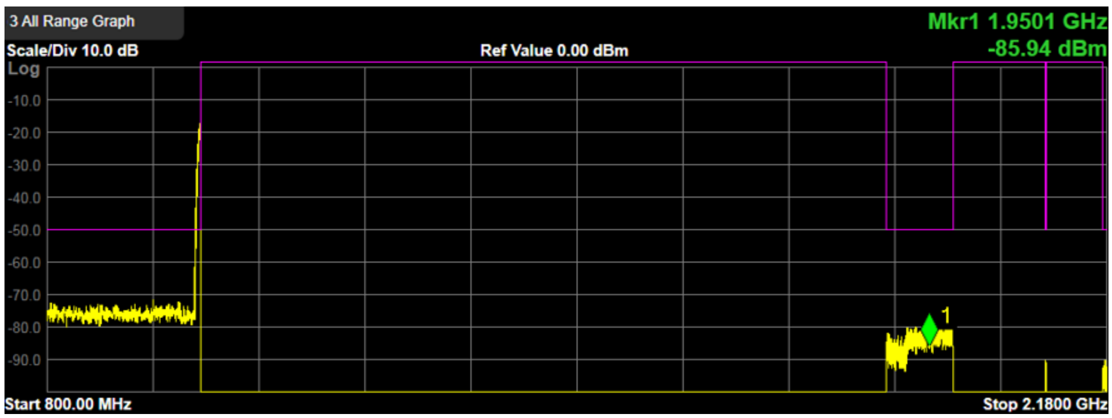
Appears in several Views, as follows:

View	Size	Position
Graph + Metrics	Three fifth, full width	Top
All Ranges	Three fifth, full width	Top
Gate View	One third, full width	Middle

When Graph + Metrics is selected



When All Ranges is selected



3.6.2.2 Table

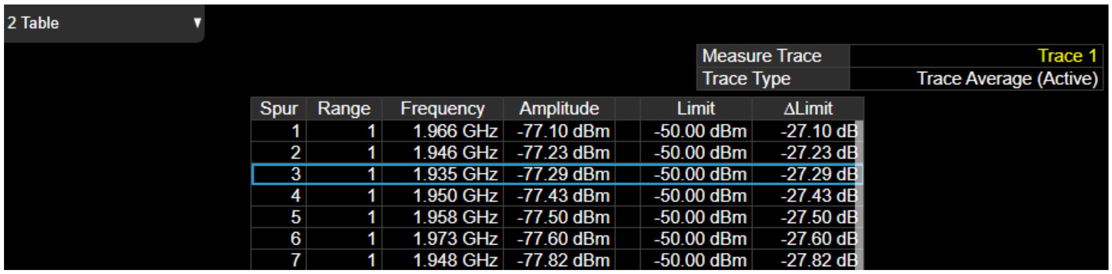
Window #2

The spurs listed are within the current value of the Marker Peak Excursion setting of the absolute limit. All the spurs listed passed. Any spur that has failed the absolute limit has an ‘F’ beside it.

Result	Units	Min	Max
Spur	N/A	0	200
Range	N/A	1	20
Frequency	Hz	Analyzer Min	Analyzer Max
Amplitude	dBm	Analyzer Min	Analyzer Max
Limit	dBm	-200	50
ΔLimit	dBm	(Limit - Amplitude)	

Views in which the **Table** window appears:

View	Size	Position
Graph + Metrics	Two fifth, full width	Bottom
Gate View	One third, full width	Bottom



Spur	Range	Frequency	Amplitude	Limit	ΔLimit
1	1	1.966 GHz	-77.10 dBm	-50.00 dBm	-27.10 dB
2	1	1.946 GHz	-77.23 dBm	-50.00 dBm	-27.23 dB
3	1	1.935 GHz	-77.29 dBm	-50.00 dBm	-27.29 dB
4	1	1.950 GHz	-77.43 dBm	-50.00 dBm	-27.43 dB
5	1	1.958 GHz	-77.50 dBm	-50.00 dBm	-27.50 dB
6	1	1.973 GHz	-77.60 dBm	-50.00 dBm	-27.60 dB
7	1	1.948 GHz	-77.82 dBm	-50.00 dBm	-27.82 dB

Measure Trace

See "Measure Trace" on page 2614.

Trace Type

This is the trace type (and view/blank parameter) of a trace specified by Measure Trace.

3.6.2.3 All Range Table

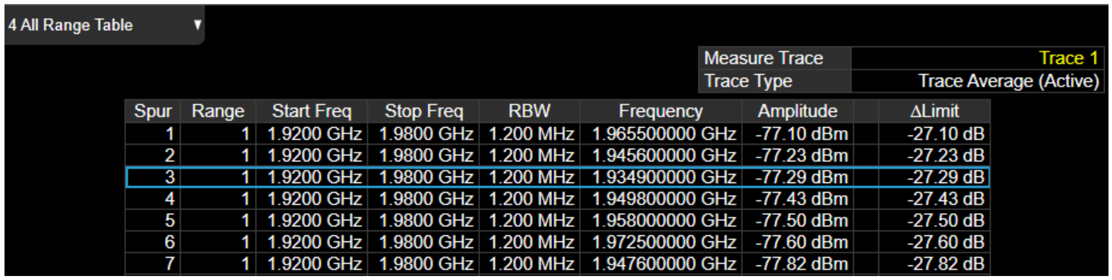
Window #4

The spurs listed are within the current value of the Marker Peak Excursion setting of the absolute limit. All the spurs listed passed. Any spur that has failed the absolute limit displays ‘F’ beside it.

Result	Units	Min	Max
Spur	N/A	0	200
Range	N/A	1	20
Start Freq	See "Start Freq" on page 1483 under Meas Setup		
Stop Freq	See "Stop Freq" on page 1484 under Meas Setup		
RBW	See "Res BW" on page 1486 under Meas Setup		
Frequency	Hz	Analyzer Min	Analyzer Max
Amplitude	dBm	Analyzer Min	Analyzer Max
Limit	dBm	-200	50
ΔLimit	dBm	(Limit - Amplitude)	

Views in which the **All Range Table** window appears:

View	Size	Position
All Ranges	Two fifth, full width	Bottom
Gate View	One third, full width	Bottom



4 All Range Table

Measure Trace	Trace 1
Trace Type	Trace Average (Active)

Spur	Range	Start Freq	Stop Freq	RBW	Frequency	Amplitude	ΔLimit
1	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.965500000 GHz	-77.10 dBm	-27.10 dB
2	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.945600000 GHz	-77.23 dBm	-27.23 dB
3	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.934900000 GHz	-77.29 dBm	-27.29 dB
4	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.949800000 GHz	-77.43 dBm	-27.43 dB
5	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.958000000 GHz	-77.50 dBm	-27.50 dB
6	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.972500000 GHz	-77.60 dBm	-27.60 dB
7	1	1.9200 GHz	1.9800 GHz	1.200 MHz	1.947600000 GHz	-77.82 dBm	-27.82 dB

3.6.2.4 Gate

Window #5

Turning on "Gate View On/Off" on page 4061 displays the **Gate** Window, which allows you to see your gating signal at the same time as the measured data.

Views in which the **Gate** window appears:

View	Size	Position
Gate View	One third, full width	Top

3.6.2.5 Marker Table

Window# 6

Displays a table containing detailed information about all the markers in the current measurement. It can be selected from the Data control on the Window Title. There is no specific view in which the **Marker Table** window turns on, it is on by demand.

3.6.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.6.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

Remote Command	`:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real>` `:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:RLEVel?`
Example	`:DISP:SPUR:WIND:TRAC:Y:RLEV 10 dBm` `:DISP:SPUR:WIND:TRAC:Y:RLEV?`
Couplings	When "Auto Scaling" on page 1416 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** changes to `OFF` Attenuation is not coupled to "Ref Value" on page 1415
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	–/+250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	`[:SENSe]:SPURious:POWer[:RF]:LEVel` `:DISPlay:SPURious:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel`

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

Remote Command	`:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ampl>` `:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?`
Example	`:DISP:SPUR:WIND:TRAC:Y:PDIV 10 dB` `:DISP:SPUR:WIND:TRAC:Y:PDIV?`
Couplings	Coupled to "Scale Range" on page 1416 as follows **Scale/Div** = **Scale Range**/10 (number of divisions) When **"Auto Scaling" on page 1416** is ON, this value is automatically determined by the measurement result When you change a value, **Auto Scaling** automatically changes to `OFF`

Preset	Automatically calculated
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	`:DISPlay:SPURious:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision`

Scale Range

Sets the Y-Axis scale range.

Remote Command	Replace `<meas>` with the identifier for the current measurement
	`:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_ampl>`
	`:DISPlay:<meas>:WINDow[1]:TRACe:Y[:SCALe]:RANGe?`

Example	`:DISP:CHP:WIND:TRAC:Y:RANG 100` `:DISP:CHP:WIND:TRAC:Y:RANG?`
Couplings	Coupled to **Scale/Div** as follows **Scale Range** = **Scale/Div** * 10 (number of divisions) When you change this value, **Auto Scaling** automatically changes to `OFF`
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Preset	`TOP`
State Saved	Saved in instrument state
Range	Top | Center | Bottom
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position

Auto Scaling

Toggles **Auto Scaling** On or Off.

Remote Command	`:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:SPURious:WINDow[1]:TRACe:Y[:SCALe]:COUPle?`
Example	`:DISP:SPUR:WIND:TRAC:Y:COUP OFF` `:DISP:SPUR:WIND:TRAC:Y:COUP?`
Couplings	When **Auto Scaling** is `ON`, and the **Restart** front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change the value of "Scale/Div" on page 1415, "Ref Value" on page 1415 or "Scale Range" on page 1416, **Auto Scaling** automatically changes to `OFF` When **Auto Scaling** is `OFF`, the measurement uses the current reference level settings When **Auto Scaling** is `ON`, the instrument automatically sets the reference level such that the absolute limit is positioned two divisions down from the top of the display. This is the most useful setting when searching for spurs. The algorithm used for determining the ref level is Ref Level = Absolute Limit + (2 * Scale/Div). All other reference level settings are left as the current base instrument settings
Preset	1
State Saved	Saved in instrument state
Range	`OFF|ON`
Backwards Compatibility SCPI	`[:SENSe]:SPURious:POWer[:RF]:RANGe:AUTO` `:DISPlay:SPURious:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle`

3.6.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 1418
- See "Single-Attenuator Configuration" on page 1418

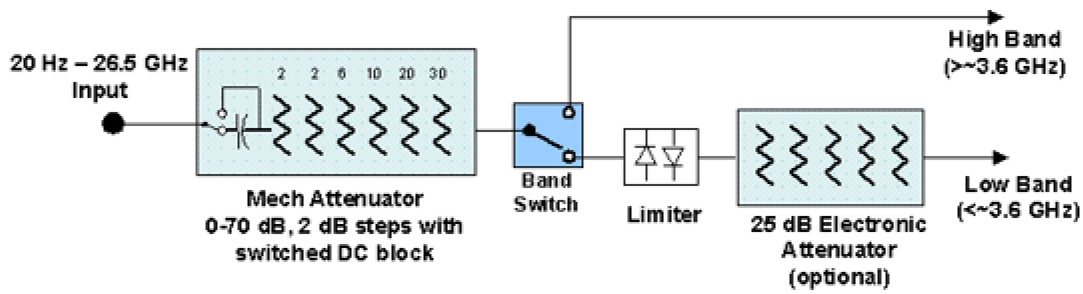
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

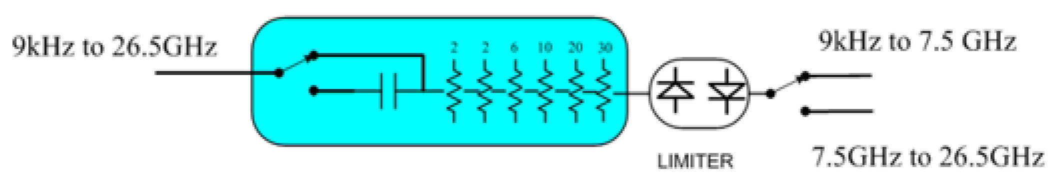
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

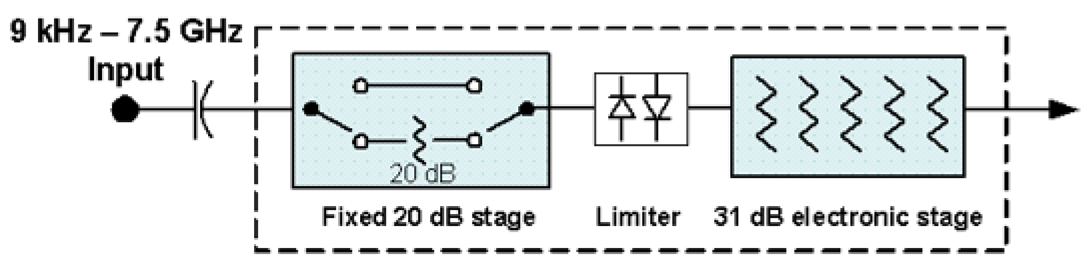


Configuration 2: Mechanical attenuator, no optional electronic attenuator



Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator **Single Attenuator**

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 3228 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten
- If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 3222 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 3251 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 1422

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of

	Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 3231 See "Attenuator Configurations and Auto/Man" on page 1422 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 3227 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	**Auto** The Auto value is 10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: *Atten: <total> dB (e<elec>)* The e letter is in amber in Single-Attenuator configurations

	For example: Dual-Attenuator configuration: *Atten: 24 dB (e14)* Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB Single-Attenuator configuration: *A: 24 dB (e14)* Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation) When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** `ON`: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	`ON`

Attenuator Configurations and Auto/Man

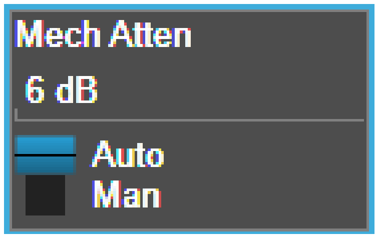
As described under "Attenuation" on page 3225, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1420 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 3231 for more about “soft” attenuation.

NOTE	In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1425

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation’s specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no “electronic attenuator”; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a “soft” attenuation. The “soft” attenuation is treated as an addition to the “main” attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation**

	control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 3253 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1425
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON`

	:POW:EATT:STAT?
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1426 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 3236.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the "Adjust Atten for Min Clipping" on page 3234 function.

When `ON`, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` restarts the measurement and then executes the function.

When `OFF`, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

“Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed”

This message is *not* generated if the command is sent.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart?`
Example	`:POW:RANG:OPT:REST OFF` `:POW:RANG:OPT:REST?`

Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when [:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate is executed.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?
Example	:POW:RANG:OPT:TYPE EONL :POW:RANG:OPT:TYPE?
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 3234 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 1429

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto

Selection	SCPI	Note
		ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 3231 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1428 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

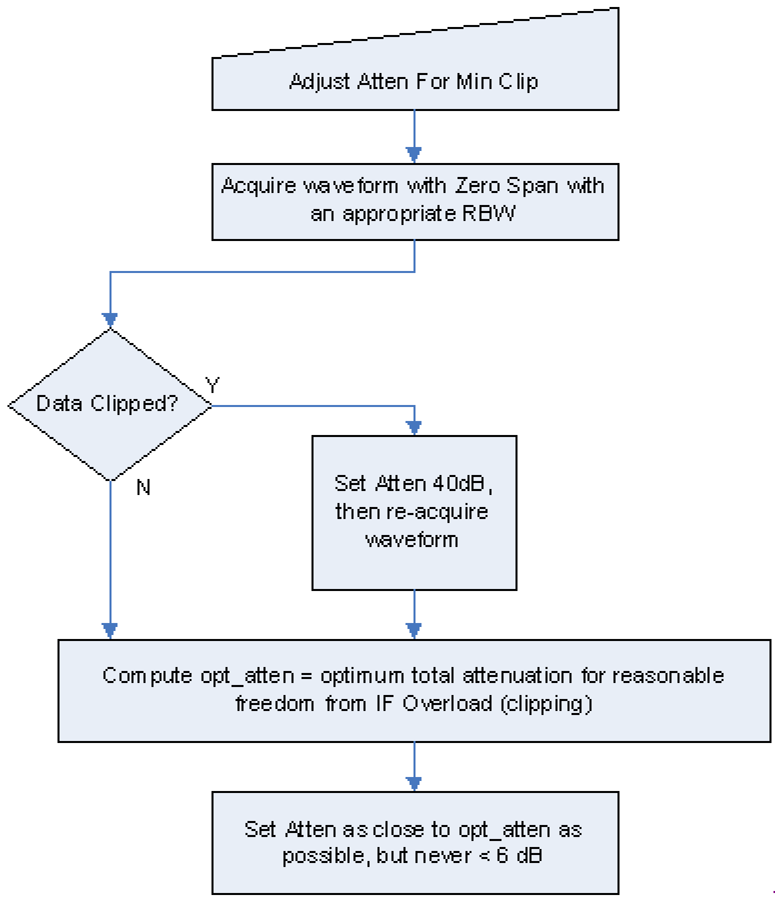
Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) OFF aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not OFF
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

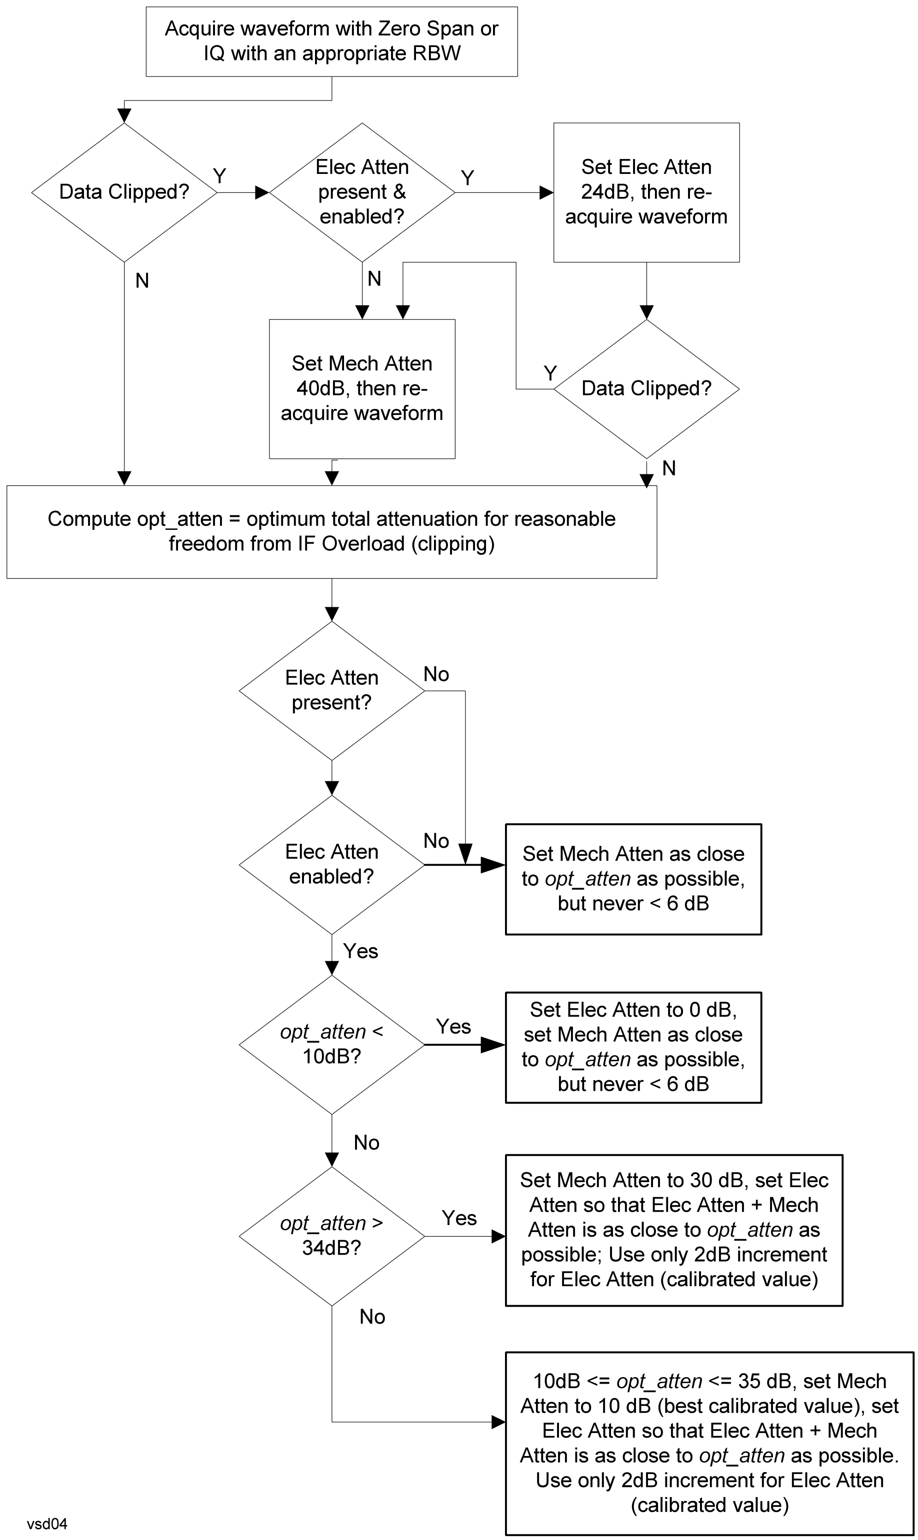
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

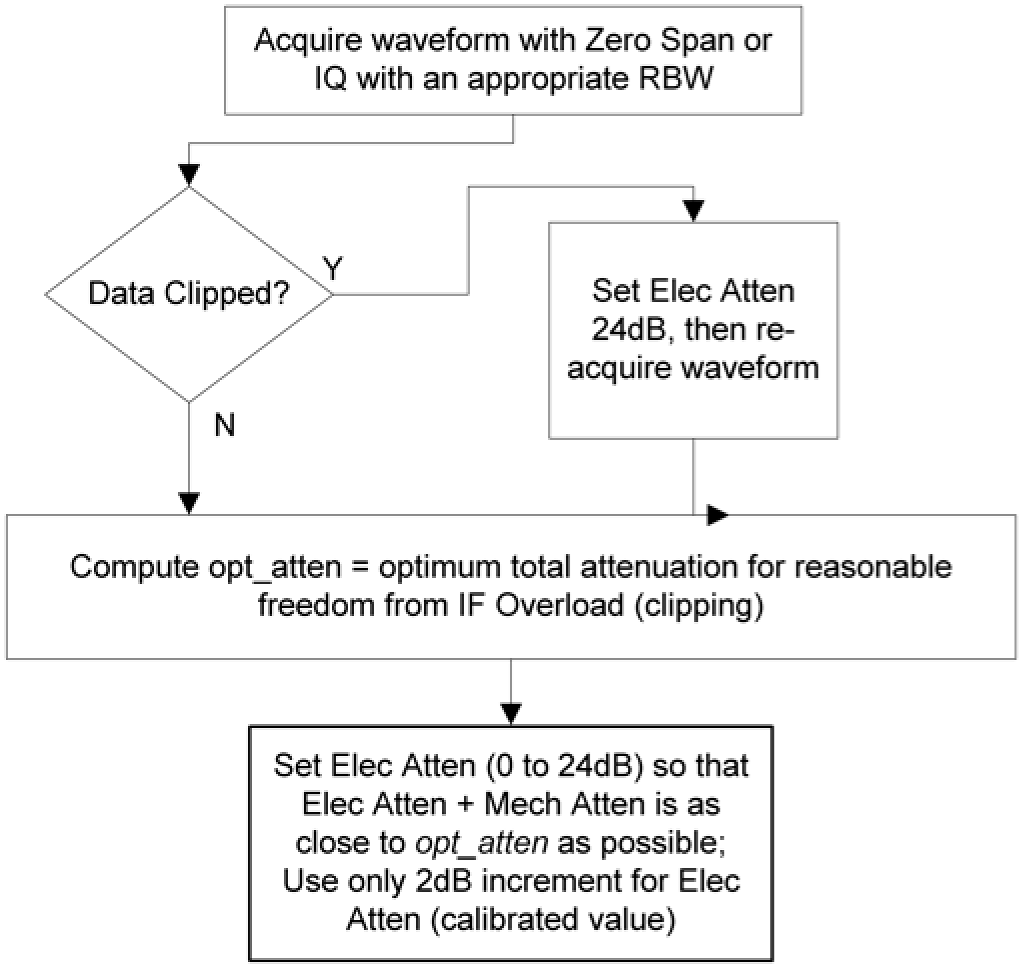
"Adjust Atten for Min Clipping" on page 3234 or "Pre-Adjust for Min Clipping" on page 1428 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Data Clipped?
Y
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= *opt_atten* <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 1428 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.6.3.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "Restart Meas on Adjust Atten" on page 3235 under "Attenuation" on page 3225.

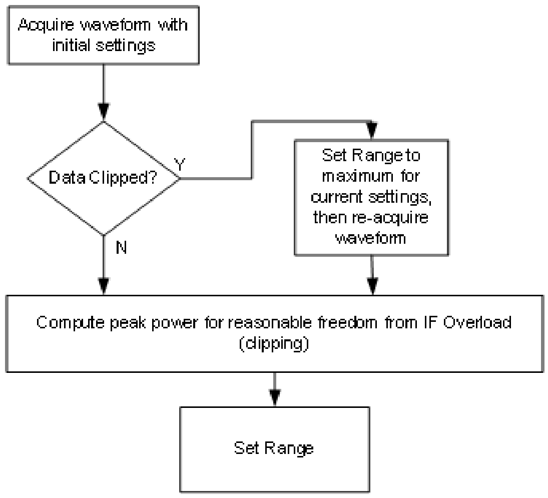
Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 3245 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`
Example	`:POW:RANG:PAR 12 dB`
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	VXT Models M9410A/11A: 0 dB All Others: 10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	VXT Models M9410A/11A: 50 dB All Others: 20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 3247. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`	
Example	`:POW:RANG:MIX:OFFS -5 dB`	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.6.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 3264 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range

between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 3250 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 1437.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 3250
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated

3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 3249 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz

State Saved	The **Preselector Adjust** value set by "Presel Center" on page 3249, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz” When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 3251. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

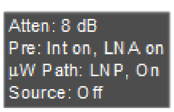
For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 3251, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 1441

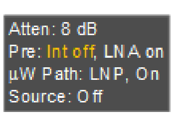
Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled
Preset	`OFF`
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to `ON`). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 1446
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 1448
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 1449

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 3249 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable.** In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated **Low Noise Path Enable** and **Full Bypass Enable** are grayed-out if the current measurement does not support them **Low Noise Path Enable** and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"
Preset	see table below
State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable

Preset:

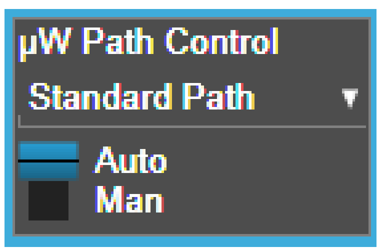
Mode	Value
IQ Analyzer Pulse RTSA Avionics	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
All other Modes	`STD`

–

Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:



This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Measurement	µW Path Control Auto behavior
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when 'Enabled Wideband IF for FFT' is OFF or 'Sweep Type Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious	Always Standard Path

Measurement	µW Path Control Auto behavior
Emissions	
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON` `:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 1444 above
Preset	ON
Range	ON|OFF

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used,

whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

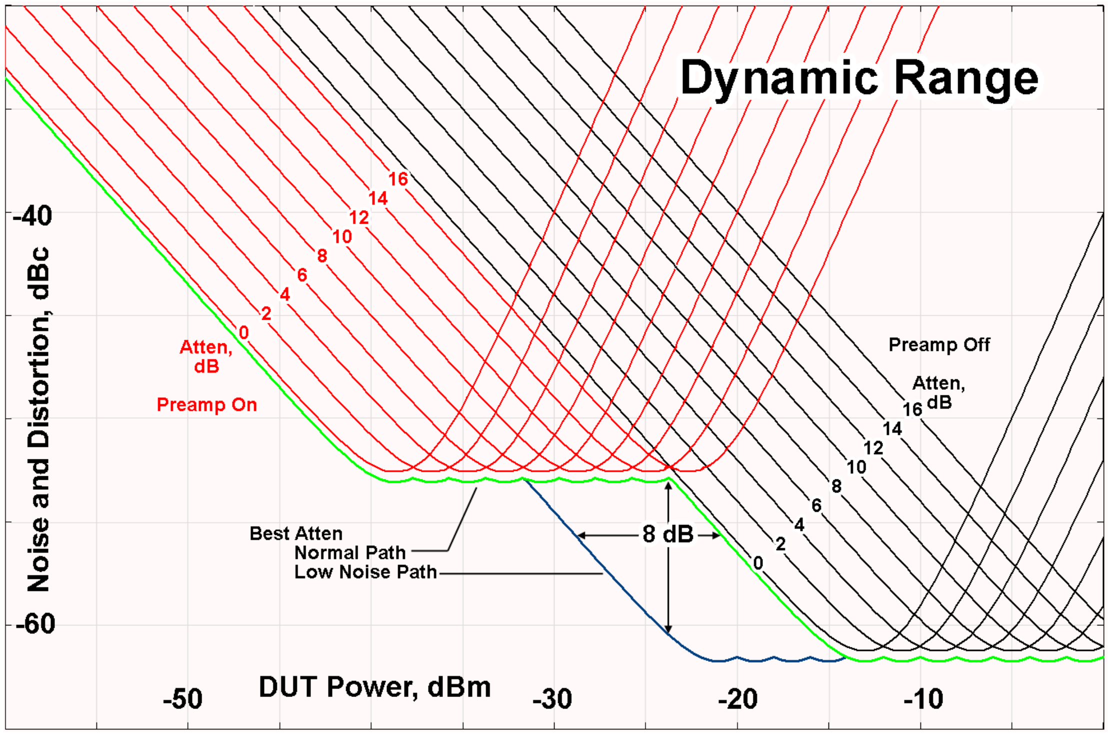
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION **When Full Bypass Enable is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently,**

whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

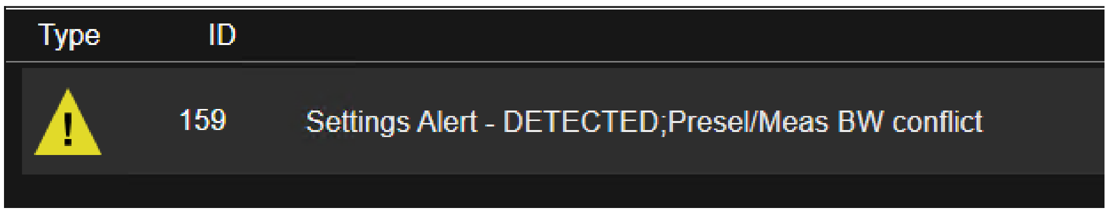
When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

.



Allow Full Bypass in Auto

Enable or disable Full Bypass in µW Path Auto rule. See "µW Path Control" on page 3254.

When this function is ON, and "µW Path Control" on page 3254 is in AUTO, it is possible for the auto rules to select the FULL Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the FULL Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
"Full Bypass Enabled, maximum safe input power reduced"

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?`
Example	`:POW:MW:PATH:AUTO:FULL ON` `:POW:MW:PATH:AUTO:FULL?`
Dependencies	Only appears if Option FBP is installed, and in the following measurements – 5GNRMode: Modulation Analysis and IQ Waveform – WLAN Mode: IQ Waveform – Channel Quality Mode: Group Delay and Noise Power Ratio
Preset	OFF
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two

traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

– There is some speed cost due to the need to take multiple captures

– Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: OFF N9042B+V3050A: ON M9410A/11A: ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

– NORMal - mathematically removes all image and multiple responses of signals present at the input

– ADVanced - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: ADVanced N9042B+V3050A: NORMal
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

– NORMal – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for NARRow (below)

– NARRow– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept

	method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when **Software Preselection** is enabled
Preset	N9041B: NORMal N9042B+V3050A: NARRow
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in SA Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 1455 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF

Meas	Mode	Preset
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.6.4 BW

There is no **BW** functionality in this measurement.

3.6.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.6.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View, or Window.

Center Frequency On/Off

Turns the display of **Center Frequency** on the **Meas Bar** On or Off.

Remote Command	:DISPlay:SPURious:FREQuency:CENTer[:STATe] ON | OFF | 1 | 0 :DISPlay:SPURious:FREQuency:CENTer[:STATe]?
Example	:DISP:SPUR:FREQ:CENT ON :DISP:SPUR:FREQ:CENT?
Preset	ON
State Saved	Yes

3.6.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1 :DISPlay:GRATicule[:STATe]?
Example	:DISP:GRAT OFF
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? This command is accepted for backwards compatibility with older instruments, but the WINDow, TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When OFF, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the Trace section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When OFF, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is OFF, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	:DISPlay:VIEW:ADVanced:SELect
Rename User View	:DISPlay:VIEW:ADVanced:REName
Delete User View	:DISPlay:VIEW:ADVanced:DELete
Create User View	:DISPlay:VIEW:ADVanced:NAME
Select Screen	:INSTrument:SCReen:SELect
Delete Screen	:INSTrument:SCReen:DELete
Delete All But This Screen	:INSTrument:SCReen:DELete:ALL
Add Screen	:INSTrument:SCReen:CREate
Rename Screen	:INSTrument:SCReen:REName
Sequencer On/Off	:SYSTem:SEQuencer

Remote Command	:DISPlay:ENABle OFF | ON | 0 | 1 :DISPlay:ENABle?
Example	:DISP:ENAB OFF
Couplings	:DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does *not* change the state of :DISP:ENAB
Preset	ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTem:PRESet
State Saved	Not saved in instrument state
Backwards Compatibility Notes	:SYST:PRES no longer turns on :DISPlay:ENABle as it did in legacy analyzers

3.6.5.3 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

This measurement has two predefined views:

#	Name	SCPI
1	"Graph + Metrics" on page 1461	RESult
2	"All Ranges" on page 1461	ALL

These are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change, depending on which window is selected.

Remote Command	`:DISPlay:SPURious:VIEW[:SELect] RESult | ALL` `:DISPlay:SPURious:VIEW[:SELect]?`
Example	`:DISP:SPUR:VIEW RANG` `:DISP:SPUR:VIEW?`
Preset	`RESult`
State Saved	No
Range	Graph + Metrics | All Ranges

Graph + Metrics

Windows: "Graph" on page 1411,"Table" on page 1412

Select Graph + Metrics to view measurement results.

- The upper window displays a trace of the range that contains the currently selected spur
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	`:DISP:SPUR:VIEW RES`

All Ranges

Windows: "Graph" on page 1411,

Select All Ranges to view measurement results for all the ranges.

- The upper window displays a merged trace of all the ranges
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	`:DISP:SPUR:VIEW ALL`

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`

Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL "Baseband"`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME "Baseband"` Creates a new View named `Baseband` from the current View, and selects it as the current View

Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN "Baseband"`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`

Example	:DISP:VIEW:ADV:DEL
Notes	<alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <alphanumeric> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated If the display is disabled (via :DISP:ENAB OFF) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	:DISPlay:VIEW:ADVanced:DELete:ALL
Example	:DISP:VIEW:ADV:DEL:ALL
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, :DISPlay:VIEW[:SELect] and :DISPlay:VIEW:NSEL, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	:DISPlay:VIEW:ADVanced:CATalog?
Example	:DISP:VIEW:ADV:CAT?
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: "Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1" No distinction is made between Predefined and User Views

	If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3275), then query the list of available Views, the result is undefined

3.6.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some settings in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called "Meas Global" and are unaffected by "Meas Preset" on page 1511. For example, Center Frequency is the same for all measurements - it does not change as you change measurements.

3.6.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets Carrier Reference Frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple **Center Frequency** parameter used in most measurements does not apply here. Instead, **Carrier Reference Frequency** is the key parameter.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- Number of Component Carriers is 1
- Center Freq Offset is 0 Hz
- Center Frequency mode is Auto

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, **Center Frequency** mode remains Auto, and **Carrier Reference Frequency** changes to the same value. The major purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD, in which `:SENSe:FREQuency:CENTer` is used to set up the frequency of the measurement.

See "More Information" on page 1466

Remote Command	For LTE-A, 5G NR Modes:
	`[:SENSe]:CCARrier:REFerence <freq>`
	`[:SENSe]:CCARrier:REFerence?`
	For MSR Mode:
	`[:SENSe]:CARRier:REFerence <freq>`
	`[:SENSe]:CARRier:REFerence?`

Example	For LTE-A, 5G NR Modes:
	`:CCAR:REF 2GHz`
	`:CCAR:REF?`
	For MSR Mode:
	`:CARR:REF 2GHz`
	`:CARR:REF?`

Dependencies	Only available in LTE-A FDD/TDD, 5G NR and MSR Modes
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as **Center Frequency**

More Information

In most applications, **Center Frequency** is generally where the carrier center is located, and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are based on carrier center frequencies and bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The **Center Frequency** defined here is only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers, or a range far away from the component carriers to see spurious. The **Center Frequency** in these three measurements has a different meaning, therefore it is a separate setting from **Carrier Reference Frequency**.

Carrier center frequencies are defined using offsets from **Carrier Reference Frequency**, which determine absolute frequency locations, and which can be set as both absolute and relative frequency from the carrier reference frequency.

Since **Center Frequency** is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the Frequency menu of these measurements.

3.6.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

3.6.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a **Peak Search**, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

On any menu tab that displays **Select Marker**, the first control is always **Marker Frequency | Time**.

Notes	The selected marker is remembered even when not in the **Marker** menu and is used if a Search is done, or a Band Function is turned on, or for Signal Track, or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for **Normal** and **Delta** markers

3.6.7.2 Settings

The controls on this tab include the **Marker** active function and a radio button selection for the marker control mode (**Normal**, **Delta**, or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X-Axis value in the current marker X-Axis Scale unit. It has no effect if the control mode is `OFF`, but is the SCPI equivalent of entering an X value if the control mode is **Normal** (`POSition`) or `DELTa`.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:X <freq>` `:CALCulate:SPURious:MARKer[1]|2|…|12:X?`
Example	`:CALC:SPUR:MARK2:X 25 kHz` `:CALC:SPUR:MARK3:X?`
Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error “Invalid suffix” is generated The query returns the marker’s absolute X Axis value if the control mode is **Normal**, or the offset from the marker’s reference marker if the control mode is **Delta**. The query is returned in the fundamental units for the current marker X Axis scale: Hz for **Frequency** and Inverse Time, seconds for Period and Time
Preset	After a preset, all markers are turned `OFF`, so Marker X-Axis Value query returns Not A Number (`NAN`)
State Saved	Saved in instrument state
Min/Max	–/+9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **Off,** but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** - except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:X:POSition <real>` `:CALCulate:SPURious:MARKer[1]|2|…|12:X:POSition?`
Example	`:CALC:SPUR:MARK10:X:POS 300` `:CALC:SPUR:MARK10:X:POS?`
Notes	The query returns the marker’s absolute X-Axis value in trace points if the control mode is **Normal**, or the offset from the marker’s reference marker in trace points if the control mode is **Delta.** The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to

	trace points . When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is `OFF`, the response is Not A Number
Preset	After a preset, all markers are turned `OFF`, so Marker X-Axis Value query returns Not A Number (`NAN`)
State Saved	Saved in instrument state
Min/Max	–/+9.9E+37

Marker Y Axis Value (Remote Query only)

Returns the marker Y Axis value in the current marker Y Axis unit.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:Y?`
Example	`:CALC:SPUR:MARK11:Y?`
Notes	Returns the marker Y-Axis result, if the control mode is **Normal** or **Delta**. If the marker is `OFF`, the response is Not A Number In the Complex Spectrum measurement, when the marker is on and Marker Trace is set to IQ, it returns I and Q values Case #1 - MarkerTrace SPEC, I or Q: returns a single double value – `>:CALC:SPEC:MARK1:Y?` – `-2.402406506109E+001` Case #2 - MarkerTrace IQ: returns a double array of two values, the first is I, and the second is Q – `>:CALC: SPEC:MARK1:Y?` – `-3.006944493834E-003,+9.9870666467354E-004` The IQ selection is for backward compatibility purposes. It is recommended that the users use the I and/or Q selection instead
Preset	Result dependent on Marker setup and signal source
State Saved	No
Backwards Compatibility SCPI	`:CALCulate:SPURious:MARKer[1]|2|…|12:FUNCtion:RESult?`

Marker Mode

Sets the marker control mode to `POSition` (**Normal**), `DELta`, or `OFF`. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is `OFF`, pressing **Marker** sets it to `POSition` and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is OFF, there is no active function, and the active function is turned off.

Remote Command	:CALCulate:SPURious:MARKer[1]|2|…|12:MODE POSition | DELTa | OFF :CALCulate:SPURious:MARKer[1]|2|…|12:MODE?
Example	:CALC:SPUR:MARK:MODE POS :CALC:SPUR:MARK:MODE?
Preset	OFF
State Saved	Saved in instrument state
Range	POSition|DELTa|OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is OFF to ON (1) puts it in POSition mode and places it at the center of the screen.

Example	:CALC:SPUR:MARK3:STAT 1 :CALC:SPUR:MARK3:STAT?
Preset	OFF
State Saved	Saved in instrument state
Range	OFF|ON
Backwards Compatibility SCPI	:CALCulate:SPURious:MARKer[1]|2|…|12:STATe OFF | ON | 0 | 1 :CALCulate:SPURious:MARKer[1]|2|…|12:STATe?

Delta Marker (Reset Delta)

Pressing this control has exactly the same effect as selecting **Delta** in "Marker Mode" on page 1469. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:SPURious:MARKer:AOFF`
Example	`:CALC:SPUR:MARK:AOFF`

Couple Markers

When this function is `ON`, moving any marker causes an equal X-Axis movement of every other marker that is not `OFF`. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental X-Axis units).

This may result in markers going off screen.

Remote Command	`:CALCulate:SPURious:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:SPURious:MARKer:COUPle[:STATe]?`
Example	`:CALC:SPUR:MARK:COUP ON` `:CALC:SPUR:MARK:COUP?`
Preset	`OFF` Preset by **Mode Preset** and **All Markers Off**
State Saved	Saved in instrument state

3.6.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a peak search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "Marker Frequency" on page 1468 on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point that has the maximum y-axis value for that marker's trace.

NOTE: Pressing the **Peak Search** hardkey automatically moves you to the Peak Search page of the Marker menu *and* performs a peak search.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:MAXimum`

Example	`:CALC:SPUR:MARK2:MAX`
	`:SYST:ERR?`
	can be used to query the errors to determine if a peak is found. The message "No peak found" will be returned after an unsuccessful search

Notes	Sending this command selects the subopcoded marker In W-CDMA Mode, this command does not work when the selected marker is located on the polar trace. In this case, the command is ignored

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value.

If the selected marker was `OFF`, then it is turned on as a `POSition` marker and a peak search is performed.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:MAXimum:NEXT`
Example	`:CALC:SPUR:MARK2:MAX:NEXT`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Right

Moves the selected marker to the nearest peak right of the current marker.

If the selected marker was OFF, then it is turned on as a POSition marker and a peak search is performed.

Remote Command	:CALCulate:SPURious:MARKer[1]|2|…|12:MAXimum:RIGHt
Example	:CALC:SPUR:MARK2:MAX:RIGH
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Moves the selected marker to the nearest peak left of the current marker.

If the selected marker was OFF, then it is turned on as a POSition marker and a peak search is performed.

Remote Command	:CALCulate:SPURious:MARKer[1]|2|…|12:MAXimum:LEFT
Example	:CALC:SPUR:MARK2:MAX:LEFT
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum Y-Axis value on the current trace.

If the selected marker is OFF, it is turned ON before the minimum search is performed.

Remote Command	:CALCulate:SPURious:MARKer[1]|2|…|12:MINimum
Example	:CALC:SPUR:MARK:MIN
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Pk-Pk Search

Finds and displays the amplitude and frequency differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace, and places that marker's reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to **Fixed** or **Normal** if it is not already on. (These markers may be on two different traces.)

If the selected marker is OFF, a **Delta** type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a **Delta** marker, then it is changed to delta, which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command	`:CALCulate:SPURious:MARKer[1]|2|…|12:PTPeak`
Example	`:CALC:SPUR:MARK:PTP`
Notes	Turns on the Marker D active function Sending this command selects the subopcoded marker
Dependencies	Pk-Pk Search is not available when **Coupled Markers** is ON
Couplings	The selected marker becomes a **Delta** marker if not already in **Delta** mode
State Saved	Not part of saved state

Marker Delta

Pressing this control has the same effect as selecting **Delta** in "Marker Mode" on page 1469 on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search, and change the marker's control mode to **Delta**, without having to access two separate menus.

3.6.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. It is the same as "Marker Frequency" on page 1468 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** control. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote	`:CALCulate:SPURious:MARKer[1]|2|…|12:REFerence <integer>`

Command	:CALCulate:SPURious:MARKer[1]|2|…|12:REFerence?
Example	:CALC:SPUR:MARK3:REF 5 :CALC:SPUR:MARK:REF?
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself, so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself” When queried a single value is returned (the specified marker numbers relative marker)
Couplings	If the reference marker is off it is turned on in **Normal** mode at the delta marker location
Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults.** This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state. Not affected by **Markers Off**, hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become **Normal** markers.

Specifying a **Marker Trace** manually or with this command associates the marker with the specified trace. If the marker is not OFF, it moves the marker from the trace it was on to the new trace. If the marker is OFF, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	:CALCulate:SPURious:MARKer[1]|2|…|12:TRACe:ATTached TRACe1 | TRACe2 | TRACe3 :CALCulate:SPURious:MARKer[1]|2|…|12:TRACe:ATTached?
Example	:CALC:SPUR:MARK2:TRAC:ATT TRAC2 :CALC:SPUR:MARK2:TRAC:ATT?
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of **Marker Trace** is not affected by "Auto Couple" on page 3289

	Sending the remote command causes the addressed marker to become selected
Preset	TRACe1
State Saved	Saved in instrument state
Range	TRACe1|TRACe2|TRACe3

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility. It is the same as "Marker Settings Diagram" on page 1470 under **Settings**.

3.6.8 Meas Setup

Contains functions for setting up the measurement parameters, and for setting up parameters global to all measurements in the Mode.

3.6.8.1 Settings

Contains frequently-used **Meas Setup** functions, to which you will want the fastest access.

Avg/Hold Num

Specifies the number of measurement averages used to calculate the measurement result. The average is displayed at the end of each sweep.

Remote Command	[:SENSe]:SPURious:AVERage:COUNt <integer> [:SENSe]:SPURious:AVERage:COUNt?
Example	:SPUR:AVER:COUN 2500 :SPUR:AVER:COUN?
Preset	10
State Saved	Saved in instrument state
Min/Max	1/10000

Continue Averaging

Continue Averaging is designed for acquiring the trace average through multiple sets of DUT conditions, to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to Single and press **Restart** to get your first set of averages, then Continue Averaging will be available.

Use `:FETCh:<meas>?` to retrieve the data as it waits for completion of Continue Averaging. `*OPC?` doesn't wait for completion and returns true immediately.

Pressing this control adds a number of Averages that matches "Avg/Hold Num" on page 1476 to the already averaged trace or measurement. Every time you press it, the terminal count increases to 2N, 3N and so on. You can change the DUT position or antenna when each set of average count is reached to the terminal count and the measurement is complete.

Since the measurement results are valid for each completed average conditions, you do not have to pre-determine the number of sets of DUT conditions.

Remote Command	`[:SENSe]:SPURious:AVERage:CONTinue`
Example	`:SPUR:AVER:CONT`
Dependencies	Enabled when you change Sweep mode to **Single**, and Average Count reaches Average Number, otherwise it is grayed-out

Terminal Count (Remote Query Only)

Query only.

This returns the terminal count that shows the target average number after "Continue Averaging" on page 1476 is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N and so on. The value is the same as "Avg/Hold Num" on page 1476, unless **Continue Averaging** is pressed, and it is reset to match **Avg/Hold Num** when **Restart** is pressed.

Remote Command	`[:SENSe]:SPURious:AVERage:COUNt:TERMinal?`
Example	`:SPUR:AVER:COUN:TERM?`

Averaging On/Off

Turns Averaging on or off.

NOTE

In this measurement, the **Average Type** is preset to the `Log-Pwr Avg (Video)` method. Other averaging methods are not available.

Remote Command	`[:SENSe]:SPURious:AVERage[:STATe] ON | OFF | 1 | 0`

	`[:SENSe]:SPURious:AVERage[:STATe]?`
Example	`:SPUR:AVER ON` `:SPUR:AVER?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`

Average Mode

Lets you set the Averaging Mode. Options are:

- `EXPonential`: The measurement averaging continues using the specified number of averages to compute each averaged value. The average will be displayed at the end of each sweep
- `REPeat`: The measurement resets the average counter each time the specified number of averages is reached

Remote Command	`[:SENSe]:SPURious:AVERage:TCONtrol EXPonential | REPeat` `[:SENSe]:SPURious:AVERage:TCONtrol?`
Example	`:SPUR:AVER:TCON REP` `:SPUR:AVER:TCON?`
Preset	`EXPonential`
State Saved	Saved in instrument state
Range	`EXPonential|REPeat`

Average Type

Enables you to control the way averaging is done by choosing one of the following averaging scales: Log-Power (Video) or Power (RMS).

There are three different averaging processes in the measurement, and all of them are affected by this setting: Trace Averaging, the Average detector, and VBW filtering.

Control Selection	SCPI	Type
Log-Pwr (Video)	`LOG`	Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power
Power (RMS)	`RMS`	True power averaging that is equivalent to taking the RMS value of the voltage. This is the most accurate type of averaging

Remote	`[:SENSe]:SPURious:AVERage:TYPE LOG | RMS`

Command	[:SENSe]:SPURious:AVERage:TYPE?
Example	:SPUR:AVER:TYPE LOG :SPUR:AVER:TYPE?
Couplings	Sending this command will affect the VBW Average Type
Preset	LOG
State Saved	Yes
Range	Log-Pwr (Video) |Power (RMS)

Meas Type

Selects either EXAMine or FULL measurement type. This parameter is coupled to "Average Mode" on page 1478. Therefore, if the EXAMine measurement type is selected, the measurement sets the Average Mode to exponential. If the FULL measurement type is selected, the measurement sets the Average Mode to repeat. The behavior of each measurement type is described in the table below. When averaging is on, trace averaging is used as each active range is measured. Averaging is not used at any other time.

Type	Single		Continuous	
	No Spurs Found	Spurs Found	No Spurs Found	Spurs Found
EXAMine	All active ranges are measured. On completion the measurement is set to the idle state and the 'No Spurs' happening is displayed	All active ranges are measured, and the spurs found reported. On completion the measurement is set to the idle state and the trace containing the worst spur restored. The spur control is enabled. A marker is also added which is set to the frequency of the worst spur	All active ranges are measured. On completion the SA remains set to last range checked with an active trace and the 'No Spurs' happening is displayed	All active ranges are measured, and the spurs found reported. On completion the SA is set to the range containing the worst spur found and continually sweeps this range. Note that the trace is continually updated but the metrics results aren't updated until restart to keep the initial results as references. Use marker

Type	Single		Continuous	
	No Spurs Found	Spurs Found	No Spurs Found	Spurs Found
				readouts to refer the latest results. The spur control is enabled. A marker is also added which is set to the frequency of the worst spur
FULL	All active ranges are measured. On completion measurement is set to idle state and the 'No Spurs' happening is displayed	All active ranges are measured, and spurs found reported. On completion the measurement is set to the idle state, displaying the trace of the last active range	Measurement continually cycles through all active ranges	All active ranges are measured, and spurs found reported. On each cycle of the active ranges the spurs found are reset. This ensures any remote queries retrieve the trace data that matches the currently displayed results

Remote Command	`[:SENSe]:SPURious:TYPE EXAMine | FULL` `[:SENSe]:SPURious:TYPE?`
Example	`:SPUR:TYPE FULL` `:SPUR:TYPE?`
Preset	`EXAMine`
State Saved	Saved in instrument state
Range	`EXAMine|FULL`

Spur

Displays any spurs found. Only enabled when the measurement type is set to `EXAMine`, and turns on upon completion of a measurement. Once the **Spur** control has been enabled, you can view any spur. The measurement sets the instrument to the range in which the currently selected spur was found. The range settings only change if the spur selected is in a range that is different from the current range settings. A marker is used to identify the currently selected spur on the trace.

Remote Command	`[:SENSe]:SPURious:SPUR <integer>` `[:SENSe]:SPURious:SPUR?`
Example	`:SPUR:SPUR 55` `:SPUR:SPUR?`
Preset	1
State Saved	No
Min/Max	1/200

Range

Selects the sweep range of the display trace. **Marker** operation, such as peak search is performed in the selected range.

For more details, see "Range Settings" on page 1482.

Preset	1
State Saved	No
Min/Max	1/20

Spur Report Mode

Selects the spurious report mode. Options are:

Limit Line Test	`LIMTest`	Report only spurs above the limit line. Any spurs reported will cause the measurement to fail. See Abs Start Limit for more information
All Spurs	`ALL`	Report all spurs detected by Peak Threshold and Peak Excursion
Minimum Margin	`MMARgin`	Report only the spur with the minimum margin from the limit line. For the spur above the limit, its margin is defined as the negative margin. If there are more than one spurs above the limit, only one spur with the largest negative margin is reported

Remote Command	`[:SENSe]:SPURious:REPT:MODE ALL | LIMTest | MMARgin` `[:SENSe]:SPURious:REPT:MODE?`
Example	`:SPUR:REPT:MODE LIMT` `:SPUR:REPT:MODE?`
Dependencies	`MMARgin` is available only when option N9060A-7FP is installed
Preset	`ALL`
State Saved	Saved in instrument state
Range	All Spurs | Limit Test | Minimum Margin

Range Settings

This dialog enables you to set range parameters. As you change values, the instrument settings are updated with the new parameter values.

In SA Mode, and most other Modes, each **Range** is defined by its Start Freq and Stop Freq. The index tabs that appear on the left side of this dialog let you change different sets of **Range** parameters; the **Ranges** themselves (Start Freq and Stop Freq) are the same in each of these tabs. In some measurements, **Center Frequency** and **Span** are also shown, but these depend on the Start Freq and Stop Freq parameters for each **Range**.

In MSR Mode, each **Range** is defined by the parameters under the **Frequency** Index tab. The parameters for each **Range** are defined using the other index tabs, tied to the **Frequency** tab by the **Range** number, which appears in the leftmost column of each table.

Each **Range** has an **Enabled** checkbox, which lets you decide whether to use the **Range** or not. The checkbox state is the same for all tabs.

Bandwidth

Lets you set RBW and VBW parameters for each range, as well as Filter Type. The **Bandwidth** tab appears in all Modes except MSR.

Frequency Range

Allows you to switch the displayed **Frequency Range** columns. When `ALL` is selected, Start Frequency, Stop Frequency, Center Frequency, and Span are displayed.

This control appears only in instruments with a 4U size front panel.

Remote Command	`:DISPlay:SPURious:VIEW:RANGe:TABLe:FMODe ALL | SSTop | CSPan` `:DISPlay:SPURious:VIEW:RANGe:TABLe:FMODe?`
Example	`:DISP:SPUR:VIEW:RANG:TABL:FMOD ALL` `:DISP:SPUR:VIEW:RANG:TABL:FMOD?`
Preset	`SSTop`
State Saved	Saved in instrument state
Range	All | Start/Stop Frequency | Center Frequency/Span

Enabled

Turns on/off each Range. If Range is ON, it will be used as part of the measurement. If it is OFF, it will be excluded. This parameter can send up to 20 values. The location in the list sent corresponds to the range number. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:STATe ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0, ON | OFF | 1 | 0` `[:SENSe]:SPURious[:RANGe][:LIST]:STATe?`
Example	`:SPUR:STAT ON` `:SPUR:STAT?`

Preset	SA:
	`ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	WCDMA:
	`ON, ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	LTETDD, LTEATDD, 5G NR:
	`OFF, OFF, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	LTE, LTEAFDD:
	`ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	MSR:
	`ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

State Saved	Yes
Range	ON|OFF

Start Freq

Sets the start frequency of the instrument. This parameter can send up to 20 values. The location where the start frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt?`
Example	`:SPUR:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz` `:SPUR:FREQ:STAR?`

Span

Sets the span of the instrument. This parameter can send up to 20 values. The location where the span occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:SPAN <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq> [:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:SPAN?	
Example	:SPUR:FREQ:SPAN 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz :SPUR:FREQ:SPAN?	
Preset	(Preset of Stop Freq) - (Preset of Start Freq)	
State Saved	No	
Min/Max	0Hz/Instrument maximum frequency + 80MHz	

Res BW

Sets the resolution bandwidth of the instrument. This parameter can send up to 20 values.

The location of where the resolution bandwidth occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. In other words, if you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution] <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq> [:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution]?

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer number. It shows a ratio between Integration BW and Resolution BW of the measurement result:

Integ BW = **Meas BW** * Resolution BW

Integration BW is desired resolution bandwidth and Resolution BW is actual bandwidth for sweep. Measurement sweeps with Resolution BW and **Meas BW** compensates sweep resolution bandwidth to Integration BW.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain as they were. The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:IMULti <integer>, …` `[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:IMULti?`
Example	`:SPUR:BAND:IMUL 1,1,1,1,1,1` `:SPUR:BAND:IMUL?`
Notes	Comma-separated list of values
Preset	`1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1`
State Saved	Yes
Max	1000
Min/Max	1
Backwards Compatibility SCPI	`[:SENSe]:SPURious[:RANGe][:LIST]:BWIDth:IMULti`

Video BW

Sets the **Video BW** mode of the instrument. This can be Auto, where the instrument determines the optimum setting, or Manual, where you determine the setting. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:VIDeo <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>`

Filter Type

In addition to the Gaussian filter shape, there are certain special filter types, such as Flat Top, which are desirable under certain conditions. The **Filter Type** menu gives you control over these parameters.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:SHAPe GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop, GAUSsian | FLATtop` `[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:SHAPe?`
Example	`:SPUR:BAND:SHAP GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, FLAT, FLAT, FLAT, FLAT, FLAT, GAUS, GAUS, GAUS, GAUS, GAUS, FLAT, FLAT, GAUS, GAUS` `:SPUR:BAND:SHAP?`
Preset	`GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS, GAUS`
State Saved	Saved in instrument state
Range	Gaussian (Normal)|Flattop
Backwards Compatibility SCPI	`[:SENSe]:SPURious[:RANGe][:LIST]:BWIDth:SHAPe`

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** tab. See"Enabled" on page 1483

Frequency Type

Selects the frequency type as either `ABSolute` or `OFFSet`:

`ABSolute`	The frequency range is determined by Abs Start Freq and Abs Stop Freq. Absolute and offset frequencies are not coupled
`OFFSet`	The frequency range is determined based on Offset Start Freq and Offset Stop Freq. Abs Start Freq and Abs Stop Freq are coupled with the offset parameters and show the actual frequency ranges. The following coupling equations are used to calculate Abs Start Freq and Abs Stop Freq

When Offset Side is Negative:

[Abs Start Freq] = [OB Start Freq] – [Offset Stop Freq]

[Abs Stop Freq] = [OB Start Freq] – [Offset Start Freq]

When Offset Side is Positive:

[Abs Start Freq] = [OB Stop Freq] + [Offset Start Freq]

[Abs Stop Freq] = [OB Stop Freq] + [Offset Stop Freq]

When changing OB Start/Stop Freq, Abs Start/Stop Freq is changed and Offset Start/Stop Freq remains unchanged.

When changing Offset Start/Stop Freq, Abs Start/Stop Freq is changed and OB Start/Stop Freq remains unchanged.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:TYPE ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet, ABSolute | OFFSet` `[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:TYPE?`
Example	`:SPUR:FREQ:TYPE OFFS, OFFS, ABS, ABS, ABS` `:SPUR:FREQ:TYPE?`
Couplings	Freq Type automatically changes to `OFFSet` when you change a value of Offset Start Freq, Offset Stop Freq or Offset Side, and automatically changes to `ABSolute` when you change a value of Abs Start Freq or Abs Stop Freq
Preset	`ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute, ABSolute`
State Saved	Saved in instrument state
Range	`ABSolute|OFFSet`

Abs Start Freq

Sets the start frequency of the instrument. This parameter can send up to 20 values. The location where the start frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

This parameter is coupled with either Offset Start Freq or Offset Stop Freq. The coupling equations are shown in "Enabled" on page 1490.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt?`

Example	`:SPUR:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz` `:SPUR:FREQ:STAR?`
Preset	9 kHz, 150 kHz, 30 MHz, 1 GHz, 1.92GHz, 1.98 GHz, 2.18 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz
State Saved	Saved in instrument state
Min/Max	-80 MHz/Hardware Dependent – Option 503: 3699999990 – Option 508: 8499999990 – Option 513: 13799999990 – Option 526: 26999999990

Abs Stop Freq

Sets the stop frequency of the instrument. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with.

This parameter is coupled with either "Offset Start Freq" on page 1493 or "Offset Stop Freq" on page 1493. The coupling equations are shown in "Enabled" on page 1490.

The location of where the stop frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STOP <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STOP?`
Example	`:SPUR:FREQ:STOP 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz` `:SPUR:FREQ:STOP?`
Preset	150kHz, 30MHz, 1GHz, 1.92GHz, 1.98GHz, 2.1GHz, 12.75GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz
State Saved	Yes
Min/Max	-79999990/Hardware Dependent:

- Option 503: 3.7 GHz
- Option 508: 8.5 GHz
- Option 513: 13.8 GHz
- Option 526: 27.0 GHz

Offset Start Freq

Sets the range frequency as offset from one of the operating band edges. This parameter can send up to 20 values. The location where the start frequency occurs in the list sent to the measurement corresponds to the range the value is associated with. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

This parameter is coupled with either "Abs Start Freq" on page 1491 or "Abs Stop Freq" on page 1492 using the coupling equations shown in "Enabled" on page 1490.

This value is clipped to keep Abs Start/Stop Freq within the available frequency range. This clipping applies even when OB Start Freq, OB Stop Freq or Offset Side is changed.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STARt <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STARt?`
Example	`:SPUR:OFFS:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz` `:SPUR:OFFS:FREQ:STAR?`
Preset	10 MHz, 20 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz
State Saved	Saved in instrument state
Min/Max	-80 MHz/SA Max Freq - 10Hz (Hardware Dependent)

Offset Stop Freq

Sets the range frequency as offset from one of operating band edges. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with.

The location of where the stop frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were. The query always returns 20 values.

This parameter is coupled with either "Abs Start Freq" on page 1491 or "Abs Stop Freq" on page 1492 using the coupling equations shown in "Enabled" on page 1490.

This value is clipped to keep Abs Start/Stop Freq inside the available frequency range. This clipping applies even when OB Start Freq, OB Stop Freq or Offset Side is changed.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STOP <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STOP?`
Example	`:SPUR:OFFS:FREQ:STOP 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz, 2.5GHz` `:SPUR:OFFS:FREQ:STOP?`
Preset	20 MHz,30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz
State Saved	Yes
Min/Max	-79999990/SA Max Frequency (Hardware Dependent)

Offset Side

Sets the offset side to either Negative or Positive. This parameter indicates which side of the operation band the specified range is on. It also determines which coupling equations defined in Frequency Type section are used to couple the absolute frequencies and the offset frequencies. This setting is effective only when "Frequency Type" on page 1490 is `OFFset`.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:SIDE NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive, NEGative | POSitive` `[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:SIDE?`
Example	`:SPUR:OFFS:SIDE NEG, NEG, POS, POS` `:SPUR:OFFS:SIDE?`
Preset	`NEG, NEG, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS, POS`

State Saved	Saved in instrument state
Range	Negative (From Op. Band Start Edge)|Positive (From Op. Band Stop Edge)

Filter/Atten

Lets you set Attenuation and IF Gain values for each Range. This tab appears in all Modes except MSR.

Frequency Range

Allows you to switch the displayed **Frequency Range** columns. When `ALL` is selected, Start Frequency, Stop Frequency, Center Frequency, and Span are displayed.

This control appears only in instruments with a 4U size front panel.

Remote Command	`:DISPlay:SPURious:VIEW:RANGe:TABLe:FMODe ALL | SSTop | CSPan` `:DISPlay:SPURious:VIEW:RANGe:TABLe:FMODe?`
Example	`:DISP:SPUR:VIEW:RANG:TABL:FMOD ALL` `:DISP:SPUR:VIEW:RANG:TABL:FMOD?`
Preset	`SSTop`
State Saved	Saved in instrument state
Range	All | Start/Stop Frequency | Center Frequency/Span

Enabled

Same as Enabled under the **Bandwidth** index tab. See "Enabled" on page 1483.

Start Freq

Same as the Start Freq column under the **Bandwidth** index tab. See "Start Freq" on page 1483.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** index tab. See "Stop Freq" on page 1484.

Center Frequency

Sets the center frequency of the instrument. This parameter can send up to 20 values. The location where the center frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:CENTer <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:CENTer?`
Example	`:SPUR:FREQ:CENT 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz,1.5 GHz` `:SPUR:FREQ:CENT?`
Preset	(Preset of Start Freq + Preset of Stop Freq)/2
State Saved	No
Min/Max	-79.999995 MHz/ Instrument maximum frequency – 5 Hz

Span

Same as the Span column under the **Bandwidth** index tab. See "Span" on page 1485.

Attenuation

PP_Substitute: cmn_mode_amptdatten_pp.fltoc

IF Gain

Sets **IF Gain** to: **Auto**, **On** (the extra 10 dB) or **Off**. These settings affect sensitivity and IF overloads. A switched IF amplifier with approximately 10 dB of gain is available. This amplifier takes full advantage of the RF dynamic range of the instrument. When it can be turned on without an overload, the dynamic range is always better with the amplifier on than off.

Dependencies	The IF Gain controls (FFT IF Gain and Swept IF Gain) have no effect when the U7227A USB Preamplifier is connected. This is not annotated or reflected on any control; there are no controls grayed out

nor any SCPI locked out. The instrument simply behaves as though both FFT IF Gain and Swept IF Gain are set to Low regardless of the setting on the controls

IF Gain Auto

Activates the rules for auto IF Gain.

Remote Command	`[:SENSe]:SPURious:IF:GAIN:AUTO[:STATe] OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1` `[:SENSe]:SPURious:IF:GAIN:AUTO[:STATe]?`
Example	`:SPUR:IF:GAIN:AUTO ON,ON` `:SPUR:IF:GAIN:AUTO?`
Couplings	When the sweep type is Swept, 'Auto' sets IF Gain to High Gain under any of the following conditions: the input attenuator is set to 0 dB, the preamp is turned on, or the Max Mixer Level is –20 dBm or lower. For other settings using the swept sweep type, auto sets IF Gain to Low Gain
Preset	`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
State Saved	Saved in instrument state

IF Gain State

Selects the range of IF Gain.

Remote Command	`[:SENSe]:SPURious:IF:GAIN[:STATe] OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1, OFF | ON | 0 | 1` `[:SENSe]:SPURious:IF:GAIN[:STATe]?`
Example	`:SPUR:IF:GAIN ON,ON` `:SPUR:IF:GAIN?`
Preset	`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
State Saved	Saved in instrument state
Range	Low | High

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** tab. See "Enabled" on page 1483.

Res BW

Same as the **Enabled** checkbox under the **Bandwidth** tab. See"Res BW" on page 1486.

Meas BW

Same as the Meas BW column under the **Bandwidth** tab. See"Meas BW" on page 1488.

Video BW

Sets the **Video BW** mode of the instrument. This can be Auto, where the instrument determines the optimum setting, or Manual, where you determine the setting. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:VIDeo <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>, <freq>` `[:SENSe]:SPURious[:RANGe][:LIST]:BANDwidth:VIDeo?`

Range	All | Start/Stop Frequency | Center Frequency/Span

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** tab. See"Enabled" on page 1483.

Start Freq

Same as the Start Freq column under the **Bandwidth** tab. See"Start Freq" on page 1483. This column does not appear in MSR mode.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** tab. See"Stop Freq" on page 1484. This column does not appear in MSR mode.

Center Frequency

Same as the Center column under the **Bandwidth** index tab. See"Center Frequency" on page 1496.

Span

Same as the Span column under the **Bandwidth** tab. See "Span" on page 1485. This column does not appear in MSR mode.

Sweep Time

Sets the **Sweep Time** mode of the instrument. This can be **Auto**, where the instrument determines the optimum setting, or **Manual**, where you determine the setting.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	`[:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>, <time>`

	[:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME?
Example	:SPUR:SWE:TIME 10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10 :SPUR:SWE:TIME?

Points

Sets the number of points per sweep for the measurement. This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were. The query always returns 20 values.

The Points mode can be manual, where you determine the setting or auto, where the instrument determines the number of trace points to ensure the sweep points resolution equals RBW/2. This is calculated using the following algorithm:

Points = (Stop Freq – Start Freq) / (ResBW / 2)

with the computed values being clipped to a minimum of 601 and a maximum of 20001.

Remote Command	[:SENSe]:SPURious[:RANGe][:LIST]:SWEep:POINts <integer> [:SENSe]:SPURious[:RANGe][:LIST]:SWEep:POINts?

Limits

Lets you set Start and Stop Limits and Threshold values for each Range.

Frequency Range

Same as **Frequency Range** under the **Bandwidth** tab. See "Frequency Range" on page 1500. This control does not appear in MSR mode.

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** tab. See"Enabled" on page 1483.

Start Freq

Same as the Start Freq column under the **Bandwidth** tab. See"Start Freq" on page 1483. This column does not appear in MSR.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** tab. See"Stop Freq" on page 1484. This column does not appear in MSR.

Center Frequency

Same as the Center column under the **Bandwidth** tab. See"Center Frequency" on page 1496. This column does not appear in MSR mode.

Span

Same as the Span column under the **Bandwidth** tab. See "Span" on page 1485. This column does not appear in MSR mode.

Abs Start Limit

Determines the limit above which spurs will report a failing. If Abs Stop Limit Mode is set to **Auto**, this is coupled to **Abs Stop Limit** to make a flat limit line. If set to **Man**, Abs Start Limit and Abs Stop Limit can take different values to make a sloped limit line.

If the Limit Line Test parameter is off, then any spurs that are found to be above the current 'Peak Excursion' are added to the results table. From these spurs, the amplitude is checked using the abs limit start and abs limit stop parameters, then the limit is calculated. An 'F' is appended to the amplitude value of the spur if the measured amplitude is above the limit. If the Limit Line Test is on, only the spurs whose amplitudes exceed the limit are reported.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Abs Stop Limit

Determines the limit above which spurs will report a failing. If Abs Stop Limit Mode is set to **Auto**, this is coupled to **Abs Start Limit** to make a flat limit line. If set to **Man**, Abs Start Limit and Abs Stop Limit can take different values to make a sloped limit line.

Abs Stop Limit Mode, when set to Couple, couples Abs Start Limit and Abs Stop Limit to make a flat limit line. If set to Man, Abs Start and Abs Stop can take different values to make a sloped limit line.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were. The query for this parameter always returns 20 values.

Peak Excursion

Sets the minimum amplitude variation of signals that can be identified as peaks. If a value of 6 dB is selected, peaks that rise and fall more than 6 dB above the peak threshold value are identified.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query for this parameter always returns 20 values.

Remote Command	[:SENSe]:SPURious[:RANGe][:LIST]:PEAK:EXCursion <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl>, <rel_ampl> [:SENSe]:SPURious[:RANGe][:LIST]:PEAK:EXCursion?

Meas Setup Summary Table

Lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "Measurement-Specific Details" on page 1510 below.

Remote Command	`:COUPle ALL`
Example	`:COUP ALL`
Backwards Compatibility SCPI	`:COUPLE ALL | NONE`
Backwards Compatibility Notes	`:COUP:NONE` puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter’s coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple***does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command	`:CONFigure:SPURious`
Example	`:CONF:SPUR`

Fast Spurious Meas (Remote Command only)

This command is the backward compatibility command for the Fast Spurious Measurement. Since this command is another representation of Spurious Report Mode, it is coupled with that command.

- When set to `ON`, only spurs above the limit line are reported. This is the same as Spurious Report Mode `LIMTest`
- When set to `OFF`, all detected spurs are reported. This is the same as Spurious Report Mode `ALL`

Remote Command	`[:SENSe]:SPURious:FSMeas ON | OFF | 1 | 0` `[:SENSe]:SPURious:FSMeas?`
Example	`:SPUR:FSM ON` `:SPUR:FSM?`
Couplings	If `:SPUR:REPT:MODE` is `ALL`, this parameter is `OFF` If `:SPUR:REPT:MODE` is `LIMTest`, this parameter is `ON`
Preset	`OFF`
State Saved	Saved in instrument state

3.6.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available

Couplings	Changing the direction affects the gate source as follows
	– If changed to uplink: RF burst
	– If changed to downlink: External 1
	In Transmit On|Off Power, changing the direction affects the trigger source as follows
	– If changed to uplink: Periodic
	– If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows.
	  – External 1, when Info BW ≤ 255 MHz
	  – External 3, when Info BW ≥ 256 MHz
	Changing the direction affects many other modulation analysis setup parameters

Preset	ULINk when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINk
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink|Uplink

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF | ON | 0 | 1` `[:SENSe]:RADio:IMODulation:INTerference[:STATe]?`

Example	:RAD:IMOD:INT 1 :RAD:IMOD:INT?
Preset	OFF
State Saved	Saved in instrument state
Range	On|Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq> [:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?
Example	:RAD:IMOD:INT:FREQ:OFFS 5MHz :RAD:IMOD:INT:FREQ:OFFS?
Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq> [:SENSe]:RADio:IMODulation:INTerference:SPAN?
Example	:RAD:IMOD:INT:SPAN 5MHz :RAD:IMOD:INT:SPAN?
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative | POSitive` `[:SENSe]:RADio:IMODulation:INTerference:SIDE?`
Example	`:RAD:IMOD:INT:SIDE POS` `:RAD:IMOD:INT:SIDE?`
Preset	`POSitive`
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:REGion INNer | OUTer` `[:SENSe]:RADio:IMODulation:INTerference:REGion?`
Example	`:RAD:IMOD:INT:REG OUT` `:RAD:IMOD:INT:REG?`
Preset	`OUTer`
State Saved	Saved in instrument state

3.6.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

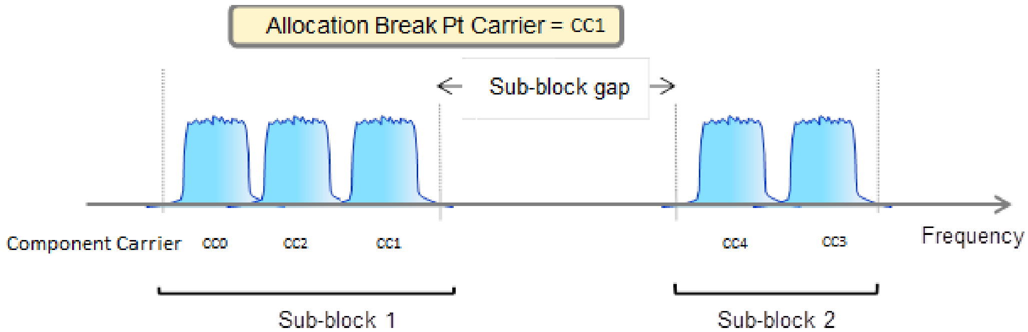
- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	`CONTiguous`
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC15` `[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	`CC0`
State Saved	Saved in instrument state
Range	`CC0|…|CC15`

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

(Display Only)" on page 1828

Number of Component Carriers

This is the same as the control on the menu panel. See "Number of Component Carriers" on page 3292.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	`[:SENSe]:CCARrier:AFOFfset OFF | ACRA100K | ACRA15K | ACRA60K | CARA100K | CARA15K | CARA60K` `[:SENSe]:CCARrier:AFOFfset?`
Example	`:CCAR:AFOF ACRA100K` `:CCAR:AFOF?`
Notes	When you change the value to `OFF`, nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC’s Frequency Offset is manually changed, this parameter is set to OFF This feature isn’t supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CC0 Freq Offset is automatically adjusted to 0 Hz
Preset	`OFF`
State Saved	Yes
Range	The cascading list is shown below

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz

Channel Spacing for	Channel Raster
Adjacent NR Carriers	
Carrier Aggregation	
Off	

Carrier Allocation

This is the same as the control on the menu panel. See "Carrier Allocation" on page 3293.

Non-Contiguous Break at

This is the same as the control on the menu panel. See "Non-Contiguous Break at" on page 3293.

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier[0]|1|…|15[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action “Apply Preset (to All CCs)” is executed
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

– OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.

– ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk ON | OFF | 1 | 0` `[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk?`
Example	`:CCAR4:RAD:SLIN ON` `:CCAR4:RAD:SLIN?`
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when "Bandwidth" on page 3297 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth B5M | B10M | B15M | B20M | B25M | B30M | B35M | B40M | B45M | B50M | B60M | B70M | B80M | B90M | B100M | B200M | B400M | B800M | B1600M | B2000M` `[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B50M`
Dependencies	When "Sidelink" on page 3296 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	B100M unless noted below – Option B25: B20M – Option B40: B35M – Option B85: B80M
State Saved	Yes
Range	5 MHz | 10 MHz | 15 MHz | 20 MHz | 25 MHz | 30 MHz | 35 MHz | 40 MHz | 45 MHz | 50 MHz | 60 MHz | 70 MHz | 80 MHz | 90 MHz | 100 MHz | 200 MHz | 400 MHz | 800 MHz | 1600 MHz | 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge FR1 | FR2` `[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge?`
Example	`:CCAR1:RAD:STAN:FRAN FR1`
Dependencies	Available selections differ depending on "Bandwidth" on page 3297 as follows: – 50 MHz and 100 MHz: FR1 and FR2 – 200 MHz or wider: FR2 only – Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	`FR1`
State Saved	Yes
Range	`FR1|FR2`

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the "Non-Contiguous Break at" parameter is set to the intended value since it's often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE This setting is available for EVM measurement only.

Remote Command	[:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE AUTO | MANual [:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE?
Example	:EVM:CCAR:CID:MODE MAN :EVM:CCAR:CID:MODE?
Preset	MANual
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	[:SENSe]:EVM:CCARrier[0]|1|…|15:CID <integer> [:SENSe]:EVM:CCARrier[0]|1|…|15:CID?
Example	:EVM:CCAR4:CID 0 :EVM:CCAR4:CID?
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	[:SENSe]:CCARrier[0]|1|…|15:SPECtrum NORMal | INVert [:SENSe]:CCARrier[0]|1|…|15:SPECtrum?
Example	:CCAR0:SPEC INV :CCAR0:SPEC?
Preset	NORM

State Saved	Yes
Range	Normal | Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE: This setting is *not* available for EVM.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515

10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset	98.280 MHz|98.310 MHz
State Saved	Yes
Min	100 kHz
Max	2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration?`

Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with "SCS Enabled" on page 1831.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RGRid:PMSCs?`
Example	`:CCAR3:RGR:PMSC?`
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

3.6.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE **You must press Apply Preset (to all CCs) or the values on the controls will *not* affect the Component Carriers.**

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

Set the LTE bandwidth.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW B1M4 | B3M | B5M | B10M | B15M | B20M` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW?`
Example	`:EVM:CCAR:LTE1:BW B20M` `:EVM:CCAR:LTE1:BW?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	`B5M`
State Saved	Yes
Range	1.4 MHz|3 MHz|5 MHz|10 MHz|15 MHz|20 MHz

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the "Freq Range" on page 3297 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “C**onfigure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22` `[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?`
Example	`:RAD:STAN:PRES:FREQ:RANG FR1` `:RAD:STAN:PRES:FREQ:RANG?`
Notes	SCPI enum “FR2” is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in "Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 1526 depending on the currently selected value.

Dependencies	Available selections differ depending on Bandwidth as follows: **Bandwidth** / **FR** 5 MHz, ..., 100 MHz — `FR1` 50 MHz, 100 MHz, 200 MHz, 400 MHz — `FR2, FR2-1` 100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz — `FR2, FR2-2` When "Uplink Carrier Mode" on page 3313 is Sidelink - V2X, FR2 is unavailable
Preset	`FR1`
State Saved	Yes
Range	FR1|FR2|FR2-1|FR2-2
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:PRESet:FRANge`

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

	Bandwidth selection changes to:					
Current FR value	5,...,45 MHz 60,...90 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of Meas Standard. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press” Apply Preset (to all CCs)”.

NOTE **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DMODe FDD | TDD | UDEFined` `[:SENSe]:RADio:STANdard:PRESet:DMODe?`
Example	`:RAD:STAN:PRES:DMOD TDD` `:RAD:STAN:PRES:DMOD?`
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD|TDD|User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "Duplex Mode" on page 3304 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles. This parameter is valid only for the downlink FR1 TDD duplex mode.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617` `[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?`
Example	`:RAD:STAN:PRES:DLIN:NRTM TS38` `:RAD:STAN:PRES:DLIN:NRTM?`
Dependencies	Unavailable when Radio Direction is Uplink, or Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2

Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	TS38
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity P0_5MS | P0_625MS | P1MS | P1_25MS | P2MS | P2_5MS | P5MS | P10MS [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity?
Example	:RAD:STAN:PRES:TRAN:PER P0_5MS :RAD:STAN:PRES:TRAN:PER?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	P5MS
State Saved	Yes
Range	0.5 ms|0.625 ms|1 ms|1.25 ms|2 ms|2.5 ms|5 ms|10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt?
Example	:RAD:STAN:PRES:DLIN:SLOT:COUN 1 :RAD:STAN:PRES:DLIN:SLOT:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt <integer>` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt?`
Example	`:RAD:STAN:PRES:DLIN:SYMB:COUN 1` `:RAD:STAN:PRES:DLIN:SYMB:COUN?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt <integer>` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt?`
Example	`:RAD:STAN:PRES:ULIN:SLOT:COUN 1` `:RAD:STAN:PRES:ULIN:SLOT:COUN?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt <integer>` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt?`
Example	`:RAD:STAN:PRES:ULIN:SYMB:COUN 1` `:RAD:STAN:PRES:ULIN:SYMB:COUN?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	4

State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNt?`
Example	`:RAD:STAN:PRES:SPEC:SLOT:COUN?`
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?`
Example	`:RAD:STAN:PRES:SLOT:ALL?`
Preset	“DDDDDDDSUU”

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as "Ignore Duplex Mode for Fulfilled RB Alloc" on page 3321.

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

In 5G, subcarrier spacing is governed by 2^n * 15 kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS480K | SCS960K`
	For option details, see "Selections & Dependencies" on page 1531
	`[:SENSe]:RADio:STANdard:PRESet:SCS?`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?`

Example	`:RAD:STAN:PRES:SCS SCS30K`
	`:RAD:STAN:PRES:SCS?`
	`:RAD:STAN:PRES:SCS:AUTO 0`
	`:RAD:STAN:PRES:SCS:AUTO?`

Notes	Not preset to the selection until **Apply Preset (to All CCs)** is executed
Dependencies	Available selections depend on a combination of Bandwidth and Frequency Range, as detailed in "Selections & Dependencies" on page 1531
Preset	SCS30K ON
State Saved	Yes Yes
Range	u = 0: 15 kHz | u = 1: 30 kHz | u = 2: 60 kHz | u = 3: 120 kHz | u = 5: 480 kHz | u = 6: 960 kHz Auto|Man

Selections & Dependencies

FR	Bandwidth	SCS	SCPI

	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press "Apply Preset (to all CCs)".

NOTE **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

"Fulfilled-xxx" is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and "DL-NR-TM x.x" is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTM1DOT1 | DLTM1DOT2 | DLTM2 | DLTM2Q16 | DLTM2QPS | DLTM2A | DLTM2B | DLTM3DOT1 | DLTM3DOT1Q16 | DLTM3DOT1QPS | DLTM3DOT1A | DLTM3DOT1B | DLTM3DOT2 | DLTM3DOT3 | FPIBPSK | DLTM1DOT1P1 | DLTM1DOT1L2` For selection details, see "Available Selections" on page 1533 `[:SENSe]:RADio:STANdard:PRESet:RBALloc?`
Example	`:RAD:STAN:PRES:RBAL DLTM1DOT1` `:RAD:STAN:PRES:RBAL?`
Notes	Resource Block Allocation Preset will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed
Dependencies	See "Available Selections" on page 1533

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier NORMal | V2X` `[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier?`
Example	`:RAD:STAN:PRES:ULIN:CARR NORM` `:RAD:STAN:PRES:ULIN:CARR?`
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: `V2X` Otherwise: `NORMal`
State Saved	Saved
Range	Normal Uplink|Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617` `[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?`
Example	`RAD:STAN:PRES:DLIN:NRTM TS38` `RAD:STAN:PRES:DLIN:NRTM?`
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

– CP-OFDM

– DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm | DFTSofdm` `[:SENSe]:RADio:STANdard:PRESet:OTYPe?`
Example	`:RAD:STAN:PRES:OTYP CPOF` `:RAD:STAN:PRES:OTYP?`
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`CPOFdm`
State Saved	Yes
Range	CP-OFDM|DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE | FTO1 | F1TO3 | F3TO4P2 | F4P2TO6 | F6TO7 | F24P25TO29P5 | F37TO40 | F43TO48 | F52TO71`
	For option details, see "Selections & Dependencies" on page 1537
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?`

Example	`:RAD:STAN:PRES:ADJ:FRAN F1TO3`
	`:RAD:STAN:PRES:ADJ:FRAN?`
	`:RAD:STAN:PRES:ADJ:FRAN:AUTO 1`
	`:RAD:STAN:PRES:ADJ:FRAN:AUTO?`

Dependencies	Available selections depend on Frequency Range. See "Selections & Dependencies" on page 1537
Couplings	When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0 Not preset to the selection until **Apply Preset (to All CCs)** is executed
Preset	Automatically selected The selection depends on which listed range the CC0 center freq is in ON
State Saved	Yes Yes
Range	None|f ≤ 1.0 GHz|1.0 < f ≤ 3.0 GHz|3.0 < f ≤ 4.2 GHz|4.2 < f ≤ 6.0 GHz|6.0 < f ≤ 7.125 GHz |24.25 < f ≤ 29.5 GHz|37.0 < f ≤ 43.5 GHz |43.5 < f ≤ 48.2 GHz|52.6 < f ≤ 71.0 GHz

Selections & Dependencies

Frequency Range	Selection	SCPI
FR1	f ≤ 1.0 GHz	FTO1
	< f ≤ 3.0 GHz	F1TO3
	3.0 < f ≤ 4.2 GHz	F3TO4P2
	4.2 < f ≤ 6.0 GHz	F4P2TO6
	6.0 < f ≤ 7.125 GHz	F6TO7
FR2	24.25 < f ≤ 29.5 GHz	F24P25TO29P5
	37.0 < f ≤ 43.5 GHz	F37TO40
	43.5 < f ≤ 48.2 GHz	F43TO48
	52.6 < f ≤ 71.0 GHz	F52TO71

Frequency Range	Selection	SCPI
FR2-1	24.25 < f ≤ 29.5 GHz	F24P25T029P5
	37.0 < f ≤ 43.5 GHz	F37T040
	43.5 < f ≤ 48.2 GHz	F43T048
FR2-2	52.6 < f ≤ 71.0 GHz	F52T071

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

– 1-C (FR1 Conducted)

– 1-O (FR1 Radiated)

– 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE FR1C | FR1O | FR2O [:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE?
Example	:RAD:STAN:PRES:DLIN:BS:TYPE FR1C :RAD:STAN:PRES:DLIN:BS:TYPE?
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted)|1-O (FR1 Radiated)| 2-O (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

– Category A Wide Area BS
– Category B Wide Area BS
– Category A Medium Range BS
– Category B Medium Range BS
– Category A Medium Range BS (Low Power rated)
– Category B Medium Range BS (Low Power rated)
– Category A Local Area BS
– Category B Local Area BS

Set the value you want for this control and the other controls in the "Configure Preset" section, and then press "Apply Preset (to all CCs)".

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory AWARea | BWARea | AMRange | BMRange | AMRLow | BMRLow | ALARea | BLARea` `[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory?`
Example	`:RAD:STAN:PRES:DLIN:BS:CAT BWAR` `:RAD:STAN:PRES:DLIN:BS:CAT?`
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed
Preset	`BWARea`
State Saved	Yes
Range	Category A Wide Area BS| Category B Wide Area BS| Category A Medium Range BS|Category B Medium Range BS|Category A Medium Range BS (Low Power rated)|Category B Medium Range BS (Low Power rated)|Category A Local Area BS|Category B Local Area BS

Assumed Adjacent Channels

This control is part of the "Preset for ACP, Mod Analysis" section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE] NR | EUTRa | NREutra [:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE]?
Example	:RAD:STAN:PRES:DLIN:ACH NR :RAD:STAN:PRES:DLIN:ACH?
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW)|E-UTRA|NR + E-UTRA

Uplink

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE] NR | UTRa | NRUTra [:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE]?
Example	:RAD:STAN:PRES:ULIN:ACH NR :RAD:STAN:PRES:ULIN:ACH?
Preset	NR
State Saved	Yes
Range	NR (same BW)|UTRA|NR + UTRA

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe NONE | PUS | PRA4 | PRA160S15 | PRA160S30 | PRA12 | PRA123S15 | PRA123S30 | SRS | PRA0S60 | PRA0S120 [:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe?
Example	:RAD:STAN:PRES:ULIN:CTYP PUS :RAD:STAN:PRES:ULIN:CTYP?
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS

	When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS
State Saved	Yes
Range	PUSCH|PRACH Config Index 4|PRACH Config Index 160 (15 kHz SCS)|PRACH Config Index 160 (30 kHz SCS)|PRACH Config Index 12|PRACH Config Index 123 (15 kHz SCS)|PRACH Config Index 123 (30 kHz SCS)|PRACH Config Index 0 (60 kHz SCS)|PRACH Config Index 0 (120 kHz SCS)|SRS

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See "Apply Preset (to All CCs)" on page 3322.

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?`
Example	`:RAD:STAN:PRES:INCL:EVM:RBAL 1` `:RAD:STAN:PRES:INCL:EVM:RBAL?`
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?`
Example	`:RAD:STAN:PRES:INCL:EGAT:SOUR 1`

	:RAD:STAN:PRES:INCL:EGAT:SOUR?
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF | ON | 0 | 1 [:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?
Example	:RAD:STAN:PRES:INCL:FRAM:PER 1 :RAD:STAN:PRES:INCL:FRAM:PER?
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF | ON | 0 | 1 [:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?
Example	:RAD:STAN:PRES:INCL:FRAM:SYNC 1 :RAD:STAN:PRES:INCL:FRAM:SYNC?
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF | ON | 0 | 1 [:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?
Example	:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1 :RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when “Apply Preset (to All CCs)” is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe?`
Example	`:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1` `:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?`
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and “Apply Preset (to All CCs)” is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot

FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE | FRAMe | GPP` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?`
Example	`:RAD:STAN:PRES:RBAL:TIME:LENG GPP` `:RAD:STAN:PRES:RBAL:TIME:LENG?`
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE: You must press "**Apply Preset (to all CCs)**" or the values on the controls in the "Configure Presets" section of the menu panel will *not* affect the Component Carriers.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:IMMediate`
Example	`:RAD:STAN:PRES:IMM`
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until "Apply Preset" is executed again – Start-up – Mode Preset – Recall

Values for Meas Standard

Note: Unless specifically stated otherwise, descriptions of Frequency Range selection "FR2" in this chapter cover either or both "FR2-1" or/and "FR2-2" selection.

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 | FR2 | FR2-1 | FR2-2	FR1 | FR2 | FR2-1 | FR2-2
Duplex Mode	FDD | TDD	FDD | TDD
SCS	μ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	μ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers),1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT and Spur only)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr),	n/a

	Cat A Local Area BS, Cat B Local Area BS	
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4
UL Channel Type (for Tx On|Off Power)	n/a	When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2: PUSCH, PRACH Config Index 0 (60 kHz SCS), PRACH Config Index 0 (120 kHz SCS), SRS

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "Apply Preset (to All CCs)" on page 3322 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

3GPP TS38.141-1 v.17.9.0 (2023-03)

ACP: Table 6.6.3.5.2-1

SEM: Table 6.6.4.5.3.1-3

ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Direction = Uplink

When UL Carrier Mode = Normal Uplink:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW) UTRA, NR + UTRA	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5.2.4.1.5-2 Table 6.5.2.4.2.5-2	Table 6.5.2.2.5-1
FR2		TS38.521-2 v.17.2.0 (2023-03)	Table 6.5.2.3.5-1	Table 6.5.2.1.5-1

When UL Carrier Mode = Sidelink / V2X:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are preset when Apply Preset is executed.

– "Configure Component Carriers" on page 3329

– "Trigger/Gate Parameters" on page 3329

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	**Sidelink**
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

		Preset values				
		TDD / FDD Duplex Mode			**User Defined Duplex mode**	
Trigger menu	**Parameter**	**Downlink (*1) FR1**	**Downlink (*1) FR2**	**Uplink**	**Downlink**	**Uplink**
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us	Off	Off
Gate Settings	Gate (*5)	On	On	(no preset)	On	On
	Gate Delay	5.000 ms	1.250 ms	(no preset)	Transmission periodicity (*8)	Transmission periodicity (*8)

	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)	Duration of downlink slots and symbols	Duration of uplink slots and symbols
	Gate Holdoff	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
	Absolute Trig Level	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)	Off	Off
	Holdoff Type	(no preset)	(no preset)	Below (*7)	(no preset)	(no preset)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when "RB Alloc Preset" on page 3310 is any of NR-TM and "Duplex Mode" on page 3304 is TDD

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW ≤ 255 MHz) or External 3 (when Info BW ≥ 256 MHz) depending on the Info BW determined by the component carrier configuration

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called “Periodic Timer Period”

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter

(*5) Gate is preset to Off with the Apply Preset action when "Duplex Mode" on page 3304 is FDD

(*6) Gate Length preset value for DL FR1 depends on "DL FR1 NR-TM Reference Standard Selection" on page 3305 under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope =

Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down

(*8) If transmission periodicity is less than 1ms, use the lowest multiple of transmission periodicity that is greater than or equal to 1ms

ACP

The following parameters are preset when Apply Preset is executed.

- "BW Parameters" on page 3331
- "Trace Detector" on page 3331
- "Sweep Parameter" on page 3331
- Frequency Parameters
- Meas Setup: Settings Parameter
- "Meas Setup: Configure Component Carrier Parameters" on page 3333
- "Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters" on page 3335

BW Parameters

Parameter	Preset Value
Res BW	100 kHz
Res BW State	Man
Video BW State	Auto

Trace Detector

Parameter	Preset Value
Detector	Auto (Average)

Sweep Parameter

Parameter	Preset Value
Auto Sweep Points	On

Frequency Parameters

Preset Configuration				Preset Value
Direction	FR	Bandwidth	Assumed Adj Channels	Span (*1)
Downlink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW), NR + E-UTRA	= 4 x Bandwidth + RFBW (*2)
			E-UTRA	= 20 MHz + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
Uplink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
			UTRA	= 20 MHz + RFBW (*2)
			NR + UTRA	= max(2 x Bandwidth, 20 MHz) + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 3 x RFBW (*2)

Notes:

(*1) Span value is preset to the wider one from either the value specified in this table or the value which is calculated based on all the set parameters for CCs and Offsets whichever being necessary.

(*2) "RFBW" represents:

- The "Bandwidth" of the selected CC for 1 CC case,
- The RF Bandwidth which is equivalent to the $BW_{channel, CA}$ with "Measure Carrier = ON" for all CCs for Multiple CC cases (in both Contiguous or Non-contiguous allocations), where $BW_{channel, CA}$ is defined in clause 5.3A.2, 3GPP TS38.104 for downlink (BTS), or in clause 5.3A.2, 3GPP TS38.101 for uplink (UE).

Meas Setup: Settings Parameter

Parameter	Preset Value
Meas Method	Integration BW

Meas Setup: Configure Component Carrier Parameters

– When "Adjust Limit Mask for Freq Range" is set to a value other than "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	
Uplink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB} + \text{SCS [kHz]}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	

where:

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

– When "Adjust Limit Mask for Freq Range" is set to "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		400 MHz	120, 480,	

			960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	
Uplink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\mathrm{Bandwidth}, \mathrm{FR}, \mathrm{SCS}) \times \mathrm{SCS}\ [\mathrm{kHz}] \times N_{sc}^{RB} + \mathrm{SCS}\ [\mathrm{kHz}]\}$
		400 MHz	120, 480, 960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	

where:

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Downlink: 3GPP TS38.817-02 v.15.9.0 (2020-09):

5.5.3 Adjacent Channel Leakage ratio

5.5.3.1 NR ACLR

“ACLR is the ratio of power of wanted signal to the power falling into Adjacent Channel. ACLR measurement bandwidth for both the wanted and adjacent channels is the maximum transmission bandwidth among the different SCSs of CP-OFDM SU for a channel BW with addition of one SCS to account for half SCS shift due to SCS alignment to DC, this measurement bandwidth is centered within the channels.”

Uplink: 3GPP TS38.817-01 v.16.2.0 (2020-09):

6.6.3 Adjacent Channel Leakage Power Ratio (ACLR)

- (snip)
- “Maximum transmission bandwidth configuration of the BS channel bandwidth (between subcarrier spacing) specified in Release 15 should be used as a measurement bandwidth for adjacent channel power measurement, i.e. the measurement bandwidth should also apply to future releases regardless of whether new SU is introduced or not.”

Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters

Preset Configuration (*1)				Preset Value (*2)		
Direction	**FR**	**Carrier Allocation**	Assumed Adjacent Chan	Power Reference	Offset Freq Define	Offset Preset Case
Downlink	FR1	Contiguous, Non-Contiguous	NR (same BW)	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
			E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: EtoC Inner: StoC	Outer: Case 2 Inner: Case 1
	FR2	Contiguous, Non-Contiguous	NR (same BW), E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
Uplink	FR1	Contiguous	NR (same BW)	Aggregated Channel BW	Outer: CtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Aggregated Channel BW	Outer: EtoC Inner: SCtoC	Outer: Case 2 Inner: Case 1
		Non-Contiguous	NR (same BW)	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 2 Inner: Case 2
	FR2	Contiguous	NR (same BW), UTRA, UTRA + NR	Aggregated Channel BW	Outer: RCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
		Non-Contiguous	NR (same BW), UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1

Notes:

(*1) Preset Configuration:

- Direction is located at the Radio tab menu.
- Carrier Allocation is located at the Component Carriers tab menu.

- FR and Assumed Adjacent Channesls are located at the Meas Standard tab menu.
- 3GPP TS38.521-1/2 have not clearly specified Uplink non-Contiguous CA test cases yet. The Left & Right Subblocks and the SCtoC selections are based on the assumption of BWChannel,CA as BWContiguous.
- Assumed Adjacent Channesls = “E-UTRA”, “E-UTRA + NR” for Downlink and “UTRA”, “UTRA + NR” for Uplink are not applicable to FR2.

(*2) Notes for Preset Value:

- Power Ref(erence) is located at the Reference tab menu.
- Outer and Inner Offset Freq Define parameters are located at the Offset and the Inner Offset sub-menus, respectively, in the Carrier/Offset/Limits Configuration dialog menu.
- Outer/Inner Offset Preset Case 1 and 2 indicate the tables in the following section.
- Outer/Inner Offset Freq Define:
  - CtoC: (Left & Right) Carrier Center to Offset Center
  - EtoC: (Left & Right) Carrier Edge to Offset Center
  - RCtoC: RFBW Center to Offset Center
  - SCtoC: (Left & Right) Sub-block Center to Offset Center
  - StoC: (Left & Right) Subblock Edge to Offset Center
- Power Ref = Aggregated Chan BW is actually the same as the Power Ref = Left & Right Sub-blocks when the Carrier Allocation = Contiguous.
- Inner Offset setting is fundamentally N/A when Carrier Allocation = Contiguous.

Outer Offset Preset Case 1

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “NR (same BW)” for DL/UL, or FR2 with Assumed Adjacent Channels (ACLR) = any case for DL/UL.

Outer Offset Parameters (for the Outer Offset Preset Case 1):

Parameter	Preset Configuration			Preset Value
	Direction	FR	Offset	

Offset Freq State	Downlink	FR1	A, B	On
			C, … , L	Off
		FR2	A	On
			B, … , L	Off
	Uplink		A	On
			B, … , L	Off
Offset Freq	Downlink		A	BW_{CC}
			B	$2*BW_{CC}$
			C, … , L	0 Hz
	Uplink	FR1	A	BW_{CC}
			B, … , L	0 Hz
		FR2	A	When Num of CCs = 1: BW_{CC} When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]}$
			B, … , L	0 Hz
Integ BW	Downlink		All	$\max_{SCS}\{N_{RB}(BW_{CC},FR,SCS)\times SCS\,[kHz]\times N_{SC}^{RB}\}$
	Uplink	FR1	All	$\max_{SCS}\{N_{RB}(BW_{CC},FR,SCS)\times SCS\,[kHz]\times N_{sc}^{RB}+SCS\,[kHz]\}$
		FR2	All	When Num of CCs = 1: $\max_{SCS}\{N_{RB}(BW_{CC},FR,SCS)\times SCS\,[kHz]\times N_{sc}^{RB}+SCS\,[kHz]\}$ When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA} - 2*BW_{GB}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]} - 2*BW_{GB}$

where:

BW_{CC}: “Bandwidth” in the Configure Preset menu under Meas Standard tab, representing CC Bandwidth

$BW_{Channel,CA}$: Aggregated Channel Bandwidth, defined in the clause 5.3A.2 in TS38.521-2

$BW_{Channel,block[n]}$: Aggregated Sub-block[n] Bandwidth (where n=1 for the Left Sub-block, 2 for the Right Sub-block, defined in the clause 5.3A.2 in TS38.521-2

BW_{GB}: Guard Band bandwidth, defined in the clause 5.3A.2 in TS38.521-2

FR: Frequency Range, applied in the Configure Preset menu

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in "N_Grid_Size (Display Only)" on page 1828

$N_{sc}^{RB} = 12$

Res BW State			All	Auto

Res BW	All	Automatically coupled with the Res BW value under the BW menu
Video BW State	All	Auto
Video BW	All	Automatically coupled with the Video BW value under the BW menu
Offset Side	All	Both
Method	All	Integration BW

Outer Limit Parameters (for the Outer Offset Preset Case 1):

– Downlink Absolute Limits:

Parameter for Downlink	Preset Configuration				Offset	Preset Value
	FR	BS type	Adjust Range (GHz)	BS Category		
Fail Mask					All	Abs AND Rel
Abs Limit	FR1	1-C	None, $f \leq 1.0$, $1.0 < f \leq 3.0$, $3.0 < f \leq 4.2$, $4.2 < f \leq 6.0$, $6.0 < f \leq 7.125$	Cat A WA BS	All	-13 + 10 LOG(BW_{config}) dBm
				Cat B WA BS	All	-15 + 10 LOG(BW_{config}) dBm
				Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	-25 + 10 LOG(BW_{config}) dBm
				Cat A LA BS, Cat B LA BS	All	-32 + 10 LOG(BW_{config}) dBm
		1-O	None, $f \leq 1.0$, $1.0 < f \leq 3.0$, $3.0 < f \leq 4.2$, $4.2 < f \leq 6.0$, $6.0 < f \leq 7.125$	Cat A WA BS	All	-4 + 10 LOG(BW_{config}) dBm
				Cat B WA BS	All	-6 + 10 LOG(BW_{config}) dBm
				Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	-16 + 10 LOG(BW_{config}) dBm
				Cat A LA BS, Cat B LA BS	All	-23 + 10 LOG(BW_{config}) dBm

FR2	2-O	None, 24.25 < f ≤ 29.5, 37.0 < f ≤ 43.5	Cat A WA BS, Cat B WA BS	All	-10.3 + 10 LOG(BW_{config}) dBm
			Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	-17.3 + 10 LOG(BW_{config}) dBm
			Cat A LA BS, Cat B LA BS	All	-17.3 + 10 LOG(BW_{config}) dBm
		43.5 < f ≤ 48.2	Cat A WA BS, Cat B WA BS	All	-10.1 + 10 LOG(BWconfig) dBm
			Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	-17.1 + 10 LOG(BWconfig) dBm
			Cat A LA BS, Cat B LA BS	All	-17.1 + 10 LOG(BWconfig) dBm
		52.6 < f ≤ 71.0	Cat A WA BS, Cat B WA BS	All	-7.7 + 10 LOG(BW_{config}) dBm
			Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	-14.7 + 10 LOG(BW_{config}) dBm
			Cat A LA BS, Cat B LA BS	All	-14.7 + 10 LOG(BW_{config}) dBm

– Downlink Relative Limits:

Parameter for Downlink	Preset Configuration				Offset	Preset Value
	FR	BStype	Bandwidth	Adjust Range(GHz)		
Rel Limit (Car)	FR1	1-C	5, … , 20 MHz	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2,	All	-44.2 dB (= -45 + TT 0.8)

		25, ..., 100 MHz	4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	All	-43.8 dB (= -45 + TT 1.2)
	1-O	5, ... , 100 MHz	None, f ≤ 1.0, 1.0 < f ≤ 3.0	All	-44 dB = (-45 + TT 1.0)
			3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0	All	-43.8 dB = (-45 + TT 1.2)
			6.0 < f ≤ 7.125	All	-36.8 dB = (-45 + TT 8.2)
FR2	2-O	50, 100, 200 400 MHz	None, 24.25 < f ≤ 29.5	All	-25.7 dB = (-28 + TT 2.3)
			37.0 < f ≤ 43.5	All	-23.4 dB = (-26 + TT 2.6)
			43.5 < f ≤ 48.2	All	-23.2 dB = (-26 + TT 2.8)
		100, 400, 800, 1600, 2000 MHz	52.6 < f ≤ 71.0	All	-18.8 dB = (-24 + TT 5.2)

BS type 1-C: TS38.141-1 v.17.9.0 (v.2023-03):

- Abs Limit: Table 6.6.3.5.2-2: Base station ACLR absolute basic limit
- Rel Limit: Table 6.6.3.5.2-1: Base station ACLR limit

  BS type 1-O: TS38.141-2 v.17.9.0 (v.2023-03):

- Rel Limit: Table 6.7.3.5.2-1: BS type 2-O ACLR limit
- Uplink Absolute/Relative Limits:

Parameter for Uplink	Preset Configuration					Preset Value
	FR	UE Power Class	Adjust Range (GHz)	Bandwidth	Offset	
Fail Mask				All	All	Abs AND Rel

Abs Limit	FR1		None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	All	All	-50 dBm
	FR2		None, 24.25 < f ≤ 29.5, 37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2, 52.6 < f ≤ 71.0	All	All	-35 dBm
Rel Limit (Car)	FR1	Power Class 1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	All	All	-36.2 dB (= -37 + TT 0.8)
		Power Class 2		All	All	-30.2 dB (= -31 + TT 0.8)
		Power Class 3		All	All	-29.2 dB (= -30 + TT 0.8) (*1)
	FR2	Power Class 1,2,3,4	None, 24.25 < f ≤ 29.5	50 MHz	All	When Num of CCs = 1: -12.34 dB (= -17 + TT 4.66) When Num of CCs > 1: -12.04 dB (= -17 + TT 4.96)
				100, 200, 400 MHz	All	-12.04 dB (= -17 + TT 4.96)
			37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2,	All	All	-11.04 dB = (-16 + TT 4.96)

52.6 < f ≤ 71.0

When UL Carrier Mode = Normal Uplink:

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.1.5 Test requirement
- Rel Limit: Table 6.5.2.4.1.5-2 NR ACLR requirement and Table 6.5.2.4.1.5-3 Test Tolerance (NR ACLR)

  FR2: TS38.521-2 v.17.0.0 (v.2022-09):

- Abs Limit:
  - Num of CCs = 1: Clause 6.5.2.3.3 Minimum conformance requirements
  - Num of CCs > 1: Clause 6.5A.2.2.1.5 Test Requirements
- Rel Limit:
  - Num of CCs = 1: Table 6.5.2.3.5-1 General requirements for NR_{ACLR}, and Table 6.5.2.3.5-1a Test Tolerance
  - Num of CCs > 1: Table 6.A.2.2.1.5-1 General requirements for CA NR_{ACLR} and Table 6.5A.2.2.1.5-1a Test Tolerance (Aggregated BW ≤ 400 MHz)

    Note: Table 6.5.2.3.5-1b and Table 6.5A.2.2.1.5-1b Relaxation values are not taken into account in the firmware version ~A.32.0x.

    Note: Rel Limit TT values for FR2 in Table 6.5.2.3.5-1a were updated based on Test ID (i.e. OFDM Type & Mod Format) but it has not been reflected to the Preset values yet.

    When UL Carrier Mode = Sidelink-V2X:

    FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5E.2.4.1.5 Test requirement
- Rel Limit: Table 6.5E.2.4.1.5-2 NR ACLR requirement and Table 6.5E.2.4.1.5-3 Test Tolerance

  (*1) Note: TT for V2X test requirement has not been defined yet (TBD/FFS) in TS38.521-1 v.17.5.0. Keep the same TT values for normal Uplink.

Outer Offset Preset Case 2

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “E-UTRA”, “NR + E-UTRA” for DL, or “UTRA”, “NR + UTRA” for UL.

Outer Offset Parameters (for the Outer Offset Preset Case 2):

Parameter	Preset Configuration			Offset	Preset Value
	Direction	FR1 (only)	Assumed Adj Chan		
Offset Frequency Define					EtoC: Carrier Edge to Meas BW Center
Offset Frequency State	Downlink		E-UTRA	A, B	On
				C, … , L	Off
			NR + E-UTRA	A, …, D	On
				E, …, L	Off
	Uplink		UTRA	A, B	On
				C, … , L	Off
			NR + UTRA	A, B, C	On
				D, …, L	Off
Offset Freq				A	= 2.5 MHz
				B	= 7.5 MHz
				C	= 0.5 x Bandwidth
				D	= 1.5 x Bandwidth
				E, F	0 Hz
Integ BW	Downlink			A, B	4.50 MHz
				C, … , L	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{SC}^{RB}\}$
	Uplink			A, B	3.84 MHz
				C, … , L	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$

where:

Bandwidth: Applied in the Configure Preset menu,

FR: Frequency Range, applied in the Configure Preset menu,

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in the Section "N_Grid_Size (Display Only)" on page 1828, "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Parameter	Preset Configuration			Offset	Preset Value
Res BW State				All	Auto
Res BW				All	Automatically coupled with the Res BW value under the BW menu
Video BW State				All	Auto
Video BW				All	Automatically coupled with the Video BW value under the BW menu

Offset Side		All	Both
Method and Filter Alpha	Downlink	All	Integration BW
	Uplink	A, B	RRC Weighted, Filter Alpha = 0.22
		C, ..., L	Integration BW

Outer Limit Parameters (for the Outer Offset Preset Case 2):

– Downlink Absolute Limits:

Parameterfor Downlink	Preset Configuration				Offset	Preset Value
	FR	BStype	Adjust Range (GHz)	BS Category		
Fail Mask					All	Abs AND Rel
Abs Limit	FR1	1-C	None, $f \leq 1.0$, $1.0 < f \leq 3.0$, $3.0 < f \leq 4.2$, $4.2 < f \leq 6.0$, $6.0 < f \leq 7.125$	Cat A WA BS	All	$-13 + 10\,LOG(BW_{config})$ dBm
				Cat B WA BS	All	$-15 + 10\,LOG(BW_{config})$ dBm
				Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	$-25 + 10\,LOG(BW_{config})$ dBm
				Cat A LA BS, Cat B LA BS	All	$-32 + 10\,LOG(BW_{config})$ dBm
		1-O	None, $f \leq 1.0$, $1.0 < f \leq 3.0$, $3.0 < f \leq 4.2$, $4.2 < f \leq 6.0$, $6.0 < f \leq 7.125$	Cat A WA BS	All	$-4 + 10\,LOG(BW_{config})$ dBm
				Cat B WA BS	All	$-6 + 10\,LOG(BW_{config})$ dBm
				Cat A MR BS, Cat B MR BS, Cat A MR BS (Low Pr), Cat B MR BS (Low Pr)	All	$-16 + 10\,LOG(BW_{config})$ dBm
				Cat A LA BS, Cat B LA BS	All	$-23 + 10\,LOG(BW_{config})$ dBm

– Downlink Relative Limits:

Parameterfor Downlink	Preset Configuration	Offset	Preset Value

	FR	BStype	Bandwidth	Adjust Range (GHz)		
Rel Limit (Car)	FR1	1-C	5, ... , 20 MHz	None, f ≤ 1.0,	All	-44.2 dB (= -45 + TT 0.8)
			25, ..., 100 MHz	1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	All	-43.8 dB (= -45 + TT 1.2)
		1-O	5, ... , 100 MHz	None, f ≤ 1.0, 1.0 < f ≤ 3.0	All	-44 dB = (-45 + TT 1.0)
				3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0	All	-43.8 dB = (-45 + TT 1.2)
				6.0 < f ≤ 7.125	All	-36.8 dB = (-45 + TT 8.2)(*)

(*) BS type 1-O relative limits for 6.0 < f ≤ 7.125 GHz range is “N/A” in 3GPP Release 17 TS38.141-2 Table 6.7.3.5.1-1 as of v.2022-09. Meanwhile, keep the value -36.8 dB for preset which is the same value as the Assumed Adjacent Channel = NR (in the Outer Offset Preset Case 1).

BS type 1-C: TS38.141-1 v.17.9.0 (v.2023-03):

- Abs Limit: Table 6.6.3.5.2-2: Base station ACLR absolute basic limit
- Rel Limit: Table 6.6.3.5.2-1: Base station ACLR limit

  BS type 1-O: TS38.141-2 v.17.9.0 (v.2023-03):
- Abs Limit: Table 6.7.3.5.1-2: BS type 1-O ACLR absolute limit
- Rel Limit: Table 6.7.3.5.1-1: BS type 1-O ACLR limit
- Uplink Absolute/Relative Limits:

Parameterfor Uplink	Preset Configuration			Offset	Preset Value
	FR	Adjust Range(GHz)	UE Power Class		
Fail Mask				All	Abs AND Rel
Abs Limit	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125		All	-50 dBm

Rel Limit (Car)	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	Power Class 1	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-36.2 dB (= -37 + TT 0.8)
			Power Class 2	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-30.2 dB (= -31 + TT 0.8)
			Power Class 3	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-29.2 dB (= -30 + TT 0.8)

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.2.5 Test requirement
- Rel Limit: Table 6.5.2.4.2.5-2 UTRA ACLR requirement

  Note: Offsets C...F are OFF; the relative limit values are just derived from the UL E-UTRA limit values.

Inner Offset Preset Case 1

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “NR (same BW)” for DL/UL, “E-UTRA” or “NR + E-UTRA” for DL, or FR2 with Assumed Adjacent Channels (ACLR) = any case for DL/UL.

Inner Offset Parameters (for the Inner Offset Preset Case 1):

Parameter	**Preset Configuration**			**Offset**	**Preset Value**
	Direction	**FR**	**CarrierAllocation**		
Offset Frequency State	Downlink	FR1	Contiguous	All	Set to default values
			Non -Contiguous	A, B	See "Table 1a Offset Freq State" on page 1569
				C, ..., L	Off
		FR2	Contiguous	All	Set to default values
			Non -Contiguous	A	See "Table 1a Offset Freq State" on page 1569
				B, ... , L	Off
	Uplink		Contiguous	All	Set to default values
			Non -Contiguous	A	See "Table 1a Offset Freq State" on page 1569
				B, ... , L	Off
Offset Freq				A, B	See "Table 1b Offset Freq and Integ BW Offset A/B" on page

		1570
	C, ... , L	0 Hz
Integ BW	A, B	See "Table 1b Offset Freq and Integ BW Offset A/B" on page 1570
	C, ... , L	Same value as Offset A and B
Offset Side	All	Both
Method	All	Integration BW
Res BW State	All	Auto
Video BW State	All	Auto
Power Ref Type	All	See "Table 1a Offset Freq State" on page 1569

Table 1a Offset Freq State

Preset Configuration			Wgap(Sub-block gap) (MHz)	Preset Value			
Direction	FR	Bandwidth		Offset Enabled		Power Ref Type(*)	
				A	B	A	B

Downlink	FR1	5, ..., 20 MHz	Wgap < 5			Auto (Cum)	Auto (Cum)
			5 ≤ Wgap < 10	✓		Auto (Cum)	Auto (Cum)
			10 ≤ Wgap <15	✓	✓	Auto (Cum)	Auto (Cum)
			15 ≤ Wgap < 20	✓	✓	Auto (Norm)	Auto (Cum)
			20 ≤ Wgap	✓	✓	Auto (Norm)	Auto (Norm)
		25, ..., 100 MHz	Wgap < 20			Auto (Cum)	Auto (Cum)
			20 ≤ Wgap < 40	✓		Auto (Cum)	Auto (Cum)
			40 ≤ Wgap <60	✓	✓	Auto (Cum)	Auto (Cum)
			60 ≤ Wgap <80	✓	✓	Auto (Norm)	Auto (Cum)
			80 ≤ Wgap	✓	✓	Auto (Norm)	Auto (Norm)
	FR2	50, 100 MHz	Wgap < 50			Auto (Cum)	Auto
			50 ≤ Wgap < 100	✓		Auto (Cum)	Auto
			100 ≤ Wgap	✓		Auto (Norm)	Auto
		200, 400, 800, 1600, 2000 (**) MHz	Wgap < 200			Auto (Cum)	Auto
			200 ≤ Wgap < 400	✓		Auto (Cum)	Auto
			400 ≤ Wgap	✓		Auto (Norm)	Auto
Uplink	FR1	5, ..., 100 MHz	Wgap < Bandwidth			Norm	Norm
			Bandwidth ≤ Wgap	✓		Norm	Norm
	FR2	50, 100, 200 400 MHz	Wgap < Bandwidth			Norm	Norm
		100, 400, 800, 1600, 2000(**) MHz	Bandwidth ≤ Wgap	✓		Norm	Norm

(*) Power Ref Type: Cum = Cumulative, Norm= Normal

(**) Non-Contiguous CA test case is not applicable to FR2-2 Bandwidths 800, 1600, 2000 MHz in Release 17. Until the definition will be applied in Release 18 or later, put these selections to the same as FR2-1's.

Table 1b Offset Freq and Integ BW Offset A/B

Preset Configuration			Offset	Preset Value	
Direction	FR	Bandwidth		Offset Freq	Offset Integ BW (MHz)

				(MHz)	
Downlink	FR1	5, ..., 20 MHz	A	2.5	4.50
			B	7.5	
		25, ..., 100 MHz	A	10	19.08
			B	30	
	FR2	50, 100 MHz	A	25	47.52
			B	75	
		200, 400, 800, 1600, 2000(**) MHz	A	100	190.08
			B	300	
Uplink	FR1	5, ..., 100 MHz	A	= Bandwidth	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$
			B	= 2 x Bandwidth	
	FR2	50, 100, 200 400 MHz	A	= Bandwidth	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$
		100, 400, 800, 1600, 2000(**) MHz	B	= 2 x Bandwidth	

where:

Bandwidth: applied in the Configure Preset menu,

FR: Frequency Range, applied in the Configure Preset menu,

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

(**) Non-Contiguous CA test case is not applicable to FR2-2 Bandwidths 800, 1600, 2000 MHz in Release 17. Until the definition will be applied in Release 18 or later, put these selections to the same as FR2-1's.

