Warranty
The material contained in this document is provided “as is,” and is subject to being changed, without notice, in future editions. Further, to the maximum extent permitted by applicable law, Keysight disclaims all warranties, either express or implied, with regard to this manual and any information contained herein, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Keysight shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein. Should Keysight and the user have a separate written agreement with warranty terms covering the material in this document that conflict with these terms, the warranty terms in the separate agreement shall control.

Technology License
The hardware and/or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

U.S. Government Rights
The Software is “commercial computer software,” as defined by Federal Acquisition Regulation (“FAR”) 2.101. Pursuant to FAR 12.212 and 27.405-3 and Department of Defense FAR Supplement (“DFARS”) 227.7202, the U.S. government acquires commercial computer software under the same terms by which the software is customarily provided to the public. Accordingly, Keysight provides the Software to U.S. government customers under its standard commercial license, which is embodied in its End User License Agreement (EULA), a copy of which can be found at www.keysight.com/find/sweula. The license set forth in the EULA represents the exclusive authority by which the U.S. government may use, modify, distribute, or disclose the Software. The EULA and the license set forth therein, does not require or permit, among other things, that Keysight: (1) Furnish technical information related to commercial computer software or commercial computer software documentation that is not customarily provided to the public; or (2) Relinquish to, or otherwise provide, the government rights in excess of these rights customarily provided to the public to use, modify, reproduce, release, perform, display, or disclose commercial computer software or commercial computer software documentation. No additional government requirements beyond those set forth in the EULA shall apply, except to the extent that those terms, rights, or licenses are explicitly required from all providers of commercial computer software pursuant to the FAR and the DFARS and are set forth specifically in writing elsewhere in the EULA. Keysight shall be under no obligation to update, revise or otherwise modify the Software. With respect to any technical data as defined by FAR 2.101, pursuant to FAR 12.211 and 27.404.2 and DFARS 227.7102, the U.S. government acquires no greater than Limited Rights as defined in FAR 27.401 or DFAR 227.7103-5 (c), as applicable in any technical data.

Safety Notices

CAUTION
A CAUTION notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in damage to the product or loss of important data. Do not proceed beyond a CAUTION notice until the indicated conditions are fully understood and met.

WARNING
A WARNING notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in personal injury or death. Do not proceed beyond a WARNING notice until the indicated conditions are fully understood and met.
In This Book

This book is your guide to programming the 2000 X-Series oscilloscopes:

The first few chapters describe how to set up and get started:

- **Chapter 1**, “What's New,” starting on page 27, describes programming command changes in the latest version of oscilloscope software.
- **Chapter 2**, “Setting Up,” starting on page 47, describes the steps you must take before you can program the oscilloscope.
- **Chapter 3**, “Getting Started,” starting on page 55, gives a general overview of oscilloscope program structure and shows how to program the oscilloscope using a few simple examples.
- **Chapter 4**, “Commands Quick Reference,” starting on page 69, is a brief listing of the 2000 X-Series oscilloscope commands and syntax.

The next chapters provide reference information on common commands, root level commands, other subsystem commands, and error messages:

- **Chapter 5**, “Common (*) Commands,” starting on page 137, describes commands defined by the IEEE 488.2 standard that are common to all instruments.
- **Chapter 6**, “Root (:) Commands,” starting on page 165, describes commands that reside at the root level of the command tree and control many of the basic functions of the oscilloscope.
- **Chapter 7**, “:ACQuire Commands,” starting on page 201, describes commands for setting the parameters used when acquiring and storing data.
- **Chapter 8**, “:BUS<n> Commands,” starting on page 215, describes commands that control all oscilloscope functions associated with the digital channels bus display.
- **Chapter 9**, “:CALibrate Commands,” starting on page 225, describes utility commands for determining the state of the calibration factor protection button.
• **Chapter 10**, “:CHANnel<n> Commands,” starting on page 235, describes commands that control all oscilloscope functions associated with individual analog channels or groups of channels.
• **Chapter 11**, “:DEMO Commands,” starting on page 257, describes commands that control the education kit (Option EDU) demonstration signals that can be output on the oscilloscope’s Demo 1 and Demo 2 terminals.
• **Chapter 12**, “:DIGital<d> Commands,” starting on page 263, describes commands that control all oscilloscope functions associated with individual digital channels.
• **Chapter 13**, “:DISPlay Commands,” starting on page 271, describes commands that control how waveforms, graticule, and text are displayed and written on the screen.
• **Chapter 14**, “:DVM Commands,” starting on page 285, describes commands that control the optional DSOXDVM digital voltmeter analysis feature.
• **Chapter 15**, “:EXTernal Trigger Commands,” starting on page 293, describes commands that control the input characteristics of the external trigger input.
• **Chapter 16**, “:FUNCtion Commands,” starting on page 299, describes commands that control math waveforms.
• **Chapter 17**, “:HARDcopy Commands,” starting on page 331, describes commands that set and query the selection of hardcopy device and formatting options.
• **Chapter 18**, “:LISTer Commands,” starting on page 349, describes commands that turn on/off the Lister display for decoded serial data and get the Lister data.
• **Chapter 19**, “:MARKer Commands,” starting on page 353, describes commands that set and query the settings of X-axis markers (X1 and X2 cursors) and the Y-axis markers (Y1 and Y2 cursors).
• **Chapter 20**, “:MEASure Commands,” starting on page 371, describes commands that select automatic measurements (and control markers).
• **Chapter 21**, “:MTESt Commands,” starting on page 427, describes commands that control the mask test features provided with Option LMT.
• **Chapter 22**, “:POD Commands,” starting on page 461, describes commands that control all oscilloscope functions associated with groups of digital channels.
• **Chapter 23**, “:RECall Commands,” starting on page 467, describes commands that recall previously saved oscilloscope setups, reference waveforms, or masks.
• **Chapter 24**, “:SAVE Commands,” starting on page 475, describes commands that save oscilloscope setups, screen images, and data.
• **Chapter 25**, “:SBUS<n> Commands,” starting on page 497, describes commands that control oscilloscope functions associated with the serial decode bus and serial triggering.
• **Chapter 26**, “:SEARch Commands,” starting on page 581, describes commands that control oscilloscope functions associated with searching for waveform events.

• **Chapter 27**, “:SYSTem Commands,” starting on page 613, describes commands that control basic system functions of the oscilloscope.

• **Chapter 28**, “:TIMebase Commands,” starting on page 635, describes commands that control all horizontal sweep functions.

• **Chapter 29**, “:TRIGger Commands,” starting on page 647, describes commands that control the trigger modes and parameters for each trigger type.

• **Chapter 30**, “:WAVEform Commands,” starting on page 721, describes commands that provide access to waveform data.

• **Chapter 31**, “:WGEN Commands,” starting on page 757, describes commands that control waveform generator (Option WGN) functions and parameters.

• **Chapter 32**, “:WMEMory<r> Commands,” starting on page 787, describes commands that control reference waveforms.

• **Chapter 33**, “Obsolete and Discontinued Commands,” starting on page 797, describes obsolete commands which still work but have been replaced by newer commands and discontinued commands which are no longer supported.

• **Chapter 34**, “Error Messages,” starting on page 847, lists the instrument error messages that can occur while programming the oscilloscope.

The command descriptions in this reference show upper and lowercase characters. For example, :AUToscale indicates that the entire command name is :AUTOSCALE. The short form, :AUT, is also accepted by the oscilloscope.

Then, there are chapters that describe programming topics and conceptual information in more detail:

• **Chapter 35**, “Status Reporting,” starting on page 855, describes the oscilloscope’s status registers and how to check the status of the instrument.

• **Chapter 36**, “Synchronizing Acquisitions,” starting on page 875, describes how to wait for acquisitions to complete before querying measurement results or performing other operations with the captured data.

• **Chapter 37**, “More About Oscilloscope Commands,” starting on page 885, contains additional information about oscilloscope programming commands.

Finally, there is a chapter that contains programming examples:

• **Chapter 38**, “Programming Examples,” starting on page 895.

**Mixed-Signal Oscilloscope Channel Differences**

Because both the "analog channels only" oscilloscopes (DSO models) and the mixed-signal oscilloscopes (MSO models) have analog channels, topics that describe analog channels refer to all oscilloscope models. Whenever a topic describes digital channels, that information applies only to the mixed-signal oscilloscope models.

1 What's New

What's New in Version 2.50 / 28
What's New in Version 2.43 / 29
What's New in Version 2.39 / 32
What's New in Version 2.38 / 33
What's New in Version 2.30 / 34
What's New in Version 2.20 / 36
What's New in Version 2.10 / 38
What's New in Version 2.00 / 39
What's New in Version 1.20 / 40
What's New in Version 1.10 / 41
Version 1.00 at Introduction / 42
Command Differences From 7000B Series Oscilloscopes / 43

2 Setting Up

Step 1. Install Keysight IO Libraries Suite software / 48
Step 2. Connect and set up the oscilloscope / 49
  Using the USB (Device) Interface / 49
  Using the LAN Interface / 49
  Using the GPIB Interface / 50
Step 3. Verify the oscilloscope connection / 51

3 Getting Started

Basic Oscilloscope Program Structure / 56
  Initializing / 56
  Capturing Data / 56
  Analyzing Captured Data / 57
Programming the Oscilloscope / 58
Referencing the IO Library / 58
Opening the Oscilloscope Connection via the IO Library / 59
Initializing the Interface and the Oscilloscope / 59
Using :AUToscale to Automate Oscilloscope Setup / 60
Using Other Oscilloscope Setup Commands / 60
Capturing Data with the :DIGitize Command / 61
Reading Query Responses from the Oscilloscope / 63
Reading Query Results into String Variables / 64
Reading Query Results into Numeric Variables / 64
Reading Definite-Length Block Query Response Data / 64
Sending Multiple Queries and Reading Results / 65
Checking Instrument Status / 66

Other Ways of Sending Commands / 67
Telnet Sockets / 67
Sending SCPI Commands Using Browser Web Control / 67

4 Commands Quick Reference

Command Summary / 70
Syntax Elements / 133
Number Format / 133
<NL> (Line Terminator) / 133
[ ] (Optional Syntax Terms) / 133
{ } (Braces) / 133
::= (Defined As) / 133
< > (Angle Brackets) / 134
... (Ellipsis) / 134
n,...,p (Value Ranges) / 134
d (Digits) / 134
Quoted ASCII String / 134
Definite-Length Block Response Data / 134

5 Common (*) Commands

*CLS (Clear Status) / 142
*ESE (Standard Event Status Enable) / 143
*ESR (Standard Event Status Register) / 145
*IDN (Identification Number) / 147
*LRN (Learn Device Setup) / 148
*OPC (Operation Complete) / 149
*OPT (Option Identification) / 150
6 Root (: ) Commands

:ACTivity / 169
:AER (Arm Event Register) / 170
:AUToscale / 171
:AUToscale:AMODE / 173
:AUToscale:CHANnels / 174
:AUToscale:FDEBug / 175
:BLANk / 176
:DIGitize / 177
:MTEenable (Mask Test Event Enable Register) / 179
:MTERegister[:EVENt] (Mask Test Event Event Register) / 181
:OPEE (Operation Status Enable Register) / 183
:OPERegister:CONDition (Operation Status Condition Register) / 185
:OPERegister[:EVENt] (Operation Status Event Register) / 187
:OVLenable (Overload Event Enable Register) / 189
:OVLRegister (Overload Event Register) / 191
:PRINt / 193
:RUN / 194
:SERial / 195
:SINGle / 196
:STATus / 197
:STOP / 198
:TER (Trigger Event Register) / 199
:VIEW / 200

7 :ACQuire Commands

:ACQuire:COMPLETE / 203
:ACQuire:COUNt / 204
:ACQuire:MODE / 205
:ACQuire:POINts / 206
:ACQuire:SEGmented:ANALyze / 207
:ACQuire:SEGmented:COUNt / 208
8 :BUS<n> Commands

-BUS<n>:BIT<m> / 217
-BUS<n>:BITS / 218
-BUS<n>:CLEar / 220
-BUS<n>:DISPLAY / 221
-BUS<n>:LABel / 222
-BUS<n>:MASK / 223

9 :CALibrate Commands

-CALibrate:DATE / 227
-CALibrate:LABel / 228
-CALibrate:OUTPut / 229
-CALibrate:PROTected / 230
-CALibrate:STARt / 231
-CALibrate:STATus / 232
-CALibrate:TEMPerature / 233
-CALibrate:TIME / 234

10 :CHANnel<n> Commands

-CHANnel<n>:BANDwidth / 238
-CHANnel<n>:BWLimit / 239
-CHANnel<n>:COUpling / 240
-CHANnel<n>:DISPLAY / 241
-CHANnel<n>:IMPedance / 242
-CHANnel<n>:INVert / 243
-CHANnel<n>:LABel / 244
-CHANnel<n>:OFFSet / 245
-CHANnel<n>:PROBe / 246
-CHANnel<n>:PROBe:HEAD[:TYPE] / 247
-CHANnel<n>:PROBe:ID / 248
-CHANnel<n>:PROBe:SKEW / 249
-CHANnel<n>:PROBe:STYPe / 250
-CHANnel<n>:PROTection / 251
-CHANnel<n>:RANGE / 252
-CHANnel<n>:SCALe / 253
-CHANnel<n>:UNITs / 254
-CHANnel<n>:VERNier / 255
11 :DEMO Commands
   :DEMO:FUNCTION / 258
   :DEMO:FUNCTION:PHASE:PHASE / 261
   :DEMO:OUTPUT / 262

12 :DIGItal<d> Commands
   :DIGItal<d>:DISPLAY / 265
   :DIGItal<d>:LABEL / 266
   :DIGItal<d>:POSITION / 267
   :DIGItal<d>:SIZE / 268
   :DIGItal<d>:THRESHold / 269

13 :DISPlay Commands
   :DISPlay:ANNOTATION / 273
   :DISPlay:ANNOTATION:BACKGROUND / 274
   :DISPlay:ANNOTATION:COLOR / 275
   :DISPlay:ANNOTATION:TEXT / 276
   :DISPlay:CLEAR / 277
   :DISPlay:DATA / 278
   :DISPlay:INTENSITY:WAVEFORM / 280
   :DISPlay:LABEL / 281
   :DISPlay:LABLIST / 282
   :DISPlay:PERSISTENCE / 283
   :DISPlay:VECTORS / 284

14 :DVM Commands
   :DVM:ARANGE / 286
   :DVM:CURRENT / 287
   :DVM:ENABLE / 288
   :DVM:FREQUENCY / 289
   :DVM:MODE / 290
   :DVM:SOURCe / 291

15 :EXTernal Trigger Commands
   :EXTernal:BWLIMIT / 294
   :EXTernal:PROBE / 295
   :EXTernal:RANGE / 296
   :EXTernal:UNITS / 297

16 :FUNCtion Commands
   :FUNCtion:BUS:CLOCKS / 304
17 :HARDcopy Commands

:HARDcopy:AREA / 333
:HARDcopy:APRinter / 334
:HARDcopy:FACTors / 335
:HARDcopy:FFEed / 336
:HARDcopy:INKSaver / 337
:HARDcopy:LAYout / 338
:HARDcopy:NETWork:APPLy / 340
:HARDcopy:NETWork:DOMain / 341
:HARDcopy:NETWork:PASSword / 342
:HARDcopy:NETWork:SLOT / 343
:HARDcopy:NETWork:USERname / 344
:HARDcopy:PALette / 345
:HARDcopy:PRINter:LIST / 346
18 :LISTer Commands

:LISTer:DATA / 350
:LISTer:DISPLAY / 351
:LISTer:REFERENCE / 352

19 :MARKer Commands

:MARKer:MODE / 355
:MARKer:X1Position / 356
:MARKer:X1Y1source / 357
:MARKer:X2Position / 358
:MARKer:X2Y2source / 359
:MARKer:XDELta / 360
:MARKer:XUNits / 361
:MARKer:XUNits:USE / 362
:MARKer:Y1Position / 363
:MARKer:Y2Position / 365
:MARKer:Y2source / 367
:MARKer:YDELta / 367
:MARKer:YUNits / 368
:MARKer:YUNits:USE / 369

20 :MEASure Commands

:MEASure:ALL / 383
:MEASure:BRATe / 384
:MEASure:CLEar / 385
:MEASure:DEFine / 386
:MEASure:DElay / 389
:MEASure:DUTYcycle / 391
:MEASure:FALLtime / 392
:MEASure:FREQuency / 393
:MEASure:NDUTy / 394
:MEASure:NEDGes / 395
:MEASure:NPULses / 396
:MEASure:NWIDth / 397
:MEASure:OVERshoot / 398
:MEASure:PEDGes / 400
:MEASure:PERiod / 401
:MEASure:PHASE / 402
:MEASure:PPULses / 403
:MEASure:PREShoot / 404
:MEASure:PWIDth / 405
:MEASure:RISetime / 406
:MEASure:SHOW / 407
:MEASure:SOURce / 408
:MEASure:TEDGe / 410
:MEASure:TVAList / 412
:MEASure:VAMPlitude / 414
:MEASure:VAverage / 415
:MEASure:VBASel / 416
:MEASure:VMAX / 417
:MEASure:VMIN / 418
:MEASure:VPP / 419
:MEASure:VRMS / 420
:MEASure:VTIMe / 421
:MEASure:VTOP / 422
:MEASure:WINDow / 423
:MEASure:XMAX / 424
:MEASure:XMIN / 425

21 :MTESt Commands

:MTESt:ALL / 432
:MTESt:AMASK:CREate / 433
:MTESt:AMASK:SOURce / 434
:MTESt:AMASK:UNITs / 435
:MTESt:AMASK:XDELta / 436
:MTESt:AMASK:YDELta / 437
:MTESt:COUNt:FWAVeforms / 438
:MTESt:COUNt:RESet / 439
:MTESt:COUNt:TIME / 440
:MTESt:COUNt:WAVeforms / 441
:MTESt:DATA / 442
:MTESt:DELete / 443
:MTESt:ENABle / 444
:MTESt:LOCK / 445
:MTESt:RMODE / 446
:MTESt:RMODE:FACTion:MEASure / 447
:MTESt:RMODE:FACTion:PRINt / 448
:MTESt:RMODE:FACTion:SAVE / 449
:MTESt:RMODE:FACTion:STOP / 450
:MTESt:RMODE:SIGMa / 451
:MTESt:RMODE:TIME / 452
22 :POD Commands

:POD<n>:DISPlay / 463
:POD<n>:SIZE / 464
:POD<n>:THReshold / 465

23 :RECall Commands

:RECall:FIlename / 469
:RECall:MASK[:STARt] / 470
:RECall:PWD / 471
:RECall:SETup[:STARt] / 472
:RECall:WMEMory<r>[[:STARt]] / 473

24 :SAVE Commands

:SAVE:FIlename / 478
:SAVE:IMAge[:STARt] / 479
:SAVE:IMAge:FACTors / 480
:SAVE:IMAge:FORMat / 481
:SAVE:IMAge:INKSaver / 482
:SAVE:IMAge:PALETTE / 483
:SAVE:LISTer[:STARt] / 484
:SAVE:MASK[:STARt] / 485
:SAVE:MULTi[:STARt] / 486
:SAVE:PWD / 487
:SAVE:SETup[:STARt] / 488
:SAVE:WAVEform[:STARt] / 489
:SAVE:WAVEform:FORMat / 490
:SAVE:WAVEform:LENGTH / 491
:SAVE:WAVEform:LENGTH:MAX / 492
:SAVE:WAVEform:SEGmented / 493
:SAVE:WMEMory:SOURce / 494
:SAVE:WMEMory[:STARt] / 495
25 \texttt{:SBUS<n>} Commands

General \texttt{:SBUS<n>} Commands / 499
\texttt{:SBUS<n>:DISPlay} / 500
\texttt{:SBUS<n>:MODE} / 501

\texttt{:SBUS<n>:CAN Commands} / 502
\texttt{:SBUS<n>:CAN:COUNT:ERROR} / 504
\texttt{:SBUS<n>:CAN:COUNT:OVERload} / 505
\texttt{:SBUS<n>:CAN:COUNT:RESET} / 506
\texttt{:SBUS<n>:CAN:COUNT:TOTAL} / 507
\texttt{:SBUS<n>:CAN:COUNT:UTILization} / 508
\texttt{:SBUS<n>:CAN:SAMPLEpoint} / 509
\texttt{:SBUS<n>:CAN:SIGNal:BAUDrate} / 510
\texttt{:SBUS<n>:CAN:SIGNal:DEFinition} / 511
\texttt{:SBUS<n>:CAN:SOURce} / 512
\texttt{:SBUS<n>:CAN:TRIGGER} / 513
\texttt{:SBUS<n>:CAN:TRIGGER:PAUSE:DATA} / 515
\texttt{:SBUS<n>:CAN:TRIGGER:PAUSE:DATA:LENGTH} / 516
\texttt{:SBUS<n>:CAN:TRIGGER:PAUSE:ID} / 517
\texttt{:SBUS<n>:CAN:TRIGGER:PAUSE:ID:MODE} / 518

\texttt{:SBUS<n>:IIC Commands} / 519
\texttt{:SBUS<n>:IIC:ASIZE} / 520
\texttt{:SBUS<n>:IIC[:SOURce]:CLOCK} / 521
\texttt{:SBUS<n>:IIC[:SOURce]:DATA} / 522
\texttt{:SBUS<n>:IIC:TRIGGER:PAUSE:ADDRESS} / 523
\texttt{:SBUS<n>:IIC:TRIGGER:PAUSE:DATA} / 524
\texttt{:SBUS<n>:IIC:TRIGGER:PAUSE:DATA2} / 525
\texttt{:SBUS<n>:IIC:TRIGGER:QUALIFIER} / 526
\texttt{:SBUS<n>:IIC:TRIGGER[:TYPE]} / 527

\texttt{:SBUS<n>:LIN Commands} / 529
\texttt{:SBUS<n>:LIN:PARity} / 531
\texttt{:SBUS<n>:LIN:SAMPLEpoint} / 532
\texttt{:SBUS<n>:LIN:SIGNal:BAUDrate} / 533
\texttt{:SBUS<n>:LIN:SOURce} / 534
\texttt{:SBUS<n>:LIN:STANDARD} / 535
\texttt{:SBUS<n>:LIN:SYNCbreak} / 536
\texttt{:SBUS<n>:LIN:TRIGGER} / 537
\texttt{:SBUS<n>:LIN:TRIGGER:ID} / 538
\texttt{:SBUS<n>:LIN:TRIGGER:PAUSE:DATA} / 539
\texttt{:SBUS<n>:LIN:TRIGGER:PAUSE:DATA:LENGTH} / 541
\texttt{:SBUS<n>:LIN:TRIGGER:PAUSE:FORM} / 542

What's New in Version 1.10 / 41
Version 1.00 at Introduction / 42
Command Differences From 7000B Series Oscilloscopes / 43
What's New in Version 2.50

New features in version 2.50 of the InfiniiVision 2000 X-Series oscilloscope software are:

- Added support for licenses that allow support subscriptions.

More detailed descriptions of the new and changed commands appear below.

### New Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:SYSTem:DIentifier? (see page 616)</td>
<td>Returns the oscilloscope's Host ID string.</td>
</tr>
</tbody>
</table>

### Changed Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>*OPT? (see page 150)</td>
<td>New license information is possible in the returned string.</td>
</tr>
</tbody>
</table>
What's New in Version 2.43

New features in version 2.43 of the InfiniiVision 2000 X-Series oscilloscope software are:

- Added measurements: bit rate, negative duty cycle, X at Min Y, X at Max Y, and Count (positive pulse count, negative pulse count, rising edge count, and falling edge count).
- Added math functions with the PLUS option license: d/dt, integrate, square root, Ax+B, square, absolute value, common logarithm, natural logarithm, exponential, base 10 exponential, low pass filter, high pass filter, magnify, measurement trend, chart logic bus timing, and chart logic bus state.
- Added triggers with the PLUS option license: edge then edge, OR, rise/fall time, Nth edge burst, runt, setup and hold, video, and USB.
- Maximum update rate has increased to 200,000 waveforms per second with the PLUS option license.
- Segmented memory and increased memory depth (1 Mpts per channel) options are now included with the PLUS option license.

More detailed descriptions of the new and changed commands appear below.

### New Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:FUNCTION:BUS:CLOCK (see page 304)</td>
<td>Selects the clock signal source for the Chart Logic Bus State operation.</td>
</tr>
<tr>
<td>:FUNCTION:BUS:SLOPe (see page 305)</td>
<td>Specifies the clock signal edge for the Chart Logic Bus State operation.</td>
</tr>
<tr>
<td>:FUNCTION:BUS:YINCrement (see page 306)</td>
<td>Specifies the value associated with each increment in Chart Logic Bus data.</td>
</tr>
<tr>
<td>:FUNCTION:BUS:YORigin (see page 307)</td>
<td>Specifies the value associated with Chart Logic Bus data equal to zero.</td>
</tr>
<tr>
<td>:FUNCTION:BUS:YUNits (see page 308)</td>
<td>Specifies the vertical units for the Chart Logic Bus operations.</td>
</tr>
<tr>
<td>:FUNCTION:FREQuency:HIGHpass (see page 314)</td>
<td>Sets the high-pass filter's -3 dB cutoff frequency.</td>
</tr>
<tr>
<td>:FUNCTION:FREQuency:LOWPas s (see page 315)</td>
<td>Sets the low-pass filter's -3 dB cutoff frequency.</td>
</tr>
<tr>
<td>:FUNCTION:INTegrate:IOFFset (see page 319)</td>
<td>Lets you enter a DC offset correction factor for the integrate math waveform input signal.</td>
</tr>
<tr>
<td>:FUNCTION:LINear:GAIN (see page 320)</td>
<td>Specifies the 'A' value in the Ax + B operation.</td>
</tr>
<tr>
<td>:FUNCTION:LINear:OFFSet (see page 321)</td>
<td>Specifies the 'B' value in the Ax + B operation.</td>
</tr>
</tbody>
</table>
## What's New

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:FUNCtion:TRENd:MEASurement (see page 330)</td>
<td>Selects the measurement whose trend is shown in the math waveform.</td>
</tr>
<tr>
<td>:MEASure:BRATe (see page 384)</td>
<td>Measures the bit rate.</td>
</tr>
<tr>
<td>:MEASure:NDUTy (see page 394)</td>
<td>Measures the negative duty cycle.</td>
</tr>
<tr>
<td>:MEASure:NEDGes (see page 395)</td>
<td>Counts the number of falling edges.</td>
</tr>
<tr>
<td>:MEASure:NPULses (see page 396)</td>
<td>Counts the number of negative pulses.</td>
</tr>
<tr>
<td>:MEASure:PEDGes (see page 400)</td>
<td>Counts the number of rising edges.</td>
</tr>
<tr>
<td>:MEASure:PPULses (see page 403)</td>
<td>Counts the number of positive pulses.</td>
</tr>
<tr>
<td>:MEASure:XMAX (see page 424)</td>
<td>Measures X-at-Max-Y, that is the horizontal axis value at which the maximum vertical value occurs.</td>
</tr>
<tr>
<td>:MEASure:XMIN (see page 424)</td>
<td>Measures X-at-Min-Y, that is the horizontal axis value at which the minimum vertical value occurs.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger (see page 625)</td>
<td>Enables or disables remote command logging, optionally specifying the log file name and write mode.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:DESTination (see page 626)</td>
<td>Specifies whether remote commands are logged to a text file (on a connected USB storage device), logged to the screen, or both.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:DISPLAY (see page 627)</td>
<td>Enables or disables the screen display of logged remote commands and their return values (if applicable).</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:FNAMe (see page 628)</td>
<td>Specifies the remote command log file name.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:STATe (see page 629)</td>
<td>Enables or disables remote command logging.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:TRANsparent (see page 630)</td>
<td>Specifies whether the screen display background for remote command logging is transparent or solid.</td>
</tr>
<tr>
<td>:SYSTem:RLOGger:WMODe (see page 631)</td>
<td>Specifies the remote command logging write mode (either CREATE or APPend).</td>
</tr>
<tr>
<td>:TRIGger:DElay Commands (see page 659)</td>
<td>This subsystem contains commands for the Edge Then Edge trigger.</td>
</tr>
<tr>
<td>:TRIGger:EBURst Commands (see page 666)</td>
<td>This subsystem contains commands for the Nth Edge Burst trigger.</td>
</tr>
<tr>
<td>:TRIGger:OR Commands (see page 686)</td>
<td>This subsystem contains commands for the OR trigger.</td>
</tr>
</tbody>
</table>
### Changed Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:RUNT Commands (see page 693)</td>
<td>This subsystem contains commands for the Run trigger.</td>
</tr>
<tr>
<td>:TRIGger:SHOLd Commands (see page 698)</td>
<td>This subsystem contains commands for the Setup and Hold trigger.</td>
</tr>
<tr>
<td>:TRIGger:TRANsition Commands (see page 704)</td>
<td>This subsystem contains commands for the Rise/Fall Time trigger.</td>
</tr>
<tr>
<td>:TRIGger:USB Commands (see page 715)</td>
<td>This subsystem contains commands for the USB trigger.</td>
</tr>
<tr>
<td>:DEMO:FUNCtion (see page 258)</td>
<td>The HARMonics, COUPling, RUNT, TRAnsiton, SHOLd, and ETE functions are now available.</td>
</tr>
<tr>
<td>:FUNCtion:OPERation (see page 656)</td>
<td>These math function operations are added: INTEGRate, DIFF, SQRT, MAGNify, ABSolute, SQUare, LN, LOG, EXP, TEN, LOWPass, HIGHpass, DIVide, LiNEar, TRENd, BTIMing, and BSTate.</td>
</tr>
<tr>
<td>:FUNCtion:SOURce1 (see page 328)</td>
<td>The BUS&lt;m&gt; parameter is available for the bus charting visualization functions.</td>
</tr>
<tr>
<td>:TRIGger:MODE (see page 656)</td>
<td>These modes are added: DELay, EBURst, OR, RUNT, SHOLd, TRAnsiton, SBUSt, and USB.</td>
</tr>
</tbody>
</table>
What's New in Version 2.39

More detailed descriptions of the new and changed commands appear below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:DISPlay:INTensity:WAVeform</td>
<td>Sets the waveform intensity.</td>
</tr>
<tr>
<td>(see page 280)</td>
<td></td>

</tbody>
</table>
What's New in Version 2.38

More detailed descriptions of the new and changed commands appear below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:CHANnel&lt;n&gt;:BANDwidth (see page 238)</td>
<td>Sets bandwidth limiting for an analog input channel.</td>
</tr>
</tbody>
</table>
What's New in Version 2.30

New features in version 2.30 of the InfiniiVision 2000 X-Series oscilloscope software are:

- Support for CAN/LIN, I2C/SPI, and UART/RS232 serial triggering and decode.
- Saving Multi Channel Waveform data (*.h5) format files that can be opened by the N8900A InfiniiView oscilloscope analysis software.

More detailed descriptions of the new and changed commands appear below.

### New Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>:LISTer Commands (see page 349)</td>
<td>Commands for turning on/off the serial decode Lister display and returning data from the Lister display.</td>
</tr>
<tr>
<td>:SAVE:LISTer[:START] (see page 484)</td>
<td>Saves the Lister display data to a file.</td>
</tr>
<tr>
<td>:SAVE:MULTi[:START] (see page 486)</td>
<td>Lets you save Multi Channel Waveform data (*.h5) format files that can be opened by the N8900A InfiniiView oscilloscope analysis software.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:CAN Commands (see page 502)</td>
<td>Commands for CAN triggering and serial decode.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:DISPLAY (see page 500)</td>
<td>Turns serial decode ON or OFF.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:IIC Commands (see page 519)</td>
<td>Commands for IIC triggering and serial decode.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:LIN Commands (see page 529)</td>
<td>Commands for LIN triggering and serial decode.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:MODE (see page 501)</td>
<td>Selects the type of serial decode.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:SPI Commands (see page 502)</td>
<td>Commands for SPI triggering and serial decode.</td>
</tr>
<tr>
<td>:SBUS&lt;n&gt;:UART Commands (see page 559)</td>
<td>Commands for UART/RS232 triggering and serial decode.</td>
</tr>
<tr>
<td>:SEARch:COUNt (see page 583)</td>
<td>Returns the number of search events found.</td>
</tr>
<tr>
<td>:SEARch:MODE (see page 584)</td>
<td>Can select SERial1.</td>
</tr>
<tr>
<td>:SEARch:SERial:CAN Commands (see page 586)</td>
<td>Commands for finding CAN events in the captured data.</td>
</tr>
<tr>
<td>:SEARch:SERial:IIC Commands (see page 592)</td>
<td>Commands for finding IIC events in the captured data.</td>
</tr>
<tr>
<td>Command</td>
<td>Differences</td>
</tr>
<tr>
<td>----------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>.SEARch:SERial:LIN Commands (see page 599)</td>
<td>Commands for finding LIN events in the captured data.</td>
</tr>
<tr>
<td>.SEARch:SERial:SPI Commands (see page 605)</td>
<td>Commands for finding SPI events in the captured data.</td>
</tr>
<tr>
<td>.SEARch:SERial:UART Commands (see page 609)</td>
<td>Commands for finding UART/RS232 events in the captured data.</td>
</tr>
<tr>
<td>.SEARch:STATe (see page 585)</td>
<td>Enables or disables the search feature.</td>
</tr>
<tr>
<td>.TRIGger:LEVel:ASETup (see page 653)</td>
<td>Sets the trigger levels of all displayed analog channels to their waveforms' 50% values.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Command</th>
<th>Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>.BLANk (see page 176)</td>
<td>You can now use the SBUS1 source parameter to turn off the serial decode display.</td>
</tr>
<tr>
<td>.DIGitize (see page 177)</td>
<td>You can now use the SBUS1 source parameter to acquire the serial waveform.</td>
</tr>
<tr>
<td>.SAVE:WAVEform:FORMat (see page 490)</td>
<td>The ALB format is no longer supported.</td>
</tr>
<tr>
<td>.STATus (see page 197)</td>
<td>You can now use the SBUS1 source parameter to view the serial decode display status.</td>
</tr>
<tr>
<td>.SYSTem:MENU (see page 620)</td>
<td>The LISTER parameter is now available.</td>
</tr>
<tr>
<td>.VIEW (see page 200)</td>
<td>You can now use the SBUS1 source parameter to turn on the serial decode display.</td>
</tr>
<tr>
<td>.WAVEform:SOURce (see page 743)</td>
<td>Can select SBUS1 as the waveform source.</td>
</tr>
<tr>
<td>.WAVEform:SOURce:SUBSourc e (see page 747)</td>
<td>With the SPI and UART/RS232 serial decode options, subsources are now valid in the 2000 X-Series oscilloscopes.</td>
</tr>
</tbody>
</table>
What’s New in Version 2.20

New features in version 2.20 of the InfiniiVision 2000 X-Series oscilloscope software are:

- Support for modulation of the waveform generator output.
- Support for controlling the optional DSOXDVM digital voltmeter analysis feature.
- Ability to turn reference waveform locations on or off and view their status using the :VIEW, :BLANK, and :STATUS commands.

More detailed descriptions of the new and changed commands appear below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>:DVM Commands (see page 285)</td>
<td>Commands for controlling the optional DSOXDVM digital voltmeter analysis feature.</td>

What’s New in Version 2.10

New features in version 2.10 of the InfiniiVision 2000 X-Series oscilloscope software are:

- Support for adding an annotation to the display.

More detailed descriptions of the new and changed commands appear below.

<table>
<thead>
<tr>
<th>Command</th>

What's New in Version 1.20

New features in version 1.20 of the InfiniiVision 2000 X-Series oscilloscope software are:

- X cursor units that let you measure time (seconds), frequency (Hertz), phase (degrees), and ratio (percent), and Y cursor units that let you measure the channel units (base) or ratio (percent).
- Option for specifying FFT vertical units as V RMS as well as decibels.
- Option for saving the maximum number of waveform data points.

