DATA SHEET

IxANVL® — Automated Network Validation Library

Problem: Questioning Product Quality

Throughout your product's lifecycle, you need to verify your device design. Does the device's protocol software meet specifications? How well does the device handle traffic from non-complying network components? How might new development impact existing code? Not only do these questions demand accurate responses, they also require speedy resolution, because identifying and addressing last-minute product reworks can be considerably time-consuming and costly.

Solution: Validation That Keeps Costs Down, Confidence Up

With Ixia's IxANVL (Automated Network Validation Library), you can quickly and effortlessly access a vast array of protocol libraries and utilities to validate protocol compliance and interoperability. Easy to use thanks to an enhanced graphical user interface (GUI) and flexible test-automation capabilities, IxANVL delivers many key advantages. By emulating large, multi-node networks, it not only reduces costs—it also leads to more efficient testing and faster product-release times. And extensive and thorough automated testing increases your confidence in product quality.

Highlights

Save Time and Money

IxANVL allows vendors to verify device design during the product's entire lifecycle. Problems can be identified earlier to prevent costly last-minute reworks. IxANVL emulates large, multi-node networks that previously were cost prohibitive–resulting in more efficient tests and quicker product release times.

Increase Confidence

IxANVL increases confidence in product quality by enabling extensive and thorough testing, performed automatically and without supervision.

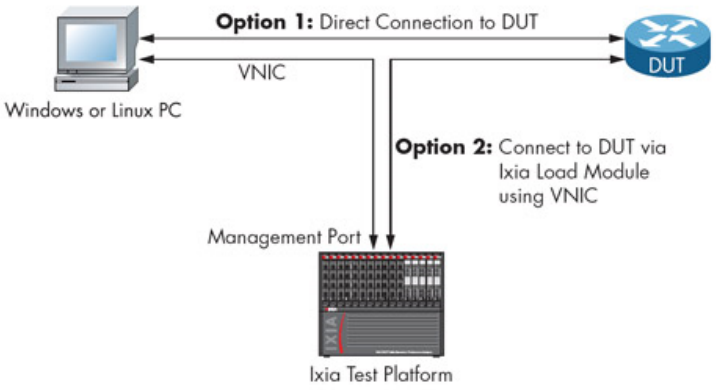
IxANVL's test results allow users to:

- Determine exactly where a device's protocol software does and does not meet the specification
- Observe how well the device handles traffic from non-complying network components
- Determine how new development effects existing code, via regression testing

Validate Broad Set of Protocols

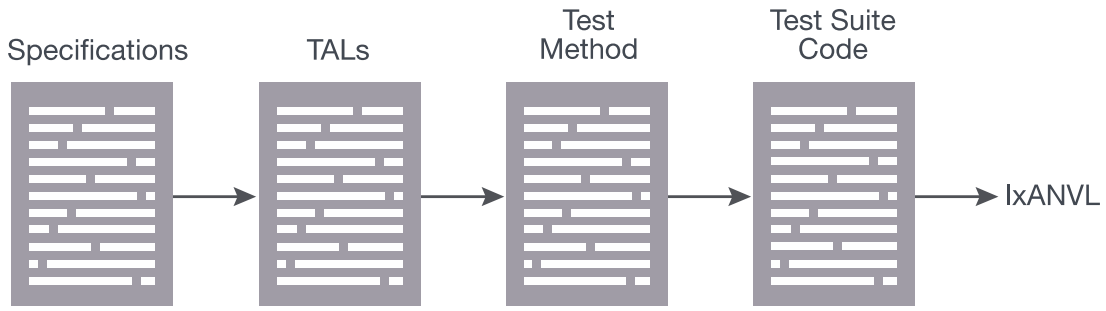
IxANVL supports a comprehensive list of protocols, including Bridging, Routing, PPP, TCP/IP, IPv6, IPsec, VPN, MPLS, Carrier Ethernet, Automotive Ethernet, Segment Routing and Multicast.

KEYSIGHT TECHNOLOGIES



Though IxANVL can run on minimal hardware such as a PC with a Linux or Windows operating system and an Ethernet card, it is also well suited for operation on Ixia's powerful test and analysis platform via a VNIC (Virtual Network Interface Card) driver. This flexibility enables IxANVL to support industry-standard test interfaces including 100Mbps/1GE/10GE/100GE Ethernet. IxANVL provides conformance, negative, and regression testing on a vast selection of protocols.

Test Methodology



IxANVL Test Suite Development Process

IxANVL follows a rigorous test suite development process:

Specifications: Analyze a protocol specification line-by-line

Test Assertion Lists (TALs):

- Develop a TAL, which is a list of testable statements
- Augment TALs with more negative tests
- Prioritize and group TALs for the test suite

Test Method: Develop a test method for each accepted test assertion

Test Suite Code Validation: Continually perform verification of protocol standards (authors or implementers) during the development process.