Inner Limit Parameters (for the Inner Offset Preset Case 1):

– Downlink Absolute Limits:

Parameterfor Downlink	Preset Configuration				Offset	Preset Value
	FR	BSType	Adjust Range(GHz)	BS Category		
Fail Mask					All	Abs AND Rel
Abs Limit	FR1	1-C	None,	Cat A WA BS	All	-13 + 10 LOG(

		f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125			BW_{config}) dBm
			Cat B WA BS	All	-15 + 10 LOG(BW_{config}) dBm

			37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2, 52.6 < f ≤ 71.0	All	All	-11.04 dB = (-16 + TT 4.96)

When UL Carrier Mode = Normal Uplink:

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.1.5 Test requirement
- Rel Limit: Table 6.5.2.4.1.5-2 NR ACLR requirement and Table 6.5.2.4.1.5-3 Test Tolerance (NR ACLR)

  FR2: TS38.521-2 v.17.0.0 (v.2022-09):

- Abs Limit: Clause 6.5.2.3.3 Minimum conformance requirements
- Rel Limit: Table 6.5.2.3.5-1 General requirements for NR_ACLR, and Table 6.5.2.3.5-1a Test Tolerance

  Note: Table 6.5.2.3.5-1b Relaxation values are not taken into account in the firmware version ~A.30.xx

  When UL Carrier Mode = Sidelink / V2X:

  FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5E.2.4.1.5 Test requirement
- Rel Limit: Table 6.5E.2.4.1.5-2 NR ACLR requirement and Table 6.5E.2.4.1.5-3 Test Tolerance

  (*1) Note: TT for V2X test requirement has not been defined yet (TBD/FFS) in TS38.521-1 v.17.5.0. Keep the same TT values for normal Uplink.

Inner Offset Preset Case 2

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “UTRA” or “NR + UTRA” for UL.

Inner Offset Parameters (for the Inner Offset Preset Case 2):

Parameter(all Uplink)	Preset Configuration		Offset	Preset Value
	Carrier Allocation	Assumed Adj Chan		
Offset Frequency State	Contiguous	UTRA, NR + UTRA	All	Set to default values
	Non-Contiguous	UTRA	A, B	See "Table 2a Offset Freq State" on page 1577
			C, … , L	Off
		NR + UTRA	A, B, C	See "Table 2a Offset Freq State" on page 1577
			D, … , L	Off
Offset Freq			A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 1577

	D, ... , L	0 Hz
Integ BW	A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 1577
	D, ... , L	Same value as Offset C
Offset Side	All	Both
Method and Filter Alpha	A, B	RRC Weighted, Filter Alpha = 0.22
	C, ... , L	Integration BW
Res BW State	All	Auto
Video BW State	All	Auto
Power Ref Type	All	See "Table 2a Offset Freq State" on page 1577

Table 2a Offset Freq State

Preset Configuration			Wgap(Sub-block gap) (MHz)	Preset Value					
Direction	FR	Bandwidth		Offset Enabled			Power Ref Type (*)		
				A	B	C	A	B	C
Uplink	FR1	5, ..., 100 MHz	Wgap < 5				Norm	Norm	Norm
			5 ≤ Wgap < 10	✓		(+)	Norm	Norm	Norm
			10 ≤ Wgap	✓	✓	(+)	Norm	Norm	Norm
			Wgap < Bandwidth	(++)	(++)		Norm	Norm	Norm
			Bandwidth ≤ Wgap	(++)	(++)	✓	Norm	Norm	Norm

(*) Power Ref Type: Cum = Cumulative, Norm= Normal

(+) Same as the rows of “Wgap < Bandwidth” and “Bandwidth ≤ Wgap”.

(++) Same as the rows of “Wgap < 5”, “5 ≤ Wgap < 10”, and “5 ≤ Wgap”.

Table 2b Offset Freq and Integ BW Offset A/B/C

Preset Configuration			Offset	Preset Value	
Direction	FR	Bandwidth		Offset Freq (MHz)	Offset Integ BW (MHz)
Uplink	FR1	5, ..., 100 MHz	A	2.5	3.84 MHz
			B	7.5	3.84 MHz
			C	= 0.5 x Bandwidth	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$

where:

Bandwidth: applied in the Configure Preset menu,

FR: Frequency Range, applied in the Configure Preset menu,

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Inner Limit Parameters (for the Inner Offset Preset Case 2):

Parameterfor Uplink	Preset Configuration			Offset	Preset Value
	FR	Adjust Range(GHz)	UE Power Class		
Fail Mask				All	Abs AND Rel
Abs Limit	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125		All	-50 dBm
Rel Limit (Car)	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	Power Class 1	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-36.2 dB (= -37 + TT 0.8)
			Power Class 2	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-30.2 dB (= -31 + TT 0.8)
			Power Class 3	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-29.2 dB (= -30 + TT 0.8)

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.2.5 Test requirement
- Rel Limit: Table 6.5.2.4.2.5-2 UTRA ACLR requirement, Table 6.5.2.4.1.5-2: NR ACLR requirement and Table 6.5.2.4.1.5-3 Test Tolerance (NR ACLR)

  Note: Offsets C...F are OFF; the relative limit values are just derived from the UL E-UTRA limit values.

Spectrum Emission Mask

The following parameters are preset when Apply Preset is executed.

- "BW Parameter" on page 3357
- "Offset RAT" on page 3357

– "Carrier Parameters" on page 3357
– "Reference Parameter" on page 3358
– "Configure Component Carrier Parameter" on page 3358
– "Outer/Inner Offset Parameters" on page 3359
– "Other Offset/Limit Parameters" on page 3360

BW Parameter

When executing Apply Preset, preset the following parameter:

– BW > Settings Tab > RBW Filter Type: Gaussian

Offset RAT

Channel BW / 2 is used as Offset RAT.

Carrier Parameters

Res BW

Preset Configuration	Preset Value
Bandwidth	RBW (kHz)
5 MHz	47
10 MHz	91
15 MHz	150
20 MHz	180
25 MHz	240
30 MHz	270
35 MHz	330
40 MHz	390
45 MHz	430
50 MHz	470
60 MHz	560
70 MHz	680
80 MHz	750
90 MHz	820
100 MHz	910

200 MHz	1800
400 MHz	3000
800 MHz	3000
1600 MHz	3000
2000 MHz	3000

RBW values in the table come from auto RBW values calculated in Swept SA when Bandwidth value is set to Span.

Note that the maximum set RBW value by the auto RBW setting is 3 MHz.

Channel Detector

Parameter	Preset Value
Channel Detector	Auto (Average)

Reference Parameter

Preset Configuration		Preset Value	
Direction	FR	Measurement Type	Power Ref
Downlink	FR1	Total Power Ref	L & R Carriers
	FR2	Total Power Ref	RF Bandwidth
Uplink	FR1	Total Power Ref	RF Bandwidth
	FR2	Total Power Ref	RF Bandwidth

Configure Component Carrier Parameter

Direction	Preset Configuration			Preset Value
	FR	Bandwidth	SCS	SEM Power Integration Bandwidth for all CC0...15
Downlink	FR1	5, ..., 100 MHz	15, 30, 60 kHz	Same as Carrier Bandwidth
	FR2	50, 100, 200, 400 MHz	60, 120 kHz	
		100, 400, 800, 1600, 2000 MHz	120, 480, 960 kHz	
Uplink	FR1	5, ..., 100 MHz	15, 30, 60 kHz	Same as Carrier Bandwidth
	FR2	50, 100, 200, 400 MHz	60, 120 kHz	
		100, 400, 800, 1600, 2000 MHz	120, 480, 960 kHz	

Outer/Inner Offset Parameters

Parameters common to all offsets in both downlink and uplink

Parameter	Preset Configuration		Inner/Outer	Preset Value
	Direction	FR		
Offset Detector			Both	Peak (Auto)
Offset Frequency Define	Downlink	FR1	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
		FR2	Outer	RFBW Edge-to-Center
			Inner	Subblock Edge-to-Center
	Uplink	FR1	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
		FR2	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
Res BW Auto State			Both	Off
Video BW Auto State			Both	On
VBW/RBW Auto State			Both	Off
VBW/RBW			Both	0.01
Sweep Time Auto State			Both	On
Sweep Type Auto State			Both	On
Offset Side			Both	Both

Cumulate Mask (Inner Offset only)

Preset Configuration		Preset Value	
Direction	FR	Cumulate Mask	Cumulate Mask Stop Frequency
Downlink	FR1	On	10.5 MHz
	FR2	On	1.50 GHz
Uplink	FR1	Off	10.5 MHz
	FR2	Off	1.50 GHz

Other Offset/Limit Parameters

Downlink, FR1, BS type = 1-C:

When executing Apply Preset: “Show Abs2 Limit” = Off

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-4: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (NR bands ≤ 3.0 GHz).

Note:
According to the Table 6.7.4.5.1.4-4 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as "-11.2 dB – (7/5)*((f_offset / MHz) – 0.05) dB" which implies the Offset A Rel Limit -11.2 thru -18.2 dB with the Fail Mask = Rel. However, it is suspected that the description "-11.2 dB" in the Table 6.7.4.5.1.4-4 is a typo and is supposed to be "-11.2 dBm". Thus, keeping the Offset A Limit -11.2 thru -18.2 dBm with the Fail Mask = Abs.

BS Category = Cat A MR BS (Low P_r) or Cat B MR BS (Low P_r), Adjust Range: 3.0 < f ≤ 4.2 GHz & 4.2 < f ≤ 6.0 GHz

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-5: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (3 GHz < NR bands ≤ 4.2 GHz),

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-6: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (4.2 GHz < NR bands ≤ 6 GHz).

Note:
According to the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as "-11 dB – (7/5)*((f_offset / MHz) – 0.05) dB" which implies the Offset A Rel Limit -11 thru -18 dB with the Fail Mask = Rel. However, it is suspected that the description "-11.2 dB"

in the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 are typo and is supposed to be “-11 dBm”. Thus, keeping the Offset A Limit -11 thru -18 dBm with the Fail Mask = Abs.

A	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
B	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
C	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
D	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
E-L		(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled

Note that $BW_{Channel}$ is CC BW.

(*) RBW (kHz) for Offset A setting:

CC BW (MHz)	5	10	15	20	25	30	35	40
RBW (kHz)	24.0	51.0	75.0	100.0	130.0	150.0	180.0	200.0

Note:
In the 3GPP definition, 2*RBW(A) = 0.01 * $BW_{Channel}$ for 5,..., 40 MHz CCs or 30 kHz for 50, ..., 100 MHz CCs, and 2*RBW(B) = 1 MHz for all CC BW.
Meanwhile, since X-series signal analyzers provides RBW in discrete line-up only, RBW(A) and RBW(B) are selected as in the table to follow the 3GPP requiement as close as possible.

Better to choose RBW to make MeasBW equal or slightly wider than required, based on the “fail-safe design” policy: e.g. for 35 MHz CC BW, preferred to set RBW 180 kHz (x2 > 350 kHz) than 160 kHz (x2 < 350 kHz) so that measurement can wouldn’t miss a bad DUT.

(**) RBW (kHz) for Offset A setting of the 45 MHz CC BW (in Release 17):

RBW = 150 kHz and MeasBW = 3 to get the 3GPP requirement 450 kHz.

(***) Absolute Limit (dBm) settings:

Offset	CC BW	Adjust Range: None, and f ≤ 1.0 GHz & 1.0 < f ≤ 3.0 GHz	Adjust Range: 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, and 6.0 < f ≤ 7.125 GHz
A	5, ..., 45 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
	50, ..., 100 MHz:	-22.5 dBm = -24 + TT 1.5	-22.2 dBm = -24 + TT 1.8
B	5, ..., 100 MHz:	-8.5 dBm = -10 + TT 1.5	-8.2 dBm = -10 + TT 1.8
C	5, ..., 100 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
D	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8
E-L	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8

Note that TT values for V2X test requirement have not been defined yet (TBD/FFS) in TS38.521-1 v.17.7.0. Keep the same TT values for Uplink.

Modulation Analysis

The following parameters are preset when Apply Preset is executed.

– "Configure Component Carriers|Channel Profile: Resource Grid" on page 3391

– "Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values" on page 3392

– "Advanced: Advanced Demod Setup" on page 3393

Note: CC channel configuration (including CC BW, FR, SCS) and Resource Block allocation map & settings are preset by recalling each scp (Signal Studio/PWSG, prepared internally) file accordingly, based on the “RB Alloc Preset” selection.

Configure Component Carriers|Channel Profile: Resource Grid

When presetting Freq Range and Bandwidth, the resource grid is reset to its default values per SCS accordingly. Also the resource grid config mode is reset to its default value: Manual.

– Transmission bandwidth configuration N_{RB} for FR1:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}

– Table 5.3.2-2: Transmission bandwidth configuration NRB for FR2-1 (Downlink for BTS).

– Table 5.3.2-3: Transmission bandwidth configuration NRB for FR2-2 (Downlink for BTS).

TS38.101-2 or TS38.521-2 v.17.0.0 (v.2022-09) Table 5.3.2-1: Maximum transmission bandwidth configuration NRB for FR2 (Uplink for UE).

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Meas Time: Meas Time parameter values

Meas Time parameters are preset to the following values when Apply Preset is executed, depending on Frequency Range, Adjust Meas Time Length for TM (Test Model), Duplex Mode, and RB Alloc Preset.

When Duplex Mode = TDD, and RB Alloc Preset = any DL NR-TMx.x:

- When Adjust Meas Time Length for TM = None: no preset for Meas Time parameters
- When Adjust Meas Time Length for TM = Frame or 3GPP: Refer to "Adjust Meas Time Length for TM" on page 3321

Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values

When presetting Freq Range, Bandwidth, SCS and the OFDM Type, the RB Offset values are preset to 0 RBs, and the RB Number values are preset to the following values.

- N_{RB} values for FR1 Downlink and Uplink, when the OFDM Type = CP-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	52	79	106	133	160	188	216	242	270	n/a	n/a	n/a	n/a	n/a
30	11	24	38	51	65	78	92	106	119	133	162	189	217	245	273
60	n/a	11	18	24	31	38	44	51	58	65	79	93	107	121	135

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common uplink configuration

- N_{RB} values for FR1 Uplink (only), when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	50	75	100	128	160	180	216	240	270	n/a	n/a	n/a	n/a	n/a
30	10	24	36	50	64	75	90	100	108	128	162	180	216	243	270
60	n/a	10	18	24	30	36	40	50	54	64	75	90	100	120	135

- N_{RB} values for Downlink and Uplink FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	n/a
120	32	66	132	264
240(*)	16	32	66	132

- N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	66	264	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

- N_{RB} values for Uplink (only) FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	64	128	256	n/a
120	32	64	128	256
240(*)	16	32	64	128

- N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	64	256	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common Uplink Configuration.

TS38.521-2 v.17.0.0 (v.2022-09) Table 6.1-1: Common Uplink Configuration for PC3.

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Note: No definition for the N_{RB} values for the new Release 17 FR2-2 SCS (480k, 960k) & Carrier BW (800, 1600, 2000 MHz).

Advanced: Advanced Demod Setup

- Direction = Downlink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	DL NR-TMx.x	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)			On

– Direction = Uplink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	n/a	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)	n/a		On
UL Flatness	Test Tolerance	n/a	FR1	1.4 dB
			FR2	n/a (*2)
UL IBE	UE Power Class	n/a	FR1	Same value as in Advanced Preset menu (grayed out)
			FR2	Same value as in Advanced Preset menu
	Test Tolerance		FR1	0.8 dB
			FR2	n/a (*2)
UL IBE Limit Threshold to	IBE Limit Threshold from P_RB	n/a	FR1	-30.00 dB
			FR2	-25.00 dB

(*1) 3GPP Conformance Test = ON parameter presets the parameters under the "EVM" tab in the Advanced Demod Setup dialog menu. For details, see **3GPP Conformance Test** in the Modulation Analysis Measurement section.

Note: "IQ Offset Compensation" parameter location will be moved to the "EVM" from the "General" submenu, and it is added to the controlled list of "3GPP Conformance Test = ON", with "Off" when Downlink, and with "On" when Uplink.

(*2) UL Spectrum Flatness & IBE "Test Tolerance" value is not preset when FR2 is selected because FR2 Test Tolerance value definition is still FFS in TS38.521-2

v.16.7.0 (v.2021-03), clauses 6.4.2.3 (IBE), 6.4.2.4 (Flatness), and 6.4.2.5 (Flatness for pi/2 BPSK).

Uplink FR1 Flatness and IBE Test Tolerance values in TS38.521-1 v.17.6.1 (v.2022-10):

- IBE: Table 6.4.2.3.5-1 Test requirements for in-band emissions
- Flatness:
  - Table 6.4.2.4.5-1 Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.4.5-2 Requirements for EVM equalizer spectrum flatness (extreme conditions),
  - Table 6.4.2.5.5-1 Mask for EVM equalizer coefficients for Pi/2 BPSK, normal conditions

Uplink FR2 Flatness and IBE Test Tolerance values in TS38.521-2 v.17.0.0 (v.2022-09):

- IBE: all FFS
  - Table 6.4.2.3.5-1: Test requirements for in-band emissions for power class 1,
  - Table 6.4.2.3.5-2: Test requirements for in-band emissions for power class 2,
  - Table 6.4.2.3.5-3: Requirements for in-band emissions for power class 3,
  - Table 6.4.2.3.5-4: Test requirements for in-band emissions for power class 4
- Flatness: all FFS
  - Table 6.4.2.4.5-1: Test Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.5.5-1: Test requirement for EVM equalizer coefficients for Pi/2 BPSK (normal conditions)

Transmit On|Off Power

The following parameters are preset when Apply Preset is executed.

- "Meas Setup: Meas Time parameters for Downlink" on page 3396
- "Meas Setup: Meas Time parameters for Uplink" on page 3396
- "Meas Setup: Other Setting parameters" on page 3399

– "Meas Setup: Limit Parameters" on page 3400

– "Other parameters" on page 3406

Meas Setup: Meas Time parameters for Downlink

Preset Configuration				Preset Value	
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Meas Offset	Meas Interval
NR-TMx.x	FR1	TDD	TS38.141-1	0 subframe	5 subframes
			TS37.141 BC3 CS16/17	4 subframes	5 subframes
	FR2	TDD	n/a	0 subframe	2 subframes
Fulfilled-xx / NR-TMx.x	FR1 /FR2	User Defined	n/a	0 subframe	Minimum subframes that can contain Transmission Periodicity

Preset Configuration				Preset Value		
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Burst Time [ms]	Burst Repetition Period [ms] (*)	UL Off Power Length [ms]
NR-TMx.x	FR1	TDD	TS38.141-1	3.7143	5.000	n/a
			TS37.141 BC3 CS16/17	2.7143	5.000	n/a
	FR2	TDD	n/a	0.9286	1.250	n/a
Fulfilled-xx / NR-TMx.x	RF1/RF2	User Defined	n/a	Time duration of downlink slots and symbols	Transmission periodicity	n/a

(*) Burst Repetition Period for Downlink comes from NR-TM DL-UL-Periodicity: 5 ms for FR1 and 1.25 ms for FR2.

Meas Setup: Meas Time parameters for Uplink

			SRS	2^{-m} (TBD)	10.0	2^{-m}	

Notes:

UL Meas Offset preset for PRACH = $-\left\lceil \frac{\mathrm{PRACH\_ON\_period}}{2^{-\mu}} \right\rceil$ slots,

UL Meas Interval preset for PRACH = $\left\lceil \frac{\text{PRACH\_ON\_period}}{2^{-\mu}} \right\rceil + \left\lceil \frac{2\times\text{PRACH\_ON\_period}}{2^{-\mu}} \right\rceil$ slots,

where:

$2^{-\mu}$ [ms]: UL slot length with μ = 0, 1, 2, or 3 for SCS (PUSCH) 15 kHz, 30 kHz, 60 kHz, or 120 kHz, respectively,

PRACH_ON_period [ms], which values are:

(*1) 0.903125 ms for FR1 PRACH Config Index 4 for FDD and 12 for TDD which Preamble Format is 0,

(*2) 0.428125 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 15 kHz SCS) which Preamble Format is A3 (15 kHz SCS),

(*3) 0.2140625 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 30 kHz SCS) which Preamble Format is A3 (30 kHz SCS),

(*4) 0.035677 ms for FR2 PRACH Config Index 0 (60 kHz SCS) which Preamble Format is A1 (60 kHz SCS), and

(*5) 0.017839 ms for FR2 PRACH Config Index 0 (120 kHz SCS) which Preamble Format is A1 (120 kHz SCS).

(*6) Burst Repetition Period for Uplink:

- FR1 PUSCH: “dl-UL-TransmissionPeriodicity” in Table 6.3.3.2.4.3-3 TDD-UL-DL-Config in TS38.521-1.
- FR1 PRACH: Not clear but “ssb-PeriodicityServingCell” = ms20 (20 ms)? in Table 6.3.3.4.4.3-3 ServingCellConfigCommonSIB in TS38.521-1, safer to set the maximum value 10 ms.
- FR1 SRS: Not clear but “repetitionFactor” = n1? in Table 6.3.3.6.4.3-1 SRS-Config: SRS time mask measurement in TS38.521-1, safer to set the maximum value 10ms.
- FR2 PUSCH: Not clear, safer to set the maximum value 10 ms.
- FR2 PRACH: Not clear, safer to set the maximum value 10 ms.
- FR2 SRS: FFS, safer to set the maximum value 10 ms.

Meas Setup: Other Setting parameters

Direction	Parameter	Preset Configuration	Preset Value
Downlink	Auto Timing Adjust	(any)	Off
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS
Uplink	Auto Timing Adjust	(any)	On
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS

(*) Sub Carrier Spacing (SCS) setting determines the following internal parameters:

– Downlink: “N” factor for 70/N µs RMS averaging window for making the OFF power. N = SCS/15, where SCS is in kHz.

– Uplink: Slot length = $2^{-\mu}$ msec, where µ = 0, 1, 2, 3, 5 or 6 for SCS 15 kHz, 30 kHz, 60 kHz, 120 kHz, 480 kHz, or 960 kHz, respectively.

Meas Setup: Limit Parameters

– Direction = Downlink:

Parameter	Preset Configuration			Preset Value
	FR	BS type	Adjust Range (GHz)

Note:

(*) FR2 PUSCH ON Power Ref & Tolerance limit values were defined in Table 6.3.3.2.5-2, TS38.521-2 v.16.2.0 (2019-12); Meanwhile, TT value for the Power Ref has not been defined yet (FFS) in Table 6.3.3.2.5-4, TS38.521-2 v.16.6.0 (2020-12).

Other parameters

- BW > Settings tab > Info BW: Auto

  However, when the following three conditions are met, executing “Apply Preset” presets Info BW to 381.12 MHz/Man.

  - Radio Direction is uplink
  - Bandwidth is 400 MHz
  - Frequency Range is FR2 or FR2-2 and Adjust Limit Mask for Freq Range is “52.6 < f ≤ 71.0 GHz”

Channel Power

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto
- Meas Setup > Component Carriers tab > Configure Comp Carriers > Power Integration Bandwidth > CHP: the value defined in the Couplings row in "CHP Power Integration Bandwidth" on page 3300.

Occupied BW

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto Detect
- BW > Settings tab > Res BW: Man, 30 kHz
- BW > Settings tab > Video BW: Auto, 300 kHz
- Meas Setup > Limits tab > Bandwidth: Auto
- Meas Setup > Settings tab > Power Integration Method

  = Normal when Radio tab > Direction = Downlink

  = From Center when Radio tab > Direction = Uplink

Monitor Spectrum

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab: Execute Adjust Span to Carrier Config action

IQ Waveform

When executing Apply Preset, preset the following parameters:

- BW > Settings tab > Digital IF BW: Auto
- BW > Settings tab > Filter Type: Flattop
- Frequency > Settings tab, execute Adjust Center Frequency to Carrier Config action
  (which presets Digital IF BW in the BW menu to Auto)

Power Stat CCDF

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab, execute Adjust Center Freq to Carrier Config action
  (which presets Info BW in the BW menu to Auto)

3.6.8.5 Advanced

Contains controls for setting advanced functions of the instrument.

This tab does not appear in VXT.

Noise Floor Extension

Allows you to turn on/configure the **Noise Floor Extension** (NFE) function. Some Modes (such as Spectrum Analyzer), support two states of NFE, Full and Adaptive. The `ON` state (in Modes that do not support Adaptive NFE) matches the `FULL` state (in Modes that *do* support Adaptive NFE).

In `ON` or `FULL` NFE, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

In Adaptive NFE, there is not the same dramatic visual impact on the noise floor as there is in Full NFE. Adaptive NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the NFE-off case; and when lots of averaging is being performed, the signal displays more like the full-NFE case.

Adaptive NFE (in Modes that support it) is recommended for general-purpose use. For fully ATE (automatic test equipment) applications, where the distraction of a person using the instrument is not a risk, Full NFE is recommended.

NFE works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact in having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE **Noise Floor Extension** has no effect unless the RF Input is selected, therefore it does nothing when **External Mixing** is selected.

In Modes that support Adaptive NFE, the default state of NFE is **Adaptive**. In Modes that do not support Adaptive NFE, the default state of NFE is `OFF`. Prior to the introduction of Adaptive NFE (firmware version A.18.00), the default state of NFE was `OFF` for all Modes.

With the introduction of Adaptive NFE, the menu control is changed from **On/Off** to **Full/Adaptive/Off**. For SCPI Backwards Compatibility, the existing SCPI command to turn NFE on and off was retained, and a new command was added to set the state to turn Adaptive On and Off

`[:SENSe]:CORRection:NOISe:FLOor ON|OFF|1|0` is retained, default changed to On for modes which support Adaptive NFE

`[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON|OFF|1|0` is added (for certain Modes), default=On

FULL = `:CORRection:NOISe:FLOor ON` plus `:CORRection:NOISe:FLOor:ADAPtive ON`

Remote Command	`[:SENSe]:CORRection:NOISe:FLOor ON | OFF | 1 | 0` `[:SENSe]:CORRection:NOISe:FLOor?`
Example	`:CORR:NOIS:FLO ON`
Dependencies	Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, but the SCPI command is accepted without error (but has no effect)
Couplings	If NFE is enabled in any Mode manually, a prompt is displayed reminding you to perform the Characterize Noise Floor operation if it is needed If NFE is enabled via SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by **Mode Preset.** Turned `ON` at startup and by **Restore Mode Defaults** in Modes that support Adaptive. Turned `OFF` at startup and by **Restore Mode Defaults** in Modes that do not support Adaptive
State Saved	No

Remote Command	`[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON | OFF | 1 | 0` `[:SENSe]:CORRection:NOISe:FLOor:ADAPtive?`

Example	First turn NFE on, this is Full mode
	`:CORR:NOIS:FLO ON`
	Then set it to Adaptive
	`:CORR:NOIS:FLO:ADAP ON`

Dependencies	Only available in Modes that support Adaptive NFE Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command is accepted without error, but has no effect
Couplings	Sending `:CORR:NOIS:FLO ON` turns NFE Adaptive `OFF` for backwards compatibility, so to turn

	Adaptive on, you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by **Mode Preset**, but set to ON at startup and by **Restore Mode Defaults**
State Saved	No

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average, and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise.

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better than the average detector because it doesn't smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

Adaptive NFE provides an alternative to fully-on and -off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low-level signals. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the NFE-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year. The control to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

“This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week”

If you Cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

3.6.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 3408) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to ON, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched ON, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is ON, modifies the **Global Center Freq**.

When **Global Center Freq** is switched OFF, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is ON, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to OFF when "Restore Defaults" on page 3410 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to OFF on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	ALL|NONE

Preset	OFF
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched ON, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is ON modifies the **Global EMC Std**.

When **Global EMC Std** is switched OFF, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is ON, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to OFF when "Restore Defaults" on page 3410 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to OFF on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	ALL | NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned ON, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to OFF when "Restore Defaults" on page 3410 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to OFF by **Global** Settings > **Restore Defaults** and **System > Restore Defaults > All Modes**
Range	ON|OFF

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.6.9 Sweep

PP_Substitute: cmn_sweep/Sweep.htm

3.6.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 1637

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting:

	– A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

– `:INIT:CONT 1` has no effect

– `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 3413 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 1639

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	`:INIT:REST` and `:INIT:IMM` perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared The `SWEEPING` bit is set The `MEASURING` bit is set
Backwards	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command

Compatibility Notes	restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the `:INIT:REST` command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K, shows the count for the sweep (data acquisition) in progress. K = k + 1, with a limit of N. The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`
Notes	If :`INIT:CONT` is `ON`, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If `:INIT:CONT` is `OFF`, then `:INIT:IMM` is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, `:ABORt` is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared Since all the bits that feed into OPC are cleared by `:ABORt`, the Abort command will cause the `*OPC` query to return true

3.6.9.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Sweep Type

Sets the **Sweep Type** of the spurious measurement to either **Auto** or **Swept**.

When in **Auto**, the selections of swept type of ranges are governed by the Best Speed Sweep Type Rule, and FFT analysis might be chosen for some ranges if it speeds up the measurement.

Remote Command	`[:SENSe]:SPURious[:RANGe]:ALL:SWEep:TYPE:AUTO OFF | ON | 0 | 1` `[:SENSe]:SPURious[:RANGe]:ALL:SWEep:TYPE:AUTO?`
Example	`:SPUR:ALL:SWE:TYPE:AUTO 1` `:SPUR:ALL:SWE:TYPE:AUTO?`
Dependencies	Available only when Option N9060A-7FP is installed
Preset	`ON`
State Saved	Saved in instrument state
Range	Auto | Swept
Annotation	When in **Auto**, and the instrument is in FFT analysis, an indicator, “FFT” is displayed at the right bottom of range spectrum trace window

Sweep Time Rules

Switches the instrument between `NORMal` and `ACCuracy` sweep states.

Setting **Auto Sweep Time** to **Accy** (`ACCuracy`) results in slower sweep times, usually about three times as long, but yields better amplitude accuracy for CW signals. The instrument amplitude accuracy specifications only apply when **Auto Sweep Time** is set to **Accy**.

Additional amplitude errors which occur when **Auto Sweep Time** is set to **Norm** are usually well under 0.1 dB, though this is not guaranteed. Because of the faster sweep times and still low errors, **Norm** is the preferred setting of **Auto Sweep Time**. **Auto Sweep Time** is set to **Norm** on a **Preset**. This means that in the Preset state, instrument amplitude accuracy specifications do not apply.

Remote Command	`[:SENSe]:SPURious:SWEep:TIME:AUTO:RULes NORMal | ACCuracy` `[:SENSe]:SPURious:SWEep:TIME:AUTO:RULes?`
Example	`:SPUR:SWE:TIME:AUTO:RUL ACC`

	:SPUR:SWE:TIME:AUTO:RUL?
Notes	This command is implemented as [:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME:AUTO:RULes to avoid illegal SCPI node definition, so this command should be used as [:SENSe]:SPURious:SWEep:TIME:AUTO:RULes
Dependencies	Does not appear in SA Mode in VXT
Preset	NORMal
State Saved	Saved in instrument state
Range	NORMal|ACCuracy

3.6.10 Trace

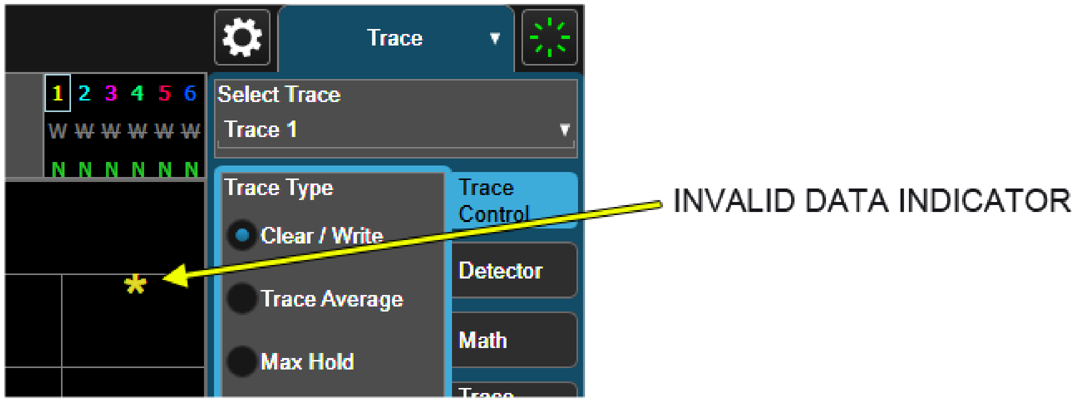
Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

The "Trace Control" on page 3047 tab of this menu contains radio-button selections for the trace type (**Clear/Write, Trace Average, Max Hold, Min Hold**) and **View/Blank** setting for the selected trace.

A trace is a series of data points, each having an x and a y value. The x value is frequency (or time, in zero span) and the y value is amplitude. Each data point is referred to as a *trace point*. In any given trace, trace point 0 is the first point, and trace point (*sweep_points – 1*) is the last. For example, in a 1001 point trace, the first point is 0 and the last is 1000. Another term sometimes used to describe traces is *bucket*. A bucket is the frequency span of a trace point, equal to the point spacing. For swept analysis, the y value in each bucket is measured while the instrument is sweeping across the bucket. The selected detector determines how it is measured.

When in **Single** Mode, Measurements and their Views save the trace data from the last acquisition. This is true on multiple screens. The marker and trace data will be present whenever the measurement is brought back into focus. The measurement switches for these measurements do not clear the traces, so the data will be present until the next acquisition is completed.

Invalid Data Indicator



The Invalid Data Indicator is displayed whenever the data on the display does not match the settings of the instrument. The most common example of this is when instrument settings have changed in the time since the data in the traces on the display was taken. This means that the screen annotation cannot be guaranteed to match the trace data. For example, if you change **Center Frequency**, the Invalid Data Indicator will display until the trace has been retaken.

If any Trace is in View mode (displaying but not updating) and instrument settings are changed, the Invalid Data Indicator will display as long as that trace remains in View. Traces that are blanked do not turn on the Invalid Data Indicator.

Not all instrument settings require display of the invalid data indicator when they change; only changes that require a new acquisition will cause it to display. For example, changing the Y-Axis scale of the instrument does not cause the invalid data indicator to display, unless the attenuation changes.

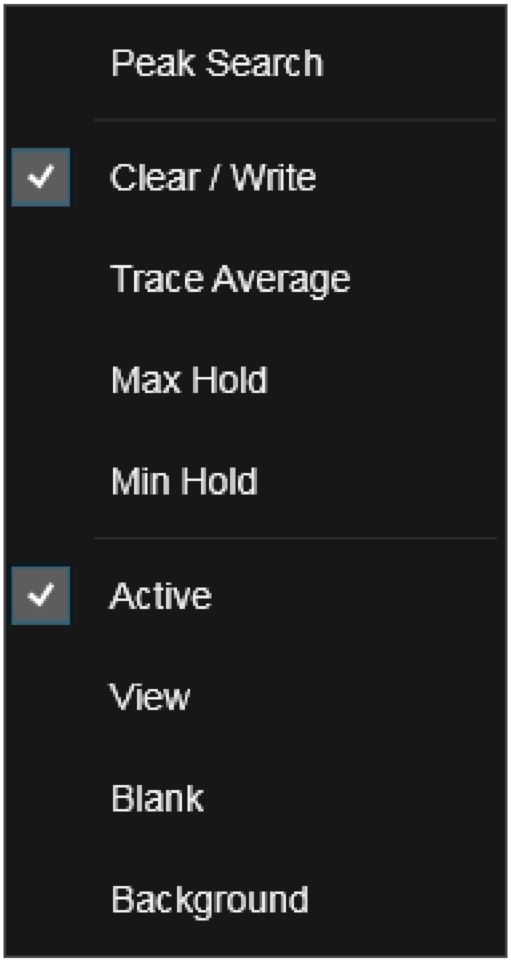
The Invalid Data Indicator is also turned on:

- When the counter is turned on, until the completion of the first count
- When a trace is imported from mass storage and the trace's parameters do not match the current instrument settings
- When a trace is sent to the instrument from a remote interface (since there is no way to know if its settings match)

NOTE **The Invalid Data Indicator has an associated status bit that can be checked at any time to determine whether the indicator is on.**

Trace right-click menu

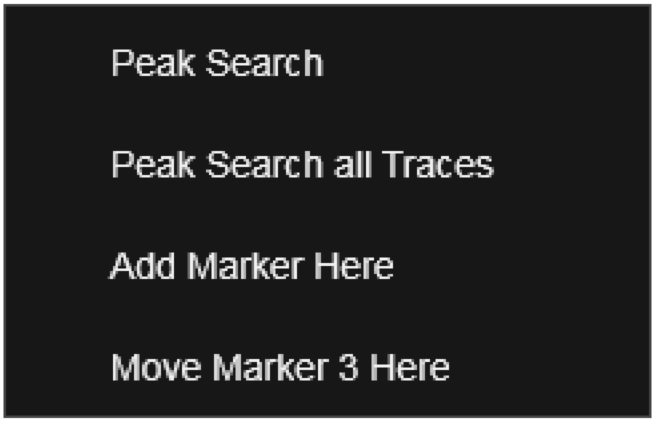
If you right-click on a trace (or touch and hold a trace and wait for the circle to close) you will see the Trace Right-Click Menu:



If you now tap or click on one of the items in this menu, the instrument will perform the corresponding function. **Peak Search** finds the highest peak on the selected Trace. **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold** set the "Trace Type" on page 3048. **Active**, **View**, **Blank**, and **Background** set the "View/Blank" on page 3053 type.

Waterfall Window

If you right-click on the trace (or touch and hold the trace and wait for the circle to close) in the **Waterfall** window (for example, in the Spectrogram View) you will see the Waterfall Trace Right-Click Menu:



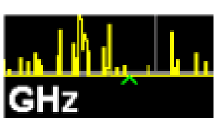
In this menu, Peak Search works as above. Peak Search all Traces finds the highest peak in the Waterfall window. Add Marker Here takes the lowest numbered Marker that is currently Off and turns it On as a Normal marker in the Waterfall window at the point where you right-clicked (or touched-and-held). Move Marker n Here moves the currently selected Marker to the point in the Waterfall window where you right-clicked (or touched-and-held).

Trace Update Indicator

Trace updates can take one of two forms:

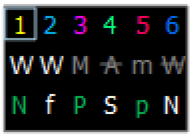
1. The trace is updated in a single operation that affects all of the points in the trace at once. This happens, for example, in the case of very fast (< 200 ms) sweeps, single-chunk FFT's, and the initial math operation after a math function is set for a trace
2. The trace is updated in a series of discrete steps, with measurement data being gathered between each step. This will be the case for slow sweeps, multi-chunk FFTs, gated sweeps, etc.

In the first case, no update indicator is required. In the second case, however, a visual indicator exists on the trace where the new data is being written. The indicator is a green caret (^) , which moves across the bottom of the graticule showing the current trace point.



Trace Annunciator Panel

This panel appears on the right hand side of the Meas Bar. Here is an explanation of the fields in this panel, as shown below:



Top Line

On the top line, each trace number is shown, in the trace color. A box is drawn around the currently selected trace.

Middle Line

Below each trace number, is a letter signifying the trace type for that trace number, where

`W`	Clear/Write
`A`	Trace Average
`M`	Max Hold
`m`	Min Hold

If the letter is white, it means the trace is being updated (**Update** = `ON`); if the letter is dimmed , it means the trace is not being updated (**Update** = `OFF`). A strikethrough indicates that the trace is blanked (**Display** = `OFF`). Note that it is possible for a trace to be updating *and* blanked, which is useful if the trace is a trace math component.

Bottom Line

The third line shows the detector type for each trace, or, if trace math is on for that trace, it shows “f” (for “math function”). It is not always possible to have a unique detector for each trace, but the instrument hardware provides the maximum flexibility of detector selection in order to maintain the highest accuracy. The letters used for this readout are

`N`	Normal
`A`	Average
`P`	peak
`p`	negative peak
`S`	Sample
`Q`	Quasi Peak
`E`	EMI Average
`R`	RMS Average
`f`	math function

If the letter is green, the detector is in Auto. If white, the detector has been manually selected.

In the example above, the panel is indicating the following:

- Trace 1: Visible, being updated, in Clear/Write, with Normal detector auto selected
- Trace 2: Visible, being updated, in Clear/Write, being written to with a math function
- Trace 3: Visible, not updating, data was taken in Max Hold, with the peak detector auto selected
- Trace 4: Blanked, not updating, data was taken with Averaging turned on, Sample detector manually selected
- Trace 5: Visible, not updating, data was taken in Min Hold with Negative Peak detector auto selected
- Trace 6: Blanked, not updating, in Clear/Write, with Normal detector manually selected

Trace Annotation

When **Trace Annotation** (see **Display**) is ON, each non-blanked trace is labeled on the trace with the detector used to take it, unless a Trace Math function is on for that trace, in which case it is labeled with the "Math Function" on page 2604.

The detector labels are:

NORM	Normal
PEAK	Peak
SAMP	Sample
NPEAK	Negative Peak
RMS	Average detector with Power Average (RMS)
LG AVG	Average detector with Log-Pwr Average
VAVG	Average detector with Voltage Average
QPEAK	Quasi Peak
EMI AVG	EMI Average
RMS AVG	RMS Average

The trace math labels are:

PDIF	Power Difference
PSUM	Power Sum
LOFF	Log Offset
LDIF	Log Difference

3.6.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the **Trace** menu
Dependencies	For the Swept SA measurement: – In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View – When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when **Meas Method** is `RBW`, `FAST` or `FPOWer`, **Select Trace** is disabled
Preset	Trace 1
State Saved	Yes

3.6.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 3048 and its update mode.

There are four Trace Types:

– **Clear/Write**

– **Trace Average**

– **Max Hold**

– **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display,** are described fully in the "View/Blank" on page 3053 control description. Essentially, when **Update** is `ON`, a trace is updating, and when **Update** is `OFF` it is not. When **Display** is `ON`, it is visible and when **Display** is `OFF` it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	WRITe	:TRAC2:TYPE WRIT	See: "Clear/Write" on page 1653
Trace Average	AVERage	:TRAC2:TYPE AVER	See: "Trace Average" on page 1653
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 1654
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 1654

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the "View/Blank" on page 3053 state must be set to **Active** (**Update**: ON, **Display**: ON) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: "Trace Mode Backwards Compatibility Commands" on page 1651

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|…|6:TYPE?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|3:<meas>:TYPE?`
	where `<meas>` is the identifier for the current measurement

Example	`:TRAC:TYPE WRIT` `:TRAC:TYPE?`
Couplings	Selecting a **Trace Type** (by pressing any of the Trace Type selections or sending `:TRAC:TYPE`) sets the Trace to **Active** (**Update**: ON, **Display**: OFF), even if the same trace type was already selected When Detector setting is "Auto" (`[:SENSe]:<meas>:DETector:AUTO?`), Detector (`[:SENSe]:<meas>:DETector[:FUNCtion]?`) switches aligning with the switch of this parameter: "NORMal" with WRITe (Clear Write), "AVERage" with AVERage, "POSitive (peak)" with MAXHold, and "NEGative (peak)" with MINHold
Preset	Swept SA and Monitor Spectrum: WRITe All other measurements: AVERage Following **Preset**, all traces are cleared (all trace points set to mintracevalue)
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the “Trace Modes” were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called Trace Types) are Clear/Write, Trace Average, Max Hold and Min Hold. View and Blank are set separately under "View/Blank" on page 3053.

While this provides more flexibility, it also gives rise to potential backwards compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new Trace Type command has been added. The :`TRACe:MODE` command is retained for backwards compatibility, and the :`TRACe:TYPE`, :`TRACe:UPDate` and :`TRACe:DISPlay` commands introduced for ongoing use. The old Trace Modes are selected using `:TRAC:MODE`, whose parameters are mapped into calls to `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay`, and the old global Averaging command `[:SENSe]:AVERage[:STATe]` is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup**, **Legacy Compatibility** menu is `ON`, the following is true for traces in Max Hold and Min Hold:

– They ignore the **Average/Hold** number; **Single** for Max Hold causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result

– Max Hold is not cleared on a **Restart**, **Single** or `:INIT:IMM`, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the Max Hold

Preset	`WRITe`
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	`:TRACe[1]|2|…|6:MODE WRITe | MAXHold | MINHold | VIEW | BLANk` `:TRACe[1]|2|…|6:MODE?`
Backwards Compatibility Notes	The legacy `:TRACe:MODE` command is retained for backwards compatibility. In conjunction with the legacy `:AVERage` command, it works as follows: – `:AVERage ON|OFF` sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the `[:SENSe]:AVERage[:STATe]` command description below – `:TRACe:MODE WRITe` sets `:TRACe:TYPE WRITe` (Clear/Write) unless average is true, in which case it sets it to `:TRACe:TYPE AVERage`. It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace

	– :TRACe:MODE MINHold sets :TRACe:TYPE MINHold (Min Hold). It also sets :TRACe:UPDate ON, :TRACe:DISPlay ON, for the selected trace – :TRACe:MODE VIEW sets :TRACe:UPDate OFF, :TRACe:DISPlay ON, for the selected trace – :TRACe:MODE BLANk sets :TRACe:UPDate OFF, :TRACe:DISPlay OFF, for the selected trace The query returns the same value as :TRACe:TYPE?, meaning that if you set :TRACe:MODE:VIEW or :TRACe:MODE:BLANk, the query response will not be what you sent :TRACe[n]:MODE was formerly used to set the type or "writing mode" of the trace. At that time, View and Blank were writing modes. The new :TRACe:TYPE command should be used in the future, but :TRACe:MODE is retained to provide backwards compatibility In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold** As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does Also, previous to X-Series: – Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence – Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case
Preset	OFF
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	[:SENSe]:AVERage[:STATe] ON | OFF | 1 | 0 [:SENSe]:AVERage[:STATe]?
Backwards Compatibility Notes	Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command [:SENSe]:AVERage[:STATe] ON|OFF|1|0 was used to turn Averaging on or off In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command [:SENSe]:AVERage[:STATe] OFF|ON|0|1. When Average is turned on, any trace in Clear/Write will get put into Average. While Average is on, any trace put into Clear/Write by the old :TRAC:MODE command will instead get put into Average. When Average is turned off, any trace in Average will get put into Clear/Write

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average, Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average, Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup.**

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like Center Frequency or Attenuation), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

– The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data

– A new sweep is initiated

– Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup.**

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold,** clears the trace , initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

– The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data

– A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold,** clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 3048 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

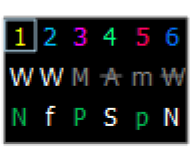
- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF; Display ON
Blank	Update OFF; Display OFF
Background	Update ON, Display OFF Allows a trace to be blanked *and* continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **Display**OFF is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **Update**OFF is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **Update**OFF, and Traces 4 and 6 have **Display**OFF.



See: "More Information" on page 1657

Notes	For the commands to control the two variables, Update and Display, see "Trace Update State On/Off" on page 1656 and "Trace Display State On/Off" on page 1656 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (Update ON and Display ON), even if that trace type was already selected Selecting a detector for a trace (pressing the key or sending `[:SENS]:DET:TRAC`) puts the trace in **Active** (**Update**ON and **Display**ON), even if that detector was already selected Selecting a "Math Function" on page 2604 other than `OFF` for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (**Update**ON and **Display**ON), even if that Math Mode was already selected Loading a trace from a file puts that trace in **View** regardless of the state it was in when it was saved; as does being the target of a **Copy** or a participant in an **Exchange**

Trace Update State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:UPDate[:STATe]?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 2 inactive (stop updating): `:TRAC2:UPD 0`
Couplings	Whenever you set **Update** to ON for any trace**,** the **Display** is set to ON for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	ON for Trace 1; `OFF` for 2–6
	For all other measurements:
	`1|0|0`
	ON for Trace 1; `OFF` for 2 &3

State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:DISPlay[:STATe]?`
	For all other measurements:

	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 1 visible:
	`:TRAC2:DISP 1`
	Blank trace 3:
	`:TRAC3:DISP 3`

Couplings	Whenever you set **Update** to ON for any trace**,** the **Display** is set to ON for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	ON for Trace 1; OFF for 2–6
	For all other measurements:
	`1|0|0`
	ON for Trace 1; OFF for 2 &3

State Saved	Saved in instrument state

More Information

When a trace becomes inactive, any update from the `:SENSe` system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display**=OFF) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update**=ON), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display**=OFF and/or **Update**=OFF does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

3.6.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2610 controls.

– See "How trace math is processed" on page 1662

Remote Command	For option details, see "Trace Math Options" on page 1660
	For Swept SA Measurement (in SA Mode):
	`:CALCulate:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate:MATH? <trace_num>`
	where `<trace_num>` is any one of:
	`TRACE1|…|TRACE6`
	For all other measurements:
	`:CALCulate:<meas>:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate[:<meas>]:MATH? <trace_num>`
	where:
	`<meas>` is the identifier for the current measurement, and
	`<trace_num>` is any one of:
	`TRACe1|TRACe2|TRACe3`
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`

	Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB
	`:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`
	Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm
	`:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0`
	Turns off trace math for trace 1

Notes	The Trace Math Function command has 6 main set of parameters:
	- Set 1 defines the “result trace”:
	`TRACE1|…|TRACE6`
	-Set 2 defines the “function”:
	`PDIFference|PSUM|LOFFset|LDIFference|OFF`
	- Set 3 is a “trace operand” (1):
	`TRACE1|…|TRACE6`
	- Set 4 is a “trace operand” (2):
	`TRACE1|…|TRACE6`
	- Set 5 defines the “Log Offset” (in dB)
	- Set 6 defines the “Log Difference Reference” (in dBm)
	Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function
	The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message
	The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas

Dependencies	Trace Math is not available if **Normalize** is on Trace Math is not available if Signal ID is on None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated and the function does not turn on
Couplings	When a math function is changed for a trace, that trace is set to Display = ON; and Update = ON

Preset	For Swept SA Measurement (in SA Mode):
	`OFF,TRACE5,TRACE6,0,0 | OFF,TRACE6,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0 | OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE4,0,0 | OFF,TRACE4,TRACE5,0,0`
	For all other measurements:
	`OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0`

State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An “f” is shown on the trace annunciation panel in the Measurement Bar when a math function is on;

	and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	*OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

```
DestinationTrace = 10 log(10(1/10)(FirstTrace) – 10(1/10)(SecondTrace))
```

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is `mintracevalue`.

Power Sum (Op1 + Op2)

Calculates a power sum between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

```
DestinationTrace = 10 log(10(1/10)(FirstTrace) + 10(1/10)(SecondTrace))
```

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Log Offset (Op1 + Offset)

Calculates a log offset from the `First Trace` operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the `Offset` control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

```
DestinationTrace = FirstTrace + Offset
```

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in the trace operand is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the `Second Trace` operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-

B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

```
DestinationTrace = (FirstTrace - SecondTrace) + Reference
```

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at –5 dBm, and the reference is –25 dBm, then the destination trace will be –15 dBm.

Example: If the first operand trace1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in `FirstTrace` is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

If neither of the above is true for a given point, then:

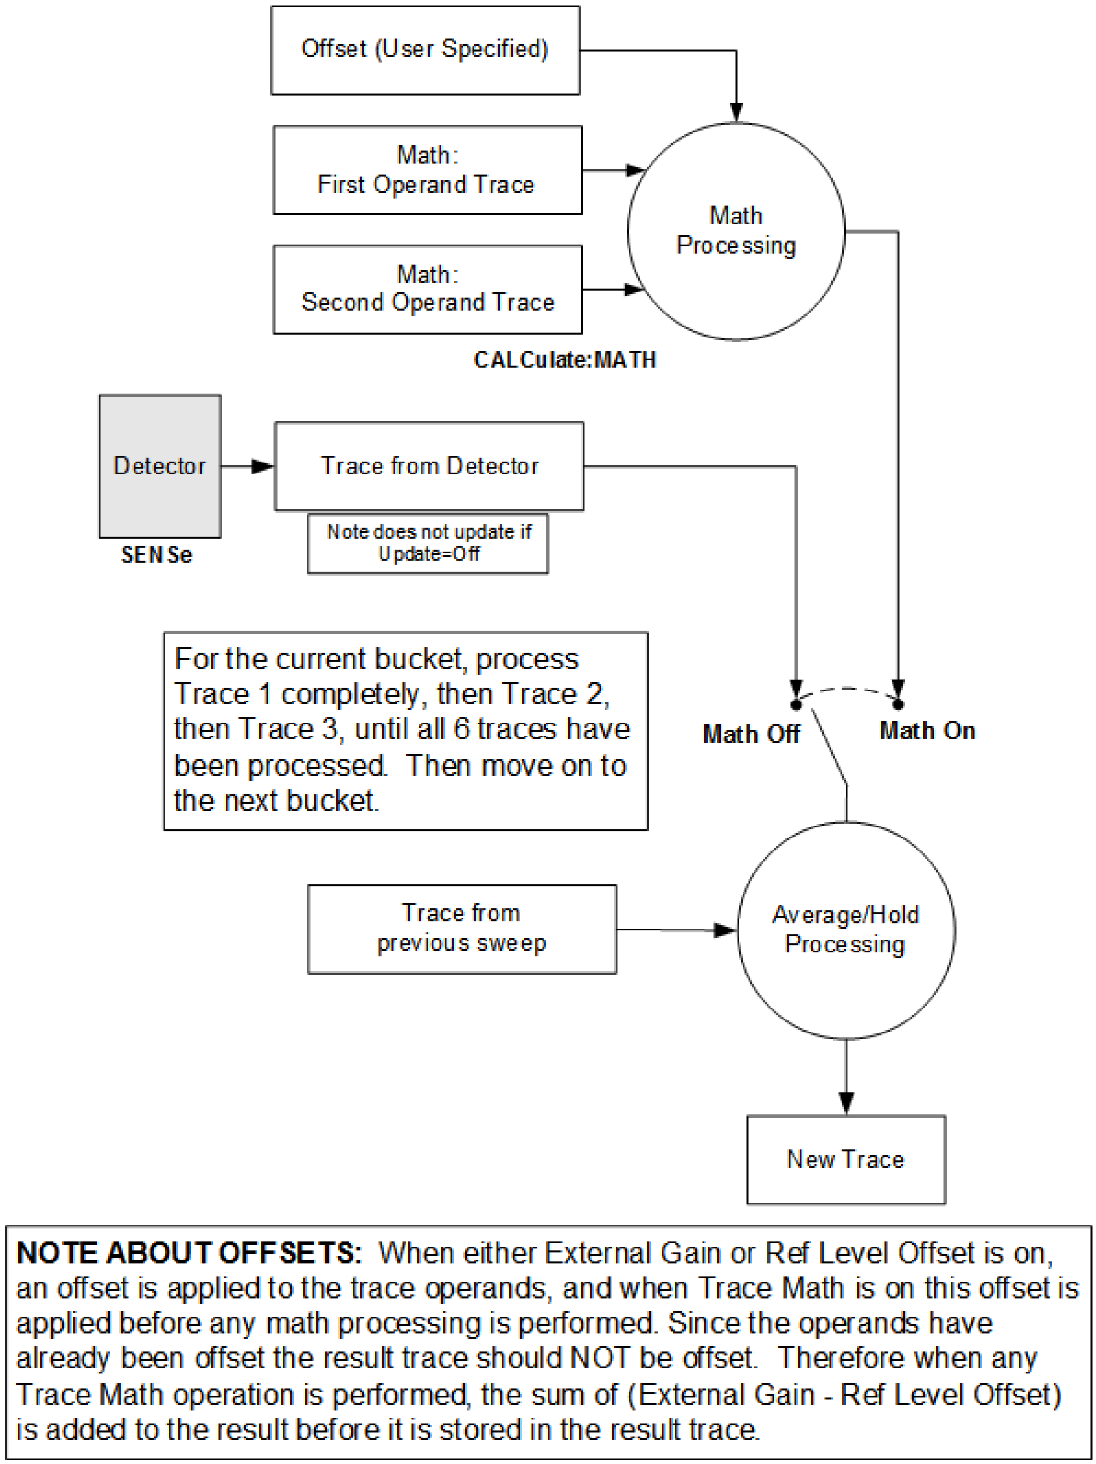
– If that point in `SecondTrace` is equal to `maxtracevalue`, the resultant point is `mintracevalue`.

– If that point in `SecondTrace` is equal to `mintracevalue`, the resultant point is `maxtracevalue`.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:



For each active trace, the current trace point is processed for `Trace 1`, then `Trace 2`, then `Trace 3`, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for `Trace 1`, `Trace 2` is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is `ON` for `Trace 4`, and its operand traces are `Trace 2` and `Trace 3`, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for `Trace 4`. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, `Trace 1` can be an average trace, which can be fed with an offset to `Trace 2`, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math `ON`, the Operand traces should have *lower* numbers than the trace (for example, using `Trace 4` as an operand for `Trace 1` will cause the data coming from `Trace 4` to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent `:CALCulate:MATH` command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	The following examples are for the Swept SA measurement
	Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:
	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`

Notes	See "Math Function" on page 2604 for how to specify Operands 1 and 2 using `:CALCulate:MATH`
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: `:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`
State Saved	The Log Offset value for each trace is saved in Instrument State
Min	–100 dB
Max	100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: `:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.6.10.4 Trace Function

Contains controls to:

– Copy and Exchange traces

– Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the "To Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	1

To Trace

Selects the trace to be copied from or exchanged with the "From Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	2

Copy

Executes a Trace Copy based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:COPY TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:COPY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On `:TRAC:COPY TRACE1,TRACE3`
Notes	The command is of the form: `:TRACe:COPY <source_trace>,<dest_trace>`
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset	For Swept SA Measurement (in SA Mode):
	`TRACE1, TRACE2`
	For all other measurements:
	`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:EXCHange TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:EXCHange TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `:TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Exchange Trace 1 and Trace 2 and put both traces in Update=`OFF`, Display=`ON`: `:TRAC:EXCH TRACE1,TRACE2`
Notes	The command is of the form: `:TRACe:EXCHange <trace_1>,<trace_2>`
Couplings	Both traces are put in **View** (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	`:TRACe[:<meas>]:PRESet:ALL`
Example	`:TRAC:PRES:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update** = `OFF`.

Remote Command	`:TRACe[:<meas>]:CLEar:ALL`
Example	`:TRAC:CLE:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
From Trace	Trace 1
To Trace	Trace 2

	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command	`:TRACe:<meas>:PRESet:EIRP`
Example	For OBW Meas: `:TRAC:OBW:PRES:EIRP`

3.6.10.5 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	`:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
	`:CALCulate:<meas>:MTRace?`
	`<meas>` is the identifier for the current measurement; any one of `CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime`

Example	Channel Power
	`:CALC:CHP:MTR TRAC1`
	`:CALC:CHP:MTR?`

Dependencies	In the ACP measurement, this control is grayed-out when **Meas Method** is set to `RBW` or `FAST`, and only Trace 1 is enabled
Preset	`TRACe1`
State Saved	No
Range	Trace 1 | Trace 2 | Trace 3

3.7 Modulation Analysis Measurement

The 5G NR Modulation Analysis measurement is used to test the Transmitted signal quality for both Base station and User equipment for E-UTRA according to 3GPP Specifications.

Once required parameters are specified, the demodulator will automatically lock onto the signal, and calculate various metrics, the output results of measurement include Frequency Error, Error Vector Magnitude, Time Alignment Error, Carrier Leakage, In-Band Emission, Equalizer Spectrum Flatness and so on.

Baseband I/Q Inputs Support

Baseband I/Q Input functionality is a hardware option and provides the ability to analyze baseband I/Q signal characteristics of mobile and base station transmitters. If the option is installed, this functionality is available in this measurement.

Because the measurement acquires the data in I/Q form regardless of RF or I/Q input selection, all the calculations for the measurement are the same regardless of RF or I/Q input selection.

Modulation Analysis Measurement Commands

The general functionality of "CONFigure" on page 4138, "INITiate" on page 4139, "FETCh" on page 4139, "MEASure" on page 4141, and "READ" on page 4140 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following commands and queries are used to configure the measurement, then retrieve the results:

`:CONFigure:EVM`

`:CONFigure:EVM:NDEFault`

`:INITiate:EVM`

`:FETCh:EVM[n]?`

`:READ:EVM[n]?`

`:MEASure:EVM[n]?`

Remote Command Results for Modulation Analysis Measurement

For the `FETCh`, `MEASure`, and `READ` queries listed above, the results returned depend on the value of `n`. For this measurement, the value of `n` is derived by concatenating three 2-digit sub-fields, as follows:

Sub-field	Variable	Definition
Most Significant 2 Digits	`CC`	The CC index. The current valid range is 00-15 and 99 See "CC Index" on page 1671 below

Sub-field	Variable	Definition
Middle 2 Digits	`BI`	The SSB and BWP index See "SSB and BWP Index" on page 1671 below
Least Significant 2 Digits	`RI`	The result index for each CC See "Result Index" on page 1672 below

The general formula for calculating the desired value of `n` is:

n = 10000*`CC` + 100*`BI` + `RI`

Note that certain result types cannot be retrieved in this way. See "Complex Results" on page 1696.

CC Index

The `CC` digits specify:

00-15	CC0 to CC15
99	Results not for a specific CC

SSB and BWP Index

The `BI` digits specify:

00	Results not specific for SSB and BWP
01	Results specific to SSB with 15 kHz SCS for FR1 or 120 kHz SCS for FR2 **Obsolete**: indexes 41-44 provide results for each SSB allocation, although indexes 01-02 remain valid for backwards compatibility
02	Results specific to SSB with 30 kHz SCS for FR1 or 240 kHz SCS for FR2 **Obsolete**: indexes 41-44 provide results for each SSB allocation, although indexes 01-02 remain valid for backwards compatibility
03	First Sidelink SSB
04	Second Sidelink SSB
10	Results specific to PRACH
11-14	Results specific to UL BWP1-BWP4

BWP1	11
BWP2	12
BWP3	13
BWP4	14

20	DL initial BWP (BWP0)
21-24	Results specific to DL BWP1-BWP4

BWP1	21

	BWP2	22
	BWP3	23
	BWP4	24
31-34	Results specific to Sidelink BWP1-BWP4	
	BWP1	31
	BWP2	32
	BWP3	33
	BWP4	34
41-44	Results specific to SSB1-SSB4	
	SSB1	41
	SSB2	42
	SSB3	43
	SSB4	44

Result Index

The current valid range for the `RI` digits is 01-31.

01	Demod Summary
02	Frame Summary
03	BWP Summary
04	In-Band Emission Limit (All)
05	In-Band Emission Trace
06	Component Carrier Summary
07	RMS Error Vector Time
08	RMS Error Vector Spectrum
09	Power vs Time
10	Flatness Limit
11	Flatness Trace
12	User Summary
13	MIMO Info **Obsolete**: index 30 provides these and additional results in a new format, although index 13 remains valid for backwards compatibility
14	Slot Summary
15	RMS Demod Power vs Time
16	RMS Demod Power vs Spectrum
17	OBW Results
18	ACP Results

19	SEM Results
20	Frequency Error per Sub-Frame
21	Channel Magnitude Frequency Response Trace
22	Channel Phase Frequency Response Trace
23	Channel Group Delay Trace
24	Transmit On/Off Results
25	Additional per channel MIMO Results
26	IQ Gain Imbalance Trace
27	IQ Quad Error Trace
28	Additional In-Band Emission Limit (General, IQ Image and Carrier Leakage)
29	Flatness Results
30	MIMO Info Updated replacement for index 13 above, with additional results
31	ccEVM summary
32	ccEVM vs symbol magnitude
33	Decoded Info

Use the following table to construct the desired value of index n.

CC	BI	RI	Result Details
00-15	00	01 Or not specified	Returns demod summary results for CC ("Component Carrier" on page 1789) when it is active All the return values are floating-point If no result is available, NaN (9.91E+37) is returned

#	Result	Unit, if any
1	Channel Power	dBm
2	EVM	%
3	EVM Peak	%
4	Freq Error (RMS)	Hz
5	Symbol Clock Error	ppm
6	IQ Offset	dB
7	Time Offset	s
8	Sync Corr	
9	Sync Source: – 1: PSS, SSS – 2: PDSCH DMRS – 3: PUSCH DMRS

Complex Results

Some results are too lengthy and complex for SCPI, so instead they are returned via "Save Meas Results" as CSV files:

- Meas IQ
- Reference IQ
- Error Vector
- RE Power
- Channel Allocation
- Decode Bits
- Condition Number
- H Matrix

3.7.1 Views

The Modulation Analysis measurement has nine pre-defined views as follows.

View	Result
"Normal" on page 1765	"IQ Meas Time" on page 1706

"Auto Detect Summary" on page 1768	"IQ Meas Time" on page 1706
	"Frame Summary" on page 1710
	"Auto Detect Summary" on page 1711

Some of these are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is **Frequency**, unless otherwise specified in the View description.

View – Selection by Enum

Remote Command	`:DISPlay:EVM:VIEW[:SELect] NORMal | IBEMission | NRESults | CCResults | DECode | MIMO | ADETect | N3X3 | MISO` `:DISPlay:EVM:VIEW[:SELect]?`
Example	Set **Normal** view: `:DISP:EVM:VIEW NORM`
Preset	`NORM`
State Saved	Saved in instrument state

3.7.1.1 Normal

This view has six windows:

- "IQ Meas Time" on page 1706
- "Detected Allocation" on page 1706
- "Spectrum" on page 1705
- "Raw Main Time" on page 1704
- "Frame Summary" on page 1710
- "Error Summary" on page 1710

Example	`:DISP:EVM:VIEW NORM`

3.7.1.2 Normal 3x3

This view has nine windows:

- "IQ Meas Time" on page 1706
- "Spectrum" on page 1705
- "Raw Main Time" on page 1704
- "Detected Allocation" on page 1706

– "RE Power 3D" on page 1707
– "Error Vector 3D" on page 1708
– "Frame Summary" on page 1710
– "Error Summary" on page 1710
– "User Summary" on page 1711

Example	`:DISP:EVM:VIEW N3X3`

3.7.1.3 In-Band Emission

This view has two windows:

– "In-band Emission" on page 1708
– "BWP Summary" on page 1710

Example	`:DISP:EVM:VIEW IBEM`

3.7.1.4 Result Summary

This view has four windows:

– "Error Summary" on page 1710
– "Frame Summary" on page 1710
– "User Summary" on page 1711
– "BWP Summary" on page 1710

Example	`:DISP:EVM:VIEW NRES`

3.7.1.5 CC Summary

This view has a single window: "CC Summary" on page 1710

Example	`:DISP:EVM:VIEW CCR`

3.7.1.6 Decode Summary

This view has three windows:

– "Decoded Info" on page 1712
– "Decoded Channels" on page 1713
– "Decoded Symbols" on page 1713

Example	`:DISP:EVM:VIEW DEC`

3.7.1.7 MISO Summary

This view has three windows:

– "Spectrum" on page 1705
– "Raw Main Time" on page 1704
– "MIMO Info" on page 1711

Example	`:DISP:EVM:VIEW MISO`

3.7.1.8 MIMO Summary

This view has two windows:

– "User Summary" on page 1711
– "MIMO Info" on page 1711

Example	`:DISP:EVM:VIEW MIMO`

3.7.1.9 Auto Detect Summary

This view has three windows:

– "IQ Meas Time" on page 1706
– "Frame Summary" on page 1710
– "Auto Detect Summary" on page 1711

Example	`:DISP:EVM:VIEW ADET`

3.7.2 Windows

The Modulation Analysis measurement can display up to 16 Windows.

Each window may have up to five properties:

Property	Description
Data	Allows you to select the trace data format
Format	Allows you to select the trace display format The **Format** key is hidden if the selected Data doesn't support any format
Component Carrier	Allows you to select which CC's trace data is displayed
BWP/SS Block	Some trace data should be displayed for specific SSB numerology (downlink only) or BWP. This property allows you to select the trace data of which BWP or SSB numerology to be displayed. The BWP/SS Block property is hidden for other trace data
Channel/Layer	In MIMO mode, some results are provided per-layer (DMRS port) or per-channel

Remote Configuration Commands

Command	Purpose & Example
`:DISPlay:EVM:WINDow[1]|2|...|16:DATA <enum>`	Configures the trace data For example, the following command sets the first window data to Spectrum `:DISP:EVM:WIND1:DATA SPEC`
`:DISPlay:EVM:WINDow[1]|2|...|16:FORMat <enum>`	Configures the trace display format For example, the following command sets the first window trace display format to Log Mag `:DISP:EVM:WIND1:FORM MLOG`
`:DISPlay:EVM:WINDow[1]|2|...|16:CCARier <enum>`	Configures the trace data of which CC to be displayed For example, the following command sets CC0 trace data to be displayed `:DISP:EVM:WIND1:CCAR CC0`
`:DISPlay:EVM:WINDow[1]|2|...|16:BWP <enum>`	Configures the trace data of which BWP or SSB Numerology (downlink only) to be displayed For example, the following command sets BWP1 trace data to be displayed `:DISP:EVM:WIND1:BWP BWP1`
`:DISPlay:EVM:WINDow[1]|2|...|16:CHANnel <enum>`	Configures the trace data of which channel to be displayed For example, the following command sets channel1 trace data to be displayed `:DISP:EVM:WIND1:CHAN CHAN1`
`:DISPlay:EVM:WINDow[1]|2|...|16:LAYer <enum>`	Configures the trace data of which layer to be displayed For example, the following command sets layer0 trace data to be displayed `:DISP:EVM:WIND1:LAY LAYER0`

3.7.2.1 Data

Provides a menu of trace data choices for the selected window.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|16[:TRACe]:DATA RMTime | SPECtrum | MTIMe | RTIMe | EVTime | EVSPectrum | REVTime | REVSpectrum | CHFResponse | DRESults | FRESults | BWPResults | IBEMission | DALLocations | DINFo | DSYMbols | CCResults | PVT | FLATness | DCHannel | DPVT | DPVS | SLResults | OBWSpectrum | OBWResults | ACPSpectrum | ACPResults | SEMSpectrum | SEMResults | TOOTrace | TOOResults | POW3D | ERR3D | CNUMber | HMATrix | IQIMbalance | SFSummary | MIMO | USER | ADET | CCEVm | CESymbol | NONE` `:DISPlay:EVM:WINDow[1]|2|…|16[:TRACe]:DATA?`

Example	`:DISP:EVM:WIND2:DATA SPEC`
	sets the second window data to Spectrum
	`:DISP:EVM:WIND2:DATA?`

Couplings	Depends on window
Preset	Depends on window
State Saved	Yes

The following trace data results are available:

#	Trace Data	SCPI Parameter	Description
1	Raw Main Time	`RMTime`	The envelope of the captured data record
2	Spectrum	`SPECtrum`	Spectrum is the FFT of the Raw Main Time waveform
3	Power vs Time	`PVT`	Power vs Time with either symbol or slot as X unit
4	OBW Spectrum	`OBWSpectrum`	OBW spectrum and indicator lines
5	ACP Spectrum	`ACPSpectrum`	ACP spectrum and indicator bars
6	SEM Spectrum	`SEMSpectrum`	SEM spectrum and mask
7	Transmit On/Off Trace	`TOOTrace`	Transmit On/Off trace and mask
8	IQ Meas	`MTIMe`	IQ Meas trace is the measured IQ symbol values used to calculate the EVM data results. There is one complex value for each subcarrier for each OFDM symbol in the measurement

#	Trace Data	SCPI Parameter	Description
			burst
9	IQ Ref	RTIMe	IQ Ref trace is the reference IQ values for computing the signal EVM values. There is one complex value for each subcarrier for each symbol in the measurement burst
10	Detected Allocations	DALLocation	Detected Allocation trace
11	RMS Demod Power vs Time	DPVT	RMS demodulated power vs time (symbol or slot)
12	RMS Demod Power vs Spectrum	DPVS	RMS demodulated power vs spectrum (sub-carrier or RB)
13	RE Power 3D	POW3D	RE Power 3D trace
14	Error Vector Time	EVTime	Error Vector Time trace shows the OFDM symbol and subcarrier Error Vector Magnitude vs. Symbol (time) and Subcarrier (frequency)
15	Error Vector Spectrum	EVSPectrum	Error Vector Spectrum trace shows the OFDM symbol and subcarrier Error Vector Magnitude (EVM) vs. subcarrier (frequency) and Symbol (time)
16	RMS Error Vector Time	REVTime	RMS EVM vs time (symbol or slot)
17	RMS Error Vector Spectrum	REVSpectrum	RMS EVM vs spectrum (sub-carrier or RB)
18	In-band Emission	IBEMission	In-band emission trace and limit
19	Error Vector 3D	ERR3D	Error Vector 3D trace
20	IQ Imbalance	IQIMbalance	IQ Imbalance per subcarrier
21	CH Freq Response	CHFResponse	Ch Frequency Response trace for Custom modulation is the channel frequency response
22	Spectrum Flatness Trace	FLATness	Spectrum Flatness trace
23	MIMO Condition Number	CNUMber	MIMO Condition Number trace
24	MIMO H/HW Matrix	HMATrix	MIMO H/HW matrix results
25	Error Summary	DRESults	Demodulation metrics results
26	Frame Summary	FRESults	Frame Summary is metrics results of each physics channel

#	Trace Data	SCPI Parameter	Description
27	BWP Summary	BWPResults	BWP is metrics results of each bandwidth part
28	Component Carrier Summary	CCResults	Key measurement results of all component carriers, and cross carrier results
29	User Summary	USER	Key PDSCH/PUSCH measurement results of all users
30	MIMO Info	MIMO	Key measurement results of all channel and DMRS ports
31	Auto Detect Summary	ADET	Auto detection mode and key detected parameters
32	Slot Summary	SLResults	Slot Summary is metrics results of each slot
33	OBW Results	OBWResults	OBW numeric results
34	ACP Results	ACPResults	ACP numeric results
35	SEM Results	SEMResults	SEM numeric results
36	Transmit On/Off Results	TOOResults	Transmit On/Off numeric results
37	Spectrum Flatness Results	SFSummary	Spectrum Flatness numeric results
38	Decoded Info	DINFo	Decode information
39	Decoded Symbols	DSYMbols	Decode symbols
40	Decoded Channels	DCHannel	Decode channels
41	ccEVM Summary	CCEVm	ccEVM summary
42	ccEVM vs Symbol	CESymbol	ccEVM per symbol trace
43	No Data	NONE	Blank Trace

Pre Demod

Displays the trace data choices that show pre-demodulation results.

Raw Main Time

Raw Main Time is the envelope of the captured raw data. This data is unprocessed and includes additional points acquired for settling of the filters involved in subsequent processing, such as the demodulation filtering.

Example	`:DISP:EVM:WIND2:DATA RMT` sets the second window data to Raw Main Time

Spectrum

Spectrum shows the FFT of the Meas Interval part of Raw Main Time waveform, note when synchronization failed Meas Interval part will start from captured IQ data.

Example	`:DISP:EVM:WIND3:DATA SPEC` sets the third window data to Spectrum

Power vs Time

Power vs Time provide power of each symbol or each slot, depends on setting of "Time Unit" on page 2362.

Example	`:DISP:EVM:WIND4:DATA PVT` sets the fourth window data to Power vs Time

OBW Spectrum

OBW Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and OBW indicator lines.

Example	`:DISP:EVM:WIND3:DATA OBWS` sets the third window data to OBW Spectrum

ACP Spectrum

ACP Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and ACP indicator bars.

Example	`:DISP:EVM:WIND3:DATA ACPS` sets the third window data to ACP Spectrum

SEM Spectrum

SEM Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and SEM mask.

Example	`:DISP:EVM:WIND3:DATA SEMS`

sets the third window data to SEM Spectrum

Transmit On/Off Trace

Transmit On/Off trace shows the waveform of active burst used for Transmit On/Off measurement.

Example	`:DISP:EVM:WIND3:DATA TOOT` sets the third window data to Transmit On/Off trace

Demod

Displays the general demodulation results.

IQ Meas Time

IQ Meas Time is the measured time data results for the input signal.

Example	`:DISP:EVM:WIND:DATA MTIM`
	sets the first window data to IQ Meas Time
	`:DISP:EVM:WIND:FORM CONS`
	selects Constellation as the first window data format

IQ Ref

IQ Ref Time is the reconstructed ideal time waveform to compare IQ Meas Time against.

Example	`:DISP:EVM:WIND:DATA RTIM`
	sets the first window data to IQ Ref Time
	`:DISP:EVM:WIND:FORM CONS`
	selects Constellation as the first window data format

Detected Allocation

Detected Allocation is the detected resource allocation in both frequency and time domain.

Example	`:DISP:EVM:WIND:DATA DALL` sets the first window data to Detected Allocation

RMS Demod Power vs Time

The trace contains the demodulated power at each point in time domain. Time domain unit could be switched between symbol and slot.

Example `:DISP:EVM:WIND4:DATA DPVT`

sets the fourth window data to RMS Demod Power vs Time

RMS Demod Power vs Spectrum

The trace contains the demodulated power at each point in frequency domain. Frequency domain unit could be switched between sub-carrier and RB.

Example `:DISP:EVM:WIND4:DATA DPVS`

sets the fourth window data to RMS Demod Power vs Spectrum

RE Power 3D

RE Power 3D trace shows power for each resource element

Example `:DISP:EVM:WIND3:DATA POW3D`

sets the third window data to RE Power 3D trace

Demod Error

Displays the general demodulation error results.

Error Vector Time

This trace shows the time domain error vector trace data results. The trace contains the computed error vectors between IQ Meas Time and IQ Ref Time at each point in time. The values of the error vectors are usually plotted as a magnitude.

Example `:DISP:EVM:WIND2:DATA EVT`

sets the second window data to Error Vector Time

Error Vector Spectrum

Error Vector Spectrum is the frequency spectrum of the Error Vector Time trace data. The demodulator produces the spectrum by windowing and FFT the Error

Vector Time data. On this trace, the individual error vectors are plotted vs frequency.

Example	`:DISP:EVM:WIND2:DATA EVSP` sets the second window data to Error Vector Spectrum

RMS Error Vector Time

This trace shows the time domain error vector trace data results. The trace contains the computed error vectors between IQ Meas Time and IQ Ref Time at each point in time. The values of the error vectors are usually plotted as a magnitude.

Example	`:DISP:EVM:WIND2:DATA REVT` sets the second window data to RMS Error Vector Time

RMS Error Vector Spectrum

This trace shows the frequency domain error vector trace data results. The trace contains the computed error vectors at each point in the frequency domain. The values of the error vectors are usually plotted as a magnitude. Frequency domain unit could be switched between sub-carrier and RB.

Example	`:DISP:EVM:WIND2:DATA REVS` sets the second window data to RMS Error Vector Spectrum

In-band Emission

This trace shows the In-band Emission trace and limit.

Example	`:DISP:EVM:WIND2:DATA IBEM` sets the second window data to In-band Emission

Error Vector 3D

Error Vector 3D trace shows modulation error for each resource element

Example	`:DISP:EVM:WIND3:DATA ERR3D` sets the third window data to Error Vector 3D trace

IQ Imbalance

IQ imbalance per subcarrier trace with two formats: Gain Imbalance and Quad Error

Example	`:DISP:EVM:WIND2:DATA IQIM` sets the second window data to IQ Imbalance

Response

Displays the trace data choices that show equalizer response results.

CH Freq Response

The CH Frequency Response trace shows the channel frequency response for which the equalizer is correcting. It's computed as the inverse of the equalization filter's frequency response.

Example	`:DISP:EVM:WIND2:DATA CHFR` sets the second window data to CH Freq Response

Spectrum Flatness

This trace shows the Spectrum Flatness trace and limit.

Example	`:DISP:EVM:WIND2:DATA FLAT` sets the second window data to Spectrum Flatness

MIMO Condition Number

This trace shows the "condition number" of the equalizer channel frequency response matrices, it is only valid for MIMO. It is defined as the ratio of the maximum singular value to the minimum singular value of a matrix. The value is always real and always greater than or equal to one. Larger values indicate a more ill-conditioned matrix. If the condition number is larger than the SNR Signal-to-Noise Ratio of the signal, it is likely that MIMO separation of the multiple data streams will not work correctly.

Example	`:DISP:EVM:WIND2:DATA CNUM` sets the second window data to MIMO Condition Number

MIMO H/HW Matrix

This table shows the H or HW matrix results, it is only valid for MIMO. If W matrix is defined in Channel Profile, it will be removed from channel response and only H matrix will be displayed. Otherwise, this table will display combined HW matrix results.

Example	`:DISP:EVM:WIND2:DATA HMAT` sets the second window data to MIMO H/HW Matrix

Tables

Displays the trace data choices that are in tabular form, including Error Summary, Frame Summary, BWP summary and CC Summary.

Error Summary

This table shows the general measurement numeric results.

Example	`:DISP:EVM:WIND4:DATA DRES` sets the fourth window data to Error Summary

Frame Summary

This table shows the measurement numeric results for each physical channel.

Note: Freq Error per Sub-Frame results will only be available when “3GPP Pre-FFT Minimization” is On.

Example	`:DISP:EVM:WIND4:DATA FRES` sets the fourth window data to Frame Summary

BWP Summary

This table shows the measurement numeric results for each bandwidth part.

Example	`:DISP:EVM:WIND4:DATA BWPR` sets the fourth window data to BWP Summary

CC Summary

This table shows the key measurement results of all component carriers, and cross carrier results like TAE.

Example	`:DISP:EVM:WIND4:DATA CCR` sets the fourth window data to CC Summary

User Summary

This table shows the key PDSCH/PUSCH measurement results of all users.

Example	`:DISP:EVM:WIND4:DATA USER` sets the fourth window data to User Summary

MIMO Info

This table shows the key measurement results of all channel and DMRS ports.

Example	`:DISP:EVM:WIND4:DATA MIMO` sets the fourth window data to MIMO Info

Auto Detect Summary

This table shows the auto detection mode and key detected parameters

Example	`:DISP:EVM:WIND4:DATA ADET` sets the fourth window data to Auto Detect Summary

Slot Summary

This table shows Slot Summary.

Example	`:DISP:EVM:WIND4:DATA SLResults` sets the fourth window data to Slot Summary

OBW Results

This table shows the OBW numeric results.

Example	`:DISP:EVM:WIND4:DATA OBWR` sets the fourth window data to OBW Results

ACP Results

This table shows the ACP numeric results.

Example	`:DISP:EVM:WIND4:DATA ACPR`

	sets the fourth window data to ACP Results

SEM Results

This table shows the SEM numeric results.

Example	`:DISP:EVM:WIND4:DATA SEMR` sets the fourth window data to SEM Results

Transmit On/Off Results

This table shows the Transmit On/Off numeric results.

Example	`:DISP:EVM:WIND4:DATA TOOR` sets the fourth window data to Transmit On/Off Results

Spectrum Flatness Results

This table shows Flatness metric results.

Example	`:DISP:EVM:WIND4:DATA SFS` sets the fourth window data to Spectrum Flatness Summary

ccEVM Summary

This table shows the key measurement results when cross-corelated EVM is enabled.

Example	`:DISP:EVM:WIND4:DATA CCEVm` sets the fourth window data to ccEVM summary

Decode

Displays decoded information and bits in tabular form, including Decoded Info and Decoded Symbols.

Decoded Info

This table shows the decoded information.

Example	`:DISP:EVM:WIND4:DATA DINF` sets the fourth window data to Decoded Info

Decoded Symbols

This table shows decoded symbols.

Example	`:DISP:EVM:WIND4:DATA DSYM` sets the fourth window data to Decoded Symbols

Decoded Channels

Shows decoded channels.

Example	`:DISP:EVM:WIND4:DATA DCH` sets the fourth window data to Decoded Channels

3.7.2.2 Format

Enables you to choose the available format of the selected trace.

The valid formats depends on Data:

Format name	Data	Description
Log Mag (dB)	Ch Freq Response	Data is converted to decibel units and shown on a linear Y axis
Phase	Ch Freq Response	Phase of complex data is shown on Y axis
Group Delay	Ch Freq Response	Useful for frequency response displays. Shows the derivative of phase response with respect to frequency
Gain Imbalance	IQ Imbalance	Gain Imbalance per subcarrier
Quad Error	IQ Imbalance	Quad Imbalance per subcarrier
Log Mag (dB)	ccEVM vs Symbol	Magnitude part of ccEVM per symbol
Real (I)	ccEVM vs Symbol	Real part of ccEVM per symbol
Imaginary (Q)	ccEVM vs Symbol	Imaginary part of ccEVM per symbol
None	Others	

Remote	`:DISPlay:EVM:WINDow[1]|2|…|9[:TRACe]:FORMat MLOG | PHASe | GDELay |`

Command	GIMBalance | QERRor | REAL | IMAGinary :DISPlay:EVM:WINDow[1]|2|…|9[:TRACe]:FORMat?
Example	:DISP:EVM:WIND2:FORM MLOG sets the second window data format to Log Mag :DISP:EVM:WIND2:FORM?
Notes	Log Mag, Phase and Group Delay are available for Channel Frequency Response trace
Preset	Depends on trace
State Saved	Yes
Range	Log Mag (dB) |Phase | Group Delay | Gain Imbalance | Quad Error | Real | Imaginary

3.7.2.3 Component Carrier

This control provides a menu of component carrier choices for the selected window.

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:CCARrier CC0 | … | CC15 :DISPlay:EVM:WINDow[1]|2|…|9:CCARrier?
Example	:DISP:EVM:WIND2:CCAR CC0 :DISP:EVM:WIND2:CCAR?
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	CC0|…|CC15

3.7.2.4 BWP/SS Block

Provides a menu of BWP and SSB numerology (downlink only) choices for the selected window.

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:BWP DBWP0 | DBWP1 | DBWP2 | DBWP3 | DBWP4 | UBWP1 | UBWP2 | UBWP3 | UBWP4 | SSB1 | SSB2 :DISPlay:EVM:WINDow[1]|2|…|9:BWP?
Example	:DISP:EVM:WIND2:BWP DBWP1 :DISP:EVM:WIND2:BWP?
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	Initial BWP|DL BWP1|DL BWP2|DL BWP3|DL BWP4| UL BWP1|UL BWP2|UL BWP3|UL BWP4|SS Block1|SS Block2

3.7.2.5 Input Channel

Provides a menu of channel choices for the selected window.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:CHANnel CHAN1	…	CHAN8` `:DISPlay:EVM:WINDow[1]|2|…|9:CHANnel?`
Example	`:DISP:EVM:WIND2:CHAN CHAN1` `:DISP:EVM:WIND2:CHAN?`
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	CHAN1|…|CHAN8

3.7.2.6 Layer

Provides a menu of layer choices for the selected window.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:LAYer LAYER0	…	LAYER7` `:DISPlay:EVM:WINDow[1]|2|…|9:LAYer?`
Example	`:DISP:EVM:WIND2:LAY LAYER1` `:DISP:EVM:WIND2:LAY?`
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	LAYER0|…|LAYER7

3.7.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.7.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Specifies the amplitude of a signal displayed on the reference graticule line. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

The Ref Value control applies only to the selected window. If the table type window is selected, the Ref Value control is unavailable. The functionality depends on the selected window.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel?`

Example	`:DISP:EVM:WIND3:Y:RLEV 20`
	set the Y ref value of the third window to 20
	`:DISP:EVM:WIND3:Y:RLEV?`
	query the Y ref value of the third window

Preset	Depends on trace data
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	The reference value is displayed above the graticule with the title “Ref Value”

Scale/Div

Controls the Y scale per division of the selected trace.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:PDIVision <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:PDIVision?`

Example	`:DISP:EVM:WIND3:Y:PDIV 10`
	set the Y scale/div of the third window to 10
	`:DISP:EVM:WIND3:Y:PDIV?`
	query the Y scale/div of the third window

Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Annotation	Upper left corner of trace grid, same gray as grid

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom` `:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RPOSition?`

Example	`:DISP:EVM:WIND3:Y:RPOS TOP`
	set the Y ref position of the third window to TOP
	`:DISP:EVM:WIND3:Y:RPOS?`
	query the Y ref position of the third window

Preset	Depends on trace data
State Saved	Saved in instrument state
Range	Top | Center | Bottom

Auto Scale

Changes the Y reference value and Scale per Division so the full trace is displayed without clipping.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:AUTO:ONCE`
Example	`:DISP:EVM:WIND3:Y:AUTO:ONCE` do the Y auto scale for the third window

Auto Scale at Restart

Enable and disable automatic Y Auto Scale with measurement restart:

- On – will do automatic Y Auto Scale when measurement restarted, to let you see complete trace
- Off – will not do automatic Y Auto Scale when measurement restarted, to keep user setting for Y scale

Remote Command	`:DISPlay:EVM:Y[:SCALe]:AUTO:RESTart 0 | 1 | OFF | ON` `:DISPlay:EVM:Y[:SCALe]:AUTO:RESTart?`
Example	`:DISP:EVM:Y:AUTO:REST ON` `:DISP:EVM:Y:AUTO:REST?`
Preset	`OFF`
State Saved	Yes

Horizontal Center

Specifies the offset of horizontal center for constellation display.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y:POLar:HCENter <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Y:POLar:HCENter?`
Example	`:DISP:EVM:WIND3:Y:POL:HCEN 0.01` `:DISP:EVM:WIND3:Y:POL:HCEN?`
Preset	0
State Saved	Saved in instrument state
Min	-500
Max	500

3.7.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

– See "Dual-Attenuator Configurations" on page 1718

– See "Single-Attenuator Configuration" on page 1719

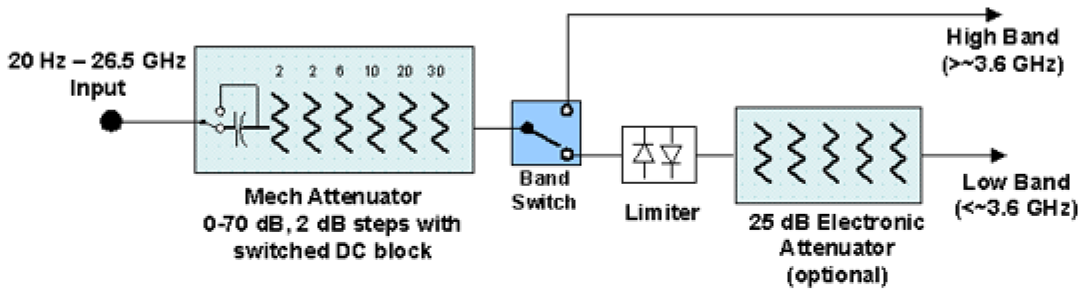
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

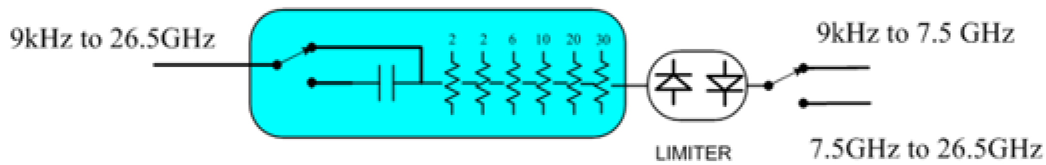
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

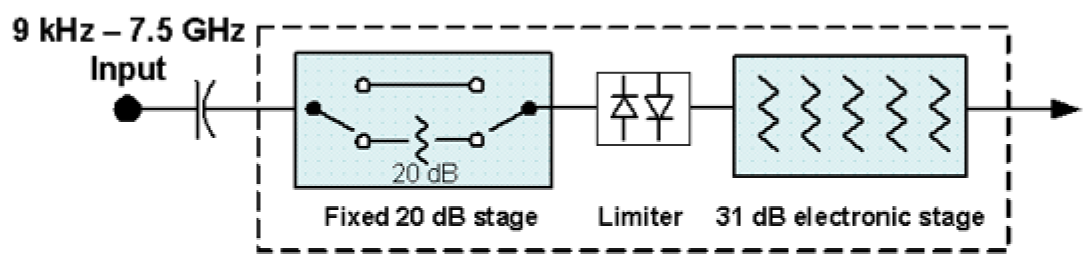


Configuration 2: Mechanical attenuator, no optional electronic attenuator

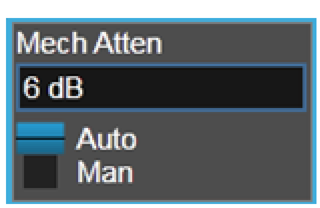


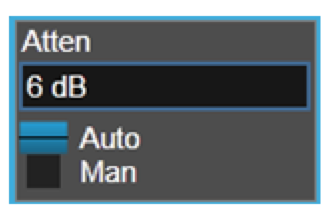
Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.





Dual Attenuator **Single Attenuator**

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 3228 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed: On the Meas Bar, the field “Atten” displays as follows: – If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten – If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten – If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 3222 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten

"Total Atten above 50 GHz" followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 3251 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 1723

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten.** In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of **Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 3231 See "Attenuator Configurations and Auto/Man" on page 1723 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**,

<table>
<tr><td></td><td>
External Gain, Ref Level Offset, Max Mixer Level, µW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto)
In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 3227 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto)
In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input
For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
</td></tr>
<tr><td>Preset</td><td>Auto
The Auto value is 10 dB</td></tr>
<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
<tr><td>Min</td><td>0 dB
The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</td></tr>
<tr><td>Max</td><td>
<table>
<tr><td>CXA Option 503 or 507</td><td>50 dB</td></tr>
<tr><td>EXA</td><td>60 dB</td></tr>
<tr><td>All other models</td><td>70 dB</td></tr>
</table>
Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
</td></tr>
<tr><td>Annotation</td><td>
The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:
Atten: <total> dB (e<elec>)
The e letter is in amber in Single-Attenuator configurations
For example:
Dual-Attenuator configuration:
Atten: 24 dB (e14)
Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB
Single-Attenuator configuration:
A: 24 dB (e14)
Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)
</td></tr>
</table>

	When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	ON

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 3225, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

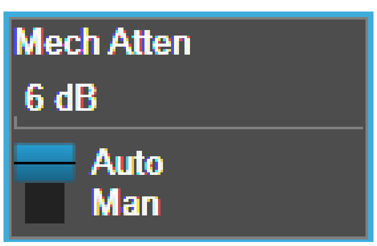
In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1721 (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 3231 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1726

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the

	frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 3253 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1726
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of

3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1727 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled

- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 3236.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the "Adjust Atten for Min Clipping" on page 3234 function.

When `ON`, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` restarts the measurement and then executes the function.

When `OFF`, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

“Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed”

This message is *not* generated if the command is sent.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart?`
Example	`:POW:RANG:OPT:REST OFF` `:POW:RANG:OPT:REST?`
Dependencies	Available only in measurements that support continuous averaging
Preset	`ON`
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when [:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate is executed.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?
Example	:POW:RANG:OPT:TYPE EONL :POW:RANG:OPT:TYPE?
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 3234 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 1730

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical |

	COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 3231 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1729 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

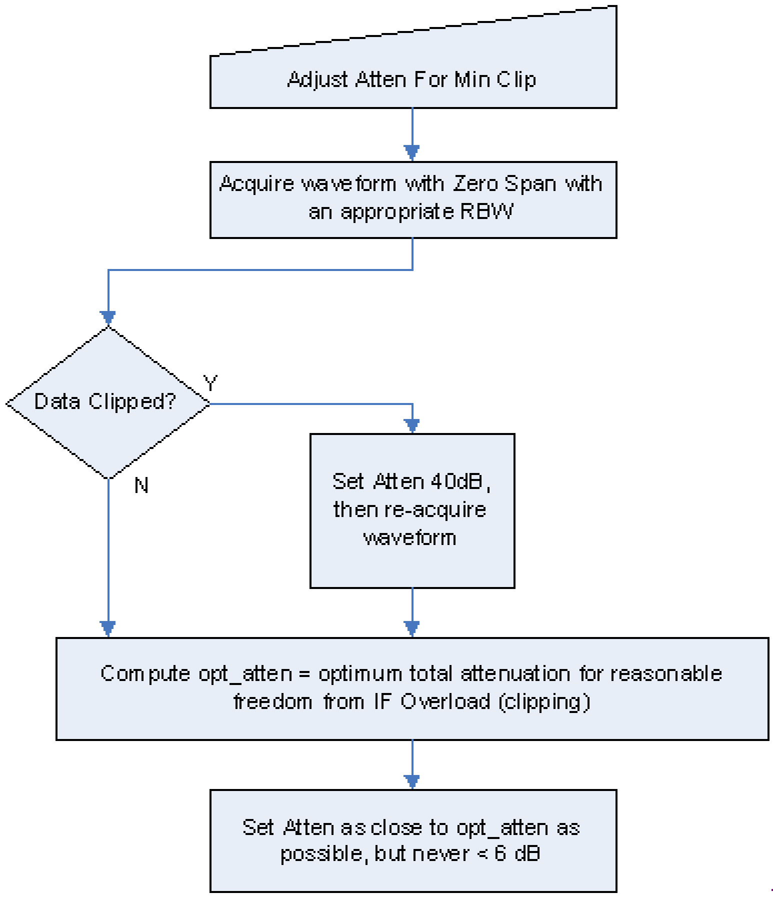
Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF
Backwards Compatibility SCPI	[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0 [:SENSe]:POWer[:RF]:RANGe:AUTO?

Adjustment Algorithm

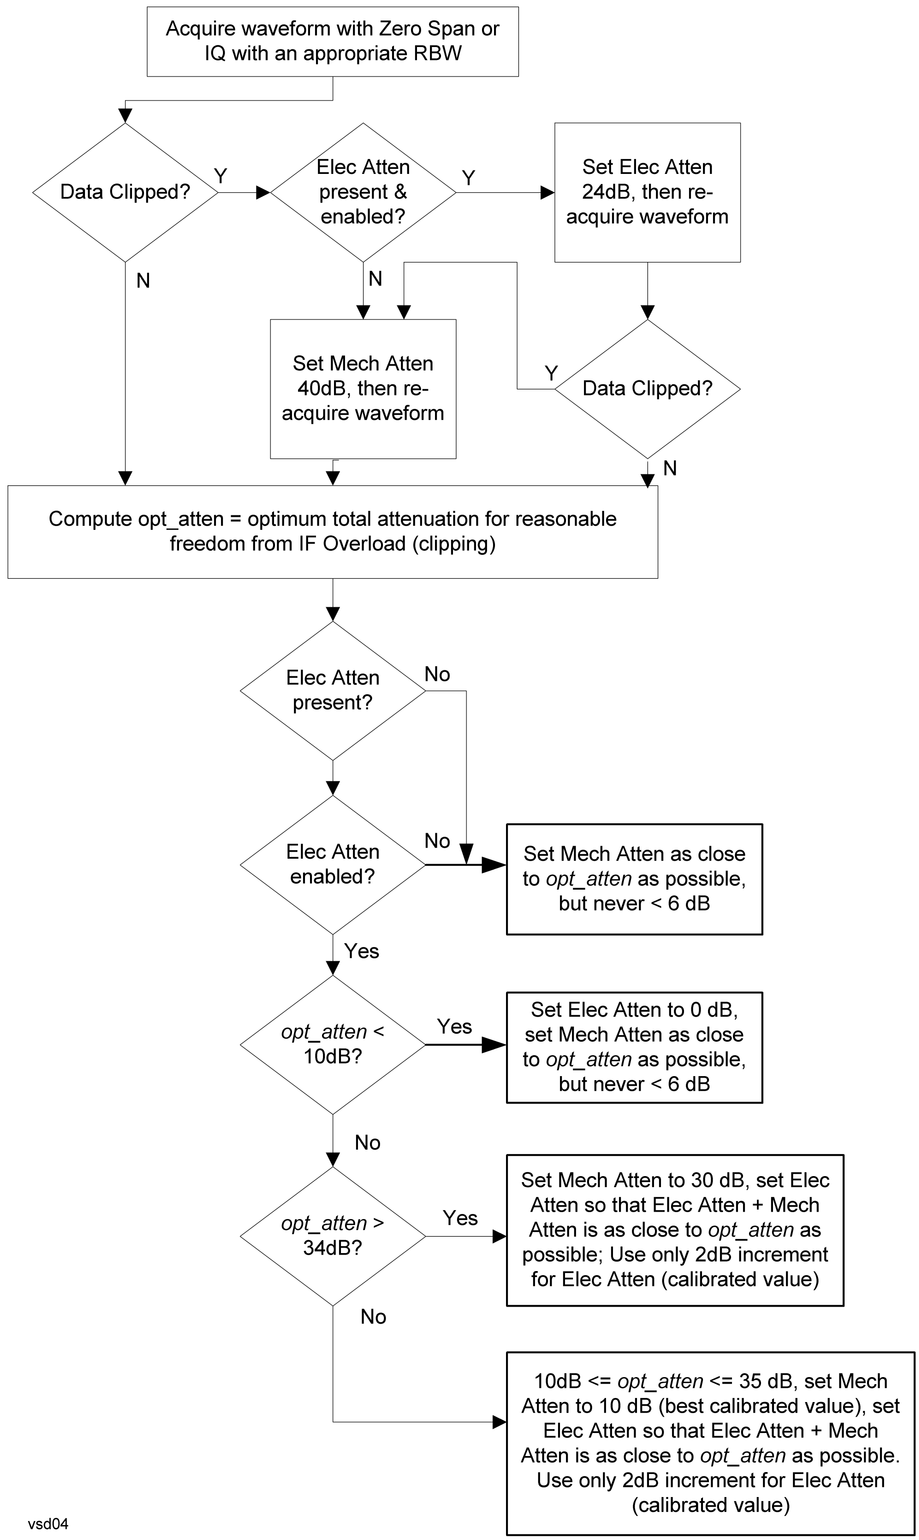
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

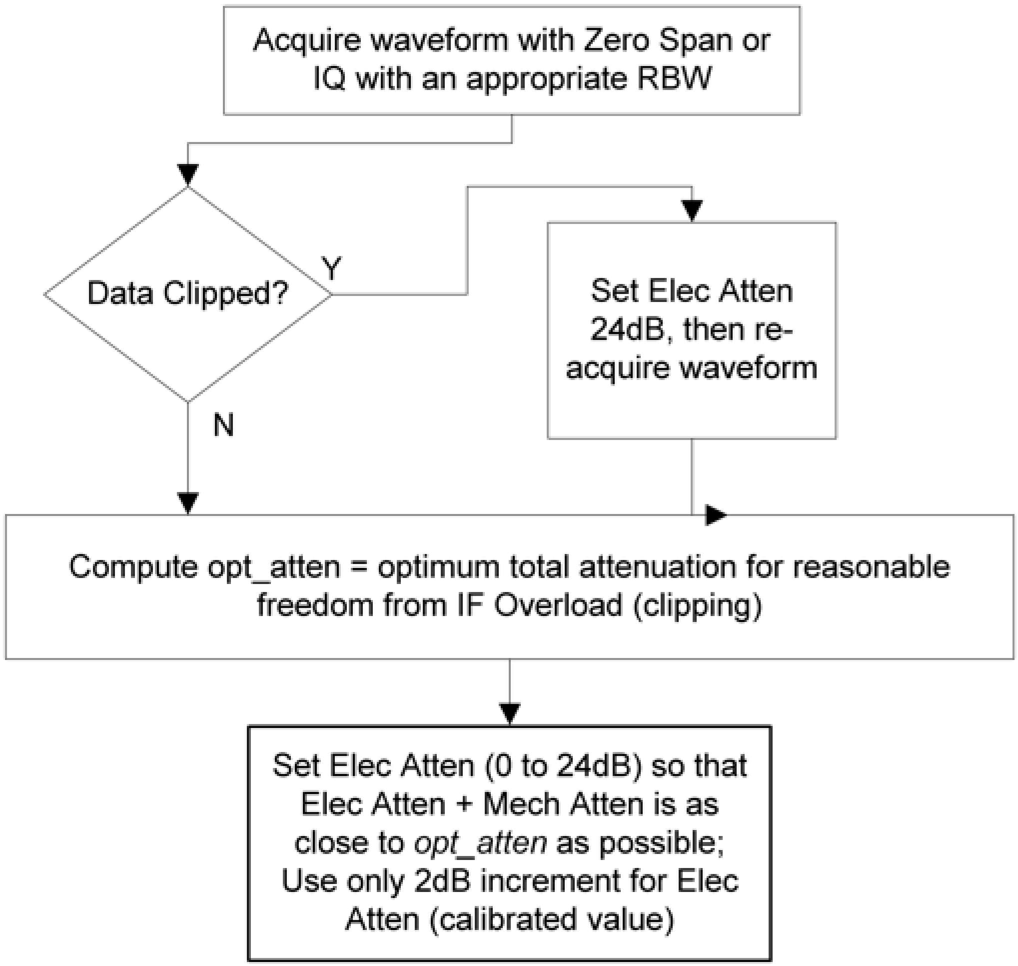
"Adjust Atten for Min Clipping" on page 3234 or "Pre-Adjust for Min Clipping" on page 1729 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= *opt_atten* <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 1729 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.7.3.3 Range (Non-attenuator models)

Only available for Keysight’s modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "Restart Meas on Adjust Atten" on page 3235 under "Attenuation" on page 3225.

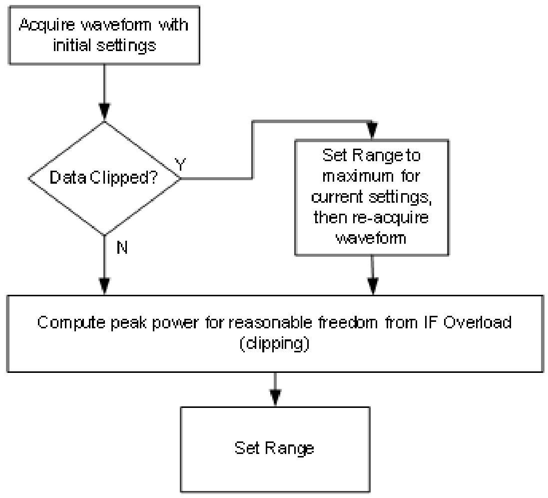
Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 3245 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`	
Example	`:POW:RANG:PAR 12 dB`	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	
Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 3247. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`
Example	`:POW:RANG:MIX:OFFS -5 dB`
Preset	0 dB
State Saved	Saved in instrument state
Min	VXT Models M9410A/11A: -34 dB All Others: -35 dB
Max	30 dB

3.7.3.4 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs"
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak
	`:VOLT:IQ:RANG 0.5 V`
	`:VOLT:IQ:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 3245 is On, the **I Range** value will be copied to "Q Range" on page 3244 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 **Ω**
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range

	states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 3242 determines both I and Q channel range settings.

Remote Command	`[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?`

Example	Set the Q Range to 0.5 V Peak:
	`:VOLT:IQ:Q:RANG 0.5 V`
	`:VOLT:IQ:Q:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 3242 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 3245 is On, the "I Range" on page 3242 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak

	"Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?`

Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 **Ω**, and to 1.0 V Peak when Reference Z is 75 **Ω**:
	`:POW:IQ:Q:RANG 4 dBm`
	`:POW:IQ:Q:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When ON, the "I Range" on page 3242 value is mirrored (copied) to the "Q Range" on page 3244
Preset	ON
State Saved	Saved in instrument state
Range	OFF|ON

3.7.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 3264 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 3250 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 1743.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command

	is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 3250
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 3249 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 3249, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated

	Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 3251. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with "Internal Preamp" on page 3251, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

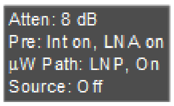
For more details about annotation, see "More Information" on page 1747

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled

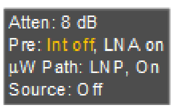
Preset	OFF
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 1752
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 1754
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 1754

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 3249 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable.** In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present

	as well as option FBP In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated **Low Noise Path Enable** and **Full Bypass Enable** are grayed-out if the current measurement does not support them **Low Noise Path Enable** and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”
Preset	**Mode** / **Value** IQ Analyzer, Pulse, RTSA, Avionics: MPB option present and licensed: `MPB`; MPB option not present and licensed: `STD` All other Modes: `STD` –
State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable
Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

Preset table:

Mode	Value

All other Modes	`STD`

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when ‘Enabled Wideband IF for FFT’ is OFF or ‘Sweep Type

Measurement	µW Path Control Auto behavior
	Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON`

	:POW:MW:PATH:AUTO?
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 1749 above
Preset	ON
Range	ON|OFF

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

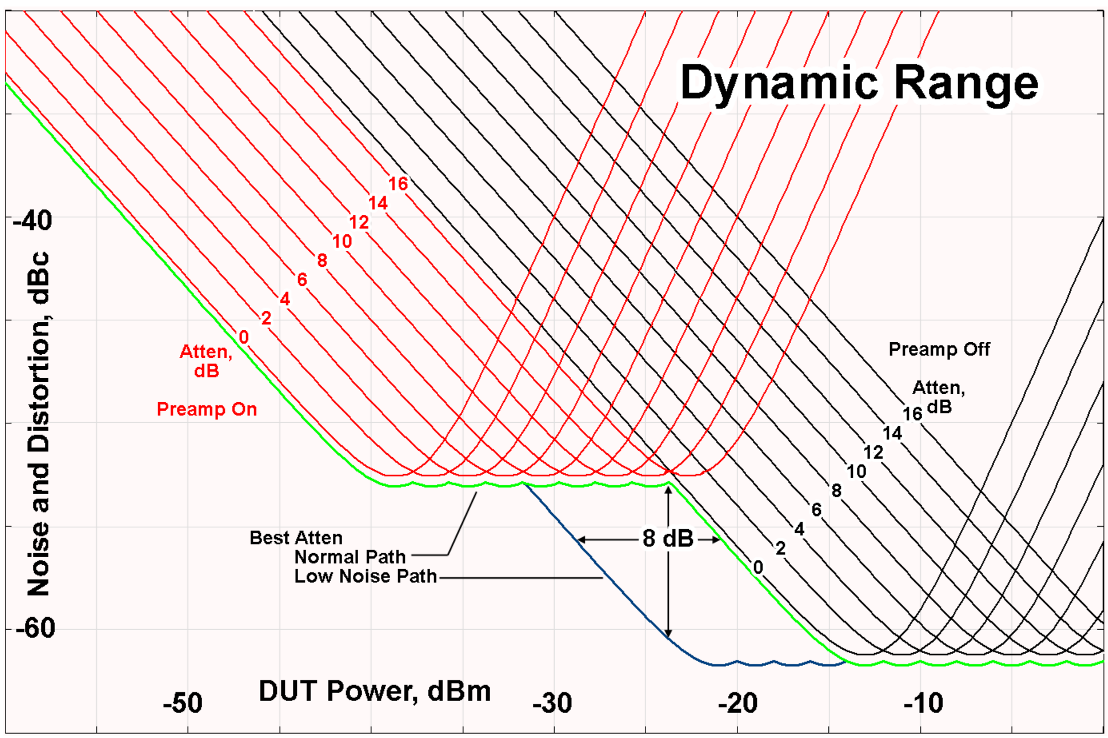
Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still

high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and

– the stop frequency is above 3.6 GHz.

– the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is OFF, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

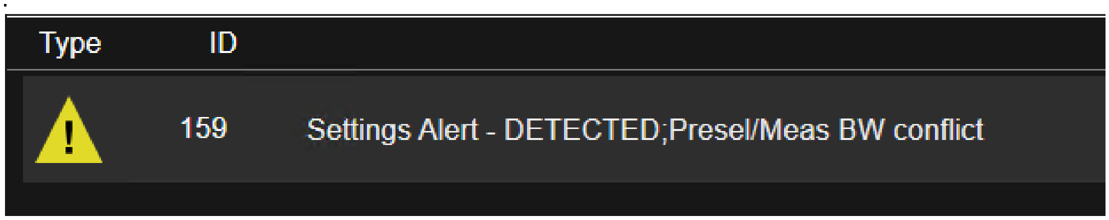
When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

.



Allow Full Bypass in Auto

Enable or disable Full Bypass in µW Path Auto rule. See "µW Path Control" on page 3254.

When this function is ON, and "µW Path Control" on page 3254 is in AUTO, it is possible for the auto rules to select the FULL Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the FULL Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?`
Example	`:POW:MW:PATH:AUTO:FULL ON` `:POW:MW:PATH:AUTO:FULL?`
Dependencies	Only appears if Option FBP is installed, and in the following measurements – 5GNRMode: Modulation Analysis and IQ Waveform – WLAN Mode: IQ Waveform – Channel Quality Mode: Group Delay and Noise Power Ratio
Preset	`OFF`
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The

specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

– There is some speed cost due to the need to take multiple captures

– Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: OFF N9042B+V3050A: ON M9410A/11A: ON

State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as "max hold" or trace averaging) is performed on the points of both candidate traces before the "select minimum" operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is `OFF`. The grayout message is "Unavailable unless SW Presel enabled"
Preset	N9041B: `ADVanced` N9042B+V3050A: `NORMal`
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- NORMal – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for NARRow (below)
- NARRow– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is “Unavailable unless SW Presel enabled” For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when **Software Preselection** is enabled
Preset	N9041B: NORMal N9042B+V3050A: NARRow
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`
Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: `:SPEC:PFIL ON`

	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in SA Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 1761 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.7.4 BW

BW is not supported in the 5G NR Modulation Analysis measurement.

3.7.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.7.5.1 Meas Display

Display Reference BWP/SSB

Enable and disable the display of reference BWP/SSB trace on Constellation, Error Vector Time and Error Vector Spectrum result windows.

Remote Command	`:DISPlay:EVM:REFerence:BWP OFF | ON | 0 | 1` `:DISPlay:EVM:REFerence:BWP?`
Example	`:DISP:EVM:REF:BWP OFF` `:DISP:EVM:REF:BWP?`
Preset	`OFF`
State Saved	Yes
Range	`Off|On`

Combine Trace w/ Same Numerology

Enable and disable combine BWP/SSB specific traces with same numerology.

Note: this feature only combine display and should not impact measurement results, so it only applies to IQ Meas Time, Detected Allocations, Error Vector Time and Error Vector Spectrum.

Remote Command	`:DISPlay:EVM:COMBine:BWP OFF | ON | 0 | 1` `:DISPlay:EVM:COMBine:BWP?`
Example	`:DISP:EVM:COMB:BWP OFF` `:DISP:EVM:COMB:BWP?`
Preset	`OFF`
State Saved	Yes
Range	`Off|On`

CC for All windows

Changes all traces/tables to specific "Component Carrier" on page 1789, note some traces/tables are not CC specific so they will not be affected.

Remote Command	`:DISPlay:EVM:CC:SELected CC0 | … | CC15`
Example	`:DISP:EVM:CC:SEL CC1`
Couplings	Activated value is based on number of component carriers
Preset	`CC0`
State Saved	Yes
Range	`CC0|…|CC15`

Display SCS Annotation

Enable or disable the display of SCS annotation in result windows.

Remote Command	`:DISPlay:EVM:TRACe:SCS:ANNotation OFF | ON | 0 | 1` `:DISPlay:EVM:TRACe:SCS:ANNotation?`
Example	`:DISP:EVM:TRAC:SCS:ANN OFF` `:DISP:EVM:TRAC:SCS:ANN?`
Preset	`ON`
State Saved	Yes
Range	Off|On

3D Trace Reset (GUI only)

Reset selected 3D trace.

State Saved	No

3D Trace X-Y Plane (GUI only)

Switch selected 3D trace to X-Y plane (EVM/Power vs symbol)

State Saved	No

3D Trace Z-Y Plane (GUI only)

Switch selected 3D trace to X-Y plane (EVM/Power vs subcarrier)

State Saved	No

3D Trace X-Z Plane (GUI only)

Switch selected 3D trace to X-Y plane (symbol vs subcarrier)

State Saved	No

3.7.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Modulation Analysis measurement has nine pre-defined views as follows.

View	Result
"Normal" on page 1765	"IQ Meas Time" on page 1706
	"Detected Allocation" on page 1706
	"Spectrum" on page 1705
	"Raw Main Time" on page 1704
	"Frame Summary" on page 1710
	"Error Summary" on page 1710
"Normal 3x3" on page 1766	"IQ Meas Time" on page 1706
	"Spectrum" on page 1705
	"Raw Main Time" on page 1704
	"Detected Allocation" on page 1706
	"RE Power 3D" on page 1707
	"Error Vector 3D" on page 1708
	"Frame Summary" on page 1710
	"Error Summary" on page 1710
	"User Summary" on page 1711
"In-Band Emission" on page 1766	"In-band Emission" on page 1708
	"BWP Summary" on page 1710
"Result Summary" on page 1766	"Error Summary" on page 1710
	"Frame Summary" on page 1710
	"User Summary" on page 1711
	"BWP Summary" on page 1710

View	Result
"CC Summary" on page 1767	"CC Summary" on page 1710
"Decode Summary" on page 1767	"Decoded Info" on page 1712
	"Decoded Channels" on page 1713
	"Decoded Symbols" on page 1713
"MISO Summary" on page 1767	"Spectrum" on page 1705
	"Raw Main Time" on page 1704
	"MIMO Info" on page 1711
"MIMO Summary" on page 1767	"User Summary" on page 1711
	"MIMO Info" on page 1711
"Auto Detect Summary" on page 1768	"IQ Meas Time" on page 1706
	"Frame Summary" on page 1710
	"Auto Detect Summary" on page 1711

Some of these are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is **Frequency**, unless otherwise specified in the View description.

View – Selection by Enum

Remote Command	`:DISPlay:EVM:VIEW[:SELect] NORMal | IBEMission | NRESults | CCResults | DECode | MIMO | ADETect | N3X3 | MISO` `:DISPlay:EVM:VIEW[:SELect]?`
Example	Set **Normal** view: `:DISP:EVM:VIEW NORM`
Preset	`NORM`
State Saved	Saved in instrument state

Normal

This view has six windows:

– "IQ Meas Time" on page 1706

– "Detected Allocation" on page 1706

– "Spectrum" on page 1705

– "Raw Main Time" on page 1704

– "Frame Summary" on page 1710
– "Error Summary" on page 1710

Example	`:DISP:EVM:VIEW NORM`

Normal 3x3

This view has nine windows:

– "IQ Meas Time" on page 1706
– "Spectrum" on page 1705
– "Raw Main Time" on page 1704
– "Detected Allocation" on page 1706
– "RE Power 3D" on page 1707
– "Error Vector 3D" on page 1708
– "Frame Summary" on page 1710
– "Error Summary" on page 1710
– "User Summary" on page 1711

Example	`:DISP:EVM:VIEW N3X3`

In-Band Emission

This view has two windows:

– "In-band Emission" on page 1708
– "BWP Summary" on page 1710

Example	`:DISP:EVM:VIEW IBEM`

Result Summary

This view has four windows:

- "Error Summary" on page 1710
- "Frame Summary" on page 1710
- "User Summary" on page 1711
- "BWP Summary" on page 1710

Example	`:DISP:EVM:VIEW NRES`

CC Summary

This view has a single window: "CC Summary" on page 1710

Example	`:DISP:EVM:VIEW CCR`

Decode Summary

This view has three windows:

- "Decoded Info" on page 1712
- "Decoded Channels" on page 1713
- "Decoded Symbols" on page 1713

Example	`:DISP:EVM:VIEW DEC`

MISO Summary

This view has three windows:

- "Spectrum" on page 1705
- "Raw Main Time" on page 1704
- "MIMO Info" on page 1711

Example	`:DISP:EVM:VIEW MISO`

MIMO Summary

This view has two windows:

- "User Summary" on page 1711

– "MIMO Info" on page 1711

Example	`:DISP:EVM:VIEW MIMO`

Auto Detect Summary

This view has three windows:

– "IQ Meas Time" on page 1706

– "Frame Summary" on page 1710

– "Auto Detect Summary" on page 1711

Example	`:DISP:EVM:VIEW ADET`

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME “Baseband”` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN "Baseband"`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`

Example	:DISP:VIEW:ADV:DEL:ALL
Notes	Disabled if there are no User Views

3.7.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1 :DISPlay:GRATicule[:STATe]?
Example	:DISP:GRAT OFF
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? This command is accepted for backwards compatibility with older instruments, but the WINDow, TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When OFF, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1 :DISPlay:ANNotation:SCReen[:STATe]?
Example	:DISP:ANN:SCR OFF
Dependencies	Grayed-out and forced to OFF when **System Display Settings**, **Annotation** is OFF

Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When OFF, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`

Name	Command
Create User View	:DISPlay:VIEW:ADVanced:NAME
Select Screen	:INSTrument:SCReen:SELect
Delete Screen	:INSTrument:SCReen:DELete
Delete All But This Screen	:INSTrument:SCReen:DELete:ALL
Add Screen	:INSTrument:SCReen:CREate
Rename Screen	:INSTrument:SCReen:REName
Sequencer On/Off	:SYSTem:SEQuencer

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.7.6 Freq

Opens the **Frequency** menu, which contains controls that allow you to control the frequency parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.7.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets the reference frequency of all the carriers. The center frequencies of carriers are defined as offset frequency from this value.