Version 1.00 at Introduction

The Keysight InfiniiVision 2000 X-Series oscilloscopes were introduced with version 1.00 of oscilloscope operating software.

The command set is most closely related to the InfiniiVision 7000B Series oscilloscopes (and the 7000A Series, 6000 Series, and 54620/54640 Series oscilloscopes before them). For more information, see "Command Differences From 7000B Series Oscilloscopes" on page 43.
Command Differences From 7000B Series Oscilloscopes

The Keysight InfiniiVision 2000 X-Series oscilloscopes command set is most closely related to the InfiniiVision 7000B Series oscilloscopes (and the 7000A Series, 6000 Series, and 54620/54640 Series oscilloscopes before them).

The main differences between the version 1.00 programming command set for the InfiniiVision 2000 X-Series oscilloscopes and the 6.10 programming command set for the InfiniiVision 7000B Series oscilloscopes are related to:

- Built-in waveform generator (with Option WGN license).
- Built-in demo signals (with Option EDU license that comes with the N6455A Education Kit).
- Reference waveforms (in place of trace memory).
- Serial decode is not supported.
- Waveform event search is not supported.
- Smaller set of trigger types.
- Fewer measurements.
- Different path name format for internal and USB storage device locations.

More detailed descriptions of the new, changed, obsolete, and discontinued commands appear below.

1 What's New
2 Setting Up

Step 1. Install Keysight IO Libraries Suite software / 48
Step 2. Connect and set up the oscilloscope / 49
Step 3. Verify the oscilloscope connection / 51

This chapter explains how to install the Keysight IO Libraries Suite software, connect the oscilloscope to the controller PC, set up the oscilloscope, and verify the oscilloscope connection.
Step 1. Install Keysight IO Libraries Suite software

1. Download the Keysight IO Libraries Suite software from the Keysight web site at:
   - http://www.keysight.com/find/iolib
2. Run the setup file, and follow its installation instructions.
Step 2. Connect and set up the oscilloscope

The 2000 X-Series oscilloscope has three different interfaces you can use for programming:

- USB (device port).
- LAN, when the LAN/VGA option module is installed. To configure the LAN interface, press the [Utility] key on the front panel, then press the I/O softkey, then press the Configure softkey.
- GPIB, when the GPIB option module is installed.

When installed, these interfaces are always active.

Using the USB (Device) Interface

1. Connect a USB cable from the controller PC's USB port to the "USB DEVICE" port on the back of the oscilloscope.

   This is a USB 2.0 high-speed port.

Using the LAN Interface

1. If the controller PC is not already connected to the local area network (LAN), do that first.

2. Contact your network administrator about adding the oscilloscope to the network.

   Find out if automatic configuration via DHCP or AutoIP can be used. Also, find out whether your network supports Dynamic DNS or Multicast DNS.
If automatic configuration is not supported, get the oscilloscope's network parameters (hostname, domain, IP address, subnet mask, gateway IP, DNS IP, etc.).

3 Connect the oscilloscope to the local area network (LAN) by inserting LAN cable into the "LAN" port on the LAN/VGA option module.

4 Configure the oscilloscope's LAN interface:
   a  Press the **Configure** softkey until "LAN" is selected.
   b  Press the **LAN Settings** softkey.
   c  Press the **Config** softkey, and enable all the configuration options supported by your network.
   d  If automatic configuration is not supported, press the **Addresses** softkey.

   Use the **Modify** softkey (and the other softkeys and the Entry knob) to enter the IP Address, Subnet Mask, Gateway IP, and DNS IP values.

   When you are done, press the **[Back up]** key.
   e  Press the **Host name** softkey. Use the softkeys and the Entry knob to enter the Host name.

   When you are done, press the **[Back up]** key.

Using the GPIB Interface

1 Connect a GPIB cable from the controller PC's GPIB interface to the "GPIB" port on the GPIB option module.

2 Configure the oscilloscope's GPIB interface:
   a  Press the **Configure** softkey until "GPIB" is selected.
   b  Use the Entry knob to select the **Address** value.
Step 3. Verify the oscilloscope connection

1. On the controller PC, click on the Keysight IO Control icon in the taskbar and choose **Connection Expert** from the popup menu.

2. In the Keysight Connection Expert application, instruments connected to the controller's USB and GPIB interfaces as well as instruments on the same LAN subnet should automatically appear in the Instruments tab.

3. If your instrument does not appear, you can add it using the Manual Configuration tab.
For example, to add a device:

a Select **LAN instrument** in the list on the left.
b Enter the oscilloscope’s **Hostname** or **IP address**.
c Select the protocol.
d Select **Instrument** under Set Protocol.
e Click **Test This VISA Address** to verify the connection.
f If the connection test is successful, click **Accept** to add the instrument.

If the connection test is not successful, go back and verify the LAN connections and the oscilloscope setup.
4 Test some commands on the instrument:
   a. In the Details for the selected instrument, click **Send Commands To This Instrument**.

   ![Keysoft Connection Expert](image)

   In the Keysight Interactive IO application, enter commands in the **Command** field and press **Send Command**, **Read Response**, or **Send & Read**.
c Choose **Connect > Exit** from the menu to exit the Keysight Interactive IO application.

5 In the Keysight Connection Expert application, choose **File > Exit** from the menu to exit the application.
3 Getting Started

Basic Oscilloscope Program Structure / 56
Programming the Oscilloscope / 58
Other Ways of Sending Commands / 67

This chapter gives you an overview of programming the 2000 X-Series oscilloscopes. It describes basic oscilloscope program structure and shows how to program the oscilloscope using a few simple examples.

The getting started examples show how to send oscilloscope setup, data capture, and query commands, and they show how to read query results.

NOTE
Language for Program Examples
The programming examples in this guide are written in Visual Basic using the Keysight VISA COM library.
Basic Oscilloscope Program Structure

The following figure shows the basic structure of every program you will write for the oscilloscope.

- **Initialize**
- **Capture**
- **Analyze**

**Initializing**

To ensure consistent, repeatable performance, you need to start the program, controller, and oscilloscope in a known state. Without correct initialization, your program may run correctly in one instance and not in another. This might be due to changes made in configuration by previous program runs or from the front panel of the oscilloscope.

- Program initialization defines and initializes variables, allocates memory, or tests system configuration.
- Controller initialization ensures that the interface to the oscilloscope is properly set up and ready for data transfer.
- Oscilloscope initialization sets the channel configuration, channel labels, threshold voltages, trigger specification, trigger mode, timebase, and acquisition type.

**Capturing Data**

Once you initialize the oscilloscope, you can begin capturing data for analysis. Remember that while the oscilloscope is responding to commands from the controller, it is not performing acquisitions. Also, when you change the oscilloscope configuration, any data already captured will most likely be rendered.

To collect data, you use the :DIGitize command. This command clears the waveform buffers and starts the acquisition process. Acquisition continues until acquisition memory is full, then stops. The acquired data is displayed by the oscilloscope, and the captured data can be measured, stored in acquisition memory in the oscilloscope, or transferred to the controller for further analysis. Any additional commands sent while :DIGitize is working are buffered until :DIGitize is complete.
You could also put the oscilloscope into run mode, then use a wait loop in your program to ensure that the oscilloscope has completed at least one acquisition before you make a measurement. Keysight does not recommend this because the needed length of the wait loop may vary, causing your program to fail. :DIGitize, on the other hand, ensures that data capture is complete. Also, :DIGitize, when complete, stops the acquisition process so that all measurements are on displayed data, not on a constantly changing data set.

**Analyzing Captured Data**

After the oscilloscope has completed an acquisition, you can find out more about the data, either by using the oscilloscope measurements or by transferring the data to the controller for manipulation by your program. Built-in measurements include: frequency, duty cycle, period, positive pulse width, and negative pulse width.

Using the :WAVeform commands, you can transfer the data to your controller. You may want to display the data, compare it to a known good measurement, or simply check logic patterns at various time intervals in the acquisition.
Programming the Oscilloscope

- "Referencing the IO Library" on page 58
- "Opening the Oscilloscope Connection via the IO Library" on page 59
- "Using :AUToscale to Automate Oscilloscope Setup" on page 60
- "Using Other Oscilloscope Setup Commands" on page 60
- "Capturing Data with the :DIGitize Command" on page 61
- "Reading Query Responses from the Oscilloscope" on page 63
- "Reading Query Results into String Variables" on page 64
- "Reading Query Results into Numeric Variables" on page 64
- "Reading Definite-Length Block Query Response Data" on page 64
- "Sending Multiple Queries and Reading Results" on page 65
- "Checking Instrument Status" on page 66

Referencing the IO Library

No matter which instrument programming library you use (SICL, VISA, or VISA COM), you must reference the library from your program.

In C/C++, you must tell the compiler where to find the include and library files (see the Keysight IO Libraries Suite documentation for more information).

To reference the Keysight VISA COM library in Visual Basic for Applications (VBA, which comes with Microsoft Office products like Excel):

1. Choose Tools>References... from the main menu.
2. In the References dialog, check the "VISA COM 5.9 Type Library".
3 Click OK.

To reference the Keysight VISA COM library in Microsoft Visual Basic 6.0:

1 Choose Project>References... from the main menu.
2 In the References dialog, check the "VISA COM 5.9 Type Library".
3 Click OK.

Opening the Oscilloscope Connection via the IO Library

PC controllers communicate with the oscilloscope by sending and receiving messages over a remote interface. Once you have opened a connection to the oscilloscope over the remote interface, programming instructions normally appear as ASCII character strings embedded inside write statements of the programming language. Read statements are used to read query responses from the oscilloscope.

For example, when using the Keysight VISA COM library in Visual Basic (after opening the connection to the instrument using the ResourceManager object's Open method), the FormattedIO488 object's WriteString, WriteNumber, WriteList, or WriteIEEEBlock methods are used for sending commands and queries. After a query is sent, the response is read using the ReadString, ReadNumber, ReadList, or ReadIEEEBlock methods.

The following Visual Basic statements open the connection and send a command that turns on the oscilloscope’s label display.

```vbnet
Dim myMgr As VisaComLib.ResourceManager
Dim myScope As VisaComLib.FormattedIO488
Set myMgr = New VisaComLib.ResourceManager
Set myScope = New VisaComLib.FormattedIO488

' Open the connection to the oscilloscope. Get the VISA Address from the Keysight Connection Expert (installed with Keysight IO Libraries Suite).
Set myScope.IO = myMgr.Open("<VISA Address>")

' Send a command.
myScope.WriteString "::DISPlay::LABel ON"
```

The "::DISPLAY::LABEL ON" in the above example is called a program message. Program messages are explained in more detail in "Program Message Syntax" on page 887.

Initializing the Interface and the Oscilloscope

To make sure the bus and all appropriate interfaces are in a known state, begin every program with an initialization statement. When using the Keysight VISA COM library, you can use the resource session object's Clear method to clears the interface buffer:
Dim myMgr As VisaComLib.ResourceManager
Dim myScope As VisaComLib.FormattedIO488

Set myMgr = New VisaComLib_ResourceManager
Set myScope = New VisaComLib_FormattedIO488

' Open the connection to the oscilloscope. Get the VISA Address from the
' Keysight Connection Expert (installed with Keysight IO Libraries Suite).
Set myScope.IO = myMgr.Open("<VISA Address>")

' Clear the interface buffer and set the interface timeout to 10 seconds.
myScope.IO.Clear
myScope.IO.Timeout = 10000

When you are using GPIB, CLEAR also resets the oscilloscope's parser. The parser
is the program which reads in the instructions which you send it.

After clearing the interface, initialize the instrument to a preset state:

myScope.WriteString "*RST"

NOTE

Information for Initializing the Instrument

The actual commands and syntax for initializing the instrument are discussed in Chapter 5,
"Common (*) Commands," starting on page 137.

Refer to the Keysight IO Libraries Suite documentation for information on initializing the
interface.

Using :AUToscale to Automate Oscilloscope Setup

The :AUToscale command performs a very useful function for unknown waveforms
by setting up the vertical channel, time base, and trigger level of the instrument.

The syntax for the autoscale command is:

myScope.WriteString "AUToscale"

Using Other Oscilloscope Setup Commands

A typical oscilloscope setup would set the vertical range and offset voltage, the
horizontal range, delay time, delay reference, trigger mode, trigger level, and
slope. An example of the commands that might be sent to the oscilloscope are:

myScope.WriteString ":CHANnel1:PROBe 10"
myScope.WriteString ":CHANnel1:RANGE 16"
myScope.WriteString ":CHANnel1:OFFSet 1.00"
myScope.WriteString ":TIMebase:MODE MAIN"
myScope.WriteString ":TIMebase:RANGE 1E-3"
myScope.WriteString ":TIMebase:DELay 100E-6"
Vertical is set to 16 V full-scale (2 V/div) with center of screen at 1 V and probe attenuation set to 10. This example sets the time base at 1 ms full-scale (100 ms/div) with a delay of 100 µs.

**Example Oscilloscope Setup Code**

This program demonstrates the basic command structure used to program the oscilloscope.

```plaintext
' Initialize the instrument interface to a known state.
myScope.IO.Clear
myScope.IO.Timeout = 10000  ' Set interface timeout to 10 seconds.

' Initialize the instrument to a preset state.
myScope.WriteString "*RST"

' Set the time base mode to normal with the horizontal time at
' 50 ms/div with 0 s of delay referenced at the center of the
' graticule.
myScope.WriteString "/:TIMebase:RANGe 5E-4"  ' Time base to 50 us/div.
myScope.WriteString "/:TIMebase:DELay 0"  ' Delay to zero.
myScope.WriteString "/:TIMebase:REFerence CENTer"  ' Display ref. at
' center.

' Set the vertical range to 1.6 volts full scale with center screen
' at -0.4 volts with 10:1 probe attenuation and DC coupling.
myScope.WriteString "/:CHANnel1:PROBe 10"  ' Probe attenuation
' to 10:1.
myScope.WriteString "/:CHANnel1:RANGe 1.6"  ' Vertical range
' 1.6 V full scale.
myScope.WriteString "/:CHANnel1:OFFSet -0.4"  ' Offset to -0.4.
myScope.WriteString "/:CHANnel1:COUPling DC"  ' Coupling to DC.

' Configure the instrument to trigger at -0.4 volts with normal
' triggering.
myScope.WriteString "/:TRIGger:SWEep NORMal"  ' Normal triggering.
myScope.WriteString "/:TRIGger:LEVel -0.4"  ' Trigger level to -0.4.
myScope.WriteString "/:TRIGger:SLOPe POSitive"  ' Trigger on pos. slope.

' Configure the instrument for normal acquisition.
myScope.WriteString "/:ACQuire:TYPE NORMal"  ' Normal acquisition.
```

**Capturing Data with the :DIGitize Command**

The :DIGitize command captures data that meets the specifications set up by the :ACQuire subsystem. When the digitize process is complete, the acquisition is stopped. The captured data can then be measured by the instrument or transferred to the controller for further analysis. The captured data consists of two parts: the waveform data record, and the preamble.
When you send the :DIGitize command to the oscilloscope, the specified channel signal is digitized with the current :ACQuire parameters. To obtain waveform data, you must specify the :WAVEform parameters for the SOURce channel, the FORMat type, and the number of POINts prior to sending the :WAVEform:DATA? query.

The number of data points comprising a waveform varies according to the number requested in the :ACQuire subsystem. The :ACQuire subsystem determines the number of data points, type of acquisition, and number of averages used by the :DIGitize command. This allows you to specify exactly what the digitized information contains.

The following program example shows a typical setup:

```plaintext
myScope.WriteString ":ACQuire:TYPE AVERage"
myScope.WriteString ":ACQuire:COMPLETE 100"
myScope.WriteString ":ACQuire:COUNt 8"
myScope.WriteString ":DIGitize CHANnel1"
myScope.WriteString ":WAVEform:SOURce CHANnel1"
myScope.WriteString ":WAVEform:FORMat BYTE"
myScope.WriteString ":WAVEform:POINts 500"
myScope.WriteString ":WAVEform:DATA?"
```

This setup places the instrument into the averaged mode with eight averages. This means that when the :DIGitize command is received, the command will execute until the signal has been averaged at least eight times.

After receiving the :WAVEform:DATA? query, the instrument will start passing the waveform information.

Digitized waveforms are passed from the instrument to the controller by sending a numerical representation of each digitized point. The format of the numerical representation is controlled with the :WAVEform:FORMat command and may be selected as BYTE, WORD, or ASCII.

**NOTE**

**Ensure New Data is Collected**

When you change the oscilloscope configuration, the waveform buffers are cleared. Before doing a measurement, send the :DIGitize command to the oscilloscope to ensure new data has been collected.

When you send the :DIGitize command to the oscilloscope, the specified channel signal is digitized with the current :ACQuire parameters. To obtain waveform data, you must specify the :WAVEform parameters for the SOURce channel, the FORMat type, and the number of POINts prior to sending the :WAVEform:DATA? query.

**NOTE**

**Set :TIMebase:MODE to MAIN when using :DIGitize**

:TIMebase:MODE must be set to MAIN to perform a :DIGitize command or to perform any :WAVEform subsystem query. A "Settings conflict" error message will be returned if these commands are executed when MODE is set to ROLL, XY, or WINDOW (zoomed). Sending the *RST (reset) command will also set the time base mode to normal.
The easiest method of transferring a digitized waveform depends on data structures, formatting available and I/O capabilities. You must scale the integers to determine the voltage value of each point. These integers are passed starting with the left most point on the instrument's display.

For more information, see the waveform subsystem commands and corresponding program code examples in Chapter 30, "WAVeform Commands," starting on page 721.

**NOTE**

**Aborting a Digitize Operation Over the Programming Interface**

When using the programming interface, you can abort a digitize operation by sending a Device Clear over the bus (for example, myScope.IO.Clear).

---

**Reading Query Responses from the Oscilloscope**

After receiving a query (command header followed by a question mark), the instrument interrogates the requested function and places the answer in its output queue. The answer remains in the output queue until it is read or another command is issued. When read, the answer is transmitted across the interface to the designated listener (typically a controller).

The statement for reading a query response message from an instrument's output queue typically has a format specification for handling the response message.

When using the VISA COM library in Visual Basic, you use different read methods (ReadString, ReadNumber, ReadList, or ReadIEEEBlock) for the various query response formats. For example, to read the result of the query command :CHANnel1:COUPling? you would execute the statements:

```vbnet
myScope.WriteString=:CHANnel1:COUPling?
Dim strQueryResult As String
strQueryResult = myScope.ReadString
```

This reads the current setting for the channel one coupling into the string variable strQueryResult.

All results for queries (sent in one program message) must be read before another program message is sent.

Sending another command before reading the result of the query clears the output buffer and the current response. This also causes an error to be placed in the error queue.

Executing a read statement before sending a query causes the controller to wait indefinitely.

The format specification for handling response messages depends on the programming language.
Reading Query Results into String Variables

The output of the instrument may be numeric or character data depending on what is queried. Refer to the specific command descriptions for the formats and types of data returned from queries.

**NOTE**

Express String Variables Using Exact Syntax

In Visual Basic, string variables are case sensitive and must be expressed exactly the same each time they are used.

The following example shows numeric data being returned to a string variable:

```vba
myScope.WriteString "::CHANnel1:RANGE?"
Dim strQueryResult As String
strQueryResult = myScope.ReadString
MsgBox "Range (string):" + strQueryResult
```

After running this program, the controller displays:

**Range (string): +40.0E+00**

Reading Query Results into Numeric Variables

The following example shows numeric data being returned to a numeric variable:

```vba
myScope.WriteString "::CHANnel1:RANGE?"
Dim varQueryResult As Variant
varQueryResult = myScope.ReadNumber
MsgBox "Range (variant):" + CStr(varQueryResult)
```

After running this program, the controller displays:

**Range (variant): 40**

Reading Definite-Length Block Query Response Data

Definite-length block query response data allows any type of device-dependent data to be transmitted over the system interface as a series of 8-bit binary data bytes. This is particularly useful for sending large quantities of data or 8-bit extended ASCII codes. The syntax is a pound sign (#) followed by a non-zero digit representing the number of digits in the decimal integer. After the non-zero digit is the decimal integer that states the number of 8-bit data bytes being sent. This is followed by the actual data.

For example, for transmitting 1000 bytes of data, the syntax would be:
The "8" states the number of digits that follow, and "00001000" states the number of bytes to be transmitted.

The VISA COM library's ReadIEEEBlock and WriteIEEEBlock methods understand the definite-length block syntax, so you can simply use variables that contain the data:

```vba
' Read oscilloscope setup using "SYS:SETup?" query.
myScope.WriteString "SYS:SETup?"
Dim varQueryResult As Variant
varQueryResult = myScope.ReadIEEEBlock(BinaryType_UI1)

' Write learn string back to oscilloscope using "SYS:SETup" command:
myScope.WriteIEEEBlock "SYS:SETup ", varQueryResult
```

### Sending Multiple Queries and Reading Results

You can send multiple queries to the instrument within a single command string, but you must also read them back as a single query result. This can be accomplished by reading them back into a single string variable, multiple string variables, or multiple numeric variables.

For example, to read the :TIMebase:RANGe?;DELay? query result into a single string variable, you could use the commands:

```vba
myScope.WriteString "TIM:RANGe?;DELay?"
Dim strQueryResult As String
strQueryResult = myScope.ReadString
MsgBox "Timebase range; delay:" + strQueryResult
```

When you read the result of multiple queries into a single string variable, each response is separated by a semicolon. For example, the output of the previous example would be:

```
Timebase range; delay: <range_value>;<delay_value>
```

To read the :TIMebase:RANGe?;DELay? query result into multiple string variables, you could use the ReadList method to read the query results into a string array variable using the commands:

```vba
myScope.WriteString "TIM:RANGe?;DELay?"
Dim strResults() As String
strResults() = myScope.ReadList(ASCIIType_BSTR)
MsgBox "Timebase range: " + strResults(0) + ", delay: " + strResults(1)
```
To read the :TIMebase:RANGe?;DELay? query result into multiple numeric variables, you could use the ReadList method to read the query results into a variant array variable using the commands:

```vbscript
myScope.WriteString "::TIMebase:RANGe?;DELay?"
Dim varResults() As Variant
varResults() = myScope.ReadList
MsgBox "Timebase range: " + FormatNumber(varResults(0) * 1000, 4) + " ms, delay: " + FormatNumber(varResults(1) * 1000000, 4) + " us"
```

Checking Instrument Status

Status registers track the current status of the instrument. By checking the instrument status, you can find out whether an operation has been completed, whether the instrument is receiving triggers, and more.

For more information, see Chapter 35, “Status Reporting,” starting on page 855 which explains how to check the status of the instrument.
Other Ways of Sending Commands

Standard Commands for Programmable Instrumentation (SCPI) can also be sent via a Telnet socket or through the Browser Web Control:

• "Telnet Sockets" on page 67
• "Sending SCPI Commands Using Browser Web Control" on page 67

Telnet Sockets

The following information is provided for programmers who wish to control the oscilloscope with SCPI commands in a Telnet session.

To connect to the oscilloscope via a telnet socket, issue the following command:

telnet <hostname> 5024

where <hostname> is the hostname of the oscilloscope. This will give you a command line with prompt.

For a command line without a prompt, use port 5025. For example:

telnet <hostname> 5025

Sending SCPI Commands Using Browser Web Control

To send SCPI commands using the Browser Web Control feature, establish a connection to the oscilloscope via LAN as described in the InfiniiVision 2000 X-Series Oscilloscopes User's Guide. When you make the connection to the oscilloscope via LAN and the instrument's welcome page is displayed, select the Browser Web Control tab, then select the Remote Programming link.

Syntax Elements

- "Number Format" on page 133
- "<NL> (Line Terminator)" on page 133
- "[ ] (Optional Syntax Terms)" on page 133
- "{} (Braces)" on page 133
- "::= (Defined As)" on page 133
- "< > (Angle Brackets)" on page 134
- "... (Ellipsis)" on page 134
- "n...,p (Value Ranges)" on page 134
- "d (Digits)" on page 134
- "Quoted ASCII String" on page 134
- "Definite-Length Block Response Data" on page 134

Number Format

NR1 specifies integer data.

NR3 specifies exponential data in floating point format (for example, -1.0E-3).

<NL> (Line Terminator)

<NL> = new line or linefeed (ASCII decimal 10).

The line terminator, or a leading colon, will send the parser to the "root" of the command tree.

[ ] (Optional Syntax Terms)

Items enclosed in square brackets, [ ], are optional.

{} (Braces)

When several items are enclosed by braces, {}, only one of these elements may be selected. Vertical line ( | ) indicates "or". For example, {ON | OFF} indicates that only ON or OFF may be selected, not both.

::= (Defined As)

::= means "defined as".

For example, <A> ::= <B> indicates that <A> can be replaced by <B> in any statement containing <A>. 
< > (Angle Brackets)

< > Angle brackets enclose words or characters that symbolize a program code parameter or an interface command.

... (Ellipsis)

... An ellipsis (trailing dots) indicates that the preceding element may be repeated one or more times.

n,...,p (Value Ranges)

n,...,p ::= all integers between n and p inclusive.

d (Digits)

d ::= A single ASCII numeric character 0 - 9.

Quoted ASCII String

A quoted ASCII string is a string delimited by either double quotes (") or single quotes ('). Some command parameters require a quoted ASCII string. For example, when using the Keysight VISA COM library in Visual Basic, the command:

```
myScope.WriteString "::CHANNEL1:LABEL 'One'
```

has a quoted ASCII string of:

'One'

In order to read quoted ASCII strings from query return values, some programming languages require special handling or syntax.

Definite-Length Block Response Data

Definite-length block response data allows any type of device-dependent data to be transmitted over the system interface as a series of 8-bit binary data bytes. This is particularly useful for sending large quantities of data or 8-bit extended ASCII codes. This syntax is a pound sign (#) followed by a non-zero digit representing the number of digits in the decimal integer. After the non-zero digit is the decimal integer that states the number of 8-bit data bytes being sent. This is followed by the actual data.

For example, for transmitting 1000 bytes of data, the syntax would be

```
#800001000<1000 bytes of data> <NL>
```

8 is the number of digits that follow

00001000 is the number of bytes to be transmitted
<1000 bytes of data> is the actual data
5 Common (*) Commands

Commands defined by IEEE 488.2 standard that are common to all instruments. See "Introduction to Common (*) Commands" on page 141.

| *WAI (see page 163) | n/a     | n/a |
Common (*) Commands

Introduction to Common (*) Commands

The common commands are defined by the IEEE 488.2 standard. They are implemented by all instruments that comply with the IEEE 488.2 standard. They provide some of the basic instrument functions, such as instrument identification and reset, reading the instrument setup, and determining how status is read and cleared.

Common commands can be received and processed by the instrument whether they are sent over the interface as separate program messages or within other program messages. If an instrument subsystem has been selected and a common command is received by the instrument, the instrument remains in the selected subsystem. For example, if the program message "*:ACQuire:TYPE AVERage; *CLS; COUNt 256" is received by the instrument, the instrument sets the acquire type, then clears the status information and sets the average count.

In contrast, if a root level command or some other subsystem command is within the program message, you must re-enter the original subsystem after the command. For example, the program message "*:ACQuire:TYPE AVERage; :AUToscale; :ACQuire:COUNt 256" sets the acquire type, completes the autoscale, then sets the acquire count. In this example, :ACQuire must be sent again after the :AUToscale command in order to re-enter the ACQuire subsystem and set the count.

NOTE

Each of the status registers has an enable (mask) register. By setting the bits in the enable register, you can select the status information you want to use.
**CLS (Clear Status)**

**Command Syntax**

```
*CLS
```

The *CLS common command clears the status data structures, the device-defined error queue, and the Request-for-OPC flag.

**NOTE**

If the *CLS command immediately follows a program message terminator, the output queue and the MAV (message available) bit are cleared.

- "*:SYStem:ERRor" on page 618
*ESE (Standard Event Status Enable)

Command Syntax

*ESE <mask_argument>

<mask_argument> ::= integer from 0 to 255

The *ESE common command sets the bits in the Standard Event Status Enable Register. The Standard Event Status Enable Register contains a mask value for the bits to be enabled in the Standard Event Status Register. A "1" in the Standard Event Status Enable Register enables the corresponding bit in the Standard Event Status Register. A zero disables the bit.

```

</table>
```

Query Syntax

*ESE?
The *ESE? query returns the current contents of the Standard Event Status Enable Register.

Return Format

<mask_argument><NL>
<mask_argument> ::= 0,...,255; an integer in NR1 format.

See Also

- "Introduction to Common (*) Commands" on page 141

*ESR (Standard Event Status Register)

Query Syntax  
*ESR?

The *ESR? query returns the contents of the Standard Event Status Register. When you read the Event Status Register, the value returned is the total bit weights of all of the bits that are high at the time you read the byte. Reading the register clears the Event Status Register.

The following table shows bit weight, name, and condition for each bit.

<table>
<thead>
<tr>
<th>Bit</th>
<th>Name</th>
<th>Description</th>
<th>When Set (1 = High = True), Indicates:</th>
</tr>

</tr>
<tr>
<td>0</td>
<td>OPC</td>
<td>Operation Complete</td>
<td>Operation is complete.</td>
</tr>
</tbody>
</table>

Return Format  
<status><NL>

<status> ::= 0,...,255; an integer in NR1 format.
NOTE

Reading the Standard Event Status Register clears it. High or 1 indicates the bit is true.

- “Introduction to Common (*) Commands” on page 141
- “*ESE (Standard Event Status Enable)” on page 143
- “*OPC (Operation Complete)” on page 149
- “*CLS (Clear Status)” on page 142
- “:SYSTem:ERRor” on page 618
*IDN (Identification Number)

(see page 886)

Query Syntax

*IDN?

The *IDN? query identifies the instrument type and software version.

Return Format

AGILENT TECHNOLOGIES,<model>,<serial number>,X.XX.XX <NL>

<model> ::= the model number of the instrument
<serial number> ::= the serial number of the instrument
X.XX.XX ::= the software revision of the instrument

See Also

• “Introduction to Common (*) Commands” on page 141
• “*OPT (Option Identification)” on page 150
**LRN (Learn Device Setup)**

Query Syntax

*LRN?

The *LRN? query result contains the current state of the instrument. This query is similar to the :SYSTem:SETup? (see page 632) query, except that it contains ":SYST:SET " before the binary block data. The query result is a valid command that can be used to restore instrument settings at a later time.

Return Format

<learn_string><NL>

<learn_string> ::= :SYST:SET <setup_data>

<setup_data> ::= binary block data in IEEE 488.2 # format

<learn string> specifies the current instrument setup. The block size is subject to change with different firmware revisions.

**NOTE**

The *LRN? query return format has changed from previous Keysight oscilloscopes to match the IEEE 488.2 specification which says that the query result must contain ":SYST:SET " before the binary block data.

See Also

- "Introduction to Common (*) Commands" on page 141
- "**RCL (Recall)" on page 152
- "**SAV (Save)" on page 156
- ":SYSTem:SETup" on page 632
*OPC (Operation Complete)

(see page 886)

**Command Syntax**

*OPC

The *OPC command sets the operation complete bit in the Standard Event Status Register when all pending device operations have finished.

**Query Syntax**

*OPC?

The *OPC? query places an ASCII "1" in the output queue when all pending device operations have completed. The interface hangs until this query returns.

**Return Format**

<complete><NL>

<complete> ::= 1

**See Also**

- "Introduction to Common (*) Commands" on page 141
- "*ESE (Standard Event Status Enable)" on page 143
- "*ESR (Standard Event Status Register)" on page 145
- "*CLS (Clear Status)" on page 142
5  Common (*) Commands

*OPT (Option Identification)

(see page 886)

Query Syntax  

*OPT?

The *OPT? query reports the options installed in the instrument. This query returns a string that identifies the module and its software revision level.

Return Format  

0,0,<license info>

<license info> ::= <All field>, <reserved>, <MSO>, <reserved>, <Memory>, <Low Speed Serial>, <Automotive Serial>, <reserved>, <reserved>, <reserved>, <RS-232/UART Serial>, <Segmented Memory>, <Mask Test>, <reserved>, <reserved>, <Bandwidth>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <Educator's Kit>, <Waveform Generator>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <Remote Command Logging>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <reserved>, <Automotive Software>, <General Purpose Software>, <reserved>, <reserved>, <Software Bundle>

<All field> ::= {0 | All}
<reserved> ::= 0
<MSO> ::= {0 | MSO}
<Memory> ::= {0 | MEMUP}
<Low Speed Serial> ::= {0 | EMBD}
<Automotive Serial> ::= {0 | AUTO}
<RS-232/UART Serial> ::= {0 | COMP}
<Segmented Memory> ::= {0 | SGM}
<Mask Test> ::= {0 | MASK}
<Bandwidth> ::= {0 | BW10 | BW20}
<Educator's Kit> ::= {0 | EDK}
<Waveform Generator> ::= {0 | WAVEGEN}
<Digital Voltmeter> ::= {0 | DVM}
<Remote Command Logging> ::= {0 | RML}
<Enhancements> (math, memory, update rate) ::= {0 | PLUS}
<Automotive Software> ::= {0 | D2000AUTA}
<General Purpose Software> ::= {0 | D2000GENA}
<Software Bundle> ::= {0 | D2000BDLA}

The <MSO> field indicates whether the unit is a mixed-signal oscilloscope.
5

Common (*) Commands

The *OPT? query returns the following:

**RCL (Recall)**

(see page 886)

**Command Syntax**

```
*RCL <value>
```

<value> ::= {0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9}

The *RCL command restores the state of the instrument from the specified save/recall register.

**See Also**

- "Introduction to Common (*) Commands" on page 141
- "**SAV (Save)**" on page 156
**RST (Reset)**

Command Syntax: *RST

The *RST command places the instrument in a known state. This is the same as pressing [Save/Recall] > Default/Erase > Factory Default on the front panel.

When you perform a factory default setup, there are no user settings that remain unchanged. To perform the equivalent of the front panel's [Default Setup] key, where some user settings (like preferences) remain unchanged, use the :SYSTem:PRESet command.

Reset conditions are:

Example Code

' RESET - This command puts the oscilloscope into a known state.
' This statement is very important for programs to work as expected.
' Most of the following initialization commands are initialized by
' *RST. It is not necessary to reinitialize them unless the default
' setting is not suitable for your application.
myScope.WriteString "*RST" ' Reset the oscilloscope to the defaults.

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
5 Common (*) Commands

*SAV (Save)

Command Syntax

*SAV <value>

<value> ::= {0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9}

The *SAV command stores the current state of the instrument in a save register. The data parameter specifies the register where the data will be saved.

See Also

• "Introduction to Common (*) Commands" on page 141
• "*RCL (Recall)" on page 152
**SRE (Service Request Enable)**

**Command Syntax**

* SRE <mask>

<mask> ::= integer with values defined in the following table.

The *SRE command sets the bits in the Service Request Enable Register. The Service Request Enable Register contains a mask value for the bits to be enabled in the Status Byte Register. A one in the Service Request Enable Register enables the corresponding bit in the Status Byte Register. A zero disables the bit.
**Table 54  Service Request Enable Register (SRE)**

**Query Syntax**

*SRE?

The *SRE? query returns the current value of the Service Request Enable Register.

**Return Format**

`<mask><NL>

<mask> ::= sum of all bits that are set, 0,...,255; an integer in NR1 format

**See Also**

- "Introduction to Common (*) Commands" on page 141
- "*STB (Read Status Byte)" on page 159
- "**CLS (Clear Status)" on page 142
**STB (Read Status Byte)**

*(see page 886)*

**Query Syntax**

*STB?*

The *STB?* query returns the current value of the instrument's status byte. The MSS (Master Summary Status) bit is reported on bit 6 instead of the RQS (request service) bit. The MSS indicates whether or not the device has at least one reason for requesting service.

**Return Format**

<value><NL>

<value> ::= 0,...,255; an integer in NR1 format

</table>

**NOTE**

To read the instrument's status byte with RQS reported on bit 6, use the interface Serial Poll.