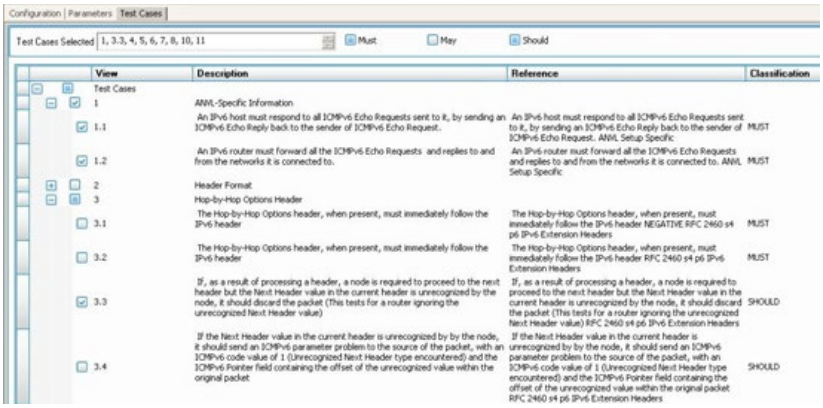
Test Configuration

The IxANVL test suite can run on a Linux or Windows PC with off-the-shelf network interface cards (NICs), or on Ixia's load modules through a VNIC connection. The tester PC connects with the device under test (DUT) via test interfaces. Up to six interfaces may be used, depending on the test configuration. IxANVL flexibly emulates various system topologies and creates virtually any test scenarios for almost any DUT.

IxANVL offers both a command-line interface for test automation and a user-friendly GUI, allowing intuitive test execution management and detail reporting. A batch runner is also available for scheduling regression test-run sequences.

Test Execution

IxANVL classifies test cases into three categories: MUST, SHOULD, and MAY. Tests can be selected and executed based on their categories or test topologies.



The IxANVL test selection interface enables users to select and run tests individually or as a group.

The IxANVL test can be run using two options—GUI or command line input. In GUI mode, the user selects which test suite and test cases to run. In command line mode, the user types a command with options indicating which tests should run and the desired output level.

In the test, IxANVL sends packets to the DUT based on the test designed and compares the received DUT packets to what was expected. After receiving these packets, IxANVL reacts according to the returned information—it may continue the test, stop the test, log an error message, or perform a host of other functions.

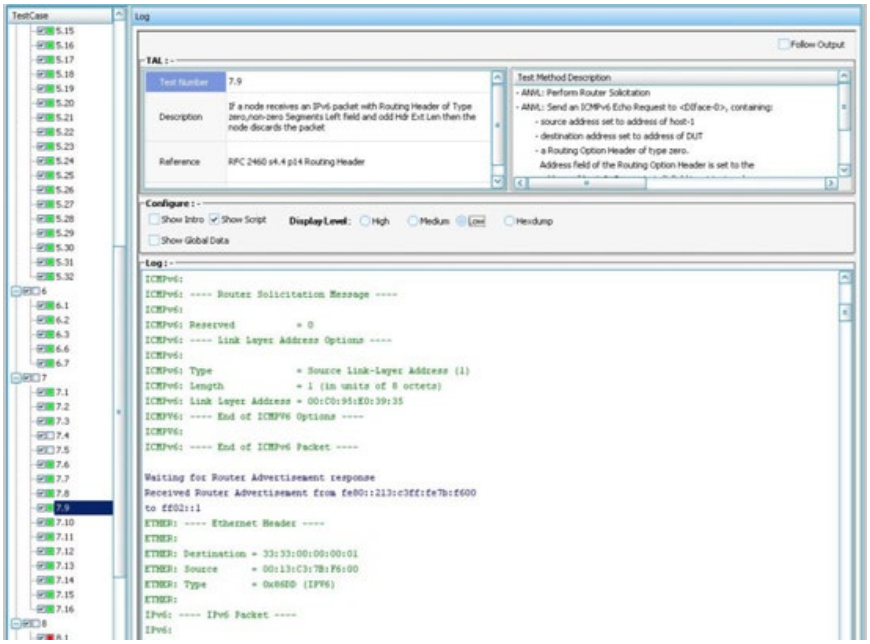
During the test, IxANVL logs the progress in real-time. After completion, it indicates whether the test passed or failed and then repeats the process with the next test until all selected tests have been run.