Remote Command	`[:SENSe]:CCARrier:REFerence <freq>` `[:SENSe]:CCARrier:REFerence?`
Example	`:CCAR:REF 2GHz` `:CCAR:REF?`
Preset	1 GHz
State Saved	Saved in instrument state
Min	Depends on instrument minimum center frequency. Same as Center Frequency
Max	Depends on instrument maximum center frequency. Same as Center Frequency

3.7.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** and places it at the center of the display. If the selected marker is Off, it is set to **Normal** and placed it at the center of the screen on the trace determined by the **Marker Window** rules.

3.7.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do *not* depend on the selected marker (e.g., Counter).

On any menu tab for which Select Marker displays, the first control is always Marker X.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state

3.7.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, Fixed or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected. Note that the X value can change if the marker is moved to a trace with a different domain.

The Marker X position is absolute if the marker mode is Normal or Fixed. If the mode is Delta, then the X position is relative to the reference marker. The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:X <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:X?`
Example	`:CALC:EVM:MARK:X 0.325` `:CALC:EVM:MARK:X?`
Notes	Marker X does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, “Suffix not allowed” is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units
Couplings	Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Z

Set the selected markers Z Axis value in the current Z Axis Scale unit for markers on traces with a 2-dimensional domain. In each case the marker that is addressed becomes the selected marker. It has no affect (other than to cause the marker to become selected) if the control mode is Off or if the trace has no Z domain. Note that the Z value can change or become irrelevant if the marker is moved to a trace with a different Z domain or no Z domain.

Note that this Z value is affected if the SCPI command to set marker point position is used.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Z <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Z?`
Example	`:CALC:EVM:MARK:Z 0.325` `:CALC:EVM:MARK:Z?`
Notes	Marker Z does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds it is clipped at the closest limit, and error -222 Data Out of Range is generated If suffix is sent, it must match the Z units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated
Couplings	Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Y

Enables you to set or read back the selected marker's Y Axis value in the current Y Axis Scale unit.

Setting the Y value is enabled when the Marker Mode is Fixed.

The query form generates an error if the marker mode is Off. Note that the Y value can change if the Y-axis units change, either from a change in format of the trace the marker is on or if the marker is moved to a different trace.

If the selected marker is on a trace that is displayed with Vector or Constellation format, this function controls only the real part of the Y value (i.e., the horizontal axis value). Use "Marker Y Imag" on page 1778 to change the imaginary (vertical) value. Marker Y and Marker Y Imag always set or get the rectangular form of Y, regardless of whether the marker readout is polar or rectangular.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y[:REAL] <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Y[:REAL]?`
Example	`:CALC:EVM:MARK2:Y 0.325` `:CALC:EVM:MARK2:Y?`
Notes	You cannot set Y unless the marker type is fixed. If the marker becomes fixed after a marker function is turned on, it is set to whatever the Y value was when the marker became fixed If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated
Couplings	Changes if marker is relative to a Delta marker that is turned on

Preset	None until marker is turned on
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Marker Y Imag

Enables you to set or read back the selected marker’s quadrature (imaginary) Y value in the current Y Axis Scale unit.

Setting the Y value is enabled when the Marker Mode is Fixed, and the current trace format is not complex (Vector or Constellation). The query form generates an error if it is used for a marker that is not on a complex trace. Marker Y Imag is not affected by whether the marker readout is polar or rectangular.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y:IMAGinary <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Y:IMAGinary?`
Example	`:CALC:EVM:MARK1:Y:IMAG 0.435` `:CALC:EVM:MARK1:Y:IMAG?`
Notes	Grayed-out unless the marker is fixed and on a vector display If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, an Invalid Suffix error is generated. Otherwise, error -138, “Suffix not allowed” is generated If query is sent while the marker is on a trace whose format is not vector or constellation, NaN (9.91E+37) is returned
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace format
Max	Depends on trace format

Marker Y Annotation (Remote Query only)

Query marker Y annotation in string format.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y:ANNotation?`
Example	`:CALC:EVM:MARK2:Y:ANN?`

Marker Mode

There are four control modes for markers:

Normal (POSition) – A marker that can be moved to any point on the X Axis by specifying its X Axis value, and whose absolute Y Axis value is then the value of the trace point at that X Axis value

Delta (DELTa) – A marker that can be moved to any point on the X Axis by specifying its X Axis offset from a reference marker, and whose absolute Y Axis value is then the value of the trace point at that X Axis value

Fixed (FIXed) – A marker whose X Axis and Y Axis values may be directly or indirectly specified by you, but whose Y Axis value remains fixed, once specified, and does not follow the trace. Fixed markers are useful as reference markers for Delta markers, as operands in a Peak Search operation, and as arbitrary reference points settable by you. These markers are represented on the display by an "X" rather than a diamond

Off (OFF) – A marker that is not in use

The SCPI command in the table below selects the marker and sets the marker control mode as described under **Normal**, **Delta**, **Fixed** and **Off**, below. All interactions and dependencies detailed under the control description are enforced when the remote command is sent.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MODE POSition | DELTa | FIXed | =OFF` `:CALCulate:EVM:MARKer[1]|2|…|12:MODE?`
Example	`:CALC:EVM:MARK2:MODE POS` `:CALC:EVM:MARK2:MODE?`
Couplings	The marker addressed by this command becomes the selected marker on the front panel
Preset	OFF
State Saved	The marker control mode (Normal, Delta, Fixed, Off) and X Axis value are saved in instrument state
Range	Normal|Delta|Fixed|Off

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the "Delta" selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:EVM:MARKer:AOFF`
Example	`:CALC:EVM:MARK:AOFF`

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker that is not Fixed or Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Note that **Fixed** markers do not couple. They stay where they were while all the other markers move. Of course, if a **Fixed** marker is being moved, all the non-fixed markers do move with it.

This may result in markers going off screen.

Remote Command	`:CALCulate:EVM:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:EVM:MARKer:COUPle[:STATe]?`
Example	`:CALC:EVM:MARK:COUP ON` `:CALC:EVM:MARK:COUP?`
Notes	In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker
Preset	`OFF`, presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.7.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that trace.

NOTE Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

Remote Command	:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum
Example	:CALC:EVM:MARK2:MAX
Notes	Sending this command selects the subopcoded marker

Next Peak (Next Lower Amp)

Moves the selected marker to the peak that is next lower in amplitude than the current marker's value. Only peaks which meet all enabled peak criteria are considered. If there is no valid peak lower than the current marker position, a "No peak found" message is generated and the marker is not moved.

In the Digital Demod measurements, if the format is complex (vector or constellation) then the marker moves to the closest point that has a lower magnitude than the marker's current position.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:NEXT
Example	:CALC:EVM:MARK2:MAX:NEXT
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Higher Amplitude

Moves the marker to the peak next higher in Y value than the peak it is currently on. If the format is complex (vector or constellation) then the marker moves to the closest point that has a higher magnitude than the marker's current position. If this function is invoked via SCPI on a marker that is off, the result is the same as if you sent a Peak Search command.

Remote Command	:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:PREVious
Example	:CALC:EVM:MARK2:MAX:PREV

Next Pk Right

Moves the selected marker to the nearest peak right of the current marker that meets all enabled peak criteria. If there is no valid peak to the right of the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:RIGHt`
Example	`:CALC:EVM:MARK2:MAX:RIGH`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Moves the selected marker to the nearest peak left of the current marker that meets all enabled peak criteria. If there is no valid peak to the left of the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:LEFT`
Example	`:CALC:EVM:MARK2:MAX:LEFT`
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum y-axis value on the current trace. Minimum (negative) peak searches do not have to meet the peak search criteria. It just looks for the lowest y-axis value. If the selected marker is Off, it is turned on before the minimum search is performed.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MINimum`
Example	`:CALC:EVM:MARK2:MIN`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Pk-Pk Search

Finds and displays the amplitude and frequency (or time) differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace. And it places that marker’s reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to Fixed or Normal if it is not already on. (These markers may be on two different traces.)

The rules for finding the maximum peak are exactly the same as for **Peak Search**, including the use of the peak criteria rules. However, the minimum trace value is not required to meet any criteria other than being the minimum y-axis value in the trace.

If the selected marker is off, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a delta marker, then it is changed to delta which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command	:CALCulate:EVM:MARKer[1]|2|…|12:PTPeak
Example	:CALC:EVM:MARK:PTP
Notes	Turns on the Marker D active function Sending this command selects the subopcoded marker
Couplings	The selected marker becomes a delta marker if not already in delta mode
State Saved	Not part of saved state

Marker Delta

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker’s control mode to Delta without having to access two separate menus.

3.7.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker X

This is the fundamental control that you use to move a marker around on the trace. This is the same as the Marker X control on the Settings tab. See "Marker X" on page 1776.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:REFerence <integer>` `:CALCulate:EVM:MARKer[1]|2|…|12:REFerence?`
Example	`:CALC:EVM:MARK2:REF 4` `:CALC:EVM:MARK2:REF?`
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself” When queried a single value is returned (the specified marker numbers relative marker)
Couplings	If the reference marker is off it is turned on in **Fixed or Normal** mode at the delta marker location
Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults**. This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12

Marker Window

Assigns the specified marker to the designated trace.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:WINDow <int>` `:CALCulate:EVM:MARKer[1]|2|…|12:WINDow?`

Example	`:CALC:EVM:MARK:WIND 2`
	set the first marker’s trace to window 2
	`:CALC:EVM:MARK:WIND?`
	query the first marker’s trace

Notes	Assigns the specified marker to the designated window
Preset	1
State Saved	Yes
Min	1
Max	6

Marker Trace

Assigns the specified marker to the designated trace (result and limit lines) when selected window is In-Band Emissions.

Remote Command	:CALCulate:EVM:MARKer[1]|2|…|12:TRACe:IBEM POWer | ALL | GENeral | IMAGe | DC :CALCulate:EVM:MARKer[1]|2|…|12:TRACe:IBEM?
Example	:CALC:EVM:MARK:TRAC:IBEM ALL set the first marker's trace to IBE All limit line :CALC:EVM:MARK:TRAC:IBEM? query the first marker's trace in IBE window
Notes	Assigns the specified marker to the designated trace (result and limit lines)
Couplings	Only valid when the In-Band Emissions window is selected
Preset	POWer
State Saved	Yes
Range	RB Power | All (combined) Limit | General Limit | IQ Image Limit | Carrier Leakage Limit

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "Marker Settings Diagram" on page 1779 on the **Settings** tab.

3.7.7.5 Marker Function

The controls on this tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

Marker X

Sets the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab

Marker Function/Interval Function

Sets the marker control function type to one of the following:

NOISe	Marker Noise
BPOWer	Band Power/Interval Power
BDENsity	Band Density/Interval Density
OFF	Marker Function Off

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion NOISe | BPOWer | BDENsity | OFF` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion?`
Example	`:CALC:EVM:MARK:FUNC BPOW` `:CALC:EVM:MARK:FUNC?`
Notes	The label on the control is **Marker Function** for Frequency Domain traces and **Interval Function** for Time Domain traces
Preset	`OFF`
State Saved	Yes
Range	Marker Noise | Band Power | Band Density | Off
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Band Span/Interval Span

Band Span

Sets the width of the span for the selected marker. This function defines the span of frequencies. The marker position does not change when you adjust the span.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:SPAN 1.23E+06` `:CALC:EVM:MARK2:FUNC:BAND:SPAN?`
Preset	When marker turned on, 1/20th of current span
State Saved	Yes
Min	100
Max	9.9E+37

Interval Span

Sets the width of the span for the selected marker. This function defines the span of time. The marker position does not change when you adjust the span.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:SPAN <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:SPAN?`
Example	`:CALC:EVM:MARK2:FUNC:INT:SPAN 1.23E+06` `:CALC:EVM:MARK2:FUNC:INT:SPAN?`
Preset	When marker turned on, 1/20th of current displayed time length
State Saved	Yes
Min	100
Max	9.9E+37

Band Left/Interval Left

Band Left

Enables you to adjust the left side of the band. In order to remain centered in the band, the marker position must also change as you change the left edge. The right edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:LEFT 1.23E+06` `:CALC:EVM:MARK2:FUNC:BAND:LEFT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current span left of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Interval Left

Enables you to adjust the left side of the band. In order to remain centered in the band, the marker position must also change as you change the left edge. The right edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:LEFT <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:LEFT?`
Example	`:CALC:EVM:MARK2:FUNC:INT:LEFT 1.23E+06` `:CALC:EVM:MARK2:FUNC:INT:LEFT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current displayed time length left of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Right/Interval Right

Band Right

Enables you to adjust the right side of the band. In order to remain centered in the band, the marker position must also change as you change the right edge. The left edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:RIGHT 1.23E+06` `:CALC:EVM:MARK2:FUNC:BAND:RIGHT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current span right of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Interval Right

Enables you to adjust the right side of the band. In order to remain centered in the band, the marker position must also change as you change the right edge. The left edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:RIGHt <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:INTerval:RIGHt?`
Example	`:CALC:EVM:MARK2:FUNC:INT:RIGHT 1.23E+06` `:CALC:EVM:MARK2:FUNC:INT:RIGHT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current displayed time length right of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

3.7.7.6 Marker To

The controls on this tab enable you to copy the current marker's value into other instrument parameters (for example, Center Freq). The currently selected marker is made the active function on entry to this menu (if the currently selected marker is not on when you press this front panel key, it will be turned on at the center of the screen as a normal type marker and then made the active function).

Marker X

Sets the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab.

Mkr -> CF

Sets the center frequency of the analyzer to the frequency of the selected marker. The marker stays at this frequency, so it moves to the center of the display. In delta marker mode, this function sets the center frequency to the x-axis value of the delta marker. When the frequency scale is in log mode, the center frequency is not at the center of the display.

If the currently selected marker is not on when this control is pressed, it will be turned on at the center of the screen as a normal type marker.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12[:SET]:CENTer`
Example	`:CALC:EVM:MARK4:CENT`
Notes	Sending this command selects the subopcoded marker If specified marker is off, this command will turn it on at the center of the screen as a normal type marker
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting Center Frequency apply

3.7.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.7.8.1 Settings

Enables you to set measurement parameters.

Component Carrier

Allows you to select which component carrier settings should be accessible on GUI.

You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

Remote Command	`[:SENSe]:EVM:SELected CC0 | … | CC15` `[:SENSe]:EVM:SELected?`
Example	`:EVM:SEL CC0` `:EVM:SEL?`
Dependencies	Coupled to Number of Component Carriers. For example, if Number of Component Carriers is 2, then Component Carrier list includes CC0~CC1

Preset	`CC0`
State Saved	Saved in instrument state
Range	`CC0|…|CC15`

Avg|Hold Number

Specifies the number of N averages that will be used for the measurement. After the specified number (average counts) have been averaged, the averaging mode (termination control) setting determines the averaging action.

Remote Command	`[:SENSe]:EVM:AVERage:COUNt <integer>` `[:SENSe]:EVM:AVERage:COUNt?`
Example	`:EVM:AVER:COUN 1000` `:EVM:AVER:COUN?`
Preset	10
State Saved	Yes
Min	1
Max	10000

Continue Averaging

Continue Averaging is designed for acquiring the trace average through multiple sets of DUT conditions, in order to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use `FETCh:<meas>?` to retrieve the data as it waits for completion of Continue Averaging. `*OPC?` does not wait for completion and returns true immediately.

Pressing this control adds (to the already averaged trace or measurement) a number of averages equal to the Avg|Hold number. Every time you press it, the terminal count increases by the current value of the Avg|Hold number. You can change your test setup (e.g., the DUT position or antenna) after each average count reaches the terminal count.

You could also accomplish the same thing by manually increasing the Avg|Hold number, but using Continue Averaging you are guaranteed to get the same number of averages at each step in the process and you always keep the Avg|Hold number the same so you don't lose its value

Remote Command	[:SENSe]:EVM:AVERage:CONTinue
Example	:EVM:AVER:CONT
Dependencies	Becomes enabled when you change Sweep mode to Single and the Average Count reaches the Average Number. Otherwise, grayed-out

Averaging On/Off

Turns averaging on or off.

Remote Command	[:SENSe]:EVM:AVERage[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:AVERage[:STATe]?
Example	:EVM:AVER OFF :EVM:AVER?
Preset	OFF
State Saved	Yes
Range	Off|On

Averaging Mode

Toggles the averaging mode between Exp (exponential) and Repeat. This selection only affects the averaging result after the number of N averages is reached. The N is set using the control "Avg|Hold Number."

Exponential	Each successive data acquisition after the average count is reached, is exponentially weighted and then combined with the existing average
Repeat	After reaching the average count, the averaging is reset, and a new average is started

Remote Command	[:SENSe]:EVM:AVERage:TCONtrol EXPonential | REPeat [:SENSe]:EVM:AVERage:TCONtrol?
Example	:EVM:AVER:TCON REP :EVM:AVER:TCON?
Notes	Selects the type of termination control used for averaging. This determines the averaging action after the specified number of frames (average count) is reached
Preset	EXPonential
State Saved	Yes
Range	Exponential|Repeat

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	`[:SENSe]:EVM:ACQuisition SIMultaneous | SEQuential` `[:SENSe]:EVM:ACQuisition?`
Example	`:EVM:ACQ SEQ` `:EVM:ACQ?`
Preset	`SEQuential`
State Saved	Saved in instrument state
Range	`Simultaneous | Sequential`

Copy CC To

Copies the selected "Component Carrier" on page 1789 to another Component Carrier, or all Component Carriers.

This parameter copies 5GNR demodulation parameters from one Component Carrier to other Component Carrier or all Component Carriers.

For GUI operation, which parameters will be copied is specified by Copy CC Content.

For SCPI operation, which parameters will be copied is specified by optional node:

– `ALL`: All Component Carrier specific parameters under Meas Setup panel

– `TIME`: All parameters under Meas Setup - Meas Time tab

– `ADVanced`: All Component Carrier specific parameters under Meas Setup - Advanced tab

– `DECode`: All parameters under Meas Setup – Decode tab

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:COPY:ALL|TIME|ADVanced|DECode CC0 | CC1 | CC2 | CC3 | CC4 | CC5 | CC6 | CC7 | CC8 | CC9 | CC10 | CC11 | CC12 | CC13 | CC14 | CC15 | ALL`

Example	`:EVM:CCAR0:COPY:ADV ALL`
Couplings	Enabled when Component Carrier number is greater than one
Preset	`ALL`
State Saved	Yes
Range	`All | CC0 | CC1 | CC2 | CC3 | CC4 | CC5 | CC6 | CC7 | CC8 | CC9 | CC10 | CC11 | CC12 | CC13 | CC14 | CC15`

Copy CC Content

Specifies the Meas Setup parameter group for "Copy CC To" on page 1792:

– All: All Component Carrier specific parameters under Meas Setup panel

– Meas Time: All parameters under Meas Setup - Meas Time tab

– Advanced: All Component Carrier specific parameters under Meas Setup - Advanced tab

– Decode: All parameters under Meas Setup – Decode tab

Couplings	Enabled when "Component Carrier" on page 1789 number is greater than one
Preset	All
State Saved	Saved in instrument state
Range	All | Meas Time | Advanced | Decode

Spur Avoidance (VXT2)

Because VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the BW<= maxBW/2.5. See More Information.

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as “Settings Alert; Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

The spur avoidance function is not available for:

- M9410A/11A with EP6 option at frequency above 6 GHz
- M9415A/16A at frequency below 380 MHz and above 12.3 GHz
- M9410E/11E/15E/16E at frequency below 380 MHz and above 25.9 GHz

Remote Command	`[:SENSe]:EVM:SAVoid[:STATe] ON | OFF | 0 | 1` `[:SENSe]:EVM:SAVoid[:STATe]?`
Example	`:EVM:SAV ON` `:EVM:SAV?`
Dependencies	This control only appears in VXT models M9410A/11A/15A and M9410E/11E/15E/16E
Preset	`ON`
State Saved	Saved in instrument state
Range	`On|Off`

More Information

The Maximum Digital IF BW depends on the installed options, and selected Center Frequency.

VXT models M9410A/11A

Option limitation:

Option	Max Digital IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 5480 MHz (without Option EP6)	1200 MHz
5480 MHz ~ 6080 MHz (without Option EP6)	(6080 MHz – CF) * 2
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 6000 MHz (Option EP6)	1200 MHz
6000 MHz ~ 6600 MHz (Option EP6)	(6600 MHz – CF) * 2

VXT model M9415A

Option limitation:

Option	Max Digital IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 12300 MHz	1200 MHz
12300 MHz ~ 12900 MHz	(12900 MHz – CF) * 2

M9410E/11E

Option Limitation:

Option	Maximum IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 25.9 GHz (without Option EP6)	1200 MHz
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 25.9 GHz (Option EP6)	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

M9415E/16E

Option Limitation:

Option	Maximum IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 25.9 GHz	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

Optimize EVM

This is an "immediate action" function to optimize EVM for active Component Carriers. It is used to set the combination of preamp, mechanical and electronic attenuation and IF gain value based on measured signal peak level. Its purpose is to get better EVM results by improving SNR and avoid ADC overload at the same time.

After this control is pressed, Pre-Adjust or Min Clipping is changed to Off and IF Gain Auto is changed to Manual.

Note: for multiple Component Carriers in sequential mode, after optimization, `separate optimized settings (attenuation, preamp, IF Gain) for each CC will be used before measurement restart. And selected component carrier's optimized setting will be displayed on panel. After measurement restart the displayed setting (optimized for selected CC) will be used for all active CC.

Remote Command	`[:SENSe]:EVM:OPTimize`
Example	`:EVM:OPT`
Dependencies	Does not appear in VXT Models M9410A/11A/15A/16A/20A/21A and M9410E/11E/15E/16E

EVM Optimization Method

"Optimize EVM" is an immediate action to adjust hardware settings to minimize EVM, before the action, the EVM Optimization Method should be selected.

There are 2 methods for EVM Optimization:

Normal	NORMal	Captures input signal, measures its peak power, then the algorithm finds the proper setting combination for attenuation, preamp and IF Gain
Iterative	ITERative	Captures input signal multiple times in an iteration process, demodulates the signal and calculates EVM for each iteration, then finds the setting combination for attenuation, preamp and IF Gain with minimum EVM

For 5GNR signal, Iterative method is significantly slower than Normal method but it can always get better EVM.

Remote Command	[:SENSe]:EVM:OPTMethod NORMal | ITERative [:SENSe]:EVM:OPTMethod?
Example	:EVM:OPTM NORM :EVM:OPTM?
Dependencies	Does not appear in VXT Models M9410A/11A/15A/16A/20A/21A and M9410E/11E/15E/16E
Couplings	Disabled when "Component Carrier" on page 1789 number is greater than one
Preset	NORMal
State Saved	Saved in instrument state
Range	Normal | Iterative

Iterative EVM Optimization Target

Specify the component carrier will be used as iterative EVM optimization target.

Remote Command	[:SENSe]:EVM:OPTimize:ITERative:TARGet CC0 | … | CC15 [:SENSe]:EVM:OPTimize:ITERative:TARGet?
Example	:EVM:OPT:ITER:TARG CC0 :EVM:OPT:ITER:TARG?
Dependencies	This control is invalid when EVM Optimization Method is Normal
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|…|CC15

Allow Re-Calculation

In single mode, turn on/off result recalculation and update (without measurement restart) when you change specific parameters:

Remote Command	`:CALCulate:EVM:RECalculate OFF | ON | 0 | 1` `:CALCulate:EVM:RECalculate?`
Example	`:CALC:EVM:REC OFF` `:CALC:EVM:REC?`
Couplings	This control will be disabled when: – Measurement in continuous mode – Or Multiple CC with Sequential Acquisition mode
Preset	`OFF`
State Saved	Yes
Range	`Off|On`

Restart Meas on Optimize EVM

Toggles the force restart switch for the immediate action of "Optimize EVM" on page 1796.

When ON, pressing the control Optimize EVM or sending `[:SENSe]:EVM:OPTimize` restarts the measurement and then executes the function.

When OFF, pressing Optimize EVM or sending the SCPI command neither restarts the measurement nor executes the function. The function is executed when you restart the measurement or execute continuing averaging. In this case, pressing **Optimize EVM** generates the following advisory message:

“The immediate action is deferred until "Restart" or "Continue Averaging" is executed”

This message is not generated when the SCPI command is sent.

Remote Command	`[:SENSe]:EVM:IACTion:RESTart OFF | ON | 0 | 1` `[:SENSe]:EVM:IACTion:RESTart?`
Example	`:EVM:IACT:REST OFF` `:EVM:IACT:REST?`
Preset	ON
State Saved	Saved

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be "coupled", meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "Measurement-Specific Details" on page 1800 below.

Remote Command	`:COUPle ALL`
Example	`:COUP ALL`
Backwards Compatibility SCPI	`:COUPLE ALL | NONE`
Backwards Compatibility Notes	`:COUP:NONE` puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	`:CONFigure:EVM`
Example	`:CONF:EVM`
Notes	Restore all defaults of parameters

3.7.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available

Couplings	Changing the direction affects the gate source as follows
	– If changed to uplink: RF burst
	– If changed to downlink: External 1
	In Transmit On|Off Power, changing the direction affects the trigger source as follows
	– If changed to uplink: Periodic
	– If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows.
	  – External 1, when Info BW ≤ 255 MHz
	  – External 3, when Info BW ≥ 256 MHz
	Changing the direction affects many other modulation analysis setup parameters

Preset	ULINk when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINk
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink|Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE **This setting is available for EVM.**

Remote Command	[:SENSe]:RADio:MIMO[:STATe] ON | OFF | 0 | 1 [:SENSe]:RADio:MIMO[:STATe]?
Example	:RAD:MIMO ON :RAD:MIMO?
Preset	OFF
State Saved	Yes
Range	ON|OFF

When input signal is MIMO, there are two use models depends on input data channel number.

– Input data channel number = 1

This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:

MIMO Info table

Spectrum trace

Raw Main Time trace

– Input data channel number > 1

Input data channels may come from:

Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE This setting is available for EVM when "MIMO" on page 1801 is set to On.

Remote Command	[:SENSe]:RADio:MIMO:CHANnel:REFerence CHANnel1 | … | CHANnel8 [:SENSe]:RADio:MIMO:CHANnel:REFerence?
Example	:RAD:MIMO:CHAN:REF CHAN1 :RAD:MIMO:CHAN:REF?
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	CHAN1
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Input Port (UXM)

Select input port for channel configuration.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2 RFIO1 | … | RFIO8` `[:SENSe]:RADio:MCHannel:PORT[1]|2?`
Example	`:RAD:MCH:PORT2 RFIO2` `:RAD:MCH:PORT2?`
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 2456 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 2456 is OFF, the label “Channel x” changes to “Unused” Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration
Preset	RFIO1|RFIO2
State Saved	Yes
Range	RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8 or RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8|RFIO 9|RFIO 10|RFIO 11|RFIO 12|RFIO

	13|RFIO 14|RFIO 15|RFIO 16
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:PORT[1]|2

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed OFF | ON | 0 | 1 [:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed?
Example	:RAD:MCH:PORT2:LOCK ON :RAD:MCH:PORT2:LOCK?
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:PORT[1]|2:LOCKed

Input Channel IP address

Set instrument IP address for channel configuration, “local” is used for current instrument.

Remote Command	[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4 <String> [:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4?
Example	:RAD:MCH:IPAD '192.168.1.2'
Dependencies	Appears only in the EVM measurement
Preset	local
State Saved	Yes
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4

Input Channel Instrument port

Set instrument port for channel configuration.

Remote Command	[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:PORT <int> [:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:PORT?

Example	:RAD:MCH:IPAD:PORT 3574
Dependencies	Available only for the EVM measurement. Only visible on VXT platforms
Preset	3574
State Saved	Yes
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4:PORT

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:LOCKed OFF | ON | 0 | 1 [:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:LOCKed?
Example	:RAD:MCH:IPAD1:LOCK 1 :RAD:MCH:IPAD1:LOCK?
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4:LOCKed

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	[:SENSe]:RADio:MCHannel:CHANnel:INFO?
Example	:RAD:MCH:CHAN:INFO?
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:CHANnel:INFO

Advanced Acquisition

This menu is only available for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See "Number of Component Carriers" on page 3292.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 1806

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

– `:INIT:CONT 1` has no effect

– `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 3413 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	`[:SENSe]:RF:ACQuistion:ATABle OFF | ON | 0 | 1` `[:SENSe]:RF:ACQuistion:ATABle?`
Example	`:RF:ACQ:ATAB 1` `:RF:ACQ:ATAB?`
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	`[:SENSe]:EVM:ACQuisition SIMultaneous | SEQuential` `[:SENSe]:EVM:ACQuisition?`
Example	`:EVM:ACQ SEQ` `:EVM:ACQ?`
Preset	`SEQuential`
State Saved	Saved in instrument state
Range	`Simultaneous | Sequential`

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1810

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation’s specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no “electronic attenuator”; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a “soft” attenuation. The “soft” attenuation is treated as an addition to the “main” attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 3253 is `ON`, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode

	– Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1811
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily

aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1812 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	`[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON | OFF | 1 | 0` `[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO?`
Example	`:RF:ACQ:ATAB:IFP:AUTO 1` `:RF:ACQ:ATAB:IFP:AUTO?`

Preset	ON
State Saved	Yes
Range	OFF|ON

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier[0]|1|…|15[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action “Apply Preset (to All CCs)” is executed
Preset	ON
State Saved	Saved in instrument state

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:ATTenuation <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:ATTenuation?`
Example	`:CCAR0:RF:CHAN1:ATT 20`
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:EATTenuation <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:EATTenuation?`
Example	`:CCAR0:RF:CHAN1:EATT 20`
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:PREamp OFF | LOW | FULL` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:PREamp?`
Example	`:CCAR0:RF:CHAN1:GAIN:PRE LOW` `:CCAR0:RF:CHAN1:GAIN:PRE?`
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	`OFF`
State Saved	Saved in instrument state

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:LNA OFF | ON | 0 | 1` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:LNA?`
Example	`:CCAR0:RF:CHAN1:GAIN:LNA ON`
Dependencies	Requires option LNA
Preset	`OFF`
State Saved	Saved in State

uW Path Control

Select uW Path for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:MW:PATH?`
Example	`:CCAR0:RF:CHAN1:MW:PATH LNP` `:CCAR0:RF:CHAN1:MW:PATH?`
Preset	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
State Saved	Save in instrument state
Range	Standard Path|Low Noise Path Enable|µW Presel Bypass|Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:IF:GAIN:LEVel <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:IF:GAIN:LEVel?`
Example	`:CCAR0:RF:CHAN1:IF:GAIN:LEV -10` `:CCAR0:RF:CHAN1:IF:GAIN:LEV?`
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	`[:SENSe]:CCARrier0|…|15:RF:CHANnel1|…|8:IFPath B10M | B25M | B40M | B85M | B125M | B140M | B160M | B255M | B510M | B1G | B1500M | B2G | B4G` `[:SENSe]:CCARrier0|…|15:RF:CHANnel1|…|8:IFPath?`
Example	`:CCAR0:RF:CHAN1:IFP B160M` `:CCAR0:RF:CHAN1:IFP?`
Notes	B10M = 10 MHz B25M = 25 MHz

	B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error -241,"Hardware missing; Option not installed"
Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE: This setting is available for ACP, EVM, SEM and Spur.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF | ON | 0 | 1` `[:SENSe]:RADio:IMODulation:INTerference[:STATe]?`
Example	`:RAD:IMOD:INT 1` `:RAD:IMOD:INT?`
Preset	OFF
State Saved	Saved in instrument state
Range	On|Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference

Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq> [:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?
Example	:RAD:IMOD:INT:FREQ:OFFS 5MHz :RAD:IMOD:INT:FREQ:OFFS?
Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq> [:SENSe]:RADio:IMODulation:INTerference:SPAN?
Example	:RAD:IMOD:INT:SPAN 5MHz :RAD:IMOD:INT:SPAN?
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative | POSitive [:SENSe]:RADio:IMODulation:INTerference:SIDE?
Example	:RAD:IMOD:INT:SIDE POS

	`:RAD:IMOD:INT:SIDE?`
Preset	`POSitive`
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE **This setting is available for ACP, EVM, SEM and Spur.**

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:REGion INNer | OUTer` `[:SENSe]:RADio:IMODulation:INTerference:REGion?`
Example	`:RAD:IMOD:INT:REG OUT` `:RAD:IMOD:INT:REG?`
Preset	`OUTer`
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) - Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) - Exclude only the span where the interfering signal is occupied

NOTE **This setting is available only for the ACP and Modulation Analysis measurements.**

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1]|2 OIBW | ISSPan` `[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1]|2?`
Example	`RAD:IMOD:INT:RANG:EXCL OIBW` `RAD:IMOD:INT:RANG:EXCL?`

Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW|Interfering Signal Span

3.7.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

– Contiguous – All the component carriers belong to one block and no sub-block gap exists

– Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

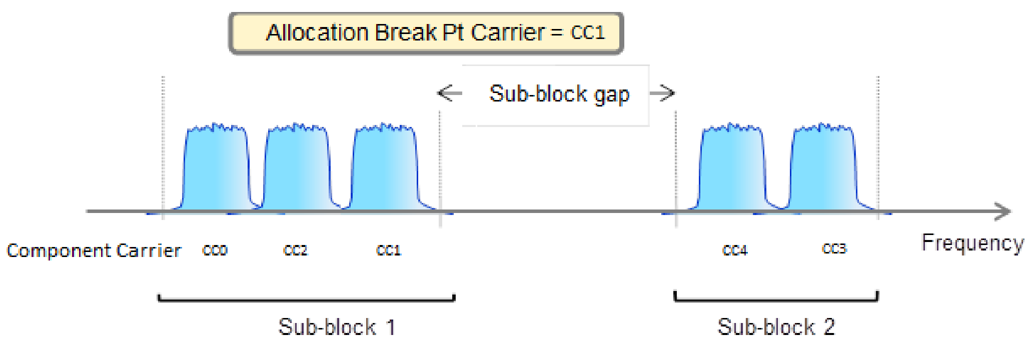
Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`

Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC15 [:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?
Example	:CCAR:CONF:ALL:NCON:ABP CC0 :CCAR:CONF:ALL:NCON:ABP?
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|…|CC15

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3296

Number of Component Carriers

This is the same as the control on the menu panel. See "Number of Component Carriers" on page 3292.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	`[:SENSe]:CCARrier:AFOFfset OFF | ACRA100K | ACRA15K | ACRA60K | CARA100K | CARA15K | CARA60K` `[:SENSe]:CCARrier:AFOFfset?`
Example	`:CCAR:AFOF ACRA100K` `:CCAR:AFOF?`
Notes	When you change the value to `OFF`, nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC’s Frequency Offset is manually changed, this parameter is set to OFF This feature isn’t supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CC0 Freq Offset is automatically adjusted to 0 Hz
Preset	`OFF`

State Saved	Yes
Range	The cascading list is shown below

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz

Channel Spacing for	Channel Raster
Adjacent NR Carriers	
Carrier Aggregation	
Off	

Carrier Allocation

This is the same as the control on the menu panel. See "Carrier Allocation" on page 3293.

Non-Contiguous Break at

This is the same as the control on the menu panel. See "Non-Contiguous Break at" on page 3293.

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier[0]|1|…|15[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action “Apply Preset (to All CCs)” is executed

Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk ON | OFF | 1 | 0` `[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk?`
Example	`:CCAR4:RAD:SLIN ON` `:CCAR4:RAD:SLIN?`
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when "Bandwidth" on page 3297 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth B5M | B10M | B15M | B20M | B25M | B30M | B35M | B40M | B45M | B50M | B60M | B70M | B80M | B90M | B100M | B200M | B400M | B800M | B1600M | B2000M` `[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B50M`
Dependencies	When "Sidelink" on page 3296 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	B100M unless noted below – Option B25: B20M – Option B40: B35M

	– Option B85: B80M
State Saved	Yes
Range	5 MHz | 10 MHz | 15 MHz | 20 MHz | 25 MHz | 30 MHz | 35 MHz | 40 MHz | 45 MHz | 50 MHz | 60 MHz | 70 MHz | 80 MHz | 90 MHz | 100 MHz | 200 MHz | 400 MHz | 800 MHz | 1600 MHz | 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge FR1 | FR2 [:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge?
Example	:CCAR1:RAD:STAN:FRAN FR1
Dependencies	Available selections differ depending on "Bandwidth" on page 3297 as follows: – 50 MHz and 100 MHz: FR1 and FR2 – 200 MHz or wider: FR2 only – Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	FR1
State Saved	Yes
Range	FR1|FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq> [:SENSe]:CCARrier<n>:FREQuency:OFFSet?
Example	:CCAR4:FREQ:OFFS 10MHz :CCAR4:FREQ:OFFS?
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor

	Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the "Non-Contiguous Break at" parameter is set to the intended value since it's often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE **This setting is available for EVM measurement only.**

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE AUTO | MANual` `[:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE?`
Example	`:EVM:CCAR:CID:MODE MAN` `:EVM:CCAR:CID:MODE?`
Preset	`MANual`
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE **This setting is available for EVM measurement only.**

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:CID <integer>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:CID?`
Example	`:EVM:CCAR4:CID 0` `:EVM:CCAR4:CID?`
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier[0]|1|…|15:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	`NORM`
State Saved	Yes
Range	Normal | Invert

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815

	35 MHz	33.840	33.855
	40 MHz	38.880	38.895
	45 MHz	43.560	43.575
	50 MHz	48.600	48.615
	60 MHz	58.320	58.350
	70 MHz	68.040	68.070
	80 MHz	78.120	78.150
	90 MHz	88.200	88.230
	100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset	98.280 MHz|98.310 MHz
State Saved	Yes
Min	100 kHz
Max	2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value

Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

SCS	5 MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	52	79	106	133	160	188	216	242	270	N.A	N.A	N.A	N.A	N.A
30	11	24	38	51	65	78	92	106	119	133	162	189	217	245	273
60	N.A	11	18	24	31	38	44	51	58	65	79	93	107	121	135

3GPP TS38.104 Tables 5.3.2-2 and 5.3.2-3 or TS38.101-2 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A

480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “ ---“.

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE **This tab and the following controls are only available for Modulation Analysis measurement.**

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See "Bandwidth" on page 3297.

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See "Freq Range" on page 3297

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

– OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.

– ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command `[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk ON | OFF | 1 | 0`

`[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk?`

Example	:CCAR4:RAD:SLIN ON :CCAR4:RAD:SLIN?
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when "Bandwidth" on page 3297 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2
- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	[:SENSe]:EVM:CCARrier[0]|1|…|15:RGRid:CONFig:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier[0]|1|…|15:RGRid:CONFig:AUTO?
Example	:EVM:CCAR:RGR:CONF:AUTO 0 :EVM:CCAR:RGR:CONF:AUTO?
Preset	OFF
State Saved	Yes
Range	OFF|ON|0|1

When the configuration mode is Auto, the default N_grid_start is set to 0 and N_grid_size is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

SCS	5 MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB	NRB

15	25	52	79	106	133	160	188	216	242	270	N.A	N.A	N.A	N.A	N.A
30	11	24	38	51	65	78	92	106	119	133	162	189	217	245	273
60	N.A	11	18	24	31	38	44	51	58	65	79	93	107	121	135

Table 5.3.2-2: Transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A	N.A	N.A	N.A
120	32	66	132	264	N.A	N.A	N.A
480	N.A	N.A	N.A	66	124	248	N.A
960	N.A	N.A	N.A	33	62	124	148

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	`[:SENSe][:EVM]:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k[:STATe] OFF | ON | 0 | 1` `[:SENSe][:EVM]:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k [:STATe]?`
Example	`:EVM:CCAR:RGR:SCS15 ON` `:EVM:CCAR:RGR:SCS15?`
Notes	Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_Grid_Size (Display Only) In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2 In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2
Preset	SCS 15k : `OFF` SCS 30k : `ON` SCS 60k : `OFF`

	SCS 120k: OFF SCS240K: OFF SCS480K:OFF SCS960K:OFF
State Saved	Yes

N_grid_start

This column lets you set the Grid Start value for the selected numerology.

Remote Command	[:SENSe]:EVM:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k:STARt <integer> [:SENSe]:EVM:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k:STARt?
Example	:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?
Preset	Depends on frequency range, bandwidth and numerology
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	[:SENSe]:EVM:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k:SIZE <integer> [:SENSe]:EVM:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k:SIZE?
Example	:EVM:CCAR:RGR:SCS15k:SIZE 270 :EVM:CCAR:RGR:SCS15k:SIZE?
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility	[:SENSe]:EVM:CCARrier[0] | 1 | … | 15:RBNumber:SCS15k | SCS30k | SCS60k | SCS120k | SCS240k

SCPI

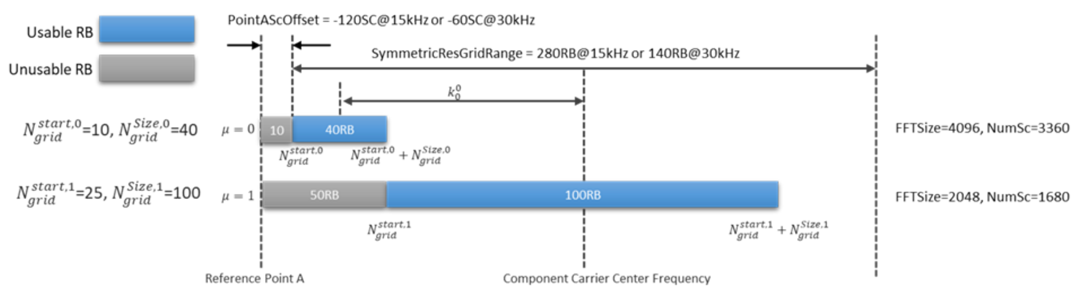
k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	`[:SENSe]:EVM:CCARrier [0]|1|…|15:RGRid:SCS15k|SCS30k|SCS60k|SCS120k|SCS240k|SCS480k|SCS960k:K0?`
Example	`:EVM:CCAR:RGR:SCS15k:K0?`

More Information

See picture below for illustration how k0 is calculated.



Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:RGRid:REFA?`
Example	`:EVM:CCAR:RGR:REFA?`

LTE Coexistence

This tab and the following controls are only available for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE

Pressing this control deletes selected LTE-CRS configuration from the list.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:DELete:LTE <integer>`
Example	`:EVM:CCAR0:DEL:LTE 1`

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:NUMBer:LTE <integer>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:NUMBer:LTE?`
Example	`:EVM:CCAR:NUMB:LTE 2` `:EVM:CCAR:NUMB:LTE?`
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>[:STATe]?`
Example	`:EVM:CCAR:LTE1 OFF` `:EVM:CCAR:LTE1?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid

Preset	OFF
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW B1M4 | B3M | B5M | B10M | B15M | B20M` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW?`
Example	`:EVM:CCAR:LTE1:BW B20M` `:EVM:CCAR:LTE1:BW?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	B5M
State Saved	Yes
Range	1.4 MHz|3 MHz|5 MHz|10 MHz|15 MHz|20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<4>:COFFset <integer>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<4>:COFFset?`
Example	`:EVM:CCAR:LTE1:COFF 0` `:EVM:CCAR:LTE1:COFF?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:MBSFn:SFRame <string>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:MBSFn:SFRame?`
Example	`:EVM:CCAR:LTE:MBSF:SFR "2:9"` `:EVM:CCAR:LTE:MBSF:SFR?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 | N2 | N4` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:CRS:ANTenna:PORT:NUMBer?`
Example	`:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1` `:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1|2|4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:CRS:VSHift <integer>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:CRS:VSHift?`
Example	`:EVM:CCAR:LTE1:CRS:VSH 0` `:EVM:CCAR:LTE1:CRS:VSH?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	5

Advanced Acquisition

This menu is only available for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See "Number of Component Carriers" on page 3292.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 1838

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 3413 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while

Average/Hold Num is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	`[:SENSe]:RF:ACQuistion:ATABle OFF | ON | 0 | 1` `[:SENSe]:RF:ACQuistion:ATABle?`
Example	`:RF:ACQ:ATAB 1` `:RF:ACQ:ATAB?`
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	`[:SENSe]:EVM:ACQuisition SIMultaneous | SEQuential` `[:SENSe]:EVM:ACQuisition?`

Example	`:EVM:ACQ SEQ` `:EVM:ACQ?`
Preset	`SEQuential`
State Saved	Saved in instrument state
Range	`Simultaneous | Sequential`

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1842

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation’s specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no “electronic attenuator”; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a “soft” attenuation. The “soft” attenuation is treated as an addition to the “main” attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable

	If "LNA" on page 3253 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1842
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1843 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled

- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	`[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON | OFF | 1 | 0` `[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO?`
Example	`:RF:ACQ:ATAB:IFP:AUTO 1` `:RF:ACQ:ATAB:IFP:AUTO?`
Preset	ON
State Saved	Yes
Range	OFF|ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:ATTenuation <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:ATTenuation?`
Example	`:CCAR0:RF:CHAN1:ATT 20`
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:EATTenuation <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:EATTenuation?`
Example	`:CCAR0:RF:CHAN1:EATT 20`
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to

24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:PREamp OFF | LOW | FULL [:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:PREamp?
Example	:CCAR0:RF:CHAN1:GAIN:PRE LOW :CCAR0:RF:CHAN1:GAIN:PRE?
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:LNA OFF | ON | 0 | 1 [:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:GAIN:LNA?
Example	:CCAR0:RF:CHAN1:GAIN:LNA ON
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

uW Path Control

Select uW Path for each component carriers.

Remote Command	[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:MW:PATH STD | LNPath | MPBypass | FULL [:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:MW:PATH?
Example	:CCAR0:RF:CHAN1:MW:PATH LNP :CCAR0:RF:CHAN1:MW:PATH?
Preset	MPB option present and licensed: MPB MPB option not present and licensed: STD
State Saved	Save in instrument state
Range	Standard Path|Low Noise Path Enable|µW Presel Bypass|Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:IF:GAIN:LEVel <rel_ampl>` `[:SENSe]:CCARrier[0]|1|…|15:RF:CHANnel1|…|8:IF:GAIN:LEVel?`
Example	`:CCAR0:RF:CHAN1:IF:GAIN:LEV -10` `:CCAR0:RF:CHAN1:IF:GAIN:LEV?`
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	`[:SENSe]:CCARrier0|…|15:RF:CHANnel1|…|8:IFPath B10M | B25M | B40M | B85M | B125M | B140M | B160M | B255M | B510M | B1G | B1500M | B2G | B4G` `[:SENSe]:CCARrier0|…|15:RF:CHANnel1|…|8:IFPath?`
Example	`:CCAR0:RF:CHAN1:IFP B160M` `:CCAR0:RF:CHAN1:IFP?`
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error -241,"Hardware missing; Option not installed"

Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

3.7.8.4 Meas Time

Enables you to set measurement time parameters.

Search Length

Specifies the amount or length of Search Time input data that is included in the measurement pulse search.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TIME:LENGth:SEARch <time>` `[:SENSe]:EVM:CCARrier0|…|15:TIME:LENGth:SEARch?`
Example	`:EVM:CCAR0:TIME:LENG:SEAR 1ms` `:EVM:CCAR0:TIME:LENG:SEAR?`
Preset	22 ms
State Saved	Yes
Min	Depends on Result Length
Max	200 msec

Result Length

Used to specify the amount of acquired time data (in subframe) that is available for measurement analysis.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TIME:LENGth:RESult <integer>` `[:SENSe]:EVM:CCARrier0|…|15:TIME:LENGth:RESult?`
Example	`:EVM:CCAR0:TIME:LENG:RES 10` `:EVM:CCAR0:TIME:LENG:RES?`
Preset	10
State Saved	Yes
Min	1 subframe
Max	40 subframes

Meas Interval Subframe

Specifies subframe number in Meas Interval. Meas Interval Subframe/Slot/Symbol are used together to specify how much time data within the Result Length that is used for measurement analysis data (computing the trace and scalar results). Measurement Interval is entered as an integer number of subframe.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval[:SFRame] <integer>` `[:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval[:SFRame]?`
Example	`:EVM:CCAR0:TIME:INT:SFR 5` `:EVM:CCAR0:TIME:INT:SFR?`
Preset	10
State Saved	Yes
Min	0
Max	40 subframes

Meas Interval Slot

Specifies slot number in Meas Interval, note this parameter is only settable for minimum enabled numerology.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval:SLOT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval:SLOT?`
Example	`:EVM:CCAR0:TIME:INT:SLOT 1` `:EVM:CCAR0:TIME:INT:SLOT?`
Preset	0
State Saved	Yes
Min	0
Max	Depends on Result Length and minimum enabled numerology

SCS	Max
0	9
1	19
2	39
3	79
4	159
5	319

Meas Interval Symbol

Specifies symbol number in Meas Interval, note this parameter is only settable for minimum enabled numerology.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval:SYMBol <integer> [:SENSe]:EVM:CCARrier0|…|15:TIME:INTerval:SYMBol?
Example	:EVM:CCAR0:TIME:INT:SYMB 1 :EVM:CCAR0:TIME:INT:SYMB?
Preset	0
State Saved	Yes
Min	0
Max	13 NOTE: For 60 kHz with Extended CP, it is coupled with the 60kHz Normal CP Symbol with extended CP = floor(Symbol with Normal CP * 6 / 7)

Meas Offset Subframe

Specifies subframe number in Meas Offset. Meas Offset Subframe/Slot/Symbol are used together to specify the start position of the Measurement Interval with respect to first subframe within the Result Length. Measurement Interval is entered as an integer number of subframes. The sum of the Measurement Interval plus Measurement Offset must fit within the measurement Result Length.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet[:SFRame] <integer> [:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet[:SFRame]?
Example	:EVM:CCAR0:TIME:OFFS:SFR 0 :EVM:CCAR0:TIME:OFFS:SFR?
Preset	0
State Saved	Yes
Min	0
Max	Depends on Result Length, Meas Interval Time

Meas Offset Slot

Specifies slot number in Meas Offset.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet:SLOT <integer> [:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet:SLOT?

Example	:EVM:CCAR0:TIME:OFFS:SLOT 0 :EVM:CCAR0:TIME:OFFS:SLOT?
Preset	0
State Saved	Yes
Min	0
Max	Same as Meas Interval Slot

Meas Offset Symbol

Specifies symbol number in Meas Offset.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet:SYMBol <integer> [:SENSe]:EVM:CCARrier0|…|15:TIME:OFFSet:SYMBol?
Example	:EVM:CCAR0:TIME:OFFS:SYMB 0 :EVM:CCAR0:TIME:OFFS:SYMB?
Preset	0
State Saved	Yes
Min	0
Max	13 NOTE: For 60 kHz with Extended CP, it is coupled with the 60kHz Normal CP Symbol with extended CP = floor(Symbol with Normal CP * 6 / 7)

Analysis Start Boundary

Sets the Analysis Start Boundary. Analysis Start Boundary specifies the alignment boundary of the Result Length time data. To ensure that this alignment can be achieved, the total amount of data acquired by the analyzer is equal to the Result Length plus the length of the alignment boundary specified by Analysis Start Boundary. For example, if Analysis Start Boundary were set to subframe, the total acquisition will be equal to ResultLength + 1 subframe (and the Measurement Interval will start at a subframe boundary).

Once the Result Length is located within the time capture, Measurement Offset and Measurement Interval determine the data that is to be analyzed. This data is also displayed on the Time trace.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:TIME:ASBoundary FRAMe | SUB | SLOT [:SENSe]:EVM:CCARrier0|…|15:TIME:ASBoundary?
Example	:EVM:CCAR0:TIME:ASB FRAM :EVM:CCAR0:TIME:ASB?

Preset	FRAMe
State Saved	Yes
Range	Frame | Subframe | Slot

Frame/Subframe/Slot Trigger

If Frame/Subframe/Slot Trigger is present and accurate (-50 usec to 50 usec), turning this parameter on may reduce required Search Length, which will help to improve measurement speed.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:FRAMe:TRIGger OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:FRAMe:TRIGger?
Example	:EVM:CCAR0:FRAM:TRIG 1 :EVM:CCAR0:FRAM:TRIG?
Preset	OFF
State Saved	Yes
Range	Off|On

Analysis Subframe/Slot Offset

Specifies the offset of target analysis subframe/slot in whole frame.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SFRame:TRIGger:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:SFRame:TRIGger:OFFSet?
Example	:EVM:CCAR0:SFR:TRIG:OFFS 0 :EVM:CCAR0:SFR:TRIG:OFFS?
Couplings	Grayed-out when Analysis Start Boundary is Frame
Preset	0
State Saved	Yes
Min	0
Max	9

Capture Time Diagram

Allows you to view and configure the Meas Time parameters in the table.

For more information about the parameters, see

3.7.8.5 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

Set the LTE bandwidth.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW B1M4 | B3M | B5M | B10M | B15M | B20M` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW?`
Example	`:EVM:CCAR:LTE1:BW B20M` `:EVM:CCAR:LTE1:BW?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	`B5M`
State Saved	Yes
Range	1.4 MHz|3 MHz|5 MHz|10 MHz|15 MHz|20 MHz

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the "Freq Range" on page 3297 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press Apply Preset (to all CCs).

NOTE **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22` `[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?`
Example	`:RAD:STAN:PRES:FREQ:RANG FR1` `:RAD:STAN:PRES:FREQ:RANG?`
Notes	SCPI enum “FR2” is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in "Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 1853 depending on the currently selected value.
Dependencies	Available selections differ depending on Bandwidth as follows: (see table below) When "Uplink Carrier Mode" on page 3313 is Sidelink - V2X, FR2 is unavailable
Preset	`FR1`
State Saved	Yes
Range	FR1|FR2|FR2-1|FR2-2
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:PRESet:FRANge`

Bandwidth	FR
5 MHz, ..., 100 MHz	`FR1`
50 MHz, 100 MHz, 200 MHz, 400 MHz	`FR2, FR2-1`
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	`FR2, FR2-2`

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

	Bandwidth selection changes to:					
Current FR value	5,...,45 MHz 60,...90 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press" Apply Preset (to all CCs)".

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DMODe FDD | TDD | UDEFined` `[:SENSe]:RADio:STANdard:PRESet:DMODe?`
Example	`:RAD:STAN:PRES:DMOD TDD` `:RAD:STAN:PRES:DMOD?`
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD|TDD|User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "Duplex Mode" on page 3304 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles. This parameter is valid only for the downlink FR1 TDD duplex mode.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617` `[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?`
Example	`:RAD:STAN:PRES:DLIN:NRTM TS38` `:RAD:STAN:PRES:DLIN:NRTM?`
Dependencies	Unavailable when Radio Direction is Uplink, or Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`TS38`
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity P0_5MS | P0_625MS | P1MS | P1_25MS | P2MS | P2_5MS | P5MS | P10MS` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity?`
Example	`:RAD:STAN:PRES:TRAN:PER P0_5MS` `:RAD:STAN:PRES:TRAN:PER?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`P5MS`
State Saved	Yes
Range	0.5 ms|0.625 ms|1 ms|1.25 ms|2 ms|2.5 ms|5 ms|10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt <integer>`

	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt?
Example	:RAD:STAN:PRES:DLIN:SLOT:COUN 1 :RAD:STAN:PRES:DLIN:SLOT:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt?
Example	:RAD:STAN:PRES:DLIN:SYMB:COUN 1 :RAD:STAN:PRES:DLIN:SYMB:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt?
Example	:RAD:STAN:PRES:ULIN:SLOT:COUN 1 :RAD:STAN:PRES:ULIN:SLOT:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	2
State Saved	Yes

Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt?
Example	:RAD:STAN:PRES:ULIN:SYMB:COUN 1 :RAD:STAN:PRES:ULIN:SYMB:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	4
State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNt?
Example	:RAD:STAN:PRES:SPEC:SLOT:COUN?
Preset	1
Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?
Example	:RAD:STAN:PRES:SLOT:ALL?
Preset	“DDDDDDDSUU”

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as "Ignore Duplex Mode for Fulfilled RB Alloc" on page 3321.

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

In 5G, subcarrier spacing is governed by 2^n * 15 kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS480K | SCS960K`
	For option details, see "Selections & Dependencies" on page 1859
	`[:SENSe]:RADio:STANdard:PRESet:SCS?`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?`

Example	`:RAD:STAN:PRES:SCS SCS30K`
	`:RAD:STAN:PRES:SCS?`
	`:RAD:STAN:PRES:SCS:AUTO 0`
	`:RAD:STAN:PRES:SCS:AUTO?`

Notes	Not preset to the selection until **Apply Preset (to All CCs)** is executed
Dependencies	Available selections depend on a combination of Bandwidth and Frequency Range, as detailed in "Selections & Dependencies" on page 1859
Preset	`SCS30K` `ON`
State Saved	Yes Yes
Range	u = 0: 15 kHz | u = 1: 30 kHz | u = 2: 60 kHz | u = 3: 120 kHz | u = 5: 480 kHz | u = 6: 960 kHz Auto|Man

Selections & Dependencies

FR	Bandwidth	SCS	SCPI
FR1	5 MHz	15K*/30K	SCS15K, SCS30K
	10 – 50 MHz	15K*/30K/60K	SCS15K, SCS30K, SCS60K
	60 – 100 MHz	30K*/60K	SCS30K, SCS60K
FR2	50, 100, 200 MHz	60K*/120K	SCS60K, SCS120K
	400 MHz	120K*/480K/960K	SCS120K, SCS480K, SCS960K
	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K
FR2-1	50, 100, 200 MHz	60K*/120K	SCS60K, SCS120K
	400 MHz	120K*	SCS120K
FR2-2	100 MHz	120K*	SCS120K
	400 MHz	120K*/480K/960K	SCS120K, SCS480K, SCS960K
	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of Meas Standard. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTM1DOT1 | DLTM1DOT2 | DLTM2 | DLTM2Q16 | DLTM2QPS | DLTM2A | DLTM2B | DLTM3DOT1 | DLTM3DOT1Q16 | DLTM3DOT1QPS | DLTM3DOT1A | DLTM3DOT1B | DLTM3DOT2 | DLTM3DOT3 | FPIBPSK | DLTM1DOT1P1 | DLTM1DOT1L2`

	For selection details, see "Available Selections" on page 1860 `[:SENSe]:RADio:STANdard:PRESet:RBALloc?`
Example	`:RAD:STAN:PRES:RBAL DLTM1DOT1` `:RAD:STAN:PRES:RBAL?`
Notes	Resource Block Allocation Preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Dependencies	See "Available Selections" on page 1860
Preset	`FQPSK`
State Saved	Yes
Range	Cascading List

Group	Configuration
Fulfilled	Fulfilled QPSK
	Fulfilled 16 QAM
	Fulfilled 64 QAM
	Fulfilled 256 QAM
	Fulfilled 1024 QAM
	Fulfilled Pi/2 BPSK

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier NORMal | V2X` `[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier?`
Example	`:RAD:STAN:PRES:ULIN:CARR NORM` `:RAD:STAN:PRES:ULIN:CARR?`
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: `V2X` Otherwise: `NORMal`
State Saved	Saved
Range	Normal Uplink|Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617` `[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?`
Example	`RAD:STAN:PRES:DLIN:NRTM TS38` `RAD:STAN:PRES:DLIN:NRTM?`
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.

Preset	TS38
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

– CP-OFDM

– DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm | DFTSofdm` `[:SENSe]:RADio:STANdard:PRESet:OTYPe?`
Example	`:RAD:STAN:PRES:OTYP CPOF` `:RAD:STAN:PRES:OTYP?`
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`CPOFdm`
State Saved	Yes
Range	CP-OFDM|DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE | FTO1 | F1TO3 | F3TO4P2 | F4P2TO6 | F6TO7 | F24P25TO29P5 | F37TO40 | F43TO48 | F52TO71`
	For option details, see "Selections & Dependencies" on page 1864
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?`

Example	`:RAD:STAN:PRES:ADJ:FRAN F1TO3`
	`:RAD:STAN:PRES:ADJ:FRAN?`
	`:RAD:STAN:PRES:ADJ:FRAN:AUTO 1`
	`:RAD:STAN:PRES:ADJ:FRAN:AUTO?`

Dependencies	Available selections depend on Frequency Range. See "Selections & Dependencies" on page 1864
Couplings	When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0 Not preset to the selection until **Apply Preset (to All CCs)** is executed
Preset	Automatically selected The selection depends on which listed range the CC0 center freq is in ON
State Saved	Yes Yes
Range	None|f ≤ 1.0 GHz|1.0 < f ≤ 3.0 GHz|3.0 < f ≤ 4.2 GHz|4.2 < f ≤ 6.0 GHz|6.0 < f ≤ 7.125 GHz |24.25 < f ≤ 29.5 GHz|37.0 < f ≤ 43.5 GHz |43.5 < f ≤ 48.2 GHz|52.6 < f ≤ 71.0 GHz

Selections & Dependencies

Frequency Range	Selection	SCPI
FR1	f ≤ 1.0 GHz	FT01
	< f ≤ 3.0 GHz	F1T03
	3.0 < f ≤ 4.2 GHz	F3T04P2
	4.2 < f ≤ 6.0 GHz	F4P2T06
	6.0 < f ≤ 7.125 GHz	F6T07
FR2	24.25 < f ≤ 29.5 GHz	F24P25T029P5
	37.0 < f ≤ 43.5 GHz	F37T040
	43.5 < f ≤ 48.2 GHz	F43T048
	52.6 < f ≤ 71.0 GHz	F52T071
FR2-1	24.25 < f ≤ 29.5 GHz	F24P25T029P5
	37.0 < f ≤ 43.5 GHz	F37T040
	43.5 < f ≤ 48.2 GHz	F43T048
FR2-2	52.6 < f ≤ 71.0 GHz	F52T071

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE: You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE FR1C | FR1O | FR2O` `[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE?`
Example	`:RAD:STAN:PRES:DLIN:BS:TYPE FR1C` `:RAD:STAN:PRES:DLIN:BS:TYPE?`
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed

Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted)|1-O (FR1 Radiated)| 2-O (FR2 Radiated)

BS Category

This control is part of the "Preset for ACP, SEM, Spur, Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the "Configure Preset" section, and then press "Apply Preset (to all CCs)".

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory AWARea | BWARea | AMRange | BMRange | AMRLow | BMRLow | ALARea | BLARea [:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory?
Example	:RAD:STAN:PRES:DLIN:BS:CAT BWAR :RAD:STAN:PRES:DLIN:BS:CAT?
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed
Preset	BWARea

State Saved	Yes
Range	Category A Wide Area BS| Category B Wide Area BS| Category A Medium Range BS|Category B Medium Range BS|Category A Medium Range BS (Low Power rated)|Category B Medium Range BS (Low Power rated)|Category A Local Area BS|Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE] NR | EUTRa | NREutra` `[:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE]?`
Example	`:RAD:STAN:PRES:DLIN:ACH NR` `:RAD:STAN:PRES:DLIN:ACH?`
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X
Preset	`NR`
State Saved	Yes
Range	NR (same BW)|E-UTRA|NR + E-UTRA

Uplink

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE] NR | UTRa | NRUTra` `[:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE]?`
Example	`:RAD:STAN:PRES:ULIN:ACH NR` `:RAD:STAN:PRES:ULIN:ACH?`
Preset	`NR`
State Saved	Yes
Range	NR (same BW)|UTRA|NR + UTRA

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe NONE | PUS | PRA4 | PRA160S15 | PRA160S30 | PRA12 | PRA123S15 | PRA123S30 | SRS | PRA0S60 | PRA0S120 [:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe?
Example	:RAD:STAN:PRES:ULIN:CTYP PUS :RAD:STAN:PRES:ULIN:CTYP?
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS
State Saved	Yes
Range	PUSCH|PRACH Config Index 4|PRACH Config Index 160 (15 kHz SCS)|PRACH Config Index 160 (30 kHz SCS)|PRACH Config Index 12|PRACH Config Index 123 (15 kHz SCS)|PRACH Config Index 123 (30 kHz SCS)|PRACH Config Index 0 (60 kHz SCS)|PRACH Config Index 0 (120 kHz SCS)|SRS

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See "Apply Preset (to All CCs)" on page 3322.

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF | ON | 0 | 1 [:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?
Example	:RAD:STAN:PRES:INCL:EVM:RBAL 1 :RAD:STAN:PRES:INCL:EVM:RBAL?
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when "Apply Preset (to All CCs)" is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?`
Example	`:RAD:STAN:PRES:INCL:EGAT:SOUR 1` `:RAD:STAN:PRES:INCL:EGAT:SOUR?`
Preset	`ON`
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?`
Example	`:RAD:STAN:PRES:INCL:FRAM:PER 1` `:RAD:STAN:PRES:INCL:FRAM:PER?`
Preset	`ON`
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?`
Example	`:RAD:STAN:PRES:INCL:FRAM:SYNC 1` `:RAD:STAN:PRES:INCL:FRAM:SYNC?`
Preset	`ON`
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?`
Example	`:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1` `:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?`
Preset	`ON`
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when "Apply Preset (to All CCs)" is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe?`
Example	`:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1` `:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?`
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	`ON`
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and "Apply Preset (to All CCs)" is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot
FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE | FRAMe | GPP` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?`
Example	`:RAD:STAN:PRES:RBAL:TIME:LENG GPP` `:RAD:STAN:PRES:RBAL:TIME:LENG?`
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE **You must press "Apply Preset (to all CCs)" or the values on the controls in the "Configure Presets" section of the menu panel will *not* affect the Component Carriers.**

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:IMMediate`
Example	`:RAD:STAN:PRES:IMM`
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until "Apply Preset" is executed again – Start-up – Mode Preset – Recall

Values for Meas Standard

Note: Unless specifically stated otherwise, descriptions of Frequency Range selection “FR2” in this chapter cover either or both “FR2-1” or/and “FR2-2” selection.

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 | FR2 | FR2-1 | FR2-2	FR1 | FR2 | FR2-1 | FR2-2
Duplex Mode	FDD | TDD	FDD | TDD
SCS	µ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	µ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers),1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT and Spur only)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a

BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr), Cat A Local Area BS, Cat B Local Area BS	n/a
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4
UL Channel Type (for Tx On|Off Power)	n/a	When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2: PUSCH, PRACH Config Index 0 (60 kHz SCS), PRACH Config Index 0 (120 kHz SCS), SRS

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "Apply Preset (to All CCs)" on page 3322 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

3GPP TS38.141-1 v.17.9.0 (2023-03)

ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Direction = Uplink

When UL Carrier Mode = Normal Uplink:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW) UTRA, NR + UTRA	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5.2.4.1.5-2 Table 6.5.2.4.2.5-2	Table 6.5.2.2.5-1
FR2		TS38.521-2 v.17.2.0 (2023-03)	Table 6.5.2.3.5-1	Table 6.5.2.1.5-1

When UL Carrier Mode = Sidelink / V2X:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are preset when Apply Preset is executed.

- "Configure Component Carriers" on page 3329
- "Trigger/Gate Parameters" on page 3329

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	**Sidelink**
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing “Apply Preset”, preset the following parameters:

		Preset values				
		TDD / FDD Duplex Mode			User Defined Duplex mode	
Trigger menu	Parameter	Downlink (*1) FR1	Downlink (*1) FR2	Uplink	Downlink	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst

	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us	Off	Off
Gate Settings	Gate (*5)	On	On	(no preset)	On	On
	Gate Delay	5.000 ms	1.250 ms	(no preset)	Transmission periodicity (*8)	Transmission periodicity (*8)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)	Duration of downlink slots and symbols	Duration of uplink slots and symbols
	Gate Holdoff	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
	Absolute Trig Level	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)	Off	Off
	Holdoff Type	(no preset)	(no preset)	Below (*7)	(no preset)	(no preset)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when "RB Alloc Preset" on page 3310 is any of NR-TM and "Duplex Mode" on page 3304 is TDD

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW ≤ 255 MHz) or External 3 (when Info BW ≥ 256 MHz) depending on the Info BW determined by the component carrier configuration

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called “Periodic Timer Period”

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter

(*5) Gate is preset to Off with the Apply Preset action when "Duplex Mode" on page 3304 is FDD

(*6) Gate Length preset value for DL FR1 depends on "DL FR1 NR-TM Reference Standard Selection" on page 3305 under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down

(*8) If transmission periodicity is less than 1ms, use the lowest multiple of transmission periodicity that is greater than or equal to 1ms

ACP

The following parameters are preset when Apply Preset is executed.

– "BW Parameters" on page 3331
– "Trace Detector" on page 3331
– "Sweep Parameter" on page 3331
– Frequency Parameters
– Meas Setup: Settings Parameter
– "Meas Setup: Configure Component Carrier Parameters" on page 3333
– "Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters" on page 3335

BW Parameters

Parameter	Preset Value
Res BW	100 kHz
Res BW State	Man
Video BW State	Auto

Trace Detector

Parameter	Preset Value
Detector	Auto (Average)

Sweep Parameter

Parameter	Preset Value
Auto Sweep Points	On

Frequency Parameters

Preset Configuration				Preset Value
Direction	FR	Bandwidth	Assumed Adj Channels	Span (*1)
Downlink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW), NR + E-UTRA	= 4 x Bandwidth + RFBW (*2)
			E-UTRA	= 20 MHz + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
Uplink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
			UTRA	= 20 MHz + RFBW (*2)
			NR + UTRA	= max(2 x Bandwidth, 20 MHz) + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 3 x RFBW (*2)

Notes:

(*1) Span value is preset to the wider one from either the value specified in this table or the value which is calculated based on all the set parameters for CCs and Offsets whichever being necessary.

(*2) “RFBW” represents:

– The “Bandwidth” of the selected CC for 1 CC case,

– The RF Bandwidth which is equivalent to the $BW_{channel, CA}$ with “Measure Carrier = ON” for all CCs for Multiple CC cases (in both Contiguous or Non-contiguous allocations), where $BW_{channel, CA}$ is defined in clause 5.3A.2, 3GPP TS38.104 for downlink (BTS), or in clause 5.3A.2, 3GPP TS38.101 for uplink (UE).

Meas Setup: Settings Parameter

Parameter	Preset Value
Meas Method	Integration BW

Meas Setup: Configure Component Carrier Parameters

– When "Adjust Limit Mask for Freq Range" is set to a value other than "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	
Uplink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB} + \text{SCS [kHz]}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	

where:

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

– When "Adjust Limit Mask for Freq Range" is set to "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		400 MHz	120, 480,	

			960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	
Uplink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB} + \text{SCS [kHz]}\}$
		400 MHz	120, 480, 960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	

where:

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Downlink: 3GPP TS38.817-02 v.15.9.0 (2020-09):

5.5.3 Adjacent Channel Leakage ratio

5.5.3.1 NR ACLR

“ACLR is the ratio of power of wanted signal to the power falling into Adjacent Channel. ACLR measurement bandwidth for both the wanted and adjacent channels is the maximum transmission bandwidth among the different SCSs of CP-OFDM SU for a channel BW with addition of one SCS to account for half SCS shift due to SCS alignment to DC, this measurement bandwidth is centered within the channels.”

Uplink: 3GPP TS38.817-01 v.16.2.0 (2020-09):

6.6.3 Adjacent Channel Leakage Power Ratio (ACLR)

– (snip)

– “Maximum transmission bandwidth configuration of the BS channel bandwidth (between subcarrier spacing) specified in Release 15 should be used as a measurement bandwidth for adjacent channel power measurement, i.e. the measurement bandwidth should also apply to future releases regardless of whether new SU is introduced or not.”

Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters

Preset Configuration (*1)				Preset Value (*2)		
Direction	**FR**	**Carrier Allocation**	Assumed Adjacent Chan	Power Reference	Offset Freq Define	Offset Preset Case
Downlink	FR1	Contiguous, Non-Contiguous	NR (same BW)	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
			E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: EtoC Inner: StoC	Outer: Case 2 Inner: Case 1
	FR2	Contiguous, Non-Contiguous	NR (same BW), E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
Uplink	FR1	Contiguous	NR (same BW)	Aggregated Channel BW	Outer: CtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Aggregated Channel BW	Outer: EtoC Inner: SCtoC	Outer: Case 2 Inner: Case 1
		Non-Contiguous	NR (same BW)	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 2 Inner: Case 2
	FR2	Contiguous	NR (same BW), UTRA, UTRA + NR	Aggregated Channel BW	Outer: RCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
		Non-Contiguous	NR (same BW), UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1

Notes:

(*1) Preset Configuration:

- Direction is located at the Radio tab menu.
- Carrier Allocation is located at the Component Carriers tab menu.

- FR and Assumed Adjacent Channesls are located at the Meas Standard tab menu.
- 3GPP TS38.521-1/2 have not clearly specified Uplink non-Contiguous CA test cases yet. The Left & Right Subblocks and the SCtoC selections are based on the assumption of BWChannel,CA as BWContiguous.
- Assumed Adjacent Channesls = “E-UTRA”, “E-UTRA + NR” for Downlink and “UTRA”, “UTRA + NR” for Uplink are not applicable to FR2.

(*2) Notes for Preset Value:

- Power Ref(erence) is located at the Reference tab menu.
- Outer and Inner Offset Freq Define parameters are located at the Offset and the Inner Offset sub-menus, respectively, in the Carrier/Offset/Limits Configuration dialog menu.
- Outer/Inner Offset Preset Case 1 and 2 indicate the tables in the following section.
- Outer/Inner Offset Freq Define:
  - CtoC: (Left & Right) Carrier Center to Offset Center
  - EtoC: (Left & Right) Carrier Edge to Offset Center
  - RCtoC: RFBW Center to Offset Center
  - SCtoC: (Left & Right) Sub-block Center to Offset Center
  - StoC: (Left & Right) Subblock Edge to Offset Center
- Power Ref = Aggregated Chan BW is actually the same as the Power Ref = Left & Right Sub-blocks when the Carrier Allocation = Contiguous.
- Inner Offset setting is fundamentally N/A when Carrier Allocation = Contiguous.

Outer Offset Preset Case 1

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “NR (same BW)” for DL/UL, or FR2 with Assumed Adjacent Channels (ACLR) = any case for DL/UL.

Outer Offset Parameters (for the Outer Offset Preset Case 1):

Parameter	Preset Configuration			Preset Value
	Direction	FR	Offset	

Offset Freq State	Downlink	FR1	A, B	On
			C, … , L	Off
		FR2	A	On
			B, … , L	Off
	Uplink		A	On
			B, … , L	Off
Offset Freq	Downlink		A	BW_{CC}
			B	$2*BW_{CC}$
			C, … , L	0 Hz
	Uplink	FR1	A	BW_{CC}
			B, … , L	0 Hz
		FR2	A	When Num of CCs = 1: BW_{CC} When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]}$
			B, … , L	0 Hz
Integ BW	Downlink		All	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{SC}^{RB}\}$
	Uplink	FR1	All	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{sc}^{RB} + SCS\,[kHz]\}$
		FR2	All	When Num of CCs = 1: $\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{sc}^{RB} + SCS\,[kHz]\}$ When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA} - 2*BW_{GB}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]} - 2*BW_{GB}$

where:

BW_{CC}: “Bandwidth” in the Configure Preset menu under Meas Standard tab, representing CC Bandwidth

$BW_{Channel,CA}$: Aggregated Channel Bandwidth, defined in the clause 5.3A.2 in TS38.521-2

$BW_{Channel,block[n]}$: Aggregated Sub-block[n] Bandwidth (where n=1 for the Left Sub-block, 2 for the Right Sub-block, defined in the clause 5.3A.2 in TS38.521-2

BW_{GB}: Guard Band bandwidth, defined in the clause 5.3A.2 in TS38.521-2

FR: Frequency Range, applied in the Configure Preset menu

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in "N_Grid_Size (Display Only)" on page 1828

$N_{sc}^{RB} = 12$

  (*1) Note: TT for V2X test requirement has not been defined yet (TBD/FFS) in TS38.521-1 v.17.5.0. Keep the same TT values for normal Uplink.

Inner Offset Preset Case 2

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “UTRA” or “NR + UTRA” for UL.

Inner Offset Parameters (for the Inner Offset Preset Case 2):

Parameter(all Uplink)	Preset Configuration		Offset	Preset Value
	Carrier Allocation	Assumed Adj Chan		
Offset Frequency State	Contiguous	UTRA, NR + UTRA	All	Set to default values
	Non-Contiguous	UTRA	A, B	See "Table 2a Offset Freq State" on page 1904
			C, ... , L	Off
		NR + UTRA	A, B, C	See "Table 2a Offset Freq State" on page 1904
			D, ... , L	Off
Offset Freq			A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 1904
			D, ... , L	0 Hz

Integ BW	A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 1904
	D, ... , L	Same value as Offset C
Offset Side	All	Both
Method and Filter Alpha	A, B	RRC Weighted, Filter Alpha = 0.22
	C, ... , L	Integration BW
Res BW State	All	Auto
Video BW State	All	Auto
Power Ref Type	All	See "Table 2a Offset Freq State" on page 1904

Table 2a Offset Freq State

Preset Configuration			Wgap(Sub-block gap) (MHz)	Preset Value					
Direction	FR	Bandwidth		Offset Enabled			Power Ref Type (*)		
				A	B	C	A	B	C
Uplink	FR1	5, ..., 100 MHz	Wgap < 5				Norm	Norm	Norm
			5 ≤ Wgap < 10	✓		(+)	Norm	Norm	Norm
			10 ≤ Wgap	✓	✓	(+)	Norm	Norm	Norm
			Wgap < Bandwidth	(++)	(++)		Norm	Norm	Norm
			Bandwidth ≤ Wgap	(++)	(++)	✓	Norm	Norm	Norm

(*) Power Ref Type: Cum = Cumulative, Norm= Normal

(+) Same as the rows of “Wgap < Bandwidth” and “Bandwidth ≤ Wgap”.

(++) Same as the rows of “Wgap < 5”, “5 ≤ Wgap < 10”, and “5 ≤ Wgap”.

Table 2b Offset Freq and Integ BW Offset A/B/C

Preset Configuration			Offset	Preset Value	
Direction	FR	Bandwidth		Offset Freq (MHz)	Offset Integ BW (MHz)
Uplink	FR1	5, ..., 100 MHz	A	2.5	3.84 MHz
			B	7.5	3.84 MHz
			C	= 0.5 x Bandwidth	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$

where:

Bandwidth: applied in the Configure Preset menu,

FR: Frequency Range, applied in the Configure Preset menu,

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Inner Limit Parameters (for the Inner Offset Preset Case 2):

Parameterfor Uplink	Preset Configuration			Offset	Preset Value
	FR	Adjust Range(GHz)	UE Power Class		
Fail Mask				All	Abs AND Rel
Abs Limit	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125		All	-50 dBm
Rel Limit (Car)	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	Power Class 1	A B C, ..., L	-32.2 dB (= -33 + TT 0.8) -35.2 dB (= -36 + TT 0.8) -36.2 dB (= -37 + TT 0.8)
			Power Class 2	A B C, ..., L	-32.2 dB (= -33 + TT 0.8) -35.2 dB (= -36 + TT 0.8) -30.2 dB (= -31 + TT 0.8)
			Power Class 3	A B C, ..., L	-32.2 dB (= -33 + TT 0.8) -35.2 dB (= -36 + TT 0.8) -29.2 dB (= -30 + TT 0.8)

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.2.5 Test requirement
- Rel Limit: Table 6.5.2.4.2.5-2 UTRA ACLR requirement, Table 6.5.2.4.1.5-2: NR ACLR requirement and Table 6.5.2.4.1.5-3 Test Tolerance (NR ACLR)

  Note: Offsets C...F are OFF; the relative limit values are just derived from the UL E-UTRA limit values.

Spectrum Emission Mask

The following parameters are preset when Apply Preset is executed.

- "BW Parameter" on page 3357
- "Offset RAT" on page 3357

– "Carrier Parameters" on page 3357
– "Reference Parameter" on page 3358
– "Configure Component Carrier Parameter" on page 3358
– "Outer/Inner Offset Parameters" on page 3359
– "Other Offset/Limit Parameters" on page 3360

BW Parameter

When executing Apply Preset, preset the following parameter:

– BW > Settings Tab > RBW Filter Type: Gaussian

Offset RAT

Channel BW / 2 is used as Offset RAT.

Carrier Parameters

Res BW

Preset Configuration	Preset Value
Bandwidth	RBW (kHz)
5 MHz	47
10 MHz	91
15 MHz	150
20 MHz	180
25 MHz	240
30 MHz	270
35 MHz	330
40 MHz	390
45 MHz	430
50 MHz	470
60 MHz	560
70 MHz	680
80 MHz	750
90 MHz	820
100 MHz	910

200 MHz	1800
400 MHz	3000
800 MHz	3000
1600 MHz	3000
2000 MHz	3000

RBW values in the table come from auto RBW values calculated in Swept SA when Bandwidth value is set to Span.

Note that the maximum set RBW value by the auto RBW setting is 3 MHz.

Channel Detector

Parameter	Preset Value
Channel Detector	Auto (Average)

Reference Parameter

Preset Configuration		Preset Value	
Direction	**FR**	**Measurement Type**	**Power Ref**
Downlink	FR1	Total Power Ref	L & R Carriers
	FR2	Total Power Ref	RF Bandwidth
Uplink	FR1	Total Power Ref	RF Bandwidth

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-4: Medium Range BS operating band unwanted emission limits, $P_{rated,x}$ ≤ 40 dBm (NR bands ≤ 3.0 GHz).

Note:
According to the Table 6.7.4.5.1.4-4 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as "-11.2 dB – (7/5)*((f_offset / MHz) – 0.05) dB" which implies the Offset A Rel Limit -11.2 thru -18.2 dB with the

Fail Mask = Rel. However, it is suspected that the description “-11.2 dB” in the Table 6.7.4.5.1.4-4 is a typo and is supposed to be “-11.2 dBm”. Thus, keeping the Offset A Limit -11.2 thru -18.2 dBm with the Fail Mask = Abs.

BS Category = Cat A MR BS (Low P_r) or Cat B MR BS (Low P_r), Adjust Range: 3.0 < f ≤ 4.2 GHz & 4.2 < f ≤ 6.0 GHz

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-5: Medium Range BS operating band unwanted emission limits, $P_{rated,x}$ ≤ 40 dBm (3 GHz < NR bands ≤ 4.2 GHz),

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-6: Medium Range BS operating band unwanted emission limits, $P_{rated,x}$ ≤ 40 dBm (4.2 GHz < NR bands ≤ 6 GHz).

Note:
According to the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as “-11 dB – (7/5)*((f_offset / MHz) – 0.05) dB” which implies the Offset A Rel Limit -11 thru -18 dB with the Fail Mask = Rel. However, it is suspected that the description “-11.2 dB” in the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 are typo and is supposed to be “-11 dBm”. Thus, keeping the Offset A Limit -11 thru -18 dBm with the Fail Mask = Abs.

(*) Offset Start & Stop Freq (MHz):

- $x = 0.1 * BW_{contiguous}$
- $y = 2 * BW_{contiguous}$ (when $BW_{contiguous} \leq 500$ MHz),
- $y = BW_{contiguous} + 500$ MHz (otherwise).

  where: $BW_{contiguous}$ equals to:

Number of CCs	Carrier Allocation	$BW_{contiguous}$
1	n/a	BW_{CC}: CC Bandwidth
> 1	Contiguous	$BW_{Channel,CA}$:Aggregated BW
> 1	Non-contiguous	$BW_{Channel,block[n]}$:Subblock BW at each side

Uplink, FR1

When executing Apply Preset: “Show Abs2 Limit” = Off

Offset	Enabled	CC BW	Start Freq (MHz)	Stop Freq (MHz)	RBW (MHz)	Meas BW (Nx)
A	✓	5, ..., 40 MHz:	0.01*BWChannel/2	1 – (0.01*BWChannel/2)	(*)	2
		45 MHz:	0.01*BWChannel/2	1 – (0.01*BWChannel/2)	150 kHz (**)	3 (**)
		50, ..., 100 MHz:	0.015	0.985	0.015	2
B	✓	5, ..., 100 MHz:	1.5	4.5	0.51	2
C	✓	5 MHz:	5.5	5.5001	1	1
		10, ..., 100 MHz:	5.5	BWChannel – 0.5	1	1
D	✓	5 MHz:	6.5	BWChannel + 4.5	1	1
		10, ..., 100 MHz:	BWChannel + 0.5	BWChannel + 4.5	1	1
E-L		5, ..., 100 MHz:	BWChannel + 5.0	500	1	1

Offset	Enabled	Limit Abs (***)			Limit Rel			FailMask	Limit Abs2			Fail Mask2
		Start (dBm)	Stop (dBm)	Coupling	Start (dB)	Stop (dB)	Coupling		Start (dBm)	Stop (dBm)	Coupling	
A	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
B	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
C	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
D	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
E-L		(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled

Note that $BW_{Channel}$ is CC BW.

(*) RBW (kHz) for Offset A setting:

CC BW (MHz)	5	10	15	20	25	30	35	40
RBW (kHz)	24.0	51.0	75.0	100.0	130.0	150.0	180.0	200.0

Note:
In the 3GPP definition, 2*RBW(A) = 0.01 * $BW_{Channel}$ for 5,..., 40 MHz CCs or 30 kHz for 50, ..., 100 MHz CCs, and 2*RBW(B) = 1 MHz for all CC BW.
Meanwhile, since X-series signal analyzers provides RBW in discrete line-up only, RBW(A) and RBW(B) are selected as in the table to follow the 3GPP requiement as close as possible.

Better to choose RBW to make MeasBW equal or slightly wider than required, based on the “fail-safe design” policy: e.g. for 35 MHz CC BW, preferred to set RBW 180 kHz (x2 > 350 kHz) than 160 kHz (x2 < 350 kHz) so that measurement can wouldn’t miss a bad DUT.

(**) RBW (kHz) for Offset A setting of the 45 MHz CC BW (in Release 17):

RBW = 150 kHz and MeasBW = 3 to get the 3GPP requirement 450 kHz.

(***) Absolute Limit (dBm) settings:

Offset	CC BW	Adjust Range:	Adjust Range: 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz,

		None, and f ≤ 1.0 GHz & 1.0 < f ≤ 3.0 GHz	and 6.0 < f ≤ 7.125 GHz
A	5, ..., 45 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
	50, ..., 100 MHz:	-22.5 dBm = -24 + TT 1.5	-22.2 dBm = -24 + TT 1.8
B	5, ..., 100 MHz:	-8.5 dBm = -10 + TT 1.5	-8.2 dBm = -10 + TT 1.8
C	5, ..., 100 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
D	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8
E-L	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8

Note that TT values for V2X test requirement have not been defined yet (TBD/FFS) in TS38.521-1 v.17.7.0. Keep the same TT values for Uplink.

TS38.101-1 or TS38.521-1 v.17.6.1 (v.2022-10) Table 5.3.2-1: Maximum transmission bandwidth configuration NRB for FR1 (Uplink for UE).

– Transmission bandwidth configuration N_{RB} for FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz (FR2)” :

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	n/a
120	32	66	132	264
240(*)	16	32	66	132

– Transmission bandwidth configuration NRB for FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz (FR2)” :

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	66	264	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

TS38.104 v.17.7.0 (v.2022-09):

– Table 5.3.2-2: Transmission bandwidth configuration NRB for FR2-1 (Downlink for BTS).

– Table 5.3.2-3: Transmission bandwidth configuration NRB for FR2-2 (Downlink for BTS).

  TS38.101-2 or TS38.521-2 v.17.0.0 (v.2022-09) Table 5.3.2-1: Maximum transmission bandwidth configuration NRB for FR2 (Uplink for UE).

  (*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Meas Time: Meas Time parameter values

Meas Time parameters are preset to the following values when Apply Preset is executed, depending on Frequency Range, Adjust Meas Time Length for TM (Test Model), Duplex Mode, and RB Alloc Preset.

When Duplex Mode = TDD, and RB Alloc Preset = any DL NR-TMx.x:

– When Adjust Meas Time Length for TM = None: no preset for Meas Time parameters

– When Adjust Meas Time Length for TM = Frame or 3GPP: Refer to "Adjust Meas Time Length for TM" on page 3321

Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values

When presetting Freq Range, Bandwidth, SCS and the OFDM Type, the RB Offset values are preset to 0 RBs, and the RB Number values are preset to the following values.

– N_{RB} values for FR1 Downlink and Uplink, when the OFDM Type = CP-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	52	79	106	133	160	188	216	242	270	n/a	n/a	n/a	n/a	n/a
30	11	24	38	51	65	78	92	106	119	133	162	189	217	245	273
60	n/a	11	18	24	31	38	44	51	58	65	79	93	107	121	135

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common uplink configuration

– N_{RB} values for FR1 Uplink (only), when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	50	75	100	128	160	180	216	240	270	n/a	n/a	n/a	n/a	n/a
30	10	24	36	50	64	75	90	100	108	128	162	180	216	243	270
60	n/a	10	18	24	30	36	40	50	54	64	75	90	100	120	135

– N_{RB} values for Downlink and Uplink FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	n/a
120	32	66	132	264
240(*)	16	32	66	132

– N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	66	264	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

– N_{RB} values for Uplink (only) FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	64	128	256	n/a
120	32	64	128	256
240(*)	16	32	64	128

– N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	64	256	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common Uplink Configuration.

TS38.521-2 v.17.0.0 (v.2022-09) Table 6.1-1: Common Uplink Configuration for PC3.

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Note: No definition for the N_{RB} values for the new Release 17 FR2-2 SCS (480k, 960k) & Carrier BW (800, 1600, 2000 MHz).

Advanced: Advanced Demod Setup

– Direction = Downlink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	DL NR-TMx.x	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)			On

– Direction = Uplink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	

General	DC Punctured	n/a	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)	n/a		On
UL Flatness	Test Tolerance	n/a	FR1	1.4 dB
			FR2	n/a (*2)
UL IBE	UE Power Class	n/a	FR1	Same value as in Advanced Preset menu (grayed out)
			FR2	Same value as in Advanced Preset menu
	Test Tolerance		FR1	0.8 dB
			FR2	n/a (*2)
UL IBE Limit Threshold to	IBE Limit Threshold from P_RB	n/a	FR1	-30.00 dB
			FR2	-25.00 dB

(*1) 3GPP Conformance Test = ON parameter presets the parameters under the "EVM" tab in the Advanced Demod Setup dialog menu. For details, see **3GPP Conformance Test** in the Modulation Analysis Measurement section.

Note: "IQ Offset Compensation" parameter location will be moved to the "EVM" from the "General" submenu, and it is added to the controlled list of "3GPP Conformance Test = ON", with "Off" when Downlink, and with "On" when Uplink.

(*2) UL Spectrum Flatness & IBE "Test Tolerance" value is not preset when FR2 is selected because FR2 Test Tolerance value definition is still FFS in TS38.521-2 v.16.7.0 (v.2021-03), clauses 6.4.2.3 (IBE), 6.4.2.4 (Flatness), and 6.4.2.5 (Flatness for pi/2 BPSK).

Uplink FR1 Flatness and IBE Test Tolerance values in TS38.521-1 v.17.6.1 (v.2022-10):

- IBE: Table 6.4.2.3.5-1 Test requirements for in-band emissions
- Flatness:
  - Table 6.4.2.4.5-1 Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.4.5-2 Requirements for EVM equalizer spectrum flatness (extreme conditions),

  - Table 6.4.2.5.5-1 Mask for EVM equalizer coefficients for Pi/2 BPSK, normal conditions

Uplink FR2 Flatness and IBE Test Tolerance values in TS38.521-2 v.17.0.0 (v.2022-09):

- IBE: all FFS
  - Table 6.4.2.3.5-1: Test requirements for in-band emissions for power class 1,
  - Table 6.4.2.3.5-2: Test requirements for in-band emissions for power class 2,
  - Table 6.4.2.3.5-3: Requirements for in-band emissions for power class 3,
  - Table 6.4.2.3.5-4: Test requirements for in-band emissions for power class 4
- Flatness: all FFS
  - Table 6.4.2.4.5-1: Test Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.5.5-1: Test requirement for EVM equalizer coefficients for Pi/2 BPSK (normal conditions)

Transmit On|Off Power

The following parameters are preset when Apply Preset is executed.

- "Meas Setup: Meas Time parameters for Downlink" on page 3396
- "Meas Setup: Meas Time parameters for Uplink" on page 3396
- "Meas Setup: Other Setting parameters" on page 3399
- "Meas Setup: Limit Parameters" on page 3400
- "Other parameters" on page 3406

Meas Setup: Meas Time parameters for Downlink

Preset Configuration				Preset Value	
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Meas Offset	Meas Interval
NR-TMx.x	FR1	TDD	TS38.141-1	0 subframe	5 subframes
			TS37.141 BC3 CS16/17	4 subframes	5 subframes
	FR2	TDD	n/a	0 subframe	2 subframes

Fulfilled-xx / NR-TMx.x	FR1 /FR2	User Defined	n/a	0 subframe	Minimum subframes that can contain Transmission Periodicity

Preset Configuration				Preset Value		
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Burst Time [ms]	Burst Repetition Period [ms] (*)	UL Off Power Length [ms]
NR-TMx.x	FR1	TDD	TS38.141-1	3.7143	5.000	n/a
			TS37.141 BC3 CS16/17	2.7143	5.000	n/a
	FR2	TDD	n/a	0.9286	1.250	n/a
Fulfilled-xx / NR-TMx.x	RF1/RF2	User Defined	n/a	Time duration of downlink slots and symbols	Transmission periodicity	n/a

(*) Burst Repetition Period for Downlink comes from NR-TM DL-UL-Periodicity: 5 ms for FR1 and 1.25 ms for FR2.

Meas Setup: Meas Time parameters for Uplink

Preset Configuration					Preset Value

Notes:

UL Meas Offset preset for PRACH = $-\left\lceil \frac{PRACH\_ON\_period}{2^{-\mu}} \right\rceil$ slots,

UL Meas Interval preset for PRACH = $\left\lceil \frac{\text{PRACH\_ON\_period}}{2^{-\mu}} \right\rceil + \left\lceil \frac{2 \times \text{PRACH\_ON\_period}}{2^{-\mu}} \right\rceil$ slots,

where:

$2^{-\mu}$ [ms]: UL slot length with μ = 0, 1, 2, or 3 for SCS (PUSCH) 15 kHz, 30 kHz, 60 kHz, or 120 kHz, respectively,

PRACH_ON_period [ms], which values are:

(*1) 0.903125 ms for FR1 PRACH Config Index 4 for FDD and 12 for TDD which Preamble Format is 0,

(*2) 0.428125 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 15 kHz SCS) which Preamble Format is A3 (15 kHz SCS),

(*3) 0.2140625 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 30 kHz SCS) which Preamble Format is A3 (30 kHz SCS),

(*4) 0.035677 ms for FR2 PRACH Config Index 0 (60 kHz SCS) which Preamble Format is A1 (60 kHz SCS), and

(*5) 0.017839 ms for FR2 PRACH Config Index 0 (120 kHz SCS) which Preamble Format is A1 (120 kHz SCS).

(*6) Burst Repetition Period for Uplink:

- FR1 PUSCH: “dl-UL-TransmissionPeriodicity” in Table 6.3.3.2.4.3-3 TDD-UL-DL-Config in TS38.521-1.
- FR1 PRACH: Not clear but “ssb-PeriodicityServingCell” = ms20 (20 ms)? in Table 6.3.3.4.4.3-3 ServingCellConfigCommonSIB in TS38.521-1, safer to set the maximum value 10 ms.
- FR1 SRS: Not clear but “repetitionFactor” = n1? in Table 6.3.3.6.4.3-1 SRS-Config: SRS time mask measurement in TS38.521-1, safer to set the maximum value 10ms.
- FR2 PUSCH: Not clear, safer to set the maximum value 10 ms.
- FR2 PRACH: Not clear, safer to set the maximum value 10 ms.
- FR2 SRS: FFS, safer to set the maximum value 10 ms.

Meas Setup: Other Setting parameters

Direction	Parameter	Preset Configuration	Preset Value
Downlink	Auto Timing Adjust	(any)	Off
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS
Uplink	Auto Timing Adjust	(any)	On
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS

(*) Sub Carrier Spacing (SCS) setting determines the following internal parameters:

– Downlink: “N” factor for 70/N µs RMS averaging window for making the OFF power. N = SCS/15, where SCS is in kHz.

– Uplink: Slot length = $2^{-\mu}$ msec, where µ = 0, 1, 2, 3, 5 or 6 for SCS 15 kHz, 30 kHz, 60 kHz, 120 kHz, 480 kHz, or 960 kHz, respectively.

Meas Setup: Limit Parameters

– Direction = Downlink:

Parameter	Preset Configuration			Preset Value
	FR	BS type	Adjust Range (GHz)	
Max Ramp Down Time, Max Ramp Up Time	FR1	1-C, 1-O	None, f ≤ 1.0 GHz, 1.0 < f ≤ 3.0 GHz, 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, 6.0 < f ≤ 7.125 GHz	10.0 us

Uplink FR1 limits in TS38.521-1 v.17.6.1 (v.2022-10):

- Table 6.3.3.2.5-1 General ON/OFF time mask (PUSCH),
- Table 6.3.3.2.5-2 Test Tolerance for OFF power, for PUSCH
- Table 6.3.3.2.5-3 Test Tolerance for ON power, for PUSCH
- Table 6.3.3.4.5-1: PRACH time mask,
- Table 6.3.3.4.5-2: Test Tolerance (Transmit OFF power and PRACH time mask),
- Table 6.3.3.6.5-1: SRS time mask,
- Table 6.3.3.6.5-2: Test Tolerance (Transmit OFF power and SRS time mask).

  Uplink FR2 limits in TS38.521-2 v.17.0.0 (v.2022-09):

- Table 6.3.3.2.5-1: Test requirement of OFF power of General ON/OFF time mask (PUSCH),

- Table 6.3.3.2.5-2: Test requirement of ON power of General ON/OFF time mask (PUSCH),
- Table 6.3.3.2.5-3: Test Tolerance for OFF power (PUSCH); ... all FFS,
- Table 6.3.3.2.5-4: Test Tolerance for ON power (PUSCH); ... all FFS,
- Table 6.3.3.2.5-5: Relaxation required for OFF power for PC3 UEs,
- Table 6.3.3.4.5-1: PRACH time mask; ... some FFS,
- Table 6.3.3.4.5-2: Relaxations for OFF power for PC3 UEs (PRACH),
- Table 6.3.3.4.5-3: Relaxations for ON power (PRACH); ... all FFS,
- Clause 6.3.3.6 SRS time mask; ... all FFS.

Note:

(*) FR2 PUSCH ON Power Ref & Tolerance limit values were defined in Table 6.3.3.2.5-2, TS38.521-2 v.16.2.0 (2019-12); Meanwhile, TT value for the Power Ref has not been defined yet (FFS) in Table 6.3.3.2.5-4, TS38.521-2 v.16.6.0 (2020-12).

Other parameters

- BW > Settings tab > Info BW: Auto

  However, when the following three conditions are met, executing “Apply Preset” presets Info BW to 381.12 MHz/Man.

  - Radio Direction is uplink
  - Bandwidth is 400 MHz
  - Frequency Range is FR2 or FR2-2 and Adjust Limit Mask for Freq Range is “52.6 < f ≤ 71.0 GHz”

Channel Power

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto
- Meas Setup > Component Carriers tab > Configure Comp Carriers > Power Integration Bandwidth > CHP: the value defined in the Couplings row in "CHP Power Integration Bandwidth" on page 3300.

Occupied BW

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto Detect
- BW > Settings tab > Res BW: Man, 30 kHz
- BW > Settings tab > Video BW: Auto, 300 kHz
- Meas Setup > Limits tab > Bandwidth: Auto
- Meas Setup > Settings tab > Power Integration Method

  = Normal when Radio tab > Direction = Downlink

  = From Center when Radio tab > Direction = Uplink

Monitor Spectrum

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab: Execute Adjust Span to Carrier Config action

IQ Waveform

When executing Apply Preset, preset the following parameters:

- BW > Settings tab > Digital IF BW: Auto
- BW > Settings tab > Filter Type: Flattop
- Frequency > Settings tab, execute Adjust Center Frequency to Carrier Config action
  (which presets Digital IF BW in the BW menu to Auto)

Power Stat CCDF

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab, execute Adjust Center Freq to Carrier Config action
  (which presets Info BW in the BW menu to Auto)

3.7.8.6 Channel Profile

Enables you to configure parameters for user and physical channels.

SSB Auto Detect

Enables or disables channel profile SSB auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PROFile:SSB:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PROFile:SSB:AUTO[:DETect]?`
Example	`:EVM:CCAR0:PROF:SSB:AUTO OFF` `:EVM:CCAR0:PROF:SSB:AUTO?`
Couplings	Only valid with Downlink Grayed-out when MIMO is on
Preset	`OFF`
State Saved	Yes

PDCCH Auto Detect

Enables or disables channel profile PDCCH auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PROFile:PDCCh:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PROFile:PDCCh:AUTO[:DETect]?`
Example	`:EVM:CCAR0:PROF:PDCC:AUTO OFF` `:EVM:CCAR0:PROF:PDCC:AUTO?`
Couplings	Only valid with Downlink Grayed-out when MIMO is on
Preset	`OFF`
State Saved	Yes

The performance and stability of PDCCH Auto Detection will be variable depending on input signal quality and setting of key parameters.

These parameters need to be set correctly:

- Component Carrier frequency and bandwidth
- N_grid_start and N_grid_size
- N_BWP_start and N_BWP_size

These additional parameters are also needed (Auto Detection Settings parameter group):

- Numerology
- RNTI

- RNTI Type
- BWP CORESET settings
- Search Space Type
- Num of PDCCH Candidates per Aggregation Level
- Allocated Slots

PDSCH Auto Detect

Enables or disables channel profile PDSCH auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PROFile:PDSCh:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PROFile:PDSCh:AUTO[:DETect]?`
Example	`:EVM:CCAR0:PROF:PDSC:AUTO OFF` `:EVM:CCAR0:PROF:PDSC:AUTO?`
Couplings	Only valid with Downlink Grayed-out when MIMO is on
Preset	`OFF`
State Saved	Yes

The performance and stability of PDSCH Auto Detection will be variable depending on input signal quality and setting of key parameters.

At least these parameters need to be set correctly:

- Component Carrier frequency and bandwidth
- N_grid_start and N_grid_size
- N_BWP_start and N_BWP_size

If these additional parameters are set correctly too, the performance and stability of PDSCH Auto Detection could be improved significantly:

- Numerology

Known limitations for PDSCH Auto Detection:

- Not working well for multiple numerologies
- Not working well if there is no gap in time or frequency domain between PDCCH and PDSCH allocations
- Not working well for RA type0

PUSCH Auto Detect

Enables or disables channel profile PUSCH auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PROFile:PUSCh:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PROFile:PUSCh:AUTO[:DETect]?`
Example	`:EVM:CCAR0:PROF:PUSC:AUTO OFF` `:EVM:CCAR0:PROF:PUSC:AUTO?`
Couplings	Only valid with Uplink Grayed-out when MIMO is on
Preset	`OFF`
State Saved	Yes

The performance and stability of PUSCH Auto Detection will be variable depending on input signal quality and setting of key parameters.

At least these parameters need to be set correctly:

– Component Carrier frequency and bandwidth

– N_grid_start and N_grid_size

– N_BWP_start and N_BWP_size

If these additional parameters are set correctly too, the performance and stability of PUSCH Auto Detection could be improved significantly:

– Numerology

Known limitations for PUSCH Auto Detection:

– Not working well for multiple numerologies

– Not working well if there is no gap in time or frequency domain between PUCCH and PUSCH allocations

– Not working well for RA type0

PRACH Occasion Auto Detect

Enables or disables PRACH occasions auto detect.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PROFile:PRACh:OCCasion:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PROFile:PRACh:OCCasion:AUTO[:DETect]?`

Example	`:EVM:CCAR0:PROF:PRAC:OCC:AUTO OFF` `:EVM:CCAR0:PROF:PRAC:OCC:AUTO?`
Preset	`OFF`
State Saved	Yes

Copy Auto -> Manual

Copies reliably auto-detected parameters into channel profile. These parameters are also displayed in "Auto Detect Summary" window.

Note those parameters detected based on power are not regarded as reliably auto-detected, so they will not be displayed or copied into channel profile.

Remote Command	`[:SENSe]:EVM:PROFile:COPY[:IMMediate]`
Example	`:EVM:PROF:COPY`
Notes	Available when Detection is Auto

Control and User Channels

Configure parameters for user and physical channels.

SS Block (Downlink)

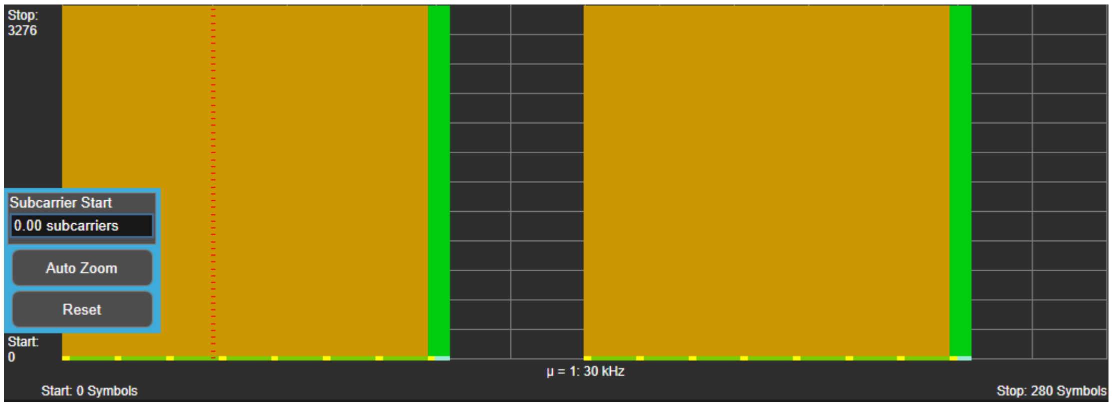
View and configure SS Block.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map.

Subcarrier Start (GUI Only)

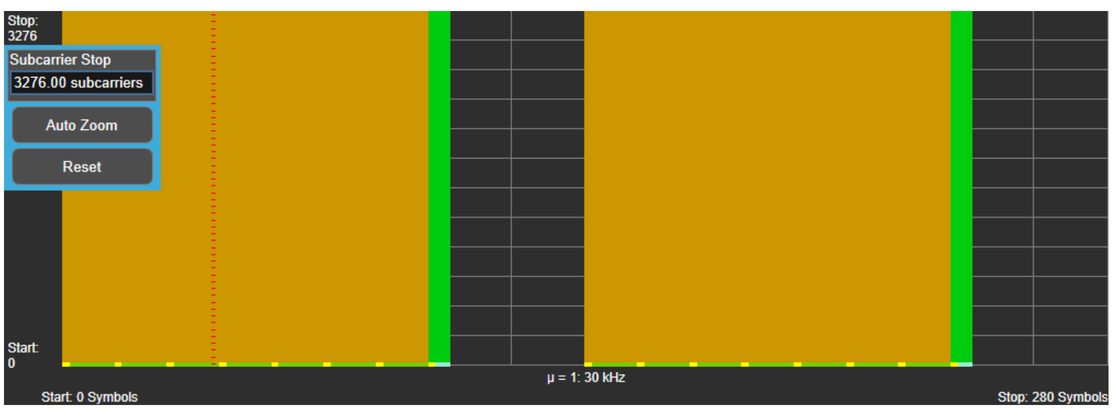
Set start subcarrier for resource map display.



Couplings	If the value entered is greater than Subcarrier Stop, Subcarrier Stop is set to the value of Subcarrier Start
Preset	0
State Saved	No
Min	0
Max	Depends on reference numerology

Subcarrier Stop (GUI Only)

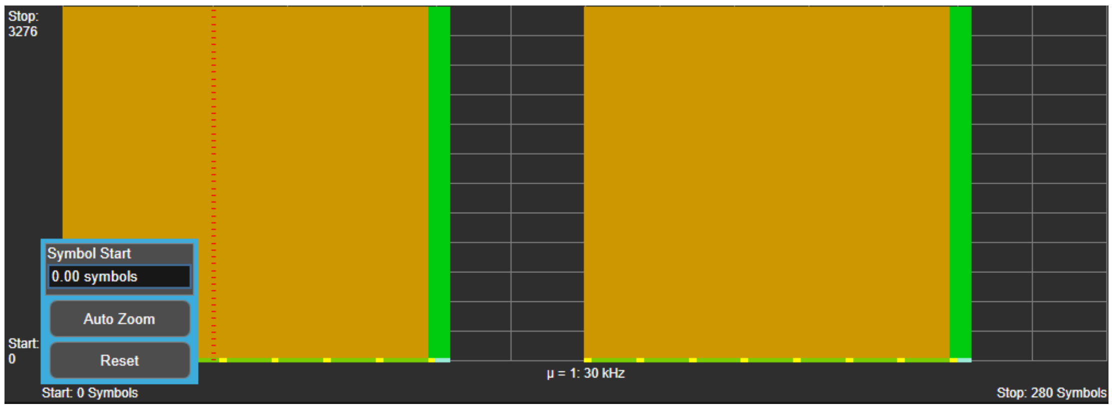
Set stop subcarrier for resource map display.



Couplings	If the value entered is lower than Subcarrier Start, Subcarrier Start is set to the value of Subcarrier Stop
Preset	Depends on reference numerology
State Saved	No
Min	0
Max	Depends on reference numerology

Symbol Start (GUI Only)

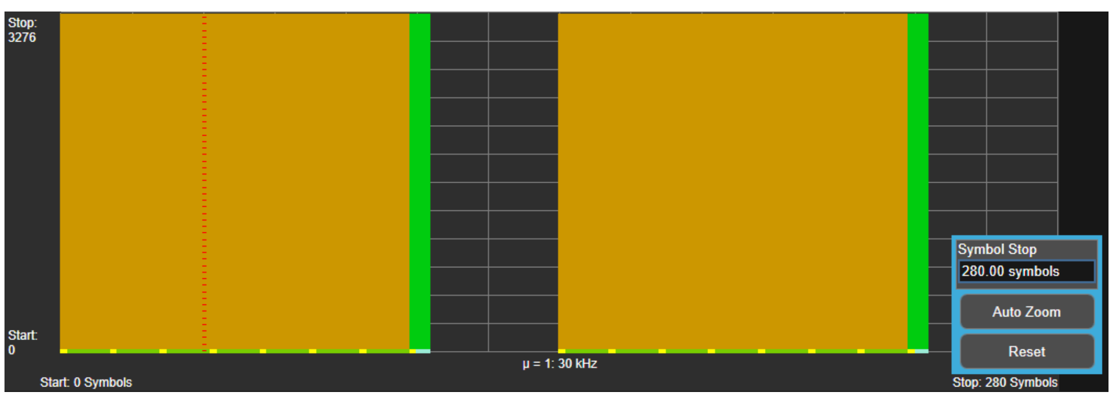
Set start symbol for resource map display.



Couplings	If the value entered is greater than Symbol Stop, Symbol Stop is set to the value of Symbol Start
Preset	0
State Saved	No
Min	0
Max	Depends on reference numerology

Symbol Stop (GUI Only)

Set stop symbol for resource map display.



Couplings	If the value entered is lower than Symbol Start, Symbol Start is set to the value of Symbol Stop
Preset	Depends on reference numerology
State Saved	No

Min	0
Max	Depends on reference numerology

Auto Zoom (GUI Only)

Auto zoom for selected BWP/physical channel allocation.

Reset (GUI Only)

Reset resource map with current reference numerology.

Add SS Block (GUI only)

Inserts a new SS Block into the list. The maximum number of SS Block lists is 2.

See "Effective SSB Number (Remote Command only)" on page 1964 for SCPI to provide similar function.

Delete SS Block

Deletes the selected SS Block from the list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:SSB <integer>`
Example	`:EVM:CCAR0:DEL:SSB 1`

Clear All (GUI only)

Deletes all SS Blocks from the list.

See "Effective SSB Number (Remote Command only)" on page 1964 for SCPI to provide similar function.

SS Block Frame Sync

Specifies SS Block Frame Sync. As some test signals may not carry a real MIB message in PBCH payload (PN bits sequence is used sometimes), we provide this parameter for clients to choose:

When it is “MIB”, frame sync should be always correct for L=4/8/64. The ssb-index-msb and half-frame-index are parsed from MIB.

Otherwise, frame sync should be correct for L=4, but not always correct for L=8/64:

- for L=4, both ssb-index and half-frame-index can be detected from PBCH DMRS matching

- for L=8, assuming half-frame-index = 0, and ssb-index can be detected from PBCH DMRS matching

- for L=64, assuming half-frame-index = 0 and ssb-index-msb = 0, and ssb-index-lsb can be detected from PBCH DMRS matching

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYNC:SSB DMRS | MIB` `[:SENSe]:EVM:CCARrier0|…|15:SYNC:SSB?`
Example	`:EVM:CCAR:SYNC:SSB MIB` `:EVM:CCAR:SYNC:SSB?`
Preset	`MIB`
State Saved	Yes
Range	DMRS | MIB + DMRS

Effective SSB Number (Remote Command only)

Specifies how many SSB configurations are effective, this SCPI only command is used to provide similar function as “Add SS Block” and “Delete SS Block”.

Note all 2 SSB configurations can be modified through SCPI, but ineffective SSB configurations (index > SSB Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:SSB <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:SSB?`
Example	`:EVM:CCAR0:NUMB:SSB 2` `:EVM:CCAR0:NUMB:SSB?`
Preset	`1`
State Saved	Yes
Min	0
Max	2

SS Block DL Parameter Group (Display only)

Allows you to configure the allocation and power parameters for SS Blocks.

This control is for UI display only. You can select one of the following two groups:

Allocation Parameters

"State" on page	"SCS" on page 1965	"Half Frame	"Block Pattern" on	"Periodicity" on page	"Lmax" on page 1968

1965		Index" on page 1966	page 1966	1967
"Active Indices" on page 1968	"RB Offset" on page 1969	"SCS Common" on page 1970	"kSSB" on page 1969	

Power Setting

"State" on page 1965	"SCS" on page 1965	"P-SS Power Boosting" on page 1970	"PBCH Power Boosting" on page 1971

State

Enable or disable selected SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>[:STATe]?`
Example	`:EVM:CCAR0:SSB1 OFF` `:EVM:CCAR0:SSB1?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

SCS

Select numerology for current SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SCS SCS15K | SCS30K | SCS120K | SCS240K` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SCS?`
Example	`:EVM:CCAR0:SSB1:SCS SCS15K` `:EVM:CCAR0:SSB1:SCS?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The SCS setting depends on the CC Bandwidth and Frequency Range. Also, if the Max RB Num for the SCS is less than 20, the SCS is not available
Preset	SCS30K
State Saved	Yes
Range	SCS15K|SCS30K|SCS120K|SCS240K

Half Frame Index

Set the SSB location to the first half frame or the second half frame when SSB period is not 5ms. This setting will be ignored when valid half-frame information could be obtained from MIB or PBCH DMRS.

0: SSB is in first half frame

1: SSB is in second half frame

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:HFINdex <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:HFINdex?`
Example	`:EVM:CCAR0:SSB1:HFIN 0` `:EVM:CCAR0:SSB1:HFIN?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	1

Block Pattern

Specifies the SSB Block Pattern (3GPP TS 38.213 section 4.1, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215) to choose Symbol Start sets.

Case A	15 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes of \{2, 8\} + 14*n. For carrier frequencies smaller than or equal to 3 GHz, n = 0, 1. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, n = 0, 1, 2, 3
Case B	30 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes \{4, 8, 16, 20\} + 28*n. For carrier frequencies smaller than or equal to 3 GHz, n = 0. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, n = 0, 1
Case C	30 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes \{2, 8\} + 14*n. For carrier frequencies smaller than or equal to 3 GHz, n = 0, 1. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, n = 0, 1, 2, 3
Case D	120 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes \{4, 8, 16, 20\} + 28*n. For carrier frequencies larger than 6 GHz, n = 0, 1, 2, 3, 5, 6, 7, 8, 10, 11, 12, 13, 15, 16, 17, 18
Case E	240 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes \{8, 12, 16, 20, 32, 36, 40, 44\} + 56*n. For carrier frequencies larger than 6 GHz, n = 0, 1, 2, 3, 5, 6, 7, 8

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PATTern A | B | C | D | E` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PATTern?`
Example	`:EVM:CCAR0:SSB1:PATT B` `:EVM:CCAR0:SSB1:PATT?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	B
State Saved	Yes
Range	Case A | Case B | Case C | Case D | Case E

Block Pattern Symbol Start Sets (Remote Command only)

Specifies Symbol Start sets and corresponding SSB Block Pattern for 30kHz SCS (3GPP TS 38.213 section 4.1 https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215).

- Set1 - Case B: the first symbols of the candidate SS/PBCH blocks have indexes \{4, 8, 16, 20\} + 28*n. For carrier frequencies smaller than or equal to 3 GHz, n = 0. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, n = 0, 1.
- Set2 - Case C: the first symbols of the candidate SS/PBCH blocks have indexes \{2, 8\} + 14*n. For carrier frequencies smaller than or equal to 3 GHz, n = 0, 1. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, n = 0, 1, 2, 3.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SYMBol:STARt SET1 | SET2` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SYMBol:STARt?`
Example	`:EVM:CCAR0:SSB1:SYMB:STAR SET2` `:EVM:CCAR0:SSB1:SYMB:STAR?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	SET1
State Saved	Yes
Range	SET1 | SET2

Periodicity

Specifies the periodicity of SS Block transmission.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PERiodicity P5MS | P10MS | P20MS | P40MS | P80MS | P160MS [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PERiodicity?
Example	:EVM:CCAR0:SSB1:PER P10MS :EVM:CCAR0:SSB1:PER?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	P10MS
State Saved	Yes
Range	5 ms|10 ms|20 ms|40ms|80ms|160ms

Lmax

Specifies the maximum number of candidate SS Block in a half frame.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:LMAX L4 | L8 | L64 [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:LMAX?
Example	:EVM:CCAR0:SSB1:LMAX L4 :EVM:CCAR0:SSB1:LMAX?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message If the SS Block SCS is 120kHz or 240kHz, the Lmax will be set to L64; L64 is not available for SCS less than 120kHz. If Lmax will be reset to the default value if the current value is invalid
Preset	L4
State Saved	Yes
Range	4|8|64

Active Indices

Specifies the indices of active candidate SS Block in a half frame. There are 3 ways to configure:

- To configure by individual index, use ',' as the delimiter, e.g., 0,1,2,3
- To configure by a range of index, use ':' to indicate the start index and the last index, e.g., 3:10 means 3,4,5,6,7,8,9,10
- To configure by a certain step, use two ':' to indicate the start index, the step and the last index, e.g., 0:4:12 means 0, 4, 8, 12

These 3 configuration methods can be used in combination, by using ',' as the delimiter, e.g., 0,1,4:7,8:2:19 means index 0,1,4,5,6,7,8,10,12,14,16,18.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:ACTive:INDices <string>` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:ACTive:INDices?`
Example	`:EVM:CCAR0:SSB1:ACT:IND "0:3"` `:EVM:CCAR0:SSB1:ACT:IND?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting is coupled with Lmax, the max index should be less than Lmax. For example, the max index should be 7 if Lmax = L8 If the max index is out of range, it will be reset according to the Lmax: Lmax = L8 Active Indices set to "0:7" Lmax = L4 Active Indices set to "0:3"
Preset	0:3
State Saved	Yes

RB Offset

Specifies the RB Offset of SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:RB:OFFSet?`
Example	`:EVM:CCAR0:SSB1:RB:OFFS 253` `:EVM:CCAR0:SSB1:RB:OFFS?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The setting range depends on the MaxRbNum and SCS The band label will be changed according to SCS setting: – It will be "15 kHz SCS" if SCS is below 60 kHz – It will be "60 kHz SCS" if SCS is above 60 kHz
Preset	253
State Saved	Yes
Min	0
Max	Max RB in CC setup for SSB SCS – SSB RB Number

kSSB

Specifies the k0 Offset of SS Block. For FR1 this will be specified in 15 kHz SCS, for FR2 this will be specified in common SCS (RMSI-SCS).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:K0 <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:K0?`
Example	`:EVM:CCAR0:SSB1:K0 6` `:EVM:CCAR0:SSB1:K0?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The setting range is coupled with MaxRbNum and SCS The band label will be changed according to SCS setting: – It will be “15 kHz” for FR1 – It will be “SCS Common” for FR2
Preset	0
State Saved	Yes
Min	0
Max	12 or 24 depends on SCS

SCS Common

Specifies common SCS for FR2 and FR1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SCS:COMMon SCS15K | SCS30K | SCS60K | SCS120K` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SCS:COMMon?`
Example	`:EVM:CCAR0:SSB1:SCS:COMM SCS60K` `:EVM:CCAR0:SSB1:SCS:COMM?`
Couplings	The sub-opcode <n> max value 2 For FR1, SCS15K and SCS30K are available For FR2, SCS60K and SCS120K are available Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`SCS15K`
State Saved	Yes
Range	`SCS15K|SCS30K|SCS60K|SCS120K`

P-SS Power Boosting

Specifies Power Boost value for the PSS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PSS:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PSS:POWer?`

Example	:EVM:CCAR0:SSB1:PSS:POW 0.0 :EVM:CCAR0:SSB1:PSS:POW?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

PBCH Power Boosting

Specifies Power Boost value for the PBCH.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:POWer?
Example	:EVM:CCAR0:SSB1:PBCH:POW 0.0 :EVM:CCAR0:SSB1:PBCH:POW?
Couplings	The range of sub-opcode <n> values is determined by the number of SS Block configured Max value for n = 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

S-SS Block (Sidelink)

View and configure S-SS Block.