**See Also**

- "Introduction to Common (*) Commands" on page 141
- "**SRE (Service Request Enable)**" on page 157
*TRG (Trigger)

(see page 886)

Command Syntax

*TRG

The *TRG command has the same effect as the :DIGitize command with no parameters.

See Also

- "Introduction to Common (*) Commands" on page 141
- ":DIGitize" on page 177
- ":RUN" on page 194
- ":STOP" on page 198
*TST (Self Test)

(see page 886)

Query Syntax

* TST?

The *TST? query performs a self-test on the instrument. The result of the test is placed in the output queue. A zero indicates the test passed and a non-zero indicates the test failed. If the test fails, refer to the troubleshooting section of the Service Guide.

Return Format

<result><NL>

<result> ::= 0 or non-zero value; an integer in NR1 format

See Also

- "Introduction to Common (*) Commands" on page 141
*WAI (Wait To Continue)

Command Syntax  

*WAI

The *WAI command has no function in the oscilloscope, but is parsed for compatibility with other instruments.

See Also  

• "Introduction to Common (*) Commands" on page 141
Common (*) Commands
6 Root (:) Commands

Control many of the basic functions of the oscilloscope and reside at the root level of the command tree. See "Introduction to Root (:) Commands" on page 168.

Introduction to Root (:) Commands

Root level commands control many of the basic operations of the instrument. These commands are always recognized by the parser if they are prefixed with a colon, regardless of current command tree position. After executing a root-level command, the parser is positioned at the root of the command tree.

<table>

<td>n/a</td>
<td>&lt;source&gt; ::= {CHANnel&lt;n&gt;</td>
</tr>
</tbody>
</table>
:ACTivity

Command Syntax

:ACTivity

The :ACTivity command clears the cumulative edge variables for the next activity query.

Query Syntax

:ACTivity?

The :ACTivity? query returns whether there has been activity (edges) on the digital channels since the last query, and returns the current logic levels.

Return Format

<edges>,<levels><NL>

<edges> ::= presence of edges (16-bit integer in NR1 format).
<levels> ::= logical highs or lows (16-bit integer in NR1 format).

bit 0 ::= DIGital 0
bit 15 ::= DIGital 15

NOTE

Because the :ACTivity? query returns edge activity since the last :ACTivity? query, you must send this query twice before the edge activity result is valid.

NOTE

A bit = 0 (zero) in the <edges> result indicates that no edges were detected on that channel (across the specified threshold voltage) since the last query.

A bit = 1 (one) in the <edges> result indicates that edges have been detected on that channel (across the specified threshold voltage) since the last query.

(The threshold voltage must be set appropriately for the logic levels of the signals being probed.)

- ":POD<n>:THReshold" on page 465
- ":DIGital<d>:THReshold" on page 269
:AER (Arm Event Register)

(see page 886)

Query Syntax     :AER?

The AER query reads the Arm Event Register. After the Arm Event Register is read, it is cleared. A "1" indicates the trigger system is in the armed state, ready to accept a trigger.

The Armed Event Register is summarized in the Wait Trig bit of the Operation Status Event Register. A Service Request can be generated when the Wait Trig bit transitions and the appropriate enable bits have been set in the Operation Status Enable Register (OPEE) and the Service Request Enable Register (SRE).

Return Format   <value><NL>

<value> ::= {0 | 1}; an integer in NR1 format.

See Also
- "Introduction to Root (:) Commands" on page 168

- "**SRE (Service Request Enable)" on page 157
:AUToscale

(see page 886)

Command Syntax

:AUToscale

:AUToscale [<source>[,...,<source>]]

<source> ::= CHANnel<n> for the DSO models

<source> ::= {DIGital<d> | POD1 | POD2 | CHANnel<n>} for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

The <source> parameter may be repeated up to 5 times.

The :AUToscale command evaluates all input signals and sets the correct conditions to display the signals. This is the same as pressing the [Auto Scale] key on the front panel.

If one or more sources are specified, those specified sources will be enabled and all others blanked. The autoscale channels mode (see “:AUToscale:CHANnels” on page 174) is set to DISPlayed channels. Then, the autoscale is performed.

When the :AUToscale command is sent, the following conditions are affected and actions are taken:

• Thresholds.
• Channels with activity around the trigger point are turned on, others are turned off.
• Channels are reordered on screen; analog channel 1 first, followed by the remaining analog channels, then the digital channels 0-15.
• Delay is set to 0 seconds.
• Time/Div.

The :AUToscale command does not affect the following conditions:

• Label names.
• Trigger conditioning.

The :AUToscale command turns off the following items:

• Cursors.
• Measurements.
• Math waveforms.
• Reference waveforms.
• Zoomed (delayed) time base mode.

For further information on :AUToscale, see the User's Guide.
See Also

- "Introduction to Root (:.) Commands" on page 168
- ":AUToscale:CHANnels" on page 174
- ":AUToscale:AMODE" on page 173

Example Code

' AUTOSCALE - This command evaluates all the input signals and sets
' the correct conditions to display all of the active signals.
myScope.WriteString ":AUToscale" ' Same as pressing Auto Scale key.

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
:AUToscale:AMODE

N (see page 886)

Command Syntax :AUToscale:AMODE <value>

/value> ::= {NORMal | CURRENT}

The :AUToscale:AMODE command specifies the acquisition mode that is set by subsequent :AUToscales.

- When NORMal is selected, an :AUToscale command sets the NORMal acquisition type and the RTIME (real-time) acquisition mode.
- When CURRent is selected, the current acquisition type and mode are kept on subsequent :AUToscales.

Use the :ACQuire:TYPE and :ACQuire:MODE commands to set the acquisition type and mode.

Query Syntax :AUToscale:AMODE?

The :AUToscale:AMODE? query returns the autoscale acquire mode setting.

Return Format <value><NL>

/value> ::= {NORM | CURR}

See Also
- "Introduction to Root (: ) Commands" on page 168
- ":AUToscale" on page 171
- ":AUToscale:CHANnels" on page 174
- ":ACQuire:TYPE" on page 213
- ":ACQuire:MODE" on page 205
:AUToscale:CHANnels

Command Syntax

:AUToscale:CHANnels <value>

<value> ::= {ALL | DISPlayed}

The :AUToscale:CHANnels command specifies which channels will be displayed on subsequent :AUToscales.

• When ALL is selected, all channels that meet the requirements of :AUToscale will be displayed.
• When DISPlayed is selected, only the channels that are turned on are autoscaled.

Use the :VIEW or :BLANk root commands to turn channels on or off.

Query Syntax

:AUToscale:CHANnels?

The :AUToscale:CHANnels? query returns the autoscale channels setting.

Return Format

<value><NL>

<value> ::= {ALL | DISP}

See Also

• "Introduction to Root (:) Commands" on page 168
• ":AUToscale" on page 171
• ":AUToscale:AMODE" on page 173
• ":VIEW" on page 200
• ":BLANk" on page 176
:AUToscale:FDEBug

N (see page 886)

Command Syntax

:AUToscale:FDEBug <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :AUToscale:FDEBug command turns fast debug auto scaling on or off.

The Fast Debug option changes the behavior of :AUToscale to let you make quick visual comparisons to determine whether the signal being probed is a DC voltage, ground, or an active AC signal.

Channel coupling is maintained for easy viewing of oscillating signals.

Query Syntax

:AUToscale:FDEBug?

The :AUToscale:FDEBug? query returns the current autoscale fast debug setting.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to Root (:) Commands" on page 168
• ":AUToscale" on page 171
ːBLANk

(see page 886)

Command Syntax

ːBLANk [<source>]

<source> ::= {CHANnel<n> | FUNCTION | MATH | SBUS1 | WMEMory<r>}
    for the DSO models
<source> ::= {CHANnel<n> | DIGital<d> | POD{1 | 2} | BUS{1 | 2} | FUNCTION | MATH | SBUS1 | WMEMory<r>}
    for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format
<r> ::= 1 to (# ref waveforms) in NR1 format

The ːBLANk command turns off (stops displaying) the specified channel, digital
pod, math function, or serial decode bus. The ːBLANk command with no
parameter turns off all sources.

NOTE

To turn on (start displaying) a channel, etc., use the ːVIEW command. The DISPlay commands,
ːCHANnel<n>:DISPlay, ːFUNCTION:DISPlay, ːPOD<n>:DISPlay, ːDIGital<n>:DISPlay,
ːSBUS<n>:DISPlay, or ːWMEMory<r>:DISPlay, are the preferred method to turn on/off a
channel, etc.

NOTE

MATH is an alias for FUNCTION.

Example Code

- "Example Code" on page 200
:DIGitize

Command Syntax

:DIGitize [<source>[,...,<source>]]

<source> ::= {CHANnel<n> | FUNCTION | MATH | SBUS1}
  for the DSO models

<source> ::= {CHANnel<n> | DIGital<d> | POD{1 | 2}
  | BUS{1 | 2} | FUNCTION | MATH | SBUS1}
  for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The <source> parameter may be repeated up to 5 times.

The :DIGitize command is a specialized RUN command. It causes the instrument
to acquire waveforms according to the settings of the :ACQuire commands
subsystem. When the acquisition is complete, the instrument is stopped.

If no argument is given, :DIGitize acquires the channels currently displayed. If no
channels are displayed, all channels are acquired.

NOTE

The :DIGitize command is only executed when the :TIMebase:MODE is MAIN or WINDow.

NOTE

To halt a :DIGitize in progress, use the device clear command.

NOTE

MATH is an alias for FUNCTION.

Example Code

' Capture an acquisition using :DIGitize.
' -----------------------------------------------------------------
myScope.WriteString " :DIGitize CHAnnel1"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:MTEenable (Mask Test Event Enable Register)

Command Syntax

: MTEenable <mask>

<mask> ::= 16-bit integer

The :MTEenable command sets a mask in the Mask Test Event Enable register. Set any of the following bits to "1" to enable bit 9 in the Operation Status Condition Register and potentially cause an SRQ (Service Request interrupt to be generated.

---

Query Syntax

:MTEenable?

The :MTEenable? query returns the current value contained in the Mask Test Event Enable register as an integer number.

Return Format

<value><NL>

<value> ::= integer in NR1 format.

See Also

• "Introduction to Root (:) Commands" on page 168

**:OVLenable (Overload Event Enable Register)**

(see page 886)

**Command Syntax**

```
:OVLenable <enable_mask>
```

<enable_mask> ::= 16-bit integer

The overload enable mask is an integer representing an input as described in the following table.

The :OVLenable command sets the mask in the Overload Event Enable Register and enables the reporting of the Overload Event Register. If an overvoltage is sensed on a 50Ω input, the input will automatically switch to 1 MΩ input impedance. If enabled, such an event will set bit 11 in the Operation Status Register.

**NOTE**

You can set analog channel input impedance to 50Ω on the 300 MHz, 500 MHz, and 1 GHz bandwidth oscilloscope models. On these same bandwidth models, if there are only two analog channels, you can also set external trigger input impedance to 50Ω.

The :OVLenable query returns the current enable mask value contained in the Overload Event Enable Register.

## Query Syntax

:OVLenable?

The :OVLenable query returns the current enable mask value contained in the Overload Event Enable Register.

## Return Format

<enable_mask><NL>

<enable_mask> ::= integer in NR1 format.

## See Also

:OVLRegister (Overload Event Register)

Query Syntax

:OVLRegister?

The :OVLRegister query returns the overload protection value stored in the Overload Event Register (OVLR). If an overvoltage is sensed on a 50Ω input, the input will automatically switch to 1 MΩ input impedance. A "1" indicates an overload has occurred.

NOTE

You can set analog channel input impedance to 50Ω on the 300 MHz, 500 MHz, and 1 GHz bandwidth oscilloscope models. On these same bandwidth models, if there are only two analog channels, you can also set external trigger input impedance to 50Ω.

:PRINt

(see page 886)

Command Syntax :

:PRINt [<options>]

<options> ::= [<print option>],..,[<print option>]

<print option> ::= {COLOR | GRAYscale | PRINter0 | PRINter1 | BMP8bit |
BMP | PNG | NOFactors | FACTors}

The <print option> parameter may be repeated up to 5 times.

The PRINt command formats the output according to the currently selected format (device). If an option is not specified, the value selected in the Print Config menu is used.

• ":.DISPlay:DATA" on page 278
:RUN

Command Syntax

:RUN

The :RUN command starts repetitive acquisitions. This is the same as pressing the Run key on the front panel.

See Also

- "Introduction to Root (:) Commands" on page 168
- ":SINGle" on page 196
- ":STOP" on page 198

Example Code

' RUN_STOP - (not executed in this example)
'   - RUN starts the data acquisition for the active waveform display.
'   - STOP stops the data acquisition and turns off AUTOSTORE.
' myScope.WriteString ":RUN"    ' Start data acquisition.
' myScope.WriteString ":STOP"    ' Stop the data acquisition.

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:SERial

N (see page 886)

Query Syntax
:SERial?

The :SERial? query returns the serial number of the instrument.

Return Format: Unquoted string<NL>

See Also
• "Introduction to Root (:) Commands" on page 168
The :SINGle command causes the instrument to acquire a single trigger of data. This is the same as pressing the Single key on the front panel.

See Also
- "Introduction to Root (:.) Commands" on page 168
- "RUN" on page 194
- "STOP" on page 198
:STATus

(see page 886)

Query Syntax

:STATus? <source>

<source> ::= {CHANnel<n> | FUNCTION | MATH | SBUS1 | WMEMory<r>}
   for the DSO models

<source> ::= {CHANnel<n> | DIGital<d> | POD{1 | 2} | BUS{1 | 2} | FUNCTION | MATH | SBUS1 | WMEMory<r>}
   for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format
<r> ::= 1 to (# ref waveforms) in NR1 format

The :STATus? query reports whether the channel, function, or serial decode bus specified by <source> is displayed.

NOTE

MATH is an alias for FUNCTION.

Return Format

<value><NL>

<value> ::= {1 | 0}

See Also

- "Introduction to Root (: Commands" on page 168

- ":WMEMory<r>:DISPlay" on page 790
- ":VIEW" on page 200
**:STOP**

(see page 886)

**Command Syntax**

```
:STOP
```

The :STOP command stops the acquisition. This is the same as pressing the Stop key on the front panel.

**See Also**

- "Introduction to Root (:) Commands" on page 168
- ":RUN" on page 194
- ":SINGle" on page 196

**Example Code**

- "Example Code" on page 194
:TER (Trigger Event Register)

(see page 886)

Query Syntax

`:TER?`

The :TER? query reads the Trigger Event Register. After the Trigger Event Register is read, it is cleared. A one indicates a trigger has occurred. A zero indicates a trigger has not occurred.

The Trigger Event Register is summarized in the TRG bit of the Status Byte Register (STB). A Service Request (SRQ) can be generated when the TRG bit of the Status Byte transitions, and the TRG bit is set in the Service Request Enable register. The Trigger Event Register must be cleared each time you want a new service request to be generated.

Return Format

```
<value><NL>
<value> ::= {1 | 0}; a 16-bit integer in NR1 format.
```

See Also
- "Introduction to Root (: Commands" on page 168
- "**SRE (Service Request Enable)" on page 157
- "**STB (Read Status Byte)" on page 159
:VIEW

(see page 886)

Command Syntax

:VIEW <source>

<source> ::= {CHANnel<n> | FUNCtion | MATH | SBUS1 | WMEMory<r>}
  for DSO models

<source> ::= {CHANnel<n> | DIGital<d> | POD{1 | 2} | BUS{1 | 2} | FUNCtion | MATH | SBUS1 | WMEMory<r>}
  for MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format
<r> ::= 1 to (# ref waveforms) in NR1 format

The :VIEW command turns on the specified channel, function, or serial decode bus.

NOTE

MATH is an alias for FUNCTION.

Introduction to :ACQuire Commands

The ACQuire subsystem controls the way in which waveforms are acquired. These acquisition types are available: normal, averaging, peak detect, and high resolution.

Normal
The :ACQuire:TYPE NORMal command sets the oscilloscope in the normal acquisition mode. For the majority of user models and signals, NORMal mode yields the best oscilloscope picture of the waveform.

Averaging
The :ACQuire:TYPE AVERage command sets the oscilloscope in the averaging mode. You can set the count by sending the :ACQuire:COUNt command followed by the number of averages. In this mode, the value for averages is an integer from 2 to 65536. The COUNt value determines the number of averages that must be acquired.

High-Resolution
The :ACQuire:TYPE HRESolution command sets the oscilloscope in the high-resolution mode (also known as smoothing). This mode is used to reduce noise at slower sweep speeds where the digitizer samples faster than needed to fill memory for the displayed time range. Instead of decimating samples, they are averaged together to provide the value for one display point. The slower the sweep speed, the greater the number of samples that are averaged together for each display point.

Peak Detect
The :ACQuire:TYPE PEAK command sets the oscilloscope in the peak detect mode. In this mode, :ACQuire:COUNt has no meaning.

Reporting the Setup
Use :ACQuire? to query setup information for the ACQuire subsystem.

Return Format
The following is a sample response from the :ACQuire? query. In this case, the query was issued following a *RST command.

:ACQ:MODE RTIM;TYPE NORM;COMP 100;COUNT 8;SEGM:COUN 2
:ACQuire:COMPlete

(see page 886)

Command Syntax

:ACQuire:COMPlete <complete>

<complete> ::= 100; an integer in NR1 format

The :ACQuire:COMPlete command affects the operation of the :DIGitize command. It specifies the minimum completion criteria for an acquisition. The parameter determines the percentage of the time buckets that must be "full" before an acquisition is considered complete. If :ACQuire:TYPE is NORMal, it needs only one sample per time bucket for that time bucket to be considered full.

The only legal value for the :COMPlete command is 100. All time buckets must contain data for the acquisition to be considered complete.

Query Syntax

:ACQuire:COMPlete?

The :ACQuire:COMPlete? query returns the completion criteria (100) for the currently selected mode.

Return Format

<completion_criteria><NL>

<completion_criteria> ::= 100; an integer in NR1 format

See Also

• "Introduction to :ACQuire Commands" on page 201
• ":ACQuire:TYPE" on page 213
• ":DIGitize" on page 177
• ":WAVeform:POINts" on page 734

Example Code

' AQUIRE_COMPLETE - Specifies the minimum completion criteria for an acquisition. The parameter determines the percentage of time buckets needed to be "full" before an acquisition is considered to be complete.
myScope.WriteString "::ACQuire:COMPLETE 100"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:ACQuire:COUNT

(see page 886)

Command Syntax

:ACQuire:COUNt <count>

<count> ::= integer in NR1 format

In averaging mode, the :ACQuire:COUNt command specifies the number of values to be averaged for each time bucket before the acquisition is considered to be complete for that time bucket. When :ACQuire:TYPE is set to AVERage, the count can be set to any value from 2 to 65536.

NOTE

The :ACQuire:COUNt 1 command has been deprecated. The AVERage acquisition type with a count of 1 is functionally equivalent to the HRESolution acquisition type; however, you should select the high-resolution acquisition mode with the :ACQuire:TYPE HRESolution command instead.

Query Syntax

:ACQuire:COUNt?

The :ACQuire:COUNt? query returns the currently selected count value for averaging mode.

Return Format

<count_argument><NL>

<count_argument> ::= an integer from 2 to 65536 in NR1 format

See Also

- "Introduction to :ACQuire Commands" on page 201
- ":ACQuire:TYPE" on page 213
- ":DIGitize" on page 177
- ":WAVeform:COUNt" on page 730
:ACQuire:MODE

Command Syntax

:ACQuire:MODE <mode>

<mode> ::= {RTIMe | SEGMented}

The :ACQuire:MODE command sets the acquisition mode of the oscilloscope.

- The :ACQuire:MODE RTIMe command sets the oscilloscope in real time mode.
- The :ACQuire:MODE SEGMented command sets the oscilloscope in segmented memory mode.

Query Syntax

:ACQuire:MODE?

The :ACQuire:MODE? query returns the acquisition mode of the oscilloscope.

Return Format

<mode_argument><NL>

<mode_argument> ::= {RTIM | SEGM}

See Also

- "Introduction to :ACQuire Commands" on page 201
- ":ACQuire:TYPE" on page 213

NOTE

The obsolete command ACQuire:TYPE:REALtime is functionally equivalent to sending ACQuire:MODE RTIMe; TYPE NORMal.
:ACQuire:POINts

(see page 886)

Query Syntax  :ACQuire:POINts?

The :ACQuire:POINts? query returns the number of data points that the hardware will acquire from the input signal. The number of points acquired is not directly controllable. To set the number of points to be transferred from the oscilloscope, use the command :WAVeform:POINts. The :WAVeform:POINts? query will return the number of points available to be transferred from the oscilloscope.

Return Format  <points_argument><NL>

<points_argument> ::= an integer in NR1 format

See Also  • "Introduction to :ACQuire Commands" on page 201
  • "DIGitize" on page 177
  • ":WAVeform:POINts" on page 734
**:ACQuire:SEGmented:ANALyze**

(see page 886)

**Command Syntax**

**:ACQuire:SEGmented:ANALyze**

**NOTE**

This command is available when the segmented memory license (SGM) is enabled.

This command calculates measurement statistics and/or infinite persistence over all segments that have been acquired. It corresponds to the front panel **Analyze Segments** softkey which appears in both the Measurement Statistics and Segmented Memory Menus.

In order to use this command, the oscilloscope must be stopped and in segmented acquisition mode, with either quick measurements or infinite persistence on.

**See Also**

- "**:ACQuire:SEGmented:COUNt" on page 208"
- "Introduction to :ACQuire Commands" on page 201"
:ACQuire:SEGメントed:COUNt

Command Syntax

:ACQuire:SEGメントed:COUNt <count>

<count> ::= an integer from 2 to 250 (w/1M memory) in NR1 format

This command is available when the segmented memory license (SGM) is enabled.

The :ACQuire:SEGメントed:COUNt command sets the number of memory segments to acquire.

The segmented memory acquisition mode is enabled with the :ACQuire:MODE command, and data is acquired using the :DIGitize, :SINGle, or :RUN commands. The number of memory segments in the current acquisition is returned by the :WAVeform:SEGメントed:COUNt? query.

The maximum number of segments may be limited by the memory depth of your oscilloscope. For example, an oscilloscope with 100K memory allows a maximum of 25 segments.

Query Syntax

:ACQuire:SEGメントed:COUNt?

The :ACQuire:SEGメントed:COUNt? query returns the current count setting.

Return Format

<count><NL>

<count> ::= an integer from 2 to 250 (w/1M memory) in NR1 format

See Also

- ":ACQuire:MODE" on page 205
- ":DIGitize" on page 177

Example Code

- "Example Code" on page 209
:ACQuire:SEGMented:INDex

Command Syntax

:ACQuire:SEGMented:INDex <index>

<index> ::= an integer from 1 to 250 (w/1M memory) in NR1 format

NOTE

This command is available when the segmented memory license (SGM) is enabled.

The :ACQuire:SEGMented:INDex command sets the index into the memory segments that have been acquired.

The segmented memory acquisition mode is enabled with the :ACQuire:MODE command. The number of segments to acquire is set using the :ACQuire:SEGMented:COUNt command, and data is acquired using the :DIGitize, :SINGle, or :RUN commands. The number of memory segments that have been acquired is returned by the :WAVEform:SEGMented:COUNt? query. The time tag of the currently indexed memory segment is returned by the :WAVEform:SEGMented:TTAG? query.

The maximum number of segments may be limited by the memory depth of your oscilloscope. For example, an oscilloscope with 100K memory allows a maximum of 25 segments.

Query Syntax

:ACQuire:SEGMented:INDex?

The :ACQuire:SEGMented:INDex? query returns the current segmented memory index setting.

Return Format

<index><NL>

<index> ::= an integer from 1 to 250 (w/1M memory) in NR1 format

See Also

- ":ACQuire:MODE" on page 205

    ' Display the segment time tag.
    myScope.WriteString "::WAVeform:SEGmented:TTAG?"
    dblTimeTag = myScope.ReadNumber
    Debug.Print "Segment " + CStr(lngI) + " time tag: ".
        + FormatNumber(dblTimeTag, 12)

Next lngI

Exit Sub

VisaComError:
    MsgBox "VISA COM Error:" + vbCrLf + Err.Description

End Sub
:**ACQuire:SRATe**

(see page 886)

**Query Syntax**

**:ACQuire:SRATe?**

The :ACQuire:SRATe? query returns the current oscilloscope acquisition sample rate. The sample rate is not directly controllable.

**Return Format**

<pre><sample_rate><NL>
<sample_rate> ::= sample rate in NR3 format
</pre>

**See Also**

- "Introduction to :ACQuire Commands" on page 201
- ":ACQuire:POINts" on page 206
:ACQuire:TYPE

Command Syntax

:ACQuire:TYPE <type>

$type ::= \{NORMal | AVERage | HRESolution | PEAK\}

The :ACQuire:TYPE command selects the type of data acquisition that is to take place. The acquisition types are:

- NORMal — sets the oscilloscope in the normal mode.
- AVERage — sets the oscilloscope in the averaging mode. You can set the count by sending the :ACQuire:COUNt command followed by the number of averages. In this mode, the value for averages is an integer from 1 to 65536. The COUNt value determines the number of averages that must be acquired.
- HRESolution — sets the oscilloscope in the high-resolution mode (also known as smoothing). This mode is used to reduce noise at slower sweep speeds where the digitizer samples faster than needed to fill memory for the displayed time range.
- PEAK — sets the oscilloscope in the peak detect mode. In this mode, :ACQuire:COUNt has no meaning.

The AVERage and HRESolution types can give you extra bits of vertical resolution. See the User’s Guide for an explanation. When getting waveform data acquired using the AVERage and HRESolution types, be sure to use the WORD or ASCii waveform data formats to get the extra bits of vertical resolution.

NOTE

The obsolete command ACQuire:TYPE:REALtime is functionally equivalent to sending ACQuire:MODE RTIME; TYPE NORMal.

Query Syntax

:ACQuire:TYPE?

The :ACQuire:TYPE? query returns the current acquisition type.

Return Format

<acq_type><NL>

$acq_type ::= \{NORM | AVER | HRES | PEAK\}$

</table>
Introduction to :BUS<n> Commands

The BUS subsystem commands control the viewing, labeling, and digital channel makeup of two possible buses.

NOTE

These commands are only valid for the MSO models.

---

**Table 65 :BUS<n> Commands Summary (continued)**

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
</table>
| :BUS<n>:LABel <string> (see page 222) | :BUS<n>:LABel? (see page 222) | <string> ::= quoted ASCII string up to 10 characters  
<n> ::= 1 or 2; an integer in NR1 format  

| :BUS<n>:MASK <mask> (see page 223) | :BUS<n>:MASK? (see page 223) | <mask> ::= 32-bit integer in decimal, <nondecimal>, or <string>  
<n> ::= {0,..,9 | A,..,F} for hexadecimal  
<n> ::= {0 | 1} for binary  
<string> ::= "0xnn...n" where n ::= {0,..,9 | A,..,F} for hexadecimal  
<n> ::= 1 or 2; an integer in NR1 format  

---

**Reporting the Setup**

Use :BUS<n>? to query setup information for the BUS subsystem.

**Return Format**

The following is a sample response from the :BUS1? query. In this case, the query was issued following a *RST command.

:BUS1:DISP 0;LAB "BUS1";MASK +255
**BUS<n>:BIT<m>**

(see page 886)

**Command Syntax**

:BUS<n>:BIT<m> <display>

<display> ::= {{1 | ON} | {0 | OFF}}

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

<m> ::= An integer, 0,..,7, is attached as a suffix to BIT and defines the digital channel that is affected by the command.

The :BUS<n>:BIT<m> command includes or excludes the selected bit as part of the definition for the selected bus. If the parameter is a 1 (ON), the bit is included in the definition. If the parameter is a 0 (OFF), the bit is excluded from the definition. Note: BIT0-7 correspond to DIGital0-7.

**NOTE**

This command is only valid for the MSO models.

**Query Syntax**

:BUS<n>:BIT<m>?

The :BUS<n>:BIT<m>? query returns the value indicating whether the specified bit is included or excluded from the specified bus definition.

**Return Format**

<display><NL>

<display> ::= {0 | 1}

**See Also**

- "Introduction to :BUS<n> Commands" on page 216
- ":BUS<n>:BITS" on page 218
- ":BUS<n>:CLEar" on page 220
- ":BUS<n>:DISPlay" on page 221
- ":BUS<n>:LABel" on page 222
- ":BUS<n>:MASK" on page 223

**Example Code**

' Include digital channel 1 in bus 1:
myScope.WriteString "::BUS1:BIT1 ON"
:BUS<n>:BITS

Command Syntax
:BUS<n>:BITS <channel_list>, <display>

<channel_list> ::= (@<m>,<m>:<m>, ...) where commas separate bits and colons define bit ranges.

<m> ::= An integer, 0,...,7, defines a digital channel affected by the command.

<display> ::= {{1 | ON} | {0 | OFF}}

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

The :BUS<n>:BITS command includes or excludes the selected bits in the channel list in the definition of the selected bus. If the parameter is a 1 (ON) then the bits in the channel list are included as part of the selected bus definition. If the parameter is a 0 (OFF) then the bits in the channel list are excluded from the definition of the selected bus.

NOTE
This command is only valid for the MSO models.

Query Syntax
:BUS<n>:BITS?

The :BUS<n>:BITS? query returns the definition for the specified bus.

Return Format
<channel_list>, <display><NL>

See Also
- "Introduction to :BUS<n> Commands" on page 216
- ":BUS<n>:BIT<m>" on page 217
- ":BUS<n>:CLEar" on page 220
- ":BUS<n>:DISPlay" on page 221
- ":BUS<n>:LABel" on page 222
- ":BUS<n>:MASK" on page 223

Example Code
' Include digital channels 1, 2, 4, 5, 6, and 7 in bus 1:
myScope.WriteString "::BUS1:BITS (@1,2,4:7), ON"

' Include digital channels 1, 5, and 7 in bus 1:
myScope.WriteString "::BUS1:BITS (@1,5,7), ON"

' Include digital channels 1 through 7 in bus 1:
myScope.WriteString "::BUS1:BITS (@1:7), ON"

' Include digital channels 1 through 3, 5, and 7 in bus 1:
myScope.WriteString "::BUS1:BITS (@1:3,5,7), ON"
:BUS<n>:CLEar

(see page 886)

Command Syntax

:BUS<n>:CLEar

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

The :BUS<n>:CLEar command excludes all of the digital channels from the selected bus definition.

NOTE
This command is only valid for the MSO models.

See Also

• ":BUS<n>:BIT<m>" on page 217
• ":BUS<n>:BITS" on page 218
• ":BUS<n>:DISPlay" on page 221
• ":BUS<n>:LABel" on page 222
• ":BUS<n>:MASK" on page 223
:BUS<n>:DISPlay

N (see page 886)

Command Syntax

:BUS<n>:DISPlay <value>

<value> ::= {{1 | ON} | {0 | OFF}}

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

The :BUS<n>:DISPlay command enables or disables the view of the selected bus.

NOTE

This command is only valid for the MSO models.

Query Syntax

:BUS<n>:DISPlay?

The :BUS<n>:DISPlay? query returns the display value of the selected bus.

Return Format

<value><NL>

<value> ::= {0 | 1}

See Also

• "Introduction to :BUS<n> Commands" on page 216
• ":BUS<n>:BIT<m>" on page 217
• ":BUS<n>:BITS" on page 218
• ":BUS<n>:CLEar" on page 220
• ":BUS<n>:LABel" on page 222
• ":BUS<n>:MASK" on page 223
:BUS<n>:LABel

Command Syntax

:BUS<n>:LABel <quoted_string>

<quoted_string> ::= any series of 10 or less characters as a quoted ASCII string.

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

The :BUS<n>:LABel command sets the bus label to the quoted string. Setting a label for a bus will also result in the name being added to the label list.

NOTE

This command is only valid for the MSO models.

NOTE

Label strings are 10 characters or less, and may contain any commonly used ASCII characters. Labels with more than 10 characters are truncated to 10 characters.

Query Syntax

:BUS<n>:LABel?

The :BUS<n>:LABel? query returns the name of the specified bus.

Return Format

<quoted_string><NL>

<quoted_string> ::= any series of 10 or less characters as a quoted ASCII string.

See Also

• "Introduction to :BUS<n> Commands" on page 216
• ":BUS<n>:BIT<m>" on page 217

• ":CHANnel<n>:LABel" on page 244
• ":DISPlay:LABList" on page 282
• ":DIGital<d>:LABel" on page 266

Example Code

' Set the bus 1 label to "Data":
myScope.WriteString "::BUS1:LABel 'Data'"
:BUS<n>:MASK

N (see page 886)

Command Syntax

:BUS<n>:MASK <mask>

<mask> ::= 32-bit integer in decimal, <nondecimal>, or <string>

<nondecimal> ::= #Hnn...n where n ::= {0,...,9 | A,...,F} for hexadecimal

<nondecimal> ::= #Bnn...n where n ::= {0 | 1} for binary

<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F} for hexadecimal

<n> ::= An integer, 1 or 2, is attached as a suffix to BUS and defines the bus that is affected by the command.

The :BUS<n>:MASK command defines the bits included and excluded in the selected bus according to the mask. Set a mask bit to a "1" to include that bit in the selected bus, and set a mask bit to a "0" to exclude it.

NOTE

This command is only valid for the MSO models.

Query Syntax

:BUS<n>:MASK?

The :BUS<n>:MASK? query returns the mask value for the specified bus.

Return Format

<mask><NL> in decimal format

<td>&lt;return value&gt; ::= &lt;hours&gt;,&lt;minutes&gt;,&lt;seconds&gt;; all in NR1 format</td>
</tr>
</tbody>
</table>
The CALibrate subsystem provides utility commands for:

- Determining the state of the calibration factor protection switch (CAL PROTECT).
- Saving and querying the calibration label string.
- Reporting the calibration time and date.
- Reporting changes in the temperature since the last calibration.
- Starting the user calibration procedure.
:CALibrate:DATE

N (see page 886)

Query Syntax  
:CALibrate:DATE?

The :CALibrate:DATE? query returns the date of the last calibration.

Return Format  
$date<NL>
$\langle date\rangle ::= \text{year,month,day in NR1 format}<NL>

See Also  
• "Introduction to :CALibrate Commands" on page 226
:CALibrate:LABel

Command Syntax

:CALibrate:LABel <string>

<string> ::= quoted ASCII string of up to 32 characters in length, not including the quotes

The CALibrate:LABel command saves a string that is up to 32 characters in length into the instrument’s non-volatile memory. The string may be used to record calibration dates or other information as needed.

Query Syntax

:CALibrate:LABel?

The :CALibrate:LABel? query returns the contents of the calibration label string.

Return Format

<string><NL>
<string>::= unquoted ASCII string of up to 32 characters in length

See Also

• "Introduction to :CALibrate Commands" on page 226
:CALibrate:OUTPut

Command Syntax :CALibrate:OUTPut <signal>

<signal> ::= {TRIGgers | MASK | WAVEgen}

The CALibrate:OUTPut command sets the signal that is available on the rear panel TRIG OUT BNC:
- TRIGgers — pulse when a trigger event occurs.
- MASK — signal from mask test indicating a failure.
- WAVEgen — waveform generator sync output signal. This signal depends on the :WGEN:FUNCTION setting:

<table>
<thead>
<tr>
<th>Waveform Type</th>
<th>Sync Signal Characteristics</th>
</tr>
</thead>
<tbody>
<tr>
<td>SINusoid, SQUare,</td>
<td>The Sync signal is a TTL positive pulse that occurs when the waveform rises above zero volts (or the DC offset value).</td>
</tr>
<tr>
<td>RAMP, PULSE</td>
<td></td>
</tr>
<tr>
<td>DC, NOISE</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Query Syntax :CALibrate:OUTPut?

The :CALibrate:OUTPut query returns the current source of the TRIG OUT BNC signal.

Return Format <signal><NL>

<signal> ::= {TRIG | MASK | WAVE}

See Also • "Introduction to :CALibrate Commands" on page 226
• ":WGEN:FUNCTION" on page 761
:CALibrate:PROTected

N (see page 886)

Query Syntax :CALibrate:PROTected?