Test Results

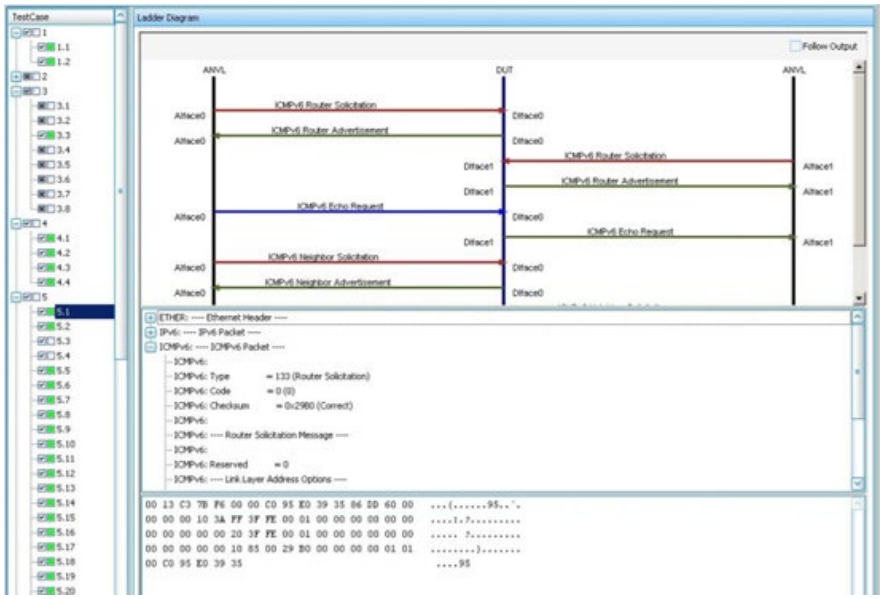
Users can specify four levels of test outputs:

1. High level: basic pass/fail
2. Medium level: pass/fail and test event status
3. Low level: comprehensive report with packet decode
4. Hexdump: detail report with hexdump of every packet exchanged between tester and DUT

IxANVL results include detailed trace outputs with a description of the test methodology for side-by-side reference.



In addition to log outputs, IxANVL provides a timing diagram that represents the relationship of the test packets exchanged between IxANVL and the DUT.



IxANVL provides comprehensive packet-by-packet analysis for every test case.

Platform

- An IxANVL workstation supports the following configuration: CentOS-6.5 (64 bit) with kernel 2.6.32-431.el6.x86_64, CentOS 7.5 (CentOS Linux release 7.5.1804, Kernel 3.10.0-862.el7.x86_64 #1 SMP)
- Windows 2008 Server R2 standard (64 bit) SP1 (US English versions), Windows 7 Professional (32 bit), Windows 7 Professional (64 bit), Windows 7 Enterprise (32 bit), Windows 2012 Server R2 standard(64-bit), Windows 10 Enterprise(64-bit), Windows Server 2016
- 2 GHz Pentium CPU or faster 2 GB RAM
- 512 MB Free Disk Space

Supported Interfaces

IxANVL supports a wide range of network interface cards that directly attach to a Linux or Windows PC:

- Ethernet 10/100
- Gigabit Ethernet

IxANVL also supports Ixia's VNIC, an interface driver that resides on a Linux workstation and Ixia chassis and allows the IxANVL test suites to access Ixia's load modules.

Ixia VNIC supports the following types of Ixia load modules (per-port CPU required):

- 10 Gigabit Ethernet including NGY family
- 40GE/100GE Ethernet
- Ethernet family (10/100/1000 Mbps)

Test Coverage

IxANVL Test Suites	Target Protocols	Reference Specification	Test Cases/Req. Test Interfaces
IPv6 Test Suites			
IPv6 Core	IPv6	RFC 2460, 2464	111 / 2