Add S-SS Block (GUI only)

Inserts a new SS Block into list, the maximum number of S-SS Block list is 2.

See "Effective SSB Number (Remote Command only)" on page 1964 for SCPI to provide similar function.

Delete S-SS Block

Deletes selected S-SS Block from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:SSSB <integer>`
Example	`:EVM:CCAR0:DEL:SSSB 1`

Clear All (GUI only)

Deletes all S-SS Blocks from list.

See "Effective SSB Number (Remote Command only)" on page 1964 for SCPI to provide similar function.

Effective S-SSB Number (Remote Command only)

Specifies how many S-SSB configurations are effective, this SCPI only command is used to provide similar function as “Add S-SS Block” and “Delete S-SS Block”.

Note all 2 S-SSB configurations can be modified through SCPI, but ineffective S-SSB configurations (index > S-SSB Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:SSSB <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:SSSB?`
Example	`:EVM:CCAR0:NUMB:SSSB 2` `:EVM:CCAR0:NUMB:SSSB?`
Preset	`1`
State Saved	Yes
Min	0
Max	2

State

Enable or disable selected S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>[:STATe]?`
Example	`:EVM:CCAR0:SSSB1 OFF` `:EVM:CCAR0:SSSB1?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	Off
State Saved	Yes

SCS

Select numerology for current S-SS Block.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SCS SCS15K | SCS30K | SCS60K | SCS120K [:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SCS?
Example	:EVM:CCAR0:SSSB1:SCS SCS15K :EVM:CCAR0:SSSB1:SCS?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The SCS setting depends on the CC Bandwidth and Frequency Range. Also if the Max RB Num for the SCS is less than 20, the SCS is not available
Preset	SCS30K
State Saved	Yes
Range	SCS15K|SCS30K|SCS60K|SCS120K

Periodicity (Display only)

Display the periodicity of S-SS Block transmission

Number per Period

Specifies number of S-SS Blocks per period.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PERiod:NUMBer <integer> [:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PERiod:NUMBer?
Example	:EVM:CCAR0:SSSB1:PER:NUMB 1 :EVM:CCAR0:SSSB1:PER:NUMB?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	16

RB Offset

Specifies the RB Offset of S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:RB:OFFSet?`
Example	`:EVM:CCAR0:SSSB1:RB:OFFS 253` `:EVM:CCAR0:SSSB1:RB:OFFS?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The setting range depends on the MaxRbNum and SCS
Preset	253
State Saved	Yes
Min	0
Max	Max RB in CC setup for S-SSB SCS – S-SSB RB Number

Slot Offset

Specifies the slot Offset (from the start of S-SSB period to the first S-SSB) of S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SLOT:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SLOT:OFFSet?`
Example	`:EVM:CCAR0:SSSB1:SLOT:OFFS 253` `:EVM:CCAR0:SSSB1:SLOT:OFFS?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message The setting range depends on the SCS
Preset	0
State Saved	Yes
Min	0
Max	Max slot number in CC setup for S-SSB SCS - 1

Slot Interval

Specifies the slot interval between neighboring S-SS Blocks.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SLOT:INTeval <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SLOT:INTeval?`
Example	`:EVM:CCAR0:SSSB1:SLOT:INT 1` `:EVM:CCAR0:SSSB1:SLOT:INT?`
Couplings	The sub-opcode <n> max value 2

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message The setting range depends on the SCS
Preset	1
State Saved	Yes
Min	1
Max	Max slot number in CC setup for S-SSB SCS - 1

S-SSB Power Boosting

Specifies Power Boost value for the S-SSB.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:POWer?`
Example	`:EVM:CCAR0:SSSB1:POW 0.0` `:EVM:CCAR0:SSSB1:POW?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

BWP (Downlink)

View and configure the BWP parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 5 (including Initial BWP).

See "Effective BWP Number (Remote Command only)" on page 1976 for SCPI to provide similar function.

Delete BWP

Deletes selected BWP from table, except Initial BWP (BWP0).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:DELete:BWP <integer>`
Example	`:EVM:CCAR0:DLIN:DEL:BWP 1`

Effective BWP Number (Remote Command only)

Specifies how many UL/DL BWP configurations are effective, this SCPI only command is used to provide similar function as “Add BWP” and “Delete BWP”.

Note all 4 UL/DL BWP configurations can be modified through SCPI, but ineffective UL/DL BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:NUMBer:BWP <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:NUMBer:BWP?`
Example	`:EVM:CCAR0:DLINk:NUMB:BWP 2` `:EVM:CCAR0:DLINk:NUMB:BWP?`
Couplings	Max value is 4 for both Uplink and Downlink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

BWP DL Parameter Group (Display only)

Allows you to configure the allocation and power parameters for BWP (DL).

This control is for UI display only. You can select one of the following two groups:

General Settings

"State" on page 1977	"CORESET Number" on page 1979	"SCS" on page 1977	"Cyclic Prefix" on page 1977
"N_BWP_start (RB Offset)" on page 1978	"N_BWP_size (RB Number)" on page 1978	"Max RB Number (Display Only)" on page 1979	

CORESET 0

"State" on page 1977	"CORESET Number" on page 1979	"CORESET ID" on page 1979	"CORESET RB Offset" on page 1980	"CORESET RB Number" on page 1980
"Allocated RBGs (6RBs)" on page 1980	"CORESET Symbol Number" on page 1981	"CORESET CCE to REG Mapping Type" on page 1981	"CORESET REG Bundle Size" on page 1981	"CORESET Interleave Size" on page 1982
"CORESET Shift Index" on page 1982				

State

Enable or disable selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4[:STATe]?`
Example	`:EVM:CCAR0:DLIN:BWP1 OFF` `:EVM:CCAR0:DLIN:BWP1?`
Preset	`ON`
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS240K [:SENSe]:EVM:CCARrier0 | … | 15:DLINk:BWP0 | … | 4:SCS?`
Example	`:EVM:CCAR0:DLIN:BWP1:SCS SCS30K` `:EVM:CCAR0:DLIN:BWP1:SCS?`
Couplings	This setting is couple with Freq Range Freq Range = FR1, the available SCSs: SCS`15K`, SCS`30K`, SCS`60K` Freq Range = FR2, the available SCSs: SCS`60K`, SCS`120K`, SCS`240K`
Preset	`SCS30K`
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:CPLength NORMal	EXTended` `[:SENSe]:EVM:CCARrier0	…	15:DLINk:BWP0	…	4:CPLength?`
Example	`:EVM:CCAR0:DLIN:BWP1:CPL NORM` `:EVM:CCAR0:DLIN:BWP1:CPL?`
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal For Initial BWP(BWP0), only Normal CP is supported
Preset	`NORMal`
State Saved	Yes
Range	`Normal|Extended`

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:RB:OFFSet?`
Example	`:EVM:CCAR0:DLIN:BWP1:RB:OFFS 0` `:EVM:CCAR0:DLIN:BWP1:RB:OFFS?`
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0 for BWP1-4 126 for Initial BWP (BWP0)
State Saved	Yes
Min	N_grid_start
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:RB:NUMBer?`
Example	`:EVM:CCAR0:DLIN:BWP1:RB:NUMB 126` `:EVM:CCAR0:DLIN:BWP1:RB:NUMB?`
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273 for BWP1-4 24 for Initial BWP (BWP0)
State Saved	Yes
Min	6
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

CORESET Number

Set the number of CORESET of the BWP

Initial BWP (BWP0): Display only and always 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:NUMBer:COReset <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:NUMBer:COReset?`
Example	`:EVM:CCAR0:DLIN:BWP1:NUMB:COR 1` `:EVM:CCAR0:DLIN:BWP1:NUMB:COR?`
Preset	1
State Saved	Yes
Min	1
Max	3

CORESET ID

Specifies the ID of CORESET:

Initial BWP (BWP0): Display only and always 0

BWP1-4: Settable and could not be 0

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:ID?`
Example	`:EVM:CCAR0:DLIN:BWP1:COR1:ID 2` `:EVM:CCAR0:DLIN:BWP1:COR1:ID?`
Couplings	The ID should be unique for all CORESETs in a BWP
Preset	0
State Saved	Yes
Min	0
Max	11

CORESET RB Offset

For CORESET0: Display the RB Offset of the CORESET0 relative to the start of InitialBWP.

For Other CORESET: Set the RB Offset of the first group of 6 RBs relative to the start of BWP, -1 means not configured.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RB:OFFSet:R16 <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RB:OFFSet:R16?`
Example	`:EVM:CCAR0:DLIN:BWP1:COR1:RB:OFFS:R16 0` `:EVM:CCAR0:DLIN:BWP1:COR1:RB:OFFS:R16?`
Preset	0 for CORESET0 -1 for other CORESET
State Saved	Yes
Min	-1
Max	5

CORESET RB Number

Specifies the RB Number of CORESET. Note this number should be multiple of 6.

BWP1-4: Remote Command only

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RB:NUMBer?`
Example	`:EVM:CCAR0:DLIN:BWP1:COR1:RB:NUMB 270` `:EVM:CCAR0:DLIN:BWP1:COR1:RB:NUMB?`
Couplings	For CORESET0 with initial BWP (BWP0), only 24, 48, 96 are valid
Preset	270
State Saved	Yes
Min	24 for CORESET 0 with Initial BWP (BWP0) 6 for other CORESETS
Max	96 for CORESET 0 with initial BWP (BWP0), For other CORESET Int(RB Number of selected BWP / 6) * 6 – CORESET RB Offset

Allocated RBGs (6RBs)

Specifies the allocated RBG of CORESET.

Initial BWP (BWP0): NA

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RBG:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:RBG:ALLocated?`
Example	`:EVM:CCAR0:DLIN:BWP1:RBG:ALL "2:9"` `:EVM:CCAR0:DLIN:BWP1:RBG:ALL?`
Couplings	The setting is NOT applied for CORESET0 with initial BWP (BWP0)
Preset	"0:44"
State Saved	Yes

CORESET Symbol Number

Specifies the Symbol Length of CORESET.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:SYMBol:LENGth <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:SYMBol:LENGth?`
Example	`:EVM:CCAR0:DLIN:BWP1:COR1:SYMB:LENG 2` `:EVM:CCAR0:DLIN:BWP1:COR1:SYMB:LENG?`
Preset	1
State Saved	Yes
Min	1
Max	3

CORESET CCE to REG Mapping Type

Specifies the CCE to REG Mapping Type of CORESET.

Initial BWP (BWP0): Display only and always be Interleaved.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:REG:MAPPing INTerleave	NONE [:SENSe]:EVM:CCARrier0	…	15:DLINk:BWP0	…	4:COReset0	1	2:REG:MAPPing?`
Example	`:EVM:CCAR0:DLIN:BWP1:COR0:REG:MAPP NONE` `:EVM:CCAR0:DLIN:BWP1:COR0:REG:MAPP?`
State Saved	Yes
Range	Interleaved | Non-interleaved

CORESET REG Bundle Size

Specifies the REG bundle size of CORESET when the REG mapping is interleaved.

Initial BWP (BWP0): Display only and always be 6.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:REG:BUNDle <integer> [:SENSe]:EVM:CCARrier0 | … | 15:DLINk:BWP0 | … | 4:COReset0 | 1 | 2:REG:BUNDle?
Example	:EVM:CCAR0:DLIN:BWP1:COR0:REG:BUND 2 :EVM:CCAR0:DLIN:BWP1:COR0:REG:BUND?
Preset	6
State Saved	Yes
Range	If number of Symbol is 1, only 2 and 6 are allowed. Otherwise, the number of Symbol and 6 are allowed

CORESET Interleave Size

Specifies the Interleave Size of CORESET when the REG mapping is interleaved.

Initial BWP (BWP0): Display only and always be 2.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:REG:INTerleave <integer> [:SENSe]:EVM:CCARrier0 | … | 15:DLINk:BWP0 | … | 4:COReset0 | 1 | 2:REG:INTerleave?
Example	:EVM:CCAR0:DLIN:BWP1:COR0:REG:INT 3 :EVM:CCAR0:DLIN:BWP1:COR0:REG:INT?
Preset	2
State Saved	Yes
Range	Only 2,3,6 are allowed

CORESET Shift Index

Specifies the Shift Index of CORESET when the REG mapping is interleaved.

Initial BWP (BWP0): Display only and always be Cell ID.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:SHIFt <integer> [:SENSe]:EVM:CCARrier0|…|15:DLINk:BWP0|…|4:COReset0|1|2:SHIFt?
Example	:EVM:CCAR0:DLIN:BWP1:COR0:SHIF 1 :EVM:CCAR0:DLIN:BWP1:COR0:SHIF?
Preset	0
State Saved	Yes
Range	The range is 0-274
Min	0
Max	274

BWP (Uplink)

View and configure the BWP parameters.

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 4.

See "Effective BWP Number (Remote Command only)" on page 1983 for SCPI to provide similar function.

Delete UL BWP

Deletes selected BWP from table.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:DELete:BWP <integer>`
Example	`:EVM:CCAR0:ULIN:DEL:BWP 1`

Effective BWP Number (Remote Command only)

Specifies how many UL/DL BWP configurations are effective, this SCPI only command is used to provide similar function as “Add BWP” and “Delete BWP”.

Note all 4 UL/DL BWP configurations can be modified through SCPI, but ineffective UL/DL BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:NUMBer:BWP <integer>` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:NUMBer:BWP?`
Example	`:EVM:CCAR0:ULINK:NUMB:BWP 2` `:EVM:CCAR0:ULINk:NUMB:BWP?`
Couplings	Max value is 4 for both Uplink and Downlink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

State

Enables or disables selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4[:STATe]?`
Example	`:EVM:CCAR0:ULIN:BWP1:STAT OFF` `:EVM:CCAR0:ULIN:BWP1:STAT?`
Preset	`ON`
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS240K` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:SCS?`
Example	`:EVM:CCAR0:ULIN:BWP1:SCS SCS30K` `:EVM:CCAR0:ULIN:BWP1:SCS?`
Couplings	This setting is couple with Freq Range Freq Range = FR1, the available SCSs: SCS`15K`, SCS`30K`, SCS`60K` Freq Range = FR2, the available SCSs: SCS`60K`, SCS`120K`, SCS`240K`
Preset	`SCS30K`
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:CPLength NORMal | EXTended` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:CPLength?`
Example	`:EVM:CCAR0:ULIN:BWP1:CPL NORM` `:EVM:CCAR0:ULIN:BWP1:CPL?`
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal
Preset	`NORMal`
State Saved	Yes
Range	`NORMal|EXTended`

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:RB:OFFSet?`
Example	`:EVM:CCAR0:ULIN:BWP1:RB:OFFS 0` `:EVM:CCAR0:ULIN:BWP1:RB:OFFS?`
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0
State Saved	Yes
Min	N_grid_start
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:BWP1|…|4:RB:NUMBer?`
Example	`:EVM:CCAR0:ULIN:BWP1:RB:NUMB 126` `:EVM:CCAR0:ULIN:BWP1:RB:NUMB?`
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273
State Saved	Yes
Min	1
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

BWP (Sidelink)

View and configure the BWP parameters.

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 4.

See "Effective BWP Number (Remote Command only)" on page 1976 for SCPI to provide similar function.

Delete BWP

Deletes selected BWP from table.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:DELete:BWP <integer>
Example	:EVM:CCAR0:SLIN:DEL:BWP 1

Effective BWP Number (Remote Command only)

Specifies how many sidelink BWP configurations are effective, this SCPI only command is used to provide similar function as “Add BWP” and “Delete BWP”.

Note all 4 sidelink BWP configurations can be modified through SCPI, but ineffective sidelink BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:NUMBer:BWP <integer> [:SENSe]:EVM:CCARrier0|…|15:SLINk:NUMBer:BWP?
Example	:EVM:CCAR0:SLINk:NUMB:BWP 2 :EVM:CCAR0:SLINk:NUMB:BWP?
Couplings	Max value is 4 for sidelink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

State

Enables or disables selected BWP.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4[:STATe]?
Example	:EVM:CCAR0:SLIN:BWP1 OFF :EVM:CCAR0:SLIN:BWP1?
Preset	ON
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:SCS SCS15K | SCS30K | SCS60K | SCS120K [:SENSe]:EVM:CCARrier0 | … | 15:SLINk:BWP1 | … | 4:SCS?
Example	:EVM:CCAR0:SLIN:BWP1:SCS SCS30K :EVM:CCAR0:SLIN:BWP1:SCS?
Couplings	All sidelink BWP have same SCS
Preset	SCS30K
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:CPLength NORMal | EXTended [:SENSe]:EVM:CCARrier0 | … | 15:SLINk:BWP1 | … | 4:CPLength?
Example	:EVM:CCAR0:SLIN:BWP1:CPL NORM :EVM:CCAR0:SLIN:BWP1:CPL?
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal
Preset	NORMal
State Saved	Yes
Range	Normal | Extended

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:RB:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:RB:OFFSet?
Example	:EVM:CCAR0:SLIN:BWP1:RB:OFFS 0 :EVM:CCAR0:SLIN:BWP1:RB:OFFS?
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SLINk:BWP1|…|4:RB:NUMBer?`
Example	`:EVM:CCAR0:SLIN:BWP1:RB:NUMB 126` `:EVM:CCAR0:SLIN:BWP1:RB:NUMB?`
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273
State Saved	Yes
Min	6
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

PDCCH

View and configure the PDCCH parameters.

Add PDCCH (GUI only)

Inserts a new PDCCH configuration into list, the maximum number of PDCCH configurations is 16.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Delete PDCCH

Deletes selected PDCCH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PDCCh <integer>`
Example	`:EVM:CCAR0:DEL:PDCC 1`

Clear All (GUI only)

Deletes all PDCCH configuration from list.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Effective PDCCH Number (Remote Command only)

Specifies how many PDCCH configurations are effective, this SCPI only command is used to provide similar function as “Add PDCCH” and “Delete PDCCH”.

Note all 16 PDCCH configurations can be modified through SCPI, but ineffective PDCCH configurations (index > Effective PDCCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PDCCh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PDCCh?`
Example	`:EVM:CCAR0:NUMB:PDCC 2` `:EVM:CCAR0:NUMB:PDCC?`
Couplings	Max value is 16 If you attempt to remotely set the Count larger than 16, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	16

PDCCH Parameter Group (Display only)

Allows you to configure the PDCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings						
"State" on page 1990	"RNTI" on page 1990	"Power Boosting" on page 1995	"Antenna Port" on page 1994	"Antenna Port Detection Threshold" on page 1994	"DMRS Power Boosting" on page 1998	"DMRS Scrambling ID" on page 1998

State

Enables or disables PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>[:STATe]?`
Example	`:EVM:CCAR0:PDCC1 OFF` `:EVM:CCAR0:PDCC1?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`OFF`
State Saved	Yes

RNTI

Specifies the user RNTI of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:RNTI <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:RNTI?`
Example	`:EVM:CCAR0:PDCC1:RNTI 1` `:EVM:CCAR0:PDCC1:RNTI?`
Couplings	Max value for n = 16 and Min value for n = 1 When RNTI Type is P-RNTI, RNTI will be fixed to 65534; if RNTI Type is SI_RNTI, RNTI is fixed to 65535 For other RNTI types, Max value is 65533. If RNTI > 65533 for these RNTI Types, RNTI will be set to 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

RNTI Type

Specifies the user RNTI Type of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:RNTI:TYPE CRNTI | CSRNTI | MCSCRNTI | PRNTI | SIRNTI | RARNTI | TCRNTI` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:RNTI:TYPE?`
Example	`:EVM:CCAR0:PDCC1:RNTI:TYPE CSRNTI` `:EVM:CCAR0:PDCC1:RNTI:TYPE?`
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub-opcode that is out of range, this results in an error message
Preset	`CRNTI`
State Saved	Yes

BWP

Specifies the BWP of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:BWP BWP0 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:BWP?`
Example	`:EVM:CCAR0:PDCC1:BWP BWP1` `:EVM:CCAR0:PDCC1:BWP?`
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub-opcode that is out of range, this results in an error message

Preset	BWP1
State Saved	Yes
Range	Initial BWP|BWP 01|BWP 02|BWP 03|BWP 04

CORESET

Sets the CORESET in selected BWP for the PDCCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:COReset:ID C0 | C1 | C2` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:COReset:ID?`
Example	`:EVM:CCAR0:PDCC1:COR:ID C0` `:EVM:CCAR0:PDCC1:COR:ID?`
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub-opcode that is out of range, this results in an error message It is coupled with CORESET Index
Preset	C0
State Saved	Yes
Range	CORESET 0 | CORESET 1 | CORESET 2

CORESET Index (Remote Command only)

Sets the CORESET index in selected BWP for the PDCCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh1|16:COReset <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh1|16:COReset?`
Example	`:EVM:CCAR0:PDCC1:COR 0` `:EVM:CCAR0:PDCC1:COR?`
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub-opcode that is out of range, this results in an error message Coupled with PDCCH CORESET
Preset	0
State Saved	Yes
Min	0
Max	2

Allocated Slots

Specifies the Slots allocated to PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:PDCC1:SLOT:ALL "2:9"` `:EVM:CCAR0:PDCC1:SLOT:ALL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"2:9,12:19"
State Saved	Yes

Periodicity

Specifies the periodicity of PDCCH transmission.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:PERiodicity <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:PERiodicity?`
Example	`:EVM:CCAR0:PDCC1:PER 2` `:EVM:CCAR0:PDCC1:PER?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	4

First Symbol

Specifies the First Symbol of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PDCC1:SYMB:FIRS 4` `:EVM:CCAR0:PDCC1:SYMB:FIRS?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

Preset	0
State Saved	Yes
Min	0
Max	13

Antenna Port

Specifies the Antenna Port of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:PDCC1:ANT:PORT 2000` `:EVM:CCAR0:PDCC1:ANT:PORT?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2000
State Saved	Yes
Min	2000
Max	2011

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:ANTenna:PORT:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:ANTenna:PORT:THReshold?`
Example	`:EVM:CCAR0:PDCC1:ANT:PORT:THR 0` `:EVM:CCAR0:PDCC1:ANT:PORT:THR?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

Power Boosting

Specifies Power Boost value for the PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:POWer?`
Example	`:EVM:CCAR0:PDCC1:POW 0` `:EVM:CCAR0:PDCC1:POW?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Search Space

Specifies the Search Space type of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SEARch:SPACe UESPecific | COMMon` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:SEARch:SPACe?`
Example	`:EVM:CCAR0:PDCC1:SEAR:SPAC COMM` `:EVM:CCAR0:PDCC1:SEAR:SPAC?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`UESPecific`
State Saved	Yes
Range	UE Specific | Common

Aggregation Level

Specifies the Aggregation Level of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:AGGRegation L1 | L2 | L4 | L8 | L16` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:AGGRegation?`
Example	`:EVM:CCAR0:PDCC1:AGGR L2` `:EVM:CCAR0:PDCC1:AGGR?`
Couplings	Max value for n = 16 and Min value for n = 1

	The Aggregation Level should NOT be greater than the CORESET RBG number. For example, if CORESET has 2 RGBs, only aggregation level 1 and aggregation level 2 are available Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`L4`
State Saved	Yes
Range	1|2|4|8|16

Num Of Candidates

Specifies the number of PDCCH candidates.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:NUMBer?`
Example	`:EVM:CCAR0:PDCC:CAND:NUMB 3` `:EVM:CCAR0:PDCC:CAND:NUMB?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message If search space is common, and Num Of candidates will be fixed according to the Aggregation Level in "CCE Aggregation Levels and Num of Candidates" on page 1996
Preset	4
State Saved	Yes
Range	1,2,3,4,5,6,8
Min	1
Max	8

CCE Aggregation Levels and Num of Candidates

Maximum number of PDCCH candidates per CCE aggregation level for common search space sets configured by searchSpace-SIB1

CCE Aggregation Level	Number of Candidates
4	4
8	2
16	1

Candidate Index

Specifies the index of PDCCH candidate. Note when Candidate Index is -1, you can input CCE Offset manually, this is default PDCCH allocation configure mode. In this mode, Search Space and Num Of Candidates will become invalid.

When Candidate Index > -1, you can set Search Space, Number of Candidates and Candidate Index. In this mode, CCE Offset will become display only.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:INDex?`
Example	`:EVM:CCAR0:PDCC1:CAND:IND 0` `:EVM:CCAR0:PDCC1:CAND:IND?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	Candidates Number - 1

PDCCH CCE Offset

Specifies the CCE Offset of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CCE:OFFSet <String>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CCE:OFFSet?`
Example	`:EVM:CCAR0:PDCC1:CCE:OFFSet "2"` `:EVM:CCAR0:PDCC1:CCE:OFFSet?`
Couplings	Max value for n = 16 and Min value for n = 1 It is display only if the PDCCH Candidate Index is NOT -1: – The CCE Offset result depends on CORESET and PDCCH parameters, see 38.211 for details When PDCCH Candidate Index is -1, you can input the CCE Offset: – If the string is not valid for numeric input, it will be reset to its default value – If some values are out of range (greater than the max CCE Offset), it will be adjusted accordingly: maxCceOffset = ((coresetRbNum / 6) * coresetSymLen / aggLevel - 1) * aggLevel; – If the input length is longer than allocated slots length, the values after allocated slots length will be discarded – If the input length is shorter than allocated slots length, the last value will be used for slots after input length Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0"
State Saved	Yes

DCI Size

Specifies the DCI Size of PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DCI:SIZE <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DCI:SIZE?`
Example	`:EVM:CCAR0:PDCC1:DCI:SIZE 10` `:EVM:CCAR0:PDCC1:DCI:SIZE?`
Preset	20
State Saved	Yes
Min	1
Max	CCE Number * 108 - 24

DMRS Scrambling ID

Specifies the PDCCH DMRS Scrambling ID.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:SCID?`
Example	`:EVM:CCAR0:PDCC:DMRS:SCID 0` `:EVM:CCAR0:PDCC:DMRS:SCID?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PDCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:POWer?`
Example	`:EVM:CCAR0:PDCC1:DMRS:POW 0` `:EVM:CCAR0:PDCC1:DMRS:POW?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Num Of Candidates (Aggregation Level 1)

Specifies the Num Of Candidates (Aggregation Level 1) of PDCCH configuration for auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel1 <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel1?`
Example	`:EVM:CCAR0:PDCC1:CAND:ALEV1 1` `:EVM:CCAR0:PDCC1:CAND:ALEV1?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 2)

Specifies the Num Of Candidates (Aggregation Level 2) of PDCCH configuration for auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel2 <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel2?`
Example	`:EVM:CCAR0:PDCC1:CAND:ALEV2 1` `:EVM:CCAR0:PDCC1:CAND:ALEV2?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 4)

Specifies the Num Of Candidates (Aggregation Level 4) of PDCCH configuration for auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel4 <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel4?`
Example	`:EVM:CCAR0:PDCC1:CAND:ALEV4 1` `:EVM:CCAR0:PDCC1:CAND:ALEV4?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 8)

Specifies the Num Of Candidates (Aggregation Level 8) of PDCCH configuration for auto detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel8 <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel8?`
Example	`:EVM:CCAR0:PDCC1:CAND:ALEV8 1` `:EVM:CCAR0:PDCC1:CAND:ALEV8?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 16)

Specifies the Num Of Candidates (Aggregation Level 16) of PDCCH configuration for auto detection.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel16 <int> [:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:CANDidate:ALEVel16?
Example	:EVM:CCAR0:PDCC1:CAND:ALEV16 1 :EVM:CCAR0:PDCC1:CAND:ALEV16?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

PDSCH

View and configure the PDSCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add PDSCH (GUI only)

Pressing this control inserts a new PDSCH allocation into list, the maximum number of PDSCH allocations is 250.

See "Effective PDSCH Number (Remote Command only)" on page 2002 for SCPI to provide similar function.

Delete PDSCH

Pressing this control deletes selected PDSCH allocation from list.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DELete:PDSCh <integer>
Example	:EVM:CCAR0:DEL:PDSC 1

Clear All (GUI only)

Pressing this control deletes all PDSCH from list.

See "Effective PDSCH Number (Remote Command only)" on page 2002 for SCPI to provide similar function.

Effective PDSCH Number (Remote Command only)

Specifies how many PDSCH configurations are effective, this SCPI only command is used to provide similar function as “Add PDSCH” and “Delete PDSCH”.

Note all 250 PDSCH configurations can be modified through SCPI, but ineffective PDSCH configurations (index > Effective PDSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PDSCh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PDSCh?`
Example	`:EVM:CCAR0:NUMB:PDSC 2` `:EVM:CCAR0:NUMB:PDSC?`
Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	250

PDSCH Parameter Group (Display only)

Allows you to configure the PDSCH parameters.

This control is for UI display only. You can select one of the following groups:

State

Enables or disables selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>[:STATe]?
Example	:EVM:CCAR0:PDSC1 OFF :EVM:CCAR0:PDSC1?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	ON
State Saved	Yes

RNTI

Specifies the user RNTI of selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RNTI <int> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RNTI?
Example	:EVM:CCAR0:PDSC1:RNTI 1 :EVM:CCAR0:PDSC1:RNTI?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

n_ID

Specifies n_ID for selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:NID <integer> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:NID?
Example	:EVM:CCAR0:PDSC1:NID 0 :EVM:CCAR0:PDSC1:NID?
Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

MCS Table

Specifies which MCS table is used to configure MCS for selected PDSCH configuration. See 38.214 clause 5.1.3 for complete MCS table.

- Table 1 – Table 5.1.3.1-1 (64QAM)
- Table 2 – Table 5.1.3.1-2 (256QAM)
- Table 3 – Table 5.1.3.1-3 (64QAMLowSE)
- Table 4 – Table 5.1.3.1-4 (1024QAM)

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:MCS:TABLe TABLe1 | … | TABLe4 [:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:MCS:TABLe?
Example	:EVM:CCAR0:PDSC1:MCS:TABL TABL2 :EVM:CCAR0:PDSC1:MCS:TABL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	TABL1
State Saved	Yes
Range	64QAM | 256QAM | 64QAMLowSE | 1024QAM

MCS

Specifies the MCS index for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:MCS?`
Example	`:EVM:CCAR0:PDSC1:MCS 1` `:EVM:CCAR0:PDSC1:MCS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When MCS is -1, you can specify Modulation manually, MCS table and TB Size will be invalid and no decoding results for this PDSCH
Preset	0
State Saved	Yes
Min	-1
Max	31

Modulation

Display the modulation for selected PDSCH configuration.

The modulation is derived from MCS Table and MCS settings 38.214 clause 5.1.3.

Modulation Oder = 2, Modulation = QPSK

Modulation Order = 4, Modulation = 16QAM

Modulation Order = 6, Modulation = 64QAM

Modulation Order = 8, Modulation = 256QAM

See "More Information" on page 2007.

Only when MCS = -1, you can specify Modulation manually (including Custom IQ mode). Custom IQ mode means customized constellation definition recalled from file.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:MODulation QPSK	QAM16	QAM64	QAM256	QAM1024` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:MODulation?`
Example	`:EVM:CCAR0:PDSC1:MOD QPSK` `:EVM:CCAR0:PDSC1:MOD?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

	Display only when MCS is not -1
Preset	`QPSK`
State Saved	Yes
Range	`QPSK|16QAM|64QAM|256QAM|1024QAM`

RV Index

Specifies the RV index for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RV <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RV?`
Example	`:EVM:CCAR0:PDSC1:RV 1` `:EVM:CCAR0:PDSC1:RV?`
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	-1
Max	3

TB Scaling Factor S

Specifies the TB Scaling Factor (S) to calculate TB size.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:TB:SFACtor S1 | SDOT5 | SDOT25` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:TB:SFACtor?`
Example	`:EVM:CCAR0:PDSC1:TB:SFAC SDOT5` `:EVM:CCAR0:PDSC1:TB:SFAC?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`S1`
State Saved	Yes
Range	1 | 0.5 | 0.25

TB Size (Display Only)

Display TB Size for the selected PDSCH configuration.

Rate Match Coreset

Select the CORESET index of current BWP for PDSCH rate matching.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMATch:COReset NONE | CORESET0 | CORESET1 | CORESET2 [:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:RMATch:COReset?
Example	:EVM:CCAR0:PDSC1:RMAT:COR CORESET0 :EVM:CCAR0:PDSC1:RMAT:COR?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
State Saved	Yes
Range	None | CORESET0 | CORESET1 | CORESET2

Precoder Group Size

Select PRB group size for precoding matrix.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PBGRoup RB2 | RB4 | WIDE | USER [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PBGRoup?
Example	:EVM:CCAR0:PDSC1:PBGR RB4 :EVM:CCAR0:PDSC1:PBGR?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	WIDE
State Saved	Yes
Range	2 RB | 4 RB | Wideband | User Defined

User Define Size

Set user defined value when Precoder Group Size = User Define.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PBGRoup:USER <integer> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PBGRoup:USER?
Example	:EVM:CCAR0:PDSC1:PBGR:USER 1 :EVM:CCAR0:PDSC1:PBGR:USER?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message This parameter is only visible when Precoder Group Size = User Define
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected BWP

BWP

Specifies the BWP of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:BWP BWP0 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:BWP?`
Example	`:EVM:CCAR0:PDSC1:BWP BWP1` `:EVM:CCAR0:PDSC1:BWP?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`BWP1`
State Saved	Yes
Range	Initial BWP|BWP1|BWP2|BWP3|BWP4

RA Type

Specifies RA Type for the selected PDSCH configuration, there are two methods to allocate RB resources:

Type 0: RBG Size and Allocated RBG

Type 1: RB Offset and RB Number

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RATYpe TYPE0 | TYPE1` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RATYpe?`
Example	`:EVM:CCAR0:PDSC1:RATY TYPE0` `:EVM:CCAR0:PDSC1:RATY?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`TYPE1`
State Saved	Yes
Range	`Type0|Type1`

RBG Size

Specifies RBG Size for the selected PDSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RBG:SIZE RB2 | RB4 | RB8 | RB16` `[:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:RBG:SIZE?`

Example	:EVM:CCAR0:PDSC1:RBG:SIZE RB16 :EVM:CCAR0:PDSC1:RBG:SIZE?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message Available values are determined by BWP size according to table 5.1.2.2.1-1 in TS38.214:

Bandwidth Part Size	Configuration 1	Configuration 2
1 – 36	2	4
37 – 72	4	8
73 – 144	8	16
145 – 275	16	16

Preset	RB16
State Saved	Yes
Range	2 RB|4 RB|8 RB|16 RB

Allocated RBGs

Specifies the RBGs allocated to selected PDSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RBG:ALLocated <string> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RBG:ALLocated?
Example	:EVM:CCAR0:PDSC1:RBG:ALL "0:15" :EVM:CCAR0:PDSC1:RBG:ALL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0:15"
State Saved	Yes

RB Offset

Specifies the RB Offset of selected PDSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RB:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RB:OFFSet?
Example	:EVM:CCAR0:PDSC1:RB:OFFSet 0 :EVM:CCAR0:PDSC1:RB:OFFSet?
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP
Min	0
Max	RB Number of selected BWP – PDSCH RB Number

RB Number

Specifies the RB Number of selected PDSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RB:NUMBer?`
Example	`:EVM:CCAR0:PDSC1:RB:NUMB 273` `:EVM:CCAR0:PDSC1:RB:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	273
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

VRB to PRB Mapping

Specifies VRB to PRB mapping type: Non-Interleaved \| Interleaved

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:VPMapping INTerleave | NONE` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:VPMapping?`
Example	`:EVM:CCAR0:PDSC1:VPM INT` `:EVM:CCAR0:PDSC1:VPM?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
State Saved	Yes
Range	Interleaved | Non-interleaved

VRB to PRB Mapping CORESET

Specifies the VRB to PRB Mapping CORESET of selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:VPMapping:COReset CORESET0 | NONE [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:VPMapping:COReset?
Example	:EVM:CCAR0:PDSC1:VPM:COR NONE :EVM:CCAR0:PDSC1:VPM:COR?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When the selected BWP is not initial BWP (BWP0), the CORESET0 should be unavailable When VRB to PRB Mapping is interleaved, this key should be invisible
State Saved	Yes
Range	CORESET0|None

VRB to PRB Interleaver

Specifies VRB to PRB Interleaver bundle size.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:VPMapping:SIZE N2 | N4 [:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:VPMapping:SIZE?
Example	:EVM:CCAR0:PDSC1:VPM:SIZE 4 :EVM:CCAR0:PDSC1:VPM:SIZE?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When VRB to PRB Mapping is Non-Interleaved, this key should be invisible
Preset	2
State Saved	Yes
Range	2 | 4

Allocated Slots

Specifies the slots allocated to selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SLOT:ALLocated <string> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SLOT:ALLocated?
Example	:EVM:CCAR0:PDSC1:SLOT:ALL "2:9" :EVM:CCAR0:PDSC1:SLOT:ALL?
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"2:9,12:19"
State Saved	Yes

Slot Format

Specifies the Slot Format of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SLOT:FORMat SF0 | SF1 | … | SF55` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SLOT:FORMat?`
Example	`:EVM:CCAR0:PDSC1:SLOT:FORM SF4` `:EVM:CCAR0:PDSC1:SLOT:FORM?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`SF0`
State Saved	Yes

First Symbol

Specifies the First Symbol of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PDSC1:SYMB:FIRS 4` `:EVM:CCAR0:PDSC1:SYMB:FIRS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	13

Last Symbol

Specifies the Last Symbol of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SYMBol:LAST <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SYMBol:LAST?`
Example	`:EVM:CCAR0:PDSC1:SYMB:LAST 4`

	:EVM:CCAR0:PDSC1:SYMB:LAST?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	13
State Saved	Yes
Min	First Symbol
Max	13

Periodicity

Specifies the periodicity of PDSCH transmission.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PERiodicity <int> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PERiodicity?
Example	:EVM:CCAR0:PDSC1:PER 2 :EVM:CCAR0:PDSC1:PER?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	4

DMRS Configuration

Specifies DMRS Configuration for selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:CONFigure TYPE1 | TYPE2 [:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:DMRS:CONFigure?
Example	:EVM:CCAR0:PDSC1:DMRS:CONF TYPE1 :EVM:CCAR0:PDSC1:DMRS:CONF?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	TYPE1
State Saved	Yes
Range	Type 1 | Type2

PDSCH Mapping

Specifies PDSCH Mapping for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PDSCh:MAP TYPEA | TYPEB` `[:SENSe]:EVM:CCARrier0 | … | 15:PDSCh<n>:PDSCh:MAP?`
Example	`:EVM:CCAR0:PDSC1:PDSC:MAP TYPEA` `:EVM:CCAR0:PDSC1:PDSC:MAP?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`TYPEA`
State Saved	Yes
Range	`Type A | Type B`

DMRS-typeA-pos

Specifies the DMRS-typeA-pos value for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:TAPos <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:TAPos?`
Example	`:EVM:CCAR0:PDSC1:DMRS:TAP 2` `:EVM:CCAR0:PDSC1:DMRS:TAP?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	2
State Saved	Yes
Min	2
Max	3

DMRS Max Len

Specifies DMRS Max Len value for the selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:MLEN <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:MLEN?`
Example	`:EVM:CCAR0:PDSC1:DMRS:MLEN 2` `:EVM:CCAR0:PDSC1:DMRS:MLEN?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

Preset	1
State Saved	Yes
Min	1
Max	2

Front-load Symbols

Specifies DMRS Duration for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:DURation SINGle | DOUBle` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:DURation?`
Example	`:EVM:CCAR0:PDSC1:DMRS:DUR DOUB` `:EVM:CCAR0:PDSC1:DMRS:DUR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When Antenna Port Index is -1, this parameter will be enabled and you need to ensure the settings are valid according to TS38.212, table 7.3.1.2.2-1 to table 7.3.1.2.2-4, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4
Preset	`SINGle`
Range	1 | 2

DMRS-add-pos

Specifies the DMRS-add-pos value for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:ADDPos <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:ADDPos?`
Example	`:EVM:CCAR0:PDSC1:DMRS:ADDP 2` `:EVM:CCAR0:PDSC1:DMRS:ADDP?`
Couplings	Max value for n = 250 and Min value for n = 1 See 3GPP TS 38.211 Table 7.4.1.1.2-3/4 for coupling rule (https://-portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3213) Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	3

n_SCID

Specifies the nSCID value for selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SCIDn <integer> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SCIDn?
Example	:EVM:CCAR0:PDSC1:SCID 1 :EVM:CCAR0:PDSC1:SCID?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1

DMRSdownlink-r16

Set whether higher-layer parameter DMRSdownlink-r16 is provided.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:R16[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:R16[:STATe]?
Example	:EVM:CCAR0:PDSC1:DMRS:R16 OFF :EVM:CCAR0:PDSC1:DMRS:R16?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes

N_ID_0

Specifies the N_ID_0 value for selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:NID0 <integer> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:NID0?
Example	:EVM:CCAR0:PDSC1:DMRS:NID0 1 :EVM:CCAR0:PDSC1:DMRS:NID0?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

	When set to -1, the N_ID_0 value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

N_ID_1

Specifies the N_ID_1 value for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:NID1 <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:NID1?`
Example	`:EVM:CCAR0:PDSC1:DMRS:NID1 1` `:EVM:CCAR0:PDSC1:DMRS:NID1?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When set to -1, the N_ID_0 value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

N_ID_nSCID (SCPI only)

Specifies the N_ID_nSCID value for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SCIDn:NID <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:SCIDn:NID?`
Example	`:EVM:CCAR0:PDSC1:SCID:NID 1` `:EVM:CCAR0:PDSC1:SCID:NID?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When set to -1, the N_ID_nSCID value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRS Mapping Reference

Specifies the DMRS mapping reference of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:MREFerence CORESET0	CRB0` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:MREFerence?`
Example	`:EVM:CCAR0:PDSC1:DMRS:MREF CRB0` `:EVM:CCAR0:PDSC1:DMRS:MREF?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When the selected BWP is not initial BWP (BWP0), the CORESET0 should be unavailable
Preset	`CRB0`
State Saved	Yes
Range	`CORESET0|CRB0`

Antenna Port/Reference Antenna Port

Specifies the Antenna Port in SISO mode and Reference Antenna Port in MIMO/MISO modes of selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:PDSC1:ANT:PORT 1000` `:EVM:CCAR0:PDSC1:ANT:PORT?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message It is coupled with Antenna Port Index, DMRS Config Type, DMRS Max Len and Rank See table 7.3.1.2.2-1, 7.3.1.2.2-2, 7.3.1.2.2-3, 7.3.1.2.2-4 in 3GPP TS38.212. The Antenna Port should be related with the “DMRS Port” + 1000 column in the table
Preset	1000
State Saved	Yes
Min	1000
Max	1011

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:ANTenna:PORT:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:ANTenna:PORT:THReshold?`
Example	`:EVM:CCAR0:PDSC1:ANT:PORT:THR 0` `:EVM:CCAR0:PDSC1:ANT:PORT:THR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

Antenna Port Index

Specifies Antenna Port Index for the selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:ANTenna:PORT:INDex <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n:ANTenna:PORT:INDex?`
Example	`:EVM:CCAR0:PDSC1:ANT:PORT:IND 1` `:EVM:CCAR0:PDSC1:ANT:PORT:IND?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Range	It is coupled with DMRS Config Type, DMRS Max Len . See table 7.3.1.2.2-1, 7.3.1.2.2-2, 7.3.1.2.2-3, 7.3.1.2.2-4 in 3GPP TS38.212
Min	-1
Max	63

Table 7.3.1.2.2-1: Antenna port(s) (1000 + DMRS port), DL-DMRS-config-type=1, DL-DMRS-max-len = 1

One Codeword:
Codeword 0 enabled,
Codeword 1 disabled

Value	Number of DMRS CDM group(s) without data	DMRS port(s)

DMRS Port (Display Only)

Display available DMRS Ports according to Antenna Port Index for the selected PDSCH configuration.

Codewords Number

Specifies Number of Codewords for the selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:CWORd:NUMBer <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:CWORd:NUMBer?`
Example	`:EVM:CCAR0:PDSC1:CWOR:NUMB 2` `:EVM:CCAR0:PDSC1:CWOR:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When DMRS Configuration is Type 1, 2 is only available when DMRS Max Len is 2 There is no limitation when DMRS Configuration is Type 2
Preset	1
State Saved	Yes
Range	1|2
Min	1
Max	2

DMRS CDM group w.o. data

Specifies DMRS CDM groups without data for the selected PDSCH configuration.

It is coupled with DMRS Config Type, DMRS Max Len . See table 7.3.1.2.2-1, 7.3.1.2.2-2, 7.3.1.2.2-3, 7.3.1.2.2-4 in 3GPP TS38.212. The column “Number of DMRS CDM group(s) without data” specifies the value for this result.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:CDMGroups:COUNt <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:CDMGroups:COUNt?`
Example	`:EVM:CCAR0:PDSC1:DMRS:CDMG:COUN 2` `:EVM:CCAR0:PDSC1:DMRS:CDMG:COUN?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message When Antenna Port Index is -1, this parameter become settable, you need to make sure valid setting according TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4
Preset	1
State Saved	Yes
Min	1
Max	2 for DMRS Config Type 1, 3 for DMRS Config Type 2

DMRS-DL-Alt

Indicates whether the 5GNR UE supports the alternative additional DMRS position for co-existence with LTE CRS

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:DALT OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:DALT?`
Example	`:EVM:CCAR0:PDSC1:DMRS:DALT OFF` `:EVM:CCAR0:PDSC1:DMRS:DALT?`
Couplings	Max value for n = 250 and Min value for n = 1
Preset	`OFF`
State Saved	Yes

PTRS Enable

Enable or disable PTRS for selected PDSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS[:STATe]?`
Example	`:EVM:CCAR0:PDSC1:PTRS OFF` `:EVM:CCAR0:PDSC1:PTRS?`

Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`OFF`
State Saved	Yes

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:K K2 | K4` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:K?`
Example	`:EVM:CCAR0:PDSC1:PTRS:K K2` `:EVM:CCAR0:PDSC1:PTRS:K?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`K2`
State Saved	Yes
Range	2|4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:L L1 | L2 | L4` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:L?`
Example	`:EVM:CCAR0:PDSC1:PTRS:L L2` `:EVM:CCAR0:PDSC1:PTRS:L?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`L1`
State Saved	Yes
Range	1|2|4

PTRS RE Offset

Specifies PTRS RE Offset for selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:RE:OFFSet BIT00 | BIT01 | BIT10 | BIT11`

	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:RE:OFFSet?
Example	:EVM:CCAR0:PDSC1:PTRS:RE:OFFS BIT00 :EVM:CCAR0:PDSC1:PTRS:RE:OFFS?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	BIT00
State Saved	Yes
Range	00|01|10|11

PDSCH Power Boosting

Specifies Power Boost value for the selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:POWer?
Example	:EVM:CCAR0:PDSC1:POW 0 :EVM:CCAR0:PDSC1:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PDSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:POWer?
Example	:EVM:CCAR0:PDSC1:DMRS:POW 0 :EVM:CCAR0:PDSC1:DMRS:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message It is coupled with “PDSCH DMRS CDM group w.0. data” dmrsBoostingValue = 10 * (1.0 - Math.Log(DrmsCdmGroup))
Preset	0 dB
State Saved	Yes

Min	-100
Max	100

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PDSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:POWer?`
Example	`:EVM:CCAR0:PDSC1:PTRS:POW 0` `:EVM:CCAR0:PDSC1:PTRS:POW?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Precoder Matrix (Downlink)

View and configure the Precoder Matrix parameters.

Reset Selected (GUI only)

Reset W matrix for selected precoder block.

Reset All (GUI only)

Reset W matrix for all precoder blocks.

Reset Matrix (Remote Command only)

Resets the specified precoder matrix. To reset *all* matrices, specify the value -1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh1|250:PMATrix:RESet<integer>`
Example	`:EVM:CCAR0:PDSC1:PMAT:RES 2`
State Saved	Yes

Min	`-1`
Max	PRBG number of each PDSCH allocation

PDSCH (GUI only)

Allows you to choose the PDSCH allocation to configure its W Matrix

"W Matrix" on page 2035 "I Value (GUI only)" on page 2035 "Q Value (GUI only)" on page 2035

W Matrix

Specifies the W Matrix for selected precoder block.

Example: 1,1,0,0,0,0,1,1 represent below matrix

1+j , 0

0 , 1+j

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PMATrix:PBGroup<m> <string>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PMATrix:PBGroup<m>?`
Example	`:EVM:CCAR0:PDSC1:PMAT:PBG1 "1,0,0,0,1,0,0,0"` `:EVM:CCAR0:PDSC1:PMAT:PBG1?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 275 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
State Saved	Yes

I Value (GUI only)

Specifies I value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Q Value (GUI only)

Specifies Q value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Rate Matching Pattern (Downlink)

View and configure the Rate Matching Pattern parameters.

Add Rate Matching Pattern (GUI only)

Inserts a new PDSCH Rate Matching Pattern into list. The maximum number of PDSCH Rate Matching Pattern is 8.

Delete Rate Matching Pattern

Deletes the selected PDSCH Rate Matching Pattern from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh1|250:RMPattern:DELete <integer>`
Example	`:EVM:CCAR0:PDSC1:RMP:DEL 1`

Clear All (GUI only)

Deletes *all* PDSCH Rate Matching Patterns from list.

For a remote command that provides a similar function, see "Effective PDSCH Number (Remote Command only)" on page 2002.

Effective Rate Matching Pattern (Remote Command only)

Specifies how many PDSCH Rate Matching Patterns are effective. This remote command provides similar functionality to “Add Rate Matching Pattern” and “Delete Rate Matching Pattern”.

Note that all 8 PDSCH Rate Matching Patterns can be modified through SCPI, but ineffective PDSCH Rate Matching Pattern (index > Effective PDSCH Rate Matching Pattern Number) will not be included in the measurement, no matter whether it is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern:NUMBer?`
Example	`:EVM:CCAR0:PDSC1:RMP:NUMB 2` `:EVM:CCAR0:PDSC1:RMP:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

Preset	0
State Saved	Yes
Min	0
Max	8

PDSCH (GUI only)

Allows you to choose the PDSCH allocation to configure its Rate Matching Pattern.

"State" on page 2037 "Level" on page 2037 "SCS" on page 2038 "RB Bitmap Index" on page 2038
"Symbol Bitmap Span" on page 2038 "Symbol Bitmap" on page 2039 "Periodicity" on page 2039 "Periodicity Pattern Bitmap" on page 2039

State

Enables or disables the selected PDSCH Rate Matching Pattern.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>[:STATe]?`
Example	`:EVM:CCAR0:PDSC1:RMP1 OFF` `:EVM:CCAR0:PDSC1:RMP1?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes

Level

Selects the level for PDSCH Rate Matching Pattern.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:LEVel BWP | CELL` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:LEVel?`
Example	`:EVM:CCAR0:PDSC1:RMP1:LEV CELL` `:EVM:CCAR0:PDSC1:RMP1:LEV?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	BWP
State Saved	Yes
Range	BWP|Cell

SCS

Specifies the SCS for PDSCH Rate Matching Pattern when Level = Cell Level. Only valid SCSs with the Freq Range are available.

– For Freq Range 1: SCS15K, SCS30K and SCS60K

– For Freq Range 2: SCS60K, SCS120K and SCS240K

When Level = BWP level, SCS is same as PDSCH allocation selected.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS240K` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SCS?`
Example	`:EVM:CCAR0:PDSC1:RMP1:SCS SCS30K` `:EVM:CCAR0:PDSC1:RMP1:SCS?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`SCS30K`
State Saved	Yes
Range	`15K|30K|60K|120K|240K`

RB Bitmap Index

Specifies the RB Bitmap Index to selected PDSCH Rate Matching Pattern

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:RB:INDex <string>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:RB:INDex?`
Example	`:EVM:CCAR0:PDSC1:RMP1:RB:IND "0:272"` `:EVM:CCAR0:PDSC1:RMP1:RB:IND?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0:272"
State Saved	Yes

Symbol Bitmap Span

Selects the Symbol Bitmap Span for PDSCH Rate Matching Pattern.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SYMBol:BSPan SLOT1 | SLOT2` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SYMBol:BSPan?`
Example	`:EVM:CCAR0:PDSC1:RMP1:SYMB:BSPan SLOT1` `:EVM:CCAR0:PDSC1:RMP1:SYMB:BSPan?`

Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	One Slot
State Saved	Yes
Range	One Slot | Two Slots

Symbol Bitmap

Specifies the Symbol Bitmap for the selected PDSCH Rate Matching Pattern. The length should match the Symbol Bitmap Span:

- 14 bit when Symbol Bitmap Span = One Slot
- 28 bit when Symbol Bitmap Span = Two Slots

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SYMBol:BITMap <string>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:SYMBol:BITMap?`
Example	`:EVM:CCAR0:PDSC1:RMP1:SYMB:BITM "0000"` `:EVM:CCAR0:PDSC1:RMP1:SYMB:BITM?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0000"
State Saved	Yes

Periodicity

Selects the Periodicity for Symbol Bitmap

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:PERiodicity <int>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:PERiodicity?`
Example	`:EVM:CCAR0:PDSC1:RMP1:PER 5` `:EVM:CCAR0:PDSC1:RMP1:PER?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message Note that if an invalid value is entered, it will be automatically adjusted
Preset	1
State Saved	Yes
Range	1 | 2 | 4 | 5 | 8 | 10 | 20 | 40

Periodicity Pattern Bitmap

Specifies the Periodicity Pattern Bitmap to selected PDSCH Rate Matching Pattern. The length should match the Periodicity.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:PERiodicity:BITMap <string>` `[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:RMPattern<m>:PERiodicity:BITMap?`
Example	`:EVM:CCAR0:PDSC1:RMP1:PER:BITM "1"` `:EVM:CCAR0:PDSC1:RMP1:PER:BITM?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"1"
State Saved	Yes

CSI-RS

View and configure the CSI-RS parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add CSI-RS (GUI only)

Pressing this control inserts a new CSI-RS configuration into list, the maximum number of CSI-RS configurations is 8.

See "Effective CSI-RS Number (Remote Command only)" on page 2041 for SCPI to provide similar function.

Delete CSI-RS

Pressing this control deletes selected CSI-RS configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:CSIRs <integer>`
Example	`:EVM:CCAR0:DEL:CSIR 1`

Clear All (GUI only)

Pressing this control deletes all CSI-RS configuration from list.

See "Effective CSI-RS Number (Remote Command only)" on page 2041 for SCPI to provide similar function.

Effective CSI-RS Number (Remote Command only)

Specifies how many CSI-RS configurations are effective, this SCPI only command is used to provide similar function as “Add CSI-RS” and “Delete CSI-RS”.

Note all 8 CSI-RS configurations can be modified through SCPI, but ineffective CSI-RS configurations (index > CSI-RS Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:CSIRs <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:CSIRs?`
Example	`:EVM:CCAR0:NUMB:CSIR 2` `:EVM:CCAR0:NUMB:CSIR?`
Preset	1
State Saved	Yes
Min	0
Max	8

CSI-RS Parameter Group (Display only)

Allows you to configure the allocation and power parameters for CSI-RS.

This control is for UI display only.

General Settings

"State" on page 2042 | "Zero Power" on page 2042 | "n_ID" on page 2042 | "Power Boosting" on page 2043

Type (Display Only)" on page 2049 2050

State

Enable or disable CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:STATe?`
Example	`:EVM:CCAR0:CSIR1:STAT OFF` `:EVM:CCAR0:CSIR1:STAT?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes

Zero Power

Enable or disable zero power mode of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ZPOWer OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ZPOWer?`
Example	`:EVM:CCAR0:CSIR1:ZPOW OFF` `:EVM:CCAR0:CSIR1:ZPOW?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes

n_ID

Specifies the user n_ID of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:NID <int>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:NID?`
Example	`:EVM:CCAR0:CSIR1:NID 1` `:EVM:CCAR0:CSIR1:NID?`

Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

Power Boosting

Specifies Power Boost value for the CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:POWer?`
Example	`:EVM:CCAR0:CSIR1:POW 0` `:EVM:CCAR0:CSIR1:POW?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:BWP BWP0 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:BWP?`
Example	`:EVM:CCAR0:CSIR1:BWP BWP1` `:EVM:CCAR0:CSIR1:BWP?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	BWP1
State Saved	Yes
Range	Initial BWP|BWP1|BWP2|BWP3|BWP4

RB Offset

Specifies the RB Offset of CSI-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:RB:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:RB:OFFSet?
Example	:EVM:CCAR0:CSIR1:RB:OFFSet 0 :EVM:CCAR0:CSIR1:RB:OFFSet?
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – CSI-RS RB Number

RB Number

Specifies the RB Number of CSI-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:RB:NUMBer <integer> [:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:RB:NUMBer?
Example	:EVM:CCAR0:CSIR1:RB:NUMB 272 :EVM:CCAR0:CSIR1:RB:NUMB?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message This value must be a multiple of 4
Preset	272
State Saved	Yes
Min	1
Max	RB Number of selected BWP (must be a multiple of 4)

Allocated Slots

Specifies the Slots allocated to CSI-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SLOT:ALLocated <string> [:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SLOT:ALLocated?
Example	:EVM:CCAR0:CSIR1:SLOT:ALL "2:9" :EVM:CCAR0:CSIR1:SLOT:ALL?
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"2"
State Saved	Yes

First Symbol

Specifies the start symbol of the first CDM group of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SYMBol:FIRSt[:ONE] <integer>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SYMBol:FIRSt[:ONE]?`
Example	`:EVM:CCAR0:CSIR1:SYMB:FIRS 4` `:EVM:CCAR0:CSIR1:SYMB:FIRS?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	12
State Saved	Yes
Min	0
Max	13

First Symbol 2

Specifies the start symbol of the second CDM group of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs1|8:SYMBol:FIRSt:TWO <integer>`
	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs1|8:SYMBol:FIRSt:TWO?`
	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SYMBol:FIRSt:TWO <integer>`
	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:SYMBol:FIRSt:TWO?`

Example	`:EVM:CCAR0:CSIR1:SYMB:FIRS:TWO 4` `:EVM:CCAR0:CSIR1:SYMB:FIRS:TWO?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message This parameter is only visible when Row Index of CSI-RS Location Table is 13/14/16/17. Also the |First symbol – First symbol 2| >= 2
Preset	10
State Saved	Yes
Min	2
Max	12

Freq Domain Bitmap

Specifies the frequency domain allocation bitmap of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:FREQuency:BITMap <string>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:FREQuency:BITMap?`
Example	`:EVM:CCAR0:CSIR1:FREQ:BITM "001"` `:EVM:CCAR0:CSIR1:FREQ:BITM?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message The setting is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211 – if the index = 1, The bitmap length = 4 – if the index = 2, The bitmap length = 12 – if the index = 4, The bitmap length = 3 – else, bitmap length = 6 For the bitmap, the occurrence of '1' should meet the minimum requirements (indexed by location table index): \{1, 1, 1, 1, 1, 4, 2, 2, 6, 3, 4, 4, 3, 3, 3, 4, 4, 4\} If the bitmap is invalid, the default bitmap will apply. The default bitmap is also determined by the location table index: – Length is the bitmap length – Contains minimum '1's
Preset	"001"
State Saved	Yes

Resource Element used for PDSCH

Sets whether the resource elements assigned to CSI-RS can be used for PDSCH if CSI-RS collides with PDSCH.

- ON - PDSCH will be mapped to the resource element and CSI-RS will overwrite the values
- OFF - PDSCH will not be mapped to the resource elements

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:REUSed:PDSCh OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:REUSed:PDSCh?`
Example	`:EVM:CCAR0:CSIR1:REUS:PDSC OFF` `:EVM:CCAR0:CSIR1:REUS:PDSC?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

Preset	OFF
State Saved	Yes

Location Table Index

Specifies Location Table (Table 7.4.1.5.3-1 in TS38.211) Index for the selected CSI-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:TABLe:INDex <int> [:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:TABLe:INDex?
Example	:EVM:CCAR0:CSIR1:TABL:IND 1 :EVM:CCAR0:CSIR1:TABL:IND?
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	4
State Saved	Yes
Min	1
Max	18

Table 7.4.1.5.3-1: CSI-RS locations within a slot.

Row	Ports	Density ρ	*CDMtype*	$(\bar{k},\bar{l})$	CDM group index j	k'	l'

Number of Antenna Ports

Specifies number of candidate CSI-RS ports to accelerate measurement speed in MIMO mode.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT:NUMBer?`
Example	`:EVM:CCAR0:CSIR:ANT:PORT:NUMB 1` `:EVM:CCAR0:CSIR:ANT:PORT:NUMB?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211
Preset	Depends on MIMO state and Location Table Index
State Saved	Yes
Min	1
Max	Depends on MIMO state and Location Table Index

Antenna Port

Specifies the Antenna Port of CSI-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:CSIR:ANT:PORT 3000` `:EVM:CCAR0:CSIR:ANT:PORT?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211
Preset	3000
State Saved	Yes
Min	3000
Max	3031

Antenna Port Detection Threshold

Specifies the threshold for Antenna Port Detection. When the power of one port is lower than the threshold compared to the reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:ANTenna:PORT:THReshold?`
Example	`:EVM:CCAR0:CSIR1:ANT:PORT:THR 0` `:EVM:CCAR0:CSIR1:ANT:PORT:THR?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

CDM Type (Display Only)

Displays the CDM type (according to "Location Table Index" on page 2047) for the selected CSI-RS configuration.

Density

Specifies the density of CSI-RS configuration (according to "Location Table Index" on page 2047).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:DENSity EHALf | OHALf | ONE | THRee` `[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:DENSity?`
Example	`:EVM:CCAR0:CSIR1:DENS ONE` `:EVM:CCAR0:CSIR1:DENS?`
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211 – If index = 1, the value is fixed to ‘THRee’ – If index >= 4 && index <= 10, the value is fixed to ‘ONE’
Preset	`ONE`
State Saved	Yes

RIM-RS

Allows you to view and configure the RIM-RS parameters.

Add RIM-RS (GUI only)

Inserts a new RIM-RS configuration into list, the maximum number of RIM-RS configurations is 8.

For details of the equivalent remote command, see "Effective CSI-RS Number (Remote Command only)" on page 2041.

Delete RIM-RS

Deletes selected RIM-RS configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:RIMRs <integer>`
Example	`:EVM:CCAR0:DEL:RIMR 1`

Clear All (GUI only)

Deletes all RIM-RS configuration from list.

For details of the equivalent remote command, see "Effective CSI-RS Number (Remote Command only)" on page 2041.

Effective RIM-RS Number (Remote Command only)

Specifies how many RIM-RS configurations are effective. This command is equivalent to the controls “Add RIM-RS” and “Delete RIM-RS”.

Note that all 8 RIM-RS configurations can be modified through SCPI, but ineffective RIM-RS configurations (index > RIM-RS Number) will not be included in the measurement irrespective of whether its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:RIMRs <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:RIMRs?`
Example	`:EVM:CCAR0:NUMB:RIMR 2` `:EVM:CCAR0:NUMB:RIMR?`
Preset	1
State Saved	Yes
Min	0
Max	8

RIM-RS Parameter Group (Display only)

Allows you to configure the allocation and power parameters for RIM-RS.

General Settings

"State" on page 2051 "Power Boosting" on page 2052

Resource Allocation

"State" on page 2051 "BWP" on page 2052 "RB Offset" on page 2053 "RB Number" on page 2053 "Allocated Slots" on page 2053 "First Symbol" on page 2054

Sequence Generation

"State" on page 2051 "n_SCID" on page 2054 "Sequence Generation Transmission Periods (n_t_RIM)" on page 2055"RB Offset" on page 2043 "Sequence Generation Multiple Factor" on page 2055 "Sequence Generation Offset" on page 2055

This control is for UI display only.

State

Enables or disables RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:STATe OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:STATe?
Example	:EVM:CCAR0:RIMR1:STAT OFF :EVM:CCAR0:RIMR1:STAT?
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes

Power Boosting

Specifies Power Boost value for the RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:POWer?
Example	:EVM:CCAR0:RIMR1:POW 0 :EVM:CCAR0:RIMR1:POW?
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:BWP BWP0 | … | BWP4 [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:BWP?
Example	:EVM:CCAR0:RIMR1:BWP BWP1 :EVM:CCAR0:RIMR1:BWP?
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	BWP1
State Saved	Yes
Range	Initial BWP|BWP 01|BWP 02|BWP 03|BWP 04

Allocated Slots

Specifies the Slots allocated to RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SLOT:ALLocated <string> [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SLOT:ALLocated?
Example	:EVM:CCAR0:RIMR1:SLOT:ALL "2:9" :EVM:CCAR0:RIMR1:SLOT:ALL?
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0"
State Saved	Yes

RB Offset

Specifies the RB Offset of RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:RB:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:RB:OFFSet?
Example	:EVM:CCAR0:RIMR1:RB:OFFSet 0 :EVM:CCAR0:RIMR1:RB:OFFSet?
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – RIM-RS RB Number

RB Number

Specifies the RB Number of RIM-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:RB:NUMBer <integer> [:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:RB:NUMBer?
Example	:EVM:CCAR0:RIMR1:RB:NUMB 272 :EVM:CCAR0:RIMR1:RB:NUMB?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message

	This value must be a multiple of 4
Preset	273
State Saved	Yes
Min	1
Max	RB Number of selected BWP (must be a multiple of 4)

First Symbol

Specifies the start symbol of the RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SYMBol:FIRSt[:ONE] <integer>` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SYMBol:FIRSt[:ONE]?`
Example	`:EVM:CCAR0:RIMR1:SYMB:FIRS 4` `:EVM:CCAR0:RIMR1:SYMB:FIRS?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	13

n_SCID

Specifies the user n_SCID of RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SCIDn <int>` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SCIDn?`
Example	`:EVM:CCAR0:RIMR1:SCID 1` `:EVM:CCAR0:RIMR1:SCID?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1023

Sequence Generation Transmission Periods (n_t_RIM)

Specifies the sequence generation n_t_RIM number of transmission periods of RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:TPERiod <int>` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:TPERiod?`
Example	`:EVM:CCAR0:RIMR1:SEQ:TPER 1` `:EVM:CCAR0:RIMR1:SEQ:TPER?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	2e31 - 1

Sequence Generation Multiple Factor

Specifies the sequence generation multiple factor of RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:MFACtor <int>` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:MFACtor?`
Example	`:EVM:CCAR0:RIMR1:SEQ:MFAC 1` `:EVM:CCAR0:RIMR1:SEQ:MFAC?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	2e31 - 1

Sequence Generation Offset

Specifies the sequence generation offset of RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:OFFSet <int>` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:SEQuence:OFFSet?`
Example	`:EVM:CCAR0:RIMR1:SEQ:OFFS 1`

	`:EVM:CCAR0:RIMR1:SEQ:OFFS?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	2e31 - 1

PUCCH

View and configure the PUCCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add PUCCH (GUI only)

Pressing this control inserts a new PUCCH configuration into list, the maximum number of PUCCH configurations is 16.

See "Effective PUCCH Number (Remote Command only)" on page 2057 for SCPI to provide similar function.

Delete PUCCH

Pressing this control deletes selected PUCCH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PUCCh <integer>`
Example	`:EVM:CCAR0:DEL:PUCC 1`

Clear All (GUI only)

Pressing this control deletes all PUCCH configuration from list.

See "Effective PUCCH Number (Remote Command only)" on page 2057 for SCPI to provide similar function.

Effective PUCCH Number (Remote Command only)

Specifies how many PUCCH configurations are effective, this SCPI only command is used to provide similar function as “Add PUCCH” and “Delete PUCCH”.

Note all 16 PUCCH configurations can be modified through SCPI, but ineffective PUCCH configurations (index > Effective PUCCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PUCCh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PUCCh?`
Example	`:EVM:CCAR0:NUMB:PUCC 2` `:EVM:CCAR0:NUMB:PUCC?`
Couplings	Max value is 16 If you attempt to remotely set the Count larger than 16, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	16

PUCCH Parameter Group (Display only)

Allows you to configure the PUCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 2058
"Format" on page 2058
"Multiplex" on page 2061
"n_RNTI" on page 2061
"Modulation" on page 2065
"Power Boosting" on page 2065
"Antenna Port" on page 2064

Resource Allocation

"State" on page 2058
"Format" on page 2058
"BWP" on page 2059
"Interlaced Transmission" on page 2059
"RB Set Index" on page 2059
"Interlace 0" on page 2060

"Interlace1" on page 2060	"RB Offset" on page 2062	"RB Number" on page 2062	"Allocated Slots" on page 2063	"First Symbol" on page 2063	"Last Symbol" on page 2064

DMRS Settings

"State" on page 2058	"Format" on page 2058	"Additional DMRS" on page 2070	"Scrambling ID" on page 2070
"DMRSuplinkTPPUCCH-r16" on page 2071	"N_ID_0" on page 2070	"DMRS Power Boosting" on page 2071	

PUCCH Settings

"State" on page 2058	"Format" on page 2058	"Group Hopping" on page 2067	"Hopping ID" on page 2067	"Intra-Slot Frequency Hopping" on page 2069
"Second hop RB Offset" on page 2062	"Initial Cyclic Shift (m0)" on page 2065	"Cyclic Shift MCS" on page 2066	"OCC Index" on page 2068	"OCC Length" on page 2068
"PUCCH UCI Size" on page 2069				

State

Enable or disable PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>[:STATe]?`
Example	`:EVM:CCAR0:PUCC1 OFF` `:EVM:CCAR0:PUCC1?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`OFF`
State Saved	Yes

Format

Specifies the format of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:FORMat F0 | … | F4` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:FORMat?`
Example	`:EVM:CCAR0:PUCC1:FORM F0`

	:EVM:CCAR0:PUCC1:FORM?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	F0
State Saved	Yes
Range	0|1|2|3|4

BWP

Specifies the BWP of PUCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:BWP BWP1 | … | BWP4 [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:BWP?
Example	:EVM:CCAR0:PUCC1:BWP BWP1 :EVM:CCAR0:PUCC1:BWP?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	BWP1
State Saved	Yes
Range	BWP 01|BWP 02|BWP 03|BWP 04

Interlaced Transmission

Enable or disable Interlaced Transmission for 15K/30K SCS

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace[:STATe]?
Example	:EVM:CCAR0:PUCC1:INT OFF :EVM:CCAR0:PUCC1:INT?
Couplings	Max value for n = 16 and Min value for n = 1 This key is only available for 15kHz or 30kHz SCS, and with valid Intra-Cell Guard Band setting Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	OFF
State Saved	Yes
Range	OFF | ON

RB Set Index

Set the RB-Set Index to be used for PUCCH transmission.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:RBSet <integer>
[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:RBSet?</td></tr>
<tr><td>Example</td><td>:EVM:CCAR0:PUCC1:INT:RBS 0
:EVM:CCAR0:PUCC1:INT:RBS?</td></tr>
<tr><td>Couplings</td><td>Max value for n = 16 and Min value for n = 1
This key is only available when Interlaced Transmission is ON
Attempting to remotely set or query a sub-opcode that is out of range results in an error message</td></tr>
<tr><td>Preset</td><td>0</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Min</td><td>0</td></tr>
<tr><td>Max</td><td>Depends on the number of RB-sets of current carrier</td></tr>
</table>

Interlace0

Set the Interlace0 for Interlaced transmission.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:ZERO <integer>
[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:ZERO?</td></tr>
<tr><td>Example</td><td>:EVM:CCAR0:PUCC1:INT:ZERO 0
:EVM:CCAR0:PUCC1:INT:ZERO?</td></tr>
<tr><td>Couplings</td><td>Max value for n = 16 and Min value for n = 1
This key is only available when Interlaced Transmission is ON
Attempting to remotely set or query a sub-opcode that is out of range results in an error message</td></tr>
<tr><td>Preset</td><td>0</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Min</td><td>0</td></tr>
<tr><td>Max</td><td>9 for 15kHz SCS
4 for 30kHz SCS</td></tr>
</table>

Interlace1

Set the Interlace1 for Interlaced transmission.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:ONE <integer>
[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INTerlace:ONE?</td></tr>
<tr><td>Example</td><td>:EVM:CCAR0:PUCC1:INT:ONE 0
:EVM:CCAR0:PUCC1:INT:ONE?</td></tr>
<tr><td>Couplings</td><td>Max value for n = 16 and Min value for n = 1</td></tr>
</table>

	This key is only available when Interlaced Transmission is ON and PUCCH format is 2/3 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	9 for 15kHz SCS 4 for 30kHz SCS

Multiplex

Specifies whether the current PUCCH allocation is multiplexed with the other PUCCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:MULTiplex OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:MULTiplex?`
Example	`:EVM:CCAR0:PUCC1:MULT OFF` `:EVM:CCAR0:PUCC1:MULT?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`OFF`
State Saved	Yes

n_RNTI

Specifies the user RNTI of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:NRNTi <int>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:NRNTi?`
Example	`:EVM:CCAR0:PUCC1:NRNT 1` `:EVM:CCAR0:PUCC1:NRNT?`
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 0 and Format 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

RB Offset

Specifies the RB Offset of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:OFFSet?`
Example	`:EVM:CCAR0:PUCC1:RB:OFFSet 0` `:EVM:CCAR0:PUCC1:RB:OFFSet?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – PUCCH RB Number

RB Number

Specifies the RB Number of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:NUMBer?`
Example	`:EVM:CCAR0:PUCC1:RB:NUMB 10` `:EVM:CCAR0:PUCC1:RB:NUMB?`
Couplings	Max value for n = 16 and Min value for n = 1 It depends on the PUCCH Format: – Format 0, 1, 4: fixed to 1 – Format 2: 1 to 16 – Format 3: 1,2,3,4,5,6,8,9,10,12,15,16 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	1
State Saved	Yes
Min	1
Max	Min of (16, RB Number of selected BWP)

Second hop RB Offset

Specifies the second hop RB Offset of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:OFFSet:HOPPing:SECond <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:RB:OFFSet:HOPPing:SECond?`
Example	`:EVM:CCAR0:PUCC1:RB:OFFS:HOPP:SEC 0` `:EVM:CCAR0:PUCC1:RB:OFFS:HOPP:SEC?`
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 2, it should be applied only when Nsym = 2. For other formats, it should be applied Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – PUCCH RB Number

Allocated Slots

Specifies the Slots allocated to PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:PUCC1:SLOT:ALL "2:9"` `:EVM:CCAR0:PUCC1:SLOT:ALL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	"0 "
State Saved	Yes

First Symbol

Specifies the First Symbol of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PUCC1:SYMB:FIRS 4` `:EVM:CCAR0:PUCC1:SYMB:FIRS?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	13
State Saved	Yes

Min	0
Max	Last Symbol

Last Symbol

Specifies the Last Symbol of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SYMBol:LAST <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SYMBol:LAST?`
Example	`:EVM:CCAR0:PUCC1:SYMB:LAST 4` `:EVM:CCAR0:PUCC1:SYMB:LAST?`
Couplings	Max value for n = 16 and Min value for n = 1 The range depends on the PUCCH format and First Symbol: – Format 0, 2: [First Symbol, First Symbol +1] – Format 1, 3, 4: [First Symbol + 3, 13] Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	13
State Saved	Yes
Min	First Symbol
Max	13

Antenna Port

Specifies the Antenna Port of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:PUCC1:ANT:PORT 2000` `:EVM:CCAR0:PUCC1:ANT:PORT?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	2000
State Saved	Yes
Min	2000
Max	2100

Power Boosting

Specifies Power Boost value for the PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:POWer?`
Example	`:EVM:CCAR0:PUCC1:POW 0` `:EVM:CCAR0:PUCC1:POW?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Modulation

Specifies the modulation type of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:MODulation:TYPE PIBPSK | BPSK | QPSK | ZC` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:MODulation:TYPE?`
Example	`:EVM:CCAR0:PUCC1:MOD:TYPE BPSK` `:EVM:CCAR0:PUCC1:MOD:TYPE?`
Couplings	Format 0: ZC (Zandoff Chu: PN sequence without modulation) Format 1: BPSK or QPSK Format 2: QPSK Format 3&4: Pi/2 BPSK or QPSK Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	Depends on Format
State Saved	Yes
Range	`ZC|PIBPSK|BPSK|QPSK`

Initial Cyclic Shift (m0)

Specifies the initial cyclic shift of PUCCH configuration.

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:CYCLic:SHIFt <integer>`

Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:CYCLic:SHIFt?
Example	:EVM:CCAR0:PUCC1:CYCL:SHIF 0 :EVM:CCAR0:PUCC1:CYCL:SHIF?
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2. For Format 3, it is fixed to 0 For Format 4, it is read-only and coupled with OCC Index – OCC Index 0 : 0 – OCC Index 1: 6 – OCC Index 2 :3 – OCC Index 3: 9 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	Depends on PUCCH format

Cyclic Shift MCS

Specifies the cyclic shift MCS of PUCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:CYCLic:SHIFt:MCS M0 | M3 | M6 | M9 | M1 | M4 | M7 | M10 [:SENSe]:EVM:CCARrier0 | … | 15:PUCCh<n>:CYCLic:SHIFt:MCS?
Example	:EVM:CCAR0:PUCC1:CYCL:SHIF:MCS M0 :EVM:CCAR0:PUCC1:CYCL:SHIF:MCS?
Couplings	Max value for n = 16 and Min value for n = 1 For format 1, format 2, format 3 and format 4, it should be fixed to 0 (M0) Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	M0
State Saved	Yes
Range	M0|M3|M6|M9|M1|M4|M7|M10

For PUCCH format 0, MCS value should be set according to tables in 3GPP TS 38.213 (https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215):

Table 9.2.3-3: Mapping of values for one HARQ-ACK information bit to sequences for PUCCH format 0

HARQ-ACK Value	0	1
Sequence cyclic shift	$m_{CS} = 0$	$m_{CS}=6$

Table 9.2.3-4: Mapping of values for two HARQ-ACK information bits to sequences for PUCCH format 0

HARQ-ACK Value	\{0, 0\}	\{0, 1\}	\{1, 1\}	\{1, 0\}
Sequence cyclic shift	$m_{CS} = 0$	$m_{CS}=3$	$m_{CS}=6$	$m_{CS}=9$

Table 9.2.5-1: Mapping of values for one HARQ-ACK information bit and positive SR to sequences for PUCCH format 0

HARQ-ACK Value	0	1
Sequence cyclic shift	$m_{CS}=3$	$m_{CS}=9$

Table 9.2.5-2: Mapping of values for two HARQ-ACK information bits and positive SR to sequences for PUCCH format 0

HARQ-ACK Value	\{0, 0\}	\{0, 1\}	\{1, 1\}	\{1, 0\}
Sequence cyclic shift	$m_{CS}=1$	$m_{CS}=4$	$m_{CS}=7$	$m_{CS}=10$

Group Hopping

Specifies the group hopping type of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:GROup NEITHER	ENABLE	DISABLE` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:GROup?`
Example	`:EVM:CCAR0:PUCC1:HOPP:GRO NEIT` `:EVM:CCAR0:PUCC1:HOPP:GRO?`
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	`NEITher`
State Saved	Yes
Range	`NEITher|ENABled|DISabled`

Hopping ID

Specifies the hopping ID of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:ID?`

Example	`:EVM:CCAR0:PUCC1:HOPP:ID 0` `:EVM:CCAR0:PUCC1:HOPP:ID?`
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1023

OCC Index

Specifies the OCC Index of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:OCC:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:OCC:INDex?`
Example	`:EVM:CCAR0:PUCC1:OCC:IND 0` `:EVM:CCAR0:PUCC1:OCC:IND?`
Couplings	Max value for n = 16 and Min value for n = 1 The range depends on PUCCH Format: – Format 1: 0,1 – Format 4: the max value should be less than OCC Length – Others: Not applied Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	Depends on PUCCH format

OCC Length

Specifies the OCC Length of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:OCC:LENGth L2 | L4` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:OCC:LENGth?`
Example	`:EVM:CCAR0:PUCC1:OCC:LENG L4` `:EVM:CCAR0:PUCC1:OCC:LENG?`

Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for PUCCH Format 4 Attempting to remotely set or query a sub-opcode that is out of range results in an error message
Preset	L2
State Saved	Yes

PUCCH UCI Size

Specifies the UCI Size of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:UCI:SIZE <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:UCI:SIZE?`
Example	`:EVM:CCAR0:PUCC1:UCI:SIZE 10` `:EVM:CCAR0:PUCC1:UCI:SIZE?`
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 1, this parameter doesn't apply The range depends on PUCCH Format: – Format 2: 21 – Format 3: 61 – Format 4: 25 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	20
State Saved	Yes
Min	3
Max	Depends on PUCCH format

Intra-Slot Frequency Hopping

Enable or disable intra-slot frequency hopping of PUCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:FREQuency:INTRa:SLOT[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:HOPPing:FREQuency:INTRa:SLOT[:STATe]?`
Example	`:EVM:CCAR0:PUCC1:HOPP:FREQ:INTR:SLOT OFF` `:EVM:CCAR0:PUCC1:HOPP:FREQ:INTR:SLOT?`
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 2, it should be applied only when Nsym = 2. For other formats, it should be applied

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes

Additional DMRS

Enable or disable additional DMRS of PUCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:ADDitional OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:ADDitional?
Example	:EVM:CCAR0:PUCC1:DMRS:ADD OFF :EVM:CCAR0:PUCC1:DMRS:ADD?
Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for format 3 and format 4 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Scrambling ID

Specifies the scrambling ID of PUCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SCID <integer> [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:SCID?
Example	:EVM:CCAR0:PUCC1:SCID 0 :EVM:CCAR0:PUCC1:SCID?
Couplings	Max value for n = 16 and Min value for n = 1 It is NOT applied for format 0 and format 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

N_ID_0

Specifies the N_ID_0 of PUCCH configuration.

Remote	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:NID <integer>

Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:NID?
Example	:EVM:CCAR0:PUCC1:NID 0 :EVM:CCAR0:PUCC1:NID?
Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for format 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting is available when: – PUCCH format is 2 – DMRSuplinkTPPUCCH-r16 is ON and PUCCH format is 3 or 4
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRSuplinkTPPUCCH-r16

Set whether higher-layer parameter DMRSuplinkTPPUCCH-r16 is provided.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:TP:R16[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:TP:R16[:STATe]?
Example	:EVM:CCAR0:PUCC1:DMRS:TP:R16 OFF :EVM:CCAR0:PUCC1:DMRS:TP:R16?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting is available when PUCCH format is 3 or 4
Preset	OFF
State Saved	Yes

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PUCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:POWer?
Example	:EVM:CCAR0:PUCC1:DMRS:POW 0 :EVM:CCAR0:PUCC1:DMRS:POW?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message

Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PUSCH

View and configure the PUSCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add PUSCH (GUI only)

Pressing this control inserts a new PUSCH configuration into list, the maximum number of PUSCH configurations is 250.

See "Effective PUSCH Number(Remote Command only)" on page 2072 for SCPI to provide similar function.

Delete PUSCH

Pressing this control deletes selected PUSCH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PUSCh <integer>`
Example	`:EVM:CCAR0:DEL:PUSC 1`

Clear All (GUI only)

Pressing this control deletes all PUSCH configuration from list.

See "Effective PUSCH Number(Remote Command only)" on page 2072 for SCPI to provide similar function.

Effective PUSCH Number(Remote Command only)

Specifies how many PUSCH configurations are effective, this SCPI only command is used to provide similar function as “Add PUSCH” and “Delete PUSCH”.

Note all 250 PUSCH configurations can be modified through SCPI, but ineffective PUSCH configurations (index > Effective PUSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PUSCh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PUSCh?`
Example	`:EVM:CCAR0:NUMB:PUSC 2` `:EVM:CCAR0:NUMB:PUSC?`
Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	250

PUSCH Parameter Group (Display only)

Allows you to configure the PUSCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 2074
"RNTI" on page 2075
"n_ID" on page 2075
"n_RAPID" on page 2089

Power Settings

"State" on page 2074	"PUSCH Power Boosting" on page 2101	"DMRS Power Boosting" on page 2102	"PTRS Power Boosting" on page 2102

State

Enable or disable selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>[:STATe]?`
Example	`:EVM:CCAR0:PUSC1 OFF`

	:EVM:CCAR0:PUSC1?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

RNTI

Specifies the user RNTI of selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RNTI <int> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RNTI?
Example	:EVM:CCAR0:PUSC1:RNTI 1 :EVM:CCAR0:PUSC1:RNTI?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

n_ID

Specifies n_ID for selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NID <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NID?
Example	:EVM:CCAR0:PUSC1:NID 0 :EVM:CCAR0:PUSC1:NID?
Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

Transform Precoding

Enable or disable Transform Precoding for selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:TPRecoding[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:TPRecoding[:STATe]?`
Example	`:EVM:CCAR0:PUSC1:TPR OFF` `:EVM:CCAR0:PUSC1:TPR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`OFF`
State Saved	Yes

MCS Table

Specifies which MCS table is used to configure MCS for selected PUSCH configuration. See 38.214 clause 5.1.3 and 6.1.4 for complete MCS table.

- Table 1 – Table 5.1.3.1-1
- Table 2 – Table 5.1.3.1-2
- Table 3 – Table 6.1.4.1-1
- Table 4 – Table 5.1.3.1-3
- Table 5 – Table 6.1.4.1-2

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:MCS:TABLe TABLe1 | … | TABLe5` `[:SENSe]:EVM:CCARrier0 | … | 15:PUSCh<n>:MCS:TABLe?`
Example	`:EVM:CCAR0:PUSC1:MCS:TABL TABL2` `:EVM:CCAR0:PUSC1:MCS:TABL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Table 1(Table 5.1.3.1-1) and Table 4(Table 5.1.3.1-3) are only available when Transform Precoding is OFF Table 3(Table 6.1.4.1-1) and Table 5(Table 6.1.4.1-2) are only available when Transform Precoding is ON
Preset	TABL1
State Saved	Yes
Range	Table 5.1.3.1-1 (64QAM)|Table 5.1.3.1-2 (256QAM)| Table 6.1.4.1-1 (64QAM TP)| Table 5.1.3.1-3 (64QAMLowSE)| Table 6.1.4.1-2 (64QAM TP LowSE)

MCS

Specifies the MCS index for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:MCS?`
Example	`:EVM:CCAR0:PUSC1:MCS 1` `:EVM:CCAR0:PUSC1:MCS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When MCS is -1, you can specify Modulation manually, MCS table and TB Size will be invalid and no decoding results
Preset	0
State Saved	Yes
Min	-1
Max	31

Modulation

Display or select the modulation for selected PUSCH configuration.

The modulation is derived from MCS Table and MCS settings 38.214 clause 5.1.3 and 6.1.4.

- Modulation Oder = 1, Modulation = Pi/2 BPSK
- Modulation Oder = 2, Modulation = QPSK
- Modulation Order = 4, Modulation = 16QAM
- Modulation Order = 6, Modulation = 64QAM
- Modulation Order = 8, Modulation = 256QAM

See "More Information" on page 2007.

Only when MCS = -1, you can specify Modulation manually (including Custom IQ mode). Custom IQ mode means customized constellation definition recalled from file.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:MODulation QPSK | QAM16 | QAM64 | QAM256 | PIBPSK | QAM1024` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:MODulation?`
Example	`:EVM:CCAR0:PUSC1:MOD QPSK`

	`:EVM:CCAR0:PUSC1:MOD?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Display only when MCS is not -1. PIBPSK (Pi/2 BPSK) is only available when PUSCH TP is On
Preset	`QPSK`
State Saved	Yes
Range	QPSK | 16 QAM | 64 QAM | 256QAM | Pi/2 BPSK | 1024QAM

RV Index

Specifies the RV index for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RV <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RV?`
Example	`:EVM:CCAR0:PUSC1:RV 1` `:EVM:CCAR0:PUSC1:RV?`
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	-1
Max	3

TB Size (Display Only)

Display TB Size for the selected PUSCH configuration.

Precoder Group Size

Select PRB group size for precoding matrix.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PBGRoup RB2 | RB4 | WIDE | USER` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PBGRoup?`
Example	`:EVM:CCAR0:PUSC1:PBGR RB4` `:EVM:CCAR0:PUSC1:PBGR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message

Preset	WIDE
State Saved	Yes
Range	2 RB | 4 RB | Wideband | User Defined

User Define Size

Set user defined value when Precoder Group Size = User Define.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:USER:PBGRoup <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:USER:PBGRoup?
Example	:EVM:CCAR0:PUSC1:PBGR:USER 1 :EVM:CCAR0:PUSC1:PBGR:USER?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This parameter is only visible when Precoder Group Size = User Define
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected BWP

BWP

Specifies the BWP of selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:BWP BWP1 | … | BWP4 [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:BWP?
Example	:EVM:CCAR0:PUSC1:BWP BWP1 :EVM:CCAR0:PUSC1:BWP?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP 01|BWP 02|BWP 03|BWP 04

RA Type

Specifies RA Type for the selected PUSCH configuration, there are two methods to allocate RB resources:

Type 0: RBG Size and Allocated RBG

Type 1: RB Offset and RB Number

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RATYpe TYPE0 | TYPE1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RATYpe?`
Example	`:EVM:CCAR0:PUSC1:RATY TYPE0` `:EVM:CCAR0:PUSC1:RATY?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`TYPE1`
State Saved	Yes
Range	Type 0|Type 1

RBG Size

Specifies RBG Size for the selected PUSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RBG:SIZE RB2 | RB4 | RB8 | RB16` `[:SENSe]:EVM:CCARrier0 | … | 15:PUSCh<n>:RBG:SIZE?`
Example	`:EVM:CCAR0:PUSC1:RBG:SIZE RB16` `:EVM:CCAR0:PUSC1:RBG:SIZE?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Available values are determined by BWP size according to table 5.1.2.2.1-1 in TS38.214:
Preset	`RB16`
State Saved	Yes
Range	2 RB|4 RB|8 RB|16 RB

Bandwidth Part Size	Configuration 1	Configuration 2
1 – 36	2	4
37 – 72	4	8
73 – 144	8	16
145 – 275	16	16

Allocated RBGs

Specifies the RBGs allocated to selected PUSCH configuration, this parameter is only valid for RA Type 0.

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RBG:ALLocated <string>`

Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RBG:ALLocated?
Example	:EVM:CCAR0:PUSC1:RBG:ALL "0:15" :EVM:CCAR0:PUSC1:RBG:ALL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0:15"
State Saved	Yes

RB Offset

Specifies the RB Offset of selected PUSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RB:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RB:OFFSet?
Example	:EVM:CCAR0:PUSC1:RB:OFFSet 0 :EVM:CCAR0:PUSC1:RB:OFFSet?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – 1

RB Number

Specifies the RB Number of selected PUSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RB:NUMBer <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RB:NUMBer?
Example	:EVM:CCAR0:PUSC1:RB:NUMB 273 :EVM:CCAR0:PUSC1:RB:NUMB?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	273
State Saved	Yes
Min	1
Max	RB Number of selected BWP – RB Offset

Allocated Slots

Specifies the Slots allocated to selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:PUSC1:SLOT:ALL "2:9"` `:EVM:CCAR0:PUSC1:SLOT:ALL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0:19"
State Saved	Yes

Slot Format

Specifies the Slot Format of selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SLOT:FORMat SF0 | SF1 | … | SF55` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SLOT:FORMat?`
Example	`:EVM:CCAR0:PUSC1:SLOT:FORM SF2` `:EVM:CCAR0:PUSC1:SLOT:FORM?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`SF1`
State Saved	Yes
Range	0|1|...|55

First Symbol

Specifies the First Symbol of selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PUSC1:SYMB:FIRS 4` `:EVM:CCAR0:PUSC1:SYMB:FIRS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0

State Saved	Yes
Min	0
Max	13

Last Symbol

Specifies the Last Symbol of selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SYMBol:LAST <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SYMBol:LAST?`
Example	`:EVM:CCAR0:PUSC1:SYMB:LAST 4` `:EVM:CCAR0:PUSC1:SYMB:LAST?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	13
State Saved	Yes
Min	First Symbol
Max	13

DMRS Config

Specifies DMRS Configuration for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:CONFigure TYPE1 | TYPE2` `[:SENSe]:EVM:CCARrier0 | … | 15:PUSCh<n>:DMRS:CONFigure?`
Example	`:EVM:CCAR0:PUSC1:DMRS:CONF TYPE1` `:EVM:CCAR0:PUSC1:DMRS:CONF?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When Transform Precoding is ON, only Type 1 is available
Preset	`TYPE1`
State Saved	Yes
Range	Type 1|Type 2

PUSCH Mapping

Specifies PUSCH Mapping for selected PUSCH configuration.

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PUSCh:MAP TYPEA | TYPEB`

Command	[:SENSe]:EVM:CCARrier0 | … | 15:PUSCh<n>:PUSCh:MAP?
Example	:EVM:CCAR0:PUSC1:PUSC:MAP TYPEA :EVM:CCAR0:PUSC1:PUSC:MAP?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	TYPEA
State Saved	Yes
Range	Type A | Type B

DMRS-typeA-pos

Specifies the DMRS-typeA-pos value for selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:TAPos <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:TAPos?
Example	:EVM:CCAR0:PUSC1:DMRS:TAP 2 :EVM:CCAR0:PUSC1:DMRS:TAP?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Min	2
Max	3

DMRS Max Len

Specifies DMRS Max Len value for the selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:MLEN <int> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:MLEN?
Example	:EVM:CCAR0:PUSC1:DMRS:MLEN 2 :EVM:CCAR0:PUSC1:DMRS:MLEN?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	2

Front-load Symbols

Specifies DMRS Duration for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:DURation SINGle	DOUBle` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:DURation?`
Example	`:EVM:CCAR0:PUSC1:DMRS:DUR DOUB` `:EVM:CCAR0:PUSC1:DMRS:DUR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When Antenna Port Index is -1, this parameter will be enabled and you need to ensure the settings are valid according to TS38.212, table 7.3.1.1.2-6 to table 7.3.1.1.2-23, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23
Preset	`SINGle`
State Saved	Yes
Range	1 | 2

DMRS-add-pos

Specifies the DMRS-add-pos value for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:ADDPos <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:ADDPos?`
Example	`:EVM:CCAR0:PUSC1:DMRS:ADDP 2` `:EVM:CCAR0:PUSC1:DMRS:ADDP?`
Couplings	Max value for n = 250 and Min value for n = 1 See 3GPP TS 38.211 Table 6.4.1.1.3-3/4 for coupling rule (https://-portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3213) Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	3

DMRS Sequence Hopping

Enable or disable Sequence Hopping when Transform Precoding is enabled for selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:HOPPing:SEQuence[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:HOPPing:SEQuence[:STATe]?`
Example	`:EVM:CCAR0:PUSC1:DMRS:HOPP:SEQ OFF` `:EVM:CCAR0:PUSC1:DMRS:HOPP:SEQ?`
Couplings	Max value for n = 250 and Min value for n = 1 When “DMRS Sequence Hopping” is ON, “DMRS Group Hopping” cannot be set to ON Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	Off|On

DMRS Group Hopping

Enable or disable Group Hopping when Transform Precoding is enabled for selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:HOPPing:GROup[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:HOPPing:GROup[:STATe]?`
Example	`:EVM:CCAR0:PUSC1:DMRS:HOPP:GRO OFF` `:EVM:CCAR0:PUSC1:DMRS:HOPP:GRO?`
Couplings	Max value for n = 250 and Min value for n = 1 When “DMRS Group Hopping” is ON, “DMRS Sequence Hopping” cannot be set to ON Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	Off|On

n_ID_PUSCH

Specifies n_ID_PUSCH when Transform Precoding is enabled for selected PUSCH configuration.

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NID:PUSCh <integer>`

Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NID:PUSCh?
Example	:EVM:CCAR0:PUSC1:NID:PUSC 0 :EVM:CCAR0:PUSC1:NID:PUSC?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting is only available when Transform Precoding is ON
Preset	-1
State Saved	Yes
Min	-1
Max	1007

nSCID

Specifies the nSCID value for selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SCIDn <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SCIDn?
Example	:EVM:CCAR0:PUSC1:SCID 1 :EVM:CCAR0:PUSC1:SCID?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting is only available when Transform Precoding is OFF
Preset	0
State Saved	Yes
Min	0
Max	1

N_ID_nSCID (SCPI only)

Specifies the N_ID_nSCID value for selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SCIDn:NID <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:SCIDn:NID?
Example	:EVM:CCAR0:PUSC1:SCID:NID 1 :EVM:CCAR0:PUSC1:SCID:NID?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When set to -1, the N_ID_nSCID value equals to Cell ID

	This setting is only available when Transform Precoding is OFF
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRSuplink-r16/DMRSuplinkTP-r16

Set whether higher-layer parameter DMRSuplink-r16 or DMRSuplinkTP-r16 is provided.

Note: DMRSuplink-r16 or DMRSuplinkTP-r16 depends on Transform Precoding is off or on.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:R16[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:R16[:STATe]?`
Example	`:EVM:CCAR0:PUSC1:DMRS:R16 OFF` `:EVM:CCAR0:PUSC1:DMRS:R16?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes

N_ID_0

Specifies the N_ID_0 value for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:NID0 <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:NID0?`
Example	`:EVM:CCAR0:PUSC1:DMRS:NID0 1` `:EVM:CCAR0:PUSC1:DMRS:NID0?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When set to -1, the N_ID_0 value equals to Cell ID This setting is available when: – Transform Precoding is OFF – Transform Precoding is ON and DMRSuplinkTP-r16 is ON and Modulation is Pi/2 BPSK
Preset	-1

State Saved	Yes
Min	-1
Max	65535

N_ID_1

Specifies the N_ID_1 value for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:NID1 <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:NID1?`
Example	`:EVM:CCAR0:PUSC1:DMRS:NID1 1` `:EVM:CCAR0:PUSC1:DMRS:NID1?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When set to -1, the N_ID_1 value equals to Cell ID This setting is available when: – Transform Precoding is OFF – Transform Precoding is ON and DMRSuplinkTP-r16 is ON and Modulation is Pi/2 BPSK
Preset	-1
State Saved	Yes
Min	-1
Max	65535

n_RAPID

Specifies n_RAPID for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NRAPid <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:NRAPid?`
Example	`:EVM:CCAR0:PUSC1:NRAP 0` `:EVM:CCAR0:PUSC1:NRAP?`
Notes	-1 means Not Configured
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	-1
State Saved	Yes
Min	-1
Max	63

Antenna Port/Reference Antenna Port

Specifies the Antenna Port in SISO mode and Reference Antenna Port in MIMO/MISO modes of selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:PUSC1:ANT:PORT 0` `:EVM:CCAR0:PUSC1:ANT:PORT?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Coupled with Antenna Port Index, DMRS Config Type, DMRS Max Len and Rank . See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The Antenna Port should be related with the “DMRS Port” column in the table
Preset	0
State Saved	Yes
Min	0
Max	11

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:ANTenna:PORT:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:ANTenna:PORT:THReshold?`
Example	`:EVM:CCAR0:PUSC1:ANT:PORT:THR 0` `:EVM:CCAR0:PUSC1:ANT:PORT:THR?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

PTRS Port

Specifies the PTRS Port of selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:PORT <String>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:PORT?`
Example	`:EVM:CCAR0:PUSC1:PTRS:PORT "0"` `:EVM:CCAR0:PUSC1:PTRS:PORT?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message If PUSCH Antenna Port Index is -1, it will be set to PUSCH Antenna Port Otherwise, PTRS ports should be a subset of PUSCH Antenna ports which are determined by PUSCH Antenna Port index. The max num. of configured PTRS ports is 2. It is indicated by the 'PTRS-DMRS association' field in DCI format 0_1 (See TS38.212 7.3.1.1.2) If PUSCH Antenna Port Index is changed which results in current PTRS port become invalid, it will be set to PUSCH Antenna Port
Preset	"0"
State Saved	Yes

Antenna Port Index

Specifies Antenna Port Index for the selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:ANTenna:PORT:INDex <int>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n:ANTenna:PORT:INDex?`
Example	`:EVM:CCAR0:PUSC1:ANT:PORT:IND 1` `:EVM:CCAR0:PUSC1:ANT:PORT:IND?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Range	Coupled with DMRS Config Type, DMRS Max Len and Rank . See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The Antenna Port Index indicates the "Value" column in the table
Min	-1
Max	27

Table 7.3.1.1.2-6: Antenna port(s), PUSCH-tp=Enabled, UL-DMRS-config-type=1, UL-DMRS-max-len = 1

Value	Number of DMRS CDM group(s) without data	DMRS port(s)
0	2	0
1	2	1
2	2	2
3	2	3

Table 7.3.1.1.2-7: Antenna port(s), PUSCH-tp=Enabled, UL-DMRS-config-type=1, UL-DMRS-max-len = 2

Value	Number of DMRS CDM group(s) without data	DMRS port(s)	Number of front-load symbols
0	2	0	1
1	2	1	1
2	2	2	1
3	2	3	1
4	2	0	2
5	2	1	2

5-31	Reserved	Reserved	Reserved

DMRS Port (Display Only)

Display available DMRS Ports according to Antenna Port Index for the selected PUSCH configuration.

Rank

Specifies Rank for the selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RANK <int>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RANK?`
Example	`:EVM:CCAR0:PUSC1:RANK 2` `:EVM:CCAR0:PUSC1:RANK?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Range	1, 2, 3, 4
Min	1
Max	4

DMRS CDM groups w.o. data

Specifies DMRS CDM groups without data for the selected PDSCH configuration.

It is coupled with DMRS Config Type, DMRS Max Len, Rank See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The column “Number of DMRS CDM group(s) without data” specifies the value for this result.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:CDMGroups:COUNt <int>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:CDMGroups:COUNt?`
Example	`:EVM:CCAR0:PUSC1:DMRS:CDMG:COUN 2` `:EVM:CCAR0:PUSC1:DMRS:CDMG:COUN?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When Antenna Port Index is -1, this parameter become settable, you need to make sure valid setting according TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23

Preset	1
State Saved	Yes
Min	1
Max	2 for DMRS Config Type 1, 3 for DMRS Config Type 2

PTRS Enable

Enable or disable PTRS for selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS[:STATe]?`
Example	`:EVM:CCAR0:PUSC1:PTRS OFF` `:EVM:CCAR0:PUSC1:PTRS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`OFF`
State Saved	Yes

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:K K2 | K4` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:K?`
Example	`:EVM:CCAR0:PUSC1:PTRS:K K2` `:EVM:CCAR0:PUSC1:PTRS:K?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	K2
State Saved	Yes
Range	K2|K4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:L L1 | L2 | L4` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:L?`
Example	`:EVM:CCAR0:PUSC1:PTRS:L L2`

	:EVM:CCAR0:PUSC1:PTRS:L?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	L1
State Saved	Yes
Range	L1|L2|L4

PTRS RE Offset

Specifies PTRS RE Offset for selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:RE:OFFSet BIT00 | BIT01 | BIT10 | BIT11 [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:RE:OFFSet?
Example	:EVM:CCAR0:PUSC1:PTRS:RE:OFFS BIT00 :EVM:CCAR0:PUSC1:PTRS:RE:OFFS?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BIT00
State Saved	Yes
Range	BIT00|BIT01|BIT10|BIT11

PTRS N_ID

Set the N_ID for the PTRS generation when transform precoding is enabled.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:NID <integer> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:NID?
Example	:EVM:CCAR0:PUSC1:PTRS:NID 1 :EVM:CCAR0:PUSC1:PTRS:NID?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message When setting “Transform Precoding” to Off, this setting will be invisible
Preset	0
State Saved	Yes
Min	0
Max	65535

N_samp_group (Number of samples per PT-RS group)

Set the Number of samples per PT-RS group for PTRS signal generation when transform precoding is enabled.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:GROup:SNUMber <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:GROup:SNUMber?`
Example	`:EVM:CCAR0:PUSC1:PTRS:GRO:SNUM 2` `:EVM:CCAR0:PUSC1:PTRS:GRO:SNUM?`
Couplings	Max value for n = 250 and Min value for n = 1 When setting “Transform Precoding” to Off, this setting will be invisible When N_group_PTRS is 8, N_samp_group can only be 4 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Range	2|4

N_group_PTRS (Number of PT-RS groups)

Set Number of PT-RS groups for PTRS signal generation when transform precoding is enabled.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:GROup:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:GROup:NUMBer?`
Example	`:EVM:CCAR0:PUSC1:PTRS:GRO:NUMB 2` `:EVM:CCAR0:PUSC1:PTRS:GRO:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 When setting “Transform Precoding” to Off, this setting will be invisible Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Range	2|4|8

PUSCH Power Boosting

Specifies Power Boost value for the selected PUSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:POWer?`

Example	:EVM:CCAR0:PUSC1:POW 0 :EVM:CCAR0:PUSC1:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:POWer?
Example	:EVM:CCAR0:PUSC1:DMRS:POW 0 :EVM:CCAR0:PUSC1:DMRS:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message It is coupled with "PUSCH DMRS CDM group w.0. data": dmrsBoostingValue = 10 * (1.0 - Math.Log(DrmsCdmGroup))
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PUSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PTRS:POWer?
Example	:EVM:CCAR0:PUSC1:PTRS:POW 0 :EVM:CCAR0:PUSC1:PTRS:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes

Min	-100
Max	100

Precoder Matrix (Uplink)

View and configure the Precoder Matrix parameters.

Reset Selected (GUI only)

Reset W matrix for selected precoder block.

Reset All (GUI only)

Reset W matrix for all precoder blocks.

Reset Matrix (Remote Command only)

Resets the specified precoder matrix. To reset *all* matrices, specify the value -1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh1|250:PMATrix:RESet<integer>`
Example	`:EVM:CCAR0:PUSC1:PMAT:RES 2`
State Saved	Yes
Min	-1
Max	PRBG number of each PUSCH allocation

PUSCH (GUI only)

Allows you to choose the PUSCH allocation to configure its W Matrix

"W Matrix" on page 2103 "I Value (GUI only)" on page 2104 "Q Value (GUI only)" on page 2104

W Matrix

Specifies the W Matrix for selected precoder block.

Example: 1,1,0,0,0,0,1,1 represent below matrix

1+j , 0

0 , 1+j

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PMATrix:PBGroup<m> <string>`

Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:PMATrix:PBGroup<m>?`
Example	`:EVM:CCAR0:PUSC1:PMAT:PBG1 "1,0,0,0,1,0,0,0"` `:EVM:CCAR0:PUSC1:PMAT:PBG1?`
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 275 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
State Saved	Yes

I Value (GUI only)

Specifies I value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Q Value (GUI only)

Specifies Q value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Rate Matching Pattern (Uplink)

View and configure the Rate Matching Pattern parameters.

Add Rate Matching Pattern (GUI only)

Inserts a new PUSCH Rate Matching Pattern into list. The maximum number of PUSCH Rate Matching Patterns is 8.

Delete Rate Matching Pattern

Deletes selected PUSCH Rate Matching Pattern from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh1|250:RMPattern:DELete <integer>`
Example	`:EVM:CCAR0:PUSC1:RMP:DEL 1`

Clear All (GUI only)

Deletes all PUSCH Rate Matching Patterns from list.

For a remote command providing a similar function, see "Effective PDSCH Number (Remote Command only)" on page 2002.

Effective Rate Matching Pattern (Remote Command only)

Specifies how many PUSCH Rate Matching Patterns are effective, this SCPI only command is used to provide similar function as “Add Rate Matching Pattern” and “Delete Rate Matching Pattern”.

Note that all 8 PUSCH Rate Matching Pattern can be modified through SCPI, but ineffective PUSCH Rate Matching Pattern (index > Effective PUSCH Rate Matching Pattern Number) will not be included in the measurement, no matter whether it is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern:NUMBer?`
Example	`:EVM:CCAR0:PUSC1:RMP:NUMB 2` `:EVM:CCAR0:PUSC1:RMP:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	8

PUSCH (GUI only)

Allows you to choose the PUSCH allocation to configure its Rate Matching Pattern

"State" on page 2105
"Level" on page 2106
"SCS" on page 2106
"RB Bitmap Index" on page 2107
"Symbol Bitmap Span" on page 2107
"Symbol Bitmap" on page 2107
"Periodicity" on page 2108
"Periodicity Pattern Bitmap" on page 2108

State

Enables or disables the selected PUSCH Rate Matching Pattern.

Remote	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>[:STATe] OFF | ON | 0 | 1`

Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>[:STATe]?
Example	:EVM:CCAR0:PUSC1:RMP1 OFF :EVM:CCAR0:PUSC1:RMP1?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	OFF|ON|0|1

Level

Selects the level for PUSCH Rate Matching Pattern.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:LEVel BWP | CELL [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:LEVel?
Example	:EVM:CCAR0:PUSC1:RMP1:LEV CELL :EVM:CCAR0:PUSC1:RMP1:LEV?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP
State Saved	Yes
Range	BWP | Cell

SCS

Specifies the SCS for PUSCH Rate Matching Pattern when Level = Cell Level. Only valid SCSs with the Freq Range are available.

- For Freq Range 1: SCS15K, SCS30K and SCS60K
- For Freq Range 2: SCS60K, SCS120K and SCS240K

When Level = BWP level, SCS is same as PUSCH allocation selected.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS240K [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SCS?
Example	:EVM:CCAR0:PUSC1:RMP1:SCS SCS30K :EVM:CCAR0:PUSC1:RMP1:SCS?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	SCS30K
State Saved	Yes
Range	15K|30K|60K|120K|240K

RB Bitmap Index

Specifies the RB Bitmap Index for the selected PUSCH Rate Matching Pattern

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:RB:INDex <string> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:RB:INDex?
Example	:EVM:CCAR0:PUSC1:RMP1:RB:INDex "0:272" :EVM:CCAR0:PUSC1:RMP1:RB:INDex?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0:272"
State Saved	Yes

Symbol Bitmap Span

Selects the Symbol Bitmap Span for PUSCH Rate Matching Pattern.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SYMBol:BSPan SLOT1 | SLOT2 [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SYMBol:BSPan?
Example	:EVM:CCAR0:PDSC1:RMP1:SYMB:BSPan SLOT1 :EVM:CCAR0:PDSC1:RMP1:SYMB:BSPan?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	One Slot
State Saved	Yes
Range	One Slot | Two Slots

Symbol Bitmap

Specifies the Symbol Bitmap for the selected PUSCH Rate Matching Pattern. The length should match the Symbol Bitmap Span:

– 14 bit when Symbol Bitmap Span = One Slot

– 28 bit when Symbol Bitmap Span = Two Slots

Remote	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SYMBol:BITMap <string>

Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:SYMBol:BITMap?
Example	:EVM:CCAR0:PUSC1:RMP1:SYMB:BITM "0000" :EVM:CCAR0:PUSC1:RMP1:SYMB:BITM?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0000"
State Saved	Yes

Periodicity

Selects the Periodicity for Symbol Bitmap

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:PERiodicity <int> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:PERiodicity?
Example	:EVM:CCAR0:PUSC1:RMP1:PER 5 :EVM:CCAR0:PUSC1:RMP1:PER?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Note that, if an invalid value is entered, it will be automatically adjusted
Preset	1
State Saved	Yes
Range	1|2|4|5|8|10|20|40

Periodicity Pattern Bitmap

Specifies the Periodicity Pattern Bitmap for the selected PUSCH Rate Matching Pattern. The length should match the Periodicity.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:PERiodicity:BITMap <string> [:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:RMPattern<m>:PERiodicity:BITMap?
Example	:EVM:CCAR0:PUSC1:RMP1:PER:BITM "1" :EVM:CCAR0:PUSC1:RMP1:PER:BITM?
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"1"
State Saved	Yes

SRS

View and configure the SRS parameters.

Resource Map Diagram

Displays all physical channel allocations on the Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add SRS (GUI only)

Inserts a new SRS configuration into list, the maximum number of SRS configurations is 1 for current version.

Delete SRS

Deletes selected SRS configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:SRS <integer>`
Example	`:EVM:CCAR0:DEL:SRS 1`

SRS Parameter Group (Display only)

Allows you to configure the SRS parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 2110
"Number of Antenna Ports" on page 2110
"Antenna Port" on page 2111
"Power" on page 2111

Resource Allocation

"State" on page 2110
"BWP" on page 2111
"Allocated Slots" on page 2112
"Start Position" on page 2112
"Number of Symbols" on page 2113
"Repetition Factor (R)" on page 2113
"Transmission Comb Number (K_TC)" on page 2114
"Transmission Comb Offset (k_TC)" on page 2114
"SRS Bandwidth Index (B_SRS)" on page 2114
"SRS Bandwidth Index (C_SRS)" on page 2115

SRS Parameters

"State" on page 2110	"Frequency Hopping Mode" on page 2116	"Frequency Hopping (b_hop)" on page 2115	"Frequency Domain Shift (n_shift)" on page 2116
"Frequency Domain Position (n_RRC)" on page 2116	"Start RB Hopping State" on page 2117	"Frequency Scaling Factor (P_F)" on page 2118	"Start RB Index (K_F)" on page 2118
"Cyclic Shift Config (n_SRS_cs)" on page 2117	"Sequence Identity (n_ID_SRS)" on page 2117		

State

Enable or disable SRS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:STATe?`
Example	`:EVM:CCAR0:SRS1:STAT OFF` `:EVM:CCAR0:SRS1:STAT?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`OFF`
State Saved	Yes

Number of Antenna Ports

Select number of antenna ports for SRS, valid value are 1, 2, 4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:ANTenna:PORT:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:ANTenna:PORT:NUMBer?`
Example	`:EVM:CCAR0:SRS1:ANT:PORT:NUMB 1` `:EVM:CCAR0:SRS1:ANT:PORT:NUMB?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`1`
State Saved	Yes
Min	1
Max	4

Antenna Port

Specifies antenna port for SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:SRS1:ANT:PORT 1000` `:EVM:CCAR0:SRS1:ANT:PORT?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1000
Min	1000
Max	1000 + Number of Antenna Port -1

Power

Specifies Power Boost value for the SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:POWer?`
Example	`:EVM:CCAR0:SRS1:POW 0` `:EVM:CCAR0:SRS1:POW?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BWP BWP1 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BWP?`
Example	`:EVM:CCAR0:SRS1:BWP BWP1` `:EVM:CCAR0:SRS1:BWP?`
Couplings	Max value for n = 1 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1|…|BWP4

Allocated Slots

Specifies the Slots allocated to SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:SRS1:SLOT:ALL "0"` `:EVM:CCAR0:SRS1:SLOT:ALL?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0"
State Saved	Yes

Symbol Start (Remote Command only)

Specifies the symbol start used for SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SYMBol:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SYMBol:OFFSet?`
Example	`:EVM:CCAR0:SRS1:SYMB:OFFS 8` `:EVM:CCAR0:SRS1:SYMB:OFFS?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	13
State Saved	Yes
Min	8 for normal CP 6 for extended CP
Max	13 for normal CP 11 for extended CP

Start Position

Specifies the start position for SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:POSition:STARt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:POSition:STARt?`
Example	`:EVM:CCAR0:SRS1:POS:STAR 0` `:EVM:CCAR0:SRS1:POS:STAR?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message NOTE: it is coupled with SRS Symbol Start: SRS Symbol Start + SRS Start Pos = 13 for normal CP, 11 for extended CP
Preset	0
State Saved	Yes
Min	0
Max	5

Number of Symbols

Specifies the number of symbols used for SRS, valid value are 1, 2, 4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SYMBol:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:SYMBol:NUMBer?`
Example	`:EVM:CCAR0:SRS1:SYMB:NUMB 2` `:EVM:CCAR0:SRS1:SYMB:NUMB?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message Symbol Start + Number of symbols should be in the range of the last six symbols in this slot
Preset	1
State Saved	Yes
Min	1
Max	4

Repetition Factor (R)

Specifies the repetition factor used for SRS, valid value are 1, 2, 4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:REPetition:FACTor <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:REPetition:FACTor?`
Example	`:EVM:CCAR0:SRS1:REP:FACT 2` `:EVM:CCAR0:SRS1:REP:FACT?`
Couplings	Max value for n = 1 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message The value should be equal or less than N_symb_SRS
Preset	1
State Saved	Yes
Min	1
Max	4

Transmission Comb Number (K_TC)

Specifies the K_TC for SRS, valid value is 2, 4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:COMB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:COMB:NUMBer?`
Example	`:EVM:CCAR0:SRS1:COMB:NUMB 2` `:EVM:CCAR0:SRS1:COMB:NUMB?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Min	2
Max	4

Transmission Comb Offset (k_TC)

Specifies k_TC for SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:COMB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:COMB:OFFSet?`
Example	`:EVM:CCAR0:SRS1:COMB:OFFS 0` `:EVM:CCAR0:SRS1:COMB:OFFS?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	K_TC

SRS Bandwidth Index (B_SRS)

Specifies B_SRS for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BW:INDex:B <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BW:INDex:B?
Example	:EVM:CCAR0:SRS1:BW:IND:B 0 :EVM:CCAR0:SRS1:BW:IND:B?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	3

SRS Bandwidth Index (C_SRS)

Specifies C_SRS for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BW:INDex:C <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:BW:INDex:C?
Example	:EVM:CCAR0:SRS1:BW:IND:C 0 :EVM:CCAR0:SRS1:BW:IND:C?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	63

Frequency Hopping (b_hop)

Specifies b_hop for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:BHOP <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:BHOP?
Example	:EVM:CCAR0:SRS1:FREQ:BHOP 0 :EVM:CCAR0:SRS1:FREQ:BHOP?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	3

Frequency Domain Shift (n_shift)

Specifies n_shift for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FDOMain:SHIFt <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FDOMain:SHIFt?
Example	:EVM:CCAR0:SRS1:FDOM:SHIF 0 :EVM:CCAR0:SRS1:FDOM:SHIF?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	268

Frequency Domain Position (n_RRC)

Specifies n_RRC for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FDOMain:POSition <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FDOMain:POSition?
Example	:EVM:CCAR0:SRS1:FDOM:POS 0 :EVM:CCAR0:SRS1:FDOM:POS?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	67

Frequency Hopping Mode

Specifies group sequence hopping mode for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:HOPPing[:MODE] NEITher | GROup | SEQuence [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:HOPPing[:MODE]?
Example	:EVM:CCAR0:SRS1:FREQ:HOPP GROup :EVM:CCAR0:SRS1:FREQ:HOPP?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message

Preset	NEITher
Range	Neither | Group | Sequence

Cyclic Shift Config (n_SRS_cs)

Specifies n_SRS_cs for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:CSHift:CONFig <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:CSHift:CONFig?
Example	:EVM:CCAR0:SRS1:CSH:CONF 0 :EVM:CCAR0:SRS1:CSH:CONF?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	7 for K_TC = 2 11 for K_TC = 4

Sequence Identity (n_ID_SRS)

Specifies n_ID_SRS for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:NID <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:NID?
Example	:EVM:CCAR0:SRS1:NID 0 :EVM:CCAR0:SRS1:NID?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
Min	0
Max	1022

Start RB Hopping State

Enable or disable Start RB hopping for SRS.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:RB:STARt:HOPPing:STATe OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:RB:STARt:HOPPing:STATe?
Example	:EVM:CCAR0:SRS1:RB:STAR:HOPP:STAT OFF

	:EVM:CCAR0:SRS1:RB:STAR:HOPP:STAT?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes

Frequency Scaling Factor (P_F)

Specifies the P_F for SRS, valid value is 1, 2, 4.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:SFACtor <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:FREQuency:SFACtor?
Example	:EVM:CCAR0:SRS1:FREQ:SFAC 2 :EVM:CCAR0:SRS1:FREQ:SFAC?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	4

Start RB Index (K_F)

Specifies the K_F for SRS

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:RB:STARt <integer> [:SENSe]:EVM:CCARrier0|…|15:SRS<n>:RB:STARt?
Example	:EVM:CCAR0:SRS1:RB:STAR 2 :EVM:CCAR0:SRS1:RB:STAR?
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	Frequency Scaling Factor (P_F) - 1

PRACH

View and configure the PRACH parameters.