The :CALibrate:PROTected? query returns the rear-panel calibration protect (CAL PROTECT) button state. The value "PROTected" indicates calibration is disabled, and "UNPRotected" indicates calibration is enabled.

Return Format
<switch><NL>
<switch> ::= {"PROTected" | "UNPRotected"}

See Also • "Introduction to :CALibrate Commands" on page 226
:CALibrate:STARt

Command Syntax

:CALibrate:STARt

The CALibrate:STARt command starts the user calibration procedure.

NOTE

Before starting the user calibration procedure, you must set the rear panel CALIBRATION switch to UNPROTECTED, and you must connect BNC cables from the TRIG OUT connector to the analog channel inputs. See the User's Guide for details.

See Also

• "Introduction to :CALibrate Commands" on page 226
• ":CALibrate:PROTected" on page 230
:CALibrate:STATus

N (see page 886)

Query Syntax :CALibrate:STATus?

The :CALibrate:STATus? query returns the summary results of the last user calibration procedure.

Return Format <return value><NL>
<br>return value ::= <status_code>,<status_string>
<br>status_code ::= an integer status code
<br>status_string ::= an ASCII status string

See Also
   • "Introduction to :CALibrate Commands" on page 226
**:CALibrate:TEMPerature**

N (see page 886)

**Query Syntax**

`:CALibrate:TEMPerature?`

The `:CALibrate:TEMPerature?` query returns the change in temperature since the last user calibration procedure.

**Return Format**

```
<return value><NL>
<return value> ::= degrees C delta since last cal in NR3 format
```

**See Also**

- "Introduction to :CALibrate Commands" on page 226
**:CALibrate:TIME**

![Note](see page 886)

**Query Syntax**: :CALibrate:TIME?

The :CALibrate:TIME? query returns the time of the last calibration.

**Return Format**: `<date><NL>

`<date>` ::= hour,minutes,seconds in NR1 format

**See Also**

- "Introduction to :CALibrate Commands" on page 226
10 :CHANnel<n> Commands

Control all oscilloscope functions associated with individual analog channels or groups of channels. See "Introduction to :CHANnel<n> Commands" on page 237.

Table 67 :CHANnel<n> Commands Summary

### Introduction to :CHANnel<n> Commands

<n> ::= 1 to (# analog channels) in NR1 format

The CHANnel<n> subsystem commands control an analog channel (vertical or Y-axis of the oscilloscope). Channels are independently programmable for all offset, probe, coupling, bandwidth limit, inversion, vernier, and range (scale) functions. The channel number (1, 2, 3, or 4) specified in the command selects the analog channel that is affected by the command.

A label command provides identifying annotations of up to 10 characters.

You can toggle the channel displays on and off with the :CHANnel<n>:DISPlay command as well as with the root level commands :VIEW and :BLANk.

#### NOTE

The obsolete CHANnel subsystem is supported.

### Reporting the Setup

Use :CHANnel1?, :CHANnel2?, :CHANnel3? or :CHANnel4? to query setup information for the CHANnel<n> subsystem.

### Return Format

The following are sample responses from the :CHANnel<n> query. In this case, the query was issued following a *RST command.

:CHAN1:RANG 40.0E+00;OFFS 0.00000E+00;COUP DC;IMP ONEM;DISP 1;BWL 0;INV 0;LAB "1";UNIT VOLT;PROB +10E+00;PROB:SKW 0.00E+00;STYP SING
:CHANnel\(<n>\):BANDwidth

(see page 886)

Command Syntax

:CHANnel\(<n>\):BANDwidth \(<limit>\)

\(<limit>\) ::= 25E6 in NR3 format

\(<n>\) ::= 1 to (# analog channels) in NR1 format

The :CHANnel\(<n>\):BANDwidth command sets the bandwidth limit value and turns on bandwidth limiting (see the :CHANnel\(<n>\):BWLimit command).

For waveforms with frequencies below the bandwidth limit, turning the bandwidth limit on removes unwanted high frequency noise from the waveform.

Bandwidth limit also limits the trigger signal path of the channel.

While you can request any limit; the oscilloscope will choose the only bandwidth limit available, 25 MHz.

Query Syntax

:CHANnel\(<n>\):BANDwidth? [MAXimum]

The :CHANnel\(<n>\):BANDwidth? query returns the current setting of the low-pass filter.

If the bandwidth limit is off, the query returns the full bandwidth of the oscilloscope.

When the MAXimum parameter is used, the oscilloscope's maximum possible bandwidth is returned.

Return Format

\(<limit>\)<NL>

\(<limit>\) ::= 25E6 or full bandwidth in NR3 format

See Also

• ":CHANnel\(<n>\):BWLimit" on page 239
**:CHANnel\(n\)::BWLimit**

**Command Syntax**

:\texttt{CHANnel<n>::BWLimit <bwlimit>}

\(<\text{bwlimit}> ::= \{\{1 | ON\} \mid \{0 | OFF\}\}

\(<n> ::= 1 \text{ to \# analog channels) in NR1 format}

The :CHANnel\(n\)::BWLimit command controls an internal low-pass filter. When the filter is on, the bandwidth of the specified channel is limited to approximately 25 MHz.

**Query Syntax**

:\texttt{CHANnel<n>::BWLimit?}

The :CHANnel\(n\)::BWLimit? query returns the current setting of the low-pass filter.

**Return Format**

\(<\text{bwlimit}>\text{<NL>}

\(<\text{bwlimit}> ::= \{1 \mid 0\}

**See Also**

- "Introduction to :CHANnel\(n\) Commands" on page 237
:CHANnel<n>:COUPling

Command Syntax
:CHANnel<n>:COUPling <coupling>

<coupling> ::= {AC | DC}
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:COUPling command selects the input coupling for the specified channel. The coupling for each analog channel can be set to AC or DC.

Query Syntax
:CHANnel<n>:COUPling?

The :CHANnel<n>:COUPling? query returns the current coupling for the specified channel.

Return Format
<coupling value><NL>

<coupling value> ::= {AC | DC}

See Also

- ":DIGital<d>:DISPlay" on page 265
:CHANnel<n>:IMPedance

Command Syntax

:CHANnel<n>:IMPedance <impedance>

<impedance> ::= ONEMeg

<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:IMPedance command selects the input impedance setting for the specified analog channel. The only legal value for this command is ONEMeg (1 M\(\Omega\)).

Query Syntax

:CHANnel<n>:IMPedance?

The :CHANnel<n>:IMPedance? query returns the current input impedance setting for the specified channel.

Return Format

<impedance value><NL>

<impedance value> ::= ONEM

See Also

• "Introduction to :CHANnel<n> Commands" on page 237
:CHANnel<n>:INVert

N  (see page 886)

Command Syntax  :CHANnel<n>:INVert <invert value>

<invert value> ::= {{1 | ON} | {0 | OFF}}
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:INVert command selects whether or not to invert the input signal for the specified channel. The inversion may be 1 (ON/inverted) or 0 (OFF/not inverted).

Query Syntax  :CHANnel<n>:INVert?

The :CHANnel<n>:INVert? query returns the current state of the channel inversion.

Return Format  <invert value><NL>

<invert value> ::= {0 | 1}

See Also  •  "Introduction to :CHANnel<n> Commands" on page 237
**:CHANnel<n>:LABel**

Command Syntax

```
:CHANnel<n>:LABel <string>
```

- `<string>` ::= quoted ASCII string
- `<n>` ::= 1 to (# analog channels) in NR1 format

**NOTE**

Label strings are 10 characters or less, and may contain any commonly used ASCII characters. Labels with more than 10 characters are truncated to 10 characters. Lower case characters are converted to upper case.

The :CHANnel<n>:LABel command sets the analog channel label to the string that follows. Setting a label for a channel also adds the name to the label list in non-volatile memory (replacing the oldest label in the list).

Query Syntax

```
:CHANnel<n>:LABel?
```

The :CHANnel<n>:LABel? query returns the label associated with a particular analog channel.

Return Format

```
<string><NL>
```

- `<string>` ::= quoted ASCII string

**See Also**

- "Introduction to :CHANnel<n> Commands" on page 237
- "::DISPlay:LABel" on page 281
- "::DIGital<d>:LABel" on page 266
- "::DISPlay:LABList" on page 282
- "::BUS<n>:LABel" on page 222

**Example Code**

```
' LABEL - This command allows you to write a name (10 characters maximum) next to the channel number. It is not necessary, but can be useful for organizing the display.
myScope.WriteString ':CHANnel1:LABel "CAL 1"' ' Label chl "CAL 1".
myScope.WriteString ':CHANnel2:LABel "CAL2"' ' Label chl "CAL2".
```

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:CHANnel<n>:OFFSet

(see page 886)

Command Syntax
:CHANnel<n>:OFFSet <offset> [suffix]

<offset> ::= Vertical offset value in NR3 format
<suffix> ::= {V | mV}

<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:OFFSet command sets the value that is represented at center screen for the selected channel. The range of legal values varies with the value set by the :CHANnel<n>:RANGe and :CHANnel<n>:SCALE commands. If you set the offset to a value outside of the legal range, the offset value is automatically set to the nearest legal value. Legal values are affected by the probe attenuation setting.

Query Syntax
:CHANnel<n>:OFFSet?

The :CHANnel<n>:OFFSet? query returns the current offset value for the selected channel.

Return Format
<offset><NL>

<offset> ::= Vertical offset value in NR3 format

See Also
- "Introduction to :CHANnel<n> Commands" on page 237
- ":CHANnel<n>:RANGe" on page 252
- ":CHANnel<n>:SCALE" on page 253
- ":CHANnel<n>:PROBe" on page 246
:CHANnel<n>:PROBe

Command Syntax

:CHANnel<n>:PROBe <attenuation>

<attenuation> ::= probe attenuation ratio in NR3 format
<n> ::= 1 to (# analog channels) in NR1 format

The obsolete attenuation values X1, X10, X20, X100 are also supported.

The :CHANnel<n>:PROBe command specifies the probe attenuation factor for the selected channel. The probe attenuation factor may be 0.001 to 10000. This command does not change the actual input sensitivity of the oscilloscope. It changes the reference constants for scaling the display factors, for making automatic measurements, and for setting trigger levels.

Query Syntax

:CHANnel<n>:PROBe?

The :CHANnel<n>:PROBe? query returns the current probe attenuation factor for the selected channel.

Return Format

<attenuation><NL>

<attenuation> ::= probe attenuation ratio in NR3 format

See Also

- "Introduction to :CHANnel<n> Commands" on page 237
- ":CHANnel<n>:RANGe" on page 252
- ":CHANnel<n>:SCALe" on page 253
- ":CHANnel<n>:OFFSet" on page 245

Example Code

' CHANNEL_PROBE - Sets the probe attenuation factor for the selected channel. The probe attenuation factor may be set from 0.001 to 100
00.

myScope.WriteString ':CHANnel1:PROBe 10' ' Set Probe to 10:1.

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:CHANnel<n>:PROBe:HEAD[:TYPE]

Command Syntax

This command is valid only for the 113xA Series probes.

:CHANnel<n>:PROBe:HEAD[:TYPE] <head_param>

<head_param> ::= {SEND0 | SEND6 | SEND12 | SEND20 | DIFF0 | DIFF6 | DIFF12 | DIFF20 | NONE}

<n> ::= {1 | 2 | 3 | 4}

The :CHANnel<n>:PROBe:HEAD[:TYPE] command sets an analog channel probe head type and dB value. You can choose from:

- SEND0 — Single-ended, 0dB.
- SEND6 — Single-ended, 6dB.
- SEND12 — Single-ended, 12dB.
- SEND20 — Single-ended, 20dB.
- DIFF0 — Differential, 0dB.
- DIFF6 — Differential, 6dB.
- DIFF12 — Differential, 12dB.
- DIFF20 — Differential, 20dB.

Query Syntax

:CHANnel<n>:PROBe:HEAD[:TYPE]?

The :CHANnel<n>:PROBe:HEAD[:TYPE]? query returns the current probe head type setting for the selected channel.

Return Format

<head_param><NL>

<head_param> ::= {SEND0 | SEND6 | SEND12 | SEND20 | DIFF0 | DIFF6 | DIFF12 | DIFF20 | NONE}

See Also

- "Introduction to :CHANnel<n> Commands" on page 237

- ":CHANnel<n>:PROBe:STYPe" on page 250
:CHANnel<n>:PROBe:ID

**Query Syntax**  
:CHANnel<n>:PROBe:ID?

<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:PROBe:ID? query returns the type of probe attached to the specified oscilloscope channel.

**Return Format**  
<probe id><NL>

<probe id> ::= unquoted ASCII string up to 11 characters

Some of the possible returned values are:

- 1131A
- 1132A
- 1134A
- 1147A
- 1153A
- 1154A
- 1156A
- 1157A
- 1158A
- 1159A
- AutoProbe
- E2621A
- E2622A
- E2695A
- E2697A
- HP1152A
- HP1153A
- NONE
- Probe
- Unknown
- Unsupported

**See Also**  
- "Introduction to :CHANnel<n> Commands" on page 237
:CHANnel<n>:PROBe:SKEW

Command Syntax
:CHANnel<n>:PROBe:SKEW <skew value>

<skew value> ::= skew time in NR3 format
<skew value> ::= -100 ns to +100 ns
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:PROBe:SKEW command sets the channel-to-channel skew factor for the specified channel. Each analog channel can be adjusted + or -100 ns for a total of 200 ns difference between channels. You can use the oscilloscope's probe skew control to remove cable-delay errors between channels.

Query Syntax
:CHANnel<n>:PROBe:SKEW?

The :CHANnel<n>:PROBe:SKEW? query returns the current probe skew setting for the selected channel.

Return Format
<skew value><NL>

<skew value> ::= skew value in NR3 format

See Also
• "Introduction to :CHANnel<n> Commands" on page 237
:CHANnel<n>:PROBe:STYPe

Command Syntax

This command is valid only for the 113xA Series probes.

Command Syntax

:CHANnel<n>:PROBe:STYPe <signal type>

<signal type> ::= {DIFFerential | SINGle}

<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:PROBe:STYPe command sets the channel probe signal type (STYPe) to differential or single-ended when using the 113xA Series probes and determines how offset is applied.

When single-ended is selected, the :CHANnel<n>:OFFset command changes the offset value of the probe amplifier. When differential is selected, the :CHANnel<n>:OFFset command changes the offset value of the channel amplifier.

Query Syntax

:CHANnel<n>:PROBe:STYPe?

The :CHANnel<n>:PROBe:STYPe? query returns the current probe signal type setting for the selected channel.

Return Format

<signal type><NL>

<signal type> ::= {DIFF | SING}

See Also

- "Introduction to :CHANnel<n> Commands" on page 237
- ":CHANnel<n>:OFFSet" on page 245
:CHANnel<n>:PROTection

N (see page 886)

Command Syntax
:CHANnel<n>:PROTection[:CLEar]

<n> ::= 1 to (# analog channels) in NR1 format | 4

With the 2000 X-Series oscilloscopes, the analog channel input impedance is always 1 MΩ, so automatic overvoltage protection is not necessary (as it is for channels with 50Ω input impedance). There are no protection settings to clear, so the :CHANnel<n>:PROTection[:CLEar] command does nothing.

Query Syntax
:CHANnel<n>:PROTection?

The :CHANnel<n>:PROTection query always returns NORM (normal).

Return Format
NORM<NL>

See Also
• "Introduction to :CHANnel<n> Commands" on page 237
• ":CHANnel<n>:COUPling" on page 240
• ":CHANnel<n>:PROBe" on page 246
:CHANnel<n>:RANGe

Command Syntax

:CHANnel<n>:RANGe <range>[<suffix>]

<range> ::= vertical full-scale range value in NR3 format
<suffix> ::= {V | mV}
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:RANGe command defines the full-scale vertical axis of the selected channel. When using 1:1 probe attenuation, legal values for the range are from 8 mV to 40 V.

If the probe attenuation is changed, the range value is multiplied by the probe attenuation factor.

Query Syntax

:CHANnel<n>:RANGe?

The :CHANnel<n>:RANGe? query returns the current full-scale range setting for the specified channel.

Return Format

<range_argument><NL>

See Also

- "Introduction to :CHANnel<n> Commands" on page 237
- ":CHANnel<n>:SCALE" on page 253
- ":CHANnel<n>:PROBe" on page 246

Example Code

' CHANNEL_RANGE - Sets the full scale vertical range in volts. The range value is 8 times the volts per division.
myScope.WriteString ':CHANnel1:RANGe 8'  ' Set the vertical range to 8 volts.

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:CHANnel<n>:SCALE

Command Syntax

:CHANnel<n>:SCALE <scale>[<suffix>]

<scale> ::= vertical units per division in NR3 format
<suffix> ::= {V | mV}
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:SCALE command sets the vertical scale, or units per division, of the selected channel.

If the probe attenuation is changed, the scale value is multiplied by the probe's attenuation factor.

Query Syntax

:CHANnel<n>:SCALE?

The :CHANnel<n>:SCALE? query returns the current scale setting for the specified channel.

Return Format

<scale value><NL>

<scale value> ::= vertical units per division in NR3 format

See Also

- "Introduction to :CHANnel<n> Commands" on page 237
- ":CHANnel<n>:RANGE" on page 252
- ":CHANnel<n>:PROBe" on page 246
:CHANnel\(n\):UNITs

Command Syntax

\[
:CHANnel\(n\):UNITs \langle units\rangle
\]

\[
\langle units\rangle ::= \{VOLT \mid AMPere\}
\]

\[
\langle n\rangle ::= 1 \text{ to } \# \text{ analog channels in NR1 format}
\]

The :CHANnel\(n\):UNITs command sets the measurement units for the connected probe. Select VOLT for a voltage probe and select AMPere for a current probe. Measurement results, channel sensitivity, and trigger level will reflect the measurement units you select.

Query Syntax

\[
:CHANnel\(n\):UNITs?\]

The :CHANnel\(n\):UNITs? query returns the current units setting for the specified channel.

Return Format

\[
\langle units\rangle\langle NL\rangle
\]

\[
\langle units\rangle ::= \{VOLT \mid AMP\}
\]

See Also

- "Introduction to :CHANnel\(n\) Commands" on page 237

:CHANnel<n>:VERNier

Command Syntax  
:CHANnel<n>:VERNier <vernier value>

<vernier value> ::= {{1 | ON} | {0 | OFF}
<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:VERNier command specifies whether the channel's vernier (fine vertical adjustment) setting is ON (1) or OFF (0).

Query Syntax  
:CHANnel<n>:VERNier?

The :CHANnel<n>:VERNier? query returns the current state of the channel's vernier setting.

Return Format  
<vernier value><NL>

<vernier value> ::= {0 | 1}

See Also  
- "Introduction to :CHANnel<n> Commands" on page 237
:CHANnel<n> Commands
11 :DEMO Commands

When the education kit is licensed (Option EDU), you can output demonstration signals on the oscilloscope's Demo 1 and Demo 2 terminals. See "Introduction to :DEMO Commands" on page 257.

<table>

</tr>
</tbody>
</table>

Introduction to :DEMO Commands

The :DEMO subsystem provides commands to output demonstration signals on the oscilloscope's Demo 1 and Demo 2 terminals.

Reporting the Setup

Use :DEMO? to query setup information for the DEMO subsystem.

Return Format

The following is a sample response from the :DEMO? query. In this case, the query was issued following the *RST command.

:DEMO:FUNC SIN;OUTP 0
:DEMO:FUNCTION

(see page 886)

Command Syntax

:DEMO:FUNCTION <signal>

<signal> ::= {SINusoid | NOISy | PHASe | LFSine | AM | RFBurst | FMBurst | HARMonics | COUPling | RINGing | SINGle | CLK | RUNT | TRANsition | SHOLd | MSO | BURSt | GLITch | ETE | I2C | UART | SPI | CAN | LIN}

The :DEMO:FUNCTION command selects the type of demo signal:

<table>
<thead>
<tr>
<th>Demo Signal Function</th>
<th>Demo 1 Terminal</th>
<th>Demo 2 Terminal</th>
</tr>
</thead>
<tbody>
<tr>
<td>SINusoid</td>
<td>5 MHz sine wave @ ~ 6 Vpp, 0 V offset</td>
<td>Off</td>

</tr>
<tr>
<td>LIN</td>
<td>LIN, 19.2 kbs, ~2.8 Vpp, ~1.4 V offset</td>
<td>Off</td>
</tr>
</tbody>
</table>
11  :DEMO Commands

Query Syntax  
:DEMO:FUNCTION?

The :DEMO:FUNCTION? query returns the currently selected demo signal type.

Return Format  
<signal><NL>

<signal> ::= {SIN | NOIS | PHAS | LFS | AM | RFB | FMB | HARM | COUP
            | RING | SING1 | CLK | RUNT | TRAN | SHOL | MSO | BURS | GLIT | ETE
            | I2C | UART | SPI | CAN | LIN}

See Also  
•  “Introduction to :DEMO Commands” on page 257
:DEMO:FUNCTION:PHASE:PHASE

N (see page 886)

Command Syntax  
:DEMO:FUNCTION:PHASE:PHASE <angle>

<angle> ::= angle in degrees from 0 to 360 in NR3 format

For the phase shifted sine demo signals, the :DEMO:FUNCTION:PHASE:PHASE command specifies the phase shift in the second sine waveform.

Query Syntax  
:DEMO:FUNCTION:PHASE:PHASE?

The :DEMO:FUNCTION:PHASE:PHASE? query returns the currently set phase shift.

Return Format  
<angle><NL>

<angle> ::= angle in degrees from 0 to 360 in NR3 format

See Also  
- "Introduction to :DEMO Commands" on page 257
- ":DEMO:FUNCTION" on page 258
:DEMO:OUTPut

(see page 886)

Command Syntax
:DEMO:OUTPut <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :DEMO:OUTPut command specifies whether the demo signal output is ON (1) or OFF (0).

Query Syntax
:DEMO:OUTPut?

The :DEMO:OUTPut? query returns the current state of the demo signal output setting.

Return Format
<on_off><NL>

<on_off> ::= {1 | 0}

See Also
- "Introduction to :DEMO Commands" on page 257
- ":DEMO:FUNCTION" on page 258
12 :DIGital<d> Commands

Control all oscilloscope functions associated with individual digital channels. See "Introduction to :DIGital<d> Commands" on page 264.

Table 69 :DIGital<d> Commands Summary

<table>
<thead>
<tr>
<th>Command</th>

<td>ECL</td>
</tr>
</tbody>
</table>
Introduction to :DIGital<d> Commands

<d> ::= 0 to (# digital channels - 1) in NR1 format

The DIGital subsystem commands control the viewing, labeling, and positioning of digital channels. They also control threshold settings for groups of digital channels, or pods.

NOTE

These commands are only valid for the MSO models.

Reporting the Setup

Use :DIGital<d>? to query setup information for the DIGital subsystem.

Return Format

The following is a sample response from the :DIGital0? query. In this case, the query was issued following a *RST command.

:DIG0:DISP 0;THR +1.40E+00;LAB 'D0';POS +0
:DIGital<d>:DISPlay

Command Syntax

[:DIGital<\d>:DISPlay <display>]

<d> ::= 0 to (# digital channels - 1) in NR1 format
<display> ::= {{1 | ON} | {0 | OFF}}

The :DIGital<d>:DISPlay command turns digital display on or off for the specified channel.

NOTE

This command is only valid for the MSO models.

Query Syntax

[:DIGital<d>:DISPlay?]

The :DIGital<d>:DISPlay? query returns the current digital display setting for the specified channel.

Return Format

<display><NL>
<display> ::= {0 | 1}

See Also

- "Introduction to :DIGital<d> Commands" on page 264
- ":POD<n>:DISPlay" on page 463
- ":CHANnel<n>:DISPlay" on page 241
- ":VIEW" on page 200
- ":BLANk" on page 176
- ":STATus" on page 197
:DIGital<d>:LABel

(see page 886)

Command Syntax

:DIGital<d>:LABel <string>

<d> ::= 0 to (# digital channels - 1) in NR1 format
<string> ::= any series of 10 or less characters as quoted ASCII string.

The :DIGital<d>:LABel command sets the channel label to the string that follows. Setting a label for a channel also adds the name to the label list in non-volatile memory (replacing the oldest label in the list).

NOTE

This command is only valid for the MSO models.

NOTE

Label strings are 10 characters or less, and may contain any commonly used ASCII characters. Labels with more than 10 characters are truncated to 10 characters.

Query Syntax

:DIGital<d>:LABel?

The :DIGital<d>:LABel? query returns the name of the specified channel.

Return Format

<label string><NL>

<label string> ::= any series of 10 or less characters as a quoted ASCII string.

See Also

- "Introduction to :DIGital<d> Commands" on page 264
- "CHANnel<n>:LABel" on page 244
- "DISPlay:LABList" on page 282
- "BUS<n>:LABel" on page 222
:DIGital<d>:POSition

(see page 886)

Command Syntax  
:DIGital<d>:POSition <position>

<d> ::= 0 to (# digital channels - 1) in NR1 format

<position> ::= integer in NR1 format.

<table>
<thead>
<tr>
<th>Channel Size</th>
<th>Position</th>
<th>Top</th>
<th>Bottom</th>
</tr>
</thead>
<tbody>
<tr>
<td>Large</td>
<td>0-7</td>
<td>7</td>
<td>0</td>
</tr>
<tr>
<td>Medium</td>
<td>0-15</td>
<td>15</td>
<td>0</td>
</tr>
<tr>
<td>Small</td>
<td>0-31</td>
<td>31</td>
<td>0</td>
</tr>
</tbody>
</table>

The :DIGital<d>:POSition command sets the position of the specified channel. Note that bottom positions might not be valid depending on whether digital buses, serial decode waveforms, or the zoomed time base are displayed.

NOTE  
This command is only valid for the MSO models.

Query Syntax  
:DIGital<d>:POSition?

The :DIGital<d>:POSition? query returns the position of the specified channel. If the returned value is "+1", this indicates there is no space to display the digital waveform (for example, when all serial lanes, digital buses, and the zoomed time base are displayed).

Return Format  
<position><NL>

<position> ::= integer in NR1 format.

See Also  
- "Introduction to :DIGital<d> Commands" on page 264
:DIGital<d>:SIZE

(see page 886)

Command Syntax

:DIGital<d>:SIZE <value>

<d> ::= 0 to (# digital channels - 1) in NR1 format
<value> ::= {SMALL | MEDium | LARGe}

The :DIGital<d>:SIZE command specifies the size of digital channels on the display. Sizes are set for all digital channels. Therefore, if you set the size on digital channel 0 (for example), the same size is set on all other as well.

NOTE

This command is only valid for the MSO models.

Query Syntax

:DIGital<d>:SIZE?

The :DIGital<d>:SIZE? query returns the size setting for the specified digital channels.

Return Format

<size_value><NL>

<size_value> ::= {SMAL | MED | LARG}

See Also

• "Introduction to :DIGital<d> Commands" on page 264
• ":POD<n>:SIZE" on page 464
• ":DIGital<d>:POSition" on page 267
:DIGital<d>:THReshold

(see page 886)

Command Syntax

:DIGital<d>:THReshold <value>

<d> ::= 0 to (# digital channels - 1) in NR1 format
<value> ::= {CMOS | ECL | TTL | <user defined value>[<suffix>]}

<user defined value> ::= -8.00 to +8.00 in NR3 format
<suffix> ::= {V | mV | uV}

- TTL = 1.4V
- CMOS = 2.5V
- ECL = -1.3V

The :DIGital<d>:THReshold command sets the logic threshold value for all channels in the same pod as the specified channel. The threshold is used for triggering purposes and for displaying the digital data as high (above the threshold) or low (below the threshold).

NOTE

This command is only valid for the MSO models.

Query Syntax

:DIGital<d>:THReshold?

The :DIGital<d>:THReshold? query returns the threshold value for the specified channel.

Return Format

[value]<NL>

[value] ::= threshold value in NR3 format

See Also

- "Introduction to :DIGital<d> Commands" on page 264

</tbody>
</table>
Introduction to :DISPlay Commands

The :DISPlay subsystem is used to control the display storage and retrieval of waveform data, labels, and text. This subsystem allows the following actions:

- Clear the waveform area on the display.
- Turn vectors on or off.
- Set waveform persistence.
- Specify labels.
- Save and Recall display data.

Reporting the Setup

Use :DISPlay? to query the setup information for the :DISPlay subsystem.

Return Format

The following is a sample response from the :DISPlay? query. In this case, the query was issued following a *RST command.

:DISP:LAB 0;VECT 1;PERS MIN

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>

</thead>
<tbody>
<tr>
<td>:DISPlay:LABList &lt;binary block&gt; (see page 282)</td>
<td>:DISPlay:LABList? (see page 282)</td>
<td>&lt;binary block&gt; ::= an ordered list of up to 75 labels, each 10 characters maximum, separated by newline characters</td>
</tr>
</tbody>
</table>
| :DISPlay:PERSistence <value> (see page 283) | :DISPlay:PERSistence? (see page 283) | <value> ::= {MINimum | INfinite | <time>}
<time> ::= seconds in in NR3 format from 100E-3 to 60E0 |
| :DISPlay:VECTors {1 | ON} (see page 284) | :DISPlay:VECTors? (see page 284) | 1 |

Table 70 :DISPlay Commands Summary (continued)
DISPlay:ANNotation

(see page 886)

Command Syntax

:DISPlay:ANNotation <setting>

<setting> ::= {{1 | ON} | {0 | OFF}}

The :DISPlay:ANNotation command turns the annotation on and off. When on, the annotation appears in the upper left corner of the oscilloscope's display. The annotation is useful for documentation purposes, to add notes before capturing screens.

Query Syntax

:DISPlay:ANNotation?

The :DISPlay:ANNotation? query returns the annotation setting.

Return Format

<value><NL>

<value> ::= {0 | 1}

See Also

- ":DISPlay:ANNotation:TEXT" on page 276
- ":DISPlay:ANNotation:COlor" on page 275
- ":DISPlay:ANNotation:BACKground" on page 274
- "Introduction to :DISPlay Commands" on page 272
:DISPlay:ANNotation:BACKground

N  (see page 886)

Command Syntax  
:DISPlay:ANNotation:BACKground <mode>

<mode> ::= {OPAQue | INVerted | TRANsparent}

The :DISPlay:ANNotation:BACKground command specifies the background of the annotation:

- OPAQue — the annotation has a solid background.
- INVerted — the annotation's foreground and background colors are switched.
- TRANsparent — the annotation has a transparent background.

Query Syntax  
:DISPlay:ANNotation:BACKground?

The :DISPlay:ANNotation:BACKground? query returns the specified annotation background mode.

Return Format  
<mode><NL>

<mode> ::= {OPAQ | INV | TRAN}

See Also  
- ":DISPlay:ANNotation" on page 273
- ":DISPlay:ANNotation:TEXT" on page 276
- ":DISPlay:ANNotation:COLor" on page 275
- "Introduction to :DISPlay Commands" on page 272
**:DISPlay:ANNotation:COLor**

(see page 886)

**Command Syntax**

`:DISPlay:ANNotation:COLor <color>`

`<color> ::= {CH1 | CH2 | CH3 | CH4 | DIG | MATH | REF | MARKer | WHTe | RED}`

The :DISPlay:ANNotation:COLor command specifies the annotation color. You can choose white, red, or colors that match analog channels, digital channels, math waveforms, reference waveforms, or markers.

**Query Syntax**

`:DISPlay:ANNotation:COLor?`

The :DISPlay:ANNotation:COLor? query returns the specified annotation color.

**Return Format**

`<color><NL>`

`<color> ::= {CH1 | CH2 | CH3 | CH4 | DIG | MATH | REF | MARK | WHT | RED}`

**See Also**

- "`:DISPlay:ANNotation" on page 273"
- "`:DISPlay:ANNotation:TEXT" on page 276"
- "`:DISPlay:ANNotation:BACKground" on page 274"
- "Introduction to :DISPlay Commands" on page 272"
:DISPlay:ANNotation:TEXT

(see page 886)

Command Syntax

:DISPlay:ANNotation:TEXT <string>

<string> ::= quoted ASCII string (up to 254 characters)

The :DISPlay:ANNotation:TEXT command specifies the annotation string. The annotation string can contain as many characters as will fit in the Edit Annotation box on the oscilloscope's screen, up to 254 characters.

You can include a carriage return in the annotation string using the characters "\n". Note that this is not a new line character but the actual "\" (backslash) and "n" characters in the string. Carriage returns lessen the number of characters available for the annotation string.

Use :DISPlay:ANNotation:TEXT "" to remotely clear the annotation text. (Two sets of quote marks without a space between them creates a NULL string.)

Query Syntax

:DISPlay:ANNotation:TEXT?

The :DISPlay:ANNotation:TEXT? query returns the specified annotation text.

When carriage returns are present in the annotation text, they are returned as the actual carriage return character (ASCII 0x0D).

Return Format

<string><NL>
<string> ::= quoted ASCII string

See Also

- ":DISPlay:ANNotation" on page 273
- ":DISPlay:ANNotation:COlor" on page 275
- ":DISPlay:ANNotation:BACKground" on page 274
- "Introduction to :DISPlay Commands" on page 272
**:DISPlay:CLEar**

(see page 886)

**Command Syntax**  
```
:DISPlay:CLEar
```

The :DISPlay:CLEar command clears the display and resets all associated measurements. If the oscilloscope is stopped, all currently displayed data is erased. If the oscilloscope is running, all of the data for active channels and functions is erased; however, new data is displayed on the next acquisition.

**See Also**  
- "Introduction to :DISPlay Commands" on page 272
**:DISPlay:DATA**

(see page 886)

**Query Syntax**

`:DISPlay:DATA? [<format>][,][<palette>]

=format| BMP | BMP8bit | PNG

<palette> ::= {COlor | GRAYscale}

The :DISPlay:DATA? query reads screen image data. You can choose 24-bit BMP, 8-bit BMP8bit, or 24-bit PNG formats in color or grayscale.

Note that the returned image is also affected by the :HARDcopy:INKSaver command, which is ON by default and returns an inverted image. To get a non-inverted image, send the "*:HARDcopy:INKSaver OFF" command before the DATA? query.

If no format or palette option is specified, the screen image is returned in whatever image format is selected by the front panel's [Save/Recall] > Save > Format softkey. If the Format softkey does not select an image format (in other words, it selects a setup or data format), the BMP, COlor format is used.

Screen image data is returned in the IEEE-488.2 # binary block data format.

**Return Format**

<display data><NL>

<display data> ::= binary block data in IEEE-488.2 # format.

**See Also**

- "Introduction to :DISPlay Commands" on page 272
- "*:HARDcopy:INKSaver" on page 337
- "*:PRINt" on page 193
- "*:RCL (Recall)" on page 152
- "*:SAV (Save)" on page 156
- "*:VIEW" on page 200

**Example Code**

' IMAGE_TRANSFER - In this example, we will query for the image data ' with "*:DISPLAY:DATA?", read the data, and then save it to a file.
Dim byteData() As Byte
myScope.IO.Timeout = 15000
myScope.WriteString "*:DISPLAY:DATA? BMP, COLOR"
byteData = myScope.ReadIEEEBlock(BinaryType_UI1)
' Output display data to a file:
strPath = "C:\scope\data\screen.bmp"
' Remove file if it exists.
If Len(Dir(strPath)) Then
    Kill strPath
End If
Close #1 ' If #1 is open, close it.
Open strPath For Binary Access Write Lock Write As #1 ' Open file for output.
Put #1, , byteData ' Write data.
Close #1  ' Close file.
myScope.IO.Timeout = 5000

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
:DISPlay:INTensity:WAVeform

command syntax

:DISPlay:INTensity:WAVeform <value>

<value> ::= an integer from 0 to 100 in NR1 format.

The :DISPlay:INTensity:WAVeform command sets the waveform intensity.

This is the same as adjusting the front panel [Intensity] knob.

query syntax

:DISPlay:INTensity:WAVeform?