Ordering Information

Part Number	Description
924-450-10PBF	IxANVL, Framework bundle, Floating Binary License. Includes Linux Framework, Windows Framework, Ipv6 Framework, Interface - Ethernet, Interface - Async Serial, Interface - Sync Serial, Interface - PPPoE, Interface - VNIC
924-430-10PBF	IxANVL, Protocol Test Package, IPv6 bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, IPv6 Core, IPv6 Advanced, DHCPv6. Simultaneous test suite runs requires purchase of additional framework licenses.
924-431-10PBF	IxANVL, Protocol Test Package, IPv4 bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, IPv4, ARP, DHCPv4. Simultaneous test suite runs requires purchase of additional framework licenses.
924-432-10PBF	IxANVL, Protocol Test Package, IPv4 Routing bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, IP RIP, OSPF Core, OSPF Extensions, OSPF-GR, VRRP, BGP4 Core, BGP4 Extensions, BGP 4 byte AS, ISIS, ISIS-TE, ISIS-MT, BFD. Simultaneous test suite runs requires purchase of additional framework licenses.
924-434-10PBF	IxANVL, Protocol Test Package, IPv6 Routing bundle, Floating Binary License. Includes single framework bundle to run test suites in sequence, RIPng, OSPFv3, BGP Plus, OSPFv3 -AF, VRRPv6, ISISv6. Simultaneous test suite runs requires purchase of additional framework licenses.
924-435-10PBF	IxANVL, Protocol Test Package, MPLS bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, MPLS, RSVP-TE, RSVP-TE P2MP, LDP, mLDP, LSP-Ping-TR, VCCV, L2VPN - PWE3, VPLS, VPLS-BGP, L3 VPN, MPLS-TP Y1731 CC LD, MPLSTP IETF CC CV LD, MPLSTP G8031 APS Y 1731. Simultaneous test suite runs requires purchase of additional framework licenses.
924-433-10PBF	IxANVL, Protocol Test Package, Multicast bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, IGMP, DVMRP, PIM, PIMv6, MLD. Simultaneous test suite runs requires purchase of additional framework licenses.
924-436-10PBF	IxANVL, Protocol Test Package, Transport bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, TCP Core, TCP Advanced, TCP High Perf, UDP. Simultaneous test suite runs requires purchase of additional framework licenses.
924-437-10PBF	IxANVL, Protocol Test Package, IPSecv4 bundle, Floating Binary License. Includes single framework bundle to run test suites in sequence, IPSec AH, IPSec ESP, IPSec IKE, IKEV2. Simultaneous test suite runs requires purchase of additional framework licenses.
924-438-10PBF	IxANVL, Protocol Test Package, IPSecv6 bundle, Floating Binary License. Includes single framework bundle to run test suites in sequence, IPSec AH /

Part Number	Description
	IPv6, IPSec ESP / IPv6, IPSec IKE / IPv6, IKEV2-IPV6. Simultaneous test suite runs requires purchase of additional framework licenses.
924-439-10PBF	IxANVL, Protocol Test Package, PPP bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, PPP, IPCP, VJ, PPPoE, MultiLINC PPP, L2TP, PPTP. Simultaneous test suite runs requires purchase of additional framework licenses.
924-440-10PBF	IxANVL, Protocol Test Package, Carrier Ethernet bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, MEF9, EtherCFM, EtherOAM, MEF OAM, Service OAM, Provider BB, MEF Service OAM, CE2.0, MEF ELMI, G8031, G_8265_1. Simultaneous test suite runs requires purchase of additional framework licenses.
924-441-10PBF	IxANVL, Protocol Test Package, Bridging bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, STP, RSTP, EAPOL, MSTP, LLDP, DCBX, Mcast Snooping, VLAN, LACP, QinQ, MVRP/MMRP. Simultaneous test suite runs requires purchase of additional framework licenses.
924-454-10BF	IXIA IxANVL, Conformance Test Suite, Floating Binary License; Test cases for ISIS-SR.
924-442-10PBF	IxANVL, Protocol Test Package, SDN bundle, Floating Binary License; Includes single framework bundle to run test suites in sequence, OF1.0, OF1.3. Simultaneous test suite runs requires purchase of additional framework licenses.
924-427-10BF	IxANVL, Conformance Test Suite, Automotive Ethernet IPv4 network and transport layer tests for host, client and server protocol stack, Floating Binary License
924-427-10F	IxANVL, Conformance Test Suite, Automotive Ethernet IPv4 network and transport layer tests for host, client and server protocol stack, Floating Source License
924-428-10BF	IxANVL, Conformance Test Suite, Automotive Ethernet IPv6 network and transport layer tests upgrade for host, client and server protocol stack, Floating Binary License; REQUIRES 924-040-91BF Framework Upgrade IPv6, 924-427-10BF AUTOMOTIVE-IPv4
924-428-10F	IxANVL, Conformance Test Suite, Automotive Ethernet IPv6 network and transport layer tests upgrade for host, client and server protocol stack, Floating Source License; REQUIRES 924-040-91F Framework Upgrade IPv6, 924-427-10F AUTOMOTIVE-IPv4

Note 1: TCP test suites require a connection with the DUT from both below and above the targeted TCP layer. Connection from below the TCP layer is achieved via a traditional physical layer interface. Connection from above the TCP layer can only be achieved with a unique application called “TCP Stub,” developed by Ixia. The TCP Stub is controlled and managed remotely by Ixia TCP Test Suites. The purpose of the TCP Stub is to generate the necessary stimulus above the TCP layer required for testing. The TCP Stub is a portable C-code application bundled with TCP test suites. Customers are required to compile the TCP Stub onto their target systems.