Note: when multiple PRACH bursts are configured, they need to be captured in same sequence as defined, so proper trigger setting is needed to get stable synchronization and de-modulation results.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "Resource Map Diagram" on page 1960.

Add PRACH (GUI only)

Pressing this control inserts a new PDCCH configuration into list, the maximum number of PRACH configurations is 100.

See "Effective PRACH Number(Remote Command only)" on page 2119 for SCPI to provide similar function.

Delete PRACH

Pressing this control deletes selected PRACH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PRACh <integer>`
Example	`:EVM:CCAR0:DEL:PRAC 1`

Effective PRACH Number(Remote Command only)

Specifies how many PRACH configurations are effective, this SCPI only command is used to provide similar function as “Add PRACH” and “Delete PRACH”.

Note all PRACH configurations can be modified through SCPI, but ineffective PUSCH configurations (index > Effective PUSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PRACh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PRACh?`
Example	`:EVM:CCAR0:NUMB:PRAC 1` `:EVM:CCAR0:NUMB:PUSC?`
Couplings	Max value is 100 If you attempt to remotely set the Count larger than 1, this will result in an error message
Preset	1
State Saved	Yes

Min	0
Max	100

PRACH Parameter Group (Display only)

Allows you to configure the PRACH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 2120 | "Config Index" on page 2121 | "Format (Display Only)" on page 2121 | "Spectrum Type" on page 2121
"SCS" on page 2156 | "Active BWP" on page 2157 | "Power" on page 2158

Resource Allocation Parameters

"State" on page 2120 | "Config Index" on page 2121 | "Occasion Index" on page 2160
"Frame Offset" on page 2160 | "Subframe Index (Display Only)" on page 2161 | "n_RA_t (Display Only)" on page 2161
"n_RA_slot (Display Only)" on page 2161 | "n_RA_f (Display Only)" on page 2161 | "n_RA_start" on page 2160
"Msg1 FDM" on page 2157

PRACH Parameters

"State" on page 2120 | "Cyclic Shift Index" on page 2158 | "Root Sequence Index" on page 2159
"Zero Correlation Zone Config" on page 2159 | "Restricted Set Config" on page 2157 | "L_RA" on page 2161

State

Enable or disable PRACH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:STATe?`
Example	`:EVM:CCAR0:PRAC1:STAT OFF` `:EVM:CCAR0:PRAC1:STAT?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes

Config Index

Specifies PRACH configuration Index. See 3GPP TS38.211 Table 6.3.3.2-2, Table 6.3.3.2-3, and Table 6.3.3.2-4 for details.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:CONFig:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:CONFIG:INDex?`
Example	`:EVM:CCAR0:PRAC1:CONF:IND 20` `:EVM:CCAR0:PRAC1:CONF:IND?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	87
Min	0
Max	262

Spectrum Type

Select spectrum type for current PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:SPECtrum:TYPE PAIRed	UNPaired` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:SPECtrum:TYPE?`
Example	`:EVM:CCAR0:PRAC1:SPEC:TYPE PAIR` `:EVM:CCAR0:PRAC1:SPEC:TYPE?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting depends on the Freq Range – FR1: both paired and unpaired are available – FR2: only unpaired is available
Preset	`PAIRed`
State Saved	Yes
Range	`PAIRed|UNPaired`

Format (Display Only)

Display the format of PRACH configuration according to the PRACH Config Index and Spectrum Type. See 3GPP TS38.211 Table 6.3.3.2-2, Table 6.3.3.2-3 and Table 6.3.3.2-4 for details.

More Information

Table 6.3.3.2-2: Random access configurations for FR1 and paired spectrum/supplementary uplink.

PRACH Configuration Index	**Preamble format**	**n_{SFN} mode x = y**		**Subframe number**	**Starting symbol**	**Number of PRACH slots within a subframe**	**$N_t^{RA,slot}$, number of time-domain PRACH occasions within a PRACH slot**	**N_{dur}^{RA}, PRACH duration**
		x	y

253	A3/B3	1	0	4,9,14,19,24,29,34,39	2	2	2	6
254	A3/B3	1	0	3,7,11,15,19,23,27,31,35,39	2	1	2	6
255	A3/B3	1	0	1,3,5,7,...,37,39	2	1	2	6

SCS

Select subcarrier spacing for current PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:SCS SCS1K25 | SCS5K | SCS15K | SCS30K | SCS60K | SCS120K` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:SCS?`
Example	`:EVM:CCAR0:PRAC1:SCS SCS15K` `:EVM:CCAR0:PRAC1:SCS?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting depends on the PRACH Format and Freq Range Format = 0,1,2 SCS = 1.25 kHz Format = 3 SCS = 5 kHz Else for Freq Range 1, SCS should be 15 kHz or 30 kHz; For Freq Range 2, SCS should be 60 kHz or

	120 kHz
Preset	SCS30K
State Saved	Yes
Range	1.25 kHz|5 kHz|15 kHz|30 kHz|60 kHz|120 kHz

Active BWP

Specifies current active uplink BWP.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:ABWP BWP1 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:ABWP?`
Example	`:EVM:CCAR0:PRAC1:ABWP BWP1` `:EVM:CCAR0:PRAC1:ABWP?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1|BWP2|BWP3|BWP4

Restricted Set Config

Select Restricted set config for current PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RSET:CONFig NONE | TYPEA | TYPEB` `[:SENSe]:EVM:CCARrier0 | … | 15:PRACh<n>:RSET:CONFig?`
Example	`:EVM:CCAR0:PRAC1:RSET:CONF TYPEA` `:EVM:CCAR0:PRAC1:RSET:CONF?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message This setting depends on the Format – Format 0,1,2,3: all three options are available – Format A1, A2, A3, B1, B2, B3, B4, C0, C2: only Unrestricted set is available
State Saved	Yes
Range	Unrestricted set | Restricted set type A | Restricted set type B

Msg1 FDM

Select high-layer parameter msg1-FDM for current PRACH.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:FDM FDM1 | FDM2 | FDM4 | FDM8 [:SENSe]:EVM:CCARrier0 | … | 15:PRACh<n>:FDM?
Example	:EVM:CCAR0:PRAC1:FDM FDM2 :EVM:CCAR0:PRAC1:FDM?
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	FDM1
State Saved	Yes
Range	1|2|4|8

Power

Specifies Power Boost value for the PRACH.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:POWer?
Example	:EVM:CCAR0:PRAC1:POW 0 :EVM:CCAR0:PRAC1:POW?
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Cyclic Shift Index

Specifies Cyclic Shift Index for the PRACH.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:CSHift:INDex <int> [:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:CSHift:INDex?
Example	:EVM:CCAR0:PRAC1:CSH:IND 1 :EVM:CCAR0:PRAC1:CSH:IND?
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes

Min	-1
Max	838

Root Sequence Index

Specifies Root Sequence Index for the PRACH.

Note: When Occasion Index is -1 (auto detect), Root Sequence Index will also be auto detected and current value is used as search start point. The maximum search length would be 64 root sequence index start from current value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RSEQuence:INDex <int>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RSEQuence:INDex?`
Example	`:EVM:CCAR0:PRAC1:RSEQ:IND 1` `:EVM:CCAR0:PRAC1:RSEQ:IND?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	Format 0,1,2,3, the max is 837 Else, the max is 137

Zero Correlation Zone Config

Specifies Zero Correlation Zone Config for the PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:ZCZone <int>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:ZCZone?`
Example	`:EVM:CCAR0:PRAC1:ZCZ 1` `:EVM:CCAR0:PRAC1:ZCZ?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	15

n_RA_start

Specifies msg1 Frequency Start (n_RA_start) for the PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RASTart <int>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RASTart?`
Example	`:EVM:CCAR0:PRAC1:RAST 1` `:EVM:CCAR0:PRAC1:RAST?`
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	RB number of BWP - 1

Occasion Index

Specifies Occasion Index for the PRACH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RA <int>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:RA?`
Example	`:EVM:CCAR0:PRAC1:RA 1` `:EVM:CCAR0:PRAC1:RA?`
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	-1
Max	511

Frame Offset

Set the Frame Offset determined by the configuration table and configuration index, corresponding to the 'y' in the table. When there is only one valid value, this parameter is display only.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:FRAMe:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PRACh<n>:FRAMe:OFFSet?`

Example	:EVM:CCAR0:PRAC1:FRAM:OFFS 1 :EVM:CCAR0:PRAC1:FRAM:OFFS?
Preset	0
State Saved	Yes
Min	0
Max	2

Subframe Index (Display Only)

Display the subframe index of PRACH according to Occasion Index.

State Saved	No

n_RA_t (Display Only)

Display the n_RA_t of PRACH according to Occasion Index.

State Saved	No

n_RA_slot (Display Only)

Display the n_RA_slot of PRACH according to Occasion Index.

State Saved	No

n_RA_f (Display Only)

Display the n_RA_f of PRACH according to Occasion Index.

State Saved	No

L_RA

Set the L_RA value of PRACH.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PRACh1|100:LRA L139 | L571 | L839 | L1151 [:SENSe]:EVM:CCARrier0 | … | 15:PRACh1 | 100:LRA?
Example	:EVM:CCAR0:PRAC:LRA L571 :EVM:CCAR0:PRAC:LRA?
Couplings	Max value for n = 100 and Min value for n = 1

	139 |1151 for 15kHz SCS; 139 | 571 for 30kHz SCS; Fixed to 139 for 60kHz and 120kHz SCS; Fixed to 839 for 1.25kHz and 5kHz SCS Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	139
State Saved	Yes
Range	139|571|839|1151

PSCCH (Sidelink)

View and configure the PSCCH parameters.

Add PSCCH (GUI only)

Pressing this control inserts a new PSCCH configuration into list, the maximum number of PSCCH configurations is 16.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Delete PSCCH

Pressing this control deletes selected PSCCH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PSCCh <integer>`
Example	`:EVM:CCAR0:DEL:PSCC 1`

Clear All (GUI only)

Pressing this control deletes all PSCCH configuration from list.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Effective PSCCH Number (Remote Command only)

Specifies how many PSCCH configurations are effective, this SCPI only command is used to provide similar function as “Add PSCCH” and “Delete PSCCH”.

Note all 16 PSCCH configurations can be modified through SCPI, but ineffective PSCCH configurations (index > Effective PSCCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PSCCh <integer> [:SENSe]:EVM:CCARrier0|…|15:NUMBer:PSCCh?
Example	:EVM:CCAR0:NUMB:PSCC 2 :EVM:CCAR0:NUMB:PSCC?
Couplings	Max value is 16 If you attempt to remotely set the Count larger than 16, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	16

PSCCH Parameter Group (Display only)

Allows you to configure the PSCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 2163 | "Payload Size" on page 2168 | "PSCCH Power Boosting" on page 2166

Resource Allocation Settings

"State" on page 2163 | "BWP" on page 2164 | "RB Offset" on page 2165 | "RB Number" on page 2166 | "RB Offset" on page 1969 | "Number of Symbols" on page 2165 | "Allocated Slots" on page 2164

DMRS Settings

"State" on page 2163 | "DMRS Scrambling ID" on page 2167 | "DMRS Parameter i" on page 2167 | "DMRS Power Boosting" on page 2166

State

Enable or disable PSCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>[:STATe]?
Example	:EVM:CCAR0:PSCC1 OFF :EVM:CCAR0:PSCC1?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message

Preset	OFF
State Saved	Yes

BWP

Specifies the BWP of PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:BWP BWP1 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:BWP?`
Example	`:EVM:CCAR0:PSCC1:BWP BWP1` `:EVM:CCAR0:PSCC1:BWP?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1|…|BWP4

Allocated Slots

Specifies the Slots allocated to PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:PSCC1:SLOT:ALL "2:9"` `:EVM:CCAR0:PSCC1:SLOT:ALL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0"
State Saved	Yes

First Symbol

Specifies the First Symbol of PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PSCC1:SYMB:FIRS 4` `:EVM:CCAR0:PSCC1:SYMB:FIRS?`
Couplings	Max value for n = 16 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	13

Number of Symbols

Specifies the Symbol Number of PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SYMBol:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:SYMBol:NUMBer?`
Example	`:EVM:CCAR0:PSCC1:SYMB:NUMB 2` `:EVM:CCAR0:PSCC1:SYMB:NUMB?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Min	1
Max	2

RB Offset

Specifies the RB Offset of selected PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:RB:OFFSet?`
Example	`:EVM:CCAR0:PSCC1:RB:OFFSet 0` `:EVM:CCAR0:PSCC1:RB:OFFSet?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP
Min	0
Max	RB Number of selected BWP – PSCCH RB Number

RB Number

Specifies the RB Number of selected PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:RB:NUMBer?`
Example	`:EVM:CCAR0:PSCC1:RB:NUMB 273` `:EVM:CCAR0:PSCC1:RB:NUMB?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	10
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

PSCCH Power Boosting

Specifies Power Boost value for the PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:POWer?`
Example	`:EVM:CCAR0:PSCC1:POW 0` `:EVM:CCAR0:PSCC1:POW?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:POWer?`
Example	`:EVM:CCAR0:PSCC1:DMRS:POW 0`

	:EVM:CCAR0:PSCC1:DMRS:POW?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Scrambling ID

Specifies the PSCCH DMRS Scrambling ID.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:SCID <integer> [:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:SCID?
Example	:EVM:CCAR0:PSCC:DMRS:SCID 0 :EVM:CCAR0:PSCC:DMRS:SCID?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

DMRS Parameter i

Specifies the PSCCH DMRS mapping parameter i.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:MAPI <integer> [:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:MAPI?
Example	:EVM:CCAR0:PSCC:DMRS:MAPI 0 :EVM:CCAR0:PSCC:DMRS:MAPI?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	2

Payload Size

Specifies the Payload Size of PSCCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:LOAD:SIZE <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:LOAD:SIZE?`
Example	`:EVM:CCAR0:PSCC1:LOAD:SIZE 10` `:EVM:CCAR0:PSCC1:LOAD:SIZE?`
Preset	60
State Saved	Yes
Min	1
Max	408

PSSCH (Sidelink)

View and configure the PSSCH parameters.

Add PSSCH (GUI only)

Pressing this control inserts a new PSCCH configuration into list, the maximum number of PSCCH configurations is 250.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Delete PSCCH

Pressing this control deletes selected PSSCH configuration from list.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DELete:PSSCh <integer>`
Example	`:EVM:CCAR0:DEL:PSSC 1`

Clear All (GUI only)

Pressing this control deletes all PSSCH configuration from list.

See "Effective PDCCH Number (Remote Command only)" on page 1989 for SCPI to provide similar function.

Effective PSSCH Number (Remote Command only)

Specifies how many PSSCH configurations are effective, this SCPI only command is used to provide similar function as “Add PSSCH” and “Delete PSSCH”.

Note all 250 PSSCH configurations can be modified through SCPI, but ineffective PSSCH configurations (index > Effective PSSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:NUMBer:PSSCh <integer> [:SENSe]:EVM:CCARrier0|…|15:NUMBer:PSSCh?
Example	:EVM:CCAR0:NUMB:PSSC 2 :EVM:CCAR0:NUMB:PSSC?
Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	250

PSSCH Parameter Group (Display only)

Allows you to configure the PSSCH parameters.

This control is for UI display only. You can select one of the following groups:

General Setting

"State" on page 2170	"n_ID" on page 2171	"PSCCH Duration" on page 2171	"DMRS Symbol Number (Remote Command only)" on page 2175 (SCPI only)	"MCS Table" on page 2174	"MCS" on page 2175	"Modulation (Display Only)" on page 2175
"xOverhead" on page 2180	"SCI2 State" on page 2178	"SCI2 Scaling " on page 2178	"SCI2 Beta Offset Index" on page 2179	"SCI2 Payload Size" on page 2179		

Resource Allocation Setting

"State" on page 2170	"BWP" on page 2170	"RB Offset"	"RB Num	"Allocated	"First Symbol"	"Last Symbol" on

on page 2172 | ber" on page 2173 | Slots" on page 2173 | on page 2174 | page 2174

"DMRS Time Pattern List" on page 2180 | "Number of DMRS Symbols" on page 2180

Antenna Setting

"State" on page 2170 | "Antenna Port" on page 2172

PTRS Setting

"State" on page 2170 | "PTRS Enable" on page 2176 | "PTRS K" on page 2177 | "PTRS L" on page 2177 | "PTRS RE Offset" on page 2178

Power Setting

"State" on page 2170 | "PSSCH Power Boosting" on page 2172 | "DMRS Power Boosting" on page 2176 | "PTRS Power Boosting" on page 2176

State

Enable or disable selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>[:STATe]?`
Example	`:EVM:CCAR0:PSSC1 OFF` `:EVM:CCAR0:PSSC1?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes
Range	DISABLE | ENABLE | 0 | 1

BWP

Specifies the BWP of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:BWP BWP1 | … | BWP4` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:BWP?`
Example	`:EVM:CCAR0:PSSC1:BWP BWP1` `:EVM:CCAR0:PSSC1:BWP?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1 | BWP2 | BWP3 | BWP4

PSCCH Duration

Specifies the associated PSCCH duration in symbol number.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PSCCh <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PSCCh?`
Example	`:EVM:CCAR0:PSSC1:PSCC 1` `:EVM:CCAR0:PSSC1:PSCC?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	2
Max	3

n_ID

Specifies n_ID for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:NID <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:NID?`
Example	`:EVM:CCAR0:PSSC1:NID 0` `:EVM:CCAR0:PSSC1:NID?`
Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes

Min	0
Max	65535

Antenna Port

Specifies the Antenna Port of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:ANTenna:PORT <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:ANTenna:PORT?`
Example	`:EVM:CCAR0:PSSC1:ANT:PORT 1000` `:EVM:CCAR0:PSSC1:ANT:PORT?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1000
State Saved	Yes
Min	1000
Max	1001

PSSCH Power Boosting

Specifies Power Boost value for the selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:POWer?`
Example	`:EVM:CCAR0:PSSC1:POW 0` `:EVM:CCAR0:PSSC1:POW?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

RB Offset

Specifies the RB Offset of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:RB:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:RB:OFFSet?`

Example	`:EVM:CCAR0:PSSC1:RB:OFFSet 0` `:EVM:CCAR0:PSSC1:RB:OFFSet?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP
Min	0
Max	RB Number of selected BWP – PSSCH RB Number

RB Number

Specifies the RB Number of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:RB:NUMBer <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:RB:NUMBer?`
Example	`:EVM:CCAR0:PSSC1:RB:NUMB 273` `:EVM:CCAR0:PSSC1:RB:NUMB?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	273
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

Allocated Slots

Specifies the slots allocated to selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SLOT:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SLOT:ALLocated?`
Example	`:EVM:CCAR0:PSSC1:SLOT:ALL "2:9"` `:EVM:CCAR0:PSSC1:SLOT:ALL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	"0:19"
State Saved	Yes

First Symbol

Specifies the First Symbol of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SYMBol:FIRSt <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SYMBol:FIRSt?`
Example	`:EVM:CCAR0:PSSC1:SYMB:FIRS 4` `:EVM:CCAR0:PSSC1:SYMB:FIRS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	8

Last Symbol

Specifies the Last Symbol of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SYMBol:LAST <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SYMBol:LAST?`
Example	`:EVM:CCAR0:PSSC1:SYMB:LAST 4` `:EVM:CCAR0:PSSC1:SYMB:LAST?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	12
State Saved	Yes
Min	5
Max	12

MCS Table

Specifies which MCS table is used to configure MCS for selected PSSCH configuration. Please refer to 38.214 clause 5.1.3 for complete MCS table.

- Table 1 – Table 5.1.3.1-1 (64QAM)
- Table 2 – Table 5.1.3.1-2 (256QAM)
- Table 3 – Table 5.1.3.1-3 (64QAMLowSE)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:MCS:TABLe TABLe1 | TABLe2 | TABLe3` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:MCS:TABLe?`
Example	`:EVM:CCAR0:PSSC1:MCS:TABL TABL2` `:EVM:CCAR0:PSSC1:MCS:TABL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	TABL1
State Saved	Yes
Range	64QAM | 256QAM | 64QAMLowSE

MCS

Specifies the MCS index for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:MCS?`
Example	`:EVM:CCAR0:PSSC1:MCS 1` `:EVM:CCAR0:PSSC1:MCS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	31

Modulation (Display Only)

Display modulation according to MCS table and MCS setting for the selected PSSCH configuration.

DMRS Symbol Number (Remote Command only)

Specifies DMRS symbol number for the selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:SYMBol:NUMBer <int>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:SYMBol:NUMBer?`
Example	`:EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB 2` `:EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB?`

Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	2
State Saved	Yes
Min	2
Max	4

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PSSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:POWer <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:POWer?
Example	:EVM:CCAR0:PSSC1:DMRS:POW 0 :EVM:CCAR0:PSSC1:DMRS:POW?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS Enable

Enable or disable PTRS for selected PSSCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS[:STATe]?
Example	:EVM:CCAR0:PSSC1:PTRS OFF :EVM:CCAR0:PSSC1:PTRS?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	DISABLE | ENABLE | 0 | 1

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:POWer <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:POWer?`
Example	`:EVM:CCAR0:PSSC1:PTRS:POW 0` `:EVM:CCAR0:PSSC1:PTRS:POW?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:K K2 | K4` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:K?`
Example	`:EVM:CCAR0:PSSC1:PTRS:K K2` `:EVM:CCAR0:PSSC1:PTRS:K?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	K2
State Saved	Yes
Range	2 | 4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:L L1 | L2 | L4` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:L?`
Example	`:EVM:CCAR0:PSSC1:PTRS:L L2` `:EVM:CCAR0:PSSC1:PTRS:L?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`L1`
State Saved	Yes
Range	1 | 2 | 4

PTRS RE Offset

Specifies PTRS RE Offset for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:RE:OFFSet BIT00 | BIT01 | BIT10 | BIT11` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:RE:OFFSet?`
Example	`:EVM:CCAR0:PSSC1:PTRS:RE:OFFS BIT00` `:EVM:CCAR0:PSSC1:PTRS:RE:OFFS?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`BIT00`
State Saved	Yes
Range	00 | 01 | 10 | 11

SCI2 State

Enable or disable SCI2 payload for selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2[:STATe]?`
Example	`:EVM:CCAR0:PSSC1:SCI2 OFF` `:EVM:CCAR0:PSSC1:SCI2?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`ON`
State Saved	Yes
Range	`DISABLE | ENABLE | 0 | 1`

SCI2 Scaling

Specifies the SCI2 Scaling of selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:SCALing <float>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:SCALing?`
Example	`:EVM:CCAR0:PSSC1:SCI2:SCAL 0.8` `:EVM:CCAR0:PSSC1:SCI2:SCAL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message

Preset	1.0
State Saved	Yes
Min	0.5
Max	1.0

SCI2 Beta Offset Index

Specifies the SCI2 Beta Offset index of selected PSSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:OFFSet?
Example	:EVM:CCAR0:PSSC1:SCI2:OFFS 1 :EVM:CCAR0:PSSC1:SCI2:OFFS?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	6
State Saved	Yes
Min	0
Max	15

SCI2 Payload Size

Specifies the SCI2 Payload Size of selected PSSCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:LOAD:SIZE <integer> [:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:SCI2:LOAD:SIZE?
Example	:EVM:CCAR0:PSSC1:SCI2:LOAD:SIZE 100 :EVM:CCAR0:PSSC1:SCI2:LOAD:SIZE?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	35
State Saved	Yes
Min	1
Max	140

xOverhead

Specifies the xOverhead parameter (N_oh_PRB) for the TB size calculation of the selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:X:OVERhead <integer>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:X:OVERhead?`
Example	`:EVM:CCAR0:PSSC1:X:OVER 1` `:EVM:CCAR0:PSSC1:X:OVER?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	18

DMRS Time Pattern List

Selects one of seven configurations of sl-PSSCH-DMRS-TimePatternList in 3GPP 38.214 8.1.3.2.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:TIME:PATTern P2	P3	P4	P23	P24	P34	P234` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:TIME:PATTern?`
Example	`:EVM:CCAR0:PSSC1:DMRS:TIME:PATT P23` `:EVM:CCAR0:PSSC1:DMRS:TIME:PATT?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	`P2`
State Saved	Yes
Range	`2	3	4	2,3	2,4	3,4	2,3,4`

Number of DMRS Symbols

Specifies the DMRS symbol number for each allocated slot in selected PSSCH configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:SYMBol:NUMBer:ALLocated <string>` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:SYMBol:NUMBer:ALLocated?`

Example	:EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB:ALL "2,2,3,2" :EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB:ALL?
Couplings	Max value for n = 250 and Min value for n = 1 This setting will be updated according to sl-PSSCH-DMRS-TimePatternList. Also it will be updated when the DMRS Symbol Number is changed via SCPI. When the length is less than allocated slots, the last value will be used for remaining slots. Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	“2”
State Saved	Yes

Summary (Downlink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include PSS

Includes or excludes PSS in selected SS Block.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PSS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PSS:INCLude?
Example	:EVM:CCAR0:SSB1:PSS:INCL OFF :EVM:CCAR0:SSB1:PSS:INCL?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include SSS

Includes or excludes SSS in selected SS Block.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SSS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:SSS:INCLude?
Example	:EVM:CCAR0:SSB1:SSS:INCL OFF :EVM:CCAR0:SSB1:SSS:INCL?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PBCH

Includes or excludes PBCH in selected SS Block.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:INCLude?
Example	:EVM:CCAR0:SSB1:PBCH:INCL OFF :EVM:CCAR0:SSB1:PBCH:INCL?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PBCH DMRS

Includes or excludes PBCH DMRS in selected SS Block.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:DMRS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:SSB<n>:PBCH:DMRS:INCLude?
Example	:EVM:CCAR0:SSB1:PBCH:DMRS:INCL OFF :EVM:CCAR0:SSB1:PBCH:DMRS:INCL?
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDCCH

Includes or excludes PDCCH in selected PDCCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:INCLude?
Example	:EVM:CCAR0:PDCC1:INCL OFF :EVM:CCAR0:PDCC1:INCL?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDCCH DMRS

Includes or excludes PDCCH DMRS in selected PDCCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDCCh<n>:DMRS:INCLude?
Example	:EVM:CCAR0:PDCC1:DMRS:INCL OFF :EVM:CCAR0:PDCC1:DMRS:INCL?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH

Includes or excludes PDSCH in selected PDSCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:INCLude?
Example	:EVM:CCAR0:PDSC1:INCL OFF :EVM:CCAR0:PDSC1:INCL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH DMRS

Includes or excludes PDSCH DMRS in selected PDSCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:DMRS:INCLude?
Example	:EVM:CCAR0:PDSC1:DMRS:INCL OFF :EVM:CCAR0:PDSC1:DMRS:INCL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH PTRS

Includes or excludes PDSCH PTRS in selected PDSCH allocation.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:PDSCh<n>:PTRS:INCLude?
Example	:EVM:CCAR0:PDSC1:PTRS:INCL OFF :EVM:CCAR0:PDSC1:PTRS:INCL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include CSI-RS

Enable or disable CSI-RS configuration.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:INCLude OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:CSIRs<n>:INCLude?
Example	:EVM:CCAR0:CSIR1:INCL OFF :EVM:CCAR0:CSIR1:INCL?
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include RIM-RS

Specifies whether to include or exclude RIM-RS configuration.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:INCLude OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:RIMRs<n>:INCLude?`
Example	`:EVM:CCAR0:RIMR1:INCL OFF` `:EVM:CCAR0:RIMR1:INCL?`
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Edit Colors (GUI only)

This table display color for each physical channel allocations, you may customize them.

Reset (GUI Only)

Pressing this control will reset color for each physical channel allocations.

Summary (Uplink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include PUCCH

Includes or excludes PUCCH in selected PUCCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INCLude OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:INCLude?`
Example	`:EVM:CCAR0:PUCC1:INCL OFF` `:EVM:CCAR0:PUCC1:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUCCH DMRS

Includes or excludes PUCCH DMRS in selected PUCCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUCCh<n>:DMRS:INCLude?`
Example	`:EVM:CCAR0:PUCC1:DMRS:INCL OFF` `:EVM:CCAR0:PUCC1:DMRS:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUSCH

Includes or excludes PUSCH in selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:INCLude?`
Example	`:EVM:CCAR0:PUSC1:INCL OFF` `:EVM:CCAR0:PUSC1:INCL?`
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUSCH DMRS

Includes or excludes PUSCH DMRS in selected PUSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PUSCh<n>:DMRS:INCLude?`
Example	`:EVM:CCAR0:PUSC1:DMRS:INCL OFF` `:EVM:CCAR0:PUSC1:DMRS:INCL?`
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include SRS

Includes or excludes SRS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SRS<n>:INCLude?`
Example	`:EVM:CCAR0:SRS:INCL OFF` `:EVM:CCAR0:SRS:INCL?`
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Edit Colors (GUI only)

See "Edit Colors (GUI only)" on page 2185

Reset (GUI only)

See "Reset (GUI Only)" on page 2185

Summary (Sidelink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include S-PSS

Includes or excludes PSS in selected S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SPSS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SPSS:INCLude?`
Example	`:EVM:CCAR0:SSSB1:SPSS:INCL OFF` `:EVM:CCAR0:SSSB1:SPSS:INCL?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include S-SSS

Includes or excludes SSS in selected S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SSSS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:SSSS:INCLude?`
Example	`:EVM:CCAR0:SSSB1:SSSS:INCL OFF` `:EVM:CCAR0:SSSB1:SSSS:INCL?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSBCH

Includes or excludes PSBCH in selected S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PSBCh:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PSBCh:INCLude?`
Example	`:EVM:CCAR0:SSSB1:PSBC:INCL OFF` `:EVM:CCAR0:SSSB1:PSBC:INCL?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSBCH DMRS

Includes or excludes PSBCH DMRS in selected S-SS Block.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PSBCh:DMRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:SSSB<n>:PSBCh:DMRS:INCLude?`
Example	`:EVM:CCAR0:SSSB1:PSBC:DMRS:INCL OFF` `:EVM:CCAR0:SSSB1:PSBC:DMRS:INCL?`
Couplings	The sub-opcode <n> max value 2 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSCCH

Includes or excludes selected PSCCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:INCLude?`
Example	`:EVM:CCAR0:PSCC1:INCL OFF` `:EVM:CCAR0:PSCC1:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSCCH DMRS

Includes or excludes PSCCH DMRS in selected PSCCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSCCh<n>:DMRS:INCLude?`
Example	`:EVM:CCAR0:PSCC1:DMRS:INCL OFF` `:EVM:CCAR0:PSCC1:DMRS:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH

Includes or excludes selected PSSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:INCLude?`
Example	`:EVM:CCAR0:PSSC1:INCL OFF` `:EVM:CCAR0:PSSC1:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH DMRS

Includes or excludes PSSCH DMRS in selected PSSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:DMRS:INCLude?`
Example	`:EVM:CCAR0:PSSC1:DMRS:INCL OFF` `:EVM:CCAR0:PSSC1:DMRS:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH PTRS

Includes or excludes PSSCH PTRS in selected PSSCH allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:INCLude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PSSCh<n>:PTRS:INCLude?`
Example	`:EVM:CCAR0:PSSC1:PTRS:INCL OFF` `:EVM:CCAR0:PSSC1:PTRS:INCL?`
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub-opcode that is out of range generates an error message
Preset	ON
State Saved	Yes

Edit Colors (GUI only)

See "Edit Colors (GUI only)" on page 2185

Reset (GUI only)

See "Reset (GUI Only)" on page 2185

3.7.8.7 Advanced

Enables you to configure advanced parameters for de-modulation algorithm.

IF Gain

In order to take full advantage of the RF dynamic range of the analyzer, we offer a switched IF amplifier with approximately 10 dB of gain. When it can be turned on without an overload, the dynamic range is always better with it on than off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

This only applies to the RF input. It does not apply to baseband I/Q input.

This control is not available in VXT, M9410E/11E/15E/16E, EXM, and UXM.

IF Gain Auto

Activates the auto rules for IF Gain

Remote Command	`[:SENSe]:EVM:IF:GAIN:AUTO[:STATe] ON | OFF | 1 | 0` `[:SENSe]:EVM:IF:GAIN:AUTO[:STATe]?`
Example	`:EVM:IF:GAIN:AUTO OFF` `:EVM:IF:GAIN:AUTO?`
Couplings	When either the auto attenuation works (for example, with electrical attenuator), or the optimized mechanical attenuator range is requested, the IF Gain setting is changed as following rule Auto sets IF Gain to On under any of the following conditions: the input attenuator is set to 0 dB. For other settings, Auto sets IF Gain to Off
Preset	`OFF`
State Saved	Yes
Range	Auto | Man

IF Gain Select

Selects the range of IF gain.

- High gain: set 10dB IF gain for better noise level measurements
- Low gain: set 0dB IF gain for large signals
- Other: allow to set arbitrary IF gain value within -12dB to 12dB. This selection is not available for B25 If bandwidth option

When this parameter is changed, IF Gain Auto will become Man.

Remote Command	`[:SENSe]:EVM:IF:GAIN:SELect LOW | HIGH | OTHer` `[:SENSe]:EVM:IF:GAIN:SELect?`
Example	`:EVM:IF:GAIN:SEL LOW` `:EVM:IF:GAIN:SEL?`
Preset	`LOW`
State Saved	Yes
Range	`LOW|HIGH|OTHer`

Other IF Gain

This specifies the IF gain value. When IF gain is set to Other, this value will be used.

Remote Command	`[:SENSe]:EVM:IF:GAIN:LEVel <rel_ampl>` `[:SENSe]:EVM:IF:GAIN:LEVel?`
Example	`:EVM:IF:GAIN:LEV -10` `:EVM:IF:GAIN:LEV?`
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Saved in instrument state
Min/Max	Depends on CC Bandwidth

LO Dither

When LO Dither is turned on, the local oscillator frequency is rapidly changed by small, random amounts. This helps spread the power of spurious signals within the passband, which lowers their level, thus increasing dynamic range.

This is only required in very wide passbands, so this feature only appears with option H1G.

Remote Command	`[:SENSe]:EVM:LO:DITHer[:STATe] ON | OFF | 1 | 0` `[:SENSe]:EVM:LO:DITHer[:STATe]?`
Example	`:EVM:LO:DITH 1`

	:EVM:LO:DITH?
Dependencies	Only available when the instrument has the Option H1G installed. If you try to turn ON LO Dither in any other case, an error message is generated, -241,"Hardware missing; Option H1G required" Only appears in some Modes (e.g., 5GNR, VMA and IQ Analyzer) The LO Dither function is turned Off and grayed out when the IF Path is set to a path other than 1 GHz. If you press the grayed out control, a warning message "LO Dither only available with IF Path 1 GHz" is shown. If you try to set LO Dither to ON remotely while it is grayed out, a message "-221,Settings conflict; LO Dither only available with IF Path 1 GHz" is returned When LO Dither is turned on, the Phase Noise Optimization control is grayed out. If you try to change the PNO value via front panel or SCPI in that case, an error is generated, "LO Dither must be turned off to change this value".
Couplings	As with most parameters with an AUTO state, AUTO COUPLE sets it to Auto, which then picks AUTOrange, and setting any specific value (AUTOrange, LOW or HIGH) will set the AUTO state to false When LO Dither is turned ON, Phase Noise Optimization is set to "Best Close-In". If the Phase Noise Optimization value changes due to turning on LO Dither, a warning message "Phase Noise Optimization changed due to LO Dither activation" is shown
Preset	OFF
State Saved	Saved in instrument state

Phase Noise Optimization

Allows you to select the LO (local oscillator) phase noise behavior for various operating conditions.

For full details, see "Parameter Options, Installed Options & Auto Rules" on page 2193 and "Ranges" on page 2198 below.

Remote Command	[:SENSe]:EVM:FREQuency:SYNThesis[:STATe] 1 | … | 5 For the meaning of each numeric option value, see "Parameter Options, Installed Options & Auto Rules" on page 2193 below [:SENSe]:EVM:FREQuency:SYNThesis[:STATe]?
Example	:EVM:FREQ:SYNT 1 :EVM:FREQ:SYNT?
Dependencies	This control is not available in VXT, M9410E/11E/15E/16E or UXM
Preset	2
State Saved	Saved in instrument state
Range	See "Ranges" on page 2198 below

Parameter Options, Installed Options & Auto Rules

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 2195	1	– In instruments with EP0, balances close-in phase noise with spur avoidance – In instruments without EP0 optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 2195	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 2196	3	Optimizes LO for tuning speed
"Best Close-in" on page 2194	4 or 1*	– In instruments with EP0, emphasizes close-in phase noise performance without regard to spur avoidance – In instruments without EP0, this setting is accepted but no action is taken
"Best Spurs" on page 2195	5	– In instruments with EP0, emphasizes spur avoidance over close-in phase noise performance – In instruments without EP0, this setting is accepted but no action taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EP0 installation. See "Best Close-in" on page 2194 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "Fast Tuning" on page 2196 is identical in effect to "Best Close-in" on page 2194.

Best Close-in

Without option EP0

```
:FREQ:SYNT 1
```

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EP0

```
:FREQ:SYNT 4
```

In instruments with Option EP0, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "Balanced" on page 2195 setting, parameter 1 selects "Balanced" on page 2195 in EP0 instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "Best Close-in" on page 2194, which is usually not as good a choice as "Balanced" on page 2195.

Balanced

```
:FREQ:SYNT 1
```

In instruments with EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Best Spurs

```
:FREQ:SYNT 5
```

In instruments with EP0, the LO is configured for better phase noise than the "Best Wide-offset" on page 2195 case close to the carrier, but the configuration has 11 dB worse phase noise than the "Best Close-in" on page 2194 case mostly within ±1 octave around 300 kHz offset. Spurs are even lower than in the "Balanced" on page 2195 case at better than –90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

```
:FREQ:SYNT 2
```

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Fast Tuning

```
:FREQ:SYNT 3
```

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "Fast Tuning" on page 2196 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "Best Spurs" on page 2195. It is available with the "Fast Tuning" on page 2196 label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 2196 option, the settings for "Best Close-in" on page 2194 are used if "Fast Tuning" on page 2196 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

```
:FREQ:SYNT:AUTO ON
```

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EP0 Models with option EP0 have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz	"Balanced" on page 2195
	Span > 114.1 MHz, *or* RBW > 800 kHz	"Fast Tuning" on page 2196
	RBW > 290 kHz, *or* Span > 4.2 MHz	"Best Wide-offset" on page

Models with Option	Conditions	Selection
		2195
	Other conditions	"Balanced" on page 2195
EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Span > 44.44 MHz, *or* RBW > 1.9 MHz, *or* Source Mode is set to "Tracking"	"Fast Tuning" on page 2196
	Center frequency is < 195 kHz, *or* CF >= 1 MHz *and* Span <= 1.3 MHz *and* RBW <= 75 kHz	"Best Close-in" on page 2194
	All other conditions	"Best Wide-offset" on page 2195
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 2194; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)	CF < 130 kHz , *or* CF > 12 MHz *and* Span < 495 kHz *and* RBW < 40 kHz	"Best Close-in" on page 2194
	Span > 22 MHz, *or* RBW > 400 kHz, *or* CF ≤ 12 MHz *and* Span < 495 kHz *and* RBW < 23 kHz	"Fast Tuning" on page 2196
	All other conditions	"Best Wide-offset" on page 2195
EP4 (available in CXA for improved phase noise)	Span > 101 MHz *or* RBW > 1.15 MHz *or* Source Mode is set to "Tracking"	"Fast Tuning" on page 2196
	CF is < 109 kHz *or* CF >= 4.95 MHz *and* Span <= 666 kHz *and* RBW < 28 kHz	"Best Close-in" on page 2194
	All other conditions	"Best Wide-offset" on page 2195
All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 2196 are actually the same as "Best Close-in" on page 2194, but the rules are implemented this way so that the	Span > 12.34 MHz, *or* RBW > 250 kHz, *or* Source Mode is set to "Tracking"	"Fast Tuning" on page 2196

Models with Option	Conditions	Selection
user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning	Center frequency is < 25 kHz, *or* CF >= 1 MHz *and* Span <= 141.4 kHz *and* RBW <= 5 kHz	"Best Close-in" on page 2194
	All other conditions	"Best Wide-offset" on page 2195

In all the above cases:

– The RBW to be used in the calculations is the equivalent –3 dB bandwidth of the current RBW filter

– The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP0	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP1	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
	3	Fast Tuning	[single loop]
EP2, EP3, EP5	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
	3	Fast Tuning	[medium loop bw]
EP4	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

Mixing Mode

Changing LO mixing from high-side to low-side vice versa.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:LO:MIXMode NORMal | ALTernate`

	[:SENSe]:EVM:CCARrier0|…|15:LO:MIXMode?
Example	:EVM:CCAR0:LO:MIXM NORM :EVM:CCAR1:LO:MIXM?
Dependencies	The Mixing Mode key is grayed-out when the RF Input is set to something other than "RF" (such as External Mixer). If you press the grayed-out key, then a warning message "Feature only available with Signal Input RF" is shown If you try to set Mixing Mode via SCPI when disabled, a message -221,"Settings conflict; Feature only available with signal input RF" is returned Not available in VXT, M9410E/11E/15E/16E or UXM
Preset	NORMal
State Saved	Yes
Range	NORMal | ALTernate

Mixing Mode Auto

Activates the auto rules for Mixing Mode

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:LO:MIXMode:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:LO:MIXMode:AUTO?
Example	:EVM:CCAR0:LO:MIXM:AUTO OFF :EVM:CCAR1:LO:MIXM:AUTO?
Preset	ON
State Saved	Yes
Range	Auto | Man

Spur Avoidance (UXA H1G)

UXA H1G has spur at -50MHz offset of CF, this Spur Avoidance function is provided to eliminate this spur.

– Auto: move the spur completely out of analysis bandwidth, the tradeoff is available analysis bandwidth will be reduced to 400MHz. And EVM could be worse as the edge of passband is used for analysis

– Manual: move the spur by specified value, or turn off this feature by setting the value to 0

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SAVoid:FREQuency <freq > [:SENSe]:EVM:CCARrier0|…|15:SAVoid:FREQuency? [:SENSe]:EVM:CCARrier0|…|15:SAVoid:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:SAVoid:AUTO?
Example	:EVM:CCAR0:SAV:FREQ 50MHz

	:EVM:CCAR0:SAV:FREQ? :EVM:CCAR0:SAV:AUTO ON :EVM:CCAR0:SAV:AUTO?
Couplings	Grayed-out when Mixer Mode is Alternate When Acquisition mode is changed from Sequential to Simultaneous, this key will be reset (manual, 0 Hz) for all component carrier
Preset	0 Hz OFF
State Saved	Saved in instrument state Yes
Range	Auto | Manual
Min	-(1GHz – BW)/2
Max	(1GHz – BW)/2

Spectrum Stitching

When Spectrum Stitching is turned on, multiple acquisitions overlapped in frequency domain will be performed and then combined to get wide band IQ data. This enables the instrument to capture and analyze wider signal, it may slow down the measurement speed and it requires the signal to occupy the major part of the analysis bandwidth.

Note: accurate trigger is needed to align multiple acquisitions in time domain, and input signal need to be repeated and aligned with trigger precisely.

Remote Command	[:SENSe]:EVM:STITching:SPECtrum[:STATe] ON | OFF | 1 | 0 [:SENSe]:EVM:STITching:SPECtrum[:STATe]?
Example	:EVM:STIT:SPEC 1 :EVM:STIT:SPEC?
Dependencies	Available only in N9032B and N9042B, and only when Trigger Source is External or Periodic
Preset	OFF
State Saved	Saved in instrument state

Advanced Demod Setup

Enables you to configure advanced parameters for de-modulation algorithm.

General

Allows you to configure general advanced parameters for de-modulation algorithm.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "Component Carrier" on page 1789.

Sync Mode

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYNC:MODE CAC | TCC` `[:SENSe]:EVM:CCARrier0|…|15:SYNC:MODE?`
Example	`:EVM:CCAR0:SYNC:MODE CAC` `:EVM:CCAR0:SYNC:MODE?`
Preset	`CAC`
State Saved	Yes
Range	CP Auto Correlation | Time Cross Correlation

Sync Source

Specifies the signal used for synchronization.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYNC:SOURce AUTO | SSB | PDSCH | PUSCH | PUCCH | PRACH | PDCCH | SRS | SLSSB | PSCCH | PSSCH | CSIRS` `[:SENSe]:EVM:CCARrier0|…|15:SYNC:SOUR?`
Example	`:EVM:CCAR0:SYNC:SOUR SSB` `:EVM:CCAR0:SYNC:SOUR?`
Preset	`AUTO`
State Saved	Yes
Range	Auto | SSB | PDSCH DMRS | PUSCH DMRS | PUCCH DMRS | PRACH | PDCCH DMRS | CSI-RS | SRS | SL SSB | PSCCH DMRS | PSSCH DMRS

Sync Source Index

Specifies the allocation index of signal used for synchronization. -1 is default setting which means best allocation will be selected automatically according to signal.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYNC:SOURce:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|15:SYNC:SOURce:INDex?`
Example	`:EVM:CCAR0:SYNC:SOUR:IND 1`

	:EVM:CCAR0:SYNC:SOUR:IND?
Preset	-1
State Saved	Yes
Min	-1
Max	249

Multi-Carrier Filter

Specifies whether or not to apply a filter to the received "Component Carrier" on page 1789 to filter out adjacent carriers.

When other carriers are expected to be adjacent to the component carrier of interest, this multi-carrier filter can be used to filter out the unwanted carrier and minimize leakage into the component carrier of interest.

When Auto is checked, Multi-Carrier Filter will be turned off for single CC and will be turned on for multiple CC.

For intra-band contiguous carrier aggregation case, turn off Multiple-Carrier Filter may help to improve EVM when SNR is high (close or higher than 50dB).

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:MCFilter[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:MCFilter[:STATe]? [:SENSe]:EVM:CCARrier0|…|15:MCFilter:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:MCFilter:AUTO?
Example	:EVM:CCAR0:MCF OFF :EVM:CCAR0:MCF? :EVM:CCAR0:MCF:AUTO ON :EVM:CCAR0:MCF:AUTO?
Preset	OFF ON
State Saved	Yes Yes
Range	OFF|ON

Extended Frequency Lock Range

Specifies range in term of subcarrier (SCS is decided by Sync Source) number for extended frequency lock.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:EFLock:RANGe:VALue <integer>

	[:SENSe]:EVM:CCARrier0|…|15:EFLock:RANGe:VALue? [:SENSe]:EVM:CCARrier0|…|15:EFLock:RANGe OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:EFLock:RANGe?
Example	:EVM:CCAR0:EFL:RANG:VAL 10 :EVM:CCAR0:EFL:RANG:VAL? :EVM:CCAR0:EFL:RANG 1 :EVM:CCAR0:EFL:RANG?
Preset	3 OFF
State Saved	Yes Yes
Range	OFF|ON
Min	1
Max	100

DC Punctured

Specifies if DC will be exclude from demodulation results.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DC:PUNCture OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:DC:PUNCture?
Example	:EVM:CCAR0:DC:PUNC 1 :EVM:CCAR0:DC:PUNC?
Preset	OFF
State Saved	Yes
Range	OFF|ON

DC offset from CC center

Specifies the offset from DC location to CC center frequency (DC offset = DC frequency – CC center frequency).

- Auto checked: DC Frequency = Carrier Reference Frequency
- Auto unchecked: DC frequency = CC center frequency + DC offset from CC center

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:DC:OFFSet <freq> [:SENSe]:EVM:CCARrier0|…|15:DC:OFFSet? [:SENSe]:EVM:CCARrier0|…|15:DC:OFFSet:AUTO ON | OFF | 1 | 0

	[:SENSe]:EVM:CCARrier0|…|15:DC:OFFSet:AUTO?
Example	:EVM:CCAR0:DC:OFFS 100MHz :EVM:CCAR0:DC:OFFS? :EVM:CCAR0:DC:OFFS:AUTO ON :EVM:CCAR0:DC:OFFS:AUTO?
Preset	0 OFF
State Saved	Saved in instrument state Yes
Range	Auto | Manual
Min	-100 GHz
Max	100 GHz

RF for Phase Compensation

Specifies the radio frequency used for baseband phase compensation before upconversion.

- Auto checked: use the CF of current component carrier
- Auto unchecked: use the value of RF for Phase Compensation. Note if the value is set to zero, it is equivalent to disable baseband phase compensation before upconversion

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:PHASe:COMPensation:FREQuency <freq> [:SENSe]:EVM:CCARrier0|…|15:PHASe:COMPensation:FREQuency? [:SENSe]:EVM:CCARrier0|…|15:PHASe:COMPensation:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:PHASe:COMPensation:AUTO?
Example	:EVM:CCAR0:PHAS:COMP:FREQ 1GHz :EVM:CCAR0:PHAS:COMP:FREQ? :EVM:CCAR0:PHAS:COMP:AUTO ON :EVM:CCAR0:PHAS:COMP:AUTO?
Preset	1 GHz ON
State Saved	Saved in instrument state Yes
Range	Auto | Manual
Min	0
Max	100 GHz

Channel Power Threshold

Set threshold for Channel Power (active) calculation, it is relative to peak symbol power.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CPOWer:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:CPOWer:THReshold?`
Example	`:EVM:CCAR0:CPOW:THR -30` `:EVM:CCAR0:CPOW:THR?`
Preset	-30 dB
State Saved	Saved in instrument state
Min	-100 dB
Max	0 dB

Report EVM in DB

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:REPort:DB OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:REPort:DB?`
Example	`:EVM:CCAR0:REP:DB 1` `:EVM:CCAR0:REP:DB?`
Preset	OFF
State Saved	Yes
Range	OFF|ON

Time Scale Factor

Set the Time Scale Factor of the sample rate and acquisition time.

Remote Command	`[:SENSe]:EVM:TIME:SCALe:FACTor <integer>` `[:SENSe]:EVM:TIME:SCALe:FACTor?`
Example	`:EVM:TIME:SCAL:FACT 10` `:EVM:TIME:SCAL:FACT?`
Preset	1
State Saved	Yes
Min	0.01
Max	1000

Reference IQ Data

Specifies composite Reference IQ Data generation mode for EVM and Error Vector calculation.

- Auto – Recover composite Reference Data from input signal
- File – Using recalled Reference Data from file.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:REFerence:DATA AUTO | FILE` `[:SENSe]:EVM:CCARrier0|…|15:REFerence:DATA?`
Example	`EVM:CCAR0:REF:DATA AUTO` `EVM:CCAR0:REF:DATA?`
Preset	AUTO
State Saved	Saved in instrument state
Range	Auto | File

PDSCH Reference Data

Specifies PDSCH Reference Data generation mode for EVM and Error Vector calculation.

- Auto Detect – Recover PDSCH Reference Data from input signal
- NR-TM PN23 DL – Generate PDSCH Reference Data for 3GPP defined Test Model. This mode will map PN23 sequence to DL symbols only. When input signal is distorted or SNR is low, this mode can help to avoid biased EVM caused by reference data recovery error in Auto Detect mode. But this mode will only work when input signal is standard Test Model
- NR-TM PN23 All – Generate PDSCH Reference Data for 3GPP defined Test Model. This mode will map PN23 sequence to all symbols (DL and UL). When input signal is distorted or SNR is low, this mode can help to avoid biased EVM caused by reference data recovery error in Auto Detect mode. Note that this mode will only work when input signal is standard Test Model
- All 0's - Generate PDSCH Reference Data with all 0 as payload

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:REFerence:DATA:PDSCh AUTO | PN23 | PN23ALL | ZERO` `[:SENSe]:EVM:CCARrier0|…|15:REFerence:DATA:PDSCh?`
Example	`:EVM:CCAR0:REF:DATA:PDSCh PN23` `:EVM:CCAR0:REF:DATA:PDSCh?`
Couplings	This control is disabled when Direction is uplink or Reference Data is File

Preset	AUTO
State Saved	Saved in instrument state
Range	Auto Detect | NR-TM PN23 DL | NR-TM PN23 All | All 0s

Signal Repeat Pattern

Specifies input signal repeat pattern to improve synchronization stability when input signal is one repeated slot (FR2).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SIGNal:PATTern NORMal | SLOT` `[:SENSe]:EVM:CCARrier0|…|15:SIGNal:PATTern?`
Example	`:EVM:CCAR0:SIGN:PATT SLOT` `:EVM:CCAR0:SIGN:PATT?`
Preset	`NORMal`
State Saved	Saved in instrument state
Range	`Normal|Slot`

High Phase Noise Mode

Specifies whether the input signal with high phase noise. When this setting is in Auto mode, it is coupled with “Signal Repeat Pattern”:

When Signal Repeat Pattern is Normal, High Phase Noise Mode is coupled to On; Otherwise, it is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:HIGH:PNOise[:STATe] OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|15:HIGH:PNOise[:STATe]?`
	`[:SENSe]:EVM:CCARrier0|…|15:HIGH:PNOise:AUTO ON | OFF | 1 | 0`
	`[:SENSe]:EVM:CCARrier0|…|15:HIGH:PNOise:AUTO?`

Example	`:EVM:CCAR0:HIGH:PNO OFF`
	`:EVM:CCAR0:HIGH:PNO?`
	`:EVM:CCAR0:HIGH:PNO:AUTO ON`
	`:EVM:CCAR0:HIGH:PNO:AUTO?`

Preset	`OFF` `ON`
State Saved	Yes Yes
Range	`Off|On`

Phase Continues across Slots

Specifies if phase continues from slot to slot in signal.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:SLOT:PHASe:CONTinue TRUE | FALSe | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:SLOT:PHASe:CONTinue?
Example	:EVM:CCAR0:SLOT:PHAS:CONT 1 :EVM:CCAR0:SLOT:PHAS:CONT?
Preset	ON
State Saved	Yes
Range	True | False

Magnitude & Phase Error Calculation

Specifies whether to estimate Mag Error and Phase Error.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:MPERror[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:MPERror[:STATe]?
Example	:EVM:CCAR0:MPER 1 :EVM:CCAR0:MPER?
Preset	ON
State Saved	Yes
Range	OFF|ON

IQ Imbalance Calculation

Specifies whether to estimate IQ imbalance. Note this calculation will only be valid when RF carrier is at the center of current component carrier, and allocated REs are on the both side of RF carrier.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:IQIMbalance[:STATe] OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|15:IQIMbalance[:STATe]?
Example	:EVM:CCAR0:IQIM 1 :EVM:CCAR0:IQIM?
Preset	OFF
State Saved	Yes
Range	OFF|ON

IQ Imbalance Mode Calculation

Specifies IQ imbalance estimation mode.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:IQIMbalance:MODE COMMon	PSUBcarrier` `[:SENSe]:EVM:CCARrier0|…|15:IQIMbalance:MODE?`
Example	`:EVM:CCAR0:IQIM:MODE PSUB` `:EVM:CCAR0:IQIM:MODE?`
Preset	`COMMon`
State Saved	Yes
Range	Common | Per-Subcarrier

TAE Calculation Mode

Switch TAE calculation mode:

All Allocations – using all PDSCH/PUSCH allocations

Max RE allocation – using the PDSCH/PUSCH allocation with maximum RE number

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TAE:MODE MRE	ALL` `[:SENSe]:EVM:CCARrier0|…|15:TAE:MODE?`
Example	`:EVM:CCAR0:TAE:MODE ALL` `:EVM:CCAR0:TAE:MODE?`
Preset	`Max-RE Alloc`
State Saved	Yes
Range	Max-RE Alloc | All Alloc

Symbol Clock Error Compensation

Specifies whether to compensate detected symbol clock error.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SCERror:COMPensation[:STATe] OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:SCERror:COMPensation[:STATe]?`
Example	`:EVM:CCAR0:SCER:COMP OFF` `:EVM:CCAR0:SCER:COMP?`
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

IQ Imbalance Compensation

Specifies whether to compensate IQ imbalance. Note IQ Imbalance calculation (and therefor IQ Imbalance Compensation) will only be valid when RF carrier is at the center of current component carrier, and allocated REs are on the both side of RF carrier.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:IQIMbalance:COMPensation[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:IQIMbalance:COMPensation[:STATe]?`
Example	`:EVM:CCAR0:IQIM:COMP 1` `:EVM:CCAR0:IQIM:COMP?`
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

EVM

This tab allows you to configure advanced parameters for EVM.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "Component Carrier" on page 1789.

3GPP Conformance Test

When 3GPP Conformance Test is turned on, related settings (in below table) will be reset according to 3GPP specifications automatically. When these parameters are changed manually, 3GPP Conformance Test will be turned off.

	DL FR1	DL FR2	UL FR1	UL FR2
Pre FFT Minimization	On	On	On	On
Tracking Mode	3GPP	3GPP	*3GPP	*3GPP
Tracking Amplitude	Off	Off	*Off	*Off
Tracking Phase	Off	On	*Off	*On
Tracking Timing	Off	Off	*Off	*Off
Equalizer Trainings	RS	RS	RS + Data	RS + Data
EQ Time Basis	Frame	Frame	Slot	Slot

EQ Freq Moving Avg Filter	On, 19 RS	On, 19 RS	Off, 0 RS	Off, 0 RS
EVM Window	3GPP	3GPP	3GPP	3GPP
Symbol Time Adjust	3GPP	3GPP	3GPP	3GPP
IQ Offset Compensation	Off	Off	On	On

* No clear definition in 38.521 so follow 38.104 for now.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CONFormance OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:CONFormance?`
Example	`:EVM:CCAR0:CONF 1` `:EVM:CCAR0:CONF?`
Couplings	This control will be grayed out when MIMO is on
Preset	ON
State Saved	Yes
Range	OFF|ON

3GPP Pre FFT Minimization

Enable or disable pre FFT minimization.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:PFFT:MINimization OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:PFFT:MINimization?`
Example	`:EVM:CCAR0:PFFT:MIN 1` `:EVM:CCAR0:PFFT:MIN?`
Couplings	This control will be grayed out when MIMO is on
Preset	ON
State Saved	Yes
Range	OFF|ON

Tracking Mode

Specifies tracking mode for de-modulation algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRACk:MODE OFF | RS | RSD | GPP` `[:SENSe]:EVM:CCARrier0|…|15:TRACk:MODE?`
Example	`:EVM:CCAR0:TRAC:MODE OFF` `:EVM:CCAR0:TRAC:MODE?`
Preset	GPP
State Saved	Yes
Range	OFF|RS|RS+Data|3GPP

Track Amplitude

When Track Amplitude is turned on, the measurement applies pilot subcarrier amplitude error correction to the pilot and data subcarriers (default is true).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRACk:AMPLitude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:TRACk:AMPLitude?`
Example	`:EVM:CCAR0:TRAC:AMPL 1` `:EVM:CCAR0:TRAC:AMPL?`
Couplings	This control will be OFF and grayed out when Tracking Mode is 3GPP
Preset	OFF
State Saved	Yes
Range	OFF|ON

Track Phase

When Track Phase is turned on, the measurement applies pilot subcarrier phase error correction to the pilot and data subcarriers (default is true).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRACk:PHASe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|15:TRACk:PHASe?`
Example	`:EVM:CCAR0:TRAC:PHAS 1` `:EVM:CCAR0:TRAC:PHAS?`
Couplings	Grayed-out when Tracking Mode is 3GPP Depends on Frequency Range: – FR1: Off – FR2: On (using PTRS as tracking source only)
Preset	OFF
State Saved	Yes
Range	OFF|ON

Track Timing

When Track Timing is turned on, the measurement applies pilot subcarrier timing error correction (frequency offset correction) to the pilot and data subcarriers (default is true).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRACk:TIMing OFF | ON | 0 | 1`

	[:SENSe]:EVM:CCARrier0|…|15:TRACk:TIMing?
Example	:EVM:CCAR0:TRAC:TIM 1 :EVM:CCAR0:TRAC:TIM?
Couplings	This control will be OFF and grayed out when Tracking Mode is 3GPP
Preset	OFF
State Saved	Yes
Range	OFF|ON

Equalizer Trainings

Specifies Equalizer Training mode.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining OFF | RS | RSD [:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining?
Example	:EVM:CCAR0:EQU:TRA OFF :EVM:CCAR0:EQU:TRA?
Preset	RS
State Saved	Yes
Range	OFF|RS|RS+Data

EQ Time Basis

Specifies Equalizer Training averaging length in time domain.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:TBASis SLOT | SUBFrame | FRAMe | MINTerval [:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:TBASis?
Example	:EVM:CCAR0:EQU:TRA:TBAS SLOT :EVM:CCAR0:EQU:TRA:TBAS?
Preset	FRAMe
State Saved	Yes
Range	Slot | sub-Frame | Frame | Meas Interval

EQ Freq Moving Avg Filter

Specifies the state and length (in RS subcarrier) of Equalizer Training moving average filter.

Remote	[:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:MAFilter:LENGth <integer>

Command	[:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:MAFilter:LENGth? [:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:MAFilter[:STATe] ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:EQUalizer:TRAining:MAFilter[:STATe]?
Example	:EVM:CCAR0:EQU:TRA:MAF:LENG 19 :EVM:CCAR0:EQU:TRA:MAF:LENG? :EVM:CCAR0:EQU:TRA:MAF ON :EVM:CCAR0:EQU:TRA:MAF?
Preset	19 ON
State Saved	Saved in instrument state Yes
Range	ON|OFF
Min	1
Max	Depends on signal configuration

EVM Window

Specifies EVM window mode is 3GPP or custom. When 3GPP mode is selected, EVM window is configured according to:

	Downlink	Uplink
FR1	Table 6.5.3.5-2/3/4 in TS 38.141-1 V15.0.0	Table 6.5.3.5-2/3/4 in TS 38.141-1 V15.0.0
FR2	Table 6.6.3.5.1-2/3/4 in TS 38.141-2 V15.0.0	Table 6.6.3.5.1-2/3/4 in TS 38.141-2 V15.0.0
	Table 6.6.3.5.2-1/2/3 in TS 38.141-2 V15.0.0	Table 6.6.3.5.2-1/2/3 in TS 38.141-2 V15.0.0

For the 3GPP TS 38.141-1 standard, see https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3367

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:EVMWindow:MODE GPP | CUSTom [:SENSe]:EVM:CCARrier0|…|15:EVMWindow:MODE?
Example	:EVM:CCAR0:EVMW:MODE GPP :EVM:CCAR0:EVMW:MODE?
Preset	GPP
State Saved	Yes
Range	3GPP | Custom

EVM Window Length (Custom)

Specifies EVM window length for custom mode.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:EVMWindow:LENGth:CUSTom <integer>` `[:SENSe]:EVM:CCARrier0|…|15:EVMWindow:LENGth:CUSTom?`
Example	`:EVM:CCAR0:EVMW:LENG:CUST 144` `:EVM:CCAR0:EVMW:LENG:CUST?`
Couplings	This control is grayed-out when EVM Window is not custom
Preset	32
State Saved	Yes
Min	1
Max	Depends on Signal Configuration

Symbol Time Adjust

Specifies symbol time adjustment mode:

Max of EVM Window Start/End	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is the max EVM calculated at 2 FFT processing windows using RMS averaging method
Min of EVM Window Start/End	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is the min EVM calculated at 2 FFT processing windows using RMS averaging method
EVM Window Start	The symbol FFT used for EVM calculations are taken starting from the Start of the EVM Window
EVM Window End	The symbol FFT used for EVM calculations are taken starting from the End of the EVM Window
EVM Window Center	The symbol FFT used for EVM calculations are taken starting from the Center of the EVM Window
% FFT Size	The symbol FFT used for EVM results begin at the location specified by '% FFT Size'
3GPP	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is calculated using 3GPP defined method based on 2 FFT processing windows

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYMBol:TIMing:ADJust:MODE MAX | MIN | STARt | END | CENTer | FFTSize | GPP` `[:SENSe]:EVM:CCARrier0|…|15:SYMBol:TIMing:ADJust:MODE?`
Example	`:EVM:CCAR0:SYMB:TIM:ADJ:MODE MAX` `:EVM:CCAR0:SYMB:TIM:ADJ:MODE?`

Preset	GPP
State Saved	Yes
Range	Max of EVM Window Start/End | Min of EVM Window Start/End |EVM Window Start | EVM Window End | EVM Window Center | % FFT Size | 3GPP

% FFT Size

Specifies Symbol Timing Adjustment in % of FFT size for Custom Symbol Time Adjustment Mode.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:SYMBol:TIMing:ADJust <percent>` `[:SENSe]:EVM:CCARrier0|…|15:SYMBol:TIMing:ADJust?`
Example	`:EVM:CCAR0:SYMB:TIM:ADJ -3.125` `:EVM:CCAR0:SYMB:TIM:ADJ?`
Preset	-3.125
State Saved	Yes
Min	-25%
Max	0

IQ Offset Compensation

Specifies whether to compensate IQ Offset.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:IQOFfset:COMPensation[:STATe] OFF	ON	0	1` `[:SENSe]:EVM:CCARrier0|…|15:IQOFfset:COMPensation[:STATe]?`
Example	`:EVM:CCAR0:IQOF:COMP 1` `:EVM:CCAR0:IQOF:COMP?`
Preset	OFF
State Saved	Yes
Range	OFF | ON

Transient Capability

Set Transient Capability for EVM calculation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRANsient:CAPability OFF	US2	US4	US7` `[:SENSe]:EVM:CCARrier0|…|15:TRANsient:CAPability?`
Example	`:EVM:CCAR0:TRAN:CAP US2` `:EVM:CCAR0:TRAN:CAP?`

Couplings	This control is visible only when Direction is Uplink
Preset	Normal
State Saved	Saved in instrument state
Range	OFF | 2 us | 4 us | 7 us

Transient Period Power Change Threshold

Specifies transient period power change threshold level in dB. If a mean slot power is changed by more than this value from one slot to another, this slot boundary is handled as transient period. Note also that RB mapping or modulation format is changed from one slot to another, this slot boundary is handled as transient period as well even though a mean power is not changed.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:TRANsient:PPCHange:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:TRANsient:PPCHange:THReshold?`
Example	`:EVM:CCAR0:TRAN:PPCH:THR 30` `:EVM:CCAR0:TRAN:PPCH:THR?`
Couplings	This control is visible only when Direction is Uplink
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

UL Flatness & IBE

Enables you to configure advanced parameters for UL Spectrum Flatness and In-Band Emission measurement.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "Component Carrier" on page 1789.

Channel Condition

Specifies under what condition the Spectrum Flatness test is performed. This parameter determines the minimum requirements for EVM equalizer spectrum flatness test.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:FLATness:CHANnel:CONDition NORMal | EXTReme [:SENSe]:EVM:CCARrier0|…|15:ULINk:FLATness:CHANnel:CONDition NORMal | EXTReme?
Example	:EVM:CCAR0:ULIN:FLAT:CHAN:COND NORM :EVM:CCAR0:ULIN:FLAT:CHAN:COND?
Preset	NORMal
State Saved	Yes
Range	NORMal|EXTReme

F_UL_Low

Specifies the lower frequency of the E-UTRA operating band.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:FREQuency:LOW <freq> [:SENSe]:EVM:CCARrier0|…|15:ULINk:FREQuency:LOW?
Example	:EVM:CCAR0:ULIN:FREQ:LOW 1.92 GHz :EVM:CCAR0:ULIN:FREQ:LOW?
Couplings	If the value entered is greater than F_UL_High, F_UL_High is set to the value of F_UL_Low
Preset	1.92GHz
State Saved	Saved in instrument state
Min/Max	0Hz/Depends on F_UL_High

F_UL_High

Specifies the upper frequency of the E-UTRA operating band.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:FREQuency:HIGH <freq> [:SENSe]:EVM:CCARrier0|…|15:ULINk:FREQuency:HIGH?
Example	:EVM:CCAR0:ULIN:FREQ:HIGH 1.98 GHz :EVM:CCAR0:ULIN:FREQ:HIGH?
Couplings	The value entered is lower than F_UL_Low, F_UL_Low is set to the value of F_ UL_High
Preset	1.98GHz
State Saved	Saved in instrument state
Min/Max	Depends on F_UL_Low/5GHz

Spectrum Flatness Test Tolerance

Specifies the test tolerance for spectrum flatness.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:FLATness:TTOLerance <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:ULINk:FLATness:TTOLerance?
Example	:EVM:CCAR0:ULIN:FLAT:TTOL 2 :EVM:CCAR0:ULIN:FLAT:TTOL?
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

UE Power Class

Specifies UE power class for In-Band Emission in FR2.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PCLass CLASS1 | … | CLASS4 [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PCLass?
Example	:EVM:CCAR0:ULIN:IBEM:PCL CLASS2 :EVM:CCAR0:ULIN:IBEM:PCL?
Couplings	This control is only valid for FR2
Preset	CLASS3
State Saved	Yes
Range	CLASS 1 | CLASS 2 | CLASS 3 | CLASS 4

UE Output Power

Specifies the UE output power to generate limit in In-Band Emission.

- Auto checked: use the measured power of input signal
- Auto unchecked: use the value to generate limit in In-Band Emission

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:OPOWer <ampl > [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:OPOWer? [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:OPOWer:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:OPOWer:AUTO?
Example	:EVM:CCAR0:ULIN:IBEM:OPOW 10 :EVM:CCAR0:ULIN:IBEM:OPOW? :EVM:CCAR0:ULIN:IBEM:OPOW:AUTO ON :EVM:CCAR0:ULIN:IBEM:OPOW:AUTO?

Preset	ON
State Saved	Saved in instrument state Yes
Range	Auto | Manual
Min	-99
Max	100

In-Band Emission Test Tolerance

Specifies the test tolerance for In-Band Emission.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:TTOLerance <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:TTOLerance?`
Example	`:EVM:CCAR0:ULIN:IBEM:TTOL 2` `:EVM:CCAR0:ULIN:IBEM:TTOL?`
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

IQ Image RBs & Carrier Leakage RBs

Specifies if IQ Image RBs & Carrier Leakage RBs should be included in General Limit.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:GENeral:MODE INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:GENeral:MODE?`
Example	`:EVM:CCAR0:ULIN:IBEM:GEN:MODE INCL` `:EVM:CCAR0:ULIN:IBEM:GEN:MODE?`
Couplings	Radio Direction is Uplink
Preset	EXCLude
State Saved	Yes
Range	Include to General Lim | Exclude from General Lim

IBE Limit Threshold from P_{RB}

Adjust “the higher of P_{RB} – 30 dB” IBE limit threshold (TS 38.521, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381).

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold <rel_ampl> [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold?
Example	:EVM:CCAR0:ULIN:IBEM:PRB:THR -30 :EVM:CCAR0:ULIN:IBEM:PRB:THR?
Couplings	Radio Direction is Uplink
Preset	-30 dB
State Saved	Saved in instrument state
Min	-100 dB
Max	0 dB

Apply threshold from P_{RB} to All Limit

Apply “the higher of P_{RB} – 30 dB” IBE limit threshold (TS 38.521, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381) to All (combined) Limit.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:ALL 0 | 1 | OFF | ON [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:ALL?
Example	:EVM:CCAR0:ULIN:IBEM:PRB:THR:ALL ON :EVM:CCAR0:ULIN:IBEM:PRB:THR:ALL?
Couplings	Radio Direction is Uplink
Preset	ON
State Saved	Yes
Range	On | Off

Apply threshold from P_{RB} to General Limit

Apply “the higher of P_{RB} – 30 dB” IBE limit threshold (TS 38.521, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381) to General Limit.

Remote Command	[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:GENeral 0 | 1 | OFF | ON [:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:GENeral?
Example	:EVM:CCAR0:ULIN:IBEM:PRB:THR:GEN ON :EVM:CCAR0:ULIN:IBEM:PRB:THR:GEN?
Couplings	Radio Direction is Uplink
Preset	Off

State Saved	Yes
Range	On | Off

Apply threshold from P_{RB} to IQ Image Limit

Apply "the higher of P_{RB} – 30 dB" IBE limit threshold (TS 38.521, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381) to IQ Image Limit.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:IMAGe 0	1	OFF	ON` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:IMAGe?`
Example	`:EVM:CCAR0:ULIN:IBEM:PRB:THR:IMAG ON` `:EVM:CCAR0:ULIN:IBEM:PRB:THR:IMAG?`
Couplings	Radio Direction is Uplink
Preset	OFF
State Saved	Yes
Range	OFF | ON

Apply threshold from P_{RB} to Carrier Leakage Limit

Apply "the higher of P_{RB} – 30 dB" IBE limit threshold (TS 38.521, https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381) to Carrier Leakage Limit.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:DC 0	1	OFF	ON` `[:SENSe]:EVM:CCARrier0|…|15:ULINk:IBEMission:PRB:THReshold:DC?`
Example	`:EVM:CCAR0:ULIN:IBEM:PRB:THR:DC ON` `:EVM:CCAR0:ULIN:IBEM:PRB:THR:DC?`
Couplings	Radio Direction is Uplink
Preset	Off
State Saved	Yes
Range	On | Off

Cross Carrier

Enables you to configure advanced parameters for cross carrier measurement.

TAE Reference CC

Specifies reference component carrier to calculate cross carrier TAE.

Remote Command	`[:SENSe]:EVM:CCRoss:TAE:REFerence CC0 | … | CC15` `[:SENSe]:EVM:CCRoss:TAE:REFerence?`
Example	`:EVM:CCR:TAE:REF CC1` `:EVM:CCR:TAE:REF?`
Preset	`CC0`
State Saved	Yes
Range	`CC0|…|CC15`

Power Reference CC

Specifies reference component carrier to calculate cross carrier relative power.

Remote Command	`[:SENSe]:EVM:CCRoss:POWer:REFerence CC0 | … | CC15` `[:SENSe]:EVM:CCRoss:POWer:REFerence?`
Example	`:EVM:CCR:POW:REF CC1` `:EVM:CCR:POW:REF?`
Preset	`CC0`
State Saved	Yes
Range	`CC0|…|CC15`

MIMO

This tab allows you to configure advanced parameters for MIMO.

Condition Number Calculation

Enable condition number calculation and specify frequency granularity setting.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CONDition:NUMBer OFF | SUBC | USER | WIDE` `[:SENSe]:EVM:CCARrier0|…|15:CONDition:NUMBer?`
Example	`:EVM:CCAR0:COND:NUMB WIDE` `:EVM:CCAR0:COND:NUMB?`
Preset	`OFF`
State Saved	Yes
Range	OFF | Subcarrier | User Defined | Wideband

RB Granularity

Specifies frequency granularity in RB when Condition Number Calculation = User Defined.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:CONDition:NUMBer:RB <integer>` `[:SENSe]:EVM:CCARrier0|…|15:CONDition:NUMBer:RB?`
Example	`:EVM:CCAR0:COND:NUMB:RB 1` `:EVM:CCAR0:COND:NUMB:RB?`
Couplings	Only valid when Condition Number Calculation = User Defined
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected allocation

Cross-Corelated EVM

Cross-Correlated EVM (ccEVM) is a technique applied for RMS EVM to suppress analyzer noise, resulting in lower EVM floor.

A 2-channel analyzer, or two analyzers, demodulate the same signal independently, and perform cross-correlation on the error vectors to cancel out uncorrelated noise added by the analyzer. Results (based on chanel1 and channel2 input signal) will be provided by ccEVM Summary, but other results are not affected (only based on channel1 input signal).

Remote Command	`[:SENSe]:EVM:CCEVm[:ENABle] ON | OFF | 1 | 0` `[:SENSe]:EVM:CCEVm[:ENABle]?`
Example	`:EVM:CCEV 1` `:EVM:CCEV?`
Couplings	This function is disabled when MIMO or Power Meas (OWB/ACP/SEM/Transmit On|Off Power) are enabled
Preset	`OFF`
State Saved	Saved in instrument state

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

- MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)
- ccEVM (EVM only): Meas Setup > Advanced
- Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

- EVM in N9042B, VXT2/3, UXM model E7515B
- PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Input Port (UXM)

Select input port for channel configuration.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2 RFIO1	…	RFIO8` `[:SENSe]:RADio:MCHannel:PORT[1]|2?`
Example	`:RAD:MCH:PORT2 RFIO2` `:RAD:MCH:PORT2?`
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 2456 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 2456 is OFF, the label “Channel x” changes to “Unused” Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration
Preset	RFIO1|RFIO2
State Saved	Yes
Range	RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8 or RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8|RFIO 9|RFIO 10|RFIO 11|RFIO 12|RFIO 13|RFIO 14|RFIO 15|RFIO 16
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:PORT[1]|2`

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed OFF	ON	0	1` `[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed?`
Example	`:RAD:MCH:PORT2:LOCK ON` `:RAD:MCH:PORT2:LOCK?`
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:PORT[1]|2:LOCKed`

Input Channel IP address

Set instrument IP address for channel configuration, “local” is used for current instrument.

Remote Command	`[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4 <String>` `[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4?`
Example	`:RAD:MCH:IPAD '192.168.1.2'`
Dependencies	Appears only in the EVM measurement
Preset	local
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4`

Input Channel TCP port (Remote Command only)

Set instrument TCP port for channel configuration.

Remote Command	`[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4:PORT <int>` `[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4:PORT?`
Example	`:RAD:MIMO:IPAD:PORT 3574`
Dependencies	Available only for the EVM measurement
Preset	3574
State Saved	Yes

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	`[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:LOCKed OFF | ON | 0 | 1` `[:SENSe]:RADio:MCHannel:IPADdress[1]|2|…|4:LOCKed?`
Example	`:RAD:MCH:IPAD1:LOCK 1` `:RAD:MCH:IPAD1:LOCK?`
Dependencies	Appears only in the EVM measurement
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:IPADdress[1]|2|…|4:LOCKed`

Channel Configuration Information (Remote Query only)

This SCPI query reads back channel configuration information.

Remote Command	`[:SENSe]:RADio:MCHannel:CHANnel:INFO?`
Example	`:RAD:MCH:CHAN:INFO?`
Dependencies	Available only for the EVM measurement
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:CHANnel:INFO`

Advanced Acquisition

This is the same as "Advanced Acquisition" on page 1837 in the Configure Comp Carriers dialog. See "Advanced Acquisition" on page 1837.

3.7.8.8 Decode

Enables you to set decoding parameters.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH/PSSCH/PSCCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding

- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

PBCH Bits

Selects the decoding type of the PBCH. It specifies how much coding to undo before showing the bits from PBCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PBCH NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PBCH?`
Example	`:EVM:CCAR0:DEC:PBCH NONE` `:EVM:CCAR0:DEC:PBCH?`
Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PDCCH Bits

Selects the decoding type of the PDCCH. It specifies how much coding to undo before showing the bits from PDCCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PDCCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PDCCh?`
Example	`:EVM:CCAR0:DEC:PDCC NONE` `:EVM:CCAR0:DEC:PDCC?`
Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PDSCH Bits

Selects the decoding type of the PDSCH. It specifies how much coding to undo before showing the bits from PDSCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PDSCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PDSCh?`
Example	`:EVM:CCAR0:DEC:PDSC NONE` `:EVM:CCAR0:DEC:PDSC?`

Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PUCCH Bits

Selects the decoding type of the PUCCH. It specifies how much coding to undo before showing the bits from PUCCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

– None- No decoded results

– Descrambled - Descrambled (rate-matched) mode is used for decoding

– DeRateMatched - Deratematched (channel coded) mode is used for decoding

– Decoded CB - Decoded Codeblock mode is used for decoding

– Decoded TB - Decoded Transport Block mode is used for decoding

– Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PUCCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PUCCh?`
Example	`:EVM:CCAR0:DEC:PUCC NONE` `:EVM:CCAR0:DEC:PUCC?`
Notes	Only visible when Radio Direction is uplink
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PUSCH Bits

Selects the decoding type of the PUSCH. It specifies how much coding to undo before showing the bits from PUSCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

– None- No decoded results

– Descrambled - Descrambled (rate-matched) mode is used for decoding

- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PUSCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PUSCh?`
Example	`:EVM:CCAR0:DEC:PUSC NONE` `:EVM:CCAR0:DEC:PUSC?`
Notes	Only visible when Radio Direction is uplink
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PSSCH Bits

Selects the decoding type of the PSSCH. It specifies how much coding to undo before showing the bits from PSSCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PSSCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PSSCh?`
Example	`:EVM:CCAR0:DEC:PSSC NONE` `:EVM:CCAR0:DEC:PSSC?`
Notes	Only visible when Radio Direction is uplink and Sidelink is enabled
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

PSCCH Bits

Selects the decoding type of the PSCCH. It specifies how much coding to undo before showing the bits from PSCCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:PSCCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock | RBITs` `[:SENSe]:EVM:CCARrier0|…|15:DECode:PSCCh?`
Example	`:EVM:CCAR0:DEC:PSCC NONE` `:EVM:CCAR0:DEC:PSCC?`
Notes	Only visible when Radio Direction is uplink and Sidelink is enabled
State Saved	Yes
Range	None | Descrambled | DeRateMatched | Decoded CB | Decoded TB | Raw Bits

Decode Iteration

Specifies maximum iteration number of LDPC decoder

Remote Command	`[:SENSe]:EVM:CCARrier0|…|15:DECode:ITERation <integer>` `[:SENSe]:EVM:CCARrier0|…|15:DECode:ITERation?`
Example	`:EVM:CCAR0:DEC:ITER 2` `:EVM:CCAR0:DEC:ITER?`
Notes	Invalid when Radio Direction is Uplink and Sidelink is enabled
Preset	8
State Saved	Yes
Min	1
Max	16

3.7.8.9 Power Meas

This tab enables you to configure power measurements like OBW/ACP/SEM.

OBW State

Enable or disable the Occupied BW measurement.

Remote Command	`[:SENSe]:EVM:OBW OFF | ON | 0 | 1` `[:SENSe]:EVM:OBW?`
Example	`:EVM:OBW OFF` `:EVM:OBW?`
Preset	`OFF`
State Saved	Yes

ACP State

Enable or disable the ACP measurement.

Remote Command	`[:SENSe]:EVM:ACP OFF | ON | 0 | 1` `[:SENSe]:EVM:ACP?`
Example	`:EVM:ACP OFF` `:EVM:ACP?`
Preset	`OFF`
State Saved	Yes

SEM State

Enable or disable the SEM measurement.

Remote Command	`[:SENSe]:EVM:SEM OFF | ON | 0 | 1` `[:SENSe]:EVM:SEM?`
Example	`:EVM:SEM OFF` `:EVM:SEM?`
Preset	`OFF`
State Saved	Yes

Transmit On|Off Power State

Enable or disable Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:EVM:PVTime OFF | ON | 0 | 1` `[:SENSe]:EVM:PVTime?`
Example	`:EVM:PVT OFF` `:EVM:PVT?`
Preset	`OFF`
State Saved	Yes

MIMO Calculation Mode

Specifies OBW/ACP/SEM/Transmit On/Off result calculation mode for MIMO signal:

- Per Channel – provide separate results for each input channel
- Averaged – provide averaged results for all input channels
- Summation – provide combined results for all input channels

Remote Command	`[:SENSe]:EVM:POWer:MIMO:MODE PERChannel | AVERaged | SUMMation` `[:SENSe]:EVM:POWer:MIMO:MODE?`
Example	`:EVM:POWer:MIMO:MODE PERC` `:EVM:POWer:MIMO:MODE?`
Preset	`PERChannel`
State Saved	Yes
Range	Per Channel | Averaged | Summation

OBW Setup

Enables you to configure advanced parameters for the OBW measurement in the EVM measurement based on the same capture.

OBW State

Enable or disable the Occupied BW measurement.

Remote Command	`[:SENSe]:EVM:OBW OFF | ON | 0 | 1` `[:SENSe]:EVM:OBW?`

Example	:EVM:OBW OFF :EVM:OBW?
Preset	OFF
State Saved	Yes

Points

Sets the number of points taken per sweep, and displayed in the traces. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

When Auto Points is on, the analyzer determines the number of points using the following calculation formula:

points = *ceil*(Span / (Rbw * 1e3)) * 1000 + 1

Where *ceil(x)* returns the smallest possible integer value that is greater than or equal to *x*.

Remote Command	[:SENSe]:EVM:OBW:POINts <integer> [:SENSe]:EVM:OBW:POINts? [:SENSe]:EVM:OBW:POINts:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:OBW:POINts:AUTO?
Example	:EVM:OBW:POIN 1001 :EVM:OBW:POIN? :EVM:OBW:POIN:AUTO ON :EVM:OBW:POIN:AUTO?
Preset	Automatically calculated ON
State Saved	Saved in instrument state Yes
Min	101
Max	100,001

% of OBW Power

Assigns the percentage of the total power that is measured within the Occupied Bandwidth for the current measurement. The resulting Occupied Bandwidth limits are displayed by markers placed on the frequencies of the specified percentage.

Remote Command	[:SENSe]:OBWidth:PERCent <real>

	[:SENSe]:OBWidth:PERCent?
Example	:OBW:PERC 75 :OBW:PERC?
Preset	99.00
State Saved	Yes
Min/Max	10/99.99

Power Integration Method

Selects the power integration method:

Normal	NORMal	By integrating the linear power bucket values from the lower edge of the trace, and interpolating to find the point where the integrated power equals (1 – [Occ BW % Pwr]) / 2 (0.5% if, for example, the 99% occupied bandwidth is to be found) of the total power, frequency f1 is obtained. This procedure is repeated from the upper trace edge to find frequency f2. This calculation uses linear interpolation to find the lower and upper carrier boundary point within the width of a sweep point (the span divided by the number of sweep points), f1 and f2
From Center	ICENter	Measures the power spectrum distribution within two times or more frequency range over the requirement for Occupied Bandwidth specification centering on the current carrier frequency

Remote Command	[:SENSe]:OBWidth:INTegration[:METHod] NORMal | ICENter [:SENSe]:OBWidth:INTegration[:METHod]?
Example	:OBW:INT NORM :OBW:INT?
Preset	For 5GNR Mode, Uplink: ICENter All other Modes NORMal
State Saved	Yes
Range	NORMal|ICENter

Limit Test

Toggles the limit test.

Remote Command	:CALCulate:OBWidth:LIMit[:TEST] ON | OFF | 1 | 0 :CALCulate:OBWidth:LIMit[:TEST]?
Example	:CALC:OBW:LIM 0

	:CALC:OBW:LIM?
Dependencies	Only appears in LTEAFDD/LTEATDD and 5GNR Modes
Preset	ON
State Saved	Saved in instrument state
Range	ON|OFF

ACP Setup

Enables you to configure advanced parameters for the ACP measurement in the EVM measurement based on the same capture.

General

Enables you to configure general parameters for the ACP measurement in the EVM measurement based on the same capture.

ACP State

Enable or disable the ACP measurement.

Remote Command	[:SENSe]:EVM:ACP OFF | ON | 0 | 1 [:SENSe]:EVM:ACP?
Example	:EVM:ACP OFF :EVM:ACP?
Preset	OFF
State Saved	Yes

Reference Carrier (Carrier Index)

Sets the reference carrier. Relative power measurements are made from the reference carrier.

If set to **Auto**, the measurement selects the carrier with the highest power as the reference carrier and the Ref Carrier parameter is updated. If a value is entered when Ref Carrier Mode is set to **Auto**, the mode changes to **Man**.

If set to **Man**, the value that you enter for the Ref Carrier is used as the reference carrier.

In MSR, LTEAFDD, LTEATDD and 5G NR Modes, this control is called **Carrier Index** and has a different SCPI command. In these Modes, it sets the carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "Power Ref" on page 2240 is **Carrier Index**. Any value up to the MAX can be set, though the measurement only deals with number of carriers specified by Carrier. If the index is larger than Carrier, reference power in this measurement becomes NaN and therefore all relative power results are NaN.

For more information, see "Carrier Index (Modes: MSR, LTEAFDD, LTEATDD, and 5GNR)" on page 2239.

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier <integer>`
	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:RCAR 1` `:ACP:CARR:RCAR?`
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored For LTEAFDD and LTEATDD Modes, this control is not shown. In order to maintain backwards compatibility with legacy LTE FDD/TDD Modes, the SCPI command is supported in the LTE & LTE-A converged applications
Dependencies	Grayed-out if there is only one carrier Does not appear in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Couplings	If you enter a carrier value that is currently configured as having no power present, that carrier changes to having power present
Preset	Auto determined
State Saved	Saved in instrument state
Min/Max	1/Number of available carriers
Backwards Compatibility SCPI	`[:SENSe]:MCPower:RCARrier[1]|2`

Auto Function

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier:AUTO?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:RCAR:AUTO OFF` `:ACP:CARR:RCAR:AUTO?`
Couplings	If you enter a ref carrier this parameter will be set to manual
Preset	1
State Saved	Yes
Range	Auto | Man
Backwards Compatibility SCPI	`[:SENSe]:MCPower:RCARrier[1]|2:AUTO` (Power Suite)

Carrier Index (Modes: MSR, LTEAFDD, LTEATDD, and 5GNR)

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:INDex <integer>`
	`[:SENSe]:ACPower:CARRier[1]|2:INDex?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:IND 1` `:ACP:CARR:IND?`
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Only appears in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	LTEAFDD, LTEATDD: 1/Dependent on Num Component Carriers 5G NR: 1/Dependent on Num Component Carriers MSR: 1/100

Carrier Index Zero Base (Remote Command Only)

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier:ZBASe <integer>`
	`[:SENSe]:ACPower:CARRier[1]|2:RCARrier:ZBASe?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:RCAR:ZBAS 1` `:ACP:CARR:RCAR:ZBAS?`
Notes	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Not available in multicarrier applications (MSR, 5GNR, LTE Modes)
Couplings	Coupled with: `[:SENSe]:ACPower:CARRier[1]|2:RCARrier <integer>`
Preset	0
State Saved	Saved in instrument state
Min	0
Max	9

Measurement Type

Changes the reference used for the measurement. This allows you to make absolute and relative power measurements of either total power or the power normalized to the measurement bandwidth.

- Total Pwr Ref (TPRef) sets the reference to the total carrier power
- PSD Ref (PSDRef) sets the reference to the power spectral density of the carrier

Remote Command	[:SENSe]:ACPower:TYPE TPRef | PSDRef [:SENSe]:ACPower:TYPE?
Example	:ACP:TYPE PSDR :ACP:TYPE?
Preset	TPRef
State Saved	Saved in instrument state
Range	Total Power Ref | PSD Ref

Power Ref

Selects the power reference type. This control has two different forms, depending on the currently-selected Mode:

- "Power Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 2240
- "Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)" on page 2241

Power Ref (Modes: SA, WCDMA, VMA, SRComms)

Type	Option	Description
Ref Carrier	RCARrier	Power of the specified carrier is the reference of measurement. Use the Reference Carrier control to select Carrier Index
Manual Power	MANual	Power or PSD specified by the user is the reference of measurement
Total Multicarriers	TMCarriers	Total Power of multi carriers is the power reference of measurement. Each carrier power is calculated with its own carrier configuration settings

Remote Command	[:SENSe]:ACPower:CARRier[1]|2:PREFerence:TYPE RCARrier | MANual | TMCarriers [:SENSe]:ACPower:CARRier[1]|2:PREFerence:TYPE? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR:PREF:TYPE RCARrier :ACP:CARR:PREF:TYPE?

Notes	Available only in SA, WCDMA, VMA and Short-Range Comms Modes Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Preset	`RCARrier`
State Saved	Saved in instrument state
Range	`RCARrier|MANual|TMCarriers`

Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

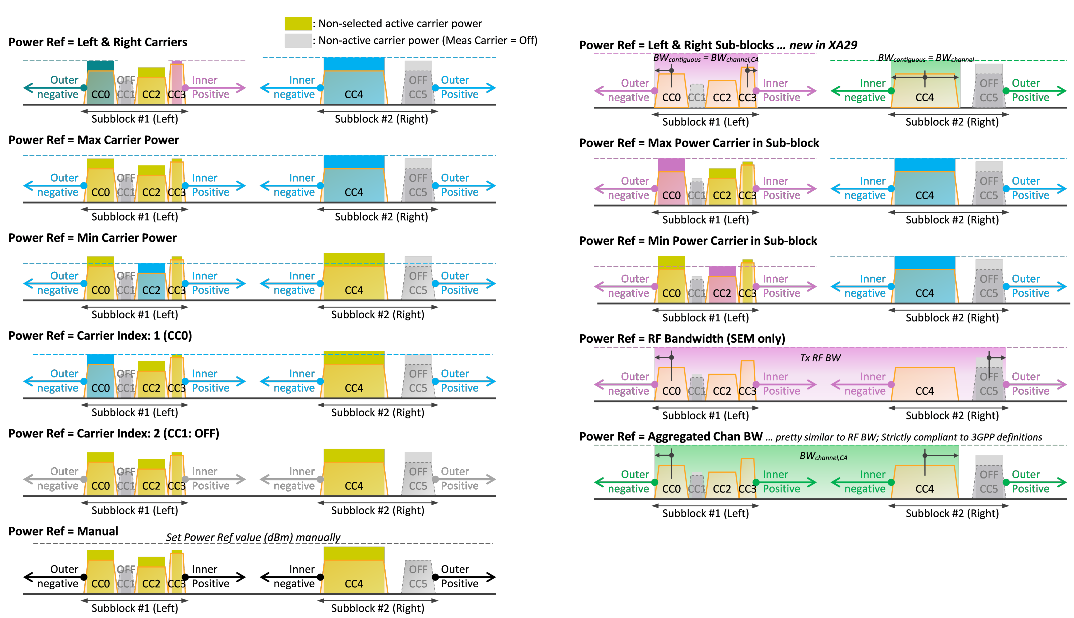
Selects the power reference type:

Type	Option	Description
Left & Right Carriers	`LRCarriers`	Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Left and right carriers are determined based on the carrier center frequencies. If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated
Max Power Carrier	`MPCarrier`	Maximum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN. Relative limits are not evaluated
Min Power Carrier 5G NR only	`MINPcarrier`	Minimum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN. Relative limits are not evaluated
Carrier Index	`CINDex`	Power of the specified carrier is the reference of measurement. If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NAN. Relative limits are not evaluated
Manual	`MANual`	Power or PSD specified by the user is the reference of measurement
Aggregated Chan BW LTEAFDD, LTEATDD, 5G NR only	`ACBandwidth`	The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN. Relative limits are not evaluated
Max Power Carrier in Sub-block	`MPCSubblock`	Maximum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NAN, and these relative limits are not evaluated
Total	`TMCarriers`	Total power of multi carriers is the power reference of measurement. Each

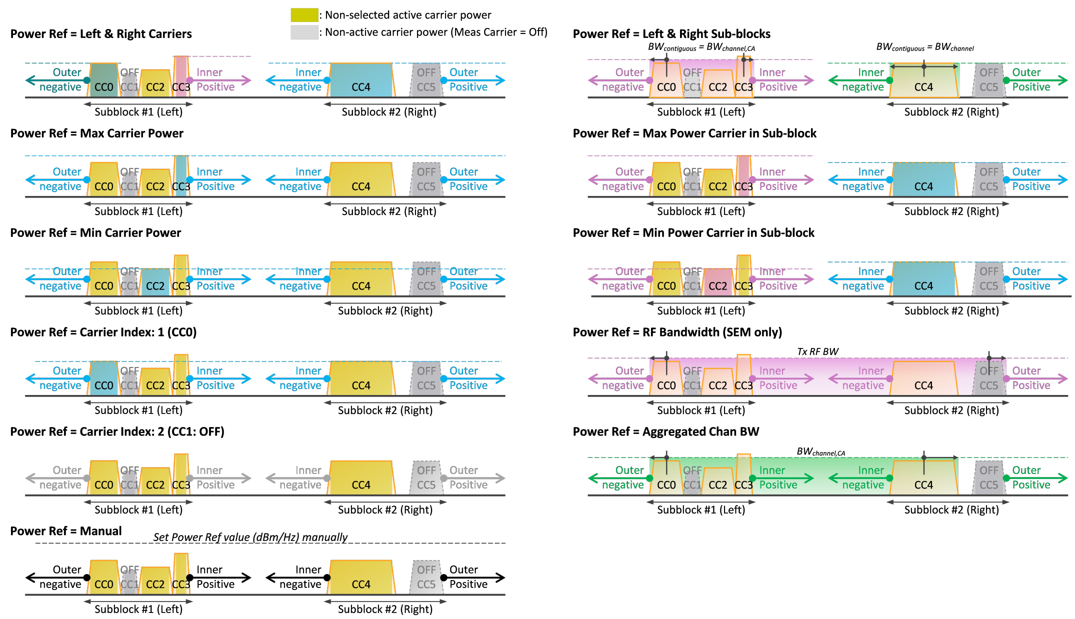
Type	Option	Description
Multicarriers MSR only		carrier power is calculated with its own carrier configuration settings
Min Power Carrier in Sub-block 5G NR only	`MINSubbloc`	Minimum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are `NAN`, and these relative limits are not evaluated
Left & Right Sub-blocks 5G NR only	`LRSubblocks`	The reference depends on the number of Component Carriers (CC) and Carrier Allocation as follows: – Num of CC is 1: the carrier power is the reference – Num of CC is 2 or more & Carrier Allocation is Contiguous: Aggregated Channel power is the reference – Num of CC is 2 or more & Carrier Allocation is Non-Contiguous: Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration

The powers of carriers are not included in the reference power when their Measure Carriers are Off. When Measure Carriers of all the carriers in a sub-block are Off, the reference power and all the relative power results are `NaN`. Therefore, relative limits are not evaluated.

Measurement Type = Total Power Ref



Measurement Type = PSD Ref



Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:PREFerence:TYPE LRCarriers | MPCarrier | CINDex | MANual | MPCSubblock | ACBandwidth | TMCarriers | MINPcarrier | MINSubblock | LRSubblocks`
	`[:SENSe]:ACPower:CARRier[1]|2:PREFerence:TYPE?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:PREF:TYPE CIND` `:ACP:CARR:PREF:TYPE?`
Notes	Available only in MSR, LTEAFDD, LTEATDD and 5G NR Modes `ACBandwidth` is available only in LTEAFDD, LTEATDD and 5G NR Modes `TMCarriers` is available only in MSR Mode `MINPcarrier,MINSubblock`, and `LRSubblocks` are available only in 5G NR Mode Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Preset	`MPCarrier`
State Saved	Saved in instrument state

Power Ref State (Remote Command Only)

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:AUTO[:STATe] OFF | ON | 0 | 1`

	[:SENSe]:ACPower:CARRier[1]|2:AUTO[:STATe]? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR:AUTO OFF :ACP:CARR:AUTO?
Preset	ON
State Saved	Saved in instrument state
Range	Auto | Man
Backwards Compatibility SCPI	[:SENSe]:MCPower:CARRier[1]|2:AUTO[:STATe]

Total Power Ref

Sets manual total power reference.

This control has two different forms, depending on the currently-selected Mode:

– "Total Power Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 2244

– "Total Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)" on page 2245

Total Power Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when Power Ref is Manual and "Measurement Type" on page 2240 is Total Power.

Remote Command	[:SENSe]:ACPower:CARRier[1]|2[:POWer] <real> [:SENSe]:ACPower:CARRier[1]|2[:POWer]? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR 10 :ACP:CARR?
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected
Dependencies	Available only when **Measurement Type** is TPRef, otherwise grayed-out
Preset	0.0
State Saved	Saved in instrument state

Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	[:SENSe]:MCPower:CARRier[1]|2[:POWer]

Total Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

Sets the multi-carrier power reference. This is used when Power Ref is Manual and "Measurement Type" on page 2240 is Total Power.

When set to **Auto**, the carrier power result reflects the measured power value in the selected reference carrier.

When set to **Man**, the result is referenced to the last measured value, or you may specify the reference for the multi-carrier power measurement. Relative values are displayed, referenced to the “Power Reference” value.

Remote Command	[:SENSe]:ACPower:CARRier[1]|2[:POWer] <real> [:SENSe]:ACPower:CARRier[1]|2[:POWer]? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR 10 :ACP:CARR?
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected
Dependencies	Enabled when "Measurement Type" on page 2240 is Total Power and "Power Ref" on page 2240 is Manual
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	[:SENSe]:MCPower:CARRier[1]|2[:POWer]

PSD Ref

Sets manual PSD reference.

This control has two different forms, depending on the currently-selected Mode:

– "PSD Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 2246

– "PSD Ref (Modes: LTEAFDD, LTEATDD, 5GNR, MSR)" on page 2247

PSD Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when "Power Ref" on page 2240 is Manual and "Measurement Type" on page 2240 is PSD.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is PSD Ref.

Remote Command	`[:SENSe]:ACPower:CARRier[1]|2:CPSD <real>`
	`[:SENSe]:ACPower:CARRier[1]|2:CPSD?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:CARR:CPSD 25` `:ACP:CARR:CPSD?`
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Available only when Measurement Type is `PSDRef`, otherwise grayed-out
Couplings	The value of PSD Ref is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-999/999

Power Ref State (Backwards Compatibility SCPI)

Sets the Power Reference State to auto or manual.

Example	`:ACP:CARR:AUTO OFF`
	`:ACP:CARR:AUTO?`
	`:MCP:CARR:AUTO ON`
	`:MCP:CARR:AUTO?`

Notes	For backwards compatibility with legacy SA and WCDMA, this command is supported When `ON`, corresponds to the Ref Carrier of the "Power Ref" on page 2240 selection When `OFF`, corresponds to the Manual of the **Power Ref** selection

Preset	ON
State Saved	Saved in instrument state
Range	Auto|Man
Backwards Compatibility SCPI	[:SENSe]:ACPower:CARRier[1]|2:AUTO[:STATe] OFF | ON | 0 | 1 [:SENSe]:ACPower:CARRier[1]|2:AUTO[:STATe]? [:SENSe]:MCPower:CARRier[1]|2:AUTO[:STATe] OFF | ON | 0 | 1 [:SENSe]:MCPower:CARRier[1]|2:AUTO[:STATe]?

PSD Ref (Modes: LTEAFDD, LTEATDD, 5GNR, MSR)

Sets manual PSD reference. This is used when "Power Ref" on page 2240 is **Manual** and "Measurement Type" on page 2240 is **PSD**.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is set to **PSD Ref**. When the **PSD Ref** state is set to **Auto**, this will be set to the measured carrier power spectral density.

Remote Command	[:SENSe]:ACPower:CARRier[1]|2:CPSD <real> [:SENSe]:ACPower:CARRier[1]|2:CPSD? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:CARR:CPSD 25 :ACP:CARR:CPSD?
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Enabled when "Measurement Type" on page 2240 is PSD Reference and **Power Ref** is Manual
Couplings	The value of PSD is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state
Min/Max	–/+999

PSD Unit

Sets the unit bandwidth for Power Spectral Density. The available units are dBm/Hz (DBMHZ) and dBm/MHz (DBMMHZ).

Remote Command	:UNIT:ACPower:POWer:PSD DBMHZ | DBMMHZ :UNIT:ACPower:POWer:PSD?

Example	:UNIT:ACP:POW:PSD DBMMHZ :UNIT:ACP:POW:PSD?
Dependencies	Enabled when "Measurement Type" on page 2240 is PSD Reference
Couplings	When the PSD unit is changed, the PSD reference result of :MEAS|READ|FETCH:ACP[n]? is also changed by the PSD unit basis (in either dBm/Hz or dBm/MHz)
Preset	DBMHZ
State Saved	Saved in instrument state
Range	dBm/Hz | dBm/MHz

Power Results

Lets you select Power Result Type:

- OUTer – Results of outer offsets and carrier powers are shown in this view. Inner offset results are not shown even when Carrier Allocation is Non-Contiguous
- Outer & Inner (OINNer) – Results of both inner and outer offsets are shown in this view

Remote Command	:DISPlay:ACPower:VIEW:RTYPe OUTer | OINNer :DISPlay:ACPower:VIEW:RTYPe?
Example	:DISP:ACP:VIEW:RTYP OUT :DISP:ACP:VIEW:RTYP?
Dependencies	Only available in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	OUTer
State Saved	Saved in instrument state
Range	Outer | Outer & Inner

Points

Sets the number of points taken per sweep, and displayed in the traces. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

When Auto Points is on, the analyzer determines the number of points using the following calculation formula.

points = *ceil*(Span / (Rbw * 1e3)) * 1000 + 1

Where *ceil(x)* returns the smallest possible integer value that is greater than or equal to *x*.

Remote Command	[:SENSe]:EVM:ACP:POINts <integer>

	[:SENSe]:EVM:ACP:POINts? [:SENSe]:EVM:ACP:POINts:AUTO ON | OFF | 1 | 0 [:SENSe]:EVM:ACP:POINts:AUTO?
Example	:EVM:ACP:POIN 1001 :EVM:ACP:POIN? :EVM:ACP:POIN:AUTO ON :EVM:ACP:POIN:AUTO?
Preset	1001 ON
State Saved	Saved in instrument state Yes
Min	101
Max	100,001

Noise Correction

Sets the measurement noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the instrument. Off turns these corrections off.

In instruments with the noise floor extensions option (option NFE) enabled, there are two ways to compensate for the analyzer noise floor: through the NFE and through this noise corrections control. The techniques are results are similar but not identical. NFE uses a model of the analyzer noise floor, adapted to the current conditions such as center frequency, RBW and ambient temperature. The parameters of this model are measured in the factory or field calibration in a highly averaged measurement. So, they are consistent. However, because the model is imperfect, the corrections are imperfect. Using NFE is very convenient; the user need not wait for the ACP noise corrections calibration to occur. The ACP NC calibration, though, has advantages of being measured very recently, at the current ambient, and the exact center frequency, with no requirement that the model be perfect. So, it will often (but not always) have slightly better dynamic range. If both ACP NC is turned on and NFE is turned on, the instrument uses only the ACP NC. When ACP NC is turned off, but NFE is on, NFE is used, and performance should still be excellent.

When **Meas Method** is Fast Power, HW supported noise correction works when either or both of Noise Correction and NFE is on.

Remote Command	[:SENSe]:ACPower:CORRection:NOISe[:AUTO] OFF | ON | 0 | 1 [:SENSe]:ACPower:CORRection:NOISe[:AUTO]?
Example	:ACP:CORR:NOIS OFF

	:ACP:CORR:NOIS?
Dependencies	Not available when "Meas Method" on page 768 is RBW or Fast
Preset	0
State Saved	Saved in instrument state
Range	OFF|ON

Offset

Enables you to configure offset parameters for the ACP measurement in the EVM measurement based on the same capture.

Offset Frequency Define

Lets you select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “From Carrier Center to Integ BW Closer Edge” definition. LTE conformance test requires “From Carrier Edge to Integ BW Center” and/or “From Carrier Edge to Integ BW Closer Edge” definition.

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge of each Offset Integ BW
RTOCenter 5G NR Mode only	From either the lower or upper RF BW** edge frequency to the center frequency of each Offset Integ BW
RTOEdge 5G NR Mode only	From either the lower or upper RF BW** edge frequency to the closest edge frequency of each Offset Integ BW
RCTOCenter 5G NR Mode only	From the center frequency of RF BW** to the center frequency of each Offset Integ BW
SCTOCenter 5G NR Mode only	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

** RF BW = BWchannel,CA which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or

Disabled. When the Number of Component Carrier = 1, RF BW = $BW_{channel}$ = 2 x $F_{offset,RAT}$

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel}$ = 2 x $F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 2252.

Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:TYPE?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:TYPE ETOC` `:ACP:OFFS:TYPE?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	`CTOCenter`
State Saved	Saved in instrument state
Range	`CTOCenter|CTOEdge|ETOCenter|ETOEdge`

Mode: MSR, LTEAFDD, LTEATDD

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:TYPE?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:TYPE ETOC` `:ACP:OFFS:TYPE?`
Preset	`CTOCenter`
State Saved	Saved in instrument state

Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:TYPE?` Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	`:ACP:OFFS:TYPE ETOC` `:ACP:OFFS:TYPE?`
Preset	`CTOCenter`
State Saved	Saved in instrument state
Range	`CTOCenter | CTOEdge | ETOCenter | ETOEdge | RTOCenter | RTOEdge | RCTOCenter | SCTOCenter`

Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagram for Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

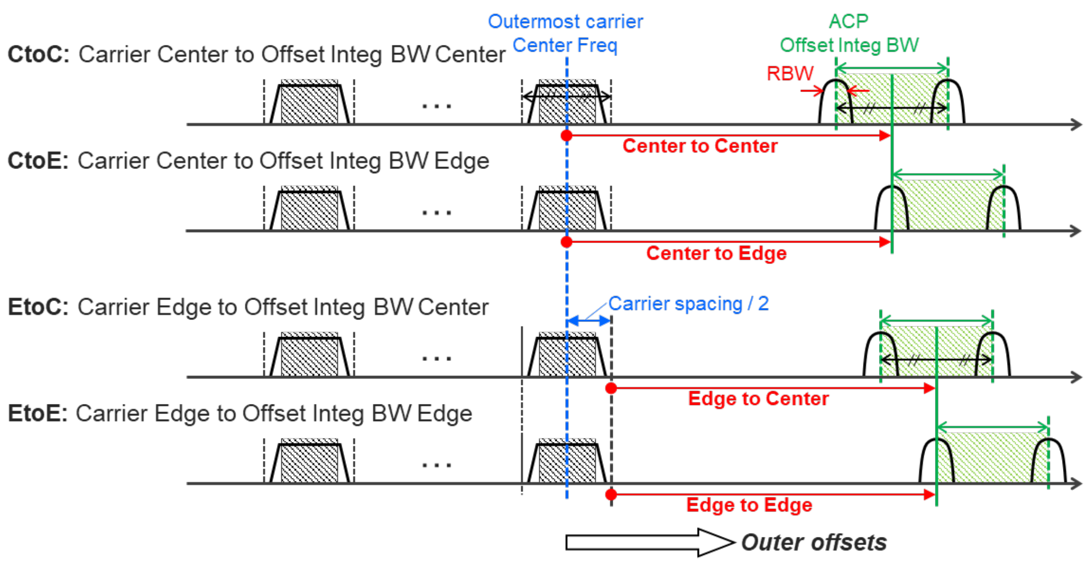

Diagram for MSR, LTEAFDD, LTEATDD, 5G NR

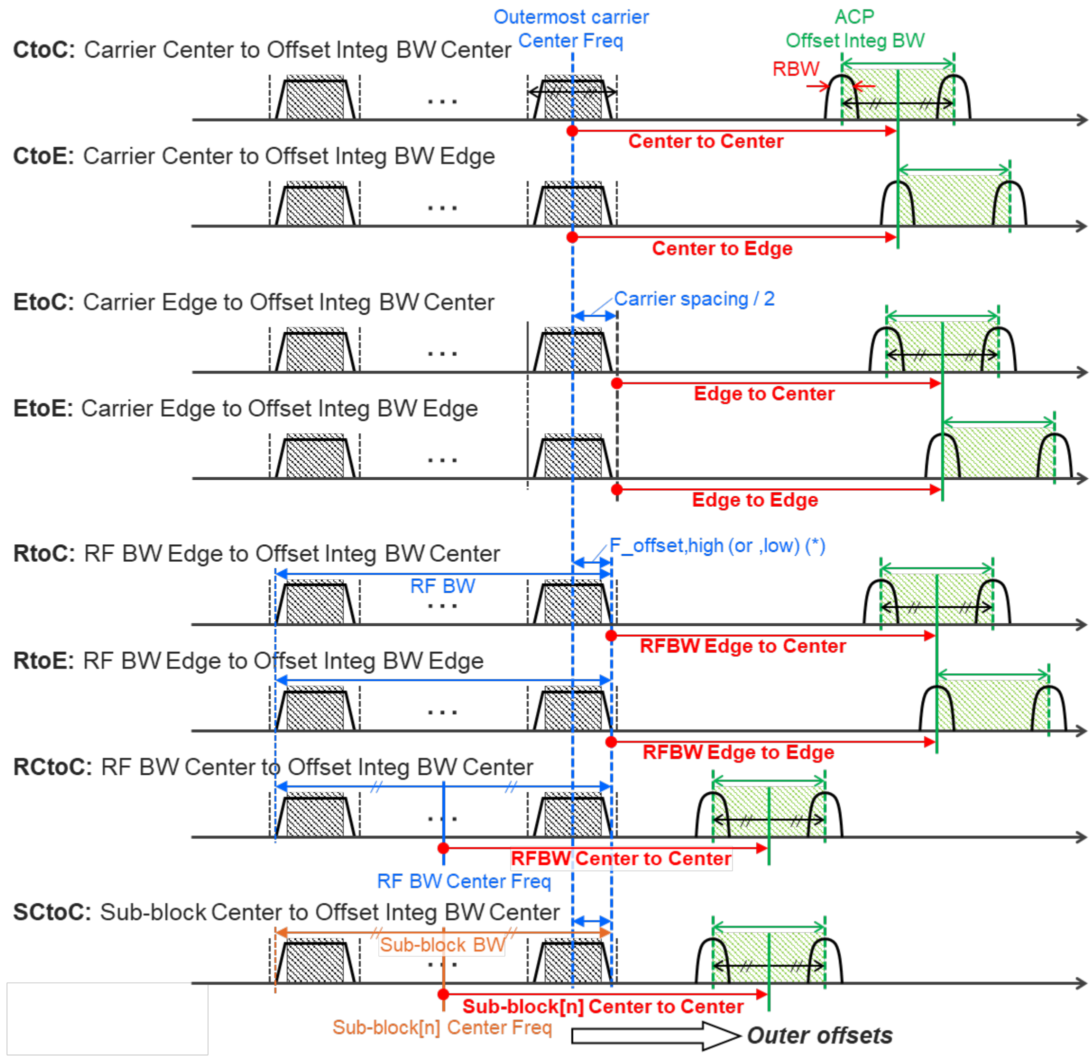

Note:

RF BW Edge and Outermost Carrier Edge are not always the same.
e.g.) 5G NR (3GPP) defines BW_channel, CA which calculates F_offset,high and F_offset,low asymmetrically with SCS shift.
(*) For MSR, F_offset,high (or ,low) = F_offset,RAT,high (or ,low)

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier.

Each **Offset Freq** state value is entered individually by selecting the desired carrier.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST[:FREQuency] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST[:FREQuency]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS1:LIST 0,0,0,0,0,0` `:ACP:OFFS1:LIST?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, in which case subsequent values are ignored
Couplings	Changing Offset Frequency might affect "Span" on page 754
Preset	When "Max Num of Offsets" on page 826 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	3 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 3 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
WCDMA	5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
LTEAFDD, LTEATDD, MSR	5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
5G NR	100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
Radio Test	25 kHz, 50 kHz, 75 kHz, 0 Hz, 0 Hz, 0 Hz

State Saved	Saved in instrument state
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement
Backwards Compatibility SCPI	`[:SENSe]:MCPower:OFFSet[1]|2:LIST[:FREQuency]`

Auto Function

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:STATe OFF | ON | 0 | 1,…` `[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:STATe?`

	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	`:ACP:OFFS2:LIST:STAT 1,1,0,0,0,0` `:ACP:OFFS2:LIST:STAT?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	`ON, OFF, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
WCDMA	`ON, ON, OFF, OFF, OFF, OFF | ON, ON, OFF, OFF, OFF, OFF`
LTEAFDD, LTEATDD, MSR	`ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
5G NR	`ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
Radio Test	`ON, ON, ON, OFF, OFF, OFF`

State Saved	Yes
Range	`OFF|ON`

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST[:FREQuency]`.

Enter each value individually by selecting the desired offset, then enter the Offset Integration Bandwidth.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATe`.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:INTegration] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:INTegration]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:LIST:BAND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz` `:ACP:OFFS2:LIST:BAND?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value, you must send all values up to that. Subsequent values remain unchanged, unless the number of values sent is greater than the number of carriers, then subsequent values is ignored
Couplings	Changing **Integ BW** might affect "Span" on page 754

<table>

</table>

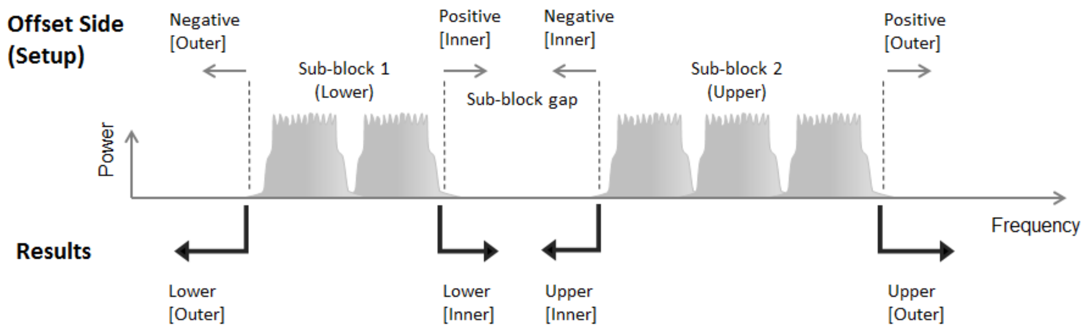
Offset Side

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:SIDE`.

`NEGative`	Negative (lower) sideband only
`BOTH`	Both of the negative (lower) and positive (upper) sidebands
`POSitive`	Positive (upper) sideband only

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in MSR, LTEAFDD and LTEATDD Modes.



Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:SIDE NEGative | BOTH | POSitive, …`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:SIDE?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:LIST:SIDE BOTH` `:ACP:OFFS:LIST:SIDE?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is BOTH `BOTH, BOTH, BOTH, BOTH, BOTH, BOTH | BOTH, BOTH, BOTH, BOTH, BOTH, BOTH`
State Saved	Saved in instrument state
Range	`NEGative|BOTH|POSitive`

Method

Allows you to turn RRC filtering of each offset on or off. The value (roll off) for the filter will be set to the value of the **Filter Alpha** parameter.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:FILTer[:RRC][:STATe] ON | OFF | 1 | 0,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:FILTer[:RRC][:STATe]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:LIST:FILT 1,0,0` `:ACP:OFFS:LIST:FILT?`
Notes	1|ON = RRC Weighted, 0|OFF = Integ BW Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
SA	0, 0, 0, 0, 0, 0 | 0, 0, 0, 0, 0,0
WCDMA	1, 1, 1, 1, 1, 1 | 1, 1, 1, 1, 1, 1
LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 | 0, 0, 0, 0, 0,0
Radio Test	0, 0, 0, 0, 0, 0

State Saved	Saved in instrument state
Range	Integ BW | RRC Weighted

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:FILTer:ALPHa <real>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:FILTer:ALPHa?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5` `:ACP:OFFS:LIST:FILT:ALPH?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

SA	0.22,0.22,0.22,0.22,0.22,0.22|0.22,0.22,0.22,0.22,0.22,0.22
WCDMA	0.22,0.22,0.22,0.22,0.22,0.22|0.22,0.22,0.22,0.22,0.22,0.22
LTEAFDD, LTEATDD, 5G NR, MSR	0.22,0.22,0.22,0.22,0.22,0.22|0.22,0.22,0.22,0.22,0.22,0.22

State Saved	Saved in instrument state
Min/Max	0.01/1.00

Limits

Enables you to configure limits parameters for the ACP measurement in the EVM measurement based on the same capture.