The :DISPlay:INTensity:WAVeform? query returns the waveform intensity setting.

return format

<value><NL>

<value> ::= an integer from 0 to 100 in NR1 format.

see also

• “Introduction to :DISPlay Commands” on page 272
:DISPlay:LABel

N (see page 886)

Command Syntax
:DISPlay:LABel <value>

<value> ::= {{1 | ON} | {0 | OFF}}

The :DISPlay:LABel command turns the analog and digital channel labels on and off.

Query Syntax
:DISPlay:LABel?

The :DISPlay:LABel? query returns the display mode of the analog and digital labels.

Return Format
<value><NL>

<value> ::= {0 | 1}

See Also
• "Introduction to :DISPlay Commands" on page 272
• "CHANnel<n>:LABel" on page 244

Example Code
' DISP_LABEL
'   - Turns label names ON or OFF on the analyzer display.
   myScope.WriteString ':DISPlay:LABel ON'   ' Turn on labels.

See complete example programs at: Chapter 38, "Programming Examples," starting on page 895
**:DISPlay:LABList**

(see page 886)

**Command Syntax**

`:DISPlay:LABList <binary block data>`

<binary block> ::= an ordered list of up to 75 labels, a maximum of 10 characters each, separated by newline characters.

The :DISPlay:LABList command adds labels to the label list. Labels are added in alphabetical order.

**NOTE**

Labels that begin with the same alphabetic base string followed by decimal digits are considered duplicate labels. Duplicate labels are not added to the label list. For example, if label "A0" is in the list and you try to add a new label called "A123456789", the new label is not added.

**Query Syntax**

`:DISPlay:LABList?`

The :DISPlay:LABList? query returns the label list.

**Return Format**

<binary block><NL>

<binary block> ::= an ordered list of up to 75 labels, a maximum of 10 characters each, separated by newline characters.

**See Also**

- "Introduction to :DISPlay Commands" on page 272
- "":DISPlay:LABel" on page 281
- "":CHANnel<n>:LABel" on page 244
- "":DIGital<d>:LABel" on page 266
- "":BUS<n>:LABel" on page 222
**:DISPlay:PERSistance**

(see page 886)

**Command Syntax**

```
:DISPlay:PERSistence <value>

<value> ::= {MINimum | INFinite | <time>}
<time> ::= seconds in in NR3 format from 100E-3 to 60E0
```

The :DISPlay:PERSistence command specifies the persistence setting:
- MINimum — indicates zero persistence.
- INFinite — indicates infinite persistence.
- <time> — for variable persistence, that is, you can specify how long acquisitions remain on the screen.

Use the :DISPlay:CLEar command to erase points stored by persistence.

**Query Syntax**

```
:DISPlay:PERSistence?
```

The :DISPlay:PERSistence? query returns the specified persistence value.

**Return Format**

```
<value><NL>
<value> ::= {MIN | INF | <time>}
```

**See Also**

- "Introduction to :DISPlay Commands" on page 272
- ":DISPlay:CLEar" on page 277
:DISPlay:VECTors

Command Syntax
:DISPlay:VECTors <vectors>

<vectors> ::= {1 | ON}

The only legal value for the :DISPlay:VECTors command is ON (or 1). This specifies that lines are drawn between acquired data points on the screen.

Query Syntax
:DISPlay:VECTors?

The :DISPlay:VECTors? query returns the vectors setting.

Return Format
<vectors><NL>

<vectors> ::= 1

<td>&lt;source&gt; ::= {CHANnel&lt;n&gt;}</td>
</tr>
</tbody>
</table>
:DVM:ARANge

N (see page 886)

Command Syntax  
:DVM:ARANge <setting>

<setting> ::= {{OFF | 0} | {ON | 1}}

If the selected digital voltmeter (DVM) source channel is not used in oscilloscope triggering, the :DVM:ARANge command turns the digital voltmeter's Auto Range capability on or off.

- When on, the DVM channel's vertical scale, vertical (ground level) position, and trigger (threshold voltage) level (used for the counter frequency measurement) are automatically adjusted.

  The Auto Range capability overrides attempted adjustments of the channel's vertical scale and position.

- When off, you can adjust the channel's vertical scale and position normally.

Query Syntax  
:DVM:ARANge?

The :DVM:ARANge? query returns a flag indicating whether the digital voltmeter's Auto Range capability is on or off.

Return Format  
<setting><NL>

<setting> ::= {0 | 1}

See Also  
- ":DVM:SOURce" on page 291
- ":DVM:ENABle" on page 288
- ":DVM:MODE" on page 290
:DVM:CURRent

(see page 886)

Query Syntax  :DVM:CURRent?

The :DVM:CURRent? query returns the displayed 3-digit DVM value based on the current mode.

NOTE  It can take up to a few seconds after DVM analysis is enabled before this query starts to produce good results, that is, results other than +9.9E+37. To wait for good values after DVM analysis is enabled, programs should loop until a value less than +9.9E+37 is returned.

Return Format  <dvm_value><NL>

<dvm_value> ::= floating-point number in NR3 format

See Also  • ":DVM:SOURce" on page 291
• ":DVM:ENABle" on page 288
• ":DVM:MODE" on page 290
• ":DVM:FREQuency" on page 289
:DVM:ENABle

Command Syntax
:DVM:ENABle <setting>

<setting> ::= {{OFF | 0} | {ON | 1}}

The :DVM:ENABle command turns the digital voltmeter (DVM) analysis feature on or off.

Query Syntax
:DVM:ENABle?

The :DVM:ENABle? query returns a flag indicating whether the digital voltmeter (DVM) analysis feature is on or off.

Return Format
<setting><NL>

<setting> ::= {0 | 1}

See Also
- ":DVM:SOURce" on page 291
- ":DVM:MODE" on page 290
- ":DVM:ARANge" on page 286
:DVM:FREQuency

Query Syntax

:DVM:FREQuency?

The :DVM:FREQuency? query returns the displayed 5-digit frequency value that is displayed below the main DVM value.

Return Format

<freq_value><NL>

<freq_value> ::= floating-point number in NR3 format

See Also

• ":DVM:SOURce" on page 291
• ":DVM:ENABle" on page 288
• ":DVM:MODE" on page 290
• ":DVM:CURREnt" on page 287
:DVM:MODE

(see page 886)

Command Syntax

:DVM:MODE <dvm_mode>

<dvm_mode> ::= {ACRMs | DC | DCRM | FREQuency}

The :DVM:MODE command sets the digital voltmeter (DVM) mode:

- ACRMs — displays the root-mean-square value of the acquired data, with the DC component removed.
- DC — displays the DC value of the acquired data.
- DCRM — displays the root-mean-square value of the acquired data.
- FREQuency — displays the frequency counter measurement.

Query Syntax

:DVM:MODE?

The :DVM:MODE? query returns the selected DVM mode.

Return Format

<dvm_mode><NL>

<dvm_mode> ::= {ACRM | DC | DCRM | FREQ}

See Also

- ":DVM:ENABle" on page 288
- ":DVM:SOURce" on page 291
- ":DVM:ARANge" on page 286
- ":DVM:CURRent" on page 287
- ":DVM:FREQuency" on page 289
:DVM:SOURce

Command Syntax

:DVM:SOURce <source>

<source> ::= {CHANnel<n>}</n> ::= 1-2 or 1-4 in NR1 format

The :DVM:SOURce command sets the select the analog channel on which digital voltmeter (DVM) measurements are made.

The selected channel does not have to be on (displaying a waveform) in order for DVM measurements to be made.

Query Syntax

:DVM:SOURce?

The :DVM:SOURce? query returns the selected DVM input source.

Return Format

<source><NL>

<source> ::= {CHAN<n>}</n> ::= 1-2 or 1-4 in NR1 format

Introduction to :EXTernal Trigger Commands

The EXTernal trigger subsystem commands control the input characteristics of the external trigger input. The probe factor, impedance, input range, input protection state, units, and bandwidth limit settings may all be queried. Depending on the instrument type, some settings may be changeable.

Reporting the Setup

Use :EXTernal? to query setup information for the EXTernal subsystem.

Return Format

The following is a sample response from the :EXTernal query. In this case, the query was issued following a *RST command.

:EXT:BWL 0;RANG +8E+00;UNIT VOLT;PROB +1.000E+00
:EXTernal:BWLimit

Command Syntax

:EXTernal:BWLimit <bwlimit>

<bwlimit> ::= {0 | OFF}

The :EXTernal:BWLimit command is provided for product compatibility. The only legal value is 0 or OFF. Use the :TRIGger:HFReject command to limit bandwidth on the external trigger input.

Query Syntax

:EXTernal:BWLimit?

The :EXTernal:BWLimit? query returns the current setting of the low-pass filter (always 0).

Return Format

<bwlimit><NL>

<bwlimit> ::= 0

See Also

• "Introduction to :EXTernal Trigger Commands" on page 293
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:HFReject" on page 651
:EXTernal:PROBe

Command Syntax  
:EXTernal:PROBe <attenuation>

<attenuation> ::= probe attenuation ratio in NR3 format

The :EXTernal:PROBe command specifies the probe attenuation factor for the external trigger. The probe attenuation factor may be 0.001 to 10000. This command does not change the actual input sensitivity of the oscilloscope. It changes the reference constants for scaling the display factors and for setting trigger levels.

If an AutoProbe probe is connected to the oscilloscope, the attenuation value cannot be changed from the sensed value. Attempting to set the oscilloscope to an attenuation value other than the sensed value produces an error.

Query Syntax  
:EXTernal:PROBe?

The :EXTernal:PROBe? query returns the current probe attenuation factor for the external trigger.

Return Format  
<attenuation><NL>

<attenuation> ::= probe attenuation ratio in NR3 format

See Also  
• "Introduction to :EXTernal Trigger Commands" on page 293
• ":EXTernal:RANGe" on page 296
• "Introduction to :TRIGger Commands" on page 647
• ":CHANnel<n>:PROBe" on page 246
:EXTernal:RANGe

Command Syntax

:EXTernal:RANGe <range>[<suffix>]

<range> ::= vertical full-scale range value in NR3 format
<suffix> ::= {V | mV}

The :EXTernal:RANGe command is provided for product compatibility. When using 1:1 probe attenuation, the range can only be set to 8.0 V.

If the probe attenuation is changed, the range value is multiplied by the probe attenuation factor.

Query Syntax

:EXTernal:RANGe?

The :EXTernal:RANGe? query returns the current full-scale range setting for the external trigger.

Return Format

<range_argument><NL>

<range_argument> ::= external trigger range value in NR3 format

See Also

• "Introduction to :EXTernal Trigger Commands" on page 293
• ":EXTernal:PROBe" on page 295
• "Introduction to :TRIGger Commands" on page 647
:EXTernal:UNITs

Command Syntax

:EXTernal:UNITs <units>

<units> ::= {VOLT | AMPere}

The :EXTernal:UNITs command sets the measurement units for the probe connected to the external trigger input. Select VOLT for a voltage probe and select AMPere for a current probe. Measurement results, channel sensitivity, and trigger level will reflect the measurement units you select.

Query Syntax

:EXTernal:UNITs?

The :CHANnel<n>:UNITs? query returns the current units setting for the external trigger.

Return Format

<units><NL>

<units> ::= {VOLT | AMP}

Introduction to :FUNCTION Commands

The :FUNCTION subsystem controls the math functions in the oscilloscope. As selected by the OPERation command, these math functions are available:

- **Operators:**
  - ADD
  - SUBTract
  - MULTiply

Operators perform their function on two analog channel sources.

- **Transforms:**
  - DIFF — Differentiate
  - INTegrate — The INTegrate:IOFFset command lets you specify a DC offset correction factor.
  - FFT — The SPAN, CENTer, VTYPE, and WINDow commands are used for FFT functions. When FFT is selected, the horizontal cursors change from time to frequency (Hz), and the vertical cursors change from volts to decibel (dB).
  - SQRT — Square root

Transforms operate on a single analog channel source or on a g(t) function that is the addition, subtraction, or multiplication of analog channel sources (specified by the GOFT commands).

These additional math functions are available:

- **Operators:**
  - DIVide

- **Transforms:**
  - LINear — Ax + B — The LINear commands set the gain (A) and offset (B) values for this function.
  - SQUare
  - ABSolute — Absolute Value
• LOG — Common Logarithm
• LN — Natural Logarithm
• EXP — Exponential ($e^x$)
• TEN — Base 10 exponential ($10^x$)

• Filters:
  • LOWPass — Low pass filter — The FREQuency:LOWPass command sets the -3 dB cutoff frequency.
  • HIGHpass — High pass filter — The FREQuency:HIGHPass command sets the -3 dB cutoff frequency.

Filters operate on a single analog channel source or on a g(t) function that is the addition, subtraction, or multiplication of analog channel sources (specified by the GOFT commands).

• Visualizations:
  • MAGNify — Operates on a single analog channel source or on a g(t) function that is the addition, subtraction, or multiplication of analog channel sources (specified by the GOFT commands).
  • TRENd — Measurement trend — Operates on a single analog channel source. The TRENd:MEASurement command selects the measurement whose trend you want to measure.
  • BTIMing — Chart logic bus timing — Operates on a bus made up of digital channels. The BUS:YINcrement, BUS:YORigin, and BUS:YUNIT commands specify function values.
  • BSTate — Chart logic bus state — Operates on a bus made up of digital channels. The BUS:YINcrement, BUS:YORigin, and BUS:YUNIT commands specify function values. The BUS:CLOCK and BUS:SLOPe commands specify the clock source and edge.

The SOURce1, DISPLAY, RANGE, and OFFSet (or REFerence) commands apply to any function.

**Reporting the Setup**

Use :FUNCtion? to query setup information for the FUNCTION subsystem.

**Return Format**

The following is a sample response from the :FUNCTION queries. In this case, the query was issued following a *RST command.

:FUNC:OPER ADD;DISP 0;SOUR1 CHAN1;SOUR2 CHAN2;RANG +8.00E+00;OFFS +0.0E+00;:FUNC:GOFT:OPER ADD;SOUR1 CHAN1;SOUR2 CHAN2
**:FUNCTION:BUS:CLOCK**

(see page 886)

**Command Syntax**

:FUNCTION:BUS:CLOCK <source>

<sourse> ::= {DIGital<d>}

<d> ::= 0 to (# digital channels - 1) in NR1 format

The :FUNCTION:BUS:CLOCK command selects the clock signal source for the Chart Logic Bus State operation.

**Query Syntax**

:FUNCTION:BUS:CLOCK?

The :FUNCTION:BUS:CLOCK query returns the source selected for the clock signal.

**Return Format**

<source><NL>

<sourse> ::= {DIGital<d>}

<d> ::= 0 to (# digital channels - 1) in NR1 format

**See Also**  
• ":FUNCTION:OPERation" on page 323
:FUNCTION:BUS:SLOPe

Command Syntax  
:FUNCTION:BUS:SLOPe <slope>

<slope> ::= {NEGative | POSitive | EITHER}

The :FUNCTION:BUS:SLOPe command specifies the clock signal edge for the Chart Logic Bus State operation.

Query Syntax  
:FUNCTION:BUS:SLOPe?

The :FUNCTION:BUS:SLOPe query returns the clock edge setting.

Return Format  
<slope><NL>

<slope> ::= {NEGative | POSitive | EITHER}

See Also  
• ":FUNCTION:OPERation" on page 323
:FUNCtion:BUS:YNCrement

(see page 886)

Command Syntax

:FUNCtion:BUS:YNCrement <value>

/value> ::= value per bus code, in NR3 format

The :FUNCtion:BUS:YNCrement command specifies the value associated with each increment in Chart Logic Bus data.

Query Syntax

:FUNCtion:BUS:YNCrement?

The :FUNCtion:BUS:YNCrement query returns the value associated with each increment in Chart Logic Bus data.

Return Format

/value><NL>

/value> ::= value per bus code, in NR3 format

See Also

• ":FUNCtion:OPERation" on page 323
:FUNCtion:BUS:YORigin

(see page 886)

Command Syntax
:FUNCtion:BUS:YORigin <value>

<value> ::= value at bus code = 0, in NR3 format

The :FUNCtion:BUS:YORigin command specifies the value associated with Chart Logic Bus data equal to zero.

Query Syntax
:FUNCtion:BUS:YORigin?

The :FUNCtion:BUS:YORigin query returns the value for associated with data equal to zero.

Return Format
<value><NL>

<value> ::= value at bus code = 0, in NR3 format

See Also
• "FUNCTION:OPERation" on page 323
:FUNCtion:BUS:YUNits

N (see page 886)

Command Syntax
:FUNCtion:BUS:YUNits <units>

<units> ::= {VOLT | AMPere | NONE}

The :FUNCtion:BUS:YUNits command specifies the vertical units for the Chart Logic Bus operations.

Query Syntax
:FUNCtion:BUS:YUNits?

The :FUNCtion:BUS:YUNits query returns the Chart Logic Bus vertical units.

Return Format
<units><NL>

<units> ::= {VOLT | AMP | NONE}

See Also
- "':FUNCtion:OPERation'" on page 323
:FUNCTION:DISPLAY

N (see page 886)

Command Syntax

:FUNCTION:DISPLAY <display>

<display> ::= {{1 | ON} | {0 | OFF}}

The :FUNCTION:DISPLAY command turns the display of the function on or off. When ON is selected, the function performs as specified using the other FUNCTION commands. When OFF is selected, function is neither calculated nor displayed.

Query Syntax

:FUNCTION:DISPLAY?

The :FUNCTION:DISPLAY? query returns whether the function display is on or off.

Return Format

<display><NL>

<display> ::= {1 | 0}

See Also

• "Introduction to :FUNCTION Commands" on page 302
• "::VIEW" on page 200
• "::BLANK" on page 176
• "::STATUS" on page 197
:FUNCTION[:FFT]:CENTer

N (see page 886)

Command Syntax :FUNCTION[:FFT]:CENTer <frequency>

<frequency> ::= the current center frequency in NR3 format. The range of legal values is from 0 Hz to 25 GHz.

The :FUNCTION[:FFT]:CENTer command sets the center frequency when FFT (Fast Fourier Transform) is selected.

Query Syntax :FUNCTION[:FFT]:CENTer?

The :FUNCTION[:FFT]:CENTer? query returns the current center frequency in Hertz.

Return Format <frequency><NL>

<frequency> ::= the current center frequency in NR3 format. The range of legal values is from 0 Hz to 25 GHz.

NOTE After a *RST (Reset) or :AUToscale command, the values returned by the :FUNCTION[:FFT]:CENTer? and :FUNCTION:SPAN? queries depend on the current :TIMebase:RANGe value. Once you change either the :FUNCTION[:FFT]:CENTer or :FUNCTION:SPAN value, they no longer track the :TIMebase:RANGe value.

See Also

• "Introduction to :FUNCTION Commands" on page 302
• " :FUNCTION[:FFT]:SPAN" on page 311
• " :TIMebase:RANGe" on page 639
• " :TIMebase:SCALE" on page 641
**:FUNCTION[:FFT]:SPAN**

### Command Syntax

**:FUNCTION[:FFT]:SPAN <span>**

<span> ::= the current frequency span in NR3 format. Legal values are 1 Hz to 100 GHz.

If you set the frequency span to a value outside of the legal range, the step size is automatically set to the nearest legal value.

The **:FUNCTION[:FFT]:SPAN** command sets the frequency span of the display (left graticule to right graticule) when FFT (Fast Fourier Transform) is selected.

### Query Syntax

**:FUNCTION[:FFT]:SPAN?**

The **:FUNCTION[:FFT]:SPAN?** query returns the current frequency span in Hertz.

### NOTE

After a *RST (Reset) or :AUToscale command, the values returned by the **:FUNCTION[:FFT]:CENTer?** and **:FUNCTION:SPAN?** queries depend on the current **:TIMebase:RANGe** value. Once you change either the **:FUNCTION[:FFT]:CENTer** or **:FUNCTION:SPAN** value, they no longer track the **:TIMebase:RANGe** value.

### Return Format

<span><NL>

<span> ::= the current frequency span in NR3 format. Legal values are 1 Hz to 100 GHz.

### See Also

- "**Introduction to :FUNCTION Commands**" on page 302
- "**:FUNCTION[:FFT]:CENTer**" on page 310
- "**:TIMebase:RANGe**" on page 639
- "**:TIMebase:SCALe**" on page 641
:FUNCTION[:FFT]:VTYPe

Command Syntax

:FUNCTION[:FFT]:VTYPe <units>

<units> ::= {DECibel | VRMS}

The :FUNCTION[:FFT]:VTYPe command specifies FFT vertical units as DECibel or VRMS.

Query Syntax

:FUNCTION[:FFT]:VTYPe?

The :FUNCTION[:FFT]:VTYPe? query returns the current FFT vertical units.

Return Format

<units><NL>

<units> ::= {DEC | VRMS}

See Also

• "Introduction to :FUNCTION Commands" on page 302
• " :FUNCTION:OPERation" on page 323
:FUNCTION[:FFT]:WINDow

Command Syntax

:FUNCTION[:FFT]:WINDow <window>

<window> ::= {RECTangular | HANNing | FLATtop | BHARris}

The :FUNCTION[:FFT]:WINDow command allows the selection of four different windowing transforms or operations for the FFT (Fast Fourier Transform) function.

The FFT operation assumes that the time record repeats. Unless an integral number of sampled waveform cycles exist in the record, a discontinuity is created between the end of one record and the beginning of the next. This discontinuity introduces additional frequency components about the peaks into the spectrum. This is referred to as leakage. To minimize leakage, windows that approach zero smoothly at the start and end of the record are employed as filters to the FFTs. Each window is useful for certain classes of input signals.

- RECTangular — useful for transient signals, and signals where there are an integral number of cycles in the time record.
- HANNing — useful for frequency resolution and general purpose use. It is good for resolving two frequencies that are close together, or for making frequency measurements. This is the default window.
- FLATtop — best for making accurate amplitude measurements of frequency peaks.
- BHARris (Blackman-Harris) — reduces time resolution compared to the rectangular window, but it improves the capacity to detect smaller impulses due to lower secondary lobes (provides minimal spectral leakage).

Query Syntax

:FUNCTION[:FFT]:WINDow?

The :FUNCTION[:FFT]:WINDow? query returns the value of the window selected for the FFT function.

Return Format

<window><NL>

<window> ::= {RECT | HANN | FLAT | BHAR}

See Also

- "Introduction to :FUNCTION Commands" on page 302
:FUNCTION:FREQuency:HIGHpass

Command Syntax

:FUNCTION:FREQuency:HIGHpass <3dB_freq>

<3dB_freq> ::= -3dB cutoff frequency value in NR3 format

The :FUNCTION:FREQuency:HIGHpass command sets the high-pass filter's -3 dB cutoff frequency.

The high-pass filter is a single-pole high pass filter.

Query Syntax

:FUNCTION:FREQuency:HIGHpass?

The :FUNCTION:FREQuency:HIGHpass query returns the high-pass filter's cutoff frequency.

Return Format

<3dB_freq><NL>

<3dB_freq> ::= -3dB cutoff frequency value in NR3 format

See Also

• "FUNCTION:OPERation" on page 323
:FUNCTION:FREQuency:LOWPass

(see page 886)

Command Syntax  
:FUNCTION:FREQuency:LOWPass <3dB_freq>

<3dB_freq> ::= -3dB cutoff frequency value in NR3 format

The :FUNCTION:FREQuency:LOWPass command sets the low-pass filter's -3 dB cutoff frequency.

The low-pass filter is a 4th order Bessel-Thompson filter.

Query Syntax  
:FUNCTION:FREQuency:LOWPass?

The :FUNCTION:FREQuency:LOWPass query returns the low-pass filter's cutoff frequency.

Return Format  
<3dB_freq><NL>

<3dB_freq> ::= -3dB cutoff frequency value in NR3 format

See Also  
• ":FUNCTION:OPERation" on page 323
:FUNCtion:GOFT:OPERation

N (see page 886)

Command Syntax

:FUNCtion:GOFT:OPERation <operation>

<operation> ::= {ADD | SUBTract | MULTiply}

The :FUNCtion:GOFT:OPERation command sets the math operation for the g(t) source that can be used as the input to transform or filter functions (if available):

• ADD — Source1 + source2.
• SUBTract — Source1 - source2.
• MULTiply — Source1 * source2.

The :FUNCtion:GOFT:SOURce1 and :FUNCtion:GOFT:SOURce2 commands are used to select source1 and source2.

Query Syntax

:FUNCtion:GOFT:OPERation?

The :FUNCtion:GOFT:OPERation? query returns the current g(t) source operation setting.

Return Format

<operation><NL>

<operation> ::= {ADD | SUBT | MULT}

See Also

• "Introduction to :FUNCtion Commands" on page 302
• ":FUNCtion:GOFT:SOURce1" on page 317
• ":FUNCtion:GOFT:SOURce2" on page 318
• ":FUNCtion:SOURce1" on page 328
:FUNCTION:GOFT:SOURce1

Command Syntax

:FUNCTION:GOFT:SOURce1 <value>

<value> ::= CHANnel<n>
<n> ::= {1 | 2 | 3 | 4} for 4ch models
<n> ::= {1 | 2} for 2ch models

The :FUNCTION:GOFT:SOURce1 command selects the first input channel for the g(t) source that can be used as the input to transform or filter functions (if available).

Query Syntax

:FUNCTION:GOFT:SOURce1?

The :FUNCTION:GOFT:SOURce1? query returns the current selection for the first input channel for the g(t) source.

Return Format

<value><NL>

<value> ::= CHAN<n>
<n> ::= {1 | 2 | 3 | 4} for the 4ch models
<n> ::= {1 | 2} for the 2ch models

See Also

• "Introduction to :FUNCTION Commands" on page 302
• ":FUNCTION:GOFT:SOURce2" on page 318
• ":FUNCTION:GOFT:OPERation" on page 316
:FUNCtion:GOFT:SOURce2

(see page 886)

Command Syntax:
:FUNCtion:GOFT:SOURce2 <value>

<value> ::= CHANnel<n>

<n> ::= {1 | 2 | 3 | 4} for 4ch models

<n> ::= {1 | 2} for 2ch models

The :FUNCtion:GOFT:SOURce2 command selects the second input channel for the
g(t) source that can be used as the input to transform or filter functions (if
available).

Query Syntax:
:FUNCtion:GOFT:SOURce2?

The :FUNCtion:GOFT:SOURce2? query returns the current selection for the second
input channel for the g(t) source.

Return Format:
<value><NL>

<value> ::= CHAN<n>

<n> ::= {1 | 2 | 3 | 4} for 4ch models

<n> ::= {1 | 2} for 2ch models

See Also
  • "Introduction to :FUNCtion Commands" on page 302
  • ":FUNCtion:GOFT:SOURce1" on page 317
  • ":FUNCtion:GOFT:OPERation" on page 316
:FUNCtion:INTegrate:IOFFset

N (see page 886)

Command Syntax
:FUNCtion:INTegrate:IOFFset <input_offset>

<input_offset> ::= DC offset correction in NR3 format.

The :FUNCtion:INTegrate:IOFFset command lets you enter a DC offset correction factor for the integrate math waveform input signal. This DC offset correction lets you level a "ramp"ed waveform.

Query Syntax
:FUNCtion:INTegrate:IOFFset?

The :FUNCtion:INTegrate:IOFFset? query returns the current input offset value.

Return Format
<input_offset><NL>

<input_offset> ::= DC offset correction in NR3 format.

See Also
• "Introduction to :FUNCtion Commands" on page 302
• "::FUNCtion:OPERation" on page 323
:FUNCtion:LINear:GAIN

(see page 886)

**Command Syntax**

:FUNCtion:LINear:GAIN <value>

<value> ::= 'A' in Ax + B, value in NR3 format

The :FUNCtion:LINear:GAIN command specifies the 'A' value in the Ax + B operation.

**Query Syntax**

:FUNCtion:LINear:GAIN?

The :FUNCtion:LINear:GAIN query returns the gain value.

**Return Format**

<value><NL>

<value> ::= 'A' in Ax + B, value in NR3 format

**See Also**

- ":FUNCtion:OPERation" on page 323
:FUNCTION:LINEar:OFFSET

(see page 886)

Command Syntax :FUNCTION:LINEar:OFFSET <value>

<value> ::= 'B' in Ax + B, value in NR3 format

The :FUNCTION:LINEar:OFFSET command specifies the 'B' value in the Ax + B operation.

Query Syntax :FUNCTION:LINEar:OFFSET?

The :FUNCTION:LINEar:OFFSET query returns the offset value.

Return Format <value><NL>

<value> ::= 'B' in Ax + B, value in NR3 format

See Also • "FUNCTION:OPERation" on page 323
:FUNCtion:OFFSet

(see page 886)

Command Syntax

:FUNCtion:OFFSet <offset>

+offset> ::= the value at center screen in NR3 format.

The :FUNCtion:OFFSet command sets the voltage or vertical value represented at center screen for the selected function. The range of legal values is generally +/-10 times the current scale of the selected function, but will vary by function. If you set the offset to a value outside of the legal range, the offset value is automatically set to the nearest legal value.

NOTE

The :FUNCtion:OFFset command is equivalent to the :FUNCtion:REFerence command.

Query Syntax

:FUNCtion:OFFSet?

The :FUNCtion:OFFSet? query outputs the current offset value for the selected function.

Return Format

<offset><NL>

+offset> ::= the value at center screen in NR3 format.

See Also

• "Introduction to :FUNCtion Commands" on page 302
• ":FUNCtion:RANGe" on page 325
• ":FUNCtion:REFerence" on page 326
• ":FUNCtion:SCALe" on page 327
:FUNCTION:OPERation

N (see page 886)

Command Syntax

:FUNCTION:OPERation <operation>

<operation> ::= {ADD | SUBTract | MULTiply | INTe grate | DIFF | FFT | SQRT | MAGNify | ABSolute | SQUare | LN | LOG | EXP | TEN | LOWPass | HIGHpass | DIVide | LINear | TRENd | BTIMing | BSTate}

The :FUNCTION:OPERation command sets the desired waveform math operation:
- ADD — Source1 + source2.
- SUBTract — Source1 - source2.
- MULTiply — Source1 * source2.
- INTe grate — Integrate the selected waveform source.
- DIFF — Differentiate the selected waveform source.
- FFT — Fast Fourier Transform on the selected waveform source.
- SQRT — Square root on the selected waveform source.

These additional operations are available:
- MAGNify — Magnify of the selected waveform source.
- ABSolute — Absolute value of the selected waveform source.
- SQUare — Square of the selected waveform source.
- LN — Natural logarithm on the selected waveform source.
- LOG — Common logarithm on the selected waveform source.
- EXP — Exponential (e^x) on the selected waveform source.
- TEN — Base 10 exponential (10^x) on the selected waveform source.
- LOWPass — Low-pass filter on the selected waveform source.
- HIGHpass — High-pass filter on the selected waveform source.
- DIVide — Divide operation on the selected waveform source.
- LINear — Ax + B operation on the selected waveform source.
- TRENd — Measurement Trend. The math waveform shows measurement values for each cycle of a selected waveform source.
- BTIMing — Chart Logic Bus Timing on the on the selected digital bus.
- BSTate — Chart Logic Bus State on the on the selected digital bus.

When the operation is ADD, SUBTract, MULTiply, or DIVide, the :FUNCTION:SOURce1 and :FUNCTION:SOURce2 commands are used to select source1 and source2. For all other operations, the :FUNCTION:SOURce1 command selects the waveform source.
Query Syntax :FUNCtion:OPERation?

The :FUNCtion:OPERation? query returns the current operation for the selected function.

Return Format <operation><NL>

<operation> ::= {ADD | SUBT | MULT | INT | DIPF | FFT | SQRT | MAGN | ABS | SQU | LN | LOG | EXP | TEN | LOWP | HIGH | DIV | LIN | TREN | BTIM | BST}

See Also

- ":FUNCTION:SOURce1" on page 328
- ":FUNCTION:SOURce2" on page 329
:FUNCTION:RANGe

(see page 886)

Command Syntax
:FUNCTION:RANGe <range>

<range> ::= the full-scale vertical axis value in NR3 format.

The :FUNCTION:RANGe command defines the full-scale vertical axis for the selected function.

Query Syntax
:FUNCTION:RANGe?

The :FUNCTION:RANGe? query returns the current full-scale range value for the selected function.

Return Format
<range><NL>

<range> ::= the full-scale vertical axis value in NR3 format.

See Also
• "Introduction to :FUNCTION Commands" on page 302
• ":FUNCTION:SCALE" on page 327
:FUNCtion:REFerence

Command Syntax

:FUNCtion:REFerence <level>

<level> ::= the current reference level in NR3 format.

The :FUNCtion:REFerence command sets the voltage or vertical value represented at center screen for the selected function. The range of legal values is generally +/-10 times the current scale of the selected function, but will vary by function. If you set the reference level to a value outside of the legal range, the level is automatically set to the nearest legal value.

NOTE

The FUNCtion:REFerence command is equivalent to the :FUNCtion:OFFSet command.

Query Syntax

:FUNCtion:REFerence?

The :FUNCtion:REFerence? query outputs the current reference level value for the selected function.

Return Format

<level><NL>

<level> ::= the current reference level in NR3 format.

See Also

• "Introduction to :FUNCtion Commands" on page 302
• ":FUNCtion:OFFSet" on page 322
• ":FUNCtion:RANGE" on page 325
• ":FUNCtion:SCALe" on page 327
:FUNCTION:SCALE

Command Syntax

:FUNCTION:SCALE <scale value>[<suffix>]

<scale value> ::= integer in NR1 format

<suffix> ::= {V | dB}

The :FUNCTION:SCALE command sets the vertical scale, or units per division, of the selected function. Legal values for the scale depend on the selected function.

Query Syntax

:FUNCTION:SCALE?

The :FUNCTION:SCALE? query returns the current scale value for the selected function.

Return Format

*scale value>*

<scale value> ::= integer in NR1 format

See Also

• "Introduction to :FUNCTION Commands" on page 302
• "FUNCTION:RANGE" on page 325
:FUNCTION:SOURce1

Command Syntax

:FUNCTION:SOURce1 <value>

<value> ::= {CHANnel<n> | GOFT | BUS<m>}

<n> ::= {1 | 2 | 3 | 4} for 4ch models
<n> ::= {1 | 2} for 2ch models
<m> ::= {1 | 2}

The :FUNCTION:SOURce1 command is used for any :FUNCTION:OPeration selection. This command selects the first source for the operator math functions or the single source for the transform functions, filter functions, or visualization functions.

The GOFT parameter is only available for the transform functions, filter functions, and the magnify visualization function (see "Introduction to :FUNCTION Commands" on page 302). The GOFT parameter lets you specify, as the function input source, the addition, subtraction, or multiplication of two channels. When GOFT is used, the g(t) source is specified by the :FUNCTION:GOFT:OPeration, :FUNCTION:GOFT:SOURce1, and :FUNCTION:GOFT:SOURce2 commands.

The BUS<m> parameter is available for the bus charting visualization functions.

**NOTE**

Another shorthand notation for SOURce1 in this command/query (besides SOUR1) is SOUR.

Query Syntax

:FUNCTION:SOURce1?

The :FUNCTION:SOURce1? query returns the current source1 for function operations.

Return Format

<value><NL>

<value> ::= {CHAN<n> | GOFT | BUS<m>}

<n> ::= {1 | 2 | 3 | 4} for 4ch models
<n> ::= {1 | 2} for 2ch models
<m> ::= {1 | 2}

See Also

- "Introduction to :FUNCTION Commands" on page 302
- ":FUNCTION:OPeration" on page 323
- ":FUNCTION:GOFT:OPeration" on page 316
- ":FUNCTION:GOFT:SOURce1" on page 317
- ":FUNCTION:GOFT:SOURce2" on page 318
:FUNCTION:SOURce2

(see page 886)

Command Syntax

:FUNCTION:SOURce2 <value>

<value> ::= {CHANnel<n> | NONE}

<n> ::= {1 | 2 | 3 | 4} for 4ch models

<n> ::= {1 | 2} for 2ch models

The :FUNCTION:SOURce2 command specifies the second source for math operator functions that have two sources. (The :FUNCTION:SOURce1 command specifies the first source.)