Limit Test

Turns limit checking for each offset On or Off. The limits may be specified in the **Offset** menu, for each offset, both sides of the carrier. For results that fail the limit, a red F is appended. In the **Combined** view, the bar turns red.

Remote Command	`:CALCulate:ACPower:LIMit:STATe OFF | ON | 0 | 1` `:CALCulate:ACPower:LIMit:STATe?`	
Example	`:CALC:ACP:LIM:STAT OFF` `:CALC:ACP:LIM:STAT?`	
Preset	SA	OFF
	WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR	ON
State Saved	Saved in instrument state	
Range	ON|OFF	
Backwards Compatibility SCPI	`[:SENSe]:MCPower:LIMit[:STATe]` `[:SENSe]:ACPower:LIMit[:STATe]`	

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier.

Each **Offset Freq** state value is entered individually by selecting the desired carrier.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST[:FREQuency] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST[:FREQuency]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS1:LIST 0,0,0,0,0,0` `:ACP:OFFS1:LIST?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, in which case subsequent values are ignored
Couplings	Changing Offset Frequency might affect "Span" on page 754
Preset	When "Max Num of Offsets" on page 826 is set to 12, the preset value of Offset G ~ L is the same as the

	Offset F value

Modes	Values
SA	3 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 3 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
WCDMA	5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
LTEAFDD, LTEATDD, MSR	5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 5.0 MHz, 10.0 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
5G NR	100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
Radio Test	25 kHz, 50 kHz, 75 kHz, 0 Hz, 0 Hz, 0 Hz

State Saved	Saved in instrument state
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement
Backwards Compatibility SCPI	`[:SENSe]:MCPower:OFFSet[1]|2:LIST[:FREQuency]`

Auto Function

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:STATe OFF | ON | 0 | 1,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:STATe?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:LIST:STAT 1,1,0,0,0,0` `:ACP:OFFS2:LIST:STAT?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	`ON, OFF, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
WCDMA	`ON, ON, OFF, OFF, OFF, OFF | ON, ON, OFF, OFF, OFF, OFF`
LTEAFDD, LTEATDD, MSR	`ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
5G NR	`ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
Radio Test	`ON, ON, ON, OFF, OFF, OFF`

State Saved	Yes
Range	`OFF|ON`

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATe command.

The query returns the six (6) sets of real numbers that are the current absolute amplitude test limits.

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:ABSolute < real>,… [:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:ABSolute? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS2:LIST:ABS -10,-10,-10,-10,-10,-10 :ACP:OFFS2:LIST:ABS?
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm | 0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm
WCDMA	50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm | 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm
LTEAFDD, LTEATDD, MSR	-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 | -50.0, -50.0, -50.0, -50.0, -50.0, -50.0
5G NR	4.92, 4.92, 4.92, 4.92, 4.92, 4.92 | -50.0, -50.0, -50.0, -50.0, -50.0, -50.0

State Saved	Saved in instrument state
Min/Max	-200.0 dBm/50.0 dBm
Backwards Compatibility SCPI	[:SENSe]:ACPR:OFFSet[1]|2:LIST:ABSolute SA, W-CDMA [:SENSe]:MCPower:OFFSet[1]|2:LIST:ABSolute SA, W-CDMA

Rel Limit (Car)

Enters a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATe.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:RCARrier <real>,… [:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:RCARrier? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS2:LIST:RCAR 0,0,0,0,0,0 :ACP:OFFS2:LIST:RCAR?
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	-45, -60, 0, 0, 0, 0 | -45, -60, 0, 0, 0, 0
WCDMA	-44.2, -49.2, -49.2, -49.2, -49.2, -49.2 | -32.2, -42.2, -42.2, -42.2, -42.2, -42.2
LTEAFDD, LTEATDD, MSR	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 | -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
5G NR	-43.8, -43.8, -43.8, -43.8, -43.8, -43.8 | -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
Radio Test	-60, -60, -60, 0, 0, 0

State Saved	Saved in instrument state
Min/Max	-150/50.0
Backwards Compatibility SCPI	[:SENSe]:MCPower:OFFSet[1]|2:LIST:RCARrier

Rel Limit (PSD)

Enters a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:RPSDensity <rel_ampl>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:RPSDensity?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:LIST:RPSD 10,10,10,10,10,10` `:ACP:OFFS2:LIST:RPSD?`
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA	-28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB | -28.87 dB, -43.87 dB, 0 dB, 0 dB, 0 dB, 0 dB
WCDMA	-44.2 dB, -49.2 dB, -49.2 dB, -49.2 dB, -49.2 dB, -49.2 dB | -32.2 dB, -42.2 dB, -42.2 dB, -42.2 dB, -42.2 dB, -42.2 dB
LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 | 0, 0, 0, 0, 0, 0
Radio Test	-60, -60, -60, 0, 0, 0

State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that lets you select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:ABSolute, or the relative values defined with [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:RPSDensity and [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:RCARrier.

You can turn off (not use) specific offsets with [:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATe.

Absolute	ABSolute	Fail is shown if one of the absolute ACP measurement results is larger than the limit for **Abs Limit**
Relative	RELative	Fail is shown if one of the relative ACP measurement results is larger than the limit for **Rel Lim (Car)** or **Rel Lim (PSD)**
Abs AND Rel	AND	Fail is shown if one of the absolute ACP measurement results is larger than the limit for **Abs Limit***and* one of the relative ACP measurement results is larger than the limit for **Rel Lim (Car)** or **Rel Lim (PSD)**
Abs OR Rel	OR	Fail is shown if one of the absolute ACP measurement results is larger than the limit for **Abs Limit***or* one of the relative ACP measurement results is larger than the limit for **Rel Lim (Car)** or **Rel Lim (PSD)**

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:TEST ABSolute | AND | OR | RELative,… [:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:TEST? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS2:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS :ACP:OFFS2:LIST:TEST?
Notes	Some Modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
SA, WCDMA	REL, REL, REL, REL, REL, REL | REL, REL, REL, REL, REL, REL
LTEAFDD, LTEATDD, 5G NR, MSR	AND, AND, AND, AND, AND, AND | AND, AND, AND, AND, AND, AND
Radio Test	REL, REL, REL, REL, REL, REL

State Saved	Saved in instrument state

Range	ABSolute|AND|OR|RELative
Backwards Compatibility SCPI	[:SENSe]:MCPower:OFFSet[1]|2:LIST:TEST

Inner Offset

Enables you to configure inner offset parameters for the ACP measurement in the EVM measurement based on the same capture.

Offset Frequency Define

Allows you to select “Offset” definition:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge frequency of each Offset Integ BW
STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of each Offset Integ BW
STOEdge	From either the lower or upper sub-block edge frequency to the closest edge frequency of each Offset Integ BW
SCTOCenter 5G NR Mode only	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel}$ = 2 x $F_{offset,RAT}$.

See "Diagram for Offset Freq Define" on page 2267

Mode: MSR, LTEAFDD, LTEATDD

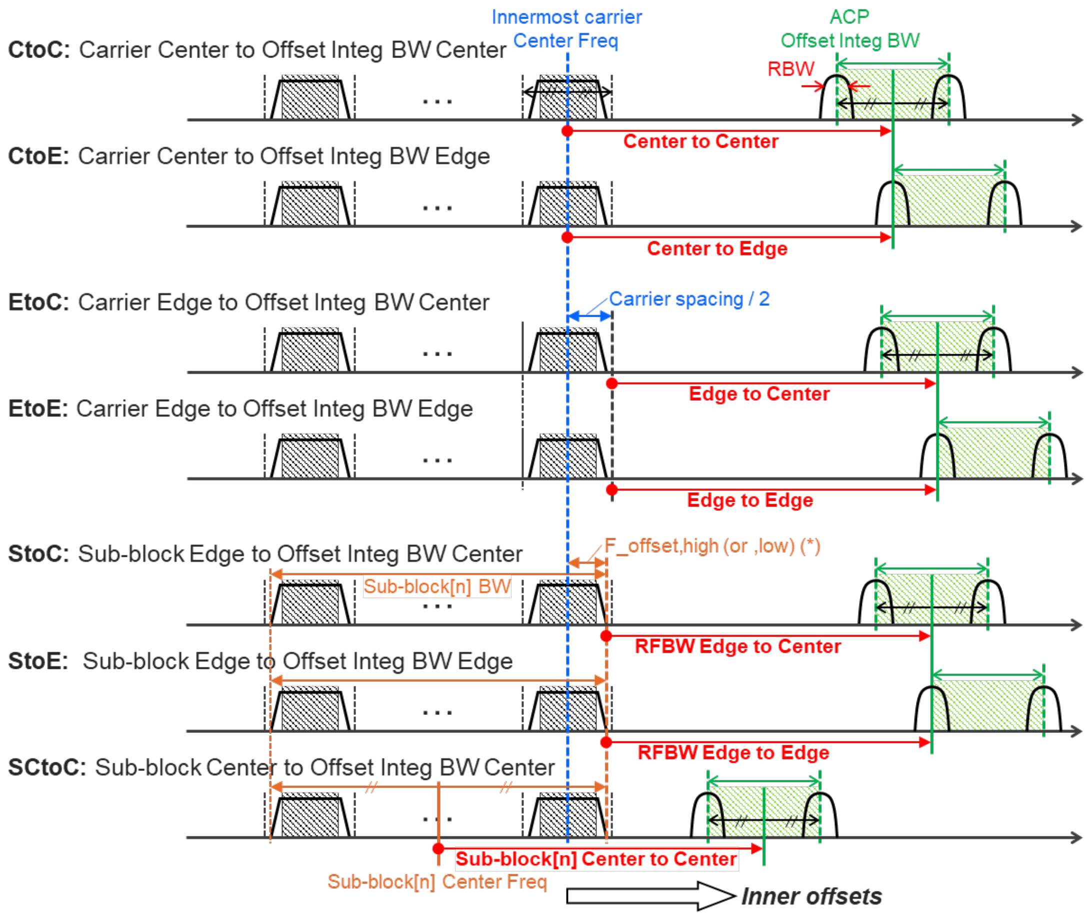
Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | STOCenter | STOEdge

	[:SENSe]:ACPower:OFFSet[1]|2:INNer:TYPE? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:TYPE ETOC :ACP:OFFS:INN:TYPE?
Preset	STOCenter
State Saved	Saved in instrument state
Range	CTOCenter|CTOEdge|ETOCenter|ETOEdge|STOCenter|STOEdge

Mode: 5G NR

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | STOCenter | STOEdge | SCTOCenter [:SENSe]:ACPower:OFFSet[1]|2:INNer:TYPE? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:TYPE ETOC :ACP:OFFS:INN:TYPE?
Preset	STOCenter | CTOCenter
State Saved	Saved in instrument state
Range	CTOCenter | CTOEdge | ETOCenter | ETOEdge | STOCenter | STOEdge | SCTOCenter

Diagram for Offset Freq Define



Note:

RF BW Edge and Outermost Carrier Edge are not always same.
e.g.) 5G NR (3GPP) defines BW_channel,CA which calculates F_offset,high and F_offset,low asymmetrically with SCS shift

(*) For MSR, F_offset,high (or ,low) = F_offset,RAT,high (or ,low)

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the **Enabled** checkbox to turn the **Offset Freq** State on or off.

The list contains up to 6 entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST[:FREQuency] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST[:FREQuency]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS1:INN:LIST 0,0,0,0,0,0` `:ACP:OFFS1:INN:LIST?`
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values are ignored
Couplings	Changing Offset Frequency might affect "Span" on page 754
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
All Others	2.5MHz,7.5MHz,0,0,0,0 | 2.5MHz,7.5MHz,0,0,0,0

State Saved	Saved in instrument state
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement

Auto Function

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:STATe OFF | ON | 0 | 1,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:STATe?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:STAT 1,1,0,0,0,0` `:ACP:OFFS2:INN:LIST:STAT?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value `ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`
State Saved	Yes

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe]:ACP:OFFSet[n]:INNer:LIST[:FREQuency]`.

Enter each value individually by selecting the desired offset on the **Offset** menu key using the up down arrows, the knob, or the numeric keypad, then enter the Offset Integration Bandwidth using the **Offset Integration Bandwidth** menu key.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:BANDwidth[:INTegration] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:BANDwidth[:INTegration]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:BAND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz` `:ACP:OFFS2:INN:LIST:BAND?`
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, so, if you want to change the second value you must send all values up to it. Subsequent values remain unchanged
Couplings	Changing Integ BW might affect "Span" on page 754
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz | 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz
MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz | 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz
5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz | 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz

State Saved	Saved in instrument state
Min/Max	10 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement

Offset Side

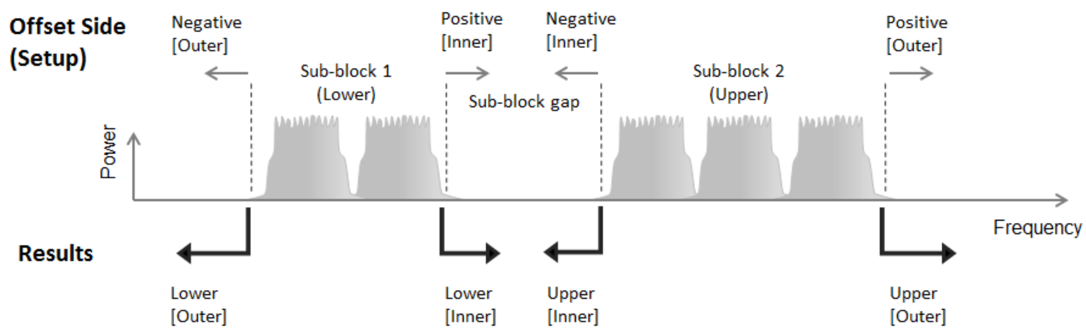
Lets you turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:SIDE`.

– `NEGative` - The upper side in the sub-block gap only (that is, negative sideband of the upper sub-block) is enabled

– BOTH - Both sides in the sub-block gap are enabled

– POSitive - The lower side in the sub-block gap only (that is, positive sideband of the lower sub-block) is enabled

The diagram below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTEAFDD and LTEATDD Modes.



Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:SIDE NEGative | BOTH | POSitive, … [:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:SIDE? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:LIST:SIDE BOTH :ACP:OFFS:INN:LIST:SIDE?
Notes	If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH | BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative|BOTH|POSitive

Method

Lets you turn RRC filtering of each offset on or off. The value (roll off) for the filter is set to the value of the Filter Alpha parameter.

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:FILTer[:RRC][:STATe] ON | OFF | 1 | 0,… [:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:FILTer[:RRC][:STATe]? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:LIST:FILT 1,0,0 :ACP:OFFS:INN:LIST:FILT?
Notes	1|ON = RRC Weighted, 0|OFF = Integ BW

Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value **Modes** / **Values** LTEAFDD: 1,1,1,1,1,1 | 1,1,1,1,1,1 MSR, LTEATDD, 5G NR: 0,0,0,0,0,0 | 0,0,0,0,0,0
State Saved	Saved in instrument state
Range	Integ BW | RRC Weighted

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:FILTer:ALPHa <real>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:FILTer:ALPHa?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS:INN:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5` `:ACP:OFFS:INN:LIST:FILT:ALPH?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is 0.22 0.22,0.22,0.22,0.22,0.22,0.22|0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.00

Power Ref Type

Lets you set reference types of inner offsets.

`CUMulative` Cumulated power of the upper and lower sub-block carriers is the reference level. This selection is effective only when one of the following "Power Ref" on page 2240 values is selected:

Left & Right Carriers	`LRCarriers`
Max Power Carrier in Sub-block	`MPCSubblock`
Min Power Carrier in Sub-block	`MINSubbloc`
Left & Right Sub-blocks	`LRSubblocks`
Manual	`MANual`

When one of the other **Power Ref** values is selected, carrier powers are not cumulated, and the reference level is equivalent to Normal

`NORMal` Power of specified carrier or the manual reference level is the reference level

Remote	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:PREFerence CUMulative | NORMal, …`

Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:PREFerence? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:LIST:PREF CUM,CUM,NORM,NORM,NORM,NORM :ACP:OFFS:INN:LIST:PREF?
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is NORMal NORMal, NORMal, NORMal, NORMal, NORMal, NORMal
State Saved	Saved in instrument state
Range	CUMulative|NORMal

Auto Function

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:PREFerence:AUTO OFF | ON | 0 | 1, … [:SENSe]:ACPower:OFFSet[1] | 2:INNer:LIST:PREFerence:AUTO? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS:INN:LIST:PREF:AUTO OFF,OFF,OFF,OFF,OFF,OFF :ACP:OFFS:INN:LIST:PREF:AUTO?
Dependencies	Available only in LTEAFDD, LTEATDD and 5G NR Modes
Couplings	When in the LTEAFDD, LTEATDD Modes, the inner power ref type is set automatically when the power ref type state is auto according to the scopes of the sub-block gap in the following table

Sub-block Gap	Inner ACP offset	Power Ref Type
Wgap <5MHz	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Normal
5MHz≤ Wgap <10MHz	1st (2.5MHz)	Cumulative
	2nd (7.5MHz)	Normal
10MHz≤ Wgap <15MHz	1st (2.5MHz)	Cumulative
	2nd (7.5MHz)	Cumulative
15MHz≤ Wgap <20MHz	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Cumulative
20MHz≤ Wgap	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Normal

When in 5G NR Mode, Power Ref Type “Auto” sets the power reference type of inner-ACLR offset automatically

Downlink: “Cumulative” or “Normal” is selected accordingly when the inner-offsets are configured to meet the test requirements as follows:

FR1, 3GPP TS 38.141-1 v16.5.0 (2020-09) Section 6.6.3.5.3 BS type 1-C:

- Table 6.6.3.5.2-3: Base Station ACLR limit in non-contiguous spectrum or multiple bands
- Table 6.6.3.5.2-4: Base station CACLR limit

	FR2, 3GPP TS 38.141-2 v16.5.0 (2020-09) Section 6.7.3.5.3 BS type 2-O: – Table 6.7.3.5.2-3: BS type 2-O ACLR limit in non-contiguous spectrum – Table 6.7.3.5.2-4: BS type 2-O CACLR limit in non-contiguous spectrum Uplink: "Normal" is always selected
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value `ON, ON, ON, ON, ON, ON | OFF, OFF, OFF, OFF, OFF, OFF`
State Saved	Saved in instrument state
Range	`Auto|Man`

Inner Limits

Enables you to configure inner limits parameters for the ACP measurement in the EVM measurement based on the same capture.

Limit Test

Turns limit checking for each offset On or Off. The limits may be specified in the **Offset** menu, for each offset, both sides of the carrier. For results that fail the limit, a red F is appended. In the **Combined** view, the bar turns red.

Remote Command	`:CALCulate:ACPower:LIMit:STATe OFF | ON | 0 | 1` `:CALCulate:ACPower:LIMit:STATe?`
Example	`:CALC:ACP:LIM:STAT OFF` `:CALC:ACP:LIM:STAT?`
Preset	SA: `OFF` WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR: `ON`
State Saved	Saved in instrument state
Range	`ON|OFF`
Backwards Compatibility SCPI	`[:SENSe]:MCPower:LIMit[:STATe]` `[:SENSe]:ACPower:LIMit[:STATe]`

Offset Freq

Determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the **Enabled** checkbox to turn the **Offset Freq** State on or off.

The list contains up to 6 entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz, and causes it to be removed from the results screen.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST[:FREQuency] <freq>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST[:FREQuency]?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS1:INN:LIST 0,0,0,0,0,0` `:ACP:OFFS1:INN:LIST?`
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values are ignored
Couplings	Changing Offset Frequency might affect "Span" on page 754
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz | 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
All Others	2.5MHz,7.5MHz,0,0,0,0 | 2.5MHz,7.5MHz,0,0,0,0

State Saved	Saved in instrument state
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as Max Span of the Swept SA Measurement

Auto Function

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:STATe OFF | ON | 0 | 1,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:STATe?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:STAT 1,1,0,0,0,0` `:ACP:OFFS2:INN:LIST:STAT?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value `ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`

State Saved	Yes

Abs Limit

Specifies an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain 6 entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current absolute amplitude test limits.

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:ABSolute < real>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:ABSolute?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:ABS -10,-10,-10,-10,-10,-10` `:ACP:OFFS2:INN:LIST:ABS?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 | -50.0,-50.0,-50.0,-50.0,-50.0,-50.0
All Others	-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 | -50.0,-50.0,-50.0,-50.0,-50.0,-50.0

State Saved	Saved in instrument state
Min/Max	-200.0 dBm/50.0 dBm

Rel Limit (Car)

Specifies a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:RCARrier <real>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:RCARrier?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:RCAR 0,0,0,0,0,0` `:ACP:OFFS2:INN:LIST:RCAR?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is the same as the Offset F value
State Saved	Saved in instrument state
Min/Max	-150/50.0

Modes	Values
5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 | -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
All Others	-44.2, -44.2,-44.2,-44.2,-44.2,-44.2 | -29.2, -29.2, -29.2, -29.2, -29.2, -29.2

Rel Limit (PSD)

Specifies a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains 6 entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n]:INNer:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with `[:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe`.

The query returns the 6 sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:RPSDensity <rel_ampl>,…`
	`[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:RPSDensity?`
	Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink

Example	`:ACP:OFFS2:INN:LIST:RPSD 10,10,10,10,10,10` `:ACP:OFFS2:INN:LIST:RPSD?`
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is 0 0, 0, 0, 0, 0, 0 | 0, 0, 0, 0, 0, 0

State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that enables you to select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with [:SENSe]:ACP:OFFSet[n]:INNer:LIST:ABSolute, or the relative values defined with [:SENSe]:ACP:OFFSet[n]:INNer:LIST:RPSDensity and [:SENSe]:ACP:OFFSet[n]:INNer:LIST:RCARrier.

You can turn off (not use) specific offsets with [:SENSe]:ACP:OFFSet[n]:INNer:LIST:STATe.

Option	SCPI	Description
Absolute	ABSolute	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	RELative	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	AND	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit *and* one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	OR	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit *or* one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	[:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:TEST ABSolute | AND | OR | RELative,… [:SENSe]:ACPower:OFFSet[1]|2:INNer:LIST:TEST? Subopcode: 1 = BTS/Downlink (Default), 2 = MS/Uplink
Example	:ACP:OFFS2:INN:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS :ACP:OFFS2:INN:LIST:TEST?
Preset	When "Max Num of Offsets" on page 826 is 12, the preset value of Offset G ~ L is AND AND, AND, AND, AND, AND, AND | AND, AND, AND, AND, AND, AND
State Saved	Saved in instrument state
Range	ABSolute|AND|OR|RELative

SEM Setup

Enables you to configure advanced parameters for the SEM measurement in the EVM measurement based on the same capture.

General

Enables you to configure general parameters for the SEM measurement in the EVM measurement based on the same capture.

SEM State

Enable or disable the SEM measurement.

Remote Command	`[:SENSe]:EVM:SEM OFF | ON | 0 | 1` `[:SENSe]:EVM:SEM?`
Example	`:EVM:SEM OFF` `:EVM:SEM?`
Preset	`OFF`
State Saved	Yes

Measurement Type

Accesses a menu that enables you to select one of the following measurement reference types:

Total Pwr Ref	`TPRef`	Sets the reference to the total carrier power and the measured data is shown in dBc and dBm
PSD Ref	`PSDRef`	Sets the reference to the mean power spectral density of the carrier and the measured data is shown in dB and dBm/Hz
Spectrum Peak Ref	`SPRef`	Sets the reference to the spectrum peak power of the carrier and the measured data is shown in dB and dBm

Remote Command	`[:SENSe]:SEMask:TYPE PSDRef | TPRef | SPRef` `[:SENSe]:SEMask:TYPE?`
Example	`:SEM:TYPE PSDR` `:SEM:TYPE?`
Preset	WLAN Mode: `SPRef` All other Modes: `TPRef`
State Saved	Saved in instrument state
Range	Total Pwr Reference | PSD Reference | Spectrum Peak Reference

Power Ref

Selects the power reference type:

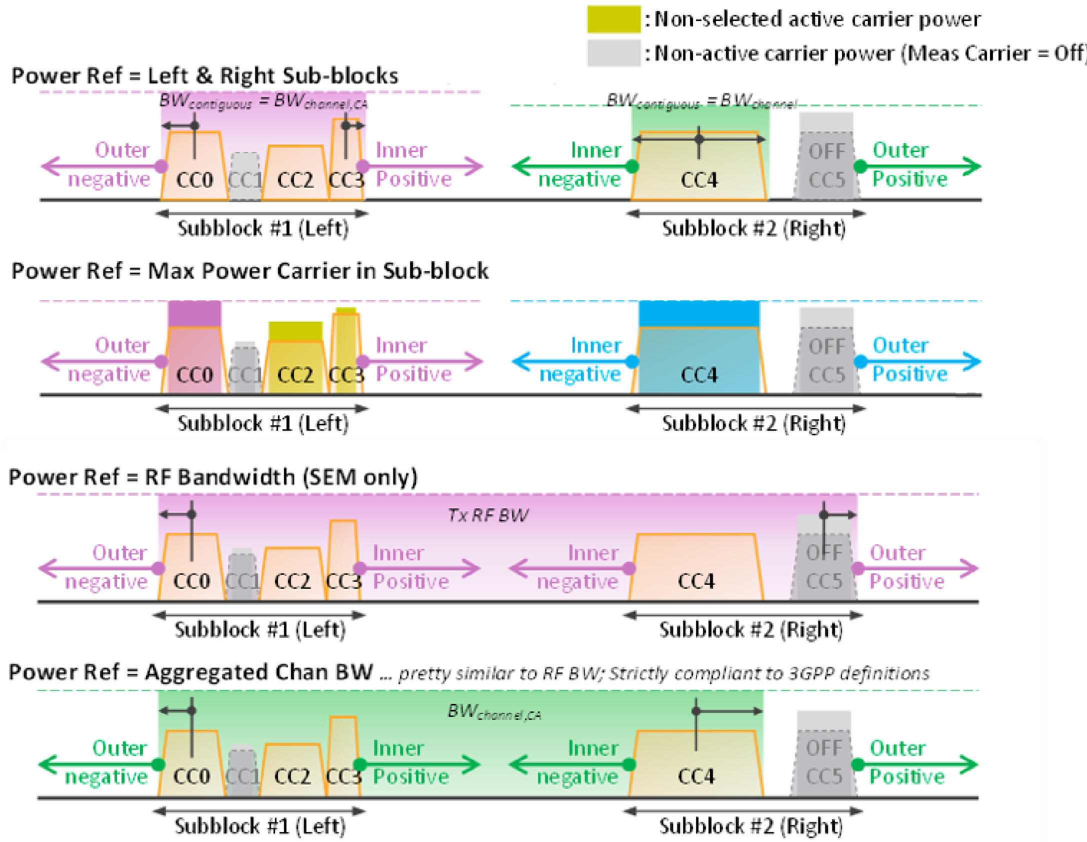
Option	SCPI	Description
Left & Right Carriers	LRCarriers	Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Only the frequency ranges of leftmost and rightmost carriers are swept and measured. Other frequency ranges in the RFBW are not measured. Left and right carriers are determined based on the carrier center frequencies If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated
Max Power Carrier	MPCarrier	Maximum carrier power is the reference of measurement. All the configured carriers are measured If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN. Relative limits are not evaluated
Carrier Index	CINDex	Power of the specified carrier is the reference of measurement. Only the frequency range of the specified carrier is swept and measured, and other frequency ranges in the RFBW are not measured If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NaN. Relative limits are not evaluated
Manual	MANual	Power or PSD specified by the user is the reference of measurement. No carriers are measured and the manually specified value is used as reference
Max Power Carrier in Sub-block	MPCSubblock	Maximum carrier power among the sub-block carriers with Measure Carrier On is the reference of measurement. All the configured carriers are measured If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NaN, and these relative limits are not evaluated
RF Bandwidth	RFBandwidth	Power or PSD of total of the RF bandwidth is the reference of measurement. Power not only in the carrier bands but also carrier gaps is integrated into the reference power. Measure Carrier On/Off does not affect the reference power frequency range because RF bandwidth is determined by the carrier configuration
Aggregated Chan BW LTE-A and 5G NR Modes only	ACBandwidth	The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. Measure Carrier On/Off affects the reference power frequency range If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN and Relative limits are not evaluated
Left & Right Sub-blocks	LRSubblocks	The reference depends on the N**umber of Component Carriers** (CC) and Carrier Allocation as follows:

Option	SCPI	Description
5G NR Mode only		

Number of CCs	Reference
1	The carrier power is the reference
2 or more, *and* **Carrier Allocation** is Contiguous	Aggregated Channel power is the reference
2 or more, *and* **Carrier Allocation** is Non-Contiguous	Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration

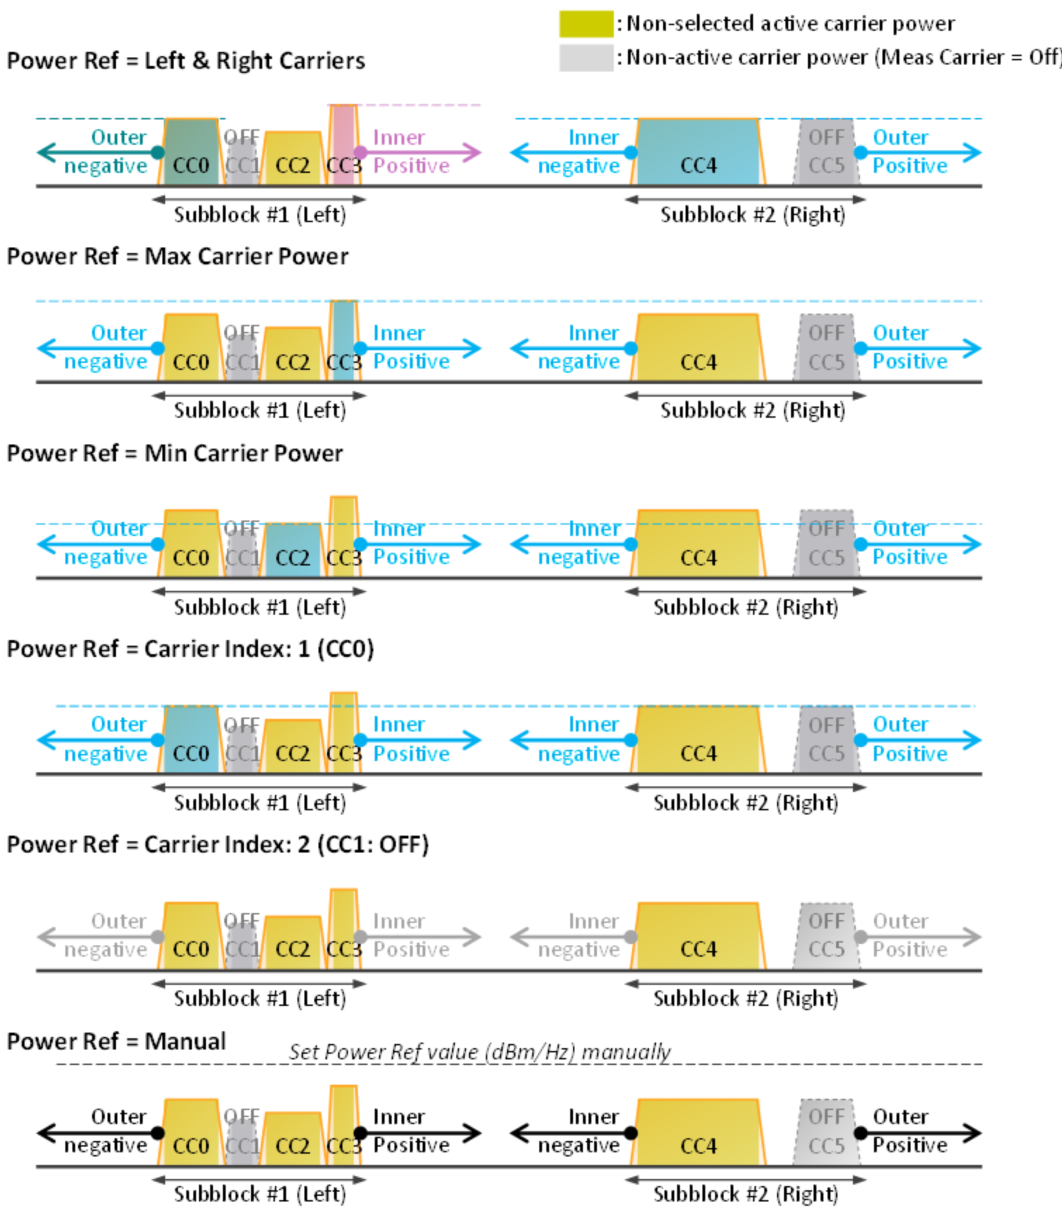
The powers of carriers are not included in the reference power when their Measure Carriers are **Off**. When Measure Carriers of all the carriers in a sub-block are **Off**, the reference power and all the relative power results are `NaN`. Therefore, relative limits are not evaluated.

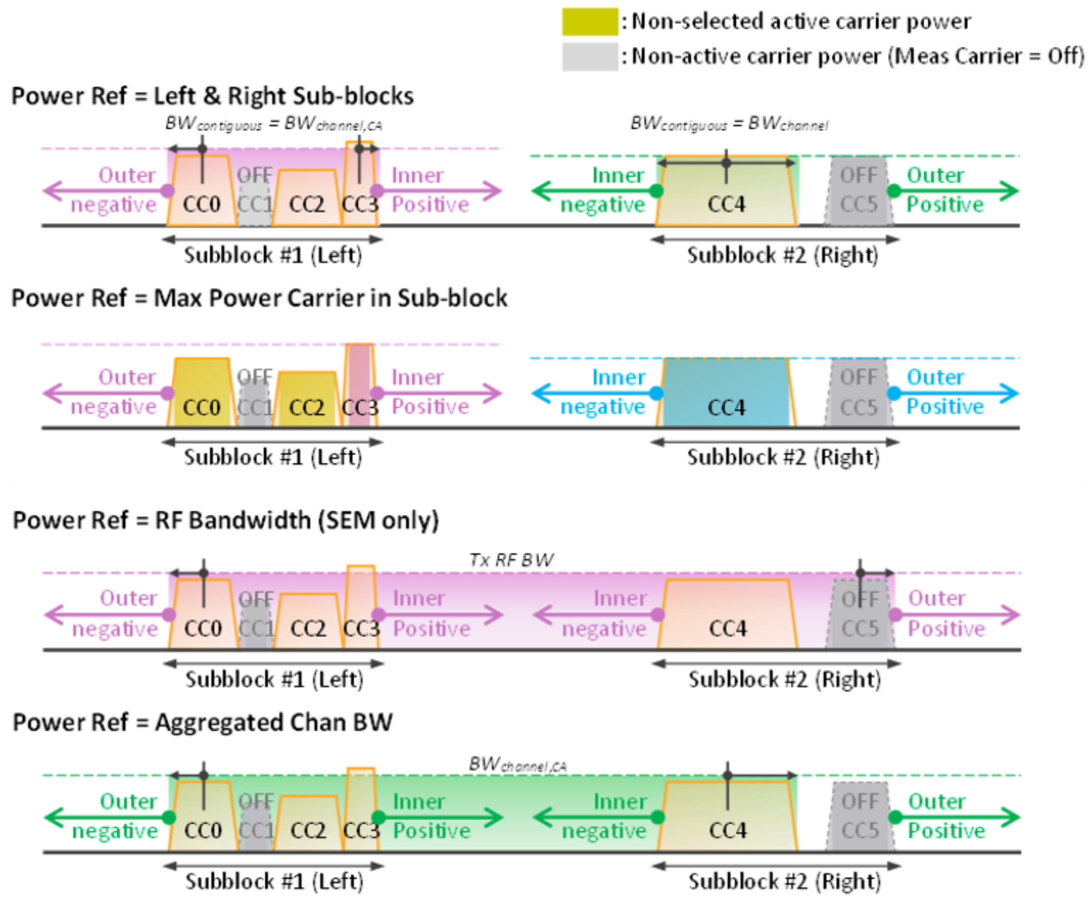
Meas Type = Total Power Ref



: Non-selected active carrier power
: Non-active carrier power (Meas Carrier = Off)
Power Ref = Left & Right Sub-blocks
Outer negative
CC0
CC1
CC2
CC3
Inner Positive
Inner negative
CC4
OFF CC5
Outer Positive
Subblock #1 (Left)
Subblock #2 (Right)
Power Ref = Max Power Carrier in Sub-block
Power Ref = RF Bandwidth (SEM only)
Tx RF BW
Power Ref = Aggregated Chan BW ... pretty similar to RF BW; Strictly compliant to 3GPP definitions

Meas Type = PSD Ref





Remote Command	`[:SENSe]:SEMask:CARRier:PREFerence:TYPE LRCarriers | MPCarrier | CINDex | MANual | MPCSubblock | RFBandwidth | ACBandwidth | LRSubblocks`
	For option details, see above
	`[:SENSe]:SEMask:CARRier:PREFerence:TYPE?`

Example	`:SEM:CARR:PREF:TYPE CIND` `:SEM:CARR:PREF:TYPE?`
Notes	`LRSubblocks` is available only in 5G NR Mode `ACBandwidth` is available only in LTE-A and 5G NR Modes
Dependencies	Only available in MSR, LTE-A and 5G NR Modes
Preset	`MPCarrier`
State Saved	Saved in instrument state
Range	Left & Right Carriers | Max Power Carriers | Carrier Index | Manual | Max Power Carrier in Sub-block | RF Bandwidth | Aggregated Chan BW | Left & Right Sub-blocks

Remote Command	`[:SENSe]:SEMask:CARRier:AUTO[:STATe] OFF | ON | 1 | 0` `[:SENSe]:SEMask:CARRier:AUTO[:STATe]?`

Example	`:SEM:CARR:AUTO OFF` `:SEM:CARR:AUTO?`
Preset	`ON`
State Saved	Saved in instrument state
Range	Auto|Man

Carrier Index

Sets carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "Power Ref" on page 2279 is Carrier Index.

Remote Command	`[:SENSe]:SEMask:CARRier:INDex <integer>` `[:SENSe]:SEMask:CARRier:INDex?`
Example	`:SEM:CARR:IND 1` `:SEM:CARR:IND?`
Dependencies	Available only in MSR, LTE-A and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	MSR Mode: 1/100 LTEAFDD,LTEATDD Mode:1/5 5G NR Mode: 16

Total Power Ref

Sets the power in the carrier (ref channel) that is used to compute the relative power values for the offsets. For modes other than MSR, LTEAFDD, LTEATDD, and 5GNR, when **Reference Power** is set to Measured, this value is set to the measured carrier reference power. When set to Manual, the result takes on the last measured value, or can be manually entered.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power readouts of the two carriers is used for computing the relative power values for the offset.

Remote Command	`[:SENSe]:SEMask:CARRier[:POWer] <real>` `[:SENSe]:SEMask:CARRier[:POWer]?`
Example	`:SEM:CARR 100dBm` `:SEM:CARR?`
Notes	The min and max values given are for "Measurement Type" on page 2278 = Total Pwr Ref
Couplings	Coupled with **Measurement Type.** Active when **Measurement Type** is set to Total Power Ref. Otherwise, grayed-out

	In MSR, LTE-A and 5G NR Modes, the control is active when **Measurement Type** is set to Total Power and **Power Ref** is set to Manual
Preset	Measured carrier reference power
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Annotation	Value is displayed on the left top of the Results window with the Channel Integ BW

PSD Ref

Sets the power spectral density in the carrier that is used to compute the relative power spectral density values for the offsets when "Measurement Type" on page 2278 is set to PSD Ref. When the state is set to **Auto**, this will be set to the measured carrier power spectral density.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power density readouts of the two carriers is used for computing the relative PSD values for the offset.

Remote Command	`[:SENSe]:SEMask:CARRier:CPSD <real>` `[:SENSe]:SEMask:CARRier:CPSD?`
Example	`:SEM:CARR:CPSD -80` `:SEM:CARR:CPSD?`
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement Carrier sub op code. 1 for BTS, 2 for MS. Default is BTS
Couplings	Coupled with "Measurement Type" on page 2278. Active if **Measurement Type** is PSD. Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when **Measurement Type** is PSD and **Power Ref** is Manual
Preset	Measured carrier PSD reference power
State Saved	Saved in instrument state
Min/Max	-200/200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is PSD Ref, the string is “PSD Ref” with BOLD font, otherwise, hide annotation

Spectrum Pk Ref

Sets the spectrum peak power in the carrier that is used to compute the relative power spectral density values for the offsets when "Measurement Type" on page 2278 is Spectrum Peak. When the state is set to **Auto**, this is set to the measured carrier spectrum peak power. When set to **Manual**, the result takes on the last measured value, or can be manually entered

Remote Command	[:SENSe]:SEMask:CARRier:PEAK[:POWer] <real> [:SENSe]:SEMask:CARRier:PEAK[:POWer]?
Example	:SEM:CARR:PEAK -80 :SEM:CARR:PEAK:POWER?
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement Carrier sub op code. 1 for BTS, 2 for MS. Default is BTS
Couplings	Coupled with "Measurement Type" on page 2278. Active when **Measurement Type** is "Spectrum Peak Ref". Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when **Measurement Type** is Spectrum Peak Ref and **Power Ref** is Manual
Preset	Measured carrier Spectrum Peak reference power
State Saved	Saved in instrument state
Min/Max	-200/200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is Spectrum Peak Ref, the string is "Spectrum Peak Ref" with BOLD font, otherwise, hide annotation

Points

Sets the number of points displayed in the traces. The current value of points is displayed in the bottom-right corner of the display.

Remote Command	[:SENSe]:SEMask:SWEep:POINts <integer> [:SENSe]:SEMask:SWEep:POINts?
Example	:SEM:SWE:POIN 4001 :SEM:SWE:POIN?
Preset	2001
State Saved	Saved in instrument state
Min	201
Max	10001
Annotation	On second line of annotations in bottom right corner

Non-Contiguous Meas Region

Selects the region to measure for the non-contiguous frequency allocation.

Option	SCPI	Comments
Outer	OUTer	
Inner	INNer	
Outer & Inner	OINNer	Available only in 5G NR and LTE-Advanced FDD/TDD Modes

Remote Command	`[:SENSe]:SEMask:NCONtiguous:REGion INNer | OUTer | OINNer` `[:SENSe]:SEMask:NCONtiguous:REGion?`
Example	`:SEM:NCON:REG INN` `:SEM:NCON:REG?`
Dependencies	Available only in MSR, 5G NR and LTE-Advanced FDD/TDD Modes `OINNer` is available only in 5G NR and LTE-Advanced FDD/TDD Modes
Preset	`INNer`
State Saved	Yes
Range	Inner | Outer | Outer & Inner

Meas Method

Sets the measurement method:

Method	Option	Description
Integration BW	0|OFF	Enables you to set the channel integration bandwidth
RRC Weighted	1|ON	Selects Root Raised Cosine (RRC) filtering of the carriers. The a value (rolloff) for the filter is set to the value of the Filter Alpha parameter

Remote Command	`[:SENSe]:SEMask:FILTer[:RRC][:STATe] OFF | ON | 0 | 1` `[:SENSe]:SEMask:FILTer[:RRC][:STATe]?`
Example	`:SEM:FILT ON` `:SEM:FILT?`
Dependencies	WLAN: RRC Weight is not supported when the radio standard is WLAN 802.11ac (80+80MHz)
Preset	SA, LTEAFDD, LTEATDD, 5G NR, WLAN, MSR Modes: `OFF` WCDMA Mode: `ON`
State Saved	Saved in instrument state
Range	Integration BW|RRC Weighted

RRC Filter Alpha

Sets the alpha value for the RRC Filter.

Remote Command	`[:SENSe]:SEMask:FILTer[:RRC]:ALPHa <real>` `[:SENSe]:SEMask:FILTer[:RRC]:ALPHa?`
Example	`:SEM:FILT:ALPH 0.3` `:SEM:FILT:ALPH?`

Preset	0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.0

Result Table

Specifies which results will be displayed in the SEM Results table

Result Table	Details
APFReq	Displays the absolute power levels in dBm and the corresponding frequencies in the SEM Results table
RPFReq	Displays the relative power levels in dBc and the corresponding frequencies in the SEM Results table
IPOWer	Displays the absolute and relative power levels integrated throughout the bandwidths between the start and stop frequencies in the SEM Results table

Remote Command	[:SENSe]:EVM:SEM:TABLe APFReq | RPFReq | IPOWer [:SENSe]:EVM:SEM:TABLe?
Example	:EVM:SEM:TABL RPFR :EVM:SEM:TABL?
Preset	APFR
State Saved	Yes
Range	Abs Pwr Freq | Rel Pwr Freq | Integrated Power

Offset

Enables you to configure offset parameters for the SEM measurement in the EVM measurement based on the same capture.

Offset Freq Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition. LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. The MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center frequency of Meas BW and the limit line have ½ Meas BW offset when the Meas BW Edge is selected.

Note that the outermost (lowermost, uppermost) carrier at each side is determined by which carrier edge frequency is located outermost within the RF BW or each sub-block bandwidth, instead of which carrier center frequency is located outermost.

See also "Diagrams for Offset Freq Define" on page 2292.

Modes other than MSR, LTE-A, 5G NR

Options:

`CTOCenter`	From carrier center to the center of offset measuring filter*
`CTOEdge`	From carrier center to the nominal –3 dB point of the offset measuring filter* closer to the carrier
`ETOCenter`	From Center Frequency – Span of Ref Channel / 2 (for lower offset), Center Frequency + Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the center of offset measuring filter *
`ETOEdge`	From Center Frequency – Span of Ref Channel / 2 (for lower offset), Center Frequency + Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the nominal –3 dB point of the offset measuring filter * closer to the carrier

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When **Number of Component Carriers** = 1, RF BW = $BW_{channel}$ = 2 x $F_{offset,RAT}$

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge` `[:SENSe]:SEMask:OFFSet[1]|2:TYPE?`
Example	`:SEM:OFFS:TYPE ETOC` `:SEM:OFFS:TYPE?`
Notes	`OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Preset	`CTOCenter`
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center | Carrier Center to Meas BW Edge | Carrier Edge to Meas BW Center | Carrier Edge to Meas BW Edge

Mode: MSR, LTEAFDD, LTEATDD

Options:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center of offset measuring filter*
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RTOCenter	From either the lower or upper RF BW** edge frequency to the center frequency of offset measuring filter*
RTOEdge	From either the lower or upper RF BW** edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RCTOCenter 5G NR Mode only	**From the center frequency of RF BW to the center frequency of offset measuring filter***

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When **Number of Component Carriers** = 1, RF BW = $BW_{channel}$ = 2 x $F_{offset,RAT}$

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | RTOCenter | RTOEdge` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:TYPE?`
Example	`:SEM:OFFS:TYPE ETOC` `:SEM:OFFS:TYPE?`
Notes	`OFFSet1` is for BTS, 2 for MS. Default is BTS
Preset	MSR: `RTOCenter` LTEAFDD, LTEATDD: `ETOCenter`
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center|Carrier Center to Meas BW Edge|Carrier Edge to Meas BW Center-|Carrier Edge to Meas BW Edge|RF BW Edge to Meas BW Center|RF BW Edge to Meas BW Edge

Mode: 5G NR

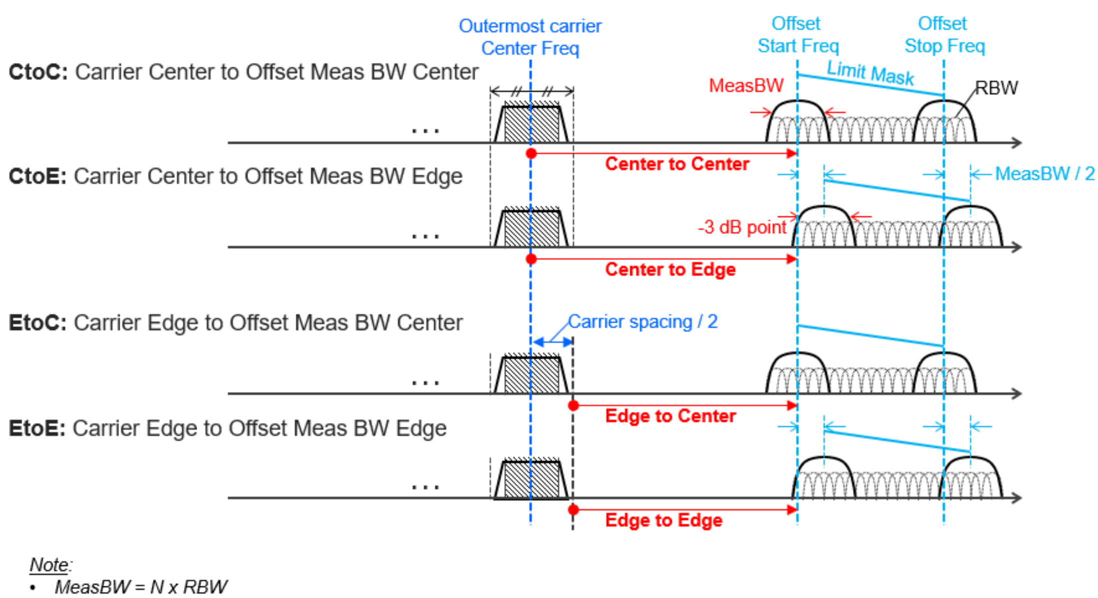
Options: see "Mode: MSR, LTEAFDD, LTEATDD" on page 2291 above.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | RTOCenter | RTOEdge | RCTOCenter` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:TYPE?`
Example	`:SEM:OFFS:TYPE ETOC` `:SEM:OFFS:TYPE?`
Notes	`OFFSet1` is for BTS, 2 for MS. Default is BTS
Preset	`ETOCenter`
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center|Carrier Center to Meas BW Edge|Carrier Edge to Meas BW Center-|Carrier Edge to Meas BW Edge|RF BW Edge to Meas BW Center|RF BW Edge to Meas BW Edge|RF BW Center to Meas BW Center

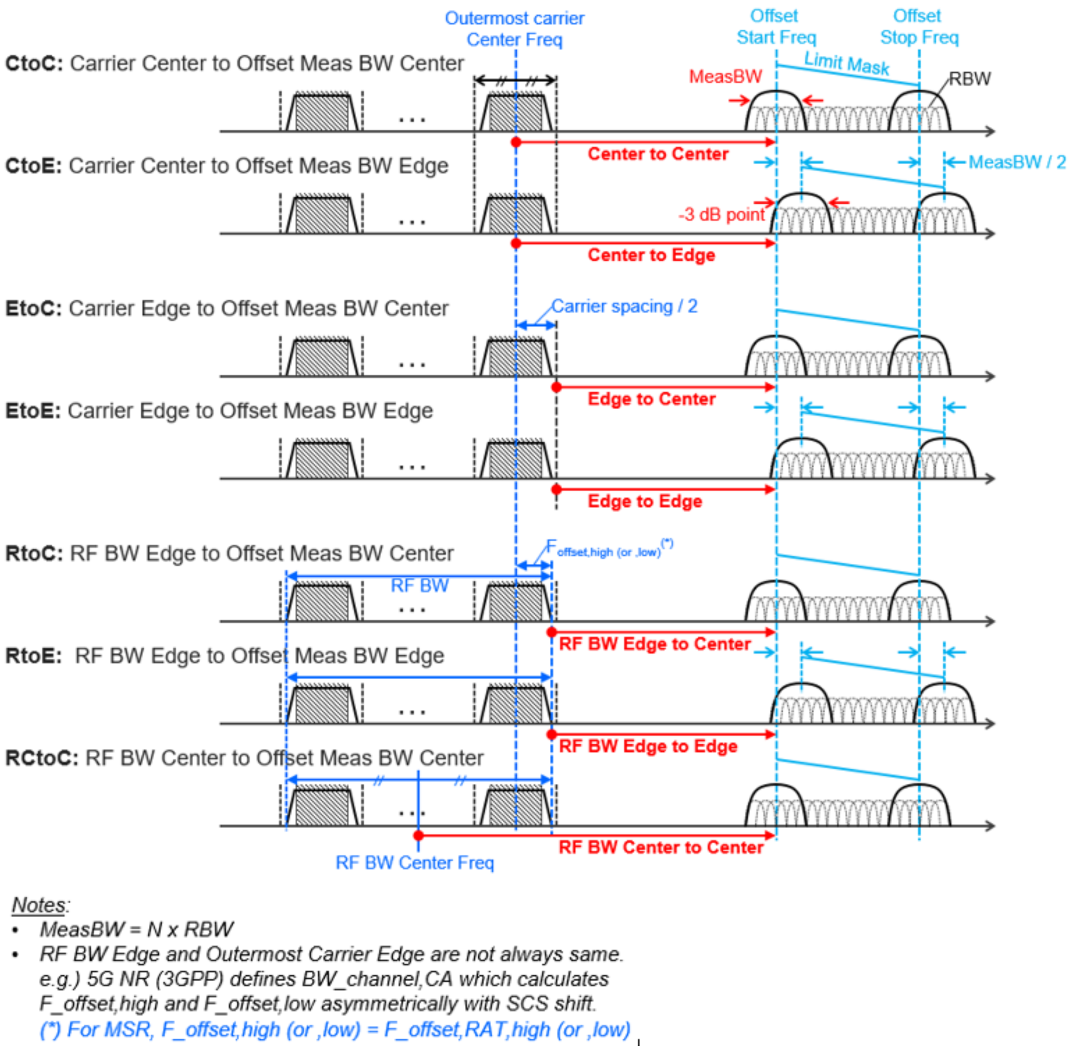
Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagrams for Modes other than MSR, LTEAFDD/LTEATDD, 5G NR



Diagrams for MSR, LTEAFDD/LTEATDD, 5G NR



Start Freq

Specifies the start frequency for the currently selected offset. Also enables you to toggle that offset between On and Off.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STARt <freq>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STARt?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STATe ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STATe?`

Example	`:SEM:OFFS2:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz`
	`:SEM:OFFS2:LIST:FREQ:STAR?`
	`:SEM:OFFS:LIST:STAT ON, ON, ON, OFF, OFF, OFF`
	`:SEM:OFFS:LIST:STAT?`

Notes	Comma-separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS If the offset is outside of the frequency range, the result spectrum will be invalid
Couplings	Coupled to Stop Freq. When the start freq goes above the stop freq, the stop freq is automatically adjusted to the start freq plus 100 Hz
Preset	When the max number of offsets is 6:

Mode	Values
SA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz
WCDMA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz|2.515MHz, 4.000 MHz, 7.500 MHz, 8.500 MHz, 12.5 MHz, 15 MHz

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	15 kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz | 15kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz
LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz,40 MHz, 40 MHz,40 MHz, 40 MHz, 40 MHz | 15.00 kHz,1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz
5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz | 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

`WLAN` Mode: See the table of "WLAN Mode Presets" on page 2295 below

When the max number of offsets is 6:

Mode	Values
SA	ON, ON, ON, ON, ON, OFF
WCDMA	ON, ON, ON, ON, ON, OFF | ON, ON, ON, ON, OFF, OFF

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

MSR	ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF
LTEAFDD, LTEATDD	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
5G NR	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

Mode	Values

802.11j/p(10MHz)	4.5 MHz, 5MHz, 5.5 MHz, 10 MHz, 15 MHz, 216 MHz, 216MHz, 216 MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz
802.11p(5MHz)	2.25 MHz, 2.5MHz, 2.75 MHz, 5 MHz, 7.5 MHz, 216 MHz, 216MHz, 216 MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz
802.11ax/be(20MHz)	9.75 MHz, 10.5 MHz, 20 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz
802.11ax/be(40MHz)	19.5 MHz, 20.5 MHz, 40 MHz, 60 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz
802.11ax/be(80MHz)	39.5 MHz, 40.5 MHz, 80 MHz, 120 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz
802.11ax/be(160MHz):	79.5 MHz, 80.5 MHz, 160 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11ax(80 MHz + 80MHz)	0MHz, 0 MHz, 40 MHz, 79 MHz, 159 MHz, 161 MHz, 200 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz
802.11af(6MHz)	2.85 MHz, 3.15 MHz, 6 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz
802.11af(7MHz)	3.325 MHz, 3.675 MHz, 7 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz
802.11af(8MHz)	3.8 MHz, 4.2 MHz, 8 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz
802.11be (320MHz)	159.5 MHz, 160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz

WLAN Mode Auto Function Presets

For X Series:

Radio Std	Presets
802.11b/g(DSSS/CCK/PBCC)	ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11a/g/j/p 20MHz (OFDM/DSSS-OFDM) 802.11j/p 10MHz 802.11p 5MHz/802.11n (20MHz/40MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	OFF, ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF
802.ah (1MHz/ 2MHz/ 4MHz/ 8MHz/ 16MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

For E6630A, E6640A, and M90XA:

Radio Std	Presets
802.11a/g(OFDM/DSSS-OFDM) 802.11n(20MHz/40MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	ON, ON, ON, OFF, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STOP <freq>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STOP?`
Example	`:SEM:OFFS:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz,`

	`15.0 MHz` `:SEM:OFFS:LIST:FREQ:STOP?`
Notes	Comma separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS If the offset is outside of the frequency range, the result spectrum will be invalid
Couplings	Coupled to Start Freq. When Stop Freq goes below Start Freq, Start Freq is automatically adjusted to Stop Freq minus 100 Hz
Preset	When the max number of offsets is 6:

Mode	Values
SA	2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz
WCDMA	2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz|3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz|215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz
LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz | 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz
5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz | 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

WLAN Mode: See table of "WLAN Mode Presets" on page 2298 below

State Saved	Saved in instrument state
Min/Max	100 Hz/Depends on instrument maximum frequency. Same as the Max Span in Swept SA Measurement

802.11af (7MHz)	3.675 MHz, 7 MHz, 10.5 MHz, 17.5MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz
802.11af (8MHz)	4.2 MHz, 8 MHz, 12 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz
802.11be (320MHz)	160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset.. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

(N x Res BW) <= (Stop freq of the offset - Start freq of the offset),

where N is the multiplier, this setting will automatically be changed to manual.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:RESolution] <bandwidth>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:RESolution]?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:RESolution]:AUTO OFF | ON | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth[:RESolution]:AUTO?`

Example	`:SEM:OFFS2:LIST:BAND 30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz,1.00 MHz, 1.00 MHz`
	`:SEM:OFFS2:LIST:BAND?`
	`:SEM:OFFS:LIST:BAND:AUTO 1,1,1,1,1,1`
	`:SEM:OFFS:LIST:BAND:AUTO?`

Notes	Comma separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA modes. In the SA mode, Offset sub op code 1 is used for both BTS and MS

Couplings	Coupled to Start and Stop offset and Meas BW multiplier. This parameter must adhere to the rule (N x Res BW) <= (Stop freq of the offset - Start freq of the offset), where N is the multiplier. If the multiplier is changed, the Res BW will change to ensure this. When set manually, Res BW Coupling is set to manual The resolution bandwidth is coupled to the offset width determined by the start frequency and stop frequency
Preset	When the max number of offsets is 6:

Mode	Values
SA	30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz,1.00 MHz, 1.00 MHz
WCDMA	30.00 kHz, 30.00 kHz, 30.00 kHz, 100.00 kHz, 1.000 MHz, 1.00 MHz|30.00 kHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.000 MHz, 1.00 MHz

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTEAFDD, LTEATDD, 5G NR	51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz | 15.0 kHz, 510 kHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz
MSR	30kHz, 30kHz, 30kHz, 1.0MHz,1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz | 30kHz, 30kHz, 30kHz, 1.0MHz,1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz, 1.0MHz,1.0MHz

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

Mode	Values
WLAN	**100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz, 100 kHz**

When the max number of offsets is 6:

`OFF, OFF, OFF, OFF, OFF, OFF | OFF, OFF, OFF, OFF, OFF, OFF`

When the max number of offsets is 12:

`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

When the max number of offsets is 14:

`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min	1 Hz
Max	Option FS1 or FS2 is installed: 10 MHz Otherwise: 8 MHz

Backwards Compatibility SCPI	`[:SENSe]:SEMask:OFFSet[1]|2:LIST:BWIDth[:RESolution]` `[:SENSe]:SEMask:OFFSet[1]|2:LIST:BWIDth[:RESolution]:AUTO`

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer number. It shows a ratio between Integration BW and Resolution BW of the measurement result.

Integ BW = Meas BW * Resolution BW

Integration BW is desired resolution bandwidth and Resolution BW is actual bandwidth for sweep. Measurement sweeps with Resolution BW and Meas BW compensates sweep resolution bandwidth to Integration BW.

If you set this value greater than 1, you can set Resolution BW narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth:IMULti <integer>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:BANDwidth:IMULti?`
Example	`:SEM:OFFS2:LIST:BAND:IMUL 1,1,1,1,1,1` `:SEM:OFFS2:LIST:BAND:IMUL?`
Notes	Comma separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA modes. In the SA mode, Offset sub op code 1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

Mode	Values
SA	1, 1, 1, 1, 1, 1
WCDMA	1, 1, 1, 10, 1, 1|1, 1, 1, 1, 1, 1

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1|1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1
LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1|2, 2, 1, 1, 1,1, 1, 1, 1, 1, 1, 1

	When the max number of offsets is 14in these modes, the preset value of Offset G ~ N is the same as the Offset F value **Mode** / **Values** WLAN / 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1
State Saved	Yes
Min/Max	1/1000
Backwards Compatibility SCPI	[:SENSe]:SEMask:OFFSet[1]|2:LIST:BWIDth:IMULti

Offset Side

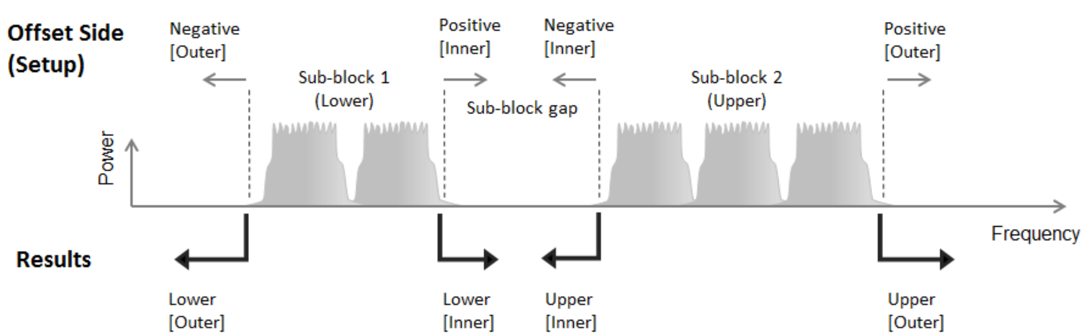
Specifies which offset side to measure.

You can turn off (not use) specific offsets with [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe.

BOTH	Both of the negative (lower) and positive (upper) sidebands
NEGative	Negative (lower) sideband only
POSitive	Positive (upper) sideband only

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, and 12 values for other Modes.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTE-Advanced FDD/TDD and 5G NR Modes.



Remote Command	[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:SIDE BOTH | NEGative | POSitive, … [:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:SIDE?
Example	:SEM:OFFS:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS

	`:SEM:OFFS:LIST:SIDE?`
Notes	Comma-separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in Modes other than SA. In SA Mode, Offset sub op code 1 is used for both BTS and MS

Preset	**Modes LTEAFDD,LTEATDD, 5G NR, MSR:**
	`BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH | BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH`
	When the max number of offsets is 14:
	Mode WLAN:
	`BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH`
	All Other Modes:
	When the max number of offsets is 6:
	`BOTH, BOTH, BOTH, BOTH, BOTH, BOTH`
	When the max number of offsets is 12:
	`BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH`

State Saved	Saved in instrument state
Range	`BOTH|NEGative|POSitive`

Limits

Enables you to configure limits parameters for the SEM measurement in the EVM measurement based on the same capture.

Start Freq

Specifies the start frequency for the currently selected offset. Also enables you to toggle that offset between On and Off.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STARt <freq>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STARt?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STATe ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STATe?`

Example	`:SEM:OFFS2:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz`

	`:SEM:OFFS2:LIST:FREQ:STAR?`
	`:SEM:OFFS:LIST:STAT ON, ON, ON, OFF, OFF, OFF`
	`:SEM:OFFS:LIST:STAT?`

Notes	Comma-separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS If the offset is outside of the frequency range, the result spectrum will be invalid
Couplings	Coupled to Stop Freq. When the start freq goes above the stop freq, the stop freq is automatically adjusted to the start freq plus 100 Hz
Preset	When the max number of offsets is 6:

Mode	Values
SA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz
WCDMA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz|2.515MHz, 4.000 MHz, 7.500 MHz, 8.500 MHz, 12.5 MHz, 15 MHz

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	15 kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz | 15kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz
LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz,40 MHz, 40 MHz,40 MHz, 40 MHz, 40 MHz | 15.00 kHz,1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz
5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz | 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

`WLAN` Mode: See the table of "WLAN Mode Presets" on page 2306 below

When the max number of offsets is 6:

Mode	Values
SA	`ON, ON, ON, ON, ON, OFF`
WCDMA	`ON, ON, ON, ON, ON, OFF | ON, ON, ON, ON, OFF, OFF`

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

	MSR	`ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	LTEAFDD, LTEATDD	`ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	5G NR	`ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

802.11ac(80MHz)	39 MHz, 41 MHz, 80 MHz, 120 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz
802.11ac(160MHz)	79 MHz, 81 MHz, 160 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11ac(80 MHz + 80MHz)	0MHz, 0 MHz, 40 MHz, 79 MHz, 159 MHz, 161 MHz, 200 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz
802.11ah(1MHz)	0.45 MHz, 0.6 MHz, 1 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz, 1.5 MHz

Radio Std	Presets
802.11ah(2MHz)	0.9 MHz, 1.1 MHz, 2 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz, 3 MHz
802.11ah(4MHz)	1.9 MHz, 2.1 MHz, 4 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz, 6 MHz
802.11ah(8MHz)	3.9 MHz, 4.1 MHz, 8 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 120 MHz, 120 MHz, 120 MHz
802.11ah(16MHz)	7.9 MHz, 8.1 MHz, 16 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz, 24 MHz
802.11j/p(10MHz)	4.5 MHz, 5MHz, 5.5 MHz, 10 MHz, 15 MHz, 216 MHz, 216MHz, 216 MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz
802.11p(5MHz)	2.25 MHz, 2.5MHz, 2.75 MHz, 5 MHz, 7.5 MHz, 216 MHz, 216MHz, 216 MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz, 216MHz
802.11ax/be(20MHz)	9.75 MHz, 10.5 MHz, 20 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz
802.11ax/be(40MHz)	19.5 MHz, 20.5 MHz, 40 MHz, 60 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz, 70 MHz
802.11ax/be(80MHz)	39.5 MHz, 40.5 MHz, 80 MHz, 120 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz, 125 MHz
802.11ax/be(160MHz):	79.5 MHz, 80.5 MHz, 160 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11ax(80 MHz + 80MHz)	0MHz, 0 MHz, 40 MHz, 79 MHz, 159 MHz, 161 MHz, 200 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz, 240 MHz
802.11af(6MHz)	2.85 MHz, 3.15 MHz, 6 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz, 9 MHz
802.11af(7MHz)	3.325 MHz, 3.675 MHz, 7 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz, 10.5 MHz
802.11af(8MHz)	3.8 MHz, 4.2 MHz, 8 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz, 12 MHz
802.11be (320MHz)	159.5 MHz, 160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz, 490 MHz

WLAN Mode Auto Function Presets

For X Series:

Radio Std	Presets
802.11b/g(DSSS/CCK/PBCC)	`ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
802.11a/g/j/p 20MHz (OFDM/DSSS-OFDM) 802.11j/p 10MHz	`ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

Radio Std	Presets
802.11p 5MHz/802.11n (20MHz/40MHz)	
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	OFF, ON, ON, ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF
802.ah (1MHz/ 2MHz/ 4MHz/ 8MHz/ 16MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

For E6630A, E6640A, and M90XA:

Radio Std	Presets
802.11a/g(OFDM/DSSS-OFDM) 802.11n(20MHz/40MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	ON, ON, ON, OFF, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STOP <freq>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:FREQuency:STOP?`
Example	`:SEM:OFFS:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz` `:SEM:OFFS:LIST:FREQ:STOP?`
Notes	Comma separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS

<table>
<tr><td></td><td>Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS
If the offset is outside of the frequency range, the result spectrum will be invalid</td></tr>
<tr><td>Couplings</td><td>Coupled to Start Freq. When Stop Freq goes below Start Freq, Start Freq is automatically adjusted to Stop Freq minus 100 Hz</td></tr>
<tr><td>Preset</td><td>When the max number of offsets is 6:
<table>
<tr><th>Mode</th><th>Values</th></tr>
<tr><td>SA</td><td>2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</td></tr>
<tr><td>WCDMA</td><td>2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz|3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz</td></tr>
</table>
When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value
<table>
<tr><th>Mode</th><th>Values</th></tr>
<tr><td>MSR</td><td>215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz|215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz</td></tr>
<tr><td>LTEAFDD, LTEATDD</td><td>5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz | 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz</td></tr>
<tr><td>5G NR</td><td>5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz | 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz</td></tr>
</table>
When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value
WLAN Mode: See table of "WLAN Mode Presets" on page 2309 below</td></tr>
<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
<tr><td>Min/Max</td><td>100 Hz/Depends on instrument maximum frequency. Same as the Max Span in Swept SA Measurement</td></tr>
</table>

WLAN Mode Presets

802.11ah (1MHz)	0.6MHz, 1 MHz, 1.5 MHz, 2.5MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz, 2.5 MHz
802.11ah (2MHz)	1.1 MHz, 2 MHz, 3 MHz, 5MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz, 5 MHz
802.11ah (4MHz)	2.1 MHz, 4 MHz, 6 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz, 10 MHz
802.11ah (8MHz)	4.1 MHz, 8 MHz, 12 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz
802.11ah (16MHz)	8.1 MHz, 16 MHz, 24 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz
802.11j/p (20MHz)	10MHz, 11 MHz, 20 MHz, 30 MHz, 50MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz
802.11j/p (10MHz)	5MHz, 5.5 MHz, 10 MHz, 15 MHz, 25MHz, 250MHz, 250MHz, 250MHz, 250 MHz, 250MHz, 250MHz, 250MHz, 250MHz, 250MHz
802.11p (5MHz)	2.5MHz, 2.75MHz, 5 MHz, 7.5 MHz, 12.5MHz, 250MHz, 250MHz, 250MHz, 250 MHz, 250MHz, 250MHz, 250MHz, 250MHz, 250MHz
802.11ax/be (20MHz)	10.5 MHz, 20 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz
802.11ax/be (40MHz)	20.5 MHz, 40 MHz, 60 MHz, 70 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz
802.11ax/be (80MHz)	40.5 MHz, 80 MHz, 120 MHz, 125 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz, 200 MHz
802.11ax/be (160MHz)	80.5 MHz, 160 MHz, 240 MHz, 250 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz, 400 MHz
802.11ax (80 MHz + 80MHz)	100Hz, 40 MHz, 79 MHz, 81 MHz, 161 MHz, 200 MHz, 240 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11af (6MHz)	3.15MHz, 6 MHz, 9 MHz, 15MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz, 15 MHz
802.11af (7MHz)	3.675 MHz, 7 MHz, 10.5 MHz, 17.5MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz,

Radio Std	Presets
	17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz, 17.5 MHz
802.11af (8MHz)	4.2 MHz, 8 MHz, 12 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz, 20 MHz
802.11be (320MHz)	160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz, 800 MHz

Abs Start

Sets the absolute power level limit at the start frequency for the selected offset. The absolute power level limit ranges from –200 to +50 dBm.

The fail condition for each offset channel is set remotely by `[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:TEST`.

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:ABSolute <real>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:ABSolute?`
Example	`:SEM:OFFS2:LIST:STAR:ABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm` `:SEM:OFFS2:LIST:STAR:ABS?`
Notes	Comma-separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

Mode	Values
SA	-14.00 dBm , -14.00 dBm , -26.00 dBm , -13.00 dBm , -13.00 dBm, -13.00 dBm
WCDMA	-12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm|-69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm

Abs Stop

Sets the absolute power level limit at the stop frequency for the selected offset. The absolute power level limit ranges from –200 to +50 dBm. You can also toggle this function between **Couple** (`COUPle` = `ON`) and **Manual** (`COUPle` = `OFF`). If set to **Couple**, the **Abs Stop** power level limit is coupled to **Abs Start** to result in a flat limit line. If set to **Man**, Abs Start and Abs Stop take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop absolute power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:ABSolute <real>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:ABSolute?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:ABSolute:COUPle ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:ABSolute:COUPle?`

Example	`:SEM:OFFS:LIST:STOP:ABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm`
	`:SEM:OFFS1:LIST:STOP:ABS?`
	`:SEM:OFFS:LIST:STOP:ABS:COUP ON, OFF, ON, ON, ON, ON`
	`:SEM:OFFS:LIST:STOP:ABS:COUP?`

Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in Modes other than SA. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Couplings	Coupled to **Abs Start** if **Auto** is selected, that is, the Stop value is equal to the Start value
Preset	When the max number of offsets is 6:

Mode	Values
SA	-14.00 dBm, -26.00 dBm, -26.00 dBm, -13.00 dBm, -13.00 dBm, -13.00 dBm
WCDMA	-12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm|-69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm
LTE, LTETDD	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm| -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTEAFDD, LTEATDD	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm| -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm
5G NR	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm| -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm
MSR	-12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm| -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

	WLAN Mode: See the table of "WLAN Mode Presets" on page 2315 below When the max number of offsets is 6:

Mode	Values
SA	`ON, OFF, ON, ON, ON, ON`
WCDMA	`ON, OFF, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON`
LTE, LTETDD	`OFF, ON, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON`

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTEAFDD, LTEATDD, 5G NR	`OFF, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON`
MSR	`ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

WLAN Mode: See the table of "WLAN Mode Auto Function Presets" on page 2316 below

Rel Start

Sets a relative power level limit at the start frequency for the selected offset. The relative power level limit ranges from –200 to +50 dBc.

The fail condition is set remotely by `[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:TEST` for each offset channel test.

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns values currently set to the relative power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:RCARrier <rel_ampl>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:RCARrier?`
Example	`:SEM:OFFS:LIST:STAR:RCAR -30, -30, -30, -30, -30, -30` `:SEM:OFFS:LIST:STAR:RCAR?`
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in Modes other than SA. In SA mode, Offset sub op code 1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

Mode	Values
SA	-30.00 dB, -30.00 dB,-30.00 dB, -30.00 dB, -30.00 dB, -30.00 dB
WCDMA	-30.00 dB, -30.00 dB, -30.00 dB, -30.00 dB, -30.00 dB, -30.00 dB|-33.73 dB, -34.00 dB, -37.50 dB, -47.50 dB, -47.50 dB, -47.50 dB

	When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value **Mode** / **Values** LTEAFDD, LTEATDD, 5G NR, MSR: 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB|0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value **WLAN Mode**: See table of "WLAN Mode Presets" on page 2318 below

802.11af (6MHz/ 7MHz/ 8MHz)	0 dB, -20.00 dB, -28.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB, -40.00 dB
802.11be (320MHz)	-4.00 dBm, -12.00 dBm, -24.00 dBm, -69.00 dBm, -69.00 dBm, -69.00 dBm,-69.00 dBm, -69.00 dBm, -69.00 dBm,-69.00 dBm, -69.00 dBm, -69.00 dBm, -69.00 dBm, -69.00 dBm

Rel Stop

Sets a relative power level limit at the stop frequency for the selected offset. The relative power level limit ranges from –200 to +50 dBc.

The fail condition is set remotely by [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:TEST for each offset channel.

You can turn off (not use) specific offset channels remotely with [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe.

The query returns values currently set to the offset stop relative power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:RCARrier <rel_ampl>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:RCARrier?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:RCARrier:COUPle ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:RCARrier:COUPle?`

Example	`:SEM:OFFS:LIST:STOP:RCAR -30, -30, -30, -30, -30, -30`
	`:SEM:OFFS:LIST:STOP:RCAR?`
	`:SEM:OFFS:LIST:STOP:RCAR:COUP ON, ON, ON, ON, ON, ON`
	`:SEM:OFFS:LIST:STOP:RCAR:COUP?`

Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in Modes other than SA. In SA mode, Offset sub op code 1 is used for both BTS and MS
Couplings	Coupled to Rel Start if "Auto" is selected, that is, Start is made the same as Stop

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

– ABSolute and RELative both check the results against the respective limit

– OR checks against both limits, failing if either of the limits is broken

– AND only displays a fail if both of the limits are broken

The absolute or relative power limit value for each offset channel can be set remotely with [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:ABSolute or [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:RCARrier.

You can turn off (not use) specific offset channels remotely with [:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:TEST ABSolute | AND | OR | RELative, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:TEST?`
Example	`:SEM:OFFS:LIST:TEST ABS, ABS, ABS, ABS, ABS, ABS` `:SEM:OFFS:LIST:TEST?`
Notes	Comma-separated list of values Note that Offset sub op code 2 is supported only in Modes other than SA. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Preset	When the max number of offsets is 6:

Show Abs2 Limit

Shows or hides Abs2 limit parameters.

Remote Command	`:DISPlay:SEMask:OFFSet:SABSolute ON | OFF | 1 | 0` `:DISPlay:SEMask:OFFSet:SABSolute?`
Example	`:DISP:SEM:OFFS:SABS 1` `:DISP:SEM:OFFS:SABS?`
Preset	0
State Saved	Yes
Range	ON|OFF

Abs2 Start

Sets the 2nd absolute power level limit at the start frequency for the selected offset, ranging from –200 to +50 dBm.

The fail condition for each offset channel is set remotely using:

`[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:TEST:SABSolute`

You can turn off (not use) specific offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe`

The query returns values currently set to the 2nd absolute power test limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:SABSolute <real>, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STARt:SABSolute?`
Example	`:SEM:OFFS:LIST:STAR:SABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm` `:SEM:OFFS:LIST:STAR:SABS?`
Notes	Comma-separated list of values `OFFSet1` is for BTS, 2 for MS. Default is BTS
Preset	For WLAN Mode: 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm For other Modes: 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm | 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm
State Saved	Saved in instrument state
Min	-200 dBm
Max	50 dBm

Abs2 Stop

Sets the 2nd absolute power level limit at the stop frequency for the selected offset, ranging from –200 to +50 dBm. You can also toggle this function between **Couple** and **Manual**. If **Couple** = `ON`, the **Abs2 Stop** power level limit is coupled to "Abs2 Start" on page 2323, resulting in a flat limit line. If set to **Man** (**Couple** = `OFF`), **Abs2 Start** and **Abs2 Stop** take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop absolute2 power limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:SABSolute <real>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:SABSolute?`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:SABSolute:COUPle ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:STOP:SABSolute:COUPle?`

Example	`:SEM:OFFS:LIST:STOP:SABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm`

	`:SEM:OFFS:LIST:STOP:SABS?`
	`:SEM:OFFS:LIST:STOP:SABS:COUP ON, ON, ON, ON, ON, ON`
	`:SEM:OFFS:LIST:STOP:SABS:COUP?`

Notes	Comma separated list of values `OFFSet` 1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Abs2 Start if **Auto** is selected, that is, the Stop value is equal to the Start value

Preset	For WLAN Mode:
	0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm
	For other Modes:
	0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm | 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm
	For WLAN Mode:
	`ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON`
	For other Modes:
	`ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON`

State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min	-200 dBm
Max	50 dBm

Fail Mask2

Selects the logic operation for fail conditions between the measurement results and the test limits:

(Primary Fail Mask selection) OR Abs2	OR	Checks against both Primary and Abs2 limits. The test fails if either of the limits is broken
(Primary Fail Mask selection) AND Abs2	AND	Checks against both Primary and Abs2 limits. The test fails if both of the limits are broken
Abs2 Disabled	OFF	Fail Mask2 is disabled

Note that the Primary Fail Mask selection is set by "Fail Mask" on page 2321.

Examples:

- when Fail Mask is Abs **AND** Rel and Fail Mask2 is **OR** Abs2, “(Abs AND Rel) OR Abs2” is displayed in the column
- when Fail Mask is Absolute and Fail Mask2 is And Abs2, “(Absolute) AND Abs2” is displayed in the column

You can turn off (not use) specific offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n][:OUTer]:LIST:STATe`

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:TEST:SABSolute AND | OR | OFF, …` `[:SENSe]:SEMask:OFFSet[1]|2[:OUTer]:LIST:TEST:SABSolute?`
Example	`:SEM:OFFS:LIST:TEST:SABS AND, AND, OR, OFF, OFF, OFF` `:SEM:OFFS:LIST:TEST:SABS?`
Notes	Comma-separated list of values

Preset	For WLAN:
	`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
	For other Modes:
	`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

State Saved	Saved in instrument state
Range	OR Abs2|AND Abs2|Abs2 Disabled

Inner Offset

Enables you to configure inner offset parameters for the SEM measurement in the EVM measurement based on the same capture.

Offset Freq Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition, and LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center frequency of Meas BW and the limit line have ½ Meas BW offset when the Meas BW Edge is selected.

Option	SCPI	Definition
Carrier Center to	`CTOCenter`	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the

Option	SCPI	Definition
Meas BW Center		center of offset measuring filter*
Carrier Center to Meas BW Edge	CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Carrier Edge to Meas BW Center	ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
Carrier Edge to Meas BW Edge	ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Edge to Meas BW Center	STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of offset measuring filter*
Sub-block Edge to Meas BW Edge	STOEdge	From either the lower or upper sub-block edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Center to Meas BW Center 5G NR Mode only	SCTOCenter	**From the center frequency of sub-block to** the center frequency of offset measuring filter*

*Measuring filter = Meas BW (N) x Res BW

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the **Number of Component Carriers** within each sub-block = 1, sub-block (bandwidth) = $BW_{channel}$ = 2 x $F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 2329.

Mode: MSR, LTEAFDD, LTEATDD

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | STOCenter | STOEdge`
	
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:TYPE?`

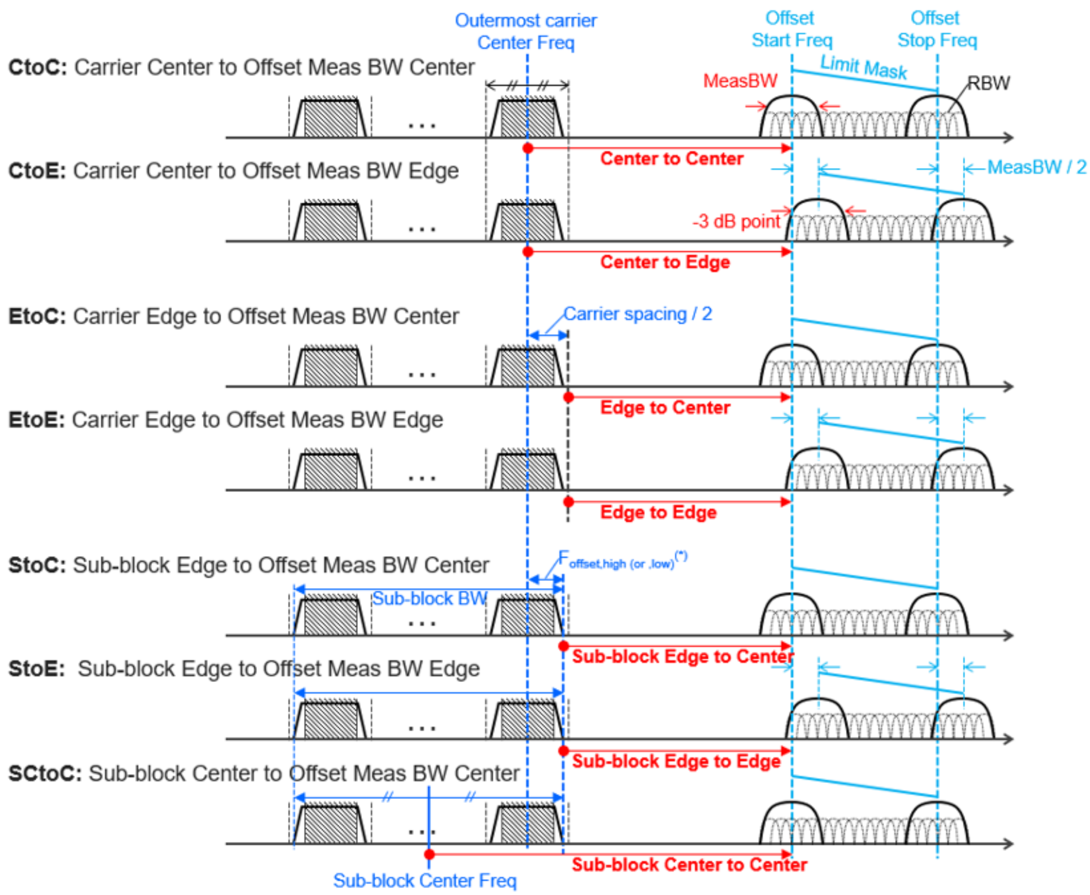
Preset	`STOCenter`
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center | Carrier Center to Meas BW Edge | Carrier Edge to Meas BW Center | Carrier Edge to Meas BW Edge | Sub-block Edge to Meas BW Center | Sub-block Edge to Meas BW Edge

Mode: 5G NR

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:TYPE CTOCenter | CTOEdge | ETOCenter | ETOEdge | STOCenter | STOEdge | SCTOCenter` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:TYPE?`
Example	`:SEM:OFFS:INN:TYPE ETOC` `:SEM:OFFS:INN:TYPE?`
Preset	`STOCenter`
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center | Carrier Center to Meas BW Edge | Carrier Edge to Meas BW Center | Carrier Edge to Meas BW Edge | Sub-block Edge to Meas BW Center | Sub-block Edge to Meas BW Edge | Sub-block Center to Meas BW Center

Diagrams for Offset Freq Define



Notes:

- *MeasBW = N x RBW*
- *Sub-block Edge and Outermost Carrier Edge in the Sub-block are not always same. e.g.) 5G NR (3GPP) defines BW_channel,block which calculates F_offset,high and F_offset,low asymmetrically with SCS shift.*
  (*) For MSR, F_offset,high (or ,low) = F_offset,RAT,high (or ,low)

Cumulate Mask

Selects whether inner offset limit masks are cumulated or not.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:CMASk[:STATe] ON | OFF | 0 | 1` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:CMASk[:STATe]?`
Example	`:SEM:OFFS:INN:CMAS 0` `:SEM:OFFS:INN:CMAS?`

Notes	OFFSet 1 is for BTS, 2 for MS. Default is BTS
Preset	1|0
State Saved	Yes
Range	ON|OFF

Cumulate Mask Stop Frequency

Specifies stop frequency of summing limit masks. For outside of the stop frequency, the limit masks are not cumulated.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:CMASk:FREQuency:STOP <freq>` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:CMASk:FREQuency:STOP?`
Example	`:SEM:OFFS:INN:CMAS:FREQ:STOP 500E6` `:SEM:OFFS:INN:CMAS:FREQ:STOP?`
Notes	OFFSet 1 is for BTS, 2 for MS. Default is BTS
Dependencies	Valid only when "Cumulate Mask " on page 2329 is ON
Preset	10.5 MHz
State Saved	Yes
Min/Max	0 Hz/10 GHz

Start Freq

Specifies the start frequency for the currently selected offset. Also, enables you to toggle that offset between On and Off. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:STARt <freq>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:STARt?`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STATe ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STATe?`

Example	`:SEM:OFFS2:INN:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz`
	`:SEM:OFFS2:INN:LIST:FREQ:STAR?`
	`:SEM:OFFS:INN:LIST:STAT ON, ON, ON, OFF, OFF, OFF`
	`:SEM:OFFS:INN:LIST:STAT?`

Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS

	If the offset is outside the frequency range, the result spectrum will be invalid
Couplings	Coupled to "Stop Freq" on page 2336. If **Start Freq** exceeds **Stop Freq**, **Stop Freq** is automatically adjusted to (**Start Freq** + 100 Hz)
Preset	

Mode	Values
MSR	15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz | 15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz
5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz | 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz
LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz | 15.00 kHz, 1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz

Mode	Values
`MSR`	`ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF | ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
`5GNR`	`ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF,OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
`LTEAFDD` `LTEATDD`	`ON, ON, ON, OFF, OFF, OFF,OFF, OFF, OFF, OFF,OFF,OFF | ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

State Saved	Saved in instrument state Saved in instrument state
Range	`ON|OFF`
Min/Max	0 Hz/Depends on instrument maximum frequency. It's always Offset Stop Freq -100 Hz

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:STOP <freq>, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:STOP?`
Example	`:SEM:OFFS:INN:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz` `:SEM:OFFS:INN:LIST:FREQ:STOP?`
Notes	Comma-separated list of values

	OFFSet 1 is for BTS, 2 for MS. Default is BTS If the offset is outside the frequency range, the result spectrum will be invalid
Couplings	Coupled to "Start Freq" on page 2335. If **Stop Freq** is lower than **Start Freq**, **Start Freq** is automatically adjusted to (**Stop Freq** - 100 Hz)
Preset	see table below

Mode	Values
MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz
5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz | 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz
LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz | 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz,20 MHz, 40 MHz , 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz

State Saved	Saved in instrument state
Min/Max	100 Hz/Depends on instrument maximum frequency. Same as the Max Span on Swept SA Measurement

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset. using front panel and all the offsets using SCPI. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

(N x Res BW) <= (Stop freq of the offset - Start freq of the offset),

where N is the multiplier, this setting will automatically be changed to manual.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth[:RESolution] <bandwidth>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth[:RESolution]?`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth[:RESolution]:AUTO OFF | ON | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth[:RESolution]:AUTO?`

Example	`:SEM:OFFS2:INN:LIST:BAND 30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz,1.00 MHz, 1.00 MHz`

	`:SEM:OFFS2:INN:LIST:BAND?`
	`:SEM:OFFS:INN:LIST:BAND:AUTO 1,1,1,1,1,1`
	`:SEM:OFFS:INN:LIST:BAND:AUTO?`

Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Start and Stop offset and "Meas BW" on page 2333 multiplier. This parameter must adhere to the rule: (N x Res BW) <= (Stop freq of the offset - Start freq of the offset), where N is the multiplier If the multiplier is changed, the Res BW changes to ensure conformance to the rule. When set manually, Res BW Coupling is set to manual The resolution bandwidth is coupled to the offset width, determined by "Start Freq" on page 2335 and "Stop Freq" on page 2336
Preset	*(see table below)*
State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min	1 Hz
Max	When Option FS1 or FS2 is installed:10 MHz Otherwise: 8 MHz

Preset:

Mode	Values
MSR	30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz | 30 kHz, 30 kHz, 30 kHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz
LTEAFDD, LTEATDD, 5G NR	51 kHz, 100 kHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz | 15.0 kHz, 510 kHz,1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz,1.0 MHz, 1.0 MHz, 1.0 MHz, 1.0 MHz

`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF | OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer, which defines a ratio between Integration BW and **Res BW** of the measurement result:

Integration BW = Meas BW * "Res BW" on page 2332

Integration BW is the desired resolution bandwidth, and **Res BW** is the actual bandwidth for sweep. Measurement sweeps with **Res BW**, and **Meas BW** compensates sweep resolution bandwidth to Integration BW.

If you set this parameter greater than 1, you can set **Res BW** narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth:IMULti <integer>, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:BANDwidth:IMULti?`
Example	`:SEM:OFFS2:INN:LIST:BAND:IMUL 1,1,1,1,1,1` `:SEM:OFFS2:INN:LIST:BAND:IMUL?`
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Couplings	This parameter must adhere to the rule: (N x Res BW) <= (Stop freq of the offset - Start freq of the offset), where N is the multiplier If **Res BW** is changed, the multiplier changes to conform to the rule
Preset	see table below
State Saved	Yes
Min/Max	1/1000

Preset:

Mode	Values
MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 | 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1
LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 | 2, 2, 1, 1, 1,1, 1, 1, 1, 1, 1, 1

Offset Side

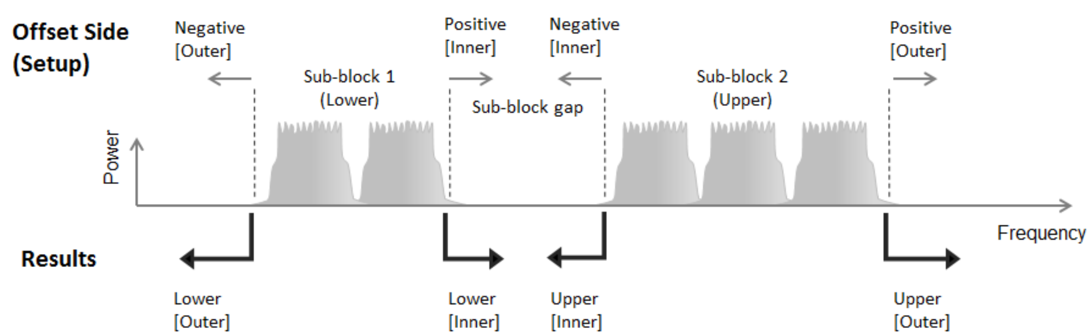
Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe`.

`BOTH`	Both sides in the sub-block gap are enabled.
`NEGative`	The upper side in the sub-block gap only (i.e., negative sideband of the upper sub-block) is enabled
`POSitive`	The lower side in the sub-block gap only (i.e., positive sideband of the lower sub-block) is enabled.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR and LTE-Advanced FDD/TDD Modes.



Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:SIDE BOTH | NEGative | POSitive, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:SIDE?`
Example	`:SEM:OFFS:INN:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS` `:SEM:OFFS:INN:LIST:SIDE?`
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS
Preset	see table below
State Saved	Saved in instrument state
Range	`BOTH|NEGative|POSitive`

Preset:

Mode	Values
MSR	BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
LTEAFDD, LTEATDD, 5GNR	BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH | BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH

Inner Limits

Enables you to configure inner limits parameters for the SEM measurement in the EVM measurement based on the same capture.

Start Freq

Specifies the start frequency for the currently selected offset. Also, enables you to toggle that offset between On and Off. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:START <freq>, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:FREQuency:START?`

	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STATe ON | OFF | 1 | 0, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STATe?`

Example	`:SEM:OFFS2:INN:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz`
	`:SEM:OFFS2:INN:LIST:FREQ:STAR?`
	`:SEM:OFFS:INN:LIST:STAT ON, ON, ON, OFF, OFF, OFF`
	`:SEM:OFFS:INN:LIST:STAT?`

Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS If the offset is outside the frequency range, the result spectrum will be invalid
Couplings	Coupled to "Stop Freq" on page 2336. If **Start Freq** exceeds **Stop Freq**, **Stop Freq** is automatically adjusted to (**Start Freq** + 100 Hz)

Preset

Mode	Values
MSR	15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz | 15 kHz, 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz, 30 MHz

Abs Start

Sets the absolute power level limit at the start frequency for the selected inner offset, ranging from –200 to +50 dBm.

The fail condition for each inner offset channel is set remotely by `[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:TEST`.

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe`.

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Abs Stop

Sets the absolute power level limit at the stop frequency for the selected inner offset, ranging from –200 to +50 dBm. You can also toggle this function between **Couple** (`COUPle = ON`) and **Manual** (`COUPle = OFF`). If set to **Couple**, the Abs Stop power level limit is coupled to Abs Start to result in a flat limit line. If set to **Man**, Abs Start and Abs Stop take different values to result in a sloped limit line.

The query returns values currently set to the inner offset stop absolute power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min/Max	-200 dBm/50 dBm

Rel Start

Sets a relative power level limit at the start frequency for the selected inner offset, ranging from –200 to +50 dBc.

The fail condition is set remotely by [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:TEST for each inner offset channel test.

You can turn off (not use) specific inner offset channels remotely with [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe.

The query returns values currently set to the relative power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STARt:RCARrier <rel_ampl>, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STARt:RCARrier?`
Example	`:SEM:OFFS:INN:LIST:STAR:RCAR -30, -30, -30, -30, -30, -30` `:SEM:OFFS:INN:LIST:STAR:RCAR?`
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Preset	0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB | 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB
State Saved	Saved in instrument state
Min/Max	-200 dB/50 dB

Rel Stop

Sets a relative power level limit at the stop frequency for the selected inner offset, ranging from –200 to +50 dBc.

The fail condition is set remotely by [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:TEST for each inner offset channel.

You can turn off (not use) specific inner offset channels remotely with [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe.

The query returns values currently set to the inner offset stop relative power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:RCARrier <rel_ampl>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:RCARrier?`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:RCARrier:COUPle ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:RCARrier:COUPle?`

Example	`:SEM:OFFS:INN:LIST:STOP:RCAR -30, -30, -30, -30, -30, -30`

	:SEM:OFFS:INN:LIST:STOP:RCAR? :SEM:OFFS:INN:LIST:STOP:RCAR:COUP ON, ON, ON, ON, ON, ON :SEM:OFFS:INN:LIST:STOP:RCAR:COUP?
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Rel Start if "Auto" is selected, that is, Start is made the same as Stop
Preset	0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB | 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB, 0 dB ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON
State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min/Max	-200 dB/50 dB

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

- ABSolute and RELative both check the results against the respective limit
- OR checks against both limits, failing if either of the limits is broken
- AND only displays a fail if both of the limits are broken

The absolute or relative power limit value for each inner offset channel can be set remotely with [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:ABSolute or [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:RCARrier.

You can turn off (not use) specific inner offset channels remotely with [:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:TEST ABSolute | AND | OR | RELative, … [:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:TEST?
Example	:SEM:OFFS:INN:LIST:TEST ABS, ABS, ABS, ABS, ABS, ABS :SEM:OFFS:INN:LIST:TEST?
Notes	Comma-separated list of values
Preset	ABS, ABS, ABS, ABS, ABS, ABS, ABS, ABS, ABS, ABS, ABS, ABS

State Saved	Saved in instrument state
Range	Absolute | Relative | Abs AND Rel | Abs OR Rel

Show Abs2 Limit

Same as "Show Abs2 Limit" on page 2342 under Limits.

Abs2 Start

Sets the 2nd absolute power level limit at the start frequency for the selected inner offset, ranging from –200 to +50 dBm.

The fail condition for each inner offset channel is set remotely using:

`[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:TEST:SABSolute`

You can turn off (not use) specific inner offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe`

The query returns values currently set to the 2nd absolute power test limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STARt:SABSolute <real>, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STARt:SABSolute?`
Example	`:SEM:OFFS:INN:LIST:STAR:SABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm` `:SEM:OFFS:INN:LIST:STAR:SABS?`
Notes	Comma-separated list of values `OFFSet` 1 is for BTS, 2 for MS. Default is BTS
Preset	0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm|0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm
State Saved	Saved in instrument state
Min	-200 dBm
Max	50 dBm

Abs2 Stop

Sets the 2nd absolute power level limit at the stop frequency for the selected inner offset, ranging from –200 to +50 dBm. You can also toggle this function between **Couple** and **Manual**. If set to **Couple** = ON, the **Abs2 Stop** power level limit is coupled to "Abs2 Start" on page 2342, resulting in a flat limit line. If set to **Man** (**Couple** = `OFF`), **Abs2 Start** and **Abs2 Stop** take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop 2nd absolute power limits.

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:SABSolute <real>, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:SABSolute?`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:SABSolute:COUPle ON | OFF | 1 | 0, …`
	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:STOP:SABSolute:COUPle?`

Example	`:SEM:OFFS:INN:LIST:STOP:SABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm`
	`:SEM:OFFS:INN:LIST:STOP:SABS?`
	`:SEM:OFFS:INN:LIST:STOP:SABS:COUP ON, ON, ON, ON, ON, ON`
	`:SEM:OFFS:INN:LIST:STOP:SABS:COUP?`

Notes	Comma-separated list of values `OFFSet` 1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Abs Start if **Auto** is selected, that is, the Stop value is equal to the Start value
Preset	0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm|0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm `ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON | ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON`
State Saved	Saved in instrument state Saved in instrument state
Range	Auto|Man
Min	-200 dBm
Max	50 dBm

Fail Mask2

Selects one of the logical operations for fail conditions between the measurement results and the test limits:

(Primary Fail Mask selection) OR Abs2	`OR`	Checks against both Primary and Abs2 limits. The test fails if either of the limits is broken
(Primary Fail Mask selection) AND Abs2	`AND`	Checks against both Primary and Abs2 limits. The test fails if both of the limits are broken
Abs2 Disabled	`OFF`	Fail Mask2 is disabled

For examples, see "Fail Mask2" on page 2325.

Note that the Primary Fail Mask selection is set by "Fail Mask" on page 2341.

You can turn off (not use) specific inner offset channels remotely using:

`[:SENSe]:SEMask:OFFSet[n]:INNer:LIST:STATe`

When sending the command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query always returns 12 values.

Remote Command	`[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:TEST:SABSolute AND	OR	OFF, …` `[:SENSe]:SEMask:OFFSet[1]|2:INNer:LIST:TEST:SABSolute?`
Example	`:SEM:OFFS:INN:LIST:TEST:SABS AND, AND, OR, OFF, OFF, OFF` `:SEM:OFFS:INN:LIST:TEST:SABS?`
Notes	Comma-separated list of values
Preset	`OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF	OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF`
State Saved	Saved in instrument state
Range	OR Abs2	AND Abs2	Abs2 Disabled

Transmit On|Off Power Setup

Enables you to configure advanced parameters for the Transmit On|Off Power measurement in the EVM measurement.

Transmit On|Off Power State

Enable or disable Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:EVM:PVTime OFF	ON	0	1` `[:SENSe]:EVM:PVTime?`
Example	`:EVM:PVT OFF` `:EVM:PVT?`
Preset	`OFF`
State Saved	Yes

Burst Repetition Period

Determines the burst repetition period. For correct measurement, the value must be set to the repetition period of the burst and less than or equal to Meas Interval time.

Remote Command	`[:SENSe]:PVTime:BURSt:RPERiod <time>` `[:SENSe]:PVTime:BURSt:RPERiod?`

Example	`:PVT:BURS:RPER 7ms` `:PVT:BURS:RPER?`
Notes	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard
Couplings	This parameter cannot be smaller than Burst Time When entering the value smaller than Burst Time, coupled to the value of Burst Time
Preset	5 ms
State Saved	Yes
Min	100 us
Max	10 ms

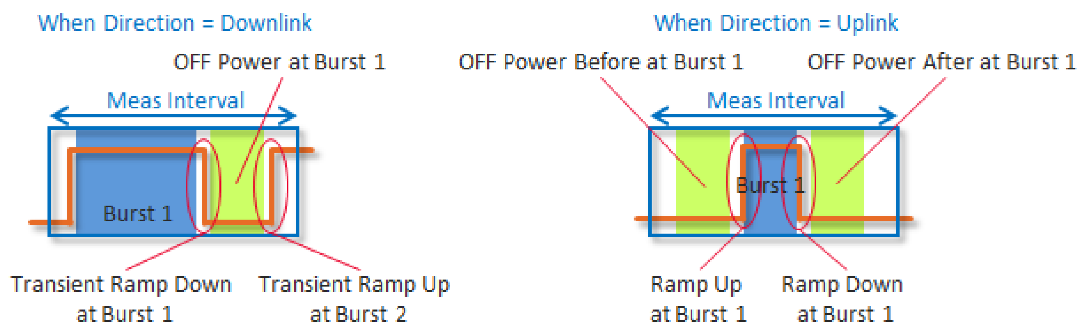
Meas Range

Enables you to select the measurement range from all bursts or specific burst within the Meas Interval. If there are multiple bursts within the Meas Interval, the burst number in the Metrics window are determined as follows and returned values of :MEAS|READ|FETCh:PVT1 are the values at that burst number. The burst number in the Metrics window can be obtained by :MEAS|READ|FETCH:PVT13.

- All Bursts: the burst number determined with the following criteria is displayed in the Metrics window.
  - On Power and Burst Width:
    - Downlink: The same burst number as Off Power.
    - Uplink with UL On Pwr Limit Test = On: The burst number that contains the maximum deviation from the UL On Pwr Reference value among all detected bursts
    - Uplink with UL On Pwr Limit Test = Off: The burst number right before or after the Off Power period that contains the maximum RMS Off Power value among all detected Off Power Before/After periods
  - Off Power (Downlink): The burst number right before the Off Power period that contains the maximum Off Power peak value among all detected Off Power periods
  - Off Power After (Uplink): The burst number right before the Off Power After period whose measured RMS Off Power value is the maximum among all detected Off Power After periods
  - Off Power Before (Uplink only): The burst number right after the Off Power Before period whose measured RMS Off Power value is the maximum among all detected Off Power Before periods

  - Ramp Up / Transient Ramp Up: The burst number whose measured ramp up period is the worst one among all detected bursts
  - Ramp Down / Transient Ramp Down: The burst number whose measured ramp down period is the worst one among all detected bursts
- Specific Burst: the burst number specified by the Specific Burst Number is displayed in the Metrics window.

Note that when in downlink, the results of Ramp Down / Transient Ramp Down of Specific Burst Number and Ramp Up / Transient Ramp Up of Specific Burst Number + 1 are displayed. When in uplink, the results of Specific Burst Number itself are displayed.



Remote Command	`:CALCulate:PVTime:MRANge ALL | SPECific` `:CALCulate:PVTime:MRANge?`
Example	`:CALC:PVT:MRAN ALL` `:CALC:PVT:MRAN?`
Preset	SPECific
State Saved	Yes
Range	All Bursts|Specific Burst

Specific Burst Number

Specifies the burst to be analyzed.

Remote Command	`:CALCulate:PVTime:SBNumber <integer>` `:CALCulate:PVTime:SBNumber?`
Example	`:CALC:PVT:SBN 8` `:CALC:PVT:SBN?`
Dependencies	This control is grayed out when Meas Range is All Bursts
Preset	1

State Saved	Yes
Min	1
Max	10

Auto Timing Adjustment

In order to check transmit off power is below the 3GPP defined limit, timing reference must be provided in the measurement. This setting specifies how the timing reference is derived in the measurement.

When it is ON, the burst boundary timing is always appropriately adjusted based on the measured ramp up and ramp down edge timings. When it is OFF, the timing reference will be provided by external trigger, expected burst boundaries will be derived from external trigger and frame configuration parameters.

Remote Command	`[:SENSe]:PVTime:TIMing:REFerence:AUTO ON | OFF | 1 | 0` `[:SENSe]:PVTime:TIMing:REFerence:AUTO?`
Example	`:PVT:TIM:REF:AUTO ON` `:PVT:TIM:REF:AUTO?`
Dependencies	When Auto Timing adjustment is OFF and Trigger type is free run, an advisory message is generated
Preset	ON
State Saved	Yes
Range	On|Off

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE **The parameter is only available for the Transmit On|Off Power measurement.**

Remote Command	`[:SENSe]:PVTime:ULINk:CCARrier CC0 | … | CC15` `[:SENSe]:PVTime:ULINk:CCARrier?`
Example	`:PVT:ULINk:CCAR CC0` `:PVT:ULINk:CCAR?`
Dependencies	Available only when Radio Direction is Uplink
Preset	`CC0`
State Saved	Yes
Range	CC0 | CC1 | CC2 | CC3 | CC4 | CC5 | CC6 | CC7 | CC8 | CC9 | CC10 | CC11 | CC12 | CC13 | CC14 | CC15

UL Off Power Length

It is used as uplink off power measurement period.

Remote Command	`[:SENSe]:PVTime:ULINk:POFF:WIDTh <real>` `[:SENSe]:PVTime:ULINk:POFF:WIDTh?`
Example	`:PVT:ULIN:POFF:WIDT 5 ms` `:PVT:ULIN:POFF:WIDT?`
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	1.0 ms
State Saved	Yes
Min	1 us
Max	0.01 s
Backwards Compatibility SCPI	`[:SENSe]:PVTime:ULINk:OFFPower:WIDTh`

Max Ramp Down Time

It is used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes. This is used to determine the start position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:DRTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:DRTime?`
Example	`:PVT:LIM:RAMP:DRT 10.0e-6` `:PVT:LIM:RAMP:DRT?`
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On|Off Power for the preset value in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Max Ramp Up Time

It is used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes. This is used to determine the end position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:URTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:URTime?`
Example	`:PVT:LIM:RAMP:URT 10.0e-6` `:PVT:LIM:RAMP:URT?`
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On|Off Power for the preset value in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Transient Period

This parameter sets the threshold for downlink transient period which is calculated from expected burst boundary to the point of the specified OFF power limit. The Transmitter OFF period is determined by this parameter when Auto Timing Adjust is Off.

If the measured ramp up or ramp down transient period of downlink signal exceeds the threshold, the ramp up or ramp down transient period measurements fail.

Remote Command	`[:SENSe]:PVTime:LIMit:TRANsient:DLINk <time>` `[:SENSe]:PVTime:LIMit:TRANsient:DLINk?`
Example	`:PVT:LIM:TRAN:DLIN 10.0e-6` `:PVT:LIM:TRAN:DLIN?`
Dependencies	This control appears only when the Radio Direction is Downlink and available when Auto Timing Adjust is Off
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Off Power

It is used as threshold in downlink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Downlink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm/MHz.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:DLINk <real>` `[:SENSe]:PVTime:LIMit:POFF:DLINk?`
Example	`:PVT:LIM:POFF:DLIN -83.0` `:PVT:LIM:POFF:DLIN?`
Dependencies	This control appears only when the Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	-83.00
State Saved	Yes
Min/Max	-150.00/0.00

Uplink Off Power

It is used as threshold in uplink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Uplink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:ULINk <real>` `[:SENSe]:PVTime:LIMit:POFF:ULINk?`
Example	`:PVT:LIM:POFF:ULIN -50.0` `:PVT:LIM:POFF:ULIN?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	-48.3
State Saved	Yes
Min/Max	-150.00 dBm/0.00 dBm

Uplink On Power Reference

This is used as an Expected Transmission ON Measured power reference in uplink, which judges whether the real measured on power is passed or not when "Uplink On Power Limit Test" on page 2584 is set to on. If the real measured on power is within the Uplink On Power Reference +/- Uplink On Power Tolerance, then the on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence?`
Example	`:PVT:LIM:PON:ULIN:REF 9.8` `:PVT:LIM:PON:ULIN:REF?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	9.8
State Saved	Yes
Min	-150 dBm
Max	150 dBm

Uplink On Power Tolerance

This is used as the pass/fail margin from the UL On Power Reference value for the UL On Power measurement limit test when "Uplink On Power Limit Test" on page 2584 is set to on.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance?`
Example	`:PVT:LIM:PON:ULIN:TOL 10.7` `:PVT:LIM:PON:ULIN:TOL?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	10.70 dB !when FR1 100MHz with SCS 30 kHz
State Saved	Yes
Min	0 dB
Max	100 dB

Uplink On Power Limit Test

When it is set to on, the measurement judges whether the real measured on power is passed or not. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, the on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:STATe OFF | ON | 0 | 1`

	[:SENSe]:PVTime:LIMit:PON:ULINk:STATe?
Example	:PVT:LIM:PON:ULIN:STAT 1 :PVT:LIM:PON:ULIN:STAT?
Dependencies	This control appears only when the Radio Direction is Uplink
Preset	OFF
State Saved	Yes

Burst Line

Turns the Burst Line On or Off. This line indicates the location of the Transmitter ON period determined by the Burst Width.

Remote Command	:DISPlay:PVTime:BLINes[:STATe] ON | OFF | 1 | 0 :DISPlay:PVTime:BLINes[:STATe]?
Example	:DISP:PVT:BLIN ON :DISP:PVT:BLIN?
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:BLINes[:STATe]

Burst Timing Indicator Line

Turns the Burst Timing Indicator Line On or Off. The line shown on screen is just to indicate which part of signal is active burst and which part is inactive burst and nothing to do with the Pass/Fail (shown at the upper-left corner of screen) criteria. Regarding the Pass/Fail criteria, please refer to "Limits" on page 2581.

Remote Command	:DISPlay:PVTime:LIMit:MASK OFF | ON | 0 | 1 :DISPlay:PVTime:LIMit:MASK?
Example	:DISP:PVT:LIM:MASK 1 :DISP:PVT:LIM:MASK?
Notes	This parameter only hides or shows the Burst Timing Indicator Line on the display
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:LIMit:MASK

Ramp Line

Turns the Ramp Line On or Off. This line indicates the Ramp Up/Down time.

Remote Command	`:DISPlay:PVTime:RAMP[:STATe] OFF | ON | 0 | 1` `:DISPlay:PVTime:RAMP[:STATe]?`
Example	`:DISP:PVT:RAMP ON` `:DISP:PVT:RAMP?`
Preset	OFF
State Saved	Yes
Range	On|Off

Bar Graph

Turns the Bar Graph On and Off. The Bar Graph represents the Transmitter ON/OFF period and power. The Transmitter OFF period is coloured in green when DL Off Power limit passes and in red when limit fails.

Remote Command	`:DISPlay:PVTime:BGRaph OFF | ON | 0 | 1` `:DISPlay:PVTime:BGRaph?`
Example	`:DISP:PVT:BGR OFF` `:DISP:PVT:BGR?`
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Noise Correction

Sets the noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the analyzer. Off turns these corrections off.

Remote Command	`[:SENSe]:PVTime:CORRection:NOISe[:AUTO] OFF | ON | 0 | 1` `[:SENSe]:PVTime:CORRection:NOISe[:AUTO]?`
Example	`:PVT:CORR:NOIS OFF` `:PVT:CORR:NOIS?`
Preset	0
State Saved	Yes
Range	On|Off

MIMO Calculation Mode

Specifies OBW/ACP/SEM/Transmit On/Off result calculation mode for MIMO signal:

- Per Channel – provide separate results for each input channel
- Averaged – provide averaged results for all input channels
- Summation – provide combined results for all input channels

Remote Command	`[:SENSe]:EVM:POWer:MIMO:MODE PERChannel | AVERaged | SUMMation` `[:SENSe]:EVM:POWer:MIMO:MODE?`
Example	`:EVM:POWer:MIMO:MODE PERC` `:EVM:POWer:MIMO:MODE?`
Preset	`PERChannel`
State Saved	Yes
Range	Per Channel | Averaged | Summation

3.7.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.7.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 2355

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 3413 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 2357

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM`

	:INIT:REST
Notes	:INIT:REST and :INIT:IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATus:OPERation register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the :INIT:REST command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K, shows the count for the sweep (data acquisition) in progress. K = k + 1, with a limit of N. The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`

Notes	If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, :ABORt is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The STATus:OPERation register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by :ABORt, the Abort command will cause the *OPC query to return true

3.7.9.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Width

Sets the width of the X axis that is displayed for the selected trace. The X width can be set less than the span for frequency-domain traces, enabling you to zoom in on just a portion of the measured values. Likewise, it can be less than time span covered by time-domain data. This, plus the X Reference Value and X Reference Position, control the range of X values that can be displayed on a trace.

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:WIDTh <real> :DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:WIDTh?
Example	:DISP:EVM:WIND3:X:WIDT 10e6 set the X width of the third window to 10 MHz :DISP:EVM:WIND3:X:WIDT? query the X width of the third window
Couplings	If Auto Scaling is ON, the X Width is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Value

Controls the X value of the selected trace at the chosen X Reference Position.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RLEVel <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RLEVel?`

Example	`:DISP:EVM:WIND3:X:RLEV 10`
	set the X ref value of the third window to 10
	`:DISP:EVM:WIND3:X:RLEV?`
	query the X ref value of the third window

Couplings	If Auto Scaling is set to On, the X Reference Value is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Position

Determines the position from which the X scaling is calculated for the selected trace. It can be set to the left side, center, or right side of the grid.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RPOSition?`

Example	`:DISP:EVM:WIND3:X:RPOS CENT`
	set the X ref position of the third window to CENT
	`:DISP:EVM:WIND3:X:RPOS?`
	query the X ref position of the third window

Preset	Depend on trace data
State Saved	Yes
Range	Left | Center | Right

Auto Scaling

Toggles Auto Scaling On or Off.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:COUPle?`

Example	`:DISP:EVM:WIND3:X:COUP ON`
	do the X auto scale for the third window
	`:DISP:EVM:WIND3:X:COUP?`
	query the X auto scale state of the third window

Couplings	When this parameter is set to On, pressing the front-panel **Restart** key activates the scale coupling

	function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either X Width or Ref Value manually, Auto Scaling is automatically set to Off
Preset	ON
State Saved	Yes
Range	On | Off

Time Unit

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the displayed trace in selected window. The available measurement units are symbol or slot. This setting applies to these measurement traces only:

- Power vs Time
- RMS Error Vector Time
- RMS Demod Power vs Time

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:UNIT:TIME SYMBol | SLOT :DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:UNIT:TIME?
Example	:DISP:EVM:WIND3:X:UNIT:TIME SYMB set the X scale unit of the third window to symbol :DISP:EVM:WIND3:X:UNIT:TIME? query the X scale unit of the third window
Preset	Depends on trace data
State Saved	Yes
Range	symbols | slots

Time Unit (Remote Command only)

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the selected trace. The available measurement units are symbol or slot.

The following table is used for measurement trace – Power vs Time – only.

Remote Command	:DISPlay:EVM:CCARrier0|…|15:PVTime:X:UNIT SYMBol | SLOT :DISPlay:EVM:CCARrier0|…|15:PVTime:X:UNIT?
Example	:DISP:EVM:CCAR0:PVT:X:UNIT SYMB set the X scale unit of Power vs Time trace (CC0) to symbol

	:DISP:EVM:CCAR0:PVT:X:UNIT? query the X scale unit of Power vs Time trace (CC0)
Preset	Depends on trace data
State Saved	Yes
Range	SYMBol | SLOT

The following table is used for the following measurement traces only:

- RMS Error Vector Time
- RMS Demod Power vs Time

Remote Command	:DISPlay:EVM:CCARrier0|…|15:REVTime|DPVTime:ALL|SSB1|SSB2|DBWP0|DBWP1|DBWP2|DBWP3|DBWP4|UBWP1|UBWP2|UBWP3|UBWP4:X:UNIT SYMBol | SLOT :DISPlay:EVM:CCARrier0|…|15:REVTime|DPVTime:ALL|SSB1|SSB2|DBWP0|DBWP1|DBWP2|DBWP3|DBWP4|UBWP1|UBWP2|UBWP3|UBWP4:X:UNIT?
Example	:DISP:EVM:CCAR0:DPVT:DBWP1:X:UNIT SYMB set the X scale unit of the RMS Demod Power vs Time trace (CC0, DL BWP1) to symbol :DISP:EVM:CCAR0:DPVT:DBWP1:X:UNIT? query the X scale unit of the RMS Demod Power vs Time trace (CC0, DL BWP1)
Preset	Depends on trace data
State Saved	Yes
Range	SYMBol | SLOT

Frequency Unit

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the displayed trace in selected window. The available measurement units are subcarrier or RB. This setting applies to these measurement traces only:

- RMS Error Vector Spectrum
- RMS Demod Power vs Spectrum

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:UNIT:FREQuency SUBCarrier | RB :DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:UNIT:FREQuency?
Example	:DISP:EVM:WIND3:X:UNIT:FREQ RB set the X scale unit of the third window to RB :DISP:EVM:WIND3:X:UNIT:FREQ?

	query the X scale unit of the third window
Preset	Depends on trace data
State Saved	Yes
Range	symbols | seconds

Frequency Unit (Remote Command only)

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the selected trace. The available measurement units are subcarrier or RB. This setting apply these measurement traces only:

- RMS Error Vector Spectrum
- RMS Demod Power vs Spectrum

Remote Command	`:DISPlay:EVM:CCARrier0|…|15:REVSpectrum|DPVSpectrum:ALL|SSB1|SSB2|DBWP0|DBWP1|DBWP2|DBWP3|DBWP4|UBWP1|UBWP2|UBWP3|UBWP4:X:UNIT SUBCarrier | RB` `:DISPlay:EVM:CCARrier0|…|15:REVSpectrum|DPVSpectrum:ALL|SSB1|SSB2|DBWP0|DBWP1|DBWP2|DBWP3|DBWP4|UBWP1|UBWP2|UBWP3|UBWP4:X:UNIT?`

Example	`:DISP:EVM:CCAR0:DPVS:DBWP1:X:UNIT RB`
	set the X scale unit of the RMS Demod Power vs Spectrum trace (CC0, DL BWP1) to RB
	`:DISP:EVM:CCAR0:DPVS:DBWP1:X:UNIT?`
	query the X scale unit of the RMS Demod Power vs Spectrum trace (CC0, DL BWP1)

Preset	Depends on trace data
State Saved	Yes
Range	`SUBCarrier | RB`

Ref Numerology

Enables you to select the Resource Grid reference applied to the selected trace. This setting apply this measurement trace only:

- Power vs Time

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RSCS SCS15K | SCS30K | SCS60KNCP | SCS60KECP | SCS120K | SCS240K` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RSCS?`

Example	`:DISP:EVM:WIND3:X:RSCS SCS30K`
	set the Resource Grid reference of the third window to symbol
	`:DISP:EVM:WIND3:X:RSCS?`
	query the Resource Grid reference of the third window

Preset	Depends on trace data
State Saved	Yes
Range	`SCS15K|SCS30K|SCS60KNCP|SCS60KECP|SCS120K|SCS240K`

3.7.9.3 Z Scale

Accesses controls that enable you to set the horizontal scale parameters.

Width

Set the width of the Z axis which is displayed for the selected trace. The Z width can be set less than the span for frequency-domain traces, enabling you to zoom in on just a portion of the measured values. This plus the Z Reference Value and Z Reference Position control the range of Z values that can be displayed on a trace.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:WIDTh <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:WIDTh?`

Example	`:DISP:EVM:WIND3:Z:WIDT 10e6`
	set the Z width of the third window to 10 MHz
	`:DISP:EVM:WIND3:Z:WIDT?`
	query the Z width of the third window

Couplings	If Auto Scaling is set to On, the Z Width is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Value

Controls the Z value of the selected trace at the chosen Z Reference Position.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:RLEVel <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:RLEVel?`
Example	`:DISP:EVM:WIND3:Z:RLEV 10` set the Z ref value of the third window to 10

	:DISP:EVM:WIND3:Z:RLEV? query the Z ref value of the third window
Couplings	If Auto Scaling is ON, the Z Reference Value is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Position

Determines the position from which the Z scaling is calculated for the selected trace. It can be set to the left side, center, or right side of the grid.

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:RPOSition LEFT | CENTer | RIGHt :DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:RPOSition?
Example	:DISP:EVM:WIND3:Z:RPOS CENT set the X ref position of the third window to CENT :DISP:EVM:WIND3:Z:RPOS? query the Z ref position of the third window
Preset	Depend on trace data
State Saved	Yes
Range	Left | Center | Right

Auto Scaling

Toggles the Auto Scaling function between On and Off.

Remote Command	:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:COUPle 0 | 1 | OFF | ON :DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:COUPle?
Example	:DISP:EVM:WIND3:Z:COUP ON do the Z auto scale for the third window :DISP:EVM:WIND3:Z:COUP? query the Z auto scale state of the third window
Couplings	When this parameter is set to On, pressing the front-panel Restart key activates the scale coupling function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either Z Width or Ref Value manually, Auto Scaling is automatically set to Off
Preset	ON

State Saved	Yes
Range	OFF|ON

Frequency Unit

Enables you to select the time units that are applied to Z-axis annotations and marker readouts for the selected trace. The available measurement units are subcarrier or RB.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:UNIT:FREQuency SUBCarrier | RB` `:DISPlay:EVM:WINDow[1]|2|…|9:Z[:SCALe]:UNIT:FREQuency?`

Example	`:DISP:EVM:WIND3:Z:UNIT:FREQ RB`
	set the Z scale unit of the third window to RB
	`:DISP:EVM:WIND3:Z:UNIT:FREQ?`
	query the Z scale unit of the third window

Preset	Depend on trace data
State Saved	Yes
Range	Sub-carrier | RB

3.7.9.4 Recording

Displays the Sample Rate, Sample Points and Sample Time of the saved IQ data file.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save**, **Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, **Recording** (this tab)
- **Sweep**, "Playback" on page 2369
- **Input/Output**, "Data Source" on page 3783

NOTE: A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "Data Source" on page 3783 under **Input/Output**.

This menu includes the following display-only fields:

Sample Rate

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sample Points

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Saved Channels [Mode: 5GNR, VMA, WLAN]

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Recording+State Mode

There could be multiple sequential IQ data captures during one measurement cycle, for example when measure multiple component carriers are in sequential mode. This control specifies how measurement should handle these sequential IQ data for Recording + State saving:

Last Capture	`LCAPture`	Keeps only last captured IQ data in memory
Meas Cycle	`MCYCle`	Keeps all IQ data of current measurement cycle in memory (measurement will consume more memory in this mode)

Remote Command	`:MMEMory:EVM:RSTate:MODE LCAPture | MCYCle` `:MMEMory:EVM:RSTate:MODE?`
Example	`:MMEM:EVM:RST:MODE MCYC` `:MMEM:EVM:RST:MODE?`
Dependencies	Available only for the EVM measurement
Preset	`LCAPture`

State Saved	Saved in instrument state
Range	Last Capture | Meas Cycle

3.7.9.5 Playback

Contains parameters for playback of saved recording files recalled to the instrument.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save**, **Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, "Recording" on page 2367
- **Sweep**, **Playback** (this tab)
- **Input/Output**, "Data Source" on page 3783

NOTE A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "Data Source" on page 3783 under the **Input/Output** menu.

This menu includes the following display-only fields:

Sample Points

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Input Channels [Mode: 5GNR, VMA, WLAN]

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Playback Mode

Specifies the mode of IQ data to be played back and analyzed:

- Fixed: Playback Stop value is ignored. Measurement will analyze the first chunk of IQ data start from Playback Start repeatedly
- Iterative: Measurement will analyze the IQ data chunk by chunk between Playback Start and Playback Stop, if the last chunk is not complete it will be ignored and start from the first chunk again

Remote Command	`:CALCulate:<meas>:PLAY:MODE FIXed | ITERative`
	`:CALCulate:<meas>:PLAY:MODE?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:MODE CONT`
	`:CALC:EVM:PLAY:MODE?`

Preset	`FIX`
State Saved	Saved in instrument state
Range	Fixed | Iterative

Playback Start

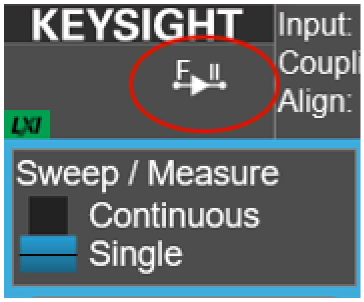
Once you have loaded an IQ data file using **Recall**, **Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. If its value is less than zero, an additional zero is inserted at the beginning of the IQ data.

To go to a specific location in the recalled I/Q data, enter the desired **Playback Start** point.

You can use this control to examine the data you recalled from the recording file. How you proceed depends on whether you are in **Continuous** or **Single** mode. To determine which mode you are in, look at the first panel on the left in the **Meas Bar** above the data display.

If the panel looks like this, you are in **Continuous** mode:

If the panel looks like this, you are in **Single** mode:



The **F** indicates that the instrument is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output**, **Data Source** menu from **File** back to **Input**.)

To examine the data you loaded:

Continuous mode

In this mode, turn the knob or use the **Up/Down** keys on the front panel to move through records in the recording. You will see **Playback Start** change from 0 to successively higher values as you move deeper into the data.

Single mode

In this mode, you can only look at one record. Set the **Playback Start** time to the desired offset from zero, then press **Restart**. A single record will be displayed. Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) is displayed in each window. After you press **Restart**, the invalid data indicator disappears.

Remote Command	`:CALCulate:<meas>:PLAY:STARt <time>`
	`:CALCulate:<meas>:PLAY:STARt?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:STAR 0.01 s`
	`:CALC:EVM:PLAY:STAR?`

Preset	0
State Saved	Saved in instrument state
Min/Max	–/+Sample Points in IQ file / Sample Rate in IQ file

Playback Stop

Specifies the stop position of the IQ data playback range to be analyzed, when “Playback Mode” is iterative.

Remote Command	`:CALCulate:<meas>:PLAY:STOP <time>` `:CALCulate:<meas>:PLAY:STOP?`

	Where <meas> is the mnemonic for the current measurement, for example, EVM

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:STOP 0.01 s`
	`:CALC:EVM:PLAY:STOP?`

Preset	0
State Saved	No
Min	0
Max	Sample Points in IQ file x Sample Rate

Step Forward

Move to next chunk of IQ data when "Playback Mode" on page 2370 is iterative.

Remote Command	`:CALCulate:<meas>:PLAY:STEP:FORWard` Where <meas> is the mnemonic for the current measurement, for example, EVM
Example	For EVM measurement in 5G NR Mode: `:CALC:EVM:PLAY:STEP:FORW`
State Saved	Saved in instrument state

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (.csv, .sdf, .txt). In this case, the *control* is grayed-out.

BIN and BINX files do not include sampling rate information inside the file, so after recalling one of these files, you must set **Sample Rate** manually. When you save a file in these formats, you must specify the sample rate, as displayed under **Sweep**, **Recording**.

Remote Command	`:CALCulate:<meas>:PLAY:SRATe <freq>`
	`:CALCulate:<meas>:PLAY:SRATe?`
	Where <meas> is the mnemonic for the current measurement, for example, EVM

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:SRAT 122.88MHz`
	`:CALC:EVM:PLAY:SRAT?`

Couplings	Displays only after recalling .csv, .sdf, or .txt files Settable after recalling .bin or .binx files
Preset	0

State Saved	No
Min	0

3.7.10 Trace

Lets you control the display of the In-Band Emissions limit lines.

3.7.10.1 Trace Control

Allows you to configure trace.

All (combined) Limit

Toggles the All (combined) Limit display On or Off.

Remote Command	`:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:ALL 0 | 1 | OFF | ON` `:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:ALL?`
Example	`:DISP:EVM:TRAC:ULIN:IBEM:LLIN:ALL ON` `:DISP:EVM:TRAC:ULIN:IBEM:LLIN:ALL?`
Couplings	Trace Data is UL In-Band Emissions
Preset	ON
State Saved	Yes
Range	OFF|ON

General Limit

Toggles the General Limit display On or Off.

Remote Command	`:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:GENeral 0 | 1 | OFF | ON` `:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:GENeral?`
Example	`:DISP:EVM:TRAC:ULIN:IBEM:LLIN:GEN ON` `:DISP:EVM:TRAC:ULIN:IBEM:LLIN:GEN?`
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF|ON

IQ Image Limit

Toggles the IQ Image Limit display On or Off.

Remote Command	`:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:IMAGe 0 | 1 | OFF | ON` `:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:IMAGe?`
Example	`:DISP:EVM:TRAC:ULIN:IBEM:LLIN:IMAG ON` `:DISP:EVM:TRAC:ULIN:IBEM:LLIN:IMAG?`
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF|ON

Carrier Leakage Limit

Toggles the Carrier Leakage Limit display On or Off.

Remote Command	`:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:DC 0 | 1 | OFF | ON` `:DISPlay:EVM:TRACe:ULINk:IBEM:LLINe:DC?`
Example	`:DISP:EVM:TRAC:ULIN:IBEM:LLIN:DC ON` `:DISP:EVM:TRAC:ULIN:IBEM:LLIN:DC?`
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF|ON

3.8 Transmit On|Off Power

This measurement is designed for testing Transmit On|Off power for the 5G NR BS and UE.

Measurement Overview

The test requirements for BS and UE are different, by setting the Direction under Mode Setup menu, the measurement can know which type of DUT it is going to test. Apply Preset will provide appropriate parameter settings for 3GPP conformance testing. See Apply Preset and Values for Meas Standard – Transmit On|Off Power section for details.

When Direction is Downlink, "Auto Timing Adjustment " on page 2452 should be set to Off and the user needs to provide external trigger which is regarded as the timing reference at the expected frame boundary to comply with the 3GPP conformance test requirements, defined in the clause 6.4.2 in TS38.141-1 and 6.5.2 in TS38.141-2.

Two key results will be provided, one is transmitter off power and the other is transmitter transient period. The definition for the two results are as below:

- Transmitter Off power (Off Power in Metrics result) is defined as the maximum power measured over 70/N ms filtered with a square filter of bandwidth equal to the transmission bandwidth configuration of the BS (BW_{Config} or $BW_{channel\_CA}$) centered on the assigned channel frequency during the transmitter off period. N = SCS/15, where SCS is Sub Carrier Spacing in kHz. "70/N us RMS Trace " on page 2431 (dBm/MHz) is the measured trace.
- The transmitter transient period (Transient Ramp Up/Down in Metrics result) is the time period from the expected burst boundary to the cross point of "70/N us RMS Trace " on page 2431 (dBm/MHz) and "Downlink Off Power" on page 2583 limit level. The expected burst boundary is determined by the external trigger. The transmitter transient period is illustrated in figure below.

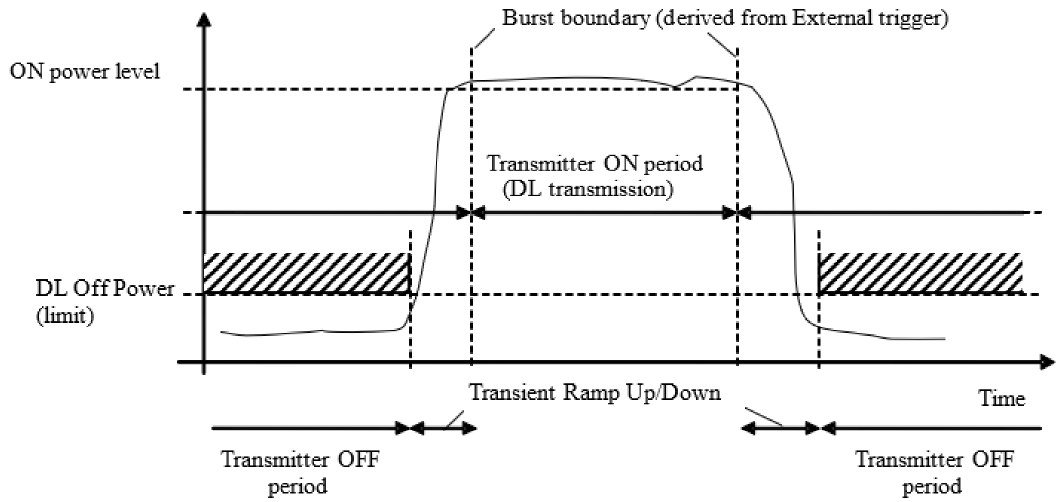


Figure: Illustration of the relations of transmitter ON period, transmitter OFF period and transmitter transient period

When Direction is Uplink, two key results will be provided to ensure that the UE's transmitter complies with the On/Off time mask defined in the clause 6.3.3 in TS38.521-1 and TS38.521-2.

- Transmitter Off power (Off Power Before/After in Metrics result) is defined as the mean power in the duration of "UL Off Power Length" on page 2576 excluding any transient periods. The bandwidth of the signal being measured for Transmitter Off power is the bandwidth of Measure CC.
- Transmitter On power is defined as the mean power in the duration of Burst Time.

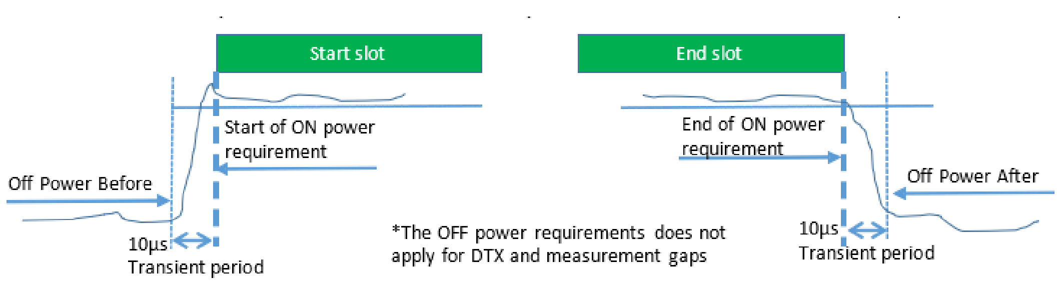

Figure: General ON/OFF time mask for NR UL transmission in FR1 with SCS of 30kHz and 60 kHz

When "Auto Timing Adjustment " on page 2452 is On, Ramp Up/Down results are calculated based on the "Threshold" on page 2585 setting.

Dynamic Range Optimization

In order to approach the best dynamic range, a special measurement algorithm is employed, two time records will be captured and merged for results calculation.

The first time capture will be made employing instrument settings which ensure accurate measurement of the bursts transmittion on power level. The attenuation is set in the Attenuation setting. Internal Preamp setting is not effective for this capture and always off.

The second time record capture will be made employing instrument settings which minimize the instrument internal noise floor, with the minimal attenuation. Internal Preamp setting is effective for this capture.

The data from the two captures will be combined to one trace. This combined trace is the one that will be displayed as the trace determined by "Measure Trace" on page 2614 and "70/N us RMS Trace " on page 2431 (dBm/MHz) and which will be used to calculate results.

Multiburst Measurement

If there are multiple bursts within a measurement interval determined by DL Meas Interval or UL Meas Interval, this measurement analyzes every burst up to 10 bursts in a frame.

Measurement results of all bursts are displayed in the Multiburst Results window. Measurement results in the Metrics window are selected by Meas Range criteria. See "Meas Range" on page 2579 for more details.

Note: It is assumed that widths of all bursts are the same and that the repetition period of the bursts is constant. For correct measurement, Burst Time, Burst Repetition Period, and DL/UL Meas Interval must be set appropriately.

Pass/Fail Results

Downlink: Fail

- If Off Power result exceeds "Downlink Off Power" on page 2583 limit
- When "Auto Timing Adjustment " on page 2452 is Off, if Transient Ramp Up/Down result exceeds "Downlink Transient Period" on page 2582
- When "Auto Timing Adjustment " on page 2452 is On, if Ramp Up/Down result exceeds "Max Ramp Up Time" on page 2581 and "Max Ramp Down Time" on page 2582, respectively.

Uplink: Fail

– When UL On Pwr Limit Test is On, if On Power result is not within "Uplink On Power Reference" on page 2583 (dBm) ± "Uplink On Power Tolerance" on page 2584 (dB)

– If Off Power Before/After result exceeds "Uplink Off Power" on page 2583 limit

– If Ramp Up/Down result exceeds "Max Ramp Up Time" on page 2581 and "Max Ramp Down Time" on page 2582, respectively.

Individual Pass/Fail results can be queried.

Remote Commands for Transmit On|Off Power Measurement

The following commands are used to retrieve the measurement results:

:CONFigure:PVTime

:CONFigure:PVTime:NDEFault

:INITiate:PVTime

:FETCh:PVTime[n]?

:READ:PVTime[n]?

:MEASure:PVTime[n]?

Measurement Results for Transmit On|Off Power Measurement

For each result, the following heading is used to represent its format and precision.

#. Result Name (type of number) [unit] <explanation>

Type of number includes double, float and integer.

Index n	Results Returned
0	Returns unprocessed I/Q trace data as a series of comma-separated trace point values, in volts. The I values are listed first in each pair, using 0 through the even-indexed values. The Q values are odd-indexed values
n=1 (or not specified)	Returns the following comma-separated scalar results: 1.Sample time is a floating point number representing the time between samples of displayed trace which you can get by using the trace queries (n=2, 3, ...) 2. Number of samples is the number of data points in the displayed trace. This number is useful when performing a query on the signal (i.e. when n=2, 3 ...) 3. On Power/ Mean Power is the mean power of the Transmitter ON period (dBm). The Transmitter ON period is determined by the Burst Time. The Burst Line indicates the Transmitter ON period 4. Burst Width is the width of the first identified burst (sec) 5. Trigger Diff is the time difference between the position of the trigger line and the

Index n	Results Returned
	start point (sec) 6. Ramp up time is the time difference between P1 and P2 (sec) where P1 is the position at which On Power (dBm) minus Ramp Up End Level (dB) intersects the Trace and P2 is the position at which On Power (dBm) minus Ramp Up Start Level (dB) intersects the Trace when Auto Timing Adjust is On When Auto Timing Adjust is Off, the Transient Ramp Up time is ABS(P1 – P2) – (70/N/2 usec) where P1 is the start position of the Transmitter ON period and P2 is the position where the 70/N us RMS Trace intersects the DL Off Power limit. If it is smaller than 70/N/2 usec, the result is 0 sec 7. Ramp down time is the time difference between P1 and P2 (sec) where P1 is the position at which On Power (dBm) minus Ramp Down End Level (dB) intersects the Trace and P2 is the position at which On Power (dBm) minus Ramp Down Start Level (dB) intersects the Trace when Auto Timing Adjust is On When Auto Timing Adjust is Off, the Transient Ramp Down time is ABS(P1 – P2) – (70/N/2 usec) where P1 is the end position of theTransmitter ON period and P2 is the position where the 70/N us RMS Trace intersects the DL Off Power limit. If it is smaller than 70/N/2 usec, the result is 0 sec 8. Off power/Off power before: When in Downlink, Off Power is the maximum power of 70/N us RMS Trace over the Transmitter OFF period (dBm/MHz). The Transmitter OFF period is On/Off Transient position of Burst Timing Indicator Line +/- (70/N / 2) usec (e.g. When SCS u=1:30 kHz, N = 2, 70/N/2 = 70/2/2 = 17.5 usec. When DL Transient Period is 10 usec, 27.5 usec far from Burst Line) When in Uplink, Off power before is the average power (dBm) during the UL Off Power Length (sec) prior to the Transmitter ON period, excluding a transient period of the Max Ramp Up Time (sec) prior to the Transmitter ON period 9. Maximum power is the maximum peak level in the range (dBm) 10. Minimum power is the minimum peak level in the range (dBm) 11. Actual sample time is the floating point number (sec) representing the time between samples of uncompressed I/Q trace data, which can be get by trace query (n=0) 12. Actual number of samples is the number of data points in the uncompressed I/Q trace data, which can be get by trace query(n=0) 13. Off power after is the average power during the UL Off Power Length (sec) following the Transmitter ON period, excluding a transient period of the Max Ramp Down Time (sec) following the Transmitter ON period This result is for Uplink only. When Direction is Downlink, the value will be NaN (9.91 E 37) 14. N/A 15. Off Power At is the worst off power position (sec). This result is for Downlink only. When Direction is Uplink, the value will be NaN (9.91 E 37)
2	Measured Trace data for Trace 1 This returns comma-separated floating point numbers representing the Measured Trace data for Trace 1 (dBm)

Index n	Results Returned
3	Measured Max Hold Trace data This returns comma-separated floating point numbers representing the Measured Max Hold Trace data (dBm)
4	Measured Min Hold Trace data This returns comma-separated floating point numbers representing the Measured Min Hold Trace data (dBm)
5	N/A
6	N/A
7	N/A
8	N/A
9	Measured 70/N us RMS Trace (dBm/MHz) data This returns comma-separated floating point numbers representing the Measured 70/N us RMS Trace (dBm/MHz) data (dBm/MHz)
10 Direction = Downlink	Returns scalar values of the pass/fail (0 = passed, or 1 = failed) determined by testing Off Power result and Ramp Up/Down results 1. DL Off Power 2. DL Ramp Up (When Auto Timing Adjust is On) / DL Transient Ramp Up (When Auto Timing Adjust is Off) 3. DL Ramp Down (When Auto Timing Adjust is On) / DL Transient Ramp Down (When Auto Timing Adjust is Off) 4. -999.0 5. -999.0 6. -999.0 7. -999.0 8. -999.0 9. -999.0 10. -999.0 The last seven results always return -999.0 The number of values returned is subject to change in future releases
10 Direction = Uplink	Returns scalar values of the pass/fail (0 = passed, or 1 = failed) determined by testing Off Power results, Ramp Up/Down results and On Power result 1. UL Off Power Before 2. UL Off Power After 3. UL Ramp Up 4. UL Ramp Down 5. UL On Power 6. -999.0 7. -999.0 8. -999.0 9. -999.0

Index n	Results Returned
	10. -999.0 The last five results always return -999.0 The number of values returned is subject to change in future releases
11	Measured Trace data for Trace 2 This returns comma-separated floating point numbers representing the Measured Trace data for Trace 2 (dBm)
12	Measured Trace data for Trace 3 This returns comma-separated floating point numbers representing the Measured Trace data for Trace 3 (dBm)
13	Returns the analyzed burst number for each result returned by READ:PVT? 1. On Power burst number for n=1 3rd 2. Off Power (DL) burst number for n=1 8th / Off Power After (UL) burst number for n=1 13th 3. Ramp Up / Transient Ramp Up burst number for n=1 6th 4. Ramp Down / Transient Ramp Down burst number for n=1 7th 5. Off Power Before burst number for n=1 8th. (Uplink only. When in downlink, the value is 9.91E37) 6. Burst Width burst number for n=1 4th
14	Returns the multiburst results: Number of return values = 7 x number of bursts analyzed 1. On Power (dBm) 2. Burst Width (sec) 3. Off Power Before (dBm, Uplink only. When in downlink, the value is 9.91E37) 4. Off Power After (Downlink: dBm/MHz, Uplink: dBm) 5. Off Power at (sec, Downlink only. When in uplink, the value is 9.91E37) 6. Ramp Up / Transient Ramp Up (sec) 7. Ramp Down / Transient Ramp Down (sec)
15	Returns the pass/fail (0 = passed, or 1 = failed) results of multiburst results Number of return values = 5 x number of bursts analyzed 1. On Power (Uplink only. When in downlink, the value is 0) 2. Off Power Before (Uplink only. When in downlink, the value is 0) 3. Off Power After 4. Ramp Up 5. Ramp Down

3.8.1 Views

The Transmit On|Off Power measurement has two views.

These Views are multiple-window views and you can select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	`:DISPlay:PVTime:VIEW[:SELect] ALL | BOTH` `:DISPlay:PVTime:VIEW[:SELect]?`

Example	`:DISP:PVTime:VIEW ALL`
	sets the burst view
	`:DISP:PVTime:VIEW BOTH`
	sets the rise and fall view

Preset	ALL
State Saved	Yes

3.8.1.1 Burst

Windows: "RF Envelope" on page 2382, "Metrics" on page 2383

View Burst envelope.

Example	`:DISPlay:PVTime:VIEW[:SELect] ALL`

3.8.1.2 Rise & Fall

Windows: "Rise" on page 2383, "Fall" on page 2383, "Metrics" on page 2383

Zooms in on the rising and falling portions of the burst being tested.

Example	`:DISPlay:PVTime:VIEW[:SELect] BOTH`

3.8.2 Windows

The following windows are available in the Transmit On|Off measurement.

3.8.2.1 RF Envelope

The RF Envelope window (#1) appears in Burst Views, as follows:

View	Size	Position
Burst	Half height, full width	Top

3.8.2.2 Rise

The Rise window (#2) is an important component to see the detail of power ramp up profile, it appears in Rise & Fall view.

View	Size	Position
Rise & Fall	Half height, half width	Top Left

3.8.2.3 Fall

The Fall window (#3) is an important component to see the detail of power ramp down profile, it appears in Rise & Fall view.

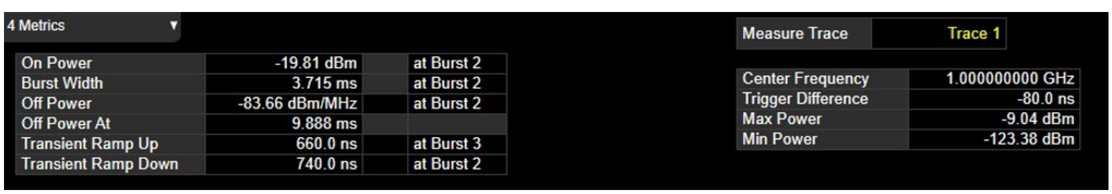
View	Size	Position
Rise & Fall	Half height, half width	Top Right

3.8.2.4 Metrics

The Metrics window (#4) is an important component to see the specific metric reported by the measurement.

View	Size	Position
Burst	Half height, full width	Bottom
Rise & Fall	Half height, full width	Bottom

This table illustrates the details of metrics window when Direction is Downlink:

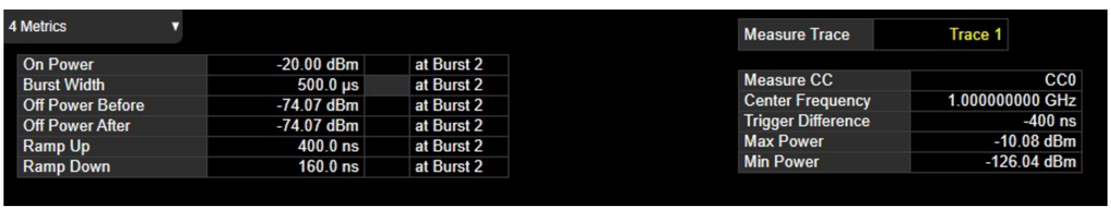


Name	Corresponding Results
On Power	n=1 3rd
On Power at Burst	n=13 1st
Burst Width	n=1 4th
Burst Width at Burst	n=13 6th
Off Power	n=1 8th
Off Power Pass/Fail	n=10 1st
Off Power at Burst	n=13 2nd

Off Power at	n=1 15th
Transient Ramp Up*	n=1 6th
Transient Ramp Up Pass/Fail	n=10 2nd
Transient Ramp Up at Burst	n=13 3rd
Transient Ramp Down*	n=1 7th
Transient Ramp Down Pass/Fail	n=10 3rd
Transient Ramp Down at Burst	n=13 4th
Measure Trace	See "Measure Trace" on page 2614
Center Frequency	See "Center Frequency" on page 2385
Trigger Difference	n=1 5th
Max Power	n=1 9th
Min Power	n=1 10th

*When Auto Timing Adjust is On, the column label changes to Ramp Up and Ramp Down, respectively.

This table illustrates the details of metrics window when Direction is Uplink:



Name	Corresponding Results
On Power	n=1 3rd
On Power Pass/Fail	n=10 5th
On Power at Burst	n=13 1st
Burst Width	n=1 4th
Burst Width at Burst	n=13 6th
Off Power Before	n=1 8th
Off Power Before Pass/Fail	n=10 1st
Off Power Before at Burst	n=13 5th
Off Power After	n=1 13th
Off Power After Pass/Fail	n=10 2nd
Off Power After at Burst	n=13 2nd

Ramp Up	n=1 6^{th}
Ramp Up Pass/Fail	n=10 3^{rd}
Ramp Up at Burst	n=13 3^{rd}
Ramp Down	n=1 7^{th}
Ramp Down Pass/Fail	n=10 4^{th}
Ramp Down at Burst	n=13 4^{th}
Measure Trace	See "Measure Trace" on page 2614
Measure CC	See "Measure CC" on page 2469
Center Frequency	See "Center Frequency" on page 2385
Trigger Difference	n=1 5^{th}
Max Power	n=1 9^{th}
Min Power	n=1 10^{th}

Center Frequency

Center Frequency is not a part of measured results and it comes from one of the acquisition conditions and parameters on measured results. Thus, before acquisition is not complete, it is shown as three dashes.

Center Frequency	---

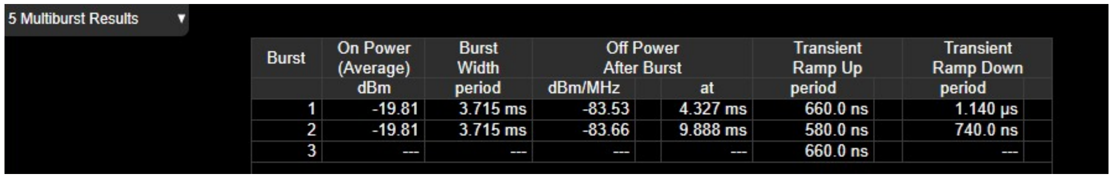
When Direction is Downlink, Center Frequency is the center of the entire frequency range that contains all the active CCs. For example, when Carrier Ref Freq is 1 GHz and two 100 MHz bandwidth component carriers’ frequency offsets are 0 Hz and 100 MHz respectively, Center Frequency is 1.049985 GHz.

When Direction is Uplink, Measure CC is shown as below. Center Frequency is equal to Measure CC's center frequency. In the above case, if Measure CC is CC0, Center Frequency is 1 GHz. If Measure CC is CC1, Center Frequency is 1.1 GHz.

Measure CC	CC0
Center Frequency	1.000000000 GHz

3.8.2.5 Multiburst Results

The Multiburst Results window (#5) displays results of all bursts.



Burst	On Power (Average)	Burst Width	Off Power After Burst		Transient Ramp Up	Transient Ramp Down
	dBm	period	dBm/MHz	at	period	period
1	-19.81	3.715 ms	-83.53	4.327 ms	660.0 ns	1.140 µs
2	-19.81	3.715 ms	-83.66	9.888 ms	580.0 ns	740.0 ns
3	---	---	---	---	660.0 ns	---

Name	Corresponding Results
Burst Number	
On Power	n=14 1st
On Power Pass/Fail (UL only)	n=15 1st
Burst Width	n=14 2nd
Off Power Before Burst (UL only)	n=14 3rd
Off Power Before Burst Pass/Fail (UL only)	n=15 2nd
Off Power After Burst	n=14 4th
Off Power After Burst Pass/Fail	n=15 3rd
Off Power After Burst at (DL only)	n=14 5th
Transient Ramp Up*	n=14 6th
Transient Ramp Up Pass/Fail	n=15 4th
Transient Ramp Down*	n=14 7th
Transient Ramp Down Pass/Fail	n=15 5th

*When in uplink or when in downlink and Auto Timing Adjust is On, the column label changes to Ramp Up and Ramp Down, respectively.

3.8.3 Amplitude

The Amplitude front-panel key activates the Amplitude menu and selects Reference Value as the active function.

3.8.3.1 Y Scale

The Y Scale Tab contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:RLEVel <real>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:RLEVel?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRAC:Y:SCAL:RLEV 5dBm`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRAC:Y:SCAL:RLEV?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:Y:SCAL:RLEV 5`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:Y:SCAL:RLEV 5`
	2-Fall for Transmit On|Off Power

Couplings	When Auto Scaling is On (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to Off Attenuation is not coupled to Ref Value
Preset	Automatically calculated
State Saved	Yes
Min	-250 dBm
Max	250 dBm
Annotation	Ref <value> top left of graph

Scale/Div

Scale/Div sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:PDIVision <rel_ampl>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:PDIVision?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRAC:Y:PDIV 5`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRAC:Y:PDIV?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:Y:PDIV 10`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:Y:PDIV 10`
	3-Fall for Transmit On|Off Power

Couplings	When the Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	0.10 dB/20dB
Annotation	<value> dB/ left upper of graph ! all measurements unless noted

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:RPOSition?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRAC:Y:RPOS CENT`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRAC:Y:RPOS?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:Y:RPOS CENT`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:Y:RPOS CENT`
	3-Fall for Transmit On|Off Power

Preset	TOP
State Saved	Saved in instrument state
Range	Top|Center|Bottom

Auto Scaling

Toggles the Auto Scaling function between On and Off. When Auto Scaling is On, pressing the Restart front-panel key results in automatically determining scale per division and reference values based on the measurement results.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:COUPle 0 | 1 | OFF | ON`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALe]:COUPle?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRAC:Y:COUP ON`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRAC:Y:COUP?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:Y:COUP ON`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:Y:COUP?`
	2-Fall for Transmit On|Off Power

Couplings	When Auto Scaling is On, and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off
Preset	1
State Saved	Saved in instrument state
Range	On|Off

3.8.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 2390
- See "Single-Attenuator Configuration" on page 2391

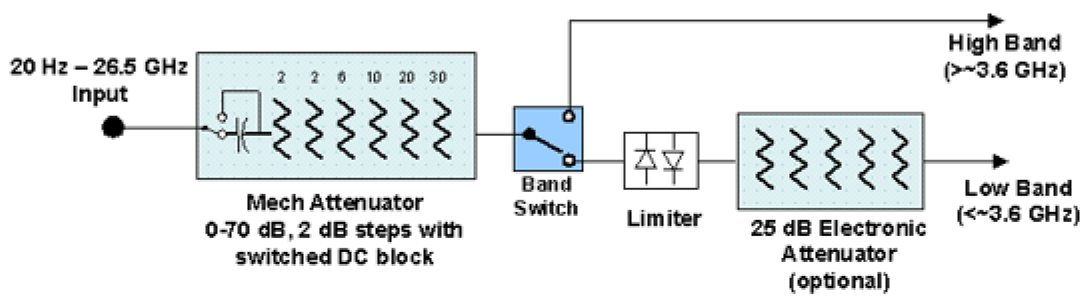
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called "Meas Global" and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight's benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

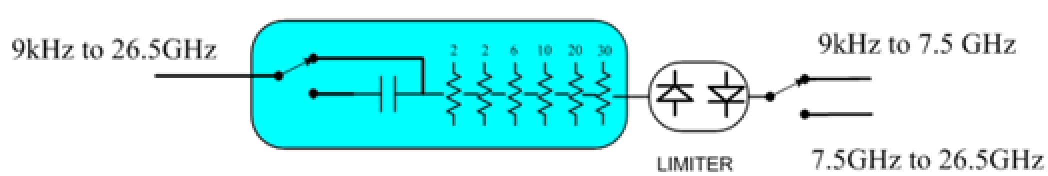
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

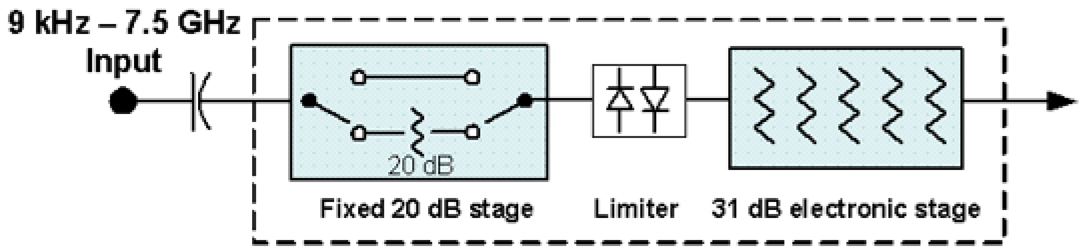


Configuration 2: Mechanical attenuator, no optional electronic attenuator



Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the "Dual-Attenuator" configuration.

Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says Mech Atten you have the Dual-Attenuator configuration. If the first control says Atten you have the Single-Attenuator configuration.

Dual Attenuator **Single Attenuator**

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and Attenuator Summary only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14`

	`:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 3228 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: – If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten – If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten – If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten In the **Amplitude**, "Y Scale" on page 3222 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows: "Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown: – Attenuator summary: – Total Atten below 50 GHz: 30 dB – Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 3251 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 2394

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of **Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 3231 See "Attenuator Configurations and Auto/Man" on page 2394 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 3227 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	**Auto** The Auto value is 10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased

Max	CXA Option 503 or 507	50 dB
	EXA	60 dB
	All other models	70 dB
	Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB	
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: *Atten: <total> dB (e<elec>)* The e letter is in amber in Single-Attenuator configurations For example: Dual-Attenuator configuration: *Atten: 24 dB (e14)* Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB Single-Attenuator configuration: *A: 24 dB (e14)* Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation) When in Manual, a # sign appears in front of Atten in the annotation	

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	ON

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 3225, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

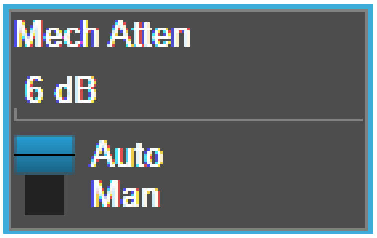
In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 2392 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 3231 for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 2397

Remote Command	[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl> [:SENSe]:POWer[:RF]:EATTenuation?
Example	:POW:EATT 10 :POW:EATT?
Notes	Electronic Attenuation’s specification is defined only when **Mech Atten** is 6 dB

Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 3253 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 2397
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE	The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 2398 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode

- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 3236.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the "Adjust Atten for Min Clipping" on page 3234 function.

When `ON`, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` restarts the measurement and then executes the function.

When `OFF`, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

“Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed”

This message is *not* generated if the command is sent.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart OFF | ON | 0 | 1 [:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart?
Example	:POW:RANG:OPT:REST OFF :POW:RANG:OPT:REST?
Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when [:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate is executed.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?
Example	:POW:RANG:OPT:TYPE EONL :POW:RANG:OPT:TYPE?
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 3234 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 2402

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 3231 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 2400 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

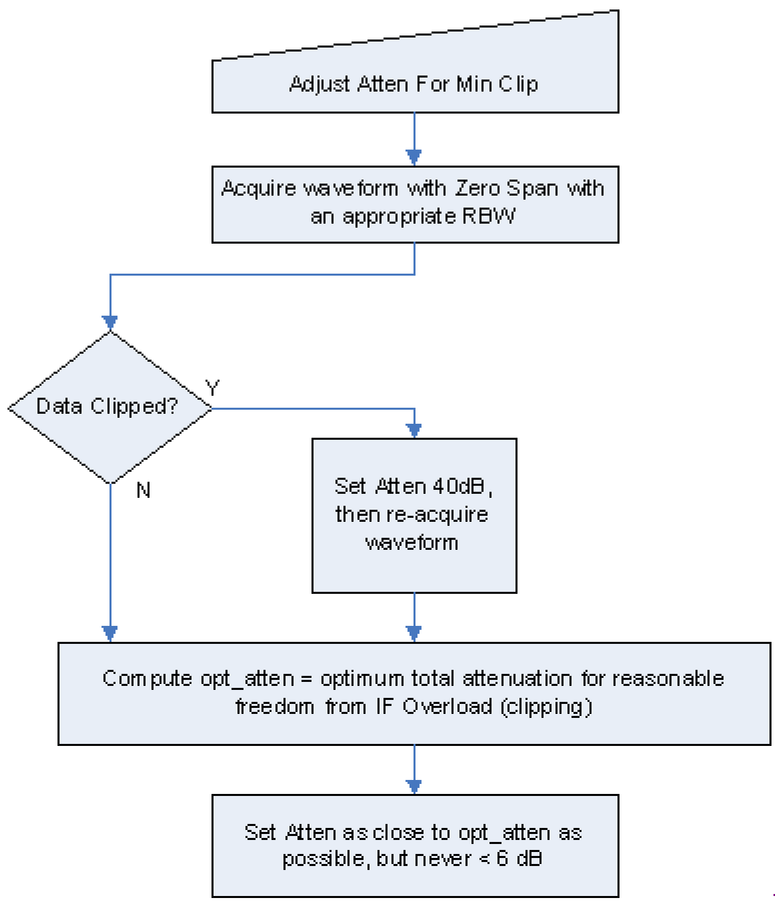
Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) OFF aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not OFF
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

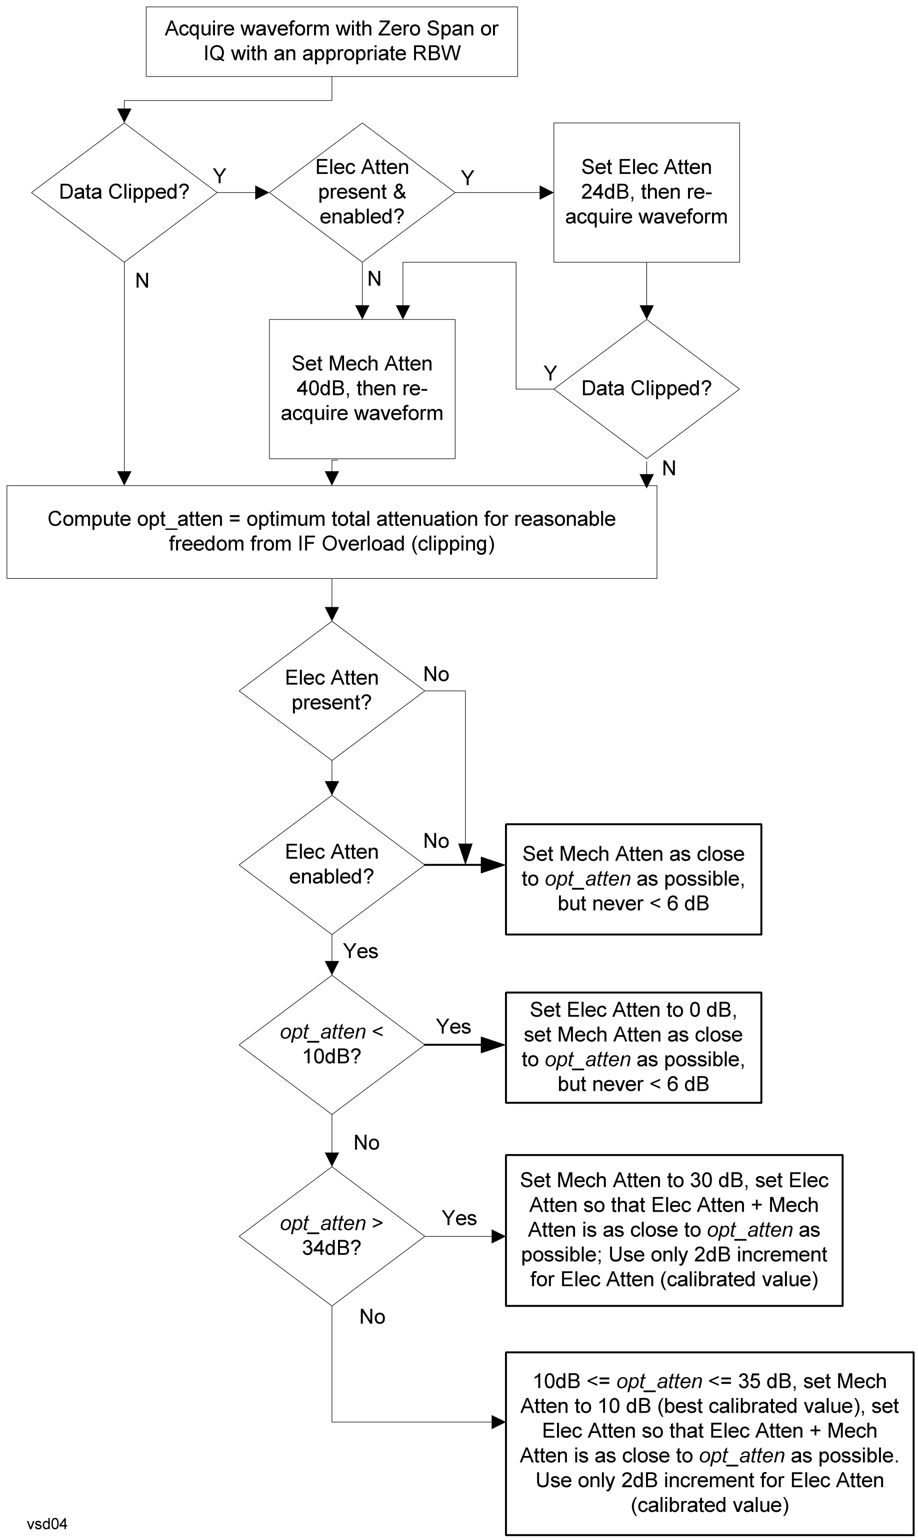
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

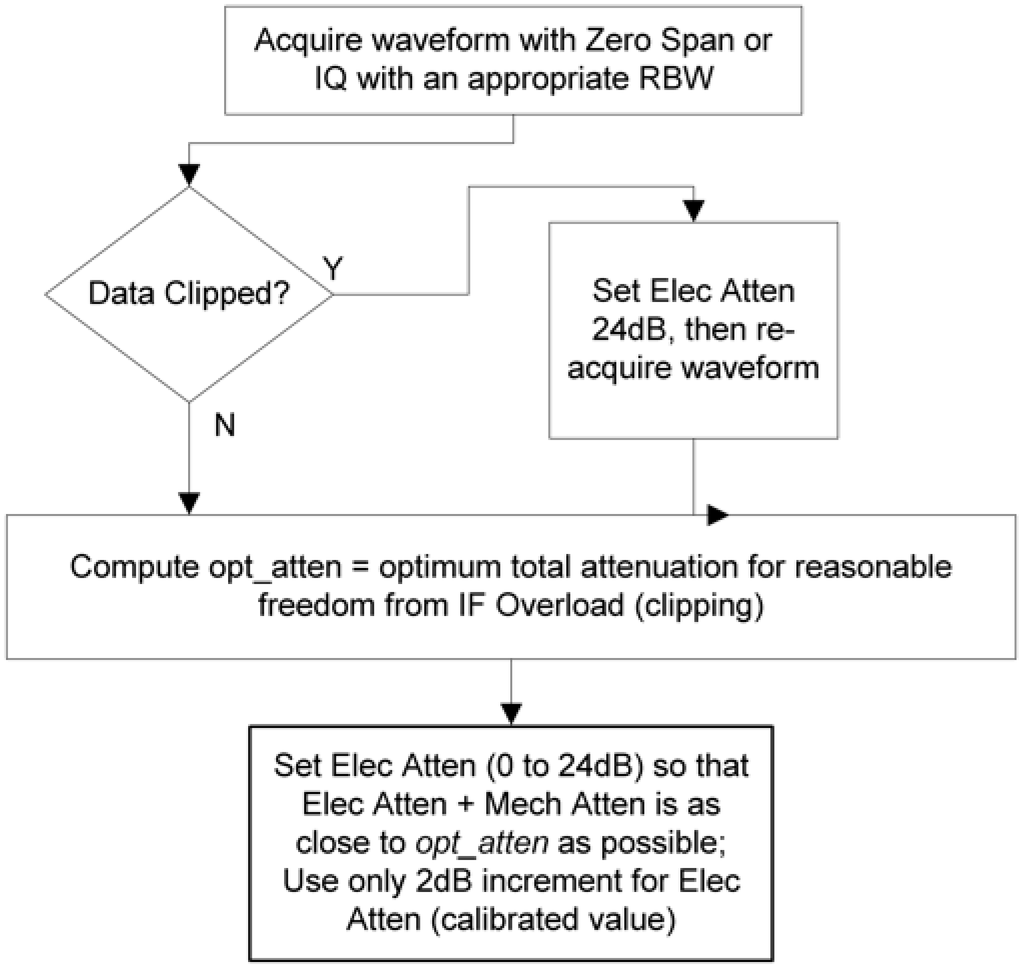
"Adjust Atten for Min Clipping" on page 3234 or "Pre-Adjust for Min Clipping" on page 2400 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Data Clipped?
Y
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Yes
Set Mech Atten as close to opt_atten as possible, but never < 6 dB
opt_atten < 10dB?
Yes
No
Set Elec Atten to 0 dB, set Mech Atten as close to opt_atten as possible, but never < 6 dB
opt_atten > 34dB?
Yes
No
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible; Use only 2dB increment for Elec Atten (calibrated value)
10dB <= opt_atten <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 2400 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?
Example	:POW:ATT:STEP 2 :POW:ATT:STEP?
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.8.3.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	[:SENSe]:POWer[:RF]:RANGe <real> [:SENSe]:POWer[:RF]:RANGe?
Example	:POW:RANG 10 dBm :POW:RANG?
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "Restart Meas on Adjust Atten" on page 3235 under "Attenuation" on page 3225.

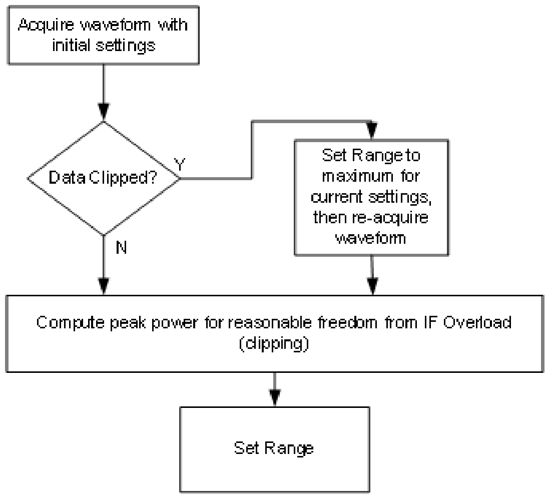
Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECtrical, COMBined, and ON) are honored and all are mapped to ELECtrical, so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 3245 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`
Example	`:POW:RANG:PAR 12 dB`
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	VXT Models M9410A/11A: 0 dB All Others: 10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	VXT Models M9410A/11A: 50 dB All Others: 20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 3247. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`	
Example	`:POW:RANG:MIX:OFFS -5 dB`	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.8.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 3264 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range

between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 3250 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 2409.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 3250
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated

3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 3249 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz

State Saved	The **Preselector Adjust** value set by "Presel Center" on page 3249, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE: The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz” When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 3251. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

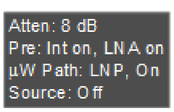
For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 3251, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 2413

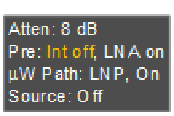
Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled
Preset	`OFF`
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 2418
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 2420
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 2421

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 3249 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated **Low Noise Path Enable** and **Full Bypass Enable** are grayed-out if the current measurement does not support them **Low Noise Path Enable** and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"
Preset	see table below
State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable

Preset:

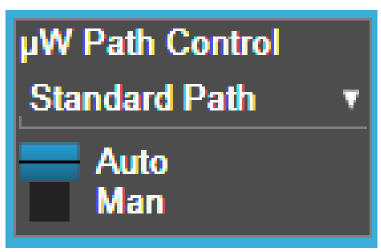
Mode	Value
IQ Analyzer Pulse RTSA Avionics	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
All other Modes	`STD`

–

Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:



This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Measurement	µW Path Control Auto behavior
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when 'Enabled Wideband IF for FFT' is OFF or 'Sweep Type Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious	Always Standard Path

Measurement	µW Path Control Auto behavior
Emissions	
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON` `:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 2416 above
Preset	`ON`
Range	`ON|OFF`

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

– The instrument is not in the Low Band, meaning:

– the start frequency is above 3.5 GHz and

– the stop frequency is above 3.6 GHz

– The internal preamp is not installed, or if installed, is set to Off or Low Band

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the Low Noise Path Enable is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used,

whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

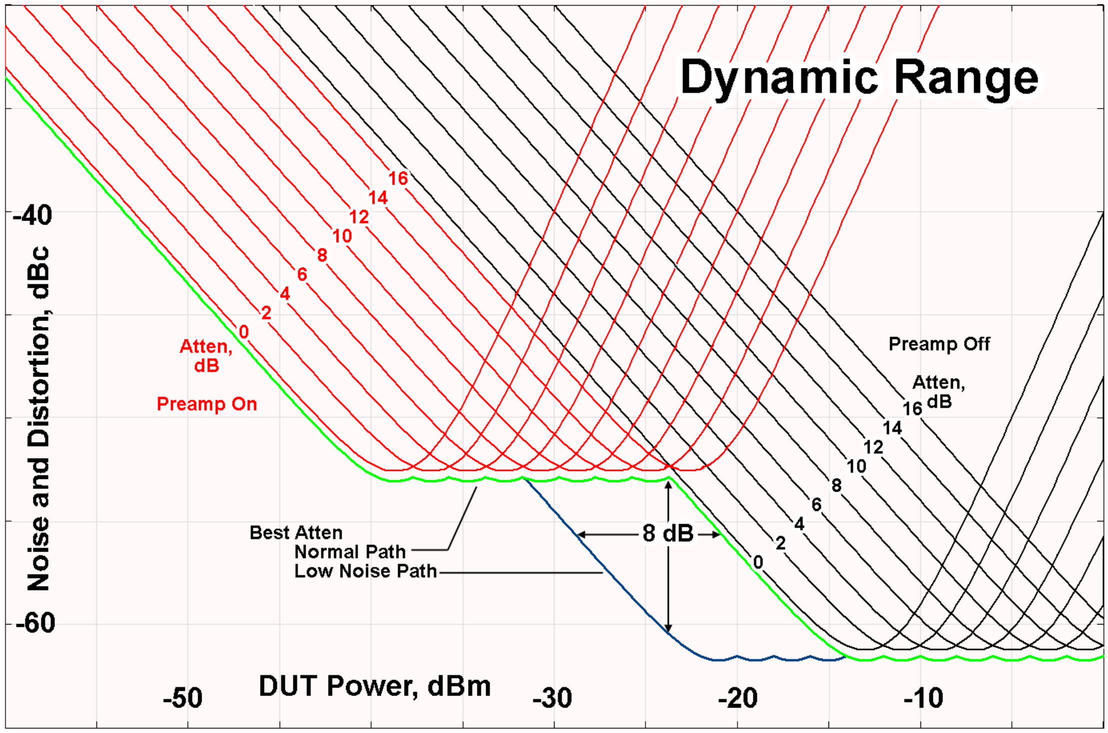
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION **When Full Bypass Enable is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently,**

whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

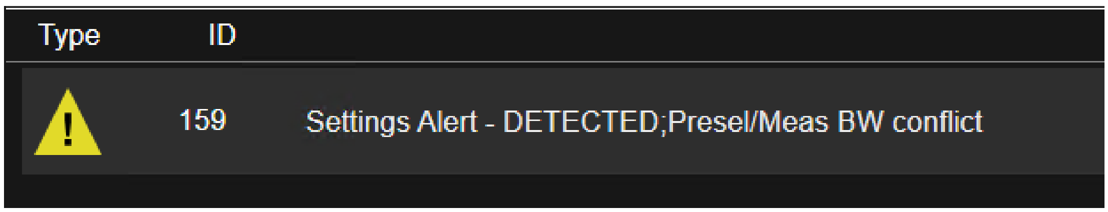
When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

.



Allow Full Bypass in Auto

Enable or disable Full Bypass in µW Path Auto rule. See "µW Path Control" on page 3254.

When this function is ON, and "µW Path Control" on page 3254 is in AUTO, it is possible for the auto rules to select the FULL Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the FULL Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
“Full Bypass Enabled, maximum safe input power reduced”

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?`
Example	`:POW:MW:PATH:AUTO:FULL ON` `:POW:MW:PATH:AUTO:FULL?`
Dependencies	Only appears if Option FBP is installed, and in the following measurements – 5GNRMode: Modulation Analysis and IQ Waveform – WLAN Mode: IQ Waveform – Channel Quality Mode: Group Delay and Noise Power Ratio
Preset	OFF
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two

traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: OFF N9042B+V3050A: ON M9410A/11A: ON
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

– NORMal - mathematically removes all image and multiple responses of signals present at the input

– ADVanced - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: ADVanced N9042B+V3050A: NORMal
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

– NORMal – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for NARRow (below)

– NARRow– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept

	method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when **Software Preselection** is enabled
Preset	N9041B: NORMal N9042B+V3050A: NARRow
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in SA Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 2427 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF

Meas	Mode	Preset
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.8.4 BW

Activates the BW menu.

3.8.4.1 Settings

The Settings Tab contains controls that pertain to the bandwidth of the measurement.

Info BW

Allows you to enter a frequency value to set the channel bandwidth that will be used for data acquisition.

Remote Command	`[:SENSe]:PVTime:BANDwidth <freq>`
	`[:SENSe]:PVTime:BANDwidth?`
	`[:SENSe]:PVTime:BANDwidth:AUTO OFF | ON | 0 | 1`

	[:SENSe]:PVTime:BANDwidth:AUTO?
Example	:PVT:BAND 200.0 MHz :PVT:BAND? :PVT:BAND:AUTO ON :PVT:BAND:AUTO?
Couplings	When it is set to AUTO and either Bandwidth or Direction is changed, this value changes to Channel Bandwidth when in the single carrier configuration. When Direction is Downlink and in the multicarrier configuration, this value is set appropriately according to the carrier configuration When in AUTO and Direction is Uplink, this value changes to Channel Bandwidth of the selected Measure CC
Preset	Automatically calculated ON
State Saved	Yes Yes
Range	Auto|Man
Min	10 Hz
Max	Analyzer Max Info BW The analyzer’s max info bandwidth is option dependent

3.8.5 Display

The Display key opens the Display Menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.8.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

Trigger Line

Turns the Trigger Line On or Off. This line indicates the trigger position.

Remote Command	:DISPlay:PVTime:TRIGger[:STATe] ON | OFF | 1 | 0 :DISPlay:PVTime:TRIGger[:STATe]?
Example	:DISP:PVT:TRIG ON :DISP:PVT:TRIG?
Preset	OFF

State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:TRIGger[:STATe]

Burst Line

Turns the Burst Line On or Off. This line indicates the location of the Transmitter ON period determined by the Burst Width.

Remote Command	:DISPlay:PVTime:BLINes[:STATe] ON | OFF | 1 | 0 :DISPlay:PVTime:BLINes[:STATe]?
Example	:DISP:PVT:BLIN ON :DISP:PVT:BLIN?
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:BLINes[:STATe]

Burst Timing Indicator Line

Turns the Burst Timing Indicator Line On or Off. The line shown on screen is just to indicate which part of signal is active burst and which part is inactive burst and nothing to do with the Pass/Fail (shown at the upper-left corner of screen) criteria. Regarding the Pass/Fail criteria, please refer to "Limits" on page 2581.

Remote Command	:DISPlay:PVTime:LIMit:MASK OFF | ON | 0 | 1 :DISPlay:PVTime:LIMit:MASK?
Example	:DISP:PVT:LIM:MASK 1 :DISP:PVT:LIM:MASK?
Notes	This parameter only hides or shows the Burst Timing Indicator Line on the display
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:LIMit:MASK

Ramp Line

Turns the Ramp Line On or Off. This line indicates the Ramp Up/Down time.

Remote Command	`:DISPlay:PVTime:RAMP[:STATe] OFF | ON | 0 | 1` `:DISPlay:PVTime:RAMP[:STATe]?`
Example	`:DISP:PVT:RAMP ON` `:DISP:PVT:RAMP?`
Preset	OFF
State Saved	Yes
Range	On|Off

Bar Graph

Turns the Bar Graph On and Off. The Bar Graph represents the Transmitter ON/OFF period and power. The Transmitter OFF period is coloured in green when DL Off Power limit passes and in red when limit fails.

Remote Command	`:DISPlay:PVTime:BGRaph OFF | ON | 0 | 1` `:DISPlay:PVTime:BGRaph?`
Example	`:DISP:PVT:BGR OFF` `:DISP:PVT:BGR?`
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

70/N us RMS Trace

Controls the display of 70/N us averaged off power (dBm/MHz) trace over the entire OFF period when the direction is downlink. The parameter also controls to display the off power limit line. The OFF power period is from burst down edge boundary plus max transient period to burst up edge boundary minus max transient period.

Remote Command	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF[:STATe] ON | OFF | 1 | 0` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF [:STATe]?`
Example	`:DISP:PVT:VIEW:WIND:TRAC:POFF ON` `:DISP:PVT:VIEW:WIND:TRAC:POFF?`
Notes	Except for 70/N us RMS off power trace on the trace window, the off power limit line (dBm/MHz) is also shown up when the state is on

Dependencies	When the direction is uplink, the control is always grayed out. There is no 70/N us RMS off power trace for uplink signal
Preset	OFF
State Saved	Yes
Range	On|Off

3.8.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Transmit On|Off Power measurement has two views.

These Views are multiple-window views and you can select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	`:DISPlay:PVTime:VIEW[:SELect] ALL | BOTH` `:DISPlay:PVTime:VIEW[:SELect]?`

Example	`:DISP:PVTime:VIEW ALL`
	sets the burst view
	`:DISP:PVTime:VIEW BOTH`
	sets the rise and fall view

Preset	ALL
State Saved	Yes

Burst

Windows: "RF Envelope" on page 2382, "Metrics" on page 2383

View Burst envelope.

Example	`:DISPlay:PVTime:VIEW[:SELect] ALL`

Rise & Fall

Windows: "Rise" on page 2383, "Fall" on page 2383, "Metrics" on page 2383

Zooms in on the rising and falling portions of the burst being tested.

Example	`:DISPlay:PVTime:VIEW[:SELect] BOTH`

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME "Baseband"` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN "Baseband"`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	:DISPlay:VIEW:ADVanced:DELete
Example	:DISP:VIEW:ADV:DEL
Notes	<alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <alphanumeric> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated If the display is disabled (via :DISP:ENAB OFF) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	:DISPlay:VIEW:ADVanced:DELete:ALL
Example	:DISP:VIEW:ADV:DEL:ALL
Notes	Disabled if there are no User Views

3.8.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1 :DISPlay:GRATicule[:STATe]?

Example	:DISP:GRAT OFF
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? This command is accepted for backwards compatibility with older instruments, but the WINDow, TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When OFF, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1 :DISPlay:ANNotation:SCReen[:STATe]?
Example	:DISP:ANN:SCR OFF
Dependencies	Grayed-out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0 :DISPlay:ANNotation:TRACe[:STATe]?
Example	:DISP:ANN:TRAC OFF
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0 :DISPlay:ACTivefunc[:STATe]?
Example	:DISP:ACT OFF
Dependencies	Grayed out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When OFF, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1 :DISPlay:ANNotation:MBAR[:STATe]?
Example	:DISP:ANN:MBAR OFF
Dependencies	Grayed out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

– and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)

– and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)

– and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON`

	Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.8.6 Frequency

The FREQ key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called "Meas Global" and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.8.6.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequencies from this value.

Because 5G NR mode measurements often deal with multiple carriers with distinct bandwidths, in 5G NR mode measurements are done based on carrier center frequencies and its bandwidths, both of which are specified by the user. Because of this, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

If the following conditions are satisfied at the same time:

- the Number of Component Carrier equals to 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Frequency is Auto

the Center Frequency value is equivalent to Carrier Reference Frequency value.

Remote Command	`[:SENSe]:CCARrier:REFerence <freq>` `[:SENSe]:CCARrier:REFerence?`
Example	`:CCAR:REF 2GHz` `:CCAR:REF?`
Preset	1 GHz
State Saved	Yes
Min/Max	Depends on instrument minimum/maximum center frequency. Same as Center Frequency

3.8.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the Marker Trace rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.8.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do NOT depend on the selected marker (e.g., Counter).

On any menu tab for which Select Marker displays, the first control is always Marker Time.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	Yes
Annunciation	Appears in the marker results block label for **Normal** and **Delta** markers

3.8.7.2 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Time

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE **The X label and value can change if the marker is moved to a trace with a different domain.**

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12:X <real>` `:CALCulate:PVTime:MARKer[1]|2|…|12:X?`
Example	`:CALC:PVT:MARK:X 0.325` `:CALC:PVT:MARK:X?`
Notes	Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units
Couplings	See "Coupling of Delta and Reference markers " on page 2442
Preset	None until marker is turned on
State Saved	Yes
Min/Max	Depends on trace data / Depends on trace data

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE

The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace the marker is on a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12[:X]:POSition <real>` `:CALCulate:PVTime:MARKer[1]|2|…|12[:X]:POSition?`
Example	`:CALC:PVT:MARK:POS 25` `:CALC:PVT:MARK:POS?`
Notes	When a marker mode is changed from off to any other mode, the X position is set to mid-screen
Preset	None until marker is turned on
State Saved	Yes
Min/Max	Depends on trace data / Depends on trace data

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

If the reference marker was off, it is turned on as a fixed??? marker.

The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.

If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is fixed then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and if its reference is fixed, the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is fixed.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Marker Mode

Sets the marker control mode to **Normal**, **Delta**, or **Off**.

All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function and the active function is turned off.

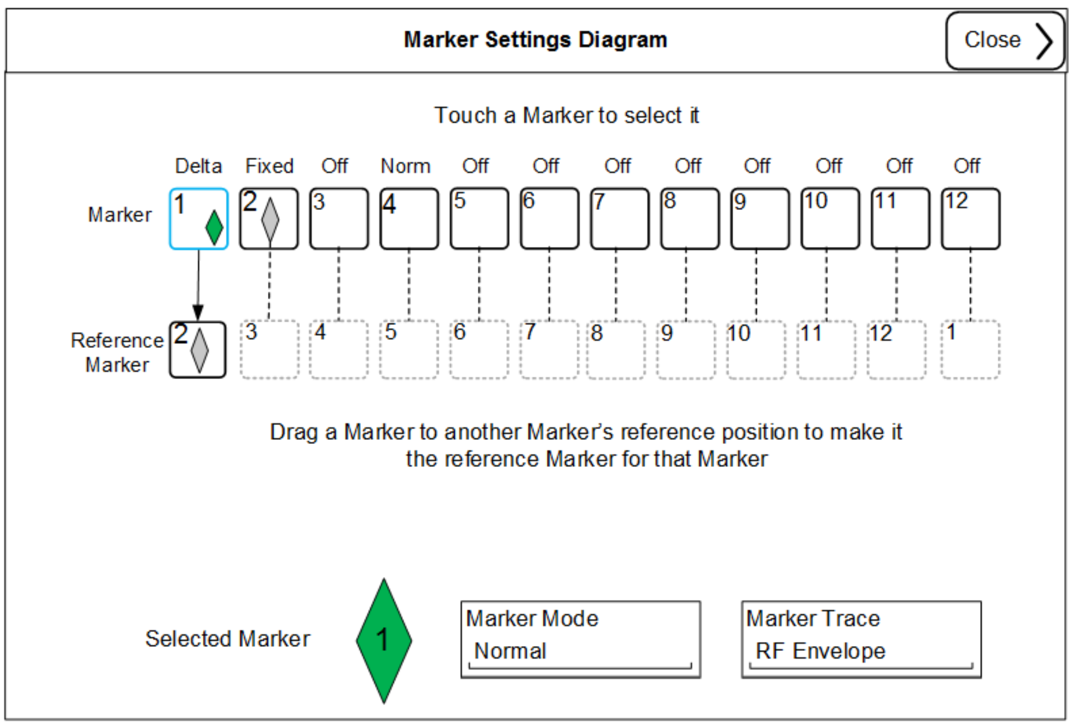
Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12:MODE POSition	DELTa	OFF` `:CALCulate:PVTime:MARKer[1]|2|…|12:MODE?`
Example	`:CALC:PVTime:MARK3:MODE POS` `:CALC:PVTime:MARK3:MODE?`
Preset	OFF
State Saved	Saved in instrument state
Range	Normal | DELTa (D) | Off

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.



All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:PVTime:MARKer:AOFF`
Example	`:CALC:PVTime:MARK:AOFF`

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Off. “equal X Axis movement” means to preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Remote Command	`:CALCulate:PVTime:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:PVTime:MARKer:COUPle[:STATe]?`
Example	`:CALC:PVT:MARK:COUP ON` `:CALC:PVT:MARK:COUP?`
Notes	In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker. See "More Information" on page 2445
Preset	OFF (presets on Mode Preset and All Markers Off)
State Saved	Yes

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.8.7.3 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE **Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.**

NOTE **Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.**

Marker Time

The Marker Time control is the fundamental control that you use to move a marker around on the trace. This is the same as the "Marker Time" on page 2441 control on the Settings tab.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE **Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.**

Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12:MAXimum`
Example	`:CALC:PVT:MARK2:MAX` `:The command SYST:ERR? can be used to query the errors to determine if a peak is found. The message “No peak found”  will be returned after an unsuccessful search`

Marker Delta

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker’s control mode to Delta without having to access two separate menus.

3.8.7.4 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker Time

The Marker Time control is the fundamental control that you use to move a marker around on the trace. This is the same as the "Marker Time" on page 2441 control on the Settings tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12:REFerence <integer>` `:CALCulate:PVTime:MARKer[1]|2|…|12:REFerence?`
Example	`:CALC:PVT:MARK:REF 5` `:CALC:PVT:MARK:REF?`
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself.”

	When queried a single value is returned (the specified marker numbers relative marker)
Couplings	If the reference marker is off it is turned on in **Normal** mode at the delta marker location.
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults**. This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Yes. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Marker Trace

Assigns the specified marker to the designated trace.

Remote Command	`:CALCulate:PVTime:MARKer[1]|2|…|12:TRACe TRACe1 | TRACe2 | TRACe3 | RMS70:CALCulate:PVTime:MARKer[1] | 2 | … | 12:TRACe?`
Example	`:CALC:PVTime:MARK:TRAC TRACe2` `:CALC:PVTime:MARK:TRAC?`
Notes	SCPI enums, RFENvelope, MAXHold, and MINHold are supported for backwards compatibility RFEN=TRACe1, MAXH=TRACe2, MINH=TRACe3
Preset	TRACe1
State Saved	Yes
Range	Trace 1|Trace 2| Trace 3|70/N us RMS Trace

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility. This is the same as the"Marker Settings Diagram" on page 2444 control on the Settings tab.

3.8.8 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.8.8.1 Settings

The Settings tab contains frequently used Meas Setup functions to which you will want the fastest access.

Average|Hold Number

Sets the number of data acquisitions that are averaged. After the specified number of average counts is reached, the averaging mode (termination control) setting determines the averaging action. Also lets you turn Averaging on and off.

Remote Command	`[:SENSe]:PVTime:AVERage:COUNt <integer>`
	`[:SENSe]:PVTime:AVERage:COUNt?`
	`[:SENSe]:PVTime:AVERage[:STATe] OFF | ON | 0 | 1`
	`[:SENSe]:PVTime:AVERage[:STATe]?`

Example	`:PVT:AVER:COUN 100`
	`:PVT:AVER:COUN?`
	`:PVT:AVER OFF`
	`:PVT:AVER?`

Preset	10 OFF
State Saved	Yes Yes
Range	On|Off
Min/Max	1/10000

Continue Averaging

Continue Averaging is designed for acquiring the trace averaging multiple sets of DUT conditions, in order to meet requirements such as OTA measurement.

NOTE	You must be in Single sweep/measurement to use Continue Averaging. Go to Single and press **Restart** to get your first set of averages, then Continue Averaging will be available. Use FETCh:<meas>? query to retrieve the data as it waits for completion of Continue Averaging. *OPC? doesn't wait for completion and returns true immediately.

Pressing this control adds a number of Averages that matches the Avg|Hold number to the already averaged trace or measurement. Every time you press it, the terminal count increases to 2N, 3N and so on. You can change the DUT position or antenna when each set of average count is reached to the terminal count and the measurement is complete.

Since the measurement results are valid for each completed average conditions, the user doesn’t have to pre-determine the number of set of DUT conditions.

Remote Command	`[:SENSe]:PVTime:AVERage:CONTinue`
Example	`:PVT:AVER:CONT`
Dependencies	This control becomes enabled when the user changes the Sweep mode to Single and the Average Count reaches to the Average Number. Otherwise, grayed out

Terminal Count (Remote Command Only)

Query only command.

This returns the terminal count that shows the target average number after Continue Averaging is pressed. Every time you press Continue Averaging, the terminal count increases to 2N, 3N and so on. The value is the same as the Avg|Hold Number unless Continue Averaging is pressed and it is reset to match the Avg|Hold Number when Restart is pressed.

Remote Command	`[:SENSe]:PVTime:AVERage:COUNt:TERMinal?`
Example	`:PVT:AVER:COUN:TERM?`

Averaging Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached. You can select between the Exp (exponential) and Repeat averaging modes. This selection only affects the averaging result after the number of N averages is reached. You can use the Avg|Hold Number to set N.

Control	SCPI	Description
Exponential averaging	EXPonential	When Measure is set at Cont, data acquisitions continue indefinitely. After N averages, exponential averaging is used with a weighting factor of N (the displayed average count stops at N). Exponential averaging weights new data more than old data, which allows tracking of slow-changing signals
Repeat averaging	REPeat	When Measure is set at Cont, data acquisitions continue indefinitely. After N averages is reached, all previous result data is cleared and the average count is set back to 1. This is equivalent to being in Measure Single and pressing the Restart control when the Single measurement finishes

Remote Command	`[:SENSe]:PVTime:AVERage:TCONtrol EXPonential | REPeat` `[:SENSe]:PVTime:AVERage:TCONtrol?`
Example	`:PVT:AVER:TCON EXP` `:PVT:AVER:TCON?`
Preset	REPeat
State Saved	Yes
Range	Exponential|Repeat

Average Type

Specifies the type of trace and result averaging to use.

CONTROL: Power (RMS) SCPI: RMS|POWer	True power averaging that is equivalent to taking the RMS value of the voltage. It is the most accurate type of averaging
CONTROL: Log-Power SCPI: LOG|LPOWer	Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power

Remote Command	`[:SENSe]:PVTime:AVERage:TYPE LOG | LPOWer | RMS | POWer` `[:SENSe]:PVTime:AVERage:TYPE?`
Example	`:SENS:PVT:AVER:TYPE RMS` `:SENS:PVT:AVER:TYPE?`
Preset	RMS
State Saved	Yes
Range	Power (RMS)|Log-Power

Subcarrier Spacing (SCS)

Sets Sub Carrier Spacing. This value is used as follows:

- Determines Slot Duration.

- Determines the value of N, where 70/N us is used as length of measurement period to calculate mean power spectral density in 3GPP standard (TS 38.141-1 6.4.2.4.2|TS 38.141-2 6.5.2.4.2). N = SCS/15, where SCS is Sub Carrier Spacing in kHz. When Sub Carrier Spacing is SCS60K, N = 60/15 = 4.

- Determines Info BW when Info BW is Auto.

When in Auto:

Downlink: Coupled to the smallest SCS (Power Meas) among the SCS (Power Meas) of each component carrier.

Uplink: Coupled to the SCS (Power Meas) of the component carrier specified in Measure CC.

Remote Command	[:SENSe]:PVTime[:DLINk]:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS240K | SCS480K | SCS960K [:SENSe]:PVTime[:DLINk]:SCS? [:SENSe]:PVTime:SCS:AUTO OFF | ON | 0 | 1 [:SENSe]:PVTime:SCS:AUTO?
Example	:PVT:SCS SCS30K :PVT:SCS? :PVT:SCS:AUTO OFF :PVT:SCS:AUTO?
Couplings	This value will be preset to the SCS value in the Meas Standard tab when the action "Apply Preset (to All CCs)" is executed
Preset	SCS30K ON
State Saved	Yes
Range	u = 0: 15 kHz|u = 1: 30 kHz|u = 2: 60 kHz|u = 3: 120 kHz|u = 4: 240 kHz|u = 5: 480 kHz|u = 6: 960kHz

Auto Timing Adjustment

In order to check transmit off power is below the 3GPP defined limit, timing reference must be provided in the measurement. This setting specifies how the timing reference is derived in the measurement.

When it is ON, the burst boundary timing is always appropriately adjusted based on the measured ramp up and ramp down edge timings. When it is OFF, the timing reference will be provided by external trigger, expected burst boundaries will be derived from external trigger and frame configuration parameters.

Remote Command	[:SENSe]:PVTime:TIMing:REFerence:AUTO ON | OFF | 1 | 0 [:SENSe]:PVTime:TIMing:REFerence:AUTO?
Example	:PVT:TIM:REF:AUTO ON :PVT:TIM:REF:AUTO?
Dependencies	When Auto Timing adjustment is OFF and Trigger type is free run, an advisory message is generated
Preset	ON
State Saved	Yes
Range	On|Off

Spur Avoidance

Because the VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the BW<= maxBW/2.5.

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as “Settings Alert;Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

Remote Command	`[:SENSe]:PVTime:SAVoid[:STATe] ON | OFF | 0 | 1` `[:SENSe]:PVTime:SAVoid[:STATe]?`
Example	`:PVT:SAV ON` `:PVT:SAV?`
Dependencies	This control only appears in VXT models M9410A/11A/15A
Preset	ON
State Saved	Saved in instrument state
Range	ON|OFF

Meas Setup Summary Table

The Meas Setup Summary Table lets you view and access many of the parameters in the Meas Setup menus on one screen.

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	`:CONFigure:PVTime`
Example	`:CONF:PVT`
Couplings	Selecting Meas Preset restores all measurement parameters to these default values

Ignore Burst Found (Remote Command Only)

In the Pvt measurement, by default, it checks whether a burst signal is found and decides what to do next. When average state is ON and no burst signal is found, the measurement will continuously run and you cannot get test results by SCPI meas/read/fetch command under continuous measurement status. To avoid this, it is recommended to implement timeout process in test scripts.

This SCPI only parameter is defined to stop continuous running, as an alternate option. For backwards compatibility, the behavior of “waiting for burst found” is kept intact when this parameter is OFF.

Remote Command	`[:SENSe]:PVTime:IGNore:BURSt:FOUNd OFF | ON | 0 | 1` `[:SENSe]:PVTime:IGNore:BURSt:FOUNd?`
Example	`:PVT:IGN:BURS:FOUN ON` `:PVT:IGN:BURS:FOUN?`
Preset	OFF
State Saved	Yes

3.8.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows – If changed to uplink: RF burst – If changed to downlink: External 1 In Transmit On|Off Power, changing the direction affects the trigger source as follows – If changed to uplink: Periodic – If changed to downlink: External 1 except for models with the H1G option. With the H1G option,

	the trigger source changes as follows. – External 1, when Info BW ≤ 255 MHz – External 3, when Info BW ≥ 256 MHz Changing the direction affects many other modulation analysis setup parameters
Preset	ULINk when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINk
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink|Uplink

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "Multi Channel Synchronous Acquisition (UXM Only)" on page 890

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for three cases:

– MIMO (EVM only): Meas Setup > Radio (N9042B and UXM model E7515B only)

– ccEVM (EVM only): Meas Setup > Advanced

– Multiple Synchronous Acquisition (PowerSuite measurements supporting multi-channel synchronous acquisition): Meas Setup > Radio (UXM model E7515B only)

Multi Channel Configuration

Enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

This menu is available for the following measurements:

– EVM in N9042B, VXT2/3, UXM model E7515B

– PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "Multi Channel Synchronous Acquisition (UXM Only)" on page 890

Input Port (UXM)

Select input port for channel configuration.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2 RFIO1	…	RFIO8` `[:SENSe]:RADio:MCHannel:PORT[1]|2?`
Example	`:RAD:MCH:PORT2 RFIO2` `:RAD:MCH:PORT2?`
Dependencies	This control appears only in the EVM and PowerSuite measurement supporting multiport synchronous acquisition in the UXM model E7515B When "Lock (UXM)" on page 2456 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 2456 is OFF, the label “Channel x” changes to “Unused” Selections are the same as those of RF Input Port and either RFIO1 to RFIO8 or RFIO1 to RFIO16 depending on the hardware configuration
Preset	RFIO1|RFIO2
State Saved	Yes
Range	RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8 or RFIO 1|RFIO 2|RFIO 3|RFIO 4|RFIO 5|RFIO 6|RFIO 7|RFIO 8|RFIO 9|RFIO 10|RFIO 11|RFIO 12|RFIO 13|RFIO 14|RFIO 15|RFIO 16
Backwards Compatibility SCPI	`[:SENSe]:RADio:MIMO:PORT[1]|2`

Lock (UXM)

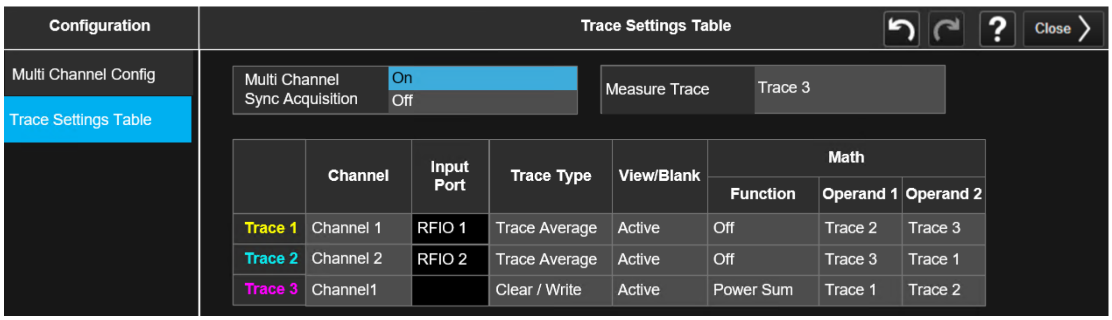
Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	`[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed OFF	ON	0	1` `[:SENSe]:RADio:MCHannel:PORT[1]|2:LOCKed?`
Example	`:RAD:MCH:PORT2:LOCK ON` `:RAD:MCH:PORT2:LOCK?`
Dependencies	This control appears only in the EVM and PowerSuite measurements supporting multiport synchronous acquisition in the UXM model E7515B
Preset	ON

State Saved	Yes
Backwards Compatibility SCPI	[:SENSe]:RADio:MIMO:PORT[1]|2:LOCKed

Trace Settings Table

Lets you set a configuration of multiport synchronous acquisition.



Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Multi Channel Synchronous Acquisition (UXM Only)

This is the same as "Multi Channel Synchronous Acquisition (UXM Only)" on page 890

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3 :CALCulate:<meas>:MTRace? <meas> is the identifier for the current measurement; any one of CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime
Example	Channel Power :CALC:CHP:MTR TRAC1

	`:CALC:CHP:MTR?`
Dependencies	In the ACP measurement, this control is grayed-out when **Meas Method** is set to `RBW` or `FAST`, and only Trace 1 is enabled
Preset	`TRACe1`
State Saved	No
Range	Trace 1 | Trace 2 | Trace 3

Channel Assignment

Selects the channel for each trace in the specified measurement. A port selected at "Input Port (UXM)" on page 2456 is assigned to a trace. This setting is valid when "Multi Channel Synchronous Acquisition (UXM Only)" on page 2457 is ON.

Multi Channel Synchronous Acquisition is performed under the following conditions:

- All Input Port Channel Lock is set to ON
- Multi Channel Synchronous Acquisition is set to ON

The selected input port is shown in the Trace Setup Summary table, on the trace and at the bottom of the Trace Control menu panel.

Remote Command	`:TRACe[1]|2|3:<meas>:CHANnel CHANnel1 | CHANnel2` `:TRACe[1]|2|3:<meas>:CHANnel?`
Example	For the ACP measurement Trace 2 `:TRAC2:ACP:CHAN CHAN2`
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 2457 is On The unlocked channel is grayed-out
Preset	CHAN1|CHAN2|CHAN1
State Saved	Yes
Range	Channel 1|Channel 2

Input Port

Read-only information. Indicates which input data is displayed in each trace. This setting is valid when Multi Channel Synchronous Acquisition is ON.

Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition Appears when "Multi Channel Synchronous Acquisition (UXM Only)" on page 890 is On This column is blank when Math Function is other than Off

EIRP (Synchronous Acquisition) (UXM Only)

Enables you to preset the following parameters. Preset is made such that Trace 3 becomes the sum of Trace 1 and Trace 2 to which data from Channel 1 and Channel 2 are assigned. The measurement result is calculated based on Trace 3.

This parameter is useful when performing the EIRP measurement by acquiring signals from two ports simultaneously.

Multi Channel Synchronous Acquisition	On

Target trace parameters are those of the PowerSuite measurements supporting multi channel synchronous acquisition in the UXM model E7515B.

	Trace 1	Trace 2	Trace 3
Channel Assignment	Channel 1	Channel 2	Channel 1
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	Active	Active
Math Function	`Off`	`Off`	Power Sum
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2
Math Trace	Trace 3		

Remote Command	`[:SENSe]:RADio:MCHannel:PRESet:EIRP`
Example	`:RAD:MCH:PRES:EIRP`
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

Restore Defaults (UXM Only)

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
Measure Trace	Trace1

	Trace 1	Trace 2	Trace 3
View/Blank	Active	Blank	Blank
Math Function	Off	Off	Off

Remote Command	`[:SENSe]:RADio:MCHannel:PRESet:DEFault`
Example	`:RAD:MCH:PRES:DEF`
Dependencies	Appears only in UXM model E7515B, in PowerSuite measurements supporting multi-channel synchronous acquisition

3.8.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

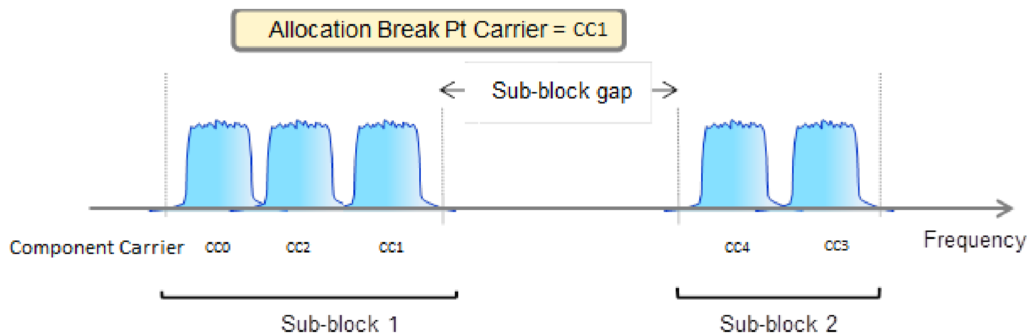
- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	`CONTiguous`
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC15 [:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?
Example	:CCAR:CONF:ALL:NCON:ABP CC0 :CCAR:CONF:ALL:NCON:ABP?
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|…|CC15

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 3296
"Sidelink" on page 3296
"Bandwidth" on page 3297
"Freq Range" on page 3297
"Freq Offset" on page 3298
"Cell ID Auto" on page 3298
"Cell ID Value" on page 3299
"Demod Spectrum" on page 3299
"CHP Power Integration Bandwidth" on page 3300
"ACP Power Integration Bandwidth" on page 3300
"SEM Power Integration Bandwidth" on page 3301
"N_Grid_Size (Display Only)" on page 1828
"SCS (Power Meas)" on page 3302

Number of Component Carriers

This is the same as the control on the menu panel. See "Number of Component Carriers" on page 3292.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	`[:SENSe]:CCARrier:AFOFfset OFF | ACRA100K | ACRA15K | ACRA60K | CARA100K | CARA15K | CARA60K` `[:SENSe]:CCARrier:AFOFfset?`
Example	`:CCAR:AFOF ACRA100K` `:CCAR:AFOF?`
Notes	When you change the value to `OFF`, nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CC0 Freq Offset is automatically adjusted to 0 Hz
Preset	`OFF`
State Saved	Yes
Range	The cascading list is shown below

Channel Spacing for	Channel Raster

Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	
Carrier Aggregation	
Off	

Carrier Allocation

This is the same as the control on the menu panel. See "Carrier Allocation" on page 3293.

Non-Contiguous Break at

This is the same as the control on the menu panel. See "Non-Contiguous Break at" on page 3293.

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier[0]|1|…|15[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action “Apply Preset (to All CCs)” is executed
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk ON	OFF	1	0` `[:SENSe]:CCARrier[0]|1|…|15:RADio:SLINk?`
Example	`:CCAR4:RAD:SLIN ON` `:CCAR4:RAD:SLIN?`
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when "Bandwidth" on page 3297 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth B5M	B10M	B15M	B20M	B25M	B30M	B35M	B40M	B45M	B50M	B60M	B70M	B80M	B90M	B100M	B200M	B400M	B800M	B1600M	B2000M` `[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B50M`
Dependencies	When "Sidelink" on page 3296 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	B100M unless noted below – Option B25: B20M – Option B40: B35M – Option B85: B80M
State Saved	Yes

<table>
<tr><td>Range</td><td>5 MHz | 10 MHz | 15 MHz | 20 MHz | 25 MHz | 30 MHz | 35 MHz | 40 MHz | 45 MHz | 50 MHz | 60 MHz | 70 MHz | 80 MHz | 90 MHz | 100 MHz | 200 MHz | 400 MHz | 800 MHz | 1600 MHz | 2000 MHz</td></tr>
</table>

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge FR1 | FR2
[:SENSe]:CCARrier[0]|1|…|15:RADio:STANdard:FRANge?</td></tr>
<tr><td>Example</td><td>:CCAR1:RAD:STAN:FRAN FR1</td></tr>
<tr><td>Dependencies</td><td>Available selections differ depending on "Bandwidth" on page 3297 as follows:
– 50 MHz and 100 MHz: FR1 and FR2
– 200 MHz or wider: FR2 only
– Other than above: FR1 only</td></tr>
<tr><td>Couplings</td><td>This value will be preset to the Frequency Range value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed</td></tr>
<tr><td>Preset</td><td>FR1</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Range</td><td>FR1|FR2</td></tr>
</table>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>
[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</td></tr>
<tr><td>Example</td><td>:CCAR4:FREQ:OFFS 10MHz
:CCAR4:FREQ:OFFS?</td></tr>
<tr><td>Notes</td><td>Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly</td></tr>
</table>

	Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE **This setting is available for EVM measurement only.**

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE AUTO	MANual` `[:SENSe]:EVM:CCARrier[0]|1|…|15:CID:MODE?`
Example	`:EVM:CCAR:CID:MODE MAN` `:EVM:CCAR:CID:MODE?`
Preset	`MANual`
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE **This setting is available for EVM measurement only.**

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:CID <integer>` `[:SENSe]:EVM:CCARrier[0]|1|…|15:CID?`
Example	`:EVM:CCAR4:CID 0` `:EVM:CCAR4:CID?`
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier[0]|1|…|15:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	`NORM`
State Saved	Yes
Range	Normal | Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote	`[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration <freq>`

Command	`[:SENSe]:CCARrier[0]|1|…|15:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table

When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset	98.280 MHz|98.310 MHz

State Saved	Yes
Min	100 kHz
Max	2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier[0]|1|…|15:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with "SCS Enabled" on page 1831.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	`[:SENSe]:CCARrier[0]|1|…|15:RGRid:PMSCs?`
Example	`:CCAR3:RGR:PMSC?`
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE: The parameter is only available for the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:PVTime:ULINk:CCARrier CC0 | … | CC15` `[:SENSe]:PVTime:ULINk:CCARrier?`
Example	`:PVT:ULINk:CCAR CC0` `:PVT:ULINk:CCAR?`
Dependencies	Available only when Radio Direction is Uplink
Preset	`CC0`
State Saved	Yes
Range	CC0 | CC1 | CC2 | CC3 | CC4 | CC5 | CC6 | CC7 | CC8 | CC9 | CC10 | CC11 | CC12 | CC13 | CC14 | CC15

3.8.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE: You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

Set the LTE bandwidth.

Remote Command	`[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW B1M4 | B3M | B5M | B10M | B15M | B20M` `[:SENSe]:EVM:CCARrier[0]|1|…|15:LTE<n>:BW?`
Example	`:EVM:CCAR:LTE1:BW B20M` `:EVM:CCAR:LTE1:BW?`
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message

Preset	B5M
State Saved	Yes
Range	1.4 MHz|3 MHz|5 MHz|10 MHz|15 MHz|20 MHz

Frequency Range

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the "Freq Range" on page 3297 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the "**Configure Preset**" section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 | FR2 | FR21 | FR22 [:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?
Example	:RAD:STAN:PRES:FREQ:RANG FR1 :RAD:STAN:PRES:FREQ:RANG?
Notes	SCPI enum "FR2" is retained for backwards compatibility. When you change Bandwidth, this parameter changes as shown in "Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility" on page 2472 depending on the currently selected value.
Dependencies	Available selections differ depending on Bandwidth as follows: (see table below) When "Uplink Carrier Mode" on page 3313 is Sidelink - V2X, FR2 is unavailable
Preset	FR1
State Saved	Yes
Range	FR1|FR2|FR2-1|FR2-2
Backwards Compatibility SCPI	[:SENSe]:RADio:STANdard:PRESet:FRANge

Bandwidth	FR
5 MHz, ..., 100 MHz	FR1
50 MHz, 100 MHz, 200 MHz, 400 MHz	FR2, FR2-1
100 MHz, 400 MHz, 800 MHz, 1600 MHz, 2000 MHz	FR2, FR2-2

Frequency Range Dependencies due to Bandwidth Selection for Backwards Compatibility

	Bandwidth selection changes to:					
Current FR value	5,...,45 MHz 60,...90 MHz	50 MHz	100 MHz	200 MHz	400 MHz	800,...2000 MHz
FR1	FR1	FR1	FR1	FR2	FR2	FR2
FR2	FR1	FR2	FR2	FR2	FR2	FR2
FR2-1	FR1	FR2-1	FR2-1	FR2-1	FR2-1	FR2
FR2-2	FR1	FR2	FR2-2	FR2	FR2-2	FR2-2

FR2 behaves as A.35.00 backwards compatibility mode.

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press” Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

FDD, TDD, User Defined are supported.

- FDD: RB allocation is filled with all slots and symbols
- TDD: When the Direction is Downlink and any of NR Test Models is selected for RB Alloc Preset, then, RB allocation is filled with the specified TDD slots and symbols only, based on the 3GPP Tx Conformance Test specification definition
- User Defined: Allows you to configure Transmission Periodicity, Number of Slots and Symbols where RB allocation is filled with in TDD slots and symbols

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DMODe FDD | TDD | UDEFined` `[:SENSe]:RADio:STANdard:PRESet:DMODe?`
Example	`:RAD:STAN:PRES:DMOD TDD` `:RAD:STAN:PRES:DMOD?`
Dependencies	Available selections depend on Frequency Range When FR1 is selected, all three selections are available. When FR2, FR2-1, or FR2-2 is selected, only

	TDD and User Defined are available
Preset	TDD
State Saved	Yes
Range	FDD|TDD|User Defined

TDD / User Def. Configuration

Lets you access TDD slot configuration parameters on one screen.

Duplex Mode

This is the same as "Duplex Mode" on page 3304 in the Meas Standard menu panel.

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles. This parameter is valid only for the downlink FR1 TDD duplex mode.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617 [:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?
Example	:RAD:STAN:PRES:DLIN:NRTM TS38 :RAD:STAN:PRES:DLIN:NRTM?
Dependencies	Unavailable when Radio Direction is Uplink, or Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	TS38
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

Transmission Periodicity

Allows you to select transmission periodicity that determines the User Defined TDD slot configuration pattern repetition period.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity P0_5MS | P0_625MS | P1MS | P1_25MS | P2MS | P2_5MS | P5MS | P10MS [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:TRANsmission:PERiodicity?
Example	:RAD:STAN:PRES:TRAN:PER P0_5MS

	:RAD:STAN:PRES:TRAN:PER?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	P5MS
State Saved	Yes
Range	0.5 ms|0.625 ms|1 ms|1.25 ms|2 ms|2.5 ms|5 ms|10 ms

Number of Downlink Slots

Specifies how many downlink slots are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SLOT:COUNt?
Example	:RAD:STAN:PRES:DLIN:SLOT:COUN 1 :RAD:STAN:PRES:DLIN:SLOT:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	7
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity

Number of Downlink Symbols

Specifies how many downlink symbols are included in one transmission periodicity.

Remote Command	[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt <integer> [:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:DLINk:SYMBol:COUNt?
Example	:RAD:STAN:PRES:DLIN:SYMB:COUN 1 :RAD:STAN:PRES:DLIN:SYMB:COUN?
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	6
State Saved	Yes
Min	1
Max	14

Number of Uplink Slots

Specifies how many uplink slots are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt <integer>` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SLOT:COUNt?`
Example	`:RAD:STAN:PRES:ULIN:SLOT:COUN 1` `:RAD:STAN:PRES:ULIN:SLOT:COUN?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	2
State Saved	Yes
Min	1
Max	Max slot count in the transmission periodicity.

Number of Uplink Symbols

Specifies how many uplink symbols are included in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt <integer>` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:ULINk:SYMBol:COUNt?`
Example	`:RAD:STAN:PRES:ULIN:SYMB:COUN 1` `:RAD:STAN:PRES:ULIN:SYMB:COUN?`
Dependencies	Grayed out when Duplex Mode is not User Defined
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	4
State Saved	Yes
Min	1
Max	14

Number of Special Slots (Remote Query Only)

Queries the number of special slots in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SPECial:SLOT:COUNt?`
Example	`:RAD:STAN:PRES:SPEC:SLOT:COUN?`
Preset	1

Min	1
Max	Max slot count in the transmission periodicity - 1

TDD Slot Allocation(Remote Query Only)

Queries TDD slot allocation in one transmission periodicity.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:SLOT:ALLocation?`
Example	`:RAD:STAN:PRES:SLOT:ALL?`
Preset	"DDDDDDDSUU"

Ignore Duplex Mode for Fulfilled RB Alloc

This is the same as "Ignore Duplex Mode for Fulfilled RB Alloc" on page 3321.

SCS

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press "Apply Preset (to all CCs)".

NOTE: **You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

In 5G, subcarrier spacing is governed by 2^n * 15 kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS480K | SCS960K`
	For option details, see "Selections & Dependencies" on page 2477
	`[:SENSe]:RADio:STANdard:PRESet:SCS?`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?`

Example	`:RAD:STAN:PRES:SCS SCS30K` `:RAD:STAN:PRES:SCS?`

	:RAD:STAN:PRES:SCS:AUTO 0 :RAD:STAN:PRES:SCS:AUTO?
Notes	Not preset to the selection until **Apply Preset (to All CCs)** is executed
Dependencies	Available selections depend on a combination of Bandwidth and Frequency Range, as detailed in "Selections & Dependencies" on page 2477
Preset	SCS30K ON
State Saved	Yes Yes
Range	u = 0: 15 kHz | u = 1: 30 kHz | u = 2: 60 kHz | u = 3: 120 kHz | u = 5: 480 kHz | u = 6: 960 kHz Auto|Man

Selections & Dependencies

FR	Bandwidth	SCS	SCPI
FR1	5 MHz	15K*/30K	SCS15K, SCS30K
	10 – 50 MHz	15K*/30K/60K	SCS15K, SCS30K, SCS60K
	60 – 100 MHz	30K*/60K	SCS30K, SCS60K
FR2	50, 100, 200 MHz	60K*/120K	SCS60K, SCS120K
	400 MHz	120K*/480K/960K	SCS120K, SCS480K, SCS960K
	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K
FR2-1	50, 100, 200 MHz	60K*/120K	SCS60K, SCS120K
	400 MHz	120K*	SCS120K
FR2-2	100 MHz	120K*	SCS120K
	400 MHz	120K*/480K/960K	SCS120K, SCS480K, SCS960K
	800, 1600 MHz	480K*/960K	SCS480K, SCS960K
	2000 MHz	960K*	SCS960K

(*) When in Auto, the narrowest available SCS is selected.

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 3292 will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

"Fulfilled-xxx" is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and "DL-NR-TM x.x" is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTM1DOT1 | DLTM1DOT2 | DLTM2 | DLTM2Q16 | DLTM2QPS | DLTM2A | DLTM2B | DLTM3DOT1 | DLTM3DOT1Q16 | DLTM3DOT1QPS | DLTM3DOT1A | DLTM3DOT1B | DLTM3DOT2 | DLTM3DOT3 | FPIBPSK | DLTM1DOT1P1 | DLTM1DOT1L2` For selection details, see "Available Selections" on page 2479 `[:SENSe]:RADio:STANdard:PRESet:RBALloc?`
Example	`:RAD:STAN:PRES:RBAL DLTM1DOT1` `:RAD:STAN:PRES:RBAL?`
Notes	Resource Block Allocation Preset will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed
Dependencies	See "Available Selections" on page 2479
Preset	`FQPSK`
State Saved	Yes
Range	Cascading List

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier NORMal | V2X` `[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier?`
Example	`:RAD:STAN:PRES:ULIN:CARR NORM`

	:RAD:STAN:PRES:ULIN:CARR?
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMal
State Saved	Saved
Range	Normal Uplink|Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 | TS37CS1617 [:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?
Example	RAD:STAN:PRES:DLIN:NRTM TS38 RAD:STAN:PRES:DLIN:NRTM?
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 | TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm | DFTSofdm` `[:SENSe]:RADio:STANdard:PRESet:OTYPe?`
Example	`:RAD:STAN:PRES:OTYP CPOF` `:RAD:STAN:PRES:OTYP?`
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`CPOFdm`
State Saved	Yes
Range	CP-OFDM|DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE | FTO1 | F1TO3 | F3TO4P2 | F4P2TO6 | F6TO7 | F24P25TO29P5 | F37TO40 | F43TO48 | F52TO71`
	For option details, see "Selections & Dependencies" on page 2483
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?`

Example	:RAD:STAN:PRES:ADJ:FRAN F1TO3 :RAD:STAN:PRES:ADJ:FRAN? :RAD:STAN:PRES:ADJ:FRAN:AUTO 1 :RAD:STAN:PRES:ADJ:FRAN:AUTO?
Dependencies	Available selections depend on Frequency Range. See "Selections & Dependencies" on page 2483
Couplings	When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0 Not preset to the selection until **Apply Preset (to All CCs)** is executed
Preset	Automatically selected The selection depends on which listed range the CC0 center freq is in ON
State Saved	Yes Yes
Range	None|f ≤ 1.0 GHz|1.0 < f ≤ 3.0 GHz|3.0 < f ≤ 4.2 GHz|4.2 < f ≤ 6.0 GHz|6.0 < f ≤ 7.125 GHz |24.25 < f ≤ 29.5 GHz|37.0 < f ≤ 43.5 GHz |43.5 < f ≤ 48.2 GHz|52.6 < f ≤ 71.0 GHz

Selections & Dependencies

Frequency Range	Selection	SCPI
FR1	f ≤ 1.0 GHz	FTO1
	< f ≤ 3.0 GHz	F1TO3
	3.0 < f ≤ 4.2 GHz	F3TO4P2
	4.2 < f ≤ 6.0 GHz	F4P2TO6
	6.0 < f ≤ 7.125 GHz	F6TO7
FR2	24.25 < f ≤ 29.5 GHz	F24P25TO29P5
	37.0 < f ≤ 43.5 GHz	F37TO40
	43.5 < f ≤ 48.2 GHz	F43TO48
	52.6 < f ≤ 71.0 GHz	F52TO71
FR2-1	24.25 < f ≤ 29.5 GHz	F24P25TO29P5
	37.0 < f ≤ 43.5 GHz	F37TO40
	43.5 < f ≤ 48.2 GHz	F43TO48
FR2-2	52.6 < f ≤ 71.0 GHz	F52TO71

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

– 1-C (FR1 Conducted)

– 1-O (FR1 Radiated)

– 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE FR1C | FR1O | FR2O` `[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:TYPE?`
Example	`:RAD:STAN:PRES:DLIN:BS:TYPE FR1C` `:RAD:STAN:PRES:DLIN:BS:TYPE?`
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	`FR1C`
State Saved	Yes
Range	1-C (FR1 Conducted)|1-O (FR1 Radiated)| 2-O (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

– Category A Wide Area BS

– Category B Wide Area BS

– Category A Medium Range BS

– Category B Medium Range BS

– Category A Medium Range BS (Low Power rated)

– Category B Medium Range BS (Low Power rated)

– Category A Local Area BS

– Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE: You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory AWARea | BWARea | AMRange | BMRange | AMRLow | BMRLow | ALARea | BLARea` `[:SENSe]:RADio:STANdard:PRESet:DLINk:BS:CATegory?`
Example	`:RAD:STAN:PRES:DLIN:BS:CAT BWAR` `:RAD:STAN:PRES:DLIN:BS:CAT?`
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	`BWARea`
State Saved	Yes
Range	Category A Wide Area BS| Category B Wide Area BS| Category A Medium Range BS|Category B Medium Range BS|Category A Medium Range BS (Low Power rated)|Category B Medium Range BS (Low Power rated)|Category A Local Area BS|Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE] NR | EUTRa | NREutra` `[:SENSe]:RADio:STANdard:PRESet:DLINk:ACHannel[:TYPE]?`
Example	`:RAD:STAN:PRES:DLIN:ACH NR` `:RAD:STAN:PRES:DLIN:ACH?`
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 3313 is Sidelink - V2X

Preset	NR
State Saved	Yes
Range	NR (same BW)|E-UTRA|NR + E-UTRA

Uplink

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE] NR | UTRa | NRUTra [:SENSe]:RADio:STANdard:PRESet:ULINk:ACHannel[:TYPE]?
Example	:RAD:STAN:PRES:ULIN:ACH NR :RAD:STAN:PRES:ULIN:ACH?
Preset	NR
State Saved	Yes
Range	NR (same BW)|UTRA|NR + UTRA

Uplink Channel Type

This control is part of the "Preset for Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the "Configure Preset" section, then press "Apply Preset (to all CCs)" to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe NONE | PUS | PRA4 | PRA160S15 | PRA160S30 | PRA12 | PRA123S15 | PRA123S30 | SRS | PRA0S60 | PRA0S120 [:SENSe]:RADio:STANdard:PRESet:ULINk:CTYPe?
Example	:RAD:STAN:PRES:ULIN:CTYP PUS :RAD:STAN:PRES:ULIN:CTYP?
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	PUS
State Saved	Yes
Range	PUSCH|PRACH Config Index 4|PRACH Config Index 160 (15 kHz SCS)|PRACH Config Index 160 (30 kHz SCS)|PRACH Config Index 12|PRACH Config Index 123 (15 kHz SCS)|PRACH Config Index 123 (30 kHz SCS)|PRACH Config Index 0 (60 kHz SCS)|PRACH Config Index 0 (120 kHz SCS)|SRS

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See "Apply Preset (to All CCs)" on page 3322.

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?`
Example	`:RAD:STAN:PRES:INCL:EVM:RBAL 1` `:RAD:STAN:PRES:INCL:EVM:RBAL?`
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when “Apply Preset (to All CCs)” is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?`
Example	`:RAD:STAN:PRES:INCL:EGAT:SOUR 1` `:RAD:STAN:PRES:INCL:EGAT:SOUR?`
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?`
Example	`:RAD:STAN:PRES:INCL:FRAM:PER 1` `:RAD:STAN:PRES:INCL:FRAM:PER?`
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?`
Example	`:RAD:STAN:PRES:INCL:FRAM:SYNC 1` `:RAD:STAN:PRES:INCL:FRAM:SYNC?`
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?`
Example	`:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1` `:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?`
Preset	ON
State Saved	Yes

Ignore Duplex Mode for Fulfilled RB Alloc

Enables you to select in Modulation Analysis measurement whether or not to ignore Duplex Mode for Fulfilled preset when "Apply Preset (to All CCs)" is executed. This parameter is valid only for the TDD duplex mode.

On: for fulfill preset FDD preset will be applied to modulation analysis measurement regardless of Duplex Mode setting

Off: for fulfill preset TDD preset based on the DL NR-TM will be applied to modulation analysis measurement

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe OFF | ON | 0 | 1` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:FULFilled:IGNore:DMODe?`
Example	`:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD 1` `:RAD:STAN:PRES:RBAL:FULF:IGN:DMOD?`
Notes	Only apply to Modulation Analysis measurement
Dependencies	Unavailable when Duplex Mode is FDD, or Duplex Mode is User Defined, or Frequency Range is FR2, or RB Alloc Preset is DL NR TM
Preset	ON
State Saved	Yes

Adjust Meas Time Length for TM

Enables you to select in Modulation Analysis measurement whether or not to adjust Meas Time settings when Test Model preset is selected and "Apply Preset (to All CCs)" is executed.

None: do not adjust Meas Time settings for Test Model

1 Frame: adjust Meas Time settings for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
All	22 msec	10 Sub Frame	10 Sub Frame	Frame

3GPP: adjust Meas Time Setting for Test Model according to below table

TM Preset	Search Length	Result Length	Meas Interval	Analysis Boundary
FR1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-1	32 msec	20 Sub Frame	20 Sub Frame	Frame
FR2-2 (120K SCS)	32 msec	160 slots	160 slots	slot

FR2-2 (480K SCS)	17 msec	160 slots	160 slots	slot
FR2-2 (960K SCS)	14.5 msec	160 slots	160 slots	slot

Remote Command	`[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth NONE | FRAMe | GPP` `[:SENSe]:RADio:STANdard:PRESet[:TDDConfig]:RBALloc:TIME:LENGth?`
Example	`:RAD:STAN:PRES:RBAL:TIME:LENG GPP` `:RAD:STAN:PRES:RBAL:TIME:LENG?`
Notes	Only apply to Modulation Analysis measurement
State Saved	Yes

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values of parameters in the Meas Standard menu. These values will also be used for any subsequent Component Carriers created.

NOTE You must press "**Apply Preset (to all CCs)**" or the values on the controls in the "Configure Presets" section of the menu panel will *not* affect the Component Carriers.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:IMMediate`
Example	`:RAD:STAN:PRES:IMM`
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until "Apply Preset" is executed again – Start-up – Mode Preset – Recall

Values for Meas Standard

Note: Unless specifically stated otherwise, descriptions of Frequency Range selection "FR2" in this chapter cover either or both "FR2-1" or/and "FR2-2" selection.

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 | FR2 | FR2-1 | FR2-2	FR1 | FR2 | FR2-1 | FR2-2
Duplex Mode	FDD | TDD	FDD | TDD
SCS	μ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	μ = 0 (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers),1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT and Spur only)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)	None, f ≤ 1.0 GHz (FR1), 1.0 < f ≤ 3.0 GHz (FR1), 3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2-1), 37.0 < f ≤ 43.5 GHz (FR2-1), 43.5 < f ≤ 48.2 GHz (FR2-1), 52.6 < f ≤ 71.0 GHz (FR2-2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr),	n/a

	Cat A Local Area BS, Cat B Local Area BS	
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4
UL Channel Type (for Tx On|Off Power)	n/a	When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2: PUSCH, PRACH Config Index 0 (60 kHz SCS), PRACH Config Index 0 (120 kHz SCS), SRS

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "Apply Preset (to All CCs)" on page 3322 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

3GPP TS38.141-1 v.17.9.0 (2023-03)

ACP: Table 6.6.3.5.2-1

SEM: Table 6.6.4.5.3.1-3

Direction = Downlink

ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Direction = Uplink

When UL Carrier Mode = Normal Uplink:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW) UTRA, NR + UTRA	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5.2.4.1.5-2 Table 6.5.2.4.2.5-2	Table 6.5.2.2.5-1
FR2		TS38.521-2 v.17.2.0 (2023-03)	Table 6.5.2.3.5-1	Table 6.5.2.1.5-1

When UL Carrier Mode = Sidelink / V2X:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1 v.17.8.0 (2023-03)	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are preset when Apply Preset is executed.

– "Configure Component Carriers" on page 3329
– "Trigger/Gate Parameters" on page 3329

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	**Sidelink**
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing “Apply Preset”, preset the following parameters:

		Preset values				
		TDD / FDD Duplex Mode			User Defined Duplex mode	
Trigger menu	Parameter	Downlink (*1) FR1	Downlink (*1) FR2	Uplink	Downlink	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms	Transmission periodicity	Transmission periodicity
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us	Off	Off
Gate Settings	Gate (*5)	On	On	(no preset)	On	On
	Gate Delay	5.000 ms	1.250 ms	(no preset)	Transmission periodicity (*8)	Transmission periodicity (*8)

	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)	Duration of downlink slots and symbols	Duration of uplink slots and symbols
	Gate Holdoff	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst	RF Burst	RF Burst
	Absolute Trig Level	(no preset)	(no preset)	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)	Off	Off
	Holdoff Type	(no preset)	(no preset)	Below (*7)	(no preset)	(no preset)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when "RB Alloc Preset" on page 3310 is any of NR-TM and "Duplex Mode" on page 3304 is TDD

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW ≤ 255 MHz) or External 3 (when Info BW ≥ 256 MHz) depending on the Info BW determined by the component carrier configuration

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called “Periodic Timer Period”

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter

(*5) Gate is preset to Off with the Apply Preset action when "Duplex Mode" on page 3304 is FDD

(*6) Gate Length preset value for DL FR1 depends on "DL FR1 NR-TM Reference Standard Selection" on page 3305 under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope =

Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down

(*8) If transmission periodicity is less than 1ms, use the lowest multiple of transmission periodicity that is greater than or equal to 1ms

ACP

The following parameters are preset when Apply Preset is executed.

– "BW Parameters" on page 3331
– "Trace Detector" on page 3331
– "Sweep Parameter" on page 3331
– Frequency Parameters
– Meas Setup: Settings Parameter
– "Meas Setup: Configure Component Carrier Parameters" on page 3333
– "Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters" on page 3335

BW Parameters

Parameter	Preset Value
Res BW	100 kHz
Res BW State	Man
Video BW State	Auto

Trace Detector

Parameter	Preset Value
Detector	Auto (Average)

Sweep Parameter

Parameter	Preset Value
Auto Sweep Points	On

Frequency Parameters

Preset Configuration				Preset Value
Direction	**FR**	**Bandwidth**	**Assumed Adj Channels**	**Span (*1)**
Downlink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW), NR + E-UTRA	= 4 x Bandwidth + RFBW (*2)
			E-UTRA	= 20 MHz + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
Uplink	FR1	5, ..., 100 MHz 35, 45 MHz	NR (same BW)	= 2 x Bandwidth + RFBW (*2)
			UTRA	= 20 MHz + RFBW (*2)
			NR + UTRA	= max(2 x Bandwidth, 20 MHz) + RFBW (*2)
	FR2	50, 100, 200, 400 MHz 100, 400, 800, 1600, 2000 MHz	NR (same BW)	= 3 x RFBW (*2)

Notes:

(*1) Span value is preset to the wider one from either the value specified in this table or the value which is calculated based on all the set parameters for CCs and Offsets whichever being necessary.

(*2) “RFBW” represents:

- The “Bandwidth” of the selected CC for 1 CC case,
- The RF Bandwidth which is equivalent to the $BW_{channel, CA}$ with “Measure Carrier = ON” for all CCs for Multiple CC cases (in both Contiguous or Non-contiguous allocations), where $BW_{channel, CA}$ is defined in clause 5.3A.2, 3GPP TS38.104 for downlink (BTS), or in clause 5.3A.2, 3GPP TS38.101 for uplink (UE).

Meas Setup: Settings Parameter

Parameter	Preset Value
Meas Method	Integration BW

Meas Setup: Configure Component Carrier Parameters

– When "Adjust Limit Mask for Freq Range" is set to a value other than "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	
Uplink	FR1	5 MHz	15, 30 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB} + \text{SCS [kHz]}\}$
		10, ..., 50 MHz	15, 30, 60 kHz	
		60, ..., 100 MHz	30, 60 kHz	
	FR2	50, 100, 200 MHz	60, 120 kHz	
		400 MHz	120 kHz	

where:

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

– When "Adjust Limit Mask for Freq Range" is set to "52.6 < f ≤ 71.0 GHz" (FR2-2):

Preset Configuration				Preset Value
Direction	FR	Bandwidth	SCS	ACP Power Integration Bandwidth for all CC0...15
Downlink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB}\}$
		400 MHz	120, 480,	

			960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	
Uplink	FR2	100 MHz	120 kHz	$\max_{SCS}\{N_{RB}(\text{Bandwidth}, \text{FR}, \text{SCS}) \times \text{SCS [kHz]} \times N_{sc}^{RB} + \text{SCS [kHz]}\}$
		400 MHz	120, 480, 960 kHz	
		800, 1600 MHz	480, 960 kHz	
		2000 MHz	960 kHz	

where:

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in the Section "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Downlink: 3GPP TS38.817-02 v.15.9.0 (2020-09):

5.5.3 Adjacent Channel Leakage ratio

5.5.3.1 NR ACLR

“ACLR is the ratio of power of wanted signal to the power falling into Adjacent Channel. ACLR measurement bandwidth for both the wanted and adjacent channels is the maximum transmission bandwidth among the different SCSs of CP-OFDM SU for a channel BW with addition of one SCS to account for half SCS shift due to SCS alignment to DC, this measurement bandwidth is centered within the channels.”

Uplink: 3GPP TS38.817-01 v.16.2.0 (2020-09):

6.6.3 Adjacent Channel Leakage Power Ratio (ACLR)

– (snip)

– “Maximum transmission bandwidth configuration of the BS channel bandwidth (between subcarrier spacing) specified in Release 15 should be used as a measurement bandwidth for adjacent channel power measurement, i.e. the measurement bandwidth should also apply to future releases regardless of whether new SU is introduced or not.”