The :FUNCTION:SOURce2 setting is not used for the transform functions, filter functions, or visualization functions (except when the measurement trend visualization's measurement requires two sources).

Query Syntax

:FUNCTION:SOURce2?

The :FUNCTION:SOURce2? query returns the currently specified second source for math operations.

Return Format

<value><NL>

<value> ::= {CHAN<n> | NONE}

<n> ::= {1 | 2 | 3 | 4} for 4ch models

<n> ::= {1 | 2} for 2ch models

:FUNCTION:TRENd:MEASurement

(see page 886)

**Command Syntax**

`:FUNCTION:TRENd:MEASurement <type>`

```plaintext
<type> ::= {VAVerage | ACRMs | VRATio | PERiod | FREQuency | PWIDth |
            NWIDth | DUTYcycle | RISetime | FALLtime}
```

The :FUNCTION:TRENd:MEASurement command selects the measurement whose
trend is shown in the math waveform.

**Query Syntax**

`:FUNCTION:TRENd:MEASurement?`

The :FUNCTION:TRENd:MEASurement query returns the selected measurement.

**Return Format**

```plaintext
<type><NL>
```

```plaintext
<type> ::= {VAV | ACRM | VRAT | PER | FREQ | PWID | NWID | DUTY |
            RIS | FALL}
```

Introduction to :HARDcopy Commands

The HARDcopy subsystem provides commands to set and query the selection of hardcopy device and formatting options such as inclusion of instrument settings (FACTors) and generation of formfeed (FFEed).

:HARDC is an acceptable short form for :HARDcopy.

Reporting the Setup

Use :HARDcopy? to query setup information for the HARDcopy subsystem.

Return Format

The following is a sample response from the :HARDcopy? query. In this case, the query was issued following the *RST command.

:HARD:APR ";AREA SCR;FACT 0;FFE 0;INKS 1;PAL NONE;LAY PORT
Command Syntax

```
:HARDcopy:AREA <area>
```

<area> ::= SCReen

The :HARDcopy:AREA command controls what part of the display area is printed. Currently, the only legal choice is SCReen.

Query Syntax

```
:HARDcopy:AREA?
```

The :HARDcopy:AREA? query returns the selected display area.

Return Format

```
<area><NL>
<area> ::= SCR
```

- ":HARDcopy:PALette" on page 345
:HARDcopy:APRinter

(see page 886)

Command Syntax

:HARDcopy:APRinter <active_printer>

<active_printer> ::= {<index> | <name>}

@index> ::= integer index of printer in list

<name> ::= name of printer in list

The :HARDcopy:APRinter command sets the active printer.

Query Syntax

:HARDcopy:APRinter?

The :HARDcopy:APRinter? query returns the name of the active printer.

Return Format

[name]<NL>

[name] ::= name of printer in list

See Also

• "Introduction to :HARDcopy Commands" on page 332
• ":HARDcopy:PRINter:LIST" on page 346
• ":HARDcopy:STAr" on page 347
HARDcopy:FACTors

Command Syntax

```
:HARDcopy:FACTors <factors>
```

```
<factors> ::= {{OFF | 0} | {ON | 1}}
```

The HARDcopy:FACTors command controls whether the scale factors are output on the hardcopy dump.

Query Syntax

```
:HARDcopy:FACTors?
```

The :HARDcopy:FACTors? query returns a flag indicating whether oscilloscope instrument settings are output on the hardcopy.

Return Format

```
<factors><NL>
```

```
<factors> ::= {0 | 1}
```

**:HARDcopy:FFEed**

**Command Syntax**

`:HARDcopy:FFEed <ffeed>`

<ffeed> ::= {{OFF | 0} | {ON | 1}}

The HARDcopy:FFEed command controls whether a formfeed is output between the screen image and factors of a hardcopy dump.

**Query Syntax**

`:HARDcopy:FFEed?`

The :HARDcopy:FFEed? query returns a flag indicating whether a formfeed is output at the end of the hardcopy dump.

**Return Format**

<ffeed><NL>

<ffeed> ::= {0 | 1}

**See Also**

:HARDcopy:INKSaver

Command Syntax

:HARDcopy:INKSaver <value>

<value> ::= {{OFF | 0} | {ON | 1}}

The HARDcopy:INKSaver command controls whether the graticule colors are inverted or not.

Query Syntax

:HARDcopy:INKSaver?

The :HARDcopy:INKSaver? query returns a flag indicating whether graticule colors are inverted or not.

Return Format

<value><NL>

<value> ::= {0 | 1}

**:HARDcopy:LAYout**

(see page 886)

**Command Syntax**

:::

`:HARDcopy:LAYout <layout>`

<layout> ::= {LANDscape | PORTrait}

The :HARDcopy:LAYout command sets the hardcopy layout mode.

**Query Syntax**

:::

`:HARDcopy:LAYout?`

The :HARDcopy:LAYout? query returns the selected hardcopy layout mode.

**Return Format**

<layout><NL>

<layout> ::= {LAND | PORT}

**:HARDcopy:NETWork:ADDRess**

N (see page 886)

**Command Syntax**  
**:HARDcopy:NETWork:ADDRess <address>**

<address> ::= quoted ASCII string

The :HARDcopy:NETWork:ADDRess command sets the address for a network printer slot. The address is the server/computer name and the printer's share name in the \server\share format.

The network printer slot is selected by the :HARDcopy:NETWork:SLOT command.

To apply the entered address, use the :HARDcopy:NETWork:APPLY command.

**Query Syntax**  
**:HARDcopy:NETWork:ADDRess?**

The :HARDcopy:NETWork:ADDRess? query returns the specified address for the currently selected network printer slot.

**Return Format**  
<address><NL>

<address> ::= quoted ASCII string

**See Also**  
- "Introduction to :HARDcopy Commands" on page 332
- ":HARDcopy:NETWork:SLOT" on page 343
- ":HARDcopy:NETWork:APPLY" on page 340

- ":HARDcopy:NETWork:USERname" on page 344
- ":HARDcopy:NETWork:PASSword" on page 342
:HARDcopy:NETWork:APPLY

Command Syntax

```
:HARDcopy:NETWork:APPLY
```

The :HARDcopy:NETWork:APPLY command applies the network printer settings and makes the printer connection.

See Also
- "Introduction to :HARDcopy Commands" on page 332
- "::HARDcopy:NETWork:SLOT" on page 343
- ":HARDcopy:NETWork:ADDRes" on page 339

:HARDcopy:NETWork:DOMain

N  (see page 886)

Command Syntax  :HARDcopy:NETWork:DOMain <domain>

<domain> ::= quoted ASCII string

The :HARDcopy:NETWork:DOMain command sets the Windows network domain name.

The domain name setting is a common setting for both network printer slots.

Query Syntax  :HARDcopy:NETWork:DOMain?

The :HARDcopy:NETWork:DOMain? query returns the current Windows network domain name.

Return Format  <domain><NL>

<domain> ::= quoted ASCII string

See Also  • "Introduction to :HARDcopy Commands" on page 332
  • ":HARDcopy:NETWork:SLOT" on page 343
  • ":HARDcopy:NETWork:APPLY" on page 340

  • ":HARDcopy:NETWork:USERname" on page 344
  • ":HARDcopy:NETWork:PASSword" on page 342
:HARDcopy:NETWork:PASSword

N (see page 886)

Command Syntax :HARDcopy:NETWork:PASSword <password>

<pASSWORD> ::= quoted ASCII string

The :HARDcopy:NETWork:PASSword command sets the password for the specified Windows network domain and user name.

The password setting is a common setting for both network printer slots.

- ":HARDcopy:NETWork:ADDRess" on page 339
**:HARDcopy:NETWork:SLOT**

(see page 886)

**Command Syntax**

```plaintext
:HARDcopy:NETWork:SLOT <slot>
```

<slot> ::= {NET0 | NET1}

The :HARDcopy:NETWork:SLOT command selects the network printer slot used for the address and apply commands. There are two network printer slots to choose from.

**Query Syntax**

```plaintext
:HARDcopy:NETWork:SLOT?
```

The :HARDcopy:NETWork:SLOT? query returns the currently selected network printer slot.

**Return Format**

```plaintext
<slot><NL>
```

<slot> ::= {NET0 | NET1}

**See Also**

- "Introduction to :HARDcopy Commands" on page 332
- ":HARDcopy:NETWork:APPLY" on page 340

- ":HARDcopy:NETWork:DOMAIN" on page 341
- ":HARDcopy:NETWork:USERNAME" on page 344
- ":HARDcopy:NETWork:PASSWORD" on page 342
:HARDcopy:NETWork:USERname

Command Syntax

```
:HARDcopy:NETWork:USERname <username>

<username> ::= quoted ASCII string
```

The :HARDcopy:NETWork:USERname command sets the user name to use when connecting to the Windows network domain.

The user name setting is a common setting for both network printer slots.

Query Syntax

```
:HARDcopy:NETWork:USERname?
```

The :HARDcopy:NETWork:USERname? query returns the currently set user name.

Return Format

```
<username><NL>

<username> ::= quoted ASCII string
```

**:HARDcopy:PAIlette**

(see page 886)

**Command Syntax**

```
:HARDcopy:PAIlette <palette>
```

<palette> ::= {COLOR | GRAYscale | NONE}

The :HARDcopy:PAIlette command sets the hardcopy palette color.

The oscilloscope's print driver cannot print color images to color laser printers, so the COLOR option is not available when connected to laser printers.

**Query Syntax**

```
:HARDcopy:PAIlette?
```

The :HARDcopy:PAIlette? query returns the selected hardcopy palette color.

**Return Format**

```
<palette><NL>
```

<palette> ::= {COL | GRAY | NONE}

:HARDcopy:PRINter:LIST

**Query Syntax**

`:HARDcopy:PRINter:LIST?`

The :HARDcopy:PRINter:LIST? query returns a list of available printers. The list can be empty.

**Return Format**

```plaintext
<list><NL>
<list> ::= [<printer_spec>] ... [printer_spec>]
<printer_spec> ::= "<index>,<active>,<name>;"
<index> ::= integer index of printer
<active> ::= {Y | N}
<name> ::= name of printer (for example "DESKJET 950C")
```

Introduction to :LISTer Commands

The LISTer subsystem is used to turn on/off the serial decode Lister display and return data from the Lister display.
:LISTer:DATA

\[ (\text{see page 886}) \]

**Query Syntax**

`:LISTer:DATA?` 

The :LISTer:DATA? query returns the lister data.

**Return Format**

\(<\text{binary \_block}><\text{NL}>\)

\(<\text{binary \_block}> ::= \text{comma-separated data with newlines at the end of each row}\)

**See Also**

- "Introduction to :LISTer Commands" on page 349
- ":LISTer:DISPlay" on page 351
- "Definite-Length Block Response Data" on page 134
LISTer:DISPlay

N (see page 886)

**Command Syntax**

```
:LISTer:DISPlay <value>

<value> ::= {{OFF | 0} | {SBUS1 | ON | 1} | ALL}
```

The :LISTer:DISPlay command configures which of the serial buses to display in the Lister, or whether the Lister is off. "ON" or "1" is the same as "SBUS1".

When set to "ALL", the decode information for different buses is interleaved in time.

Serial bus decode must be on before it can be displayed in the Lister.

**Query Syntax**

```
:LISTer:DISPlay?
```

The :LISTer:DISPlay? query returns the Lister display setting.

**Return Format**

```
<value><NL>

<value> ::= {OFF | SBUS1 | ALL}
```

:LISTer:REFerence

(see page 886)

Command Syntax

:LISTer:REFerence <time_ref>

<time_ref> ::= {TRIGger | PREvious}

The :LISTer:REFerence command selects whether the time value for a Lister row is relative to the trigger or the previous Lister row.

Query Syntax

:LISTer:REFerence?

The :LISTer:REFerence? query returns the Lister time reference setting.

Return Format

<time_ref><NL>

<time_ref> ::= {TRIGger | PREvious}

### Introduction to MARKer Commands

The MARKer subsystem commands set and query the settings of X-axis markers (X1 and X2 cursors) and the Y-axis markers (Y1 and Y2 cursors). You can set and query the marker mode and source, the position of the X and Y cursors, and query delta X and delta Y cursor values.

### Reporting the Setup

Use :MARKer? to query setup information for the MARKer subsystem.

### Return Format

The following is a sample response from the :MARKer? query. In this case, the query was issued following a *RST and ".:MARKer:MODE MANual" command.

:MARK:X1Y1 CHAN1;X2Y2 CHAN1;MODE MAN
:MARKer:MODE

(see page 886)

**Command Syntax**

:MARKer:MODE <mode>

<mode> ::= {OFF | MEASurement | MANual | WAVeform}

The :MARKer:MODE command sets the cursors mode:

- **OFF** — removes the cursor information from the display.
- **MANual** — enables manual placement of the X and Y cursors.

If the front-panel cursors are off, or are set to the front-panel Hex or Binary mode, setting :MARKer:MODE MANual will put the cursors in the front-panel Normal mode.

- **MEASurement** — cursors track the most recent measurement.

Setting the mode to MEASurement sets the marker sources (:MARKer:X1Y1source and :MARKer:X2Y2source) to the measurement source (:MEASure:SOURce). Setting the measurement source remotely always sets the marker sources.

- **WAVEform** — the Y1 cursor tracks the voltage value at the X1 cursor of the waveform specified by the X1Y1source, and the Y2 cursor does the same for the X2 cursor and its X2Y2source.

**Query Syntax**

:MARKer:MODE?

The :MARKer:MODE? query returns the current cursors mode.

**Return Format**

<mode><NL>

<mode> ::= {OFF | MEAS | MAN | WAV}

**See Also**

- ":MARKer:X2Position" on page 358
- ":MARKer:Y1Position" on page 363
- ":MARKer:Y2Position" on page 365
:MARKer:X1Position

Command Syntax:

```
:MARKer:X1Position <position> [suffix]
```

- `<position>` ::= X1 cursor position in NR3 format
- `<suffix>` ::= {s | ms | us | ns | ps | Hz | kHz | MHz}

The :MARKer:X1Position command:
- Sets :MARKer:MODE to MANual if it is not currently set to WAVeform (see ":MARKer:MODE" on page 355).
- Sets the X1 cursor position to the specified value.

X cursor units are set by the :MARKer:XUNits command.

Query Syntax:

```
:MARKer:X1Position?
```

The :MARKer:X1Position? query returns the current X1 cursor position. This is functionally equivalent to the obsolete :MEASure:TSTArt command/query.

Return Format:

```
<position><NL>
```

- `<position>` ::= X1 cursor position in NR3 format

See Also:

- "Introduction to :MARKer Commands" on page 354
- ":MARKer:MODE" on page 355
- ":MARKer:X2Position" on page 358
- ":MARKer:X1Y1source" on page 357
- ":MARKer:X2Y2source" on page 359
- ":MARKer:XUNits" on page 361
- ":MEASure:TSTArt" on page 825
Command Syntax
:MARKer:X1Y1source <source>

<ssource> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= {1 | 2}

The :MARKer:X1Y1source command sets the source for the cursors. The channel you specify must be enabled for cursors to be displayed. If the channel or function is not on, an error message is issued.

If the marker mode is not currently WAVeform (see ":MARKer:MODE" on page 355):
• Sending a :MARKer:X1Y1source command will put the cursors in the MANual mode.
• Setting the source for one pair of markers (for example, X1Y1) sets the source for the other (for example, X2Y2).

If the marker mode is currently WAVeform, the X1Y1 source can be set separate from the X2Y2 source.

If :MARKer:MODE is set to OFF or MANual, setting :MEASure:SOURce to CHANnel<n>, FUNCtion, MATH, or WMEMory<r> will also set :MARKer:X1Y1source and :MARKer:X2Y2source to this value.

NOTE
MATH is an alias for FUNCtion. The query will return FUNC if the source is FUNCtion or MATH.

Query Syntax
:MARKer:X1Y1source?

The :MARKer:X1Y1source? query returns the current source for the cursors. If all channels are off or if :MARKer:MODE is set to OFF, the query returns NONE.

Return Format
<ssource><NL>

<ssource> ::= {CHAN<n> | FUNC | WMEM<r> | NONE}

See Also
• "Introduction to :MARKer Commands" on page 354
• ":MARKer:MODE" on page 355
• ":MARKer:X2Y2source" on page 359
• ":MEASure:SOURce" on page 408
:MARKer:X2Position

Command Syntax

:MARKer:X2Position <position> [suffix]

<position> ::= X2 cursor position in NR3 format
<suffix> ::= {s | ms | us | ns | ps | Hz | kHz | MHz}

The :MARKer:X2Position command:
- Sets :MARKer:MODE to MANual if it is not currently set to WAVeform (see ":MARKer:MODE" on page 355).
- Sets the X2 cursor position to the specified value.
X cursor units are set by the :MARKer:XUNits command.

NOTE: :MARKer:X2Position is an overlapped command (see "Sequential vs. Overlapped Commands" on page 894).

Query Syntax

:MARKer:X2Position?

The :MARKer:X2Position? query returns current X2 cursor position. This is functionally equivalent to the obsolete :MEASure:TSTOp command/query.

NOTE: If the front-panel cursors are off, the marker position values are not defined and an error is generated. Make sure to set :MARKer:MODE to MANual or WAVeform to put the cursors in the front-panel Normal mode.

Return Format

<position><NL>

<position> ::= X2 cursor position in NR3 format

See Also
- "Introduction to :MARKer Commands" on page 354
- ":MARKer:MODE" on page 355
- ":MARKer:X1Position" on page 356
- ":MARKer:X2Y2source" on page 359
- ":MARKer:XUNits" on page 361
- ":MEASure:TSTOp" on page 826
:MARKer:X2Y2source

**Command Syntax**

:MARKer:X2Y2source <source>

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= {1 | 2}

The :MARKer:X2Y2source command sets the source for the cursors. The channel you specify must be enabled for cursors to be displayed. If the channel or function is not on, an error message is issued.

If the marker mode is not currently WAVeform (see ":MARKer:MODE" on page 355):

- Sending a :MARKer:X2Y2source command will put the cursors in the MANual mode.
- Setting the source for one pair of markers (for example, X2Y2) sets the source for the other (for example, X1Y1).

If the marker mode is currently WAVeform, the X2Y2 source can be set separate from the X1Y1 source.

If :MARKer:MODE is set to OFF or MANual, setting :MEASure:SOURce to CHANnel<n>, FUNCtion, MATH, or WMEMory<r> will also set :MARKer:X1Y1source and :MARKer:X2Y2source to this value.

**NOTE**

MATH is an alias for FUNCtion. The query will return FUNC if the source is FUNCtion or MATH.

**Query Syntax**

:MARKer:X2Y2source?

The :MARKer:X2Y2source? query returns the current source for the cursors. If all channels are off or if :MARKer:MODE is set to OFF, the query returns NONE.

**Return Format**

<source><NL>

<source> ::= {CHAN<n> | FUNC | WMEM<r> | NONE}

**See Also**

- "Introduction to :MARKer Commands" on page 354
- ":MARKer:MODE" on page 355
- ":MARKer:X1Y1source" on page 357
- ":MEASure:SOURce" on page 408
:MARKer:XDELta

(see page 886)

Query Syntax 
:MARKer:XDELta?

The MARKer:XDELta? query returns the value difference between the current X1 and X2 cursor positions.

\[ X\text{delta} = (\text{Value at X2 cursor}) - (\text{Value at X1 cursor}) \]

X cursor units are set by the :MARKer:XUNits command.

NOTE
If the front-panel cursors are off, the marker position values are not defined. Make sure to set :MARKer:MODE to MANual or WAVEform to put the cursors in the front-panel Normal mode.

Return Format

\(<value><NL>\)

\(<value> ::= \text{difference value in NR3 format.}\)

See Also

• "Introduction to :MARKer Commands" on page 354
• ":MARKer:MODE" on page 355
• ":MARKer:X1Position" on page 356
• ":MARKer:X2Position" on page 358
• ":MARKer:X1Y1source" on page 357
• ":MARKer:X2Y2source" on page 359
• ":MARKer:XUNits" on page 361
:MARKer:XUNits

Command Syntax

:MARKer:XUNits <units>

<units> ::= {SEConds | HERTz | DEGRees | PERCent}

The :MARKer:XUNits command sets the X cursors units:

- SEConds — for making time measurements.
- HERTz — for making frequency measurements.
- DEGRees — for making phase measurements. Use the :MARKer:XUNits:USE command to set the current X1 location as 0 degrees and the current X2 location as 360 degrees.
- PERCent — for making ratio measurements. Use the :MARKer:XUNits:USE command to set the current X1 location as 0 percent and the current X2 location as 100 percent.

Query Syntax

:MARKer:XUNits?

The :MARKer:XUNits? query returns the current X cursors units.

Return Format

<units><NL>

<units> ::= {SEC | HERT | DEGR | PERC}

See Also

- "Introduction to :MARKer Commands" on page 354
- ":MARKer:XUNits:USE" on page 362
- ":MARKer:X1Y1source" on page 357
- ":MARKer:X2Y2source" on page 359
- ":MEASure:SOURce" on page 408
- ":MARKer:X1Position" on page 356
- ":MARKer:X2Position" on page 358
:MARKer:XUNits:USE

(see page 886)

Command Syntax

```
:MARKer:XUNits:USE
```

When DEGREes is selected for :MARKer:XUNits, the :MARKer:XUNits:USE command sets the current X1 location as 0 degrees and the current X2 location as 360 degrees.

When PERCent is selected for :MARKer:XUNits, the :MARKer:XUNits:USE command sets the current X1 location as 0 percent and the current X2 location as 100 percent.

Once the 0 and 360 degree or 0 and 100 percent locations are set, inputs to and outputs from the :MARKer:X1Position, :MARKer:X2Position, and :MARKer:XDELta commands/queries are relative to the set locations.

See Also
- "Introduction to :MARKer Commands" on page 354
- ":MARKer:XUNits" on page 361
- ":MARKer:X1Y1source" on page 357
- ":MARKer:X2Y2source" on page 359
- ":MEASure:SOURce" on page 408
- ":MARKer:X1Position" on page 356
- ":MARKer:X2Position" on page 358
- ":MARKer:XDELta" on page 360
:MARKer:Y1Position

(see page 886)

**Command Syntax**

`:MARKer:Y1Position <position> [suffix]`

- `<position> ::=: Y1 cursor position in NR3 format`
- `<suffix> ::= {mV | V | dB}`

If the :MARKer:MODE is not currently set to WAVEform (see ":MARKer:MODE" on page 355), the :MARKer:Y1Position command:
- Sets :MARKer:MODE to MANual.
- Sets the Y1 cursor position to the specified value.

Y cursor units are set by the :MARKer:YUNits command.

When the :MARKer:MODE is set to WAVEform, Y positions cannot be set.

**Query Syntax**

`:MARKer:Y1Position?`

The :MARKer:Y1Position? query returns current Y1 cursor position. This is functionally equivalent to the obsolete :MEASure:VSTArt command/query.

**NOTE**

When the waveform tracking markers mode is on (:MARKer:MODE WAVEform), use the :MEASure:VTIMe? query to get the vertical value at a horizontal X position. A :MARKer:Y1Position? query immediately following a :MARKer:X1Position command (with no time delay between the command and query) will likely not return the tracked value because :MARKer:X1Position is an overlapping command.

**NOTE**

If the front-panel cursors are off or are set to Binary or Hex Mode, the marker position values are not defined and an error is generated. Make sure to set :MARKer:MODE to MANual or WAVEform to put the cursors in the front-panel Normal mode.

**Return Format**

```
<position><NL>
```

- `<position> ::= Y1 cursor position in NR3 format`

**:MARKer:Y2Position**

(see page 886)

**Command Syntax**

`:MARKer:Y2Position <position> [suffix]`

- `<position>` ::= Y2 cursor position in NR3 format
- `<suffix>` ::= {mV | V | dB}

If the :MARKer:MODE is not currently set to WAVeform (see ":MARKer:MODE" on page 355), the :MARKer:Y1Position command:
- Sets the Y2 cursor position to the specified value.
- Y cursor units are set by the :MARKer:YUNits command.

When the :MARKer:MODE is set to WAVeform, Y positions cannot be set.

**Query Syntax**

`:MARKer:Y2Position?`

The :MARKer:Y2Position? query returns current Y2 cursor position. This is functionally equivalent to the obsolete :MEASure:VSTOp command/query.

---

**NOTE**

When the waveform tracking markers mode is on (:MARKer:MODE WAVeform), use the :MEASure:VTIMe? query to get the vertical value at a horizontal X position. A :MARKer:Y2Position? query immediately following a :MARKer:X2Position command (with no time delay between the command and query) will likely not return the tracked value because :MARKer:X2Position is an overlapping command.

**NOTE**

If the front-panel cursors are off or are set to Binary or Hex Mode, the marker position values are not defined and an error is generated. Make sure to set :MARKer:MODE to MANual or WAVeform to put the cursors in the front-panel Normal mode.

**Return Format**

`<position><NL>`

- `<position>` ::= Y2 cursor position in NR3 format

19  :MARKer Commands

- "MEASURE:VSTOp" on page 831
:MARKer:YDELta

(see page 886)

**Query Syntax** :MARKer:YDELta?

The :MARKer:YDELta? query returns the value difference between the current Y1 and Y2 cursor positions.

\[ \text{Ydelta} = (\text{Value at Y2 cursor}) - (\text{Value at Y1 cursor}) \]

**NOTE** If the front-panel cursors are off or are set to Binary or Hex Mode, the marker position values are not defined. Make sure to set :MARKer:MODE to MANual or WAVeform to put the cursors in the front-panel Normal mode.

Y cursor units are set by the :MARKer:YUNits command.

**Return Format**

```
<value><NL>
<value> ::= difference value in NR3 format
```

- ":MARKer:YUNits" on page 368
:MARKer:YUNits

Command Syntax
:MARKer:YUNits <units>

<units> ::= {BASE | PERCent}

The :MARKer:YUNits command sets the Y cursors units:
- BASE — for making measurements in the units associated with the cursors source.
- PERCent — for making ratio measurements. Use the :MARKer:YUNits:USE command to set the current Y1 location as 0 percent and the current Y2 location as 100 percent.

Query Syntax
:MARKer:YUNits?

The :MARKer:YUNits? query returns the current Y cursors units.

Return Format
<units><NL>

<units> ::= {BASE | PERC}

:MARKer:YUNits:USE

Command Syntax

:MARKer:YUNits:USE

When PERCent is selected for :MARKer:YUNits, the :MARKer:YUNits:USE command sets the current Y1 location as 0 percent and the current Y2 location as 100 percent.

Once the 0 and 100 percent locations are set, inputs to and outputs from the :MARKer:Y1Position, :MARKer:Y2Position, and :MARKer:YDELta commands/queries are relative to the set locations.

Introduction to :MEASure Commands

The commands in the MEASure subsystem are used to make parametric measurements on displayed waveforms.

Measurement Setup

To make a measurement, the portion of the waveform required for that measurement must be displayed on the oscilloscope screen.

<table>
<thead>
<tr>
<th>Measurement Type</th>
<th>Portion of waveform that must be displayed</th>
</tr>
</thead>
<tbody>
<tr>
<td>period, duty cycle, or frequency</td>
<td>at least one complete cycle</td>
</tr>
<tr>
<td>pulse width</td>
<td>the entire pulse</td>
</tr>
<tr>
<td>rise time</td>
<td>rising edge, top and bottom of pulse</td>
</tr>
<tr>
<td>fall time</td>
<td>falling edge, top and bottom of pulse</td>
</tr>
</tbody>
</table>

Measurement Error

If a measurement cannot be made (typically because the proper portion of the waveform is not displayed), the value +9.9E+37 is returned for that measurement.

Making Measurements
If more than one waveform, edge, or pulse is displayed, time measurements are made on the portion of the displayed waveform closest to the trigger reference (left, center, or right).

When making measurements in the zoomed (delayed) time base mode (:TIMebase:MODE WINDow), the oscilloscope will attempt to make the measurement inside the zoomed sweep window. If the measurement is an average and there are not three edges, the oscilloscope will revert to the mode of making the measurement at the start of the main sweep.

When the command form is used, the measurement result is displayed on the instrument. When the query form of these measurements is used, the measurement is made one time, and the measurement result is returned over the bus.

Measurements are made on the displayed waveforms specified by the :MEASure:SOURce command. The MATH source is an alias for the FUNCTION source.

Not all measurements are available on the digital channels or FFT (Fast Fourier Transform).

**Reporting the Setup**

Use the :MEASure? query to obtain setup information for the MEASure subsystem. (Currently, this is only :MEASure:SOURce.)

**Return Format**

The following is a sample response from the :MEASure? query. In this case, the query was issued following a *RST command.

:MEAS:SOUR CHAN1,CHAN2;STAT ON
:MEASure:ALL

Command Syntax: :MEASure:ALL

This command installs a Snapshot All measurement on the screen.

See Also: • "Introduction to :MEASure Commands" on page 381
:MEASure:BRATe

N (see page 886)

Command Syntax :MEASure:BRATe [<source>]

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# of analog channels) in NR1 format

<r> ::= 1 to (# ref waveforms) in NR1 format

The :MEASure:BRATe command installs a screen measurement and starts the bit rate measurement. If the optional source parameter is specified, the currently specified source is modified.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax :MEASure:BRATe? [<source>]

The :MEASure:BRATe? query measures all positive and negative pulse widths on the waveform, takes the minimum value found of either width type and inverts that minimum width to give a value in Hertz.

Return Format <value><NL>

<value> ::= the bit rate value in Hertz

See Also

• ":MEASure:SOURce" on page 408
• ":MEASure:FREQuency" on page 393
• ":MEASure:PERiod" on page 401
:MEASure:CLEar

(see page 886)

Command Syntax

:MEASure:CLEar

This command clears all selected measurements and markers from the screen.

See Also

- "Introduction to :MEASure Commands" on page 381
:MEASure:DEFine

(see page 886)

Command Syntax

:MEASure:DEFine <meas_spec>[,<source>]

<meas_spec> ::= {DELay | THResholds}

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= {1 | 2}

The :MEASure:DEFine command sets up the definition for measurements by specifying the delta time or threshold values. Changing these values may affect the results of other measure commands. The table below identifies which measurement results that can be affected by redefining the DELay specification or the THResholds values. For example, changing the THResholds definition from the default 10%, 50%, and 90% values may change the returned measurement result.

<table>

:MEASure:DEFine DELay Command Syntax

:MEASure:DEFine DELay,<delay spec>[,<source>]

<delay_spec> ::= <edge_spec1>,<edge_spec2>

<edge_spec1> ::= [<slope>]<occurrence>

<edge_spec2> ::= [<slope>]<occurrence>

<slope> ::= {+ | -}
This command defines the behavior of the :MEASure:DELay? query by specifying the start and stop edge to be used. <edge_spec1> specifies the slope and edge number on source1. <edge_spec2> specifies the slope and edge number on source2. The measurement is taken as:

\[ \text{delay} = t(<\text{edge} \_ \text{spec2}>) - t(<\text{edge} \_ \text{spec1}>) \]

**NOTE**

The :MEASure:DELay command and the front-panel delay measurement use an auto-edge selection method to determine the actual edge used for the measurement. The :MEASure:DEFine command has no effect on these delay measurements. The edges specified by the :MEASure:DEFine command only define the edges used by the :MEASure:DELay? query.

---

**Command Syntax**

:MEASure:DEFine THResholds,<threshold spec>[,<source>]

<threshold spec> ::= {STANdard}

| {<threshold mode>,<upper>,<middle>,<lower>} |

<threshold mode> ::= {PERCent | ABSolute}

for <threshold mode> = PERCent:

<upper>, <middle>, <lower> ::= A number specifying the upper, middle, and lower threshold percentage values between Vbase and Vtop in NR3 format.

for <threshold mode> = ABSolute:

<upper>, <middle>, <lower> ::= A number specifying the upper, middle, and lower threshold absolute values in NR3 format.

- STANdard threshold specification sets the lower, middle, and upper measurement thresholds to 10%, 50%, and 90% values between Vbase and Vtop.
- Threshold mode PERCent sets the measurement thresholds to any user-defined percentages between 5% and 95% of values between Vbase and Vtop.
- Threshold mode ABSolute sets the measurement thresholds to absolute values. ABSolute thresholds are dependent on channel scaling (:CHANnel<n>:RANGe or ":CHANnel<n>:SCAle" on page 253:CHANnel<n>:SCAle), probe attenuation (:CHANnel<n>:PROBe), and probe units (:CHANnel<n>:UNITs). Always set these values first before setting ABSolute thresholds.

**Query Syntax**

:MEASure:DEFine? <meas_spec>[,<source>]

<meas_spec> ::= {DELay | THResholds}

The :MEASure:DEFine? query returns the current edge specification for the delay measurements setup or the current specification for the thresholds setup.

**Return Format**

for <meas_spec> = DELay:
for `<meas_spec` = THResholds and `<threshold_mode` = PERCent:

```
THR,PERC,<upper>,<middle>,<lower><NL>
```

<upper>, <middle>, <lower> ::= A number specifying the upper, middle, and lower threshold percentage values between Vbase and Vtop in NR3 format.

for `<meas_spec` = THResholds and `<threshold_mode` = ABSolute:

```
THR,ABS,<upper>,<middle>,<lower><NL>
```

<upper>, <middle>, <lower> ::= A number specifying the upper, middle, and lower threshold voltages in NR3 format.

for `<threshold_spec` = STANdard:

```
THR,PERC,+90.0,+50.0,+10.0
```

:MEASure:DELay

(see page 886)

Command Syntax

:MEASure:DELay [<source1>],<source2>]

<source1>, <source2> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:DELay command places the instrument in the continuous measurement mode and starts a delay measurement.

The measurement is taken as:

\[
\text{delay} = t(\text{edge spec 2}) - t(\text{edge spec 1})
\]

where the <edge spec> definitions are set by the :MEASure:DEFine command.

NOTE

The delay command or front-panel measurement run the delay measurement in auto-edge select mode. In this mode, you can select the edge polarity, but the instrument will select the edges that will make the best possible delay measurement. The source1 edge chosen will be the edge that meets the polarity specified and is closest to the timebase reference point. The source2 edge selected will be that edge of the specified polarity that gives the first of the following criteria:

- The smallest positive delay value that is less than source1 period.
- The smallest negative delay that is less than source1 period.
- The smallest absolute value of delay.

The :MEASure:DELay? query will make the measurement using the edges specified by the :MEASure:DEFine command.

Query Syntax

:MEASure:DELay? [<source1>],<source2>]

The :MEASure:DELay? query measures and returns the delay between source1 and source2. The delay measurement is made from the user-defined slope and edge count of the signal connected to source1, to the defined slope and edge count of the signal connected to source2. Delay measurement slope and edge parameters are selected using the :MEASure:DEFine command.

Also in the :MEASure:DEFine command, you can set upper, middle, and lower threshold values. It is the middle threshold value that is used when performing the delay query. The standard upper, middle, and lower measurement thresholds are...
90%, 50%, and 10% values between Vbase and Vtop. If you want to move the delay measurement point nearer to Vtop or Vbase, you must change the threshold values with the :MEASure:DEFine THResholds command.

**Return Format**

\[
\text{<value><NL>}
\]

\[
\text{<value> ::= floating-point number delay time in seconds in NR3 format}
\]

**See Also**

- ">:MEASure:PHASe" on page 402
:MEASure:DUTYcycle

Command Syntax
:MEASure:DUTYcycle [source]

<source> ::= {<digital channels> | CHAnnel<n> | FUNCtion | MATH | WMEMory<r>}
<digital channels> ::= DIGital<d> for the MSO models
<n> ::= 1 to (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:DUTYcycle command installs a screen measurement and starts a
duty cycle measurement on the current :MEASure:SOURce. If the optional source
parameter is specified, the current source is modified.