Meas Setup: Power Ref & Offset/Limit Configs: Outer/Inner Offset Parameters

Preset Configuration (*1)				Preset Value (*2)		
Direction	**FR**	**Carrier Allocation**	Assumed Adjacent Chan	Power Reference	Offset Freq Define	Offset Preset Case
Downlink	FR1	Contiguous, Non-Contiguous	NR (same BW)	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
			E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: EtoC Inner: StoC	Outer: Case 2 Inner: Case 1
	FR2	Contiguous, Non-Contiguous	NR (same BW), E-UTRA, E-UTRA + NR	Left & Right Carriers	Outer: CtoC Inner: StoC	Outer: Case 1 Inner: Case 1
Uplink	FR1	Contiguous	NR (same BW)	Aggregated Channel BW	Outer: CtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Aggregated Channel BW	Outer: EtoC Inner: SCtoC	Outer: Case 2 Inner: Case 1
		Non-Contiguous	NR (same BW)	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
			UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 2 Inner: Case 2
	FR2	Contiguous	NR (same BW), UTRA, UTRA + NR	Aggregated Channel BW	Outer: RCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1
		Non-Contiguous	NR (same BW), UTRA, UTRA + NR	Left & Right Sub-blocks	Outer: SCtoC Inner: SCtoC	Outer: Case 1 Inner: Case 1

Notes:

(*1) Preset Configuration:

- Direction is located at the Radio tab menu.
- Carrier Allocation is located at the Component Carriers tab menu.

- FR and Assumed Adjacent Channesls are located at the Meas Standard tab menu.
- 3GPP TS38.521-1/2 have not clearly specified Uplink non-Contiguous CA test cases yet. The Left & Right Subblocks and the SCtoC selections are based on the assumption of BWChannel,CA as BWContiguous.
- Assumed Adjacent Channesls = “E-UTRA”, “E-UTRA + NR” for Downlink and “UTRA”, “UTRA + NR” for Uplink are not applicable to FR2.

(*2) Notes for Preset Value:

- Power Ref(erence) is located at the Reference tab menu.
- Outer and Inner Offset Freq Define parameters are located at the Offset and the Inner Offset sub-menus, respectively, in the Carrier/Offset/Limits Configuration dialog menu.
- Outer/Inner Offset Preset Case 1 and 2 indicate the tables in the following section.
- Outer/Inner Offset Freq Define:
  - CtoC: (Left & Right) Carrier Center to Offset Center
  - EtoC: (Left & Right) Carrier Edge to Offset Center
  - RCtoC: RFBW Center to Offset Center
  - SCtoC: (Left & Right) Sub-block Center to Offset Center
  - StoC: (Left & Right) Subblock Edge to Offset Center
- Power Ref = Aggregated Chan BW is actually the same as the Power Ref = Left & Right Sub-blocks when the Carrier Allocation = Contiguous.
- Inner Offset setting is fundamentally N/A when Carrier Allocation = Contiguous.

Outer Offset Preset Case 1

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “NR (same BW)” for DL/UL, or FR2 with Assumed Adjacent Channels (ACLR) = any case for DL/UL.

Outer Offset Parameters (for the Outer Offset Preset Case 1):

Parameter	Preset Configuration			Preset Value
	Direction	FR	Offset	

Offset Freq State	Downlink	FR1	A, B	On
			C, ... , L	Off
		FR2	A	On
			B, ... , L	Off
	Uplink		A	On
			B, ... , L	Off
Offset Freq	Downlink		A	BW_{CC}
			B	$2*BW_{CC}$
			C, ... , L	0 Hz
	Uplink	FR1	A	BW_{CC}
			B, ... , L	0 Hz
		FR2	A	When Num of CCs = 1: BW_{CC} When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]}$
			B, ... , L	0 Hz
Integ BW	Downlink		All	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{SC}^{RB}\}$
	Uplink	FR1	All	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{sc}^{RB} + SCS\,[kHz]\}$
		FR2	All	When Num of CCs = 1: $\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\,[kHz] \times N_{sc}^{RB} + SCS\,[kHz]\}$ When Num of CCs > 1 with Contiguous allocation: $BW_{Channel,CA} - 2*BW_{GB}$ When Num of CCs > 1 with Non-Contiguous allocation: $BW_{Channel,block[n]} - 2*BW_{GB}$

where:

BW_{CC}: "Bandwidth" in the Configure Preset menu under Meas Standard tab, representing CC Bandwidth

$BW_{Channel,CA}$: Aggregated Channel Bandwidth, defined in the clause 5.3A.2 in TS38.521-2

$BW_{Channel,block[n]}$: Aggregated Sub-block[n] Bandwidth (where n=1 for the Left Sub-block, 2 for the Right Sub-block, defined in the clause 5.3A.2 in TS38.521-2

BW_{GB}: Guard Band bandwidth, defined in the clause 5.3A.2 in TS38.521-2

FR: Frequency Range, applied in the Configure Preset menu

N_{RB} is referred to "Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)" in "N_Grid_Size (Display Only)" on page 1828

$N_{sc}^{RB} = 12$

  (*1) Note: TT for V2X test requirement has not been defined yet (TBD/FFS) in TS38.521-1 v.17.5.0. Keep the same TT values for normal Uplink.

Inner Offset Preset Case 2

When Frequency Range = FR1 with Assumed Adjacent Channels (ACLR) = “UTRA” or “NR + UTRA” for UL.

Inner Offset Parameters (for the Inner Offset Preset Case 2):

Parameter(all Uplink)	Preset Configuration		Offset	Preset Value
	Carrier Allocation	Assumed Adj Chan		
Offset Frequency State	Contiguous	UTRA, NR + UTRA	All	Set to default values
	Non-Contiguous	UTRA	A, B	See "Table 2a Offset Freq State" on page 2523
			C, … , L	Off
		NR + UTRA	A, B, C	See "Table 2a Offset Freq State" on page 2523
			D, … , L	Off
Offset Freq			A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 2523

	D, ... , L	0 Hz
Integ BW	A, B, C	See "Table 2b Offset Freq and Integ BW Offset A/B/C" on page 2523
	D, ... , L	Same value as Offset C
Offset Side	All	Both
Method and Filter Alpha	A, B	RRC Weighted, Filter Alpha = 0.22
	C, ... , L	Integration BW
Res BW State	All	Auto
Video BW State	All	Auto
Power Ref Type	All	See "Table 2a Offset Freq State" on page 2523

Table 2a Offset Freq State

Preset Configuration			Wgap(Sub-block gap) (MHz)	Preset Value					
Direction	FR	Bandwidth		Offset Enabled			Power Ref Type (*)		
				A	B	C	A	B	C
Uplink	FR1	5, ..., 100 MHz	Wgap < 5				Norm	Norm	Norm
			5 ≤ Wgap < 10	✓		(+)	Norm	Norm	Norm
			10 ≤ Wgap	✓	✓	(+)	Norm	Norm	Norm
			Wgap < Bandwidth	(++)	(++)		Norm	Norm	Norm
			Bandwidth ≤ Wgap	(++)	(++)	✓	Norm	Norm	Norm

(*) Power Ref Type: Cum = Cumulative, Norm= Normal

(+) Same as the rows of “Wgap < Bandwidth” and “Bandwidth ≤ Wgap”.

(++) Same as the rows of “Wgap < 5”, “5 ≤ Wgap < 10”, and “5 ≤ Wgap”.

Table 2b Offset Freq and Integ BW Offset A/B/C

Preset Configuration			Offset	Preset Value	
Direction	FR	Bandwidth		Offset Freq (MHz)	Offset Integ BW (MHz)
Uplink	FR1	5, ..., 100 MHz	A	2.5	3.84 MHz
			B	7.5	3.84 MHz
			C	= 0.5 x Bandwidth	$\max_{SCS}\{N_{RB}(BW_{CC}, FR, SCS) \times SCS\ [kHz] \times N_{sc}^{RB} + SCS\ [kHz]\}$

where:

Bandwidth: applied in the Configure Preset menu,

FR: Frequency Range, applied in the Configure Preset menu,

N_{RB} is referred to “Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104 for Downlink, TS38.101-1 for Uplink FR1 and TS38.101-2 for Uplink FR2)” in "N_Grid_Size (Display Only)" on page 1828,

$N_{sc}^{RB} = 12$

Inner Limit Parameters (for the Inner Offset Preset Case 2):

Parameterfor Uplink	Preset Configuration			Offset	Preset Value
	FR	Adjust Range(GHz)	UE Power Class		
Fail Mask				All	Abs AND Rel
Abs Limit	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125		All	-50 dBm
Rel Limit (Car)	FR1	None, f ≤ 1.0, 1.0 < f ≤ 3.0, 3.0 < f ≤ 4.2, 4.2 < f ≤ 6.0, 6.0 < f ≤ 7.125	Power Class 1	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-36.2 dB (= -37 + TT 0.8)
			Power Class 2	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-30.2 dB (= -31 + TT 0.8)
			Power Class 3	A	-32.2 dB (= -33 + TT 0.8)
				B	-35.2 dB (= -36 + TT 0.8)
				C, ..., L	-29.2 dB (= -30 + TT 0.8)

FR1: TS38.521-1 v.17.6.1 (v.2022-10):

- Abs Limit: Clause 6.5.2.4.2.5 Test requirement
- Rel Limit: Table 6.5.2.4.2.5-2 UTRA ACLR requirement, Table 6.5.2.4.1.5-2: NR ACLR requirement and Table 6.5.2.4.1.5-3 Test Tolerance (NR ACLR)

  Note: Offsets C...F are OFF; the relative limit values are just derived from the UL E-UTRA limit values.

Spectrum Emission Mask

The following parameters are preset when Apply Preset is executed.

- "BW Parameter" on page 3357
- "Offset RAT" on page 3357

– "Carrier Parameters" on page 3357
– "Reference Parameter" on page 3358
– "Configure Component Carrier Parameter" on page 3358
– "Outer/Inner Offset Parameters" on page 3359
– "Other Offset/Limit Parameters" on page 3360

BW Parameter

When executing Apply Preset, preset the following parameter:

– BW > Settings Tab > RBW Filter Type: Gaussian

Offset RAT

Channel BW / 2 is used as Offset RAT.

Carrier Parameters

Res BW

Preset Configuration	Preset Value
Bandwidth	RBW (kHz)
5 MHz	47
10 MHz	91
15 MHz	150
20 MHz	180
25 MHz	240
30 MHz	270
35 MHz	330
40 MHz	390
45 MHz	430
50 MHz	470
60 MHz	560
70 MHz	680
80 MHz	750
90 MHz	820
100 MHz	910

200 MHz	1800
400 MHz	3000
800 MHz	3000
1600 MHz	3000
2000 MHz	3000

RBW values in the table come from auto RBW values calculated in Swept SA when Bandwidth value is set to Span.

Note that the maximum set RBW value by the auto RBW setting is 3 MHz.

Channel Detector

Parameter	Preset Value
Channel Detector	Auto (Average)

Reference Parameter

Preset Configuration		Preset Value	
Direction	FR	Measurement Type	Power Ref
Downlink	FR1	Total Power Ref	L & R Carriers
	FR2	Total Power Ref	RF Bandwidth
Uplink	FR1	Total Power Ref	RF Bandwidth
	FR2	Total Power Ref	RF Bandwidth

Configure Component Carrier Parameter

Direction	Preset Configuration			Preset Value
	FR	Bandwidth	SCS	SEM Power Integration Bandwidth for all CC0...15
Downlink	FR1	5, ..., 100 MHz	15, 30, 60 kHz	Same as Carrier Bandwidth
	FR2	50, 100, 200, 400 MHz	60, 120 kHz	
		100, 400, 800, 1600, 2000 MHz	120, 480, 960 kHz	
Uplink	FR1	5, ..., 100 MHz	15, 30, 60 kHz	Same as Carrier Bandwidth
	FR2	50, 100, 200, 400 MHz	60, 120 kHz	
		100, 400, 800, 1600, 2000 MHz	120, 480, 960 kHz	

Outer/Inner Offset Parameters

Parameters common to all offsets in both downlink and uplink

Parameter	Preset Configuration		Inner/Outer	Preset Value
	Direction	FR		
Offset Detector			Both	Peak (Auto)
Offset Frequency Define	Downlink	FR1	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
		FR2	Outer	RFBW Edge-to-Center
			Inner	Subblock Edge-to-Center
	Uplink	FR1	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
		FR2	Outer	Edge-to-Center
			Inner	Subblock Edge-to-Center
Res BW Auto State			Both	Off
Video BW Auto State			Both	On
VBW/RBW Auto State			Both	Off
VBW/RBW			Both	0.01
Sweep Time Auto State			Both	On
Sweep Type Auto State			Both	On
Offset Side			Both	Both

Cumulate Mask (Inner Offset only)

Preset Configuration		Preset Value	
Direction	FR	Cumulate Mask	Cumulate Mask Stop Frequency
Downlink	FR1	On	10.5 MHz
	FR2	On	1.50 GHz
Uplink	FR1	Off	10.5 MHz
	FR2	Off	1.50 GHz

Other Offset/Limit Parameters

Downlink, FR1, BS type = 1-C:

When executing Apply Preset: “Show Abs2 Limit” = Off

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-4: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (NR bands ≤ 3.0 GHz).

Note:
According to the Table 6.7.4.5.1.4-4 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as "-11.2 dB – (7/5)*((f_offset / MHz) – 0.05) dB" which implies the Offset A Rel Limit -11.2 thru -18.2 dB with the Fail Mask = Rel. However, it is suspected that the description "-11.2 dB" in the Table 6.7.4.5.1.4-4 is a typo and is supposed to be "-11.2 dBm". Thus, keeping the Offset A Limit -11.2 thru -18.2 dBm with the Fail Mask = Abs.

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-5: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (3 GHz < NR bands ≤ 4.2 GHz),

TS38.141-2 v.17.7.0 (v.2022-09) Table 6.7.4.5.1.4-6: Medium Range BS operating band unwanted emission limits, $P_{rated,x} \leq 40$ dBm (4.2 GHz < NR bands ≤ 6 GHz).

Note:
According to the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 (v.17.7.0 (v.2022-09)), the limit requirement of the offset range from 0.05 to 5.05 MHz is described as "-11 dB – (7/5)*((f_offset / MHz) – 0.05) dB" which implies the Offset A Rel Limit -11 thru -18 dB with the Fail Mask = Rel. However, it is suspected that the description "-11.2 dB"

in the Table 6.7.4.5.1.4-5 & 6.7.4.5.1.4-6 are typo and is supposed to be “-11 dBm”. Thus, keeping the Offset A Limit -11 thru -18 dBm with the Fail Mask = Abs.

BS Category = Cat A MR BS (Low P_r) or Cat B MR BS (Low P_r), Adjust Range: 6.0 < f ≤ 7.125 GHz

B	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
C	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
D	✓	(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled
E-L		(***)	(***)	✓	0	0	✓	Abs	0	0	✓	Disabled

Note that $BW_{Channel}$ is CC BW.

(*) RBW (kHz) for Offset A setting:

CC BW (MHz)	5	10	15	20	25	30	35	40
RBW (kHz)	24.0	51.0	75.0	100.0	130.0	150.0	180.0	200.0

Note:
In the 3GPP definition, 2*RBW(A) = 0.01 * $BW_{Channel}$ for 5,..., 40 MHz CCs or 30 kHz for 50, ..., 100 MHz CCs, and 2*RBW(B) = 1 MHz for all CC BW.
Meanwhile, since X-series signal analyzers provides RBW in discrete line-up only, RBW(A) and RBW(B) are selected as in the table to follow the 3GPP requiement as close as possible.

Better to choose RBW to make MeasBW equal or slightly wider than required, based on the “fail-safe design” policy: e.g. for 35 MHz CC BW, preferred to set RBW 180 kHz (x2 > 350 kHz) than 160 kHz (x2 < 350 kHz) so that measurement can wouldn’t miss a bad DUT.

(**) RBW (kHz) for Offset A setting of the 45 MHz CC BW (in Release 17):

RBW = 150 kHz and MeasBW = 3 to get the 3GPP requirement 450 kHz.

(***) Absolute Limit (dBm) settings:

Offset	CC BW	Adjust Range: None, and f ≤ 1.0 GHz & 1.0 < f ≤ 3.0 GHz	Adjust Range: 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, and 6.0 < f ≤ 7.125 GHz
A	5, ..., 45 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
	50, ..., 100 MHz:	-22.5 dBm = -24 + TT 1.5	-22.2 dBm = -24 + TT 1.8
B	5, ..., 100 MHz:	-8.5 dBm = -10 + TT 1.5	-8.2 dBm = -10 + TT 1.8
C	5, ..., 100 MHz:	-11.5 dBm = -13 + TT 1.5	-11.2 dBm = -13 + TT 1.8
D	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8
E-L	5, ..., 100 MHz:	-23.5 dBm = -25 + TT 1.5	-23.2 dBm = -25 + TT 1.8

Note that TT values for V2X test requirement have not been defined yet (TBD/FFS) in TS38.521-1 v.17.7.0. Keep the same TT values for Uplink.

Modulation Analysis

The following parameters are preset when Apply Preset is executed.

– "Configure Component Carriers|Channel Profile: Resource Grid" on page 3391

– "Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values" on page 3392

– "Advanced: Advanced Demod Setup" on page 3393

Note: CC channel configuration (including CC BW, FR, SCS) and Resource Block allocation map & settings are preset by recalling each scp (Signal Studio/PWSG, prepared internally) file accordingly, based on the “RB Alloc Preset” selection.

Configure Component Carriers|Channel Profile: Resource Grid

When presetting Freq Range and Bandwidth, the resource grid is reset to its default values per SCS accordingly. Also the resource grid config mode is reset to its default value: Manual.

- Transmission bandwidth configuration N_{RB} for FR1:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz

TS38.104 v.17.7.0 (v.2022-09):

- Table 5.3.2-2: Transmission bandwidth configuration NRB for FR2-1 (Downlink for BTS).
- Table 5.3.2-3: Transmission bandwidth configuration NRB for FR2-2 (Downlink for BTS).

TS38.101-2 or TS38.521-2 v.17.0.0 (v.2022-09) Table 5.3.2-1: Maximum transmission bandwidth configuration NRB for FR2 (Uplink for UE).

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Meas Time: Meas Time parameter values

Meas Time parameters are preset to the following values when Apply Preset is executed, depending on Frequency Range, Adjust Meas Time Length for TM (Test Model), Duplex Mode, and RB Alloc Preset.

When Duplex Mode = TDD, and RB Alloc Preset = any DL NR-TMx.x:

- When Adjust Meas Time Length for TM = None: no preset for Meas Time parameters
- When Adjust Meas Time Length for TM = Frame or 3GPP: Refer to "Adjust Meas Time Length for TM" on page 3321

Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values

When presetting Freq Range, Bandwidth, SCS and the OFDM Type, the RB Offset values are preset to 0 RBs, and the RB Number values are preset to the following values.

- N_{RB} values for FR1 Downlink and Uplink, when the OFDM Type = CP-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	52	79	106	133	160	188	216	242	270	n/a	n/a	n/a	n/a	n/a
30	11	24	38	51	65	78	92	106	119	133	162	189	217	245	273
60	n/a	11	18	24	31	38	44	51	58	65	79	93	107	121	135

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common uplink configuration

- N_{RB} values for FR1 Uplink (only), when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	5MHz	10 MHz	15 MHz	20 MHz	25 MHz	30 MHz	35 MHz	40 MHz	45 MHz	50 MHz	60 MHz	70 MHz	80 MHz	90 MHz	100 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
15	25	50	75	100	128	160	180	216	240	270	n/a	n/a	n/a	n/a	n/a
30	10	24	36	50	64	75	90	100	108	128	162	180	216	243	270
60	n/a	10	18	24	30	36	40	50	54	64	75	90	100	120	135

- N_{RB} values for Downlink and Uplink FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	n/a
120	32	66	132	264
240(*)	16	32	66	132

- N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = CP-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	66	264	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

- N_{RB} values for Uplink (only) FR2 (FR2-1) with “Adjust Limit Mask for Freq Range” != “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	64	128	256	n/a
120	32	64	128	256
240(*)	16	32	64	128

- N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “52.6 < f ≤ 71.0 GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	64	256	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common Uplink Configuration.

TS38.521-2 v.17.0.0 (v.2022-09) Table 6.1-1: Common Uplink Configuration for PC3.

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Note: No definition for the N_{RB} values for the new Release 17 FR2-2 SCS (480k, 960k) & Carrier BW (800, 1600, 2000 MHz).

Advanced: Advanced Demod Setup

- Direction = Downlink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	DL NR-TMx.x	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)			On

– Direction = Uplink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	n/a	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)	n/a		On
UL Flatness	Test Tolerance	n/a	FR1	1.4 dB
			FR2	n/a (*2)
UL IBE	UE Power Class	n/a	FR1	Same value as in Advanced Preset menu (grayed out)
			FR2	Same value as in Advanced Preset menu
	Test Tolerance		FR1	0.8 dB
			FR2	n/a (*2)
UL IBE Limit Threshold to	IBE Limit Threshold from P_RB	n/a	FR1	-30.00 dB
			FR2	-25.00 dB

(*1) 3GPP Conformance Test = ON parameter presets the parameters under the “EVM” tab in the Advanced Demod Setup dialog menu. For details, see **3GPP Conformance Test** in the Modulation Analysis Measurement section.

Note: “IQ Offset Compensation” parameter location will be moved to the “EVM” from the “General” submenu, and it is added to the controlled list of “3GPP Conformance Test = ON”, with “Off” when Downlink, and with “On” when Uplink.

(*2) UL Spectrum Flatness & IBE “Test Tolerance” value is not preset when FR2 is selected because FR2 Test Tolerance value definition is still FFS in TS38.521-2

v.16.7.0 (v.2021-03), clauses 6.4.2.3 (IBE), 6.4.2.4 (Flatness), and 6.4.2.5 (Flatness for pi/2 BPSK).

Uplink FR1 Flatness and IBE Test Tolerance values in TS38.521-1 v.17.6.1 (v.2022-10):

- IBE: Table 6.4.2.3.5-1 Test requirements for in-band emissions
- Flatness:
  - Table 6.4.2.4.5-1 Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.4.5-2 Requirements for EVM equalizer spectrum flatness (extreme conditions),
  - Table 6.4.2.5.5-1 Mask for EVM equalizer coefficients for Pi/2 BPSK, normal conditions

Uplink FR2 Flatness and IBE Test Tolerance values in TS38.521-2 v.17.0.0 (v.2022-09):

- IBE: all FFS
  - Table 6.4.2.3.5-1: Test requirements for in-band emissions for power class 1,
  - Table 6.4.2.3.5-2: Test requirements for in-band emissions for power class 2,
  - Table 6.4.2.3.5-3: Requirements for in-band emissions for power class 3,
  - Table 6.4.2.3.5-4: Test requirements for in-band emissions for power class 4
- Flatness: all FFS
  - Table 6.4.2.4.5-1: Test Requirements for EVM equalizer spectrum flatness (normal conditions),
  - Table 6.4.2.5.5-1: Test requirement for EVM equalizer coefficients for Pi/2 BPSK (normal conditions)

Transmit On|Off Power

The following parameters are preset when Apply Preset is executed.

- "Meas Setup: Meas Time parameters for Downlink" on page 3396
- "Meas Setup: Meas Time parameters for Uplink" on page 3396
- "Meas Setup: Other Setting parameters" on page 3399

– "Meas Setup: Limit Parameters" on page 3400

– "Other parameters" on page 3406

Meas Setup: Meas Time parameters for Downlink

Preset Configuration				Preset Value	
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Meas Offset	Meas Interval
NR-TMx.x	FR1	TDD	TS38.141-1	0 subframe	5 subframes
			TS37.141 BC3 CS16/17	4 subframes	5 subframes
	FR2	TDD	n/a	0 subframe	2 subframes
Fulfilled-xx / NR-TMx.x	FR1 /FR2	User Defined	n/a	0 subframe	Minimum subframes that can contain Transmission Periodicity

Preset Configuration				Preset Value		
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Burst Time [ms]	Burst Repetition Period [ms] (*)	UL Off Power Length [ms]
NR-TMx.x	FR1	TDD	TS38.141-1	3.7143	5.000	n/a
			TS37.141 BC3 CS16/17	2.7143	5.000	n/a
	FR2	TDD	n/a	0.9286	1.250	n/a
Fulfilled-xx / NR-TMx.x	RF1/RF2	User Defined	n/a	Time duration of downlink slots and symbols	Transmission periodicity	n/a

(*) Burst Repetition Period for Downlink comes from NR-TM DL-UL-Periodicity: 5 ms for FR1 and 1.25 ms for FR2.

Meas Setup: Meas Time parameters for Uplink

Preset Configuration					Preset Value	
RB Alloc	FR	Duplex	UL Channel Type	SCS (PUSCH)	Meas Offset	Meas Interval

	FR2	TDD	PUSCH	2^{-m}	10.0	2^{-m}	
			PRACH Config Index 0 (60 k SCS)	0.0357	10.0	0.0357	(*4)
			PRACH Config Index 0 (120 k SCS)	0.0178	10.0	0.0178	(*5)
			SRS	2^{-m} (TBD)	10.0	2^{-m}	

Notes:

UL Meas Offset preset for PRACH = $-\left\lceil \frac{PRACH\_ON\_period}{2^{-\mu}} \right\rceil$ slots,

UL Meas Interval preset for PRACH = $\left\lceil\frac{\mathbf{PRACH\_ON\_period}}{2^{-\mu}}\right\rceil + \left\lceil\frac{2\times\mathbf{PRACH\_ON\_period}}{2^{-\mu}}\right\rceil$ slots,

where:

$2^{-\mu}$ [ms]: UL slot length with μ = 0, 1, 2, or 3 for SCS (PUSCH) 15 kHz, 30 kHz, 60 kHz, or 120 kHz, respectively,

PRACH_ON_period [ms], which values are:

(*1) 0.903125 ms for FR1 PRACH Config Index 4 for FDD and 12 for TDD which Preamble Format is 0,

(*2) 0.428125 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 15 kHz SCS) which Preamble Format is A3 (15 kHz SCS),

(*3) 0.2140625 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 30 kHz SCS) which Preamble Format is A3 (30 kHz SCS),

(*4) 0.035677 ms for FR2 PRACH Config Index 0 (60 kHz SCS) which Preamble Format is A1 (60 kHz SCS), and

(*5) 0.017839 ms for FR2 PRACH Config Index 0 (120 kHz SCS) which Preamble Format is A1 (120 kHz SCS).

(*6) Burst Repetition Period for Uplink:

- FR1 PUSCH: “dl-UL-TransmissionPeriodicity” in Table 6.3.3.2.4.3-3 TDD-UL-DL-Config in TS38.521-1.
- FR1 PRACH: Not clear but “ssb-PeriodicityServingCell” = ms20 (20 ms)? in Table 6.3.3.4.4.3-3 ServingCellConfigCommonSIB in TS38.521-1, safer to set the maximum value 10 ms.
- FR1 SRS: Not clear but “repetitionFactor” = n1? in Table 6.3.3.6.4.3-1 SRS-Config: SRS time mask measurement in TS38.521-1, safer to set the maximum value 10ms.
- FR2 PUSCH: Not clear, safer to set the maximum value 10 ms.
- FR2 PRACH: Not clear, safer to set the maximum value 10 ms.
- FR2 SRS: FFS, safer to set the maximum value 10 ms.

Meas Setup: Other Setting parameters

Direction	Parameter	Preset Configuration	Preset Value
Downlink	Auto Timing Adjust	(any)	Off
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS
Uplink	Auto Timing Adjust	(any)	On
	SCS(*)	SCS μ = 0, 1, 2, 3, 5, or 6	Same SCS

(*) Sub Carrier Spacing (SCS) setting determines the following internal parameters:

- Downlink: “N” factor for 70/N µs RMS averaging window for making the OFF power. N = SCS/15, where SCS is in kHz.
- Uplink: Slot length = $2^{-\mu}$ msec, where µ = 0, 1, 2, 3, 5 or 6 for SCS 15 kHz, 30 kHz, 60 kHz, 120 kHz, 480 kHz, or 960 kHz, respectively.

Meas Setup: Limit Parameters

- Direction = Downlink:

Parameter	Preset Configuration			Preset Value
	FR	BS type	Adjust Range (GHz)	
Max Ramp Down Time, Max Ramp Up Time	FR1	1-C, 1-O	None, f ≤ 1.0 GHz, 1.0 < f ≤ 3.0 GHz, 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, 6.0 < f ≤ 7.125 GHz	10.0 us
	FR2	2-O	None, 24.25 < f ≤ 29.5 GHz, 37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2, 52.6 < f ≤ 71.0	3.0 us
DL Transient Period	FR1	1-C, 1-O	None, f ≤ 1.0 GHz, 1.0 < f ≤ 3.0 GHz, 3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, 6.0 < f ≤ 7.125 GHz	10.0 us
	FR2	2-O	None, 24.25 < f ≤ 29.5 GHz, 37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2, 52.6 < f ≤ 71.0	3.0 us
DL Off Power	FR1	1-C	None, f ≤ 1.0 GHz, 1.0 < f ≤ 3.0 GHz	-83 dBm / MHz = -85 + TT 2.0
			3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz,	-82.5 dBm / MHz = -85 + TT 2.5

			6.0 < f ≤ 7.125 GHz	
		1-O	None, f ≤ 1.0 GHz, 1.0 < f ≤ 3.0 GHz	-102.6 dBm / MHz = -106 + TT 3.4
			3.0 < f ≤ 4.2 GHz, 4.2 < f ≤ 6.0 GHz, 6.0 < f ≤ 7.125 GHz	-102.4 dBm / MHz = -106 + TT 3.6
	FR2	2-O	None, 24.25 < f ≤ 29.5 GHz,	-33.1 dBm / MHz = -36 + TT 2.9
			37.0 < f ≤ 43.5, 43.5 < f ≤ 48.2, 52.6 < f ≤ 71.0	-32.7 dBm / MHz = -36 + TT 3.3

FR1 BS type 1-C limits in TS38.141-1 v.17.7.0 (v.2022-09):

- Clause 6.4.2.4.2 Procedure, for DL Transient Period,
- Clause 6.4.2.5 Test Requirements, for DL Off Power limits.

  FR1 BS type 1-O limits in TS38.141-2 v.17.7.0 (v.2022-09):
- Clause 6.5.2.4.2.2 Procedure for BS type 1-O, for DL Transient Period,
- Clause 6.5.2.5.1 Test requirements for BS type 1-O, for DL Off Power limits.

  FR1 BS type 2-O limits in TS38.141-2 v.17.7.0 (v.2022-09):
- Clause 6.5.2.4.2.3 Procedure for BS type 2-O, for DL Transient Period,
- Clause 6.5.2.5.2 Test requirements for BS type 2-O, for DL Off Power limits.
- Direction = Uplink:

Uplink FR1 limits in TS38.521-1 v.17.6.1 (v.2022-10):

- Table 6.3.3.2.5-1 General ON/OFF time mask (PUSCH),
- Table 6.3.3.2.5-2 Test Tolerance for OFF power, for PUSCH
- Table 6.3.3.2.5-3 Test Tolerance for ON power, for PUSCH
- Table 6.3.3.4.5-1: PRACH time mask,
- Table 6.3.3.4.5-2: Test Tolerance (Transmit OFF power and PRACH time mask),
- Table 6.3.3.6.5-1: SRS time mask,
- Table 6.3.3.6.5-2: Test Tolerance (Transmit OFF power and SRS time mask).

  Uplink FR2 limits in TS38.521-2 v.17.0.0 (v.2022-09):

- Table 6.3.3.2.5-1: Test requirement of OFF power of General ON/OFF time mask (PUSCH),

- Table 6.3.3.2.5-2: Test requirement of ON power of General ON/OFF time mask (PUSCH),
- Table 6.3.3.2.5-3: Test Tolerance for OFF power (PUSCH); ... all FFS,
- Table 6.3.3.2.5-4: Test Tolerance for ON power (PUSCH); ... all FFS,
- Table 6.3.3.2.5-5: Relaxation required for OFF power for PC3 UEs,
- Table 6.3.3.4.5-1: PRACH time mask; ... some FFS,
- Table 6.3.3.4.5-2: Relaxations for OFF power for PC3 UEs (PRACH),
- Table 6.3.3.4.5-3: Relaxations for ON power (PRACH); ... all FFS,
- Clause 6.3.3.6 SRS time mask; ... all FFS.

Note:

(*) FR2 PUSCH ON Power Ref & Tolerance limit values were defined in Table 6.3.3.2.5-2, TS38.521-2 v.16.2.0 (2019-12); Meanwhile, TT value for the Power Ref has not been defined yet (FFS) in Table 6.3.3.2.5-4, TS38.521-2 v.16.6.0 (2020-12).

Other parameters

- BW > Settings tab > Info BW: Auto

  However, when the following three conditions are met, executing “Apply Preset” presets Info BW to 381.12 MHz/Man.

  - Radio Direction is uplink
  - Bandwidth is 400 MHz
  - Frequency Range is FR2 or FR2-2 and Adjust Limit Mask for Freq Range is “52.6 < f ≤ 71.0 GHz”

Channel Power

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto
- Meas Setup > Component Carriers tab > Configure Comp Carriers > Power Integration Bandwidth > CHP: the value defined in the Couplings row in "CHP Power Integration Bandwidth" on page 3300.

Occupied BW

When executing Apply Preset, preset the following parameters:

- Frequency > Settings tab > Span: Auto Detect
- BW > Settings tab > Res BW: Man, 30 kHz
- BW > Settings tab > Video BW: Auto, 300 kHz
- Meas Setup > Limits tab > Bandwidth: Auto
- Meas Setup > Settings tab > Power Integration Method

  = Normal when Radio tab > Direction = Downlink

  = From Center when Radio tab > Direction = Uplink

Monitor Spectrum

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab: Execute Adjust Span to Carrier Config action

IQ Waveform

When executing Apply Preset, preset the following parameters:

- BW > Settings tab > Digital IF BW: Auto
- BW > Settings tab > Filter Type: Flattop
- Frequency > Settings tab, execute Adjust Center Frequency to Carrier Config action
  (which presets Digital IF BW in the BW menu to Auto)

Power Stat CCDF

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab, execute Adjust Center Freq to Carrier Config action
  (which presets Info BW in the BW menu to Auto)

3.8.8.5 Meas Time

Access to the menu for setting up the parameters related to the measurement time.

Burst Time

Sets Burst Time to measure. This parameter is effective when Downlink and Auto Timing Adjust is set to Off.

Remote Command	`[:SENSe]:PVTime:BURSt:WIDTh <real>` `[:SENSe]:PVTime:BURSt:WIDTh?`
Example	`:PVT:BURS:WIDT 10ms` `:PVT:BURS:WIDT?`
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	500 us
State Saved	Yes
Min/Max	1 us/10.0 ms

Burst Repetition Period

Determines the burst repetition period. For correct measurement, the value must be set to the repetition period of the burst and less than or equal to Meas Interval time.

Remote Command	`[:SENSe]:PVTime:BURSt:RPERiod <time>` `[:SENSe]:PVTime:BURSt:RPERiod?`
Example	`:PVT:BURS:RPER 7ms` `:PVT:BURS:RPER?`
Notes	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard
Couplings	This parameter cannot be smaller than Burst Time When entering the value smaller than Burst Time, coupled to the value of Burst Time
Preset	5 ms
State Saved	Yes
Min	100 us
Max	10 ms

UL Off Power Length

It is used as uplink off power measurement period.

Remote Command	`[:SENSe]:PVTime:ULINk:POFF:WIDTh <real>` `[:SENSe]:PVTime:ULINk:POFF:WIDTh?`

Example	:PVT:ULIN:POFF:WIDT 5 ms :PVT:ULIN:POFF:WIDT?
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	1.0 ms
State Saved	Yes
Min	1 us
Max	0.01 s
Backwards Compatibility SCPI	[:SENSe]:PVTime:ULINk:OFFPower:WIDTh

DL Meas Offset

This control is part of the "Predefined Params" section of **Meas Standard**. It lets you set the Downlink Meas Offset to be used for **Transmit On/Off Power** measurements.

NOTE: This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	[:SENSe]:PVTime:DLINk:MOFFset <integer> [:SENSe]:PVTime:DLINk:MOFFset?
Example	:PVT:DLIN:MOFF 1 :PVT:DLIN:MOFF?
Dependencies	This control appears only when Radio Direction is Downlink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	0
State Saved	Yes
Min	-9
Max	9

UL Meas Offset

It lets you set the Uplink Meas Offset to be used for Transmit On/Off Power measurements.

Remote Command	[:SENSe]:PVTime:ULINk:MOFFset <integer> [:SENSe]:PVTime:ULINk:MOFFset?
Example	:PVT:ULINk:MOFF 1

	`:PVT:ULINk:MOFF?`
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	-2
State Saved	Yes
Min	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).
Max	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).

DL Meas Interval

This control is part of the "Predefined Params" section of **Meas Standard**. It lets you set the desired subframe count for downlink analysis in **Transmit On/Off Power** measurements.

NOTE This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	`[:SENSe]:PVTime:DLINk:MINTerval <integer>` `[:SENSe]:PVTime:DLINk:MINTerval?`
Example	`:PVT:DLIN:MINT 5` `:PVT:DLIN:MINT?`
Dependencies	This control appears only when Radio Direction is Downlink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	5
State Saved	Yes
Min	1
Max	10

UL Meas Interval

This control is part of the "Predefined Params" section of **Meas Standard**. It lets you set the desired slot count for uplink analysis in **Transmit On/Off Power** measurements.

NOTE This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	`[:SENSe]:PVTime:ULINk:MINTerval <integer>` `[:SENSe]:PVTime:ULINk:MINTerval?`
Example	`:PVT:ULIN:MINT 5` `:PVT:ULIN:MINT?`
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On|Off Power in Values for Meas Standard.
Preset	6
State Saved	Yes
Min	1
Max	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).

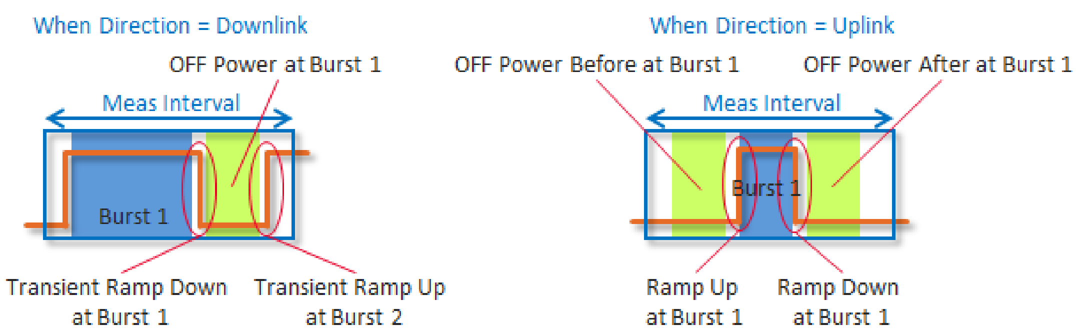
Meas Range

Enables you to select the measurement range from all bursts or specific burst within the Meas Interval. If there are multiple bursts within the Meas Interval, the burst number in the Metrics window are determined as follows and returned values of :MEAS|READ|FETCh:PVT1 are the values at that burst number. The burst number in the Metrics window can be obtained by :MEAS|READ|FETCH:PVT13.

- All Bursts: the burst number determined with the following criteria is displayed in the Metrics window.
  - On Power and Burst Width:
    - Downlink: The same burst number as Off Power.
    - Uplink with UL On Pwr Limit Test = On: The burst number that contains the maximum deviation from the UL On Pwr Reference value among all detected bursts
    - Uplink with UL On Pwr Limit Test = Off: The burst number right before or after the Off Power period that contains the maximum RMS Off Power value among all detected Off Power Before/After periods
  - Off Power (Downlink): The burst number right before the Off Power period that contains the maximum Off Power peak value among all detected Off Power periods
  - Off Power After (Uplink): The burst number right before the Off Power After period whose measured RMS Off Power value is the maximum among all detected Off Power After periods

  - Off Power Before (Uplink only): The burst number right after the Off Power Before period whose measured RMS Off Power value is the maximum among all detected Off Power Before periods
  - Ramp Up / Transient Ramp Up: The burst number whose measured ramp up period is the worst one among all detected bursts
  - Ramp Down / Transient Ramp Down: The burst number whose measured ramp down period is the worst one among all detected bursts
- Specific Burst: the burst number specified by the Specific Burst Number is displayed in the Metrics window.

Note that when in downlink, the results of Ramp Down / Transient Ramp Down of Specific Burst Number and Ramp Up / Transient Ramp Up of Specific Burst Number + 1 are displayed. When in uplink, the results of Specific Burst Number itself are displayed.



Remote Command	`:CALCulate:PVTime:MRANge ALL | SPECific` `:CALCulate:PVTime:MRANge?`
Example	`:CALC:PVT:MRAN ALL` `:CALC:PVT:MRAN?`
Preset	SPECific
State Saved	Yes
Range	All Bursts|Specific Burst

Specific Burst Number

Specifies the burst to be analyzed.

Remote Command	`:CALCulate:PVTime:SBNumber <integer>` `:CALCulate:PVTime:SBNumber?`
Example	`:CALC:PVT:SBN 8` `:CALC:PVT:SBN?`

Dependencies	This control is grayed out when Meas Range is All Bursts
Preset	1
State Saved	Yes
Min	1
Max	10

3.8.8.6 Limits

Accesses the setup menu for the measurement ramp up, ramp down time and threshold for off power.

Please note, whether the pass/fail shown in measurement bar (at upper-left corner of screen) will be pass or fail is just determined by the threshold listed in Limits menu, they are Max Ramp Up Time, Max Ramp Down Time, Downlink Off Power and Uplink Off Power. If and only if ramp up time, ramp down time and off power (downlink or uplink) measured are all less than Max Ramp Up Time, Max Ramp Down Time and Off Power (downlink or uplink) separately, the Pass/Fail flag is set to pass (green), otherwise Pass/Fail flag is set to fail (red). The limit mask shown on screen is just to indicate which part is active burst and which part is inactive burst, the mask is nothing to do with the Pass/Fail criteria.

Max Ramp Up Time

It is used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes. This is used to determine the end position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:URTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:URTime?`
Example	`:PVT:LIM:RAMP:URT 10.0e-6` `:PVT:LIM:RAMP:URT?`
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On|Off Power for the preset value in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Max Ramp Down Time

It is used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes. This is used to determine the start position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:DRTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:DRTime?`
Example	`:PVT:LIM:RAMP:DRT 10.0e-6` `:PVT:LIM:RAMP:DRT?`
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On|Off Power for the preset value in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Transient Period

This parameter sets the threshold for downlink transient period which is calculated from expected burst boundary to the point of the specified OFF power limit. The Transmitter OFF period is determined by this parameter when Auto Timing Adjust is Off.

If the measured ramp up or ramp down transient period of downlink signal exceeds the threshold, the ramp up or ramp down transient period measurements fail.

Remote Command	`[:SENSe]:PVTime:LIMit:TRANsient:DLINk <time>` `[:SENSe]:PVTime:LIMit:TRANsient:DLINk?`
Example	`:PVT:LIM:TRAN:DLIN 10.0e-6` `:PVT:LIM:TRAN:DLIN?`
Dependencies	This control appears only when the Radio Direction is Downlink and available when Auto Timing Adjust is Off
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Off Power

It is used as threshold in downlink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Downlink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm/MHz.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:DLINk <real>` `[:SENSe]:PVTime:LIMit:POFF:DLINk?`
Example	`:PVT:LIM:POFF:DLIN -83.0` `:PVT:LIM:POFF:DLIN?`
Dependencies	This control appears only when the Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	-83.00
State Saved	Yes
Min/Max	-150.00/0.00

Uplink Off Power

It is used as threshold in uplink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Uplink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:ULINk <real>` `[:SENSe]:PVTime:LIMit:POFF:ULINk?`
Example	`:PVT:LIM:POFF:ULIN -50.0` `:PVT:LIM:POFF:ULIN?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	-48.3
State Saved	Yes
Min/Max	-150.00 dBm/0.00 dBm

Uplink On Power Reference

This is used as an Expected Transmission ON Measured power reference in uplink, which judges whether the real measured on power is passed or not when "Uplink On Power Limit Test" on page 2584 is set to on. If the real measured on power is within the Uplink On Power Reference +/- Uplink On Power Tolerance, then the on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence?`
Example	`:PVT:LIM:PON:ULIN:REF 9.8` `:PVT:LIM:PON:ULIN:REF?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	9.8
State Saved	Yes
Min	-150 dBm
Max	150 dBm

Uplink On Power Tolerance

This is used as the pass/fail margin from the UL On Power Reference value for the UL On Power measurement limit test when "Uplink On Power Limit Test" on page 2584 is set to on.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance?`
Example	`:PVT:LIM:PON:ULIN:TOL 10.7` `:PVT:LIM:PON:ULIN:TOL?`
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On/Off Power for the preset value in Values for Meas Standard.
Preset	10.70 dB !when FR1 100MHz with SCS 30 kHz
State Saved	Yes
Min	0 dB
Max	100 dB

Uplink On Power Limit Test

When it is set to on, the measurement judges whether the real measured on power is passed or not. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, the on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:STATe OFF | ON | 0 | 1`

	`[:SENSe]:PVTime:LIMit:PON:ULINk:STATe?`
Example	`:PVT:LIM:PON:ULIN:STAT 1` `:PVT:LIM:PON:ULIN:STAT?`
Dependencies	This control appears only when the Radio Direction is Uplink
Preset	OFF
State Saved	Yes

3.8.8.7 Threshold

Accesses the setup menu to set the thresholds used to find ramp up and ramp down part in burst signal.

These parameters are used when

– Direction is Downlink and Auto Timing Adjust is On

– Direction is Uplink

Ramp Up Start Level

Specifies the relative power level to active burst average power level at which the ramp-up starts.

Remote Command	`[:SENSe]:PVTime:THReshold:UP:STARt <rel_ampl>` `[:SENSe]:PVTime:THReshold:UP:STARt?`
Example	`:PVT:THR:UP:STAR -50.0` `:PVT:THR:UP:STAR?`
Preset	-20.000 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Up End Level

Specifies the relative power level to active slots average power level at which the ramp-up ends.

Remote Command	`[:SENSe]:PVTime:THReshold:UP:END <rel_ampl>` `[:SENSe]:PVTime:THReshold:UP:END?`
Example	`:PVT:THR:UP:END -50.0` `:PVT:THR:UP:END?`

Preset	-0.915 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Down Start Level

Specifies the relative power level to active slots average power level at which the ramp-down starts.

Remote Command	`[:SENSe]:PVTime:THReshold:DOWN:STARt <rel_ampl>` `[:SENSe]:PVTime:THReshold:DOWN:STARt?`
Example	`:PVT:THR:DOWN:STAR -50.0` `:PVT:THR:DOWN:STAR?`
Preset	-0.915 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Down End Level

Specifies the relative power level to active slots average power level at which the ramp-down ends.

Remote Command	`[:SENSe]:PVTime:THReshold:DOWN:END <rel_ampl>` `[:SENSe]:PVTime:THReshold:DOWN:END?`
Example	`:PVT:THR:DOWN:END -50.0` `:PVT:THR:DOWN:END?`
Preset	-20.000 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

3.8.8.8 Advanced

The Advanced tab contains controls for setting advanced functions of the analyzer.

Noise Floor Extension

Turns on the **Noise Floor Extension** function. When this function is On, the expected noise power of the analyzer (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

When Noise Floor Extension is on, the Off power results (signal plus analyzer noise)will be is compensated by subtracting the estimated noise power, leaving just the signal power. For downlink, the 70us RMS Off power trace will be compensated , and for uplink, both Off Power Before and Off Power After results will be compensated.

Remote Command	`[:SENSe]:CORRection:NOISe:FLOor ON | OFF | 1 | 0` `[:SENSe]:CORRection:NOISe:FLOor?`
Example	`:CORR:NOIS:FLO ON` `:CORR:NOIS:FLO?`
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect)
Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset. Turned off by Restore Mode Defaults
State Saved	No

Noise Correction

Sets the noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the analyzer. Off turns these corrections off.

Remote Command	`[:SENSe]:PVTime:CORRection:NOISe[:AUTO] OFF | ON | 0 | 1` `[:SENSe]:PVTime:CORRection:NOISe[:AUTO]?`
Example	`:PVT:CORR:NOIS OFF` `:PVT:CORR:NOIS?`
Preset	0
State Saved	Yes
Range	On|Off

Ramp Time Length

Indicates the searching window length in which the start of ramp up or the end of ramp down is searched. If it is set shorter than actual ramp time, the ramp may be lost. The start of the searching window is derived from the external trigger when auto timing adjust is off, and is at the actual burst boundary when auto timing adjust is on.

Remote Command	`[:SENSe]:PVTime:RAMP:SEARch:LENGth <time>` `[:SENSe]:PVTime:RAMP:SEARch:LENGth?`
Example	`:PVT:RAMP:SEAR:LENG 50us` `:PVT:RAMP:SEAR:LENG?`
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Off Power Meas Rules

Indicates which way to calculate 70us RMS Off Power over the entire OFF period. When it is “Speed,” 70 us averaged power is calculated in 35us granularity during OFF period. When it is “Accuracy,” the 70us RMS Off Power is calculated for each sample points during OFF period.

Remote Command	`[:SENSe]:PVTime:POFF:MEAS:RULes SPEed | ACCuracy` `[:SENSe]:PVTime:POFF:MEAS:RULes?`
Example	`:PVT:POFF:MEAS:RUL SPE` `:PVT:POFF:MEAS:RUL?`
Preset	SPEed
State Saved	Yes
Range	Speed|Accuracy

IF Gain

Sets ranging in the digital IF when acquiring an I/Q time record.

See "More Information about IF Gain" on page 2589.

This function is not affected by RF Input Range attenuation.

The IF Gain control is used to set the IF Gain function to Auto, Low Gain or High Gain

On sets the high gain option, which allows for better noise level measurements.

Off sets low gain when measuring large signals.

When this parameter is changed manually from front panel, IF Gain Auto will become Man.

Remote Command	`[:SENSe]:PVTime:IF:GAIN[:STATe] ON | OFF | 1 | 0`
	`[:SENSe]:PVTime:IF:GAIN[:STATe]?`
	`[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe] ON | OFF | 1 | 0`

	[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe]?
Example	:PVT:IF:GAIN ON :PVT:IF:GAIN? :PVT:IF:GAIN:AUTO ON :PVT:IF:GAIN:AUTO?
Notes	where ON = high gain OFF = low gain
Dependencies	This control does not appear in VXT or UXM
Couplings	When either the auto attenuation is active (for example, with an electrical attenuator), or the optimize mechanical attenuator range is requested, the IF Gain setting is changed using the following rule The Auto selection sets IF Gain On under any of the following conditions: the input attenuator is set to 0 dB the preamp is turned on, the Max Mixer Level is –20 dBm or lower For other settings, Auto sets IF Gain to Off
Preset	OFF OFF
State Saved	Yes
Range	Low Gain|High Gain

More Information about IF Gain

To take full advantage of the RF dynamic range of the analyzer, you can manually turn on or turn off a switched digital IF amplifier. When it is turned on, the signal will get approximately 10 dB of gain.

Setting IF Gain to Man and selecting High Gain will turn on the digital IF amplifier and get an extra 10 dB gain.

Setting IF Gain to Auto will activate the Auto rules for IF Gain.

These settings affect sensitivity and IF overloads.

3.8.8.9 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 3408) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to ON, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 3410 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 3410 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System > Restore Defaults > All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.8.9 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time and whether in Single sweep/measure or Continuous sweep/measure mode.

3.8.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 2592

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 3413 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 2594

Remote	`:INITiate[:IMMediate]`

Command	`:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	`:INIT:REST` and `:INIT:IMM` perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared The `SWEEPING` bit is set The `MEASURING` bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the `:INIT:REST` command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

– Restarts the current sweep

– Restarts the current measurement

– Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold

– Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K, shows the count for the sweep (data acquisition) in progress. K = k + 1, with a limit of N. The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`

Notes	If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, :ABORt is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The STATus:OPERation register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by :ABORt, the Abort command will cause the *OPC query to return true

3.8.9.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Enables you to set the display X reference value.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RLEVel <time>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RLEVel?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:RLEV 1s`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRACE:X:RLEV?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:X:RLEV 1s`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:X:RLEV 1s`
	3-Fall for Transmit On|Off Power

Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	-10.0 s/10.0s ! 1-Burst

	-1.0s/1.0s ! 2-Rise, 3-Fall
Annotation	<value> s bottom left of graph

Scale/Div

Enables you to set the display X scale/division value.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:PDIVision <time>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:PDIVision?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:PDIV 1ms`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRACE:X:PDIV?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:X:PDIV 1ms`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:X:PDIV 1ms`
	3-Fall for Transmit On|Off Power

Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	1.00 ns /1.0 s

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RPOSition?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:RPOS LEFT`

	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRACE:X:RPOS?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:X:RPOS LEFT`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:X:RPOS RIGHt`
	3-Fall for Transmit On|Off Power

Preset	LEFT
State Saved	Yes
Range	Left|Center|Right

Auto Scaling

Toggles the scale coupling function between On and Off.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:COUPle 0	1	OFF	ON` `:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:COUPle?` Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3

Example	`:DISP:PVT:WIND:TRAC:X:COUP OFF`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND:TRAC:X:COUP?`
	1-Burst for Transmit On|Off Power
	`:DISP:PVT:WIND2:TRAC:X:COUP OFF`
	2-Rise for Transmit On|Off Power
	`:DISP:PVT:WIND3:TRAC:X:COUP ON`
	3-Fall for Transmit On|Off Power

Couplings	When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off
Preset	ON
State Saved	Yes

3.8.10 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write, Trace Average, Max Hold, Min Hold**) and **View/Blank** setting for the selected trace.

3.8.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the **Trace** menu
Dependencies	For the Swept SA measurement: – In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View – When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when **Meas Method** is `RBW`, `FAST` or `FPOWer`, **Select Trace** is disabled
Preset	Trace 1
State Saved	Yes

3.8.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 3048 and its update mode.

There are four Trace Types:

– **Clear/Write**

– **Trace Average**

– **Max Hold**

– **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display,** are described fully in the "View/Blank" on page 3053 control description. Essentially, when **Update** is `ON`, a trace is updating, and when **Update** is `OFF` it is not. When **Display** is `ON`, it is visible and when **Display** is `OFF` it is not. These terms are used throughout the descriptions in this section.

Trace Type

Allows you to select the type of trace you want to you use for the current measurement. There are four trace Types: Clear/Write, Trace Average, Max Hold and Min Hold.

Besides the **Trace Type**, the **View/Blank** state must be set to **Active** (**Update** On, **Display** On) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**. See also the **View/Blank** menu description.

Remote Command	`:TRACe[1]|2|3:PVTime:TYPE WRITe	AVERage	MAXHold	MINHold` `:TRACe[1]|2|3:PVTime:TYPE?`
Example	`:TRAC:PVT:TYPE WRIT` `:TRAC:PVT:TYPE?`
Notes	`WRITe` = Clear Write. In **Clear/Write** type each trace update replaces the old data in the trace with new data `AVERage` = Average. In **Trace Average** type the instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data `MAXHold` = Maximum Hold. In **Max Hold** type the instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data `MINHold` = Minimum Hold. In **Min Hold** type the instrument maintains and displays a min hold trace, which represents the minimum data value on a point-point basis of the new trace data and previous trace data
Dependencies	When the backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold [:STATe] is set to On, this parameter for Trace 2 is changed to MaxHold. Conversely, set to Off, the parameter is not changed When the backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold [:STATe] is set to On, this parameter for Trace 3 is changed to MinHold. Conversely, set to Off, the parameter is not changed
Preset	`AVERage|MAXH|MINH`
State Saved	Yes
Range	Clear / Write|Trace Average|Max Hold|Min Hold
Backwards Compatibility SCPI	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]`

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 3048 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

View/Blank

This radio button box lets you set the state of the two trace values, Update and Display. The four choices available are:

Active	Update and Display both ON
View	Update OFF, Display ON
Blank	Update OFF, Display OFF
Background	Update ON, Display OFF This allows a trace to be blanked and continue to update "in the background", which was not possible in the past

See the tables below for details onthe SCPI remote commands to control these two variables.

Preset	Trace On
State Saved	Yes
Range	Trace On|Blank

Trace Update State On/Off

Toggles a trace Update state between On and Off. The Off selection makes the trace inactive. This does not affect whether the trace is visible or not. To change the trace visibility, see "Trace Display State On/Off" on page 2603

Remote Command	`:TRACe[1]|2|3:PVTime:UPDate[:STATe] ON | OFF | 0 | 1` `:TRACe[1]|2|3:PVTime:UPDate[:STATe]?`

Example	`:TRAC:PVT:UPD ON` `:TRAC:PVT:UPD?`
Dependencies	The backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe: MAXHold [:STATe] is set to On, this parameter for Trace2 is changed to On and vice versa The backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe: MINHold [:STATe] is set to On, this parameter for Trace3 is changed to On and vice versa
Couplings	Whenever you set **Update** to **On** for any trace**,** the **Display** is set to **On** for that trace
Preset	1|0|0 (**On** for Trace 1; **Off** for 2 & 3)
State Saved	Yes

Backwards Compatibility SCPI	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:BURSt[:STATe]`
	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]`
	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]`

Trace Display State On/Off

Toggles a trace Display state between On and Off. The Off selection makes the trace not visible. This does not affect whether the trace is updating or not.

Even when not visible, traces may be queried and markers may be placed on them.

Remote Command	`:TRACe[1]|2|3:PVTime:DISPlay[:STATe] ON | OFF | 0 | 1` `:TRACe[1]|2|3:PVTime:DISPlay[:STATe]?`
Example	`:TRAC:PVT:DISP ON` `:TRAC:PVT:DISP?`
Dependencies	The backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:BURSt [:STATe] is set to On, this parameter for Trace1 is changed to On and vice versa The backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe: MAXHold [:STATe] is set to On, this parameter for Trace2 is changed to On and vice versa The backwards Compatibility SCPI command, :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe: MINHold [:STATe] is set to On, this parameter for Trace3 is changed to On and vice versa
Couplings	Whenever you set **Update** to **On** for any trace**,** the **Display** is set to **On** for that trace
Preset	1|0|0 (**On** for Trace 1; **Off** for 2 & 3)
State Saved	Yes
Range	0 1

Backwards Compatibility SCPI	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:BURSt[:STATe]`
	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]`
	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]`

3.8.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2610 controls.

– See "How trace math is processed" on page 2608

Remote Command	For option details, see "Trace Math Options" on page 2606
	For Swept SA Measurement (in SA Mode):
	`:CALCulate:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate:MATH? <trace_num>`
	where `<trace_num>` is any one of:
	`TRACE1|…|TRACE6`
	For all other measurements:
	`:CALCulate:<meas>:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>`
	`:CALCulate[:<meas>]:MATH? <trace_num>`
	where:
	`<meas>` is the identifier for the current measurement, and
	`<trace_num>` is any one of:
	`TRACe1|TRACe2|TRACe3`
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0`
	Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`
	Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB
	`:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`

	Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm `:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0` Turns off trace math for trace 1

Notes	The Trace Math Function command has 6 main set of parameters:
	- Set 1 defines the "result trace":
	`TRACE1|…|TRACE6`
	-Set 2 defines the "function":
	`PDIFference|PSUM|LOFFset|LDIFference|OFF`
	- Set 3 is a "trace operand" (1):
	`TRACE1|…|TRACE6`
	- Set 4 is a "trace operand" (2):
	`TRACE1|…|TRACE6`
	- Set 5 defines the "Log Offset" (in dB)
	- Set 6 defines the "Log Difference Reference" (in dBm)
	Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function
	The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message
	The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas

Dependencies	Trace Math is not available if **Normalize** is on Trace Math is not available if Signal ID is on None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated and the function does not turn on
Couplings	When a math function is changed for a trace, that trace is set to Display = `ON`; and Update = `ON`

Preset	For Swept SA Measurement (in SA Mode):
	`OFF,TRACE5,TRACE6,0,0 | OFF,TRACE6,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0 | OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE4,0,0 | OFF,TRACE4,TRACE5,0,0`
	For all other measurements:
	`OFF,TRACE2,TRACE3,0,0 | OFF,TRACE3,TRACE1,0,0 | OFF,TRACE1,TRACE2,0,0`

State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An "f" is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	`*OPC` can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

```
DestinationTrace = 10 log(10(1/10)(FirstTrace) – 10(1/10)(SecondTrace))
```

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is `mintracevalue`.

Power Sum (Op1 + Op2)

Calculates a power sum between the `First Trace` operand and the `Second Trace` operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

`DestinationTrace = 10 log(10(1/10)(FirstTrace) + 10(1/10)(SecondTrace))`

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

Log Offset (Op1 + Offset)

Calculates a log offset from the `First Trace` operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the `Offset` control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

`DestinationTrace = FirstTrace + Offset`

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in the trace operand is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the `Second Trace` operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the `First Trace` operand and the `Second Trace` operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

`DestinationTrace = (FirstTrace - SecondTrace) + Reference`

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at –5 dBm, and the reference is –25 dBm, then the destination trace will be –15 dBm.

Example: If the first operand trace1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in `FirstTrace` is equal to `maxtracevalue`, the resultant point is also `maxtracevalue`.

If a point in `FirstTrace` is equal to `mintracevalue`, the resultant point is also `mintracevalue`.

If neither of the above is true for a given point, then:

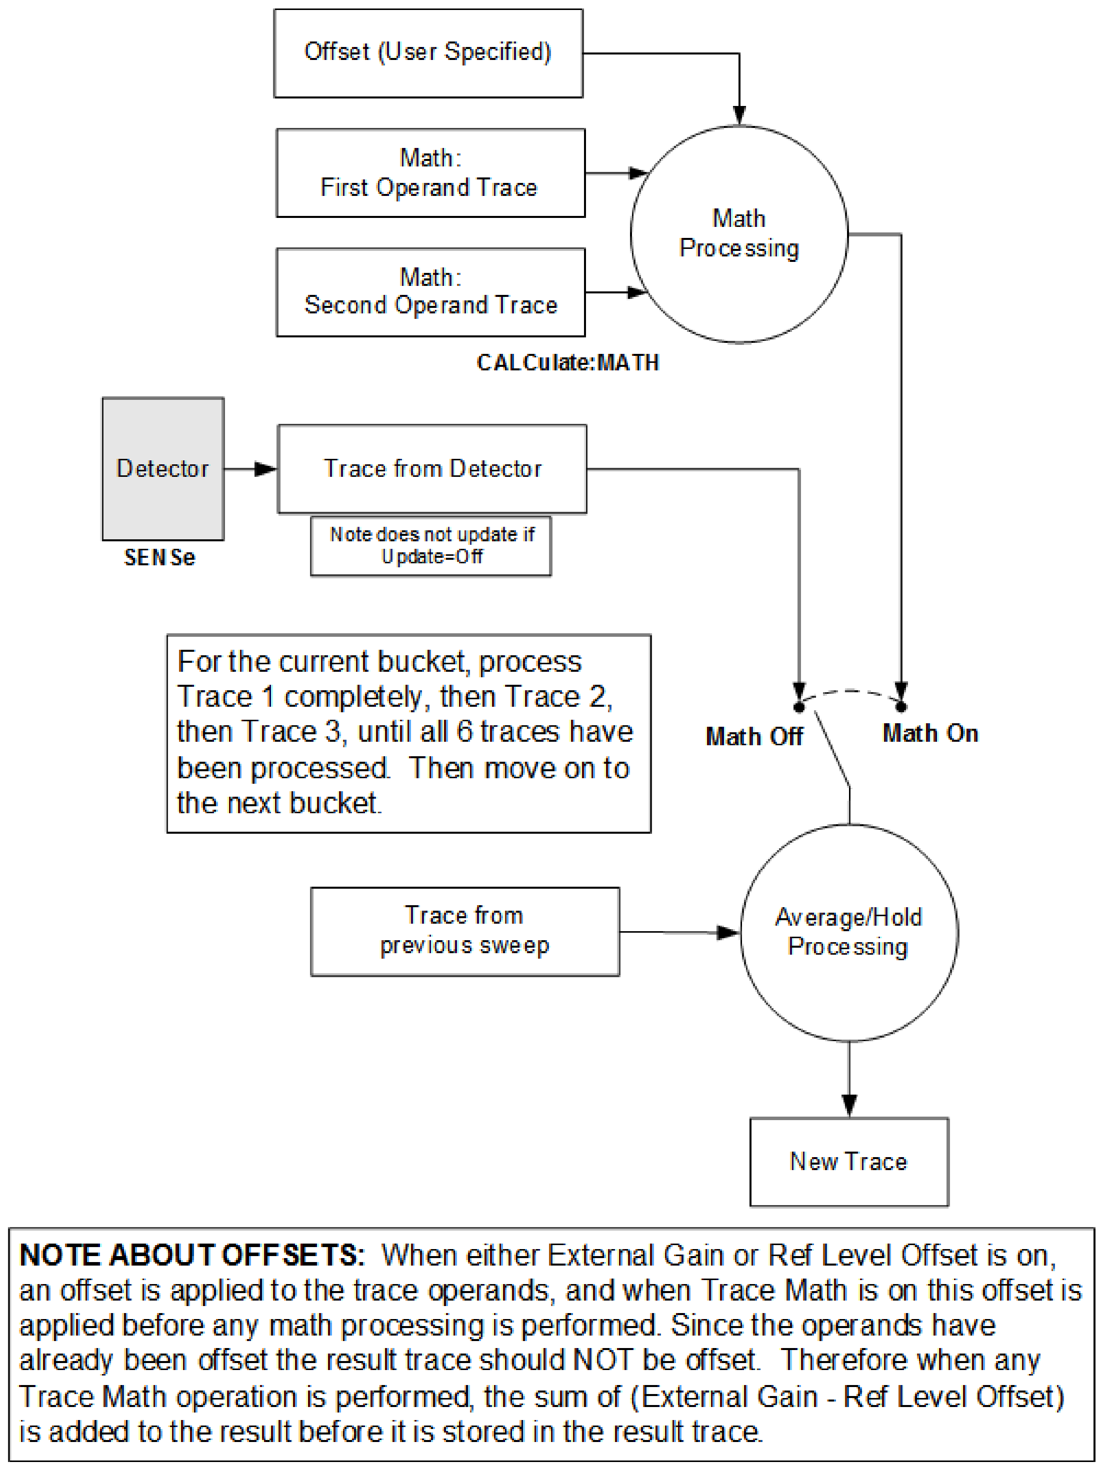
– If that point in `SecondTrace` is equal to `maxtracevalue`, the resultant point is `mintracevalue`.

– If that point in `SecondTrace` is equal to `mintracevalue`, the resultant point is `maxtracevalue`.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:



For each active trace, the current trace point is processed for `Trace 1`, then `Trace 2`, then `Trace 3`, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for `Trace 1`, `Trace 2` is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is `ON` for `Trace 4`, and its operand traces are `Trace 2` and `Trace 3`, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for `Trace 4`. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, `Trace 1` can be an average trace, which can be fed with an offset to `Trace 2`, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math `ON`, the Operand traces should have *lower* numbers than the trace (for example, using `Trace 4` as an operand for `Trace 1` will cause the data coming from `Trace 4` to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent `:CALCulate:MATH` command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	The following examples are for the Swept SA measurement
	Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:
	`:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0`
	Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:
	`:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`

Notes	See "Math Function" on page 2604 for how to specify Operands 1 and 2 using `:CALCulate:MATH`
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: `:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0`
State Saved	The Log Offset value for each trace is saved in Instrument State
Min	–100 dB
Max	100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: `:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00`
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.8.10.4 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the "To Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	1

To Trace

Selects the trace to be copied from or exchanged with the "From Trace" on page 2612 when a "Copy" on page 2612 or "Exchange" on page 2613 is performed

Preset	2

Copy

Executes a Trace Copy based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:COPY TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:COPY TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On `:TRAC:COPY TRACE1,TRACE3`
Notes	The command is of the form: `:TRACe:COPY <source_trace>,<dest_trace>`
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset	For Swept SA Measurement (in SA Mode):
	`TRACE1, TRACE2`
	For all other measurements:
	`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2612 and "To Trace" on page 2612 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe:EXCHange TRACE1 | … | TRACE6, TRACE1 | … | TRACE6`
	For all other measurements:
	`:TRACe:<meas>:EXCHange TRACe1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
	where `<meas>` is the identifier for the current measurement
	Note that the format of the `:TRACe<n>` parameter differs from that for the Swept SA Measurement

Example	Exchange Trace 1 and Trace 2 and put both traces in Update=`OFF`, Display=`ON`: `:TRAC:EXCH TRACE1,TRACE2`
Notes	The command is of the form: `:TRACe:EXCHange <trace_1>,<trace_2>`
Couplings	Both traces are put in **View** (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	`:TRACe[:<meas>]:PRESet:ALL`
Example	`:TRAC:PRES:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update** = `OFF`.

Remote Command	`:TRACe[:<meas>]:CLEar:ALL`
Example	`:TRAC:CLE:ALL`
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off
From Trace	Trace 1
To Trace	Trace 2

	Trace 1	Trace 2	Trace 3
Trace Type	Trace Average	Trace Average	Clear / Write
View/Blank	Active	View	Active
Math Function	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command	`:TRACe:<meas>:PRESet:EIRP`
Example	For OBW Meas: `:TRAC:OBW:PRES:EIRP`

3.8.10.5 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a `:READ` or `:FETCh` query:

- Trace 1
- Trace 2
- Trace 3

Remote Command	`:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3`
	`:CALCulate:<meas>:MTRace?`
	`<meas>` is the identifier for the current measurement; any one of `CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime`

Example	Channel Power
	`:CALC:CHP:MTR TRAC1`
	`:CALC:CHP:MTR?`

Dependencies	In the ACP measurement, this control is grayed-out when **Meas Method** is set to `RBW` or `FAST`, and only Trace 1 is enabled
Preset	`TRACe1`
State Saved	No
Range	Trace 1 | Trace 2 | Trace 3

3.9 Power Stat CCDF Measurement

Many modern digitally-modulated signals look noise-like in the time and frequency domain, requiring statistical measurement of these signals for meaningful characterization and differentiation. The **Power Statistics Complementary Cumulative Distribution Function** (CCDF) measurement displays curves to characterize the higher-level power statistics of digitally modulated signals. The curves can be useful in determining design parameters for digital communications systems.

The Power Statistics CCDF measurement displays probability on the Y-Axis and amplitude on the X-axis, for a display of the statistical amplitude distribution of a signal. This distribution can be affected by many factors. For example, modulation filtering, modulation format, combining the multiple signals at different frequencies, number of active codes, and correlation between symbols on different codes with spread spectrum systems will all affect measurement results. These factors are all related to modulation and signal parameters. External factors such as signal compression and expansion by nonlinear components, group delay distortion from filtering, and power control within the observation interval also affect the measurement.

The power measured in power statistics CCDF curves is actually instantaneous envelope power defined by the equation:

$P = (I^2 + Q^2) / Zo$

where I & Q are the quadrature voltage components of the waveform, and Zo is the characteristic impedance.

A CCDF curve is defined by how much time the waveform spends at or above a given power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For capturing a lower probability down to 0.0001%, this measurement is made in the single mode by pressing Single. To make the power statistics CCDF measurement, the instrument uses digital signal processing (DSP) to sample the input signal in the channel bandwidth. The Gaussian distribution line as the band-limited Gaussian noise CCDF reference line, the user-definable reference trace, and the currently measured trace can be displayed on a semi-log graph. If the currently measured trace is above the user reference trace, it means that the higher peak power levels against the average power are included in the input signal.

Power Stat CCDF Measurement Commands

The general functionality of "CONFigure" on page 4138, "INITiate" on page 4139, "FETCh" on page 4139, "MEASure" on page 4141, and "READ" on page 4140 are described in the section **SCPI Operation and Results Query** in the topic

Programming the Instrument.

The following measurement commands and queries are used to configure the measurement:

`:INITiate:PSTatistic`	Initiates a trigger cycle for the `PST` measurement, but does not return any data. You must then use `:FETC:PST[n]?` to retrieve data Does not change any measurement settings
`:CONFigure?`	Returns the long form name of current measurement, in this case, `PSTatistic`
`:CONFigure:PSTatistic`	Selects `PST` measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 2694
`:CONFigure:PSTatistic:NDEFault`	Selects `PST` measurement *without* affecting settings

The following queries are used to retrieve the results:

`:FETCh:PSTatistic?`	Retrieves the data specified by `n`
`:MEASure:PSTatistic[n]?`	Switches to `PST` measurement, restores default values, starts the measurement, then retrieves the data specified by `n`
`:READ:PSTatistic[n]?`	Starts the measurement, then retrieves the data specified by `n`

Measurement Results for Power Stat CCDF

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value `n`.

n	Results Returned
0	Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values
1, or not specified	Returns 11 scalar results:

#	Item	Unit, if any
1	Average input power	dBm
2	Probability at the average input power level	%
3	Power level that has 10 % of the power	
4	Power level that has 1 % of the power	
5	Power level that has 0.1 % of the power	
6	Power level that has 0.01 % of the power	
7	Power level that has 0.001 % of the power	

n	Results Returned		
	#	**Item**	**Unit, if any**
	8	Power level that has 0.0001 % of the power	
	9	Peak power	dB
	10	Count	
	11	Power level that has 0.00001% of the power if "Minimum Probability" on page 2623 is PP7 (0.00001 %) This value is returned only when PP7 is selected	
2	Returns a series of 5001 floating point numbers (in percent) that represent the current measured power stat trace. This is the probability at particular power levels (average power), in the following order: 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power ... 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power		
3	Returns a series of 5001 floating point numbers (in percent) that represent the Gaussian trace. This is the probability at particular power levels (average power), in the following order: 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power ... 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power		
4	Returns a series of 5001 floating point numbers (in percent) that represent the user-definable reference trace. This is the probability at particular power levels (average power), in the following order: 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power ... 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power		

3.9.1 Views

In the `LTEATDD` and `5GNR` Modes, this measurement has two views: "Normal" on page 2619 and **Slot**. In all other Modes, there is only a single view (**Normal**). For the SCPI command to select **Slot** View, see "Slot View" on page 2670.

These are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

3.9.1.1 Normal

Windows: "Metrics" on page 2622, "Graph" on page 2619

The Power Stat CCDF measurement provides CCDF curves and power statistics metrics. This is common for both Uplink (MS) and Downlink (BTS).

Example	`:PST:SLTV OFF`

3.9.1.2 Slot

Windows: "Metrics" on page 2622, "Graph" on page 2619, "Slot" on page 2621

Adds the signal wave window to Power Stat CCDF measurement curves and Power statistics metrics.

To select this view, set **Display** > **Settings** > "Slot View" on page 2670. to ON.

Example	`:PST:SLTV ON`
Dependencies	Only available in LTEATDD and 5GNR Modes

3.9.2 Windows

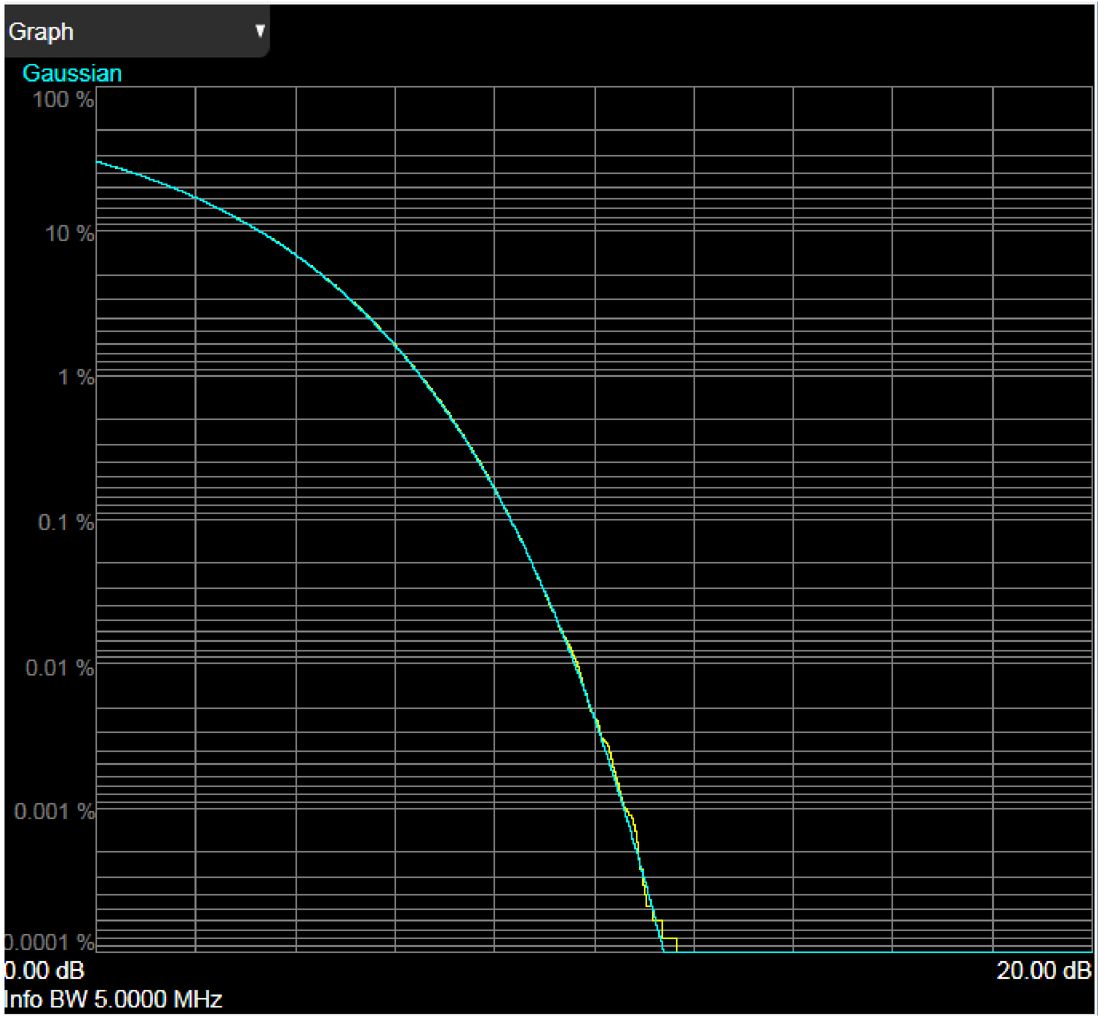
Three window types are defined:

1. "Graph" on page 2619
2. "Slot" on page 2621
3. "Metrics" on page 2622

Slot only appears in LTEATDD and 5GNR Modes.

3.9.2.1 Graph

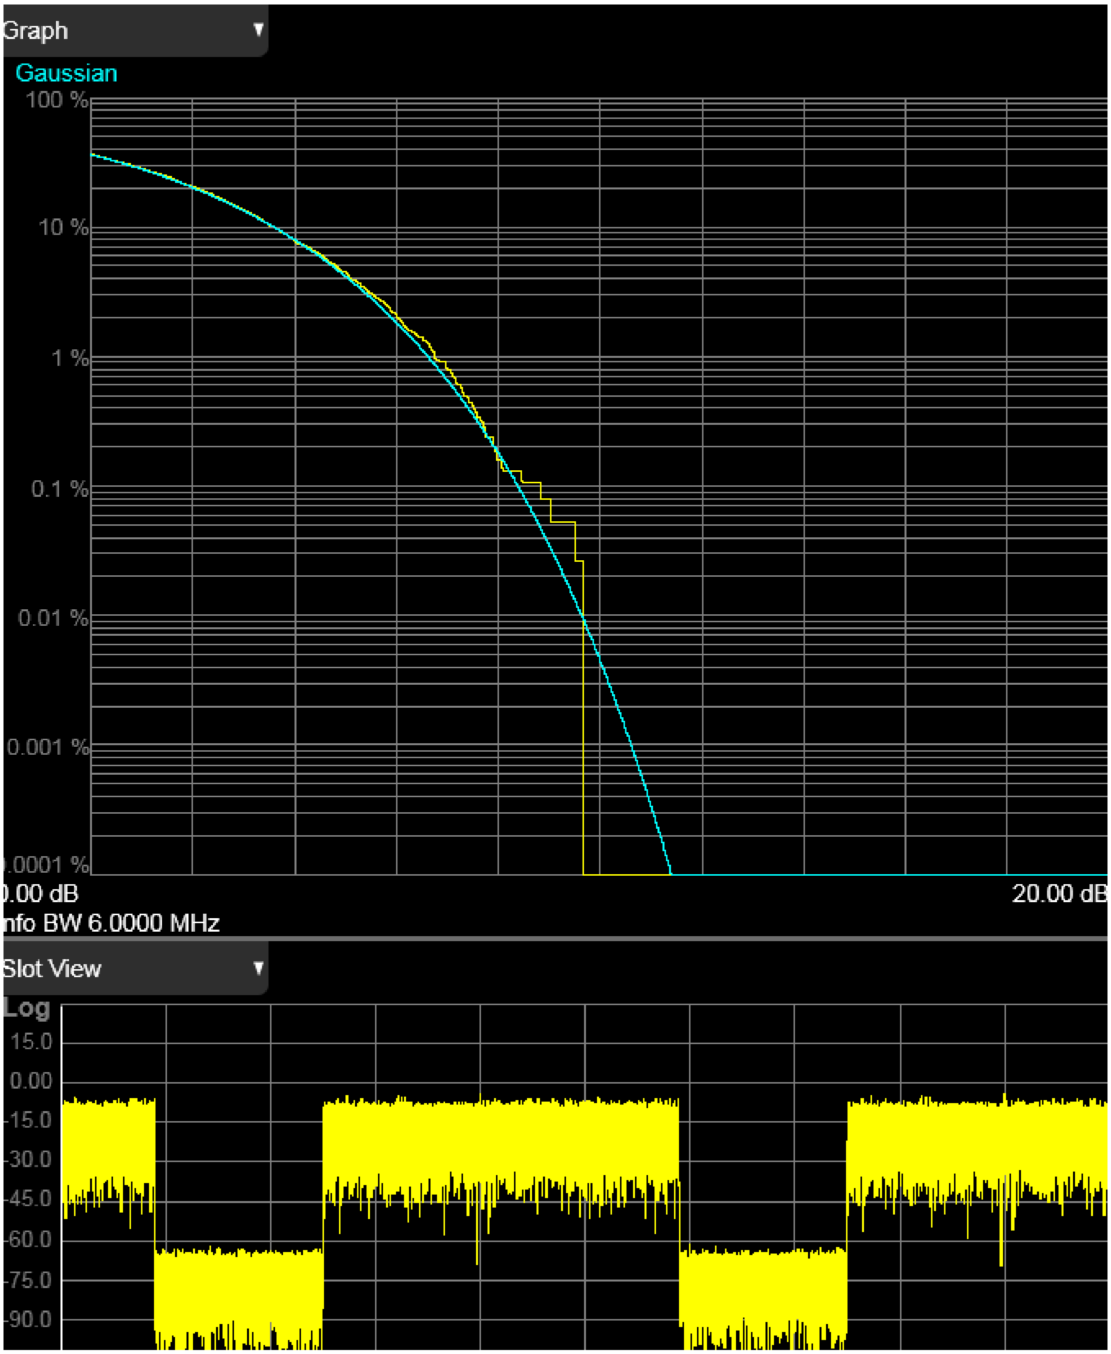
Displays Amplitude versus probability



Graph
Gaussian
100 %
10 %
1 %
0.1 %
0.01 %
0.001 %
0.0001 %
0.00 dB
20.00 dB
Info BW 5.0000 MHz

3.9.2.2 Slot

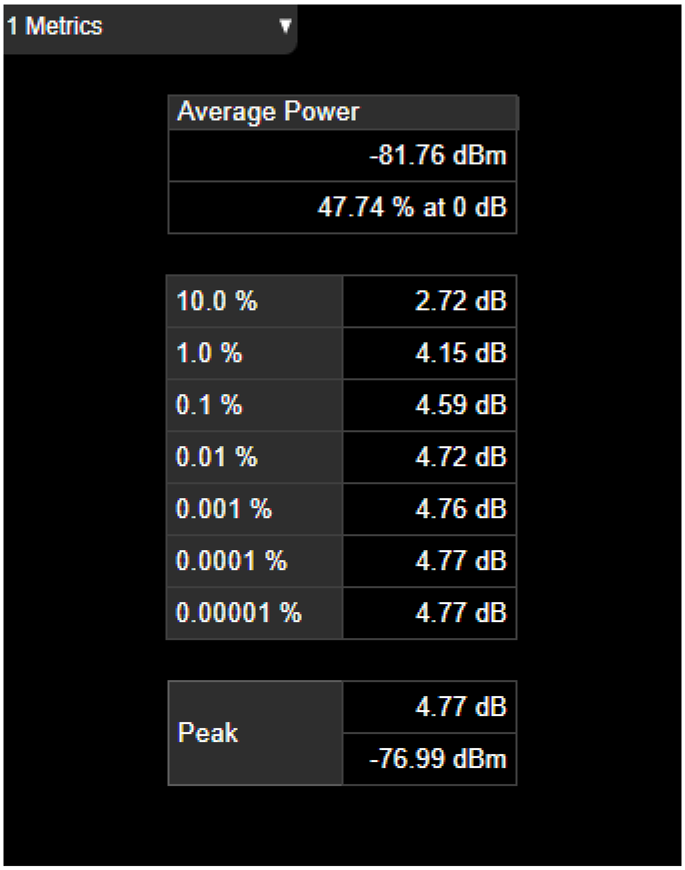
.



Only appears in LTEATDD and 5GNR Modes, and only in the View called "Slot" on page 2619

3.9.2.3 Metrics

Displays the textual results of the Power Stat CCDF measurement.



For the list of n = 1 measurement results, see "Measurement Results for Power Stat CCDF" on page 2617 above.

Name	Unit	Corresponding Results	Results Item for n = 1	Explanation
Average Power	dBm	Average input power	1	99.99 dBm
Average Power	%	Probability at the average input power level	2	99.99 %
10.0%	dB	Power level that has 10 % of the power	3	99.99 dB
1.0%	dB	Power level that has 1 % of the power	4	99.99 dB
0.1%	dB	Power level that has 0.1 % of	5	99.99 dB

Name	Unit	Corresponding Results	Results Item for n = 1	Explanation
		the power		
0.01%	dB	Power level that has 0.01 % of the power	6	99.99 dB
0.001%	dB	Power level that has 0.001 % of the power	7	99.99 dB
0.0001%	dB	Power level that has 0.0001 % of the power	8	99.99 dB
0.00001%	dB	Power level that has 0.00001% of the power if "Minimum Probability" on page 2623 is PP7 (0.00001 %)	11	99.99 dB
Peak	dB	Peak power	9	99.99 dB
Peak	dBm	Not available via remote commands	n/a	99.99 dBm

3.9.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.9.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Minimum Probability

Sets the minimum probability range.

Remote Command	`:CALCulate:PSTatistic:RANGe[:PROBability]:MINimum PP2 | … | PP7`
	For parameter values, see "Parameter Options" on page 2624 below
	`:CALCulate:PSTatistic:RANGe[:PROBability]:MINimum?`

Example	`:CALC:PST:RANG:MIN PP6` `:CALC:PST:RANG:MIN?`

Preset	PP6
State Saved	Yes
Range	1 % | 0.1 % | 0.01 % | 0.001 %| 0.0001 % | 0.00001 %

Parameter Options

Option	Value
PP2	1.0e-2 (1 %)
PP3	1.0e-3 (0.1 %)
PP4	1.0e-4 (0.01 %)
PP5	1.0e-5 (0.001 %)
PP6	1.0e-6 (0.0001 %)
PP7	1.0e-7 (0.00001 %)

3.9.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

– See "Dual-Attenuator Configurations" on page 2625

– See "Single-Attenuator Configuration" on page 2625

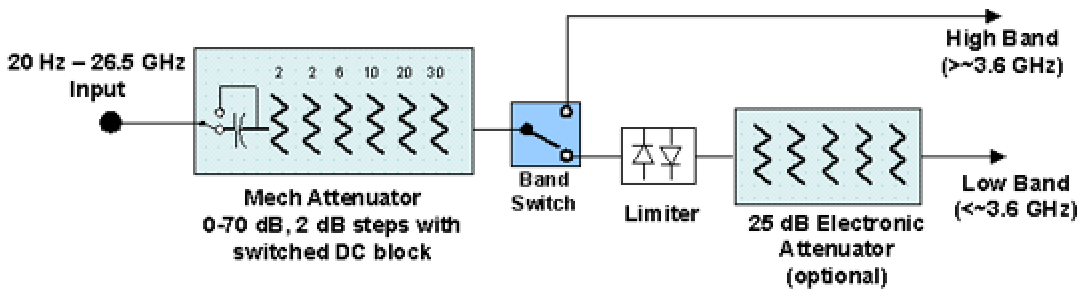
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

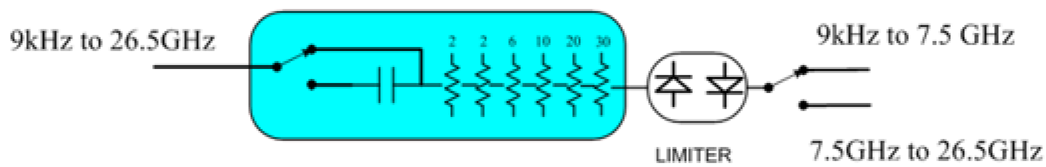
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

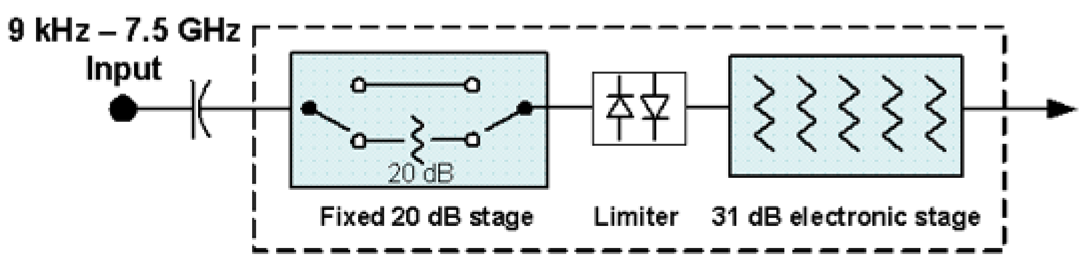


Configuration 2: Mechanical attenuator, no optional electronic attenuator

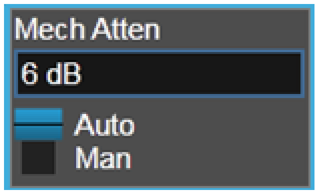


Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the "Dual-Attenuator" configuration.

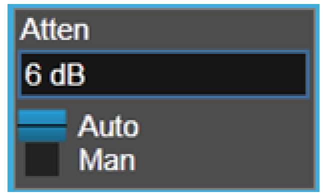
Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Dual Attenuator



Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 3228 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten
- If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 3222 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 3251 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 2629

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of

	Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 3231 See "Attenuator Configurations and Auto/Man" on page 2629 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 3227 from the result to determine the **Mech Atten.** Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	**Auto** The Auto value is 10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: *Atten: <total> dB (e<elec>)* The e letter is in amber in Single-Attenuator configurations

For example:

Dual-Attenuator configuration:

Atten: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB

Single-Attenuator configuration:

A: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)

When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	ON

Attenuator Configurations and Auto/Man

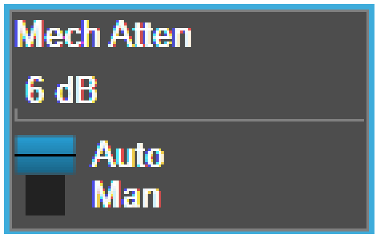
As described under "Attenuation" on page 3225, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 2627 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 3231 for more about “soft” attenuation.

NOTE	In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 2632

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation**

	control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 3251 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 3253 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 2632
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON`

	`:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 2633 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 3230

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 3236.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Restart Meas on Adjust Atten

Toggles the force restart switch for the "Adjust Atten for Min Clipping" on page 3234 function.

When `ON`, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` restarts the measurement and then executes the function.

When `OFF`, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

“Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed”

This message is *not* generated if the command is sent.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:RESTart?`
Example	`:POW:RANG:OPT:REST OFF` `:POW:RANG:OPT:REST?`

Dependencies	Available only in measurements that support continuous averaging
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

– Electric attenuator only

– Combination of Electric attenuator and Mechanical attenuator

when [:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate is executed.

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?
Example	:POW:RANG:OPT:TYPE EONL :POW:RANG:OPT:TYPE?
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 3234 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 2636

Selection	SCPI	Note
Off	OFF	This is the default setting
On	ON	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined
Elec Atten Only	ELECtrical	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator

Selection	SCPI	Note
		and is usually faster
Elec+Mech Atten	COMBined	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 3231 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 2635 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

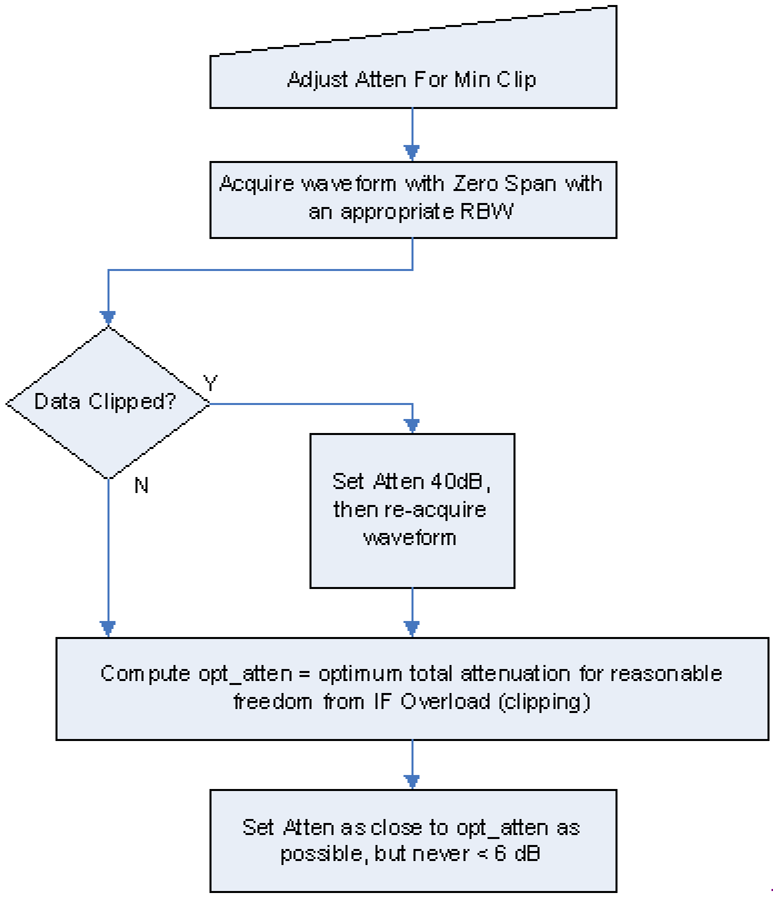
Backwards Compatibility Command

Notes	ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF
Backwards Compatibility SCPI	[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0 [:SENSe]:POWer[:RF]:RANGe:AUTO?

Adjustment Algorithm

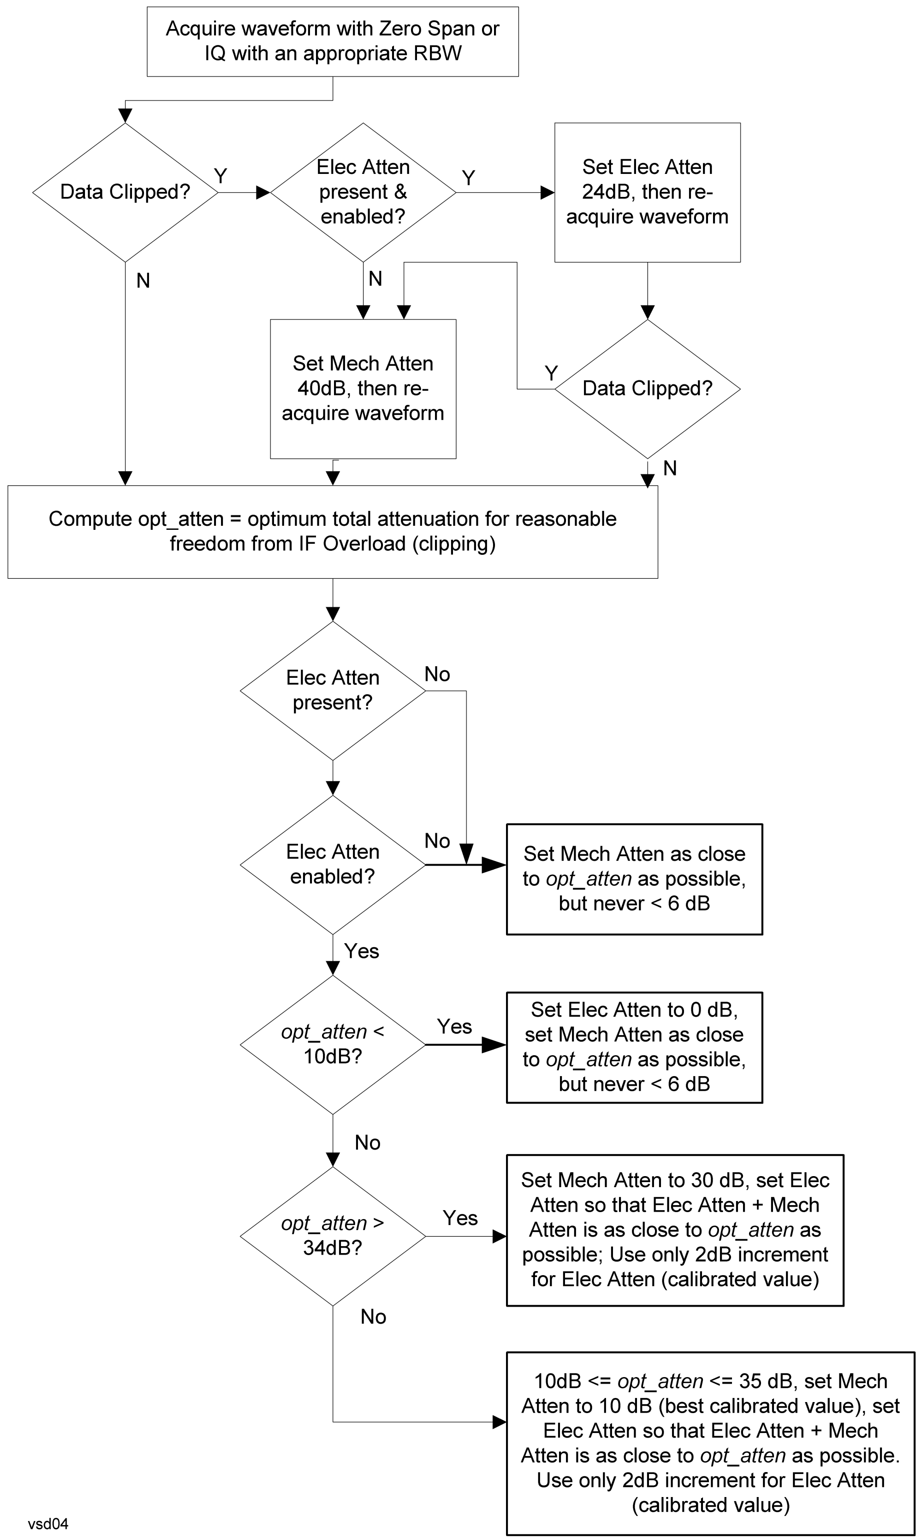
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

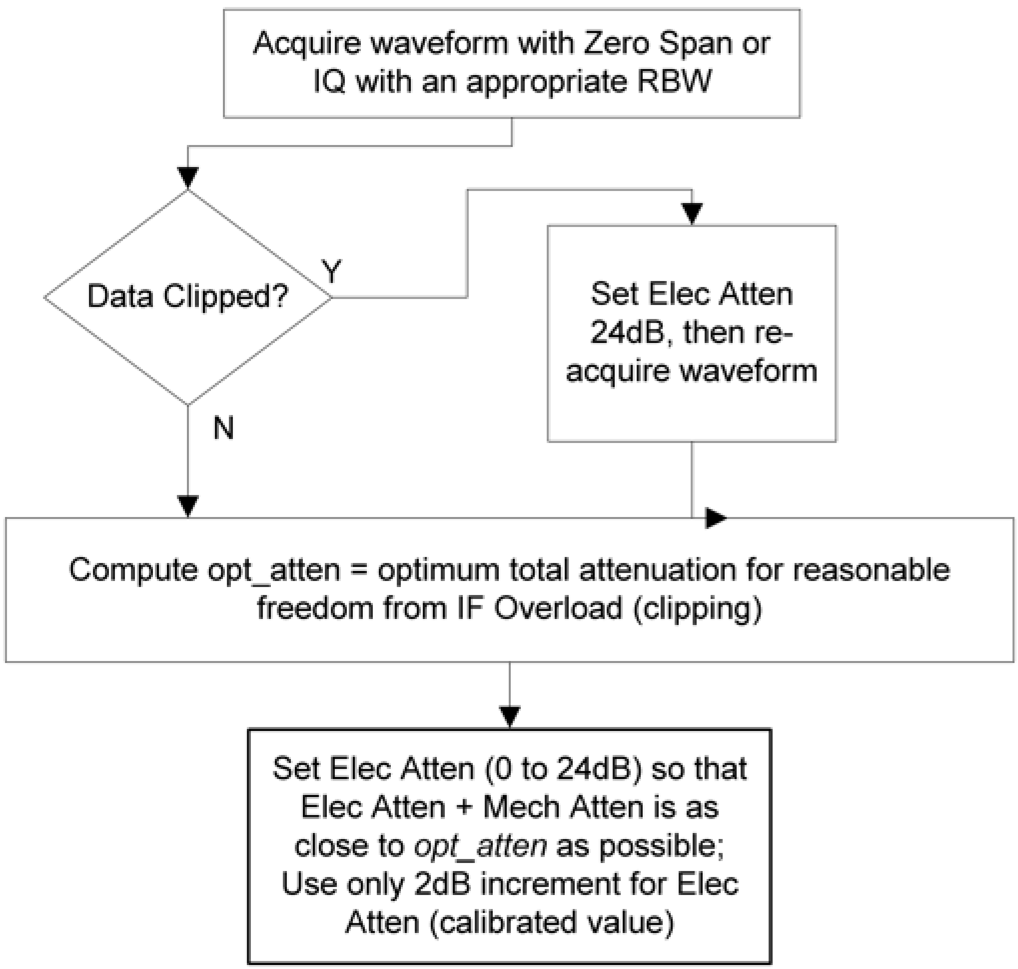
"Adjust Atten for Min Clipping" on page 3234 or "Pre-Adjust for Min Clipping" on page 2635 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to opt_atten as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to opt_atten as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= opt_atten <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 2635 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.9.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs"
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`
Example	Set the I Range to 0.5 V Peak `:VOLT:IQ:RANG 0.5 V`

	`:VOLT:IQ:RANG?`
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 3245 is On, the **I Range** value will be copied to "Q Range" on page 3244 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 **Ω**
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 3242 determines both I and Q channel range settings.

Remote Command	[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage> [:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?
Example	Set the Q Range to 0.5 V Peak: :VOLT:IQ:Q:RANG 0.5 V :VOLT:IQ:Q:RANG?
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 3242 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 3245 is On, the "I Range" on page 3242 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl> [:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?
Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 **Ω**, and to 1.0 V Peak when Reference Z is 75 **Ω**: :POW:IQ:Q:RANG 4 dBm :POW:IQ:Q:RANG?
Notes	The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form of the command

	The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When ON, the "I Range" on page 3242 value is mirrored (copied) to the "Q Range" on page 3244
Preset	ON
State Saved	Saved in instrument state
Range	OFF|ON

3.9.3.4 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

The same as "Restart Meas on Adjust Atten" on page 3235 under "Attenuation" on page 3225.

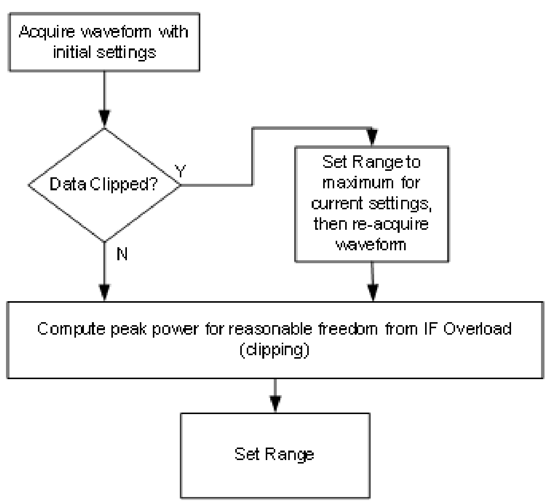
Pre-Adjust for Min Clipping

If this function is ON, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and ON) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 3245 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`	
Example	`:POW:RANG:PAR 12 dB`	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	
Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 3247. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`	
Example	`:POW:RANG:MIX:OFFS -5 dB`	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.9.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 3264 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 3250 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 2649.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command

	is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 3250
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated

3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 3249 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 3249, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated

	Not available when the electronic/soft attenuator is enabled
Preset	LOW
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	OFF

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 3251. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with "Internal Preamp" on page 3251, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

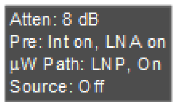
For more details about annotation, see "More Information" on page 2653

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled

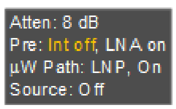
Preset	OFF
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 2658
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 2660
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 2660

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 3249 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable.** In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present

	as well as option FBP In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated **Low Noise Path Enable** and **Full Bypass Enable** are grayed-out if the current measurement does not support them **Low Noise Path Enable** and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"
Preset	<table><tr><th>Mode</th><th>Value</th></tr><tr><td>IQ Analyzer Pulse RTSA Avionics</td><td>MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`</td></tr><tr><td>All other Modes</td><td>`STD`</td></tr></table>–
State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable
Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when 'Enabled Wideband IF for FFT' is OFF or 'Sweep Type

Measurement	µW Path Control Auto behavior
	Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON`

	:POW:MW:PATH:AUTO?
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 2655 above
Preset	ON
Range	ON|OFF

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

– The instrument is not in the Low Band, meaning:

– the start frequency is above 3.5 GHz and

– the stop frequency is above 3.6 GHz

– The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

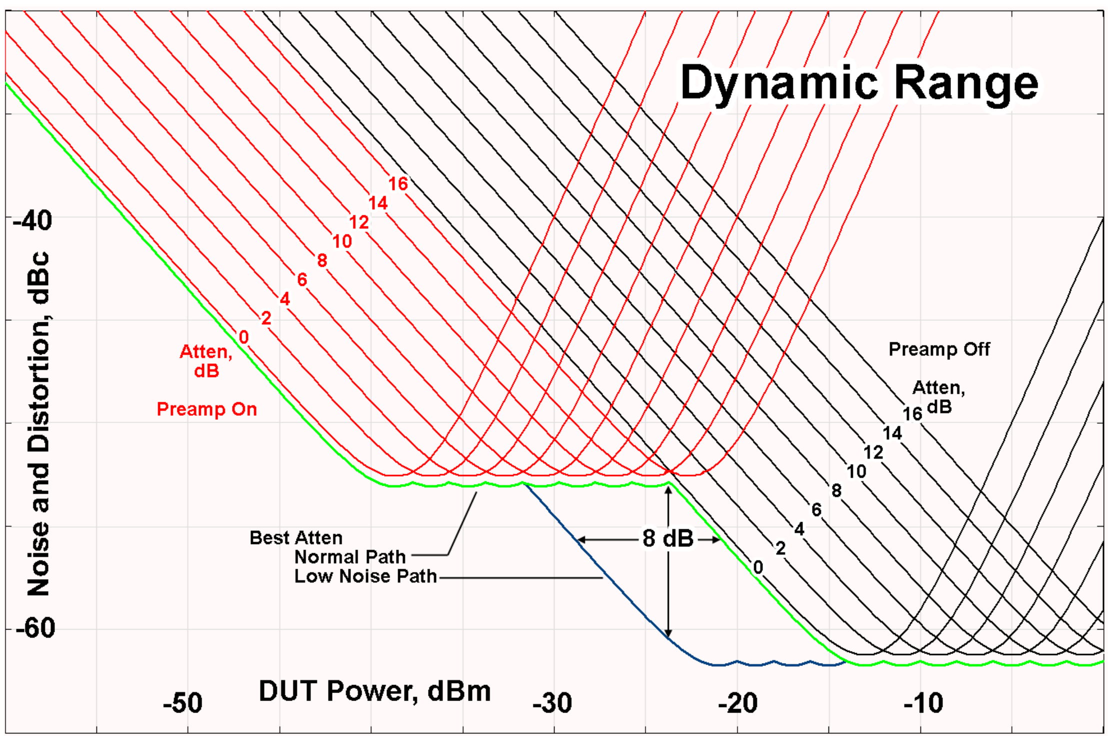
Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still

high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the "Low Noise Path." However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and

- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is OFF, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

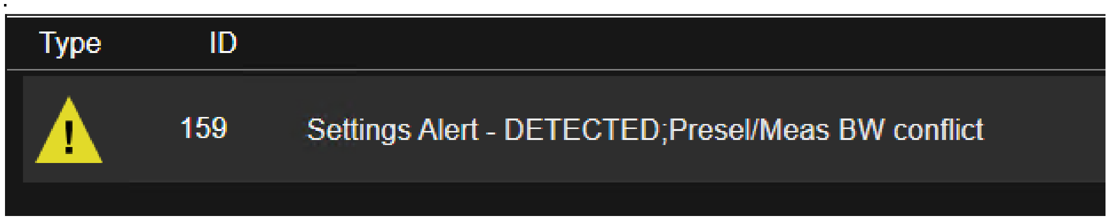
When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

.



Allow Full Bypass in Auto

Enable or disable Full Bypass in µW Path Auto rule. See "µW Path Control" on page 3254.

When this function is ON, and "µW Path Control" on page 3254 is in AUTO, it is possible for the auto rules to select the FULL Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the FULL Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION: When **Full Bypass Enable** is selected, and "Y Scale" on page 3222 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?`
Example	`:POW:MW:PATH:AUTO:FULL ON` `:POW:MW:PATH:AUTO:FULL?`
Dependencies	Only appears if Option FBP is installed, and in the following measurements – 5GNRMode: Modulation Analysis and IQ Waveform – WLAN Mode: IQ Waveform – Channel Quality Mode: Group Delay and Noise Power Ratio
Preset	`OFF`
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The

specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: OFF N9042B+V3050A: ON M9410A/11A: ON

State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: `ADVanced` N9042B+V3050A: `NORMal`
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- NORMal – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for NARRow (below)
- NARRow– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 3264 is OFF. The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when **Software Preselection** is enabled
Preset	N9041B: NORMal N9042B+V3050A: NARRow
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`
Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: `:SPEC:PFIL ON`

	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in SA Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 2667 below
State Saved	Saved in instrument state

Prefilter Presets

3.9.4 BW

Opens the Bandwidth (**BW**) menu, which contains the Info BW control.

3.9.4.1 Settings

Contains basic bandwidth functions. It is the only tab under **BW**.

Info BW

Allows you to enter a frequency value to set the channel bandwidth that will be used for data acquisition. When in **Auto**, it is set to the value that covers carriers set by carrier configuration.

Remote Command	`[:SENSe]:PSTatistic:BANDwidth <freq>` `[:SENSe]:PSTatistic:BANDwidth?`
Example	`:PST:BAND 8 MHz` `:PST:BAND?`
Notes	Auto/Man is available only for 5G NR, LTE, LTETDD, LTEAFDD, LTEA TDD
Preset	Depends on Mode and installed Options. See "Preset Values" on page 2669 below
State Saved	Saved in instrument state
Min	10 kHz
Max	Hardware-dependent: RF Input – No Option = 10 MHz – WB (25 MHz or wider) = Hardware Option Limit I/Q Input (for I+jQ) – No Option = 20 MHz – Option B25 = 50 MHz
Backwards Compatibility SCPI	`[:SENSe]:PSTatistic:BWIDth`

Auto Function

Remote Command	`[:SENSe]:PSTatistic:BANDwidth:AUTO ON | OFF | 1 | 0` `[:SENSe]:PSTatistic:BANDwidth:AUTO`
Example	`:PST:BAND:AUTO 0` `:PST:BAND:AUTO?`
Preset	ON

3.9.5 Display

Lets you configure display items for the current Mode, Measurement View or Window.

3.9.5.1 Settings

Contains a control to turn on or turn off "Slot" on page 2619. When **Slot** View is switched `OFF`, **Normal** View is selected.

Slot View

Toggles "Slot" on page 2619 On or Off. When `ON`, **Slot View** is selected. When `OFF`, **Normal** View is selected.

Remote Command	`[:SENSe]:PSTatistic:SLTView[:STATe] OFF | ON | 0 | 1` `[:SENSe]:PSTatistic:SLTView[:STATe]?`
Example	`:PST:SLTV ON` `:PST:SLTV?`
Dependencies	Only available in LTEATDD and 5GNR Modes
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

3.9.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 2618.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`
Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send: `:DISP:VIEW:ADV:SEL "Trace Zoom"` because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with

	:DISP:VIEW:ADV:SEL <alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work: :DISP:VIEW:ADV:SEL "Trace Zoom" :DISP:VIEW:ADV:SEL "TRACE ZOOM" If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist" If the display is disabled (via :DISP:ENAB OFF) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated
Backwards Compatibility SCPI	The legacy node :DISPlay:VIEW[:SELect] is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	:DISPlay:VIEW:ADVanced:NAME <alphanumeric>
Example	:DISP:VIEW:ADV:NAME "Baseband" Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <alphanumeric> name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via :DISP:ENAB OFF) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN "Baseband"`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated

	If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 3275), then query the list of available Views, the result is undefined

3.9.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ....

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON`

	This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When OFF, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to OFF when **System Display Settings**, **Annotation** is OFF
Preset	ON This remains OFF through a Preset when **System Display Settings**, **Annotation** is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

– and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)

– and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)

– and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is OFF, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	:DISPlay:VIEW:ADVanced:SELect
Rename User View	:DISPlay:VIEW:ADVanced:REName
Delete User View	:DISPlay:VIEW:ADVanced:DELete
Create User View	:DISPlay:VIEW:ADVanced:NAME
Select Screen	:INSTrument:SCReen:SELect
Delete Screen	:INSTrument:SCReen:DELete
Delete All But This Screen	:INSTrument:SCReen:DELete:ALL
Add Screen	:INSTrument:SCReen:CREate
Rename Screen	:INSTrument:SCReen:REName
Sequencer On/Off	:SYSTem:SEQuencer

Remote Command	:DISPlay:ENABle OFF | ON | 0 | 1 :DISPlay:ENABle?
Example	:DISP:ENAB OFF
Couplings	:DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does *not* change the state of :DISP:ENAB
Preset	ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTem:PRESet
State Saved	Not saved in instrument state
Backwards Compatibility Notes	:SYST:PRES no longer turns on :DISPlay:ENABle as it did in legacy analyzers

3.9.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, **Center Frequency** is the same for all measurements — it does not change as you change measurements.

3.9.6.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR Mode measurements often deal with multiple carriers with distinct bandwidths, the simple "Center Frequency" on page 2679 parameter used in most measurements does not apply here. Instead, **Carrier Reference Frequency** is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, as **Center Frequency** can be a global parameter, and it would not make sense for **Carrier Reference Frequency** to use this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

– the **Number of Component Carriers** is 1

– the **Center Freq Offset** is 0 Hz

– the **Center Frequency** Mode is Auto

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, the mode of **Center Frequency** remains as Auto and the Carrier Ref Freq changes to the same value. The main purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD Modes, in which `:SENSe:FREQuency:CENTer` is used to set up the frequency of the measurement.

See "More Information" on page 2679

Remote Command	For LTE-A, 5G NR
	`[:SENSe]:CCARrier:REFerence <freq>`
	`[:SENSe]:CCARrier:REFerence?`
	For MSR
	`[:SENSe]:CARRier:REFerence <freq>`
	`[:SENSe]:CARRier:REFerence?`

Example	For LTE-A, 5G NR

	`:CCAR:REF 2GHz`
	`:CCAR:REF?`
	For MSR
	`:CARR:REF 2GHz`
	`:CARR:REF?`

Dependencies	Only available in LTEAFDD, LTEATDD, 5GNR and MSR Modes
Preset	1 GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as "Center Frequency" on page 2679

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The **Center Frequency** setting is the same for all measurements within a mode, that is, it is Meas Global. Some Modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

Center Frequency sets (and queries) the center frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, **Center Frequency** changes to the value for that input. SCPI commands are available to directly set the center frequency for a specific input.

Center Frequency is remembered as you go from input to input. Thus, you can set a **Center Frequency** of 10 GHz with the RF Input selected, change to BBIQ and set a **Center Frequency** of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input, **Center Frequency** will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

– "Center Frequency Presets" on page 2681

– "VXT Models with Radio Heads/CIU Frequency Range" on page 2683

– "RF Center Freq" on page 2683
– "Ext Mix Center Freq" on page 2684
– "I/Q Center Freq" on page 2684

Remote Command	`[:SENSe]:FREQuency:CENTer <freq>` `[:SENSe]:FREQuency:CENTer?`

Example	Set Center Frequency to 50 MHz:
	`:FREQ:CENT 50 MHz`
	Increment Center Frequency by the value of **CF Step**:
	`:FREQ:CENT UP`
	Return the current value of Center Frequency:
	`:FREQ:CENT?`

Notes	Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: – For RF input it is equivalent to `:FREQ:RF:CENT` – For I/Q input it is equivalent to `:FREQ:IQ:CENT` – For External Mixer it is equivalent to `:FREQ:EMIX:CENT` Preset and Max values are dependent on Hardware Options If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2681, "RF Center Freq" on page 2683, "Ext Mix Center Freq" on page 2684, "I/Q Center Freq" on page 2684, and "VXT Models with Radio Heads/CIU Frequency Range" on page 2683
State Saved	Saved in instrument state
Min/Max	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2681, "RF Center Freq" on page 2683, "I/Q Center Freq" on page 2684, and "VXT Models with Radio Heads/CIU Frequency Range" on page 2683
Status Bits/OPC dependencies	Non-overlapped

The following command and parameters apply only to MSR, LTE-Advanced FDD/TDD and 5G NR Modes.

Remote Command	`[:SENSe]:FREQuency:CENTer:AUTO ON | OFF | 1 | 0` `[:SENSe]:FREQuency:CENTer:AUTO?`
Example	`:FREQ:CENT:AUTO OFF` `:FREQ:CENT:AUTO?`
Dependencies	Only available for the Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in MSR,

	LTE-Advanced FDD/TDD and 5G NR Modes
Couplings	When Center Frequency changes, state automatically changes to **Manual** (OFF) Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes: **Center Frequency** / **Relationship** Auto: Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed) Man: Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset
Preset	ON
State Saved	Saved in instrument state
Range	Auto|Man

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (M9421A, M8920A)	2.145 GHz	3.88GHz	3.88 GHz
506 (M9421A, M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (M9410A/11A)	1.0 GHz	6.08 GHz	6.08 GHz
F06 (M9415A)	1 GHz	1.08 GHz	6.6 GHz
F08 (M9415A)	1 GHz	1.08 GHz	8.6 GHz
F12 (M9415A)	1 GHz	1.08 GHz	12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can’t tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq

Lets you specify the RF Center Frequency. Sets the Center Frequency to use when the RF input is selected, even if the RF input is not selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:RF:CENTer <freq>` `[:SENSe]:FREQuency:RF:CENTer?`
Example	`:FREQ:RF:CENT 30 MHz` `:FREQ:RF:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each mode and common across all the measurements in the mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set **Center Frequency** such that the Stop Frequency would be > 3.6 GHz fails and results in an advisory message If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning
Preset	See "Center Frequency Presets" on page 2681
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See "Center Frequency Presets" on page 2681. Basically, instrument maximum frequency - 5 Hz

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. Sets the Center Frequency to use when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:EMIXer:CENTer <freq>` `[:SENSe]:FREQuency:EMIXer:CENTer?`
Example	`:FREQ:EMIX:CENT 60 GHz` `:FREQ:EMIX:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