NOTE
The signal must be displayed to make the measurement. This command is not available if the
source is FFT (Fast Fourier Transform).

Query Syntax
:MEASure:DUTYcycle? [source]

The :MEASure:DUTYcycle? query measures and outputs the duty cycle of the
signal specified by the :MEASure:SOURce command. The value returned for the
duty cycle is the ratio of the positive pulse width to the period. The positive pulse
width and the period of the specified signal are measured, then the duty cycle is
calculated with the following formula:

\[
\text{duty cycle} = \frac{+\text{pulse width}}{\text{period}} \times 100
\]

Return Format
<value><NL>
<value> ::= ratio of positive pulse width to period in NR3 format

See Also
• "Introduction to :MEASure Commands" on page 381
• ":MEASure:PERiod" on page 401
• ":MEASure:PWIDth" on page 405
• ":MEASure:SOURce" on page 408

Example Code
• "Example Code" on page 408
:MEASure:FALLtime

Command Syntax  
:MEASure:FALLtime [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:FALLtime command installs a screen measurement and starts a fall-time measurement. For highest measurement accuracy, set the sweep speed as fast as possible, while leaving the falling edge of the waveform on the display. If the optional source parameter is specified, the current source is modified.

Query Syntax  
:MEASure:FALLtime? [<source>]

The :MEASure:FALLtime? query measures and outputs the fall time of the displayed falling (negative-going) edge closest to the trigger reference. The fall time is determined by measuring the time at the upper threshold of the falling edge, then measuring the time at the lower threshold of the falling edge, and calculating the fall time with the following formula:

\[
\text{fall time} = \text{time at lower threshold} - \text{time at upper threshold}
\]

Return Format  
<value><NL>

<value> ::= time in seconds between the lower threshold and upper threshold in NR3 format

See Also  
- "Introduction to :MEASure Commands" on page 381
- "MEASure:RISeTime" on page 406
- "MEASure:SOURce" on page 408

NOTE  
This command is not available if the source is FFT (Fast Fourier Transform).
:MEASure:FREQuency

(see page 886)

Command Syntax
:MEASure:FREQuency [<source>]

<source> ::= {<digital channels> | CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<digital channels> ::= DIGital<d> for the MSO models
<n> ::= 1 to (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:FREQuency command installs a screen measurement and starts a frequency measurement. If the optional source parameter is specified, the current source is modified.

IF the edge on the screen closest to the trigger reference is rising:
THEN frequency = 1/(time at trailing rising edge - time at leading rising edge)
ELSE frequency = 1/(time at trailing falling edge - time at leading falling edge)

NOTE
This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax
:MEASure:FREQuency? [<source>]

The :MEASure:FREQuency? query measures and outputs the frequency of the cycle on the screen closest to the trigger reference.

Return Format
<source><NL>
<source> ::= frequency in Hertz in NR3 format

See Also
• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:PERiod" on page 401

Example Code
• "Example Code" on page 408
### :MEASure:NDUTy

**Command Syntax**

```
:MEASure:NDUTy [<source>]
```

- `<source>` ::= `{<digital channels> | CHANnel<n> | FUNCTION | MATH | WMEMory<r>}
- `<digital channels>` ::= DIGital<d> for the MSO models
- `<d>` ::= 0 to (# digital channels - 1) in NR1 format
- `<n>` ::= 1 to (# of analog channels) in NR1 format
- `<r>` ::= 1 to (# ref waveforms) in NR1 format

The :MEASure:NDUTy command installs a screen measurement and starts a negative duty cycle measurement on the current :MEASure:SOURce. If the optional source parameter is specified, the current source is modified.

**Query Syntax**

```
:MEASure:NDUTy? [<source>]
```

The :MEASure:NDUTy? query measures and outputs the negative duty cycle of the signal specified by the :MEASure:SOURce command. The value returned for the duty cycle is the ratio of the negative pulse width to the period. The negative pulse width and the period of the specified signal are measured, then the duty cycle is calculated with the following formula:

\[-\text{duty cycle} = \left(\frac{-\text{pulse width}}{\text{period}}\right)\times 100\]

**Return Format**

```
<value><NL>
```

- `<value>` ::= ratio of negative pulse width to period in NR3 format

**See Also**

- "Introduction to :MEASure Commands" on page 381
- "MEASure:PERiod" on page 401
- "MEASure:NWIDth" on page 397
- "MEASure:SOURce" on page 408
- "MEASure:DUTYcycle" on page 391

**NOTE**

The signal must be displayed to make the measurement. This command is not available if the source is FFT (Fast Fourier Transform).
:MEASure:NEDGes

N (see page 886)

Command Syntax
:MEASure:NEDGes [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}
<n> ::= 1 to (# analog channels) in NR1 format
<r> ::= 1-2 in NR1 format

The :MEASure:NEDGes command installs a falling edge count measurement on screen. If the optional source parameter is not specified, the current source is measured.

NOTE
This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax
:MEASure:NEDGes? [<source>]

The :MEASure:NEDGes? query measures and returns the on-screen falling edge count.

Return Format
<value><NL>
<value> ::= the falling edge count in NR3 format

See Also
• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
:MEASure:NPULses

Command Syntax

:MEASure:NPULses [<source>]

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:NPULses command installs a falling pulse count measurement on screen. If the optional source parameter is not specified, the current source is measured.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:NPULses? [<source>]

The :MEASure:NPULses? query measures and returns the on-screen falling pulse count.

Return Format

<value><NL>

<value> ::= the falling pulse count in NR3 format

See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:SOURce" on page 408
:MEASure:NWIDth

(see page 886)

Command Syntax

:MEASure:NWIDth [<source>]

<source> ::= {<digital channels> | CHANnel<n> | FUNCtion | MATH
| WMEMory<r>}

<digital channels> ::= DIGital<d> for the MSO models
<n> ::= 1 to (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:NWIDth command installs a screen measurement and starts a negative pulse width measurement. If the optional source parameter is not specified, the current source is modified.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:NWIDth? [<source>]

The :MEASure:NWIDth? query measures and outputs the width of the negative pulse on the screen closest to the trigger reference using the midpoint between the upper and lower thresholds.

FOR the negative pulse closest to the trigger point:

width = (time at trailing rising edge - time at leading falling edge)

Return Format

<value><NL>

<value> ::= negative pulse width in seconds in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:PWIDth" on page 405
• ":MEASure:PERiod" on page 401
:MEASURE:OVERshoot

Command Syntax

:MEASURE:OVERshoot [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASURE:OVERshoot command installs a screen measurement and starts an overshoot measurement. If the optional source parameter is specified, the current source is modified.

NOTE
This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASURE:OVERshoot? [<source>]

The :MEASURE:OVERshoot? query measures and returns the overshoot of the edge closest to the trigger reference, displayed on the screen. The method used to determine overshoot is to make three different vertical value measurements: Vtop, Vbase, and either Vmax or Vmin, depending on whether the edge is rising or falling.

For a rising edge:

overshoot = ((Vmax - Vtop) / (Vtop - Vbase)) x 100

For a falling edge:

overshoot = ((Vbase - Vmin) / (Vtop - Vbase)) x 100

Vtop and Vbase are taken from the normal histogram of all waveform vertical values. The extremum of Vmax or Vmin is taken from the waveform interval right after the chosen edge, halfway to the next edge. This more restricted definition is used instead of the normal one, because it is conceivable that a signal may have more preshoot than overshoot, and the normal extremum would then be dominated by the preshoot of the following edge.

Return Format

<overshoot><NL>

<overshoot>::= the percent of the overshoot of the selected waveform in NR3 format

See Also

• ":MEASure:VBASE" on page 416
• ":MEASure:VMIN" on page 418
:MEASure:PEDGes

N (see page 886)

Command Syntax
:MEASure:PEDGes [<source>]

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:PEDGes command installs a rising edge count measurement on screen. If the optional source parameter is not specified, the current source is measured.

NOTE
This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax
:MEASure:PEDGes? [<source>]

The :MEASure:NEDGes? query measures and returns the on-screen rising edge count.

Return Format
<value><NL>

<value> ::= the rising edge count in NR3 format

See Also
- "Introduction to :MEASure Commands" on page 381
- ":MEASure:SOURce" on page 408
:MEASure:PERiod

C (see page 886)

Command Syntax

:MEASure:PERiod [<source>]

<sources> ::= {<digital channels> | CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<digital channels> ::= DIGital<d> for the MSO models

<n> ::= 1 to (# of analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:PERiod command installs a screen measurement and starts the period measurement. If the optional source parameter is specified, the current source is modified.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:PERiod? [<source>]

The :MEASure:PERiod? query measures and outputs the period of the cycle closest to the trigger reference on the screen. The period is measured at the midpoint of the upper and lower thresholds.

IF the edge closest to the trigger reference on screen is rising:

THEN period = (time at trailing rising edge - time at leading rising edge)

ELSE period = (time at trailing falling edge - time at leading falling edge)

Return Format

<value><NL>

<value> ::= waveform period in seconds in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:NWIDth" on page 397
• ":MEASure:PWIDth" on page 405
• ":MEASure:FREQuency" on page 393

Example Code

• "Example Code" on page 408
:MEASure:PHASe

(see page 886)

**Command Syntax**

```
:MEASure:PHASe [<source1>][,<source2>]

<source1>, <source2> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}
<n> ::= 1 to (# analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
```

The :MEASure:PHASe command places the instrument in the continuous measurement mode and starts a phase measurement.

**Query Syntax**

```
:MEASure:PHASe? [<source1>][,<source2>]
```

The :MEASure:PHASe? query measures and returns the phase between the specified sources.

A phase measurement is a combination of the period and delay measurements. First, the period is measured on source1. Then the delay is measured between source1 and source2. The edges used for delay are the source1 rising edge used for the period measurement closest to the horizontal reference and the rising edge on source 2. See :MEASure:DELay for more detail on selecting the 2nd edge.

The phase is calculated as follows:

```
phase = (delay / period of input 1) \times 360
```

**Return Format**

```
<value><NL>
```

<value> ::= the phase angle value in degrees in NR3 format

**See Also**

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:DELay" on page 389
- ":MEASure:PERiod" on page 401
- ":MEASure:SOURce" on page 408
:MEASure:PPULses

(see page 886)

Command Syntax

:MEASure:PPULses [<source>]

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:PPULses command installs a rising pulse count measurement on
screen. If the optional source parameter is not specified, the current source is
measured.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:PPULses? [<source>]

The :MEASure:PPULses? query measures and returns the on-screen rising pulse
count.

Return Format

<value><NL>

<value> ::= the rising pulse count in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
:MEASure:PRESHoot

(see page 886)

Command Syntax

:MEASure:PRESHoot [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:PRESHoot command installs a screen measurement and starts a preshoot measurement. If the optional source parameter is specified, the current source is modified.

Query Syntax

:MEASure:PRESHoot? [<source>]

The :MEASure:PRESHoot? query measures and returns the preshoot of the edge closest to the trigger, displayed on the screen. The method used to determine preshoot is to make three different vertical value measurements: Vtop, Vbase, and either Vmin or Vmax, depending on whether the edge is rising or falling.

For a rising edge:

\[
\text{preshoot} = \left( \frac{(V_{\text{min}}-V_{\text{base}})}{(V_{\text{top}}-V_{\text{base}})} \right) \times 100
\]

For a falling edge:

\[
\text{preshoot} = \left( \frac{(V_{\text{max}}-V_{\text{top}})}{(V_{\text{top}}-V_{\text{base}})} \right) \times 100
\]

Vtop and Vbase are taken from the normal histogram of all waveform vertical values. The extremum of Vmax or Vmin is taken from the waveform interval right before the chosen edge, halfway back to the previous edge. This more restricted definition is used instead of the normal one, because it is likely that a signal may have more overshoot than preshoot, and the normal extremum would then be dominated by the overshoot of the preceding edge.

Return Format

<value><NL>

<value> ::= the percent of preshoot of the selected waveform in NR3 format

See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:SOURce" on page 408

- ":MEASure:VTOP" on page 422
- ":MEASure:VBASE" on page 416
:MEASure:PWIDth

Command Syntax
:MEASure:PWIDth [source]

<source> ::= {<digital channels> | CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<digital channels> ::= DIGital<d> for the MSO models
<n> ::= 1 to (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:PWIDth command installs a screen measurement and starts the positive pulse width measurement. If the optional source parameter is specified, the current source is modified.

NOTE
This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax
:MEASure:PWIDth? [source]

The :MEASure:PWIDth? query measures and outputs the width of the displayed positive pulse closest to the trigger reference. Pulse width is measured at the midpoint of the upper and lower thresholds.

IF the edge on the screen closest to the trigger is falling:
THEN width = (time at trailing falling edge - time at leading rising edge)
ELSE width = (time at leading falling edge - time at leading rising edge)

Return Format
=value<NL>

See Also
- "Introduction to :MEASure Commands" on page 381
- ":MEASure:SOURce" on page 408
- ":MEASure:NWIDth" on page 397
- ":MEASure:PERiod" on page 401
:MEASure:RISetime

(see page 886)

Command Syntax

:MEASure:RISetime [ <source> ]

<source> ::= { CHANnel<n> | FUNCTION | MATH | WMEMory<r> }

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:RISetime command installs a screen measurement and starts a rise-time measurement. If the optional source parameter is specified, the current source is modified.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:RISetime? [ <source> ]

The :MEASure:RISetime? query measures and outputs the rise time of the displayed rising (positive-going) edge closest to the trigger reference. For maximum measurement accuracy, set the sweep speed as fast as possible while leaving the leading edge of the waveform on the display. The rise time is determined by measuring the time at the lower threshold of the rising edge and the time at the upper threshold of the rising edge, then calculating the rise time with the following formula:

rise time = time at upper threshold - time at lower threshold

Return Format

<value><NL>

<value> ::= rise time in seconds in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:FALLtime" on page 392
:MEASURE:SHOW

Command Syntax
:MEASURE:SHOW <show>

<show> ::= {1 | ON}

The :MEASURE:SHOW command enables markers for tracking measurements on the display. This feature is always on.

Query Syntax
:MEASURE:SHOW?

The :MEASURE:SHOW? query returns the current state of the markers.

Return Format
<show><NL>

<show> ::= 1

See Also
• "Introduction to :MEASURE Commands" on page 381
:MEASURE:SOURce

(see page 886)

Command Syntax

:MEASURE:SOURce <source1>[,<source2>]

<source1>,<source2> ::= {<digital channels> | CHANnel<n> | FUNCTION
  | MATH | WMEMory<r>}

<digital channels> ::= DIGital<d> for the MSO models

<n> ::= 1 to (# of analog channels) in NR1 format

<r> ::= 1-2 in NR1 format
<
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASURE:SOURce command sets the default sources for measurements. The specified sources are used as the sources for the MEASURE subsystem commands if the sources are not explicitly set with the command.

If a source is specified for any measurement, the current source is changed to this new value.

If :MARKer:MODE is set to OFF or MANual, setting :MEASURE:SOURce to CHANnel<n>, FUNCTION, or MATH will also set :MARKer:X1Y1source to source1 and :MARKer:X2Y2source to source2.

Query Syntax

:MEASURE:SOURce?

The :MEASURE:SOURce? query returns the current source selections. Source2 applies only to :MEASURE:DELay and :MEASURE:PHASe measurements.

NOTE

MATH is an alias for FUNCTION. The query will return FUNC if the source is FUNCTION or MATH.

Return Format

<source1>,<source2><NL>

<source1>,<source2> ::= {<digital channels> | CHAN<n> | FUNC | WMEM<r>}

See Also:

• "Introduction to :MEASURE Commands" on page 381
• ":MARKer:MODE" on page 355
• ":MARKer:X1Y1source" on page 357
• ":MARKer:X2Y2source" on page 359
• ":MEASURE:DELay" on page 389
• ":MEASURE:PHASe" on page 402

Example Code

' MEASURE - The commands in the MEASURE subsystem are used to make
' measurements on displayed waveforms.
myScope.WriteString " :MEASURE:SOURce CHANnel1" ' Source to measure.
myScope.WriteString " :MEASURE:FREQuency?" ' Query for frequency.
varQueryResult = myScope.ReadNumber ' Read frequency.
MsgBox "Frequency:" + vbCrLf + FormatNumber(varQueryResult / 1000, 4) + " kHz"

myScope.WriteString " '.MEASure:DUTYcycle?" ' Query for duty cycle.
varQueryResult = myScope.ReadNumber ' Read duty cycle.
MsgBox "Duty cycle:" + vbCrLf + FormatNumber(varQueryResult, 3) + "%"

myScope.WriteString " '.MEASure:RISetime?" ' Query for risetime.
varQueryResult = myScope.ReadNumber ' Read risetime.
MsgBox "Risetime:" + vbCrLf + FormatNumber(varQueryResult * 1000000, 4) + " us"

myScope.WriteString " '.MEASure:VPPl?" ' Query for Pk to Pk voltage.
varQueryResult = myScope.ReadNumber ' Read VPP.
MsgBox "Peak to peak voltage:" + vbCrLf + FormatNumber(varQueryResult, 4) + " V"

myScope.WriteString " '.MEASure:VMAX?" ' Query for Vmax.
varQueryResult = myScope.ReadNumber ' Read Vmax.
MsgBox "Maximum voltage:" + vbCrLf + FormatNumber(varQueryResult, 4) + " V"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
**:MEASURE:TEDGE**

N (see page 886)

**Query Syntax**

```plaintext
:MEASURE:TEDGE? <slope><occurrence>[,<source>]
```

- `<slope>` ::= direction of the waveform. A rising slope is indicated by a space or plus sign (+). A falling edge is indicated by a minus sign (-).
- `<occurrence>` ::= the transition to be reported. If the occurrence number is one, the first crossing from the left screen edge is reported. If the number is two, the second crossing is reported, etc.
- `<source>` ::= {<digital channels> | CHAnel<n> | FUNCtion | MATH | WMEMory<r>}
- `<digital channels>` ::= DIGital<d> for the MSO models
- `<n>` ::= 1 to (# of analog channels) in NR1 format
- `<r>` ::= 1-2 in NR1 format
- `<d>` ::= 0 to (# digital channels - 1) in NR1 format

When the :MEASURE:TEDGE query is sent, the displayed signal is searched for the specified transition. The time interval between the trigger event and this occurrence is returned as the response to the query. The sign of the slope selects a rising (+) or falling (-) edge. If no sign is specified for the slope, it is assumed to be the rising edge.

The magnitude of occurrence defines the occurrence to be reported. For example, +3 returns the time for the third time the waveform crosses the midpoint threshold in the positive direction. Once this crossing is found, the oscilloscope reports the time at that crossing in seconds, with the trigger point (time zero) as the reference.

If the specified crossing cannot be found, the oscilloscope reports +9.9E+37. This value is returned if the waveform does not cross the specified vertical value, or if the waveform does not cross the specified vertical value for the specific number of times in the direction specified.

You can make delay and phase measurements using the MEASURE:TEDGE command:

\[
\text{Delay} = \text{time at the nth rising or falling edge of the channel} - \text{time at the same edge of another channel}
\]

\[
\text{Phase} = \left( \frac{\text{delay between channels}}{\text{period of channel}} \right) \times 360
\]

For an example of making a delay and phase measurement, see ":MEASURE:TEDGE Code" on page 411.

If the optional source parameter is specified, the current source is modified.
### Return Format

\[
\text{<value>} <\text{NL}>
\]

\[
\text{<value>} ::= \text{time in seconds of the specified transition in NR3 format}
\]

### :MEASure:TEDGe Code

' Make a delay measurement between channel 1 and 2.
Dim dblChan1Edge1 As Double
Dim dblChan2Edge1 As Double
Dim dblChan1Edge2 As Double
Dim dblDelay As Double
Dim dblPeriod As Double
Dim dblPhase As Double

' Query time at 1st rising edge on ch1.
myScope.WriteString "MEASURE:TEDGE? +1, CHAN1"

' Read time at edge 1 on ch 1.
dblChan1Edge1 = myScope.ReadNumber

' Query time at 1st rising edge on ch2.
myScope.WriteString "MEASURE:TEDGE? +1, CHAN2"

' Read time at edge 1 on ch 2.
dblChan2Edge1 = myScope.ReadNumber

' Calculate delay time between ch1 and ch2.
dblDelay = dblChan2Edge1 - dblChan1Edge1

' Write calculated delay time to screen.
MsgBox "Delay = " + vbCrLf + CStr(dblDelay)

' Make a phase difference measurement between channel 1 and 2.
' Query time at 1st rising edge on ch1.
myScope.WriteString "MEASURE:TEDGE? +2, CHAN1"

' Read time at edge 2 on ch 1.
dblChan1Edge2 = myScope.ReadNumber

' Calculate period of ch 1.
dblPeriod = dblChan1Edge2 - dblChan1Edge1

' Calculate phase difference between ch1 and ch2.
dblPhase = (dblDelay / dblPeriod) * 360
MsgBox "Phase = " + vbCrLf + CStr(dblPhase)

See complete example programs at: Chapter 38, "Programming Examples,” starting on page 895

### See Also
- "Introduction to :MEASure Commands" on page 381
- ":MEASure:TVALue" on page 412
- ":MEASure:VTIMe" on page 421
:MEASURE:TVALue

(see page 886)

Query Syntax  :MEASURE:TVALue? <value>, [<slope><occurrence>[,<source>]]

<value> ::= the vertical value that the waveform must cross. The value can be volts or a math function value such as dB, Vs, or V/s.

<slope> ::= direction of the waveform. A rising slope is indicated by a plus sign (+). A falling edge is indicated by a minus sign (-).

<occurrence> ::= the transition to be reported. If the occurrence number is one, the first crossing is reported. If the number is two, the second crossing is reported, etc.

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

When the :MEASURE:TVALue? query is sent, the displayed signal is searched for the specified value level and transition. The time interval between the trigger event and this defined occurrence is returned as the response to the query.

The specified value can be negative or positive. To specify a negative value, use a minus sign (-). The sign of the slope selects a rising (+) or falling (-) edge. If no sign is specified for the slope, it is assumed to be the rising edge.

The magnitude of the occurrence defines the occurrence to be reported. For example, +3 returns the time for the third time the waveform crosses the specified value level in the positive direction. Once this value crossing is found, the oscilloscope reports the time at that crossing in seconds, with the trigger point (time zero) as the reference.

If the specified crossing cannot be found, the oscilloscope reports +9.9E+37. This value is returned if the waveform does not cross the specified value, or if the waveform does not cross the specified value for the specified number of times in the direction specified.

If the optional source parameter is specified, the current source is modified.

NOTE This query is not available if the source is FFT (Fast Fourier Transform).

Return Format  <value><NL>

<value> ::= time in seconds of the specified value crossing in NR3 format
See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:TEDGe" on page 410
- ":MEASure:VTIMe" on page 421
:MEASure:VAMPlitude

C (see page 886)

Command Syntax

:MEASure:VAMPlitude [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:VAMPlitude command installs a screen measurement and starts a
vertical amplitude measurement. If the optional source parameter is specified, the
current source is modified.

Query Syntax

:MEASure:VAMPlitude? [<source>]

The :MEASure:VAMPlitude? query measures and returns the vertical amplitude of
the waveform. To determine the amplitude, the instrument measures Vtop and
Vbase, then calculates the amplitude as follows:

vertical amplitude = Vtop - Vbase

Return Format

<value><NL>

<value> ::= the amplitude of the selected waveform in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:VBASE" on page 416
• ":MEASure:VTOP" on page 422
• ":MEASure:VPP" on page 419
:MEASure:VAVerage

(see page 886)

Command Syntax

:MEASure:VAVerage [<interval>] [,] [<source>]

<interval> ::= {CYCLE | DISPlay}
<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}
<n> ::= 1-2 or 1-4 (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format

The :MEASure:VAVerage command installs a screen measurement and starts an average value measurement. If the optional source parameter is specified, the current source is modified.

The <interval> option lets you specify the measurement interval: either an integral number of cycles, or the full screen. If <interval> is not specified, DISPlay is implied.

Query Syntax

The :MEASure:VAVerage? query returns the average value of an integral number of periods of the signal. If at least three edges are not present, the oscilloscope averages all data points.

Return Format

<value><NL>

<value> ::= calculated average value in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• "MEASure:SOURce" on page 408
:MEASure:VBASe

Command Syntax

:MEASure:VBASe [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:VBASe command installs a screen measurement and starts a waveform base value measurement. If the optional source parameter is specified, the current source is modified.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

:MEASure:VBASe? [<source>]

The :MEASure:VBASe? query returns the vertical value at the base of the waveform. The base value of a pulse is normally not the same as the minimum value.

Return Format

<base_voltage><NL>

<base_voltage> ::= value at the base of the selected waveform in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:VTOP" on page 422
• ":MEASure:VAMPlitude" on page 414
• ":MEASure:VMIN" on page 418
:MEASure:VMAX

(see page 886)

Command Syntax

:MEASure:VMAX [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1-2 or 1-4 (# of analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:VMAX command installs a screen measurement and starts a maximum vertical value measurement. If the optional source parameter is specified, the current source is modified.

Query Syntax

:MEASure:VMAX? [<source>]

The :MEASure:VMAX? query measures and outputs the maximum vertical value present on the selected waveform.

Return Format

/value/<NL>

/value> ::= maximum vertical value of the selected waveform in NR3 format

See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:SOURce" on page 408
- ":MEASure:VMIN" on page 418
- ":MEASure:VPP" on page 419
- ":MEASure:VTOP" on page 422
:MEASure:VMIN

Command Syntax

:MEASure:VMIN [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:VMIN command installs a screen measurement and starts a minimum vertical value measurement. If the optional source parameter is specified, the current source is modified.

Query Syntax

:MEASure:VMIN? [<source>]

The :MEASure:VMIN? query measures and outputs the minimum vertical value present on the selected waveform.

Return Format

<value><NL>

<value> ::= minimum vertical value of the selected waveform in NR3 format

See Also

- "Introduction to :MEASure Commands" on page 381
- "MEASure:SOURce" on page 408
- "MEASure:VBASe" on page 416
- "MEASure:VMAX" on page 417
- "MEASure:VPP" on page 419
:MEASure:VPP

(see page 886)

Command Syntax

:MEASure:VPP [source]

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASure:VPP command installs a screen measurement and starts a vertical peak-to-peak measurement. If the optional source parameter is specified, the current source is modified.

Query Syntax

:MEASure:VPP? [source]

The :MEASure:VPP? query measures the maximum and minimum vertical value for the selected source, then calculates the vertical peak-to-peak value and returns that value. The peak-to-peak value (Vpp) is calculated with the following formula:

Vpp = Vmax - Vmin

Vmax and Vmin are the vertical maximum and minimum values present on the selected source.

Return Format

<value><NL>

<value> ::= vertical peak to peak value in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
• ":MEASure:VMAX" on page 417
• ":MEASure:VMIN" on page 418
• ":MEASure:VAMPlitude" on page 414
:MEASure:VRMS

(see page 886)

Command Syntax

<interval> ::= {CYCLE | DISPlay}
<type> ::= {AC | DC}
<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}
<n> ::= 1-2 or 1-4 (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format

The :MEASure:VRMS command installs a screen measurement and starts an RMS value measurement. If the optional source parameter is specified, the current source is modified.

The <interval> option lets you specify the measurement interval: either an integral number of cycles, or the full screen. If <interval> is not specified, DISPlay is implied.

The <type> option lets you choose between a DC RMS measurement and an AC RMS measurement. If <type> is not specified, DC is implied.

NOTE

This command is not available if the source is FFT (Fast Fourier Transform).

Query Syntax

The :MEASure:VRMS? query measures and outputs the dc RMS value of the selected waveform. The dc RMS value is measured on an integral number of periods of the displayed signal. If at least three edges are not present, the oscilloscope computes the RMS value on all displayed data points.

Return Format

<value><NL>

<value> ::= calculated dc RMS value in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:SOURce" on page 408
:MEASure:VTIMe

N  (see page 886)

Query Syntax  
:MEASure:VTIMe? <vtime_argument>[,<source>]

<vtime_argument> ::= time from trigger in seconds
<source> ::= {<digital channels> | CHANnel<n> | FUNCtion | MATH | WMEMory<r>}
<digital channels> ::= DIGital<d> for the MSO models
<n> ::= 1 to (# of analog channels) in NR1 format
<r> ::= 1-2 in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :MEASure:VTIMe? query returns the value at a specified time on the source specified with :MEASure:SOURce. The specified time must be on the screen and is referenced to the trigger event. If the optional source parameter is specified, the current source is modified.

NOTE  
This query is not available if the source is FFT (Fast Fourier Transform).

Return Format  
<value><NL>

<value> ::= value at the specified time in NR3 format

See Also  
- "Introduction to :MEASure Commands" on page 381
- "MEASure:SOURce" on page 408
- "MEASure:TEDGe" on page 410
- "MEASure:TVALue" on page 412
:MEASure:VTOP

Command Syntax

:MEASure:VTOP [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH}

<n> ::= 1-2 or 1-4 (# of analog channels) in NR1 format

The :MEASure:VTOP command installs a screen measurement and starts a waveform top value measurement.

Query Syntax

:MEASure:VTOP? [<source>]

The :MEASure:VTOP? query returns the vertical value at the top of the waveform. The top value of the pulse is normally not the same as the maximum value.

Return Format

<value><NL>

<value> ::= vertical value at the top of the waveform in NR3 format

NOTE

This query is not available if the source is FFT (Fast Fourier Transform).

* ":MEASure:VAMPlitude" on page 414
* ":MEASure:VBASe" on page 416
:MEASURE:WINDow

(see page 886)

Command Syntax

:MEASURE:WINDow <type>

$type ::= \{MAIN | ZOOM | AUTO\}

When the zoomed time base is displayed, the :MEASURE:WINDow command lets you specify the measurement window:

- MAIN — the measurement window is the upper, Main window.
- ZOOM — the measurement window is the lower, Zoom window.
- AUTO — the measurement is attempted in the lower, Zoom window; if it cannot be made there, the upper, Main window is used.

Query Syntax

:MEASURE:WINDow?

The :MEASURE:WINDow? query returns the current measurement window setting.

Return Format

<type><NL>

$type ::= \{MAIN | ZOOM | AUTO\}

See Also

- "Introduction to :MEASURE Commands" on page 381
- ":MEASURE:SOURce" on page 408
**:MEASURE:XMAX**

(see page 886)

**Command Syntax**

```
:MEASURE:XMAX [<source>]
```

**Query Syntax**

```
:MEASURE:XMAX? [<source>]
```

The :MEASURE:XMAX command installs a screen measurement and starts an X-at-Max-Y measurement on the selected window. If the optional source parameter is specified, the current source is modified.

**NOTE**

:MEASURE:XMAX is an alias for :MEASURE:TMAX.

**Query Syntax**

```
:MEASURE:XMAX? [<source>]
```

The :MEASURE:XMAX? query measures and returns the horizontal axis value at which the maximum vertical value occurs. If the optional source is specified, the current source is modified.

**Return Format**

```
<value><NL>
```

**See Also**

- "Introduction to :MEASURE Commands" on page 381
- ":MEASURE:XMIN" on page 425
- ":MEASURE:TMAX" on page 823
MEASURE:XMIN

Command Syntax

:MEASURE:XMIN [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r>}

<n> ::= 1-2 or 1-4 (# of analog channels) in NR1 format

<r> ::= 1-2 in NR1 format

The :MEASURE:XMIN command installs a screen measurement and starts an X-at-Min-Y measurement on the selected window. If the optional source parameter is specified, the current source is modified.

NOTE:MEASURE:XMIN is an alias for :MEASURE:TMIN.

Query Syntax

:MEASURE:XMIN? [<source>]

The :MEASURE:XMIN? query measures and returns the horizontal axis value at which the minimum vertical value occurs. If the optional source is specified, the current source is modified.

Return Format

<value><NL>

<value> ::= horizontal value of the minimum in NR3 format

Introduction to :MTESt Commands

Mask testing automatically compares the current displayed waveform with the boundaries of a set of polygons that you define. Any waveform or sample that falls within the boundaries of one or more polygons is recorded as a failure.

Reporting the Setup

Use :MTESt? to query setup information for the MTESt subsystem.

Return Format

The following is a sample response from the :MTESt? query. In this case, the query was issued following a *RST command.

```
:MTES:SOUR CHAN1;ENAB 0;LOCK 1;:MTES:AMAS:SOUR CHAN1;UNIT DIV;XDEL +2.50000000E-001;YDEL +2.50000000E-001;:MTES:SCAL:X1 +200.000E-06;XDEL +400.000E-06;Y1 -3.00000E+00;Y2 +3.00000E+00;BIND 0;:MTES:RMOD FOR;RMOD:TIME +1E+00;WAV 1000;SIGM +6.0E+00;:MTES:RMOD:FACT:STOP 0;PRIN 0;SAVE 0
```

Example Code

Exit Sub

VisaComError:
    MsgBox "VISA COM Error:" + vbCrLf + Err.Description

End Sub
 Command Syntax  
:MTESt:ALL <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTESt:ALL command specifies the channel(s) that are included in the mask test:

- **ON** — All displayed analog channels are included in the mask test.
- **OFF** — Just the selected source channel is included in the test.

Query Syntax  
:MTESt:ENABle?

The :MTESt:ENABle? query returns the current setting.

Return Format  
<on_off><NL>

<on_off> ::= {1 | 0}

See Also  
- "Introduction to :MTESt Commands" on page 429
:MTESt:AMASk:CREate

Command Syntax

The :MTESt:AMASk:CREate command automatically constructs a mask around the current selected channel, using the tolerance parameters defined by the :MTESt:AMASk:XDELta, :MTESt:AMASk:YDELta, and :MTESt:AMASk:UNITs commands. The mask only encompasses the portion of the waveform visible on the display, so you must ensure that the waveform is acquired and displayed consistently to obtain repeatable results.

The :MTESt:SOURce command selects the channel and should be set before using this command.

- "::MTESt:AMASk:UNITs" on page 435
- "::MTESt:AMASk:SOURce" on page 434
- "::MTESt:SOURce" on page 459

Example Code

- "Example Code" on page 429
:MTES:AMASk:SOURce

N (see page 886)

Command Syntax

:MTES:AMASk:SOURce <source>

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :MTES:AMASk:SOURce command selects the source for the interpretation of the :MTES:AMASk:XDELta and :MTES:AMASk:YDELta parameters when :MTES:AMASk:UNITs is set to CURRENT.

When UNITs are CURRENT, the XDELta and YDELta parameters are defined in terms of the channel units, as set by the :CHANnel<n>:UNITs command, of the selected source.

Suppose that UNITs are CURRENT and that you set SOURce to CHANNEL1, which is using units of volts. Then you can define AMASk:XDELta in terms of volts and AMASk:YDELta in terms of seconds.

This command is the same as the :MTES:SOURce command.

Query Syntax

:MTES:AMASk:SOURce?

The :MTES:AMASk:SOURce? query returns the currently set source.

Return Format

<source> ::= CHAN<n>

<n> ::= 1 to (# analog channels) in NR1 format

Example Code

• "Example Code" on page 429
:MESt:AMASk:UNITs

(see page 886)

Command Syntax

:MESt:AMASk:UNITs <units>

<units> ::= {CURRent | DIVisions}

The :MESt:AMASk:UNITs command alters the way the mask test subsystem interprets the tolerance parameters for automasking as defined by :MESt:AMASk:XDELta and :MESt:AMASk:YDELta commands.

- CURRent — the mask test subsystem uses the units as set by the :CHANnel<n>:UNITs command, usually time for ΔX and voltage for ΔY.
- DIVisions — the mask test subsystem uses the graticule as the measurement system, so tolerance settings are specified as parts of a screen division. The mask test subsystem maintains separate XDELta and YDELta settings for CURRent and DIVisions. Thus, XDELta and YDELta are not converted to new values when the UNITs setting is changed.

Query Syntax

:MESt:AMASk:UNITs?

The :MESt:AMASk:UNITs query returns the current measurement units setting for the mask test automask feature.

Return Format

<units><NL>

<units> ::= {CURR | DIV}

Example Code

- "Example Code" on page 429
:MTESt:AMASk:XDELta

N (see page 886)

Command Syntax :MTESt:AMASk:XDELta <value>

<value> ::= X delta value in NR3 format

The :MTESt:AMASk:XDELta command sets the tolerance in the X direction around the waveform for the automasking feature. The absolute value of the tolerance will be added and subtracted to horizontal values of the waveform to determine the boundaries of the mask.

The horizontal tolerance value is interpreted based on the setting specified by the :MTESt:AMASk:UNITs command; thus, if you specify 250-E3, the setting for :MTESt:AMASk:UNITs is CURRent, and the current setting specifies time in the horizontal direction, the tolerance will be ±250 ms. If the setting for :MTESt:AMASk:UNITs is DIVisions, the same X delta value will set the tolerance to ±250 millidivisions, or 1/4 of a division.

Query Syntax :MTESt:AMASk:XDELta?

The :MTESt:AMASk:XDELta? query returns the current setting of the ΔX tolerance for automasking. If your computer program will interpret this value, it should also request the current measurement system using the :MTESt:AMASk:UNITs query.

Return Format <value><NL>

<value> ::= X delta value in NR3 format

See Also • "Introduction to :MTESt Commands" on page 429
• ":MTESt:AMASk:UNITs" on page 435
• ":MTESt:AMASk:YDELta" on page 437

Example Code • "Example Code" on page 429
:MTESt:AMASk:YDELta

N  (see page 886)

Command Syntax  :MTESt:AMASk:YDELta <value>

<value> ::= Y delta value in NR3 format

The :MTESt:AMASk:YDELta command sets the vertical tolerance around the waveform for the automasking feature. The absolute value of the tolerance will be added and subtracted to vertical values of the waveform to determine the boundaries of the mask.

The vertical tolerance value is interpreted based on the setting specified by the :MTESt:AMASk:UNITs command; thus, if you specify 250-E3, the setting for :MTESt:AMASk:UNITs is CURRent, and the current setting specifies voltage in the vertical direction, the tolerance will be ±250 mV. If the setting for :MTESt:AMASk:UNITs is DIVisions, the same Y delta value will set the tolerance to ±250 millidivisions, or 1/4 of a division.

Query Syntax  :MTESt:AMASk:YDELta?

The :MTESt:AMASk:YDELta? query returns the current setting of the ΔY tolerance for automasking. If your computer program will interpret this value, it should also request the current measurement system using the :MTESt:AMASk:UNITs query.

Return Format  <value><NL>

<value> ::= Y delta value in NR3 format

See Also  • "Introduction to :MTESt Commands" on page 429

Example Code  • "Example Code" on page 429
:MTES:COUNT:FWAVEforms

N (see page 886)

Query Syntax
:MTES:COUNT:FWAVEforms? [CHANnel<n>]

<n> ::= 1 to (# analog channels) in NR1 format

The :MTES:COUNT:FWAVEforms? query returns the total number of failed waveforms in the current mask test run. This count is for all regions and all waveforms collected on the channel specified by the optional parameter or collected on the currently specified source channel (:MTES:SOURce) if there is no parameter.

Return Format
<failed><NL>

<failed> ::= number of failed waveforms in NR1 format.

Example Code
• "Example Code" on page 429
:MTEST:COUNt:RESet

Command Syntax

: MTEST : COUNt : RESet

The :MTEST:COUNt:RESet command resets the mask statistics.

See Also

- "Introduction to :MTEST Commands" on page 429

(see page 886)
:MTESt:COUNT:TIME

(see page 886)

Query Syntax :MTESt:COUNT:TIME?

The :MTESt:COUNT:TIME? query returns the elapsed time in the current mask test run.

Return Format <time><NL>

<time> ::= elapsed seconds in NR3 format.

See Also
- "Introduction to :MTESt Commands" on page 429
- ":MTESt:COUNT:WAVEforms" on page 441
- ":MTESt:COUNT:FWAVEforms" on page 438

Example Code
- "Example Code" on page 429
:MTSt:COUNt:WAVeforms

N (see page 886)

Query Syntax

:MTSt:COUNt:WAVeforms?

The :MTSt:COUNt:WAVeforms? query returns the total number of waveforms acquired in the current mask test run.

Return Format

<count><NL>

<count> ::= number of waveforms in NR1 format.

See Also

• "Introduction to :MTSt Commands" on page 429
• ":MTSt:COUNt:FWaveforms" on page 438
• ":MTSt:COUNt:TIME" on page 440
• ":MTSt:COUNt:RESet" on page 439

Example Code

• "Example Code" on page 429
:MTEST:DATA

(see page 886)

Command Syntax

: MTEST:DATA <mask>

<mask> ::= binary block data in IEEE 488.2 # format.

The :MTEST:DATA command loads a mask from binary block data. These are the
data bytes found in a *.msk file.

Query Syntax

: MTEST:DATA?

The :MTEST:DATA? query returns a mask in binary block data format. The format
for the data transmission is the # definite-length format defined in the IEEE 488.2
specification.

Return Format

<mask><NL>

<mask> ::= binary block data in IEEE 488.2 # format

See Also

• "SAVE:MASK[:START]" on page 485
• "RECALL:MASK[:START]" on page 470
:MTEST:DELeTe

N (see page 886)

Command Syntax: :MTEST:DELeTe

The :MTEST:DELeTe command clears the currently loaded mask.

See Also:
• "Introduction to :MTEST Commands" on page 429
• ":MTEST:AMASK:CREate" on page 433
Command Syntax
:MEAS:ENAB  
<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MEAS:ENAB command enables or disables the mask test features.

- ON — Enables the mask test features.
- OFF — Disables the mask test features.

Query Syntax
:MEAS:ENAB?

The :MEAS:ENAB? query returns the current state of mask test features.

Return Format
<on_off><NL>
<on_off> ::= {1 | 0}

See Also
- "Introduction to :MEAS Commands" on page 429
`:MTESt:LOCK`  

(see page 886)  

### Command Syntax

`:MTESt:LOCK <on_off>`  

<on_off> ::= {{1 | ON} | {0 | OFF}}  

The :MTESt:LOCK command enables or disables the mask lock feature:

- **ON** — Locks a mask to the SOURce. As the vertical or horizontal scaling or position of the SOURce changes, the mask is redrawn accordingly.
- **OFF** — The mask is static and does not move.

### Query Syntax

`:MTESt:LOCK?`  

The :MTESt:LOCK? query returns the current mask lock setting.

### Return Format

<on_off><NL>  

<on_off> ::= {1 | 0}  

### See Also

- "Introduction to :MTESt Commands" on page 429  
- ":MTESt:SOURce" on page 459
:MTESt:RMODe

(see page 886)

Command Syntax

:MTESt:RMODe <rmode>

<rmode> ::= {FORever | SIGMa | TIME | WAVeforms}

The :MTESt:RMODe command specifies the termination conditions for the mask test:

- FORever — the mask test runs until it is turned off.
- SIGMa — the mask test runs until the Sigma level is reached. This level is set by the ":MTESt:RMODe:SIGMa" on page 451 command.
- TIME — the mask test runs for a fixed amount of time. The amount of time is set by the ":MTESt:RMODe:TIME" on page 452 command.
- WAVeforms — the mask test runs until a fixed number of waveforms are acquired. The number of waveforms is set by the ":MTESt:RMODe:WAVeforms" on page 453 command.

Query Syntax

:MTESt:RMODe?

The :MTESt:RMODe? query returns the currently set termination condition.

Return Format

<rmode><NL>

<rmode> ::= {FOR | SIGM | TIME | WAV}

See Also

- "Introduction to :MTESt Commands" on page 429
- ":MTESt:RMODe:SIGMa" on page 451
- ":MTESt:RMODe:TIME" on page 452
- ":MTESt:RMODe:WAVeforms" on page 453

Example Code

- "Example Code" on page 429
:MTESt:RMODe:FACTion:MEASure

N (see page 886)

Command Syntax

:MTESt:RMODe:FACTion:MEASure <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTESt:RMODe:FACTion:MEASure command sets measuring only mask failures on or off.

When ON, measurements and measurement statistics run only on waveforms that contain a mask violation; passing waveforms do not affect measurements and measurement statistics.

This mode is not available when the acquisition mode is set to Averaging.

Query Syntax

:MTESt:RMODe:FACTion:MEASure?

The :MTESt:RMODe:FACTion:MEASure? query returns the current mask failure measure setting.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to :MTESt Commands" on page 429
• ":MTESt:RMODe:FACTion:PRINT" on page 448
• ":MTESt:RMODe:FACTion:SAVE" on page 449
• ":MTESt:RMODe:FACTion:STOP" on page 450
:MTEST:RMODE:FACTion:PRINT

Command Syntax

:MTEST:RMODE:FACTion:PRINT <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTEST:RMODE:FACTion:PRINT command sets printing on mask failures on or off.

NOTE

Query Syntax

:MTEST:RMODE:FACTion:PRINT?

The :MTEST:RMODE:FACTion:PRINT? query returns the current mask failure print setting.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

- "Introduction to :MTEST Commands" on page 429
- ":MTEST:RMODE:FACTion:MEASure" on page 447
- ":MTEST:RMODE:FACTion:SAVE" on page 449
- ":MTEST:RMODE:FACTion:STOP" on page 450

See Chapter 17, ":HARDcopy Commands," starting on page 331 for more information on setting the hardcopy device and formatting options.

NOTE

:MTESt:RMODe:FACTion:SAVE

Command Syntax

[:MTESt:RMODe:FACTion:SAVE <on_off>]

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTESt:RMODe:FACTion:SAVE command sets saving on mask failures on or off.

Query Syntax

[:MTESt:RMODe:FACTion:SAVE?]

The :MTESt:RMODe:FACTion:SAVE? query returns the current mask failure save setting.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to :MTESt Commands" on page 429
• ":MTESt:RMODe:FACTion:MEASure" on page 447
• ":MTESt:RMODe:FACTion:PRINt" on page 448
• ":MTESt:RMODe:FACTion:STOP" on page 450

NOTE

Setting :MTESt:RMODe:FACTion:SAVE ON automatically sets :MTESt:RMODe:FACTion:PRINt OFF.
**:MTESt:RMODe:FACTion:STOP**

N  (see page 886)

**Command Syntax**

```
:MTESt:RMODe:FACTion:STOP <on_off>
```

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTESt:RMODe:FACTion:STOP command sets stopping on a mask failure on or off. When this setting is ON and a mask violation is detected, the mask test is stopped and the acquisition system is stopped.

**Query Syntax**

```
:MTESt:RMODe:FACTion:STOP?
```

The :MTESt:RMODe:FACTion:STOP? query returns the current mask failure stop setting.

**Return Format**

```
<on_off><NL>
```

<on_off> ::= {1 | 0}

**See Also**

- ":%MTESt:RMODe:FACTion:SAVE" on page 449
:MTEST:RMODe:SIGMa

Command Syntax

:MTEST:RMODe:SIGMa <level>

<level> ::= from 0.1 to 9.3 in NR3 format

When the :MTEST:RMODe command is set to SIGMa, the :MTEST:RMODe:SIGMa command sets the test sigma level to which a mask test runs. Test sigma is the best achievable process sigma, assuming no failures. (Process sigma is calculated using the number of failures per test.) The test sigma level indirectly specifies the number of waveforms that must be tested (in order to reach the sigma level).

Query Syntax

:MTEST:RMODe:SIGMa?

The :MTEST:RMODe:SIGMa? query returns the current Sigma level setting.

Return Format

<level><NL>

<level> ::= from 0.1 to 9.3 in NR3 format

See Also

• "Introduction to :MTEST Commands" on page 429
• ":MTEST:RMODe" on page 446

Example Code

• "Example Code" on page 429
:MTEST:RMODE:TIME

Command Syntax
: MTEST: RMODE: TIME <seconds>

<seconds> ::= from 1 to 86400 in NR3 format

When the :MTEST:RMODE command is set to TIME, the :MTEST:RMODE:TIME command sets the number of seconds for a mask test to run.

Query Syntax
: MTEST: RMODE: TIME?

The :MTEST:RMODE:TIME? query returns the number of seconds currently set.

Return Format
<seconds><NL>

<seconds> ::= from 1 to 86400 in NR3 format

See Also
• "Introduction to :MTEST Commands" on page 429
• ":MTEST:RMODE" on page 446
:MTEst:RMODe:WAVeforms

N (see page 886)

Command Syntax

:MTEst:RMODe:WAVeforms <count>

<count> ::= number of waveforms in NR1 format
from 1 to 2,000,000,000

When the :MTEst:RMODe command is set to WAVeforms, the
:MTEst:RMODe:WAVeforms command sets the number of waveform acquisitions
that are mask tested.

Query Syntax

:MTEst:RMODe:WAVeforms?

The :MTEst:RMODe:WAVeforms? query returns the number of waveforms
currently set.

Return Format

<count><NL>

<count> ::= number of waveforms in NR1 format
from 1 to 2,000,000,000

See Also

• "Introduction to :MTEst Commands" on page 429
• ":.MTEst:RMODe" on page 446
:MTES:t:SCALe:BIND

(see page 886)

Command Syntax

:MTES:t:SCALe:BIND <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTES:t:SCALe:BIND command enables or disables Bind 1 & 0 Levels (Bind -1 & 0 Levels for inverted masks) control:

• ON —

  If the Bind 1 & 0 Levels control is enabled, the 1 Level and the 0 Level controls track each other. Adjusting either the 1 Level or the 0 Level control shifts the position of the mask up or down without changing its size.

  If the Bind -1 & 0 Levels control is enabled, the -1 Level and the 0 Level controls track each other. Adjusting either the -1 Level or the 0 Level control shifts the position of the mask up or down without changing its size.

• OFF —

  If the Bind 1 & 0 Levels control is disabled, adjusting either the 1 Level or the 0 Level control changes the vertical height of the mask.

  If the Bind -1 & 0 Levels control is disabled, adjusting either the -1 Level or the 0 Level control changes the vertical height of the mask.

Query Syntax

:MTES:t:SCALe:BIND?

The :MTES:t:SCALe:BIND? query returns the value of the Bind 1&0 control (Bind -1&0 for inverted masks).

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to :MTES:t Commands" on page 429
• ":MTES:t:SCALe:X1" on page 455
• ":MTES:t:SCALe:XDELta" on page 456
• ":MTES:t:SCALe:Y1" on page 457
• ":MTES:t:SCALe:Y2" on page 458
:MTESt:SCALe:X1

Command Syntax

:MTESt:SCALe:X1 <x1_value>

<x1_value> ::= X1 value in NR3 format

The :MTESt:SCALe:X1 command defines where X=0 in the base coordinate system used for mask testing. The other X-coordinate is defined by the :MTESt:SCALe:XDELta command. Once the X1 and XDELta coordinates are set, all X values of vertices in the mask regions are defined with respect to this value, according to the equation:

\[ X = (X \times \Delta X) + X1 \]

Thus, if you set X1 to 100 ms, and XDELta to 100 ms, an X value of 0.100 is a vertex at 110 ms.

The oscilloscope uses this equation to normalize vertices. This simplifies reprogramming to handle different data rates. For example, if you halve the period of the waveform of interest, you need only to adjust the XDELta value to set up the mask for the new waveform.

The X1 value is a time value specifying the location of the X1 coordinate, which will then be treated as X=0 for mask regions coordinates.

Query Syntax

:MTESt:SCALe:X1?

The :MTESt:SCALe:X1? query returns the current X1 coordinate setting.

Return Format

<x1_value><NL>

<x1_value> ::= X1 value in NR3 format

See Also

- "Introduction to :MTESt Commands" on page 429
- ":MTESt:SCALe:BIND" on page 454
- ":MTESt:SCALe:XDELta" on page 456
- ":MTESt:SCALe:Y1" on page 457
- ":MTESt:SCALe:Y2" on page 458
**:MTEST:SCALE:XDELta**

(see page 886)

**Command Syntax**

```plaintext
:MTEST:SCALE:XDELta <xdelta_value>
```

<xdelta_value> ::= X delta value in NR3 format

The :MTEST:SCALE:XDELta command defines the position of the X2 marker with respect to the X1 marker. In the mask test coordinate system, the X1 marker defines where X=0; thus, the X2 marker defines where X=1.

Because all X vertices of the regions defined for mask testing are normalized with respect to X1 and ΔX, redefining ΔX also moves those vertices to stay in the same locations with respect to X1 and ΔX. Thus, in many applications, it is best if you define XDELta as a pulse width or bit period. Then, a change in data rate without corresponding changes in the waveform can easily be handled by changing ΔX.

The X-coordinate of polygon vertices is normalized using this equation:

```
X = (X * ΔX) + X1
```

The X delta value is a time value specifying the distance of the X2 marker with respect to the X1 marker.

For example, if the period of the waveform you wish to test is 1 ms, setting ΔX to 1 ms ensures that the waveform’s period is between the X1 and X2 markers.

**Query Syntax**

```plaintext
:MTEST:SCALE:XDELta?
```

The :MTEST:SCALE:XDELta? query returns the current value of ΔX.

**Return Format**

<xdelta_value><NL>

<xdelta_value> ::= X delta value in NR3 format

**See Also**

- "Introduction to :MTEST Commands" on page 429

- ":MTEST:SCALE:X1" on page 455
- ":MTEST:SCALE:Y1" on page 457
- ":MTEST:SCALE:Y2" on page 458
:MTESt:SCALe:Y1

(see page 886)

Command Syntax

:MTESt:SCALe:Y1 <y1_value>

<y1_value> ::= Y1 value in NR3 format

The :MTESt:SCALe:Y1 command defines where Y=0 in the coordinate system for mask testing. All Y values of vertices in the coordinate system are defined with respect to the boundaries set by SCALe:Y1 and SCALe:Y2 according to the equation:

\[ Y = (Y \cdot (Y2 - Y1)) + Y1 \]

Thus, if you set Y1 to 100 mV, and Y2 to 1 V, a Y value of 0.100 in a vertex is at 190 mV.

The Y1 value is a voltage value specifying the point at which Y=0.

Query Syntax

:MTESt:SCALe:Y1?

The :MTESt:SCALe:Y1? query returns the current setting of the Y1 marker.

Return Format

<y1_value><NL>

<y1_value> ::= Y1 value in NR3 format

See Also

• "Introduction to :MTESt Commands" on page 429

• ":MTESt:SCALe:X1" on page 455
• ":MTESt:SCALe:XDELta" on page 456
• ":MTESt:SCALe:Y2" on page 458
:MTESt:SCAlE:Y2

Command Syntax

```
:MTESt:SCAlE:Y2 <y2_value>
```

<y2_value> ::= Y2 value in NR3 format

The :MTESt:SCAlE:Y2 command defines the Y2 marker in the coordinate system for mask testing. All Y values of vertices in the coordinate system are defined with respect to the boundaries defined by SCAlE:Y1 and SCAlE:Y2 according to the following equation:

\[
Y = (Y \times (Y2 - Y1)) + Y1
\]

Thus, if you set Y1 to 100 mV, and Y2 to 1 V, a Y value of 0.100 in a vertex is at 190 mV.

The Y2 value is a voltage value specifying the location of the Y2 marker.

Query Syntax

```
:MTESt:SCAlE:Y2?
```

The :MTESt:SCAlE:Y2? query returns the current setting of the Y2 marker.

Return Format

```
<y2_value><NL>
```

<y2_value> ::= Y2 value in NR3 format

See Also

:MTES_t:SOURce

(see page 886)

Command Syntax

:MTES_t:SOURce <source>

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :MTES_t:SOURce command selects the channel which is configured by the commands contained in a mask file when it is loaded.

Query Syntax

:MTES_t:SOURce?

The :MTES_t:SOURce? query returns the channel which is configured by the commands contained in the current mask file.

Return Format

<source><NL>

<source> ::= {CHAN<n> | NONE}

<n> ::= 1 to (# analog channels) in NR1 format

See Also

• "Introduction to :MTES_t Commands" on page 429
• ":MTES_t:AMASk:SOURce" on page 434
:MTESt:TITLe

N (see page 886)

Query Syntax :MTESt:TITLe?

The :MTESt:TITLe? query returns the mask title which is a string of up to 128 characters. The title is displayed in the mask test dialog box and mask test tab when a mask file is loaded.

Return Format <title><NL>

<title> ::= a string of up to 128 ASCII characters.

See Also  •  "Introduction to :MTESt Commands" on page 429
22 :POD Commands

Control all oscilloscope functions associated with groups of digital channels. See "Introduction to :POD<n> Commands" on page 461.

Table 79 :POD<n> Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:POD&lt;n&gt;:DISPlay {{0</td>
<td>OFF}</td>

<td>:POD&lt;n&gt;:THReshold? (see page 465)</td>
<td>( \langle n \rangle ::= 1 ) in NR1 format |</td>
</tr>
</tbody>
</table>

**NOTE**

These commands are only valid for the MSO models.

Reporting the Setup

Use :POD1? to query setup information for the POD subsystem.
The following is a sample response from the :POD1? query. In this case, the query was issued following a *RST command.

:POD1:DISP 0;THR 1.40E+00
:POD<n>:DISPlay

(see page 886)

Command Syntax
:POD<n>:DISPlay <display>

<display> ::= {{1 | ON} | {0 | OFF}}
<n> ::= An integer, 1, is attached as a suffix to the command and defines the group of channels that are affected by the command.

POD1 ::= D0-D7

The :POD<n>:DISPlay command turns displaying of the specified group of channels on or off.

NOTE
This command is only valid for the MSO models.

Query Syntax
:POD<n>:DISPlay?

The :POD<n>:DISPlay? query returns the current display setting of the specified group of channels.

Return Format
<display><NL>

<display> ::= {0 | 1}

See Also
• "Introduction to :POD<n> Commands" on page 461
• ":DIGital<d>:DISPlay" on page 265
• ":CHANnel<n>:DISPlay" on page 241
• ":VIEW" on page 200
• ":BLANk" on page 176
• ":STATus" on page 197
:POD<n>:SIZE

Command Syntax

:POD<n>:SIZE <value>

<n> ::= An integer, 1, is attached as a suffix to the command and defines the group of channels that are affected by the command.

POD1 ::= D0-D7

<value> ::= {SMALL | MEDIUM | LARGE}

The :POD<n>:SIZE command specifies the size of digital channels on the display.

Query Syntax

:POD<n>:SIZE?

The :POD<n>:SIZE? query returns the digital channels size setting.

Return Format

<size_value><NL>

<size_value> ::= {SMALL | MEDIUM | LARGE}

See Also

- "Introduction to :POD<n> Commands" on page 461
- "DIGital<d>:SIZE" on page 268
- "DIGital<d>:POSITION" on page 267

NOTE

This command is only valid for the MSO models.
The `:POD<n>:THReshold` command sets the threshold for the specified group of channels. The threshold is used for triggering purposes and for displaying the digital data as high (above the threshold) or low (below the threshold).

**NOTE**
This command is only valid for the MSO models.

### Command Syntax
```
:POD<n>:THReshold <type>[<suffix>]
```

- `<n>` ::= An integer, 1, is attached as a suffix to the command and defines the group of channels that are affected by the command.
- `<type>` ::= `{CMOS | ECL | TTL | <user defined value>}
- `<user defined value>` ::= -8.00 to +8.00 in NR3 format
- `<suffix>` ::= `{V | mV | uV}

POD1 ::= D0-D7
TTL ::= 1.4V
CMOS ::= 2.5V
ECL ::= -1.3V

### Query Syntax
```
:POD<n>:THReshold?
```

The `:POD<n>:THReshold?` query returns the threshold value for the specified group of channels.

### Return Format
```
<threshold><NL>
```

- `<threshold>` ::= Floating point number in NR3 format

### See Also
- "Introduction to :POD<n> Commands" on page 461
- "DIGital<d>:THReshold" on page 269
- "TRIGger[:EDGE]:LEVel" on page 673

### Example Code
```
' THRESHOLD - This command is used to set the voltage threshold for
' the waveforms. There are three preset values (TTL, CMOS, and ECL)
' and you can also set a user-defined threshold value between
' -8.0 volts and +8.0 volts.
'
' In this example, we set channels 0-7 to CMOS, and then set the
' external trigger to TTL. Of course, you only need to set the
' thresholds for the channels you will be using in your program.
'
' Set channels 0-7 to CMOS threshold.
myScope.WriteString "POD1:THRESHOLD CMOS"
```
' Set external channel to TTL threshold (short form).
myScope.WriteString "':TRIG:LEV TTL,EXT"

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
23 :RECall Commands

Recall previously saved oscilloscope setups, reference waveforms, and masks.

Introduction to :RECall Commands

The :RECall subsystem provides commands to recall previously saved oscilloscope setups, reference waveforms, and masks.

Reporting the Setup
Use :RECall? to query setup information for the RECall subsystem.

Return Format

The following is a sample response from the :RECall? query. In this case, the query was issued following the *RST command.

:REC:FIL "scope_0"

Recalling Files From a USB Storage Device

When :RECall commands have a "quoted ASCII string" <file_name> parameter, you can recall files from a connected USB storage device. For example:

' To recall a setup file from a connected USB storage device:
myScope.WriteString "::RECall:SETup:STARt ""\\usb\\my_setup_file.scp"
"
:RECall:FILename

Command Syntax

:RECall:FILename <base_name>

ase_name› ::= quoted ASCII string

The :RECall:FILename command specifies the source for any RECall operations.

NOTE

This command specifies a file's base name only, without path information or an extension.

Query Syntax

:RECall:FILename?

The :RECall:FILename? query returns the current RECall filename.

Return Format

ase_name›<NL>

ase_name› ::= quoted ASCII string

See Also

• "Introduction to :RECall Commands" on page 467
• "::RECall:SETup[:STARt]" on page 472
• "::SAVE:FILename" on page 478
**:RECall:MASK[:STARt]**

(see page 886)

**Command Syntax**

`:RECall:MASK[:STARt] [<file_spec>]`

`<file_spec> ::= {<internal_loc> | <file_name>}`

`<internal_loc> ::= 0-3; an integer in NR1 format`

`<file_name> ::= quoted ASCII string`

The `:RECall:MASK[:STARt]` command recalls a mask.

**NOTE**

If a file extension is provided as part of a specified `<file_name>`, it must be ".msk".

**See Also**

- "Introduction to :RECall Commands" on page 467
- ":RECall:FIlename" on page 469
- ":SAVE:MASK[:STARt]" on page 485
- ":MTESt:DATA" on page 442
:**RECall:PWD**

(see page 886)

**Command Syntax**

`:RECall:PWD <path_name>`

`<path_name> ::= quoted ASCII string`

The :RECall:PWD command sets the present working directory for recall operations.

**Query Syntax**

`:RECall:PWD?`

The :RECall:PWD? query returns the currently set working directory for recall operations.

**Return Format**

`<path_name><NL>`

`<path_name> ::= quoted ASCII string`

**See Also**

- "Introduction to :RECall Commands" on page 467
- "SAVE:PWD" on page 487
:RECall:SETup[:STARt]

N (see page 886)

Command Syntax

:RECall:SETup[:STARt] [<file_spec>]

<file_spec> ::= {<internal_loc> | <file_name>}

<internal_loc> ::= 0-9; an integer in NR1 format

<file_name> ::= quoted ASCII string

The :RECall:SETup[:STARt] command recalls an oscilloscope setup.

NOTE

If a file extension is provided as part of a specified <file_name>, it must be ".scp".

See Also

- "Introduction to :RECall Commands" on page 467
- "::RECall:FILename" on page 469
- "::SAVE:SETup[:STARt]" on page 488
**:RECall:WMEMory<r>[:STARt]**

**N**ote (see page 886)

**Command Syntax**

```plaintext
:RECall:WMEMory<r>[:STARt] [<file_name>]
<r> ::= 1-2 in NR1 format
<file_name> ::= quoted ASCII string
```

The :RECall:WMEMory<r>[:STARt] command recalls a reference waveform.

**NOTE**

If a file extension is provided as part of a specified <file_name>, it must be ".h5".

**See Also**

- "Introduction to :RECall Commands" on page 467
- ":RECall:FILENAME" on page 469
- ":SAVE:WMEMory[:STARt]" on page 495
:RECall Commands
## 24 :SAVE Commands

Save oscilloscope setups, screen images, and data. See "Introduction to :SAVE Commands" on page 477.

Introduction to :SAVE Commands

The :SAVE subsystem provides commands to save oscilloscope setups, screen images, and data.

:SAV is an acceptable short form for :SAVE.

Reporting the Setup

Use :SAVE? to query setup information for the SAVE subsystem.

Return Format

The following is a sample response from the :SAVE? query. In this case, the query was issued following the *RST command.

:SAVE:FIL ""; :SAVE:IMAG:AREA GRAT; FACT 0; FORM TIFF; INKS 0; PAL MON; :SAVE:PWD "C:/setups/"; :SAVE:WAV:FORM NONE; LENG 1000; SEGm CURR

Saving Files to a USB Storage Device

When :SAVE commands have a "quoted ASCII string" <file_name> parameter, you can save files to a connected USB storage device. For example:

' To save a setup file to a connected USB storage device:
myScope.WriteString "(:SAVE:SETup:STARt "\usb\my_setup_file.scp""

"
:SAVE:FILename

(see page 886)

Command Syntax

:SAVE:FILename <base_name>

<base_name> ::= quoted ASCII string

The :SAVE:FILename command specifies the source for any SAVE operations.

NOTE

This command specifies a file's base name only, without path information or an extension.

Query Syntax

:SAVE:FILename?

The :SAVE:FILename? query returns the current SAVE filename.

Return Format

<base_name><NL>

<base_name> ::= quoted ASCII string

SAVE:IMAGE[:START]

Command Syntax

:SAVE:IMAGE[:START] [<file_name>]

<file_name> ::= quoted ASCII string

NOTE

Be sure to set the :SAVE:IMAGE:FORMat before saving an image. If the format is NONE, the save image command will not succeed.

NOTE

If a file extension is provided as part of a specified <file_name>, and it does not match the extension expected by the format specified in :SAVE:IMAGE:FORMat, the format will be changed if the extension is a valid image file extension.

NOTE

If the extension ".bmp" is used and the current :SAVE:IMAGE:FORMat is not BMP or BMP8, the format will be changed to BMP.

:SAVE:IMAGe:FACTors

Command Syntax

:SAVE:IMAGe:FACTors <factors>

<factors> ::= {{OFF | 0} | {ON | 1}}

The :SAVE:IMAGe:FACTors command controls whether the oscilloscope factors are output along with the image.

NOTE

Factors are written to a separate file with the same path and base name but with the ".txt" extension.

Query Syntax

:SAVE:IMAGe:FACTors?

The :SAVE:IMAGe:FACTors? query returns a flag indicating whether oscilloscope factors are output along with the image.

Return Format

<factors><NL>

<factors> ::= {0 | 1}

See Also

• "Introduction to :SAVE Commands" on page 477

• ":SAVE:IMAGe:PALette" on page 483
:SAVE:IMAGe:FORMat

N (see page 886)

Command Syntax

:SAVE:IMAGe:FORMat <format>

<format> ::= {{BMP | BMP24bit} | BMP8bit | PNG}

The :SAVE:IMAGe:FORMat command sets the image format type.

Query Syntax

:SAVE:IMAGe:FORMat?

The :SAVE:IMAGe:FORMat? query returns the selected image format type.

Return Format

<format><NL>

<format> ::= {BMP | BMP8 | PNG | NONE}

When NONE is returned, it indicates that a waveform data file format is currently selected.

:SAVE:IMAGE:INKSaver

N (see page 886)

Command Syntax

:SAVE:IMAGE:INKSaver <value>

<value> ::= {{OFF | 0} | {ON | 1}}

The :SAVE:IMAGE:INKSaver command controls whether the graticule colors are inverted or not.

Query Syntax

:SAVE:IMAGE:INKSaver?

The :SAVE:IMAGE:INKSaver? query returns a flag indicating whether graticule colors are inverted or not.

Return Format

<value><NL>

<value> ::= {0 | 1}

**:SAVE:IMAGe:PALETTE**

(see page 886)

**Command Syntax**

```
:SAVE:IMAGe:PALETTE <palette>
```

<palette> ::= {COLOR | GRAYscale}

The :SAVE:IMAGe:PALETTE command sets the image palette color.

**Query Syntax**

```
:SAVE:IMAGe:PALETTE?
```

The :SAVE:IMAGe:PALETTE? query returns the selected image palette color.

**Return Format**

```
<palette><NL>
```

<palette> ::= {COL | GRAY}

:SAVE:LISTer[:START]

Command Syntax

::SAVE:LISTer[:START] [<file_name>]

<file_name> ::= quoted ASCII string

The :SAVE:LISTer[:START] command saves the Lister display data to a file.

NOTE

If a file extension is provided as part of a specified <file_name>, it must be ".csv".

See Also

- "Introduction to :SAVE Commands" on page 477
- "::SAVE:FILename" on page 478
- Chapter 18, "::LISTer Commands," starting on page 349
**:SAVE:MASK[:START]**

(see page 886)

**Command Syntax**

`:SAVE:MASK[:START] [<file_spec>]`

- `<file_spec>` ::= {<internal_loc> | <file_name>}
- `<internal_loc>` ::= 0-3; an integer in NR1 format
- `<file_name>` ::= quoted ASCII string

**NOTE**

If a file extension is provided as part of a specified `<file_name>`, it must be ".msk".

**See Also**

- "Introduction to :SAVE Commands" on page 477
- ":SAVE:FILENAME" on page 478
- ":RECALL:MASK[:START]" on page 470
- ":MTEST:DATA" on page 442
**:SAVE:MULTi[:STARt]**

(see page 886)

**Command Syntax**

`:SAVE:MULTi[:STARt] [<file_name>]`

`<file_name> ::= quoted ASCII string`

The :SAVE:MULTi[:STARt] command saves multi-channel waveform data to a file. This file can be opened by the N8900A InfiniiView oscilloscope analysis software.

**NOTE**

If a file extension is provided as part of a specified `<file_name>`, it must be ".h5".

**See Also**

- "Introduction to :SAVE Commands" on page 477
- ":SAVE:FILENAME" on page 478
- ":SAVE:PWD" on page 487
SAVE:PWD

Command Syntax

:SAVE:PWD <path_name>

<path_name> ::= quoted ASCII string

The :SAVE:PWD command sets the present working directory for save operations.

Query Syntax

:SAVE:PWD?

The :SAVE:PWD? query returns the currently set working directory for save operations.

Return Format

<path_name><NL>

<path_name> ::= quoted ASCII string

See Also

• "Introduction to :SAVE Commands" on page 477
• ":SAVE:FILENAME" on page 478
• ":RECALL:PWD" on page 471
:SAVE:SETup[:STARt]

N  (see page 886)

Command Syntax  
:SAVE:SETup[:STARt] [<file_spec>]

<file_spec> ::= {<internal_loc> | <file_name>}

<internal_loc> ::= 0-9; an integer in NR1 format

=file_name> ::= quoted ASCII string

The :SAVE:SETup[:STARt] command saves an oscilloscope setup.

NOTE  
If a file extension is provided as part of a specified <file_name>, it must be ".scp".

See Also  
• "Introduction to :SAVE Commands" on page 477
• ":SAVE:FILENAME" on page 478
• ":RECall:SETup[:STARt]" on page 472
:SAVE:WAVEform[:STARt]

N (see page 886)

Command Syntax

:SAVE:WAVEform[:STARt] [<file_name>]

<file_name> ::= quoted ASCII string

The :SAVE:WAVEform[:STARt] command saves oscilloscope waveform data to a file.

NOTE

Be sure to set the :SAVE:WAVEform:FORMat before saving waveform data. If the format is NONE, the save waveform command will not succeed.

NOTE

If a file extension is provided as part of a specified <file_name>, and it does not match the extension expected by the format specified in :SAVE:WAVEform:FORMat, the format will be changed if the extension is a valid waveform file extension.

See Also

- "Introduction to :SAVE Commands" on page 477

- ":SAVE:FILENAME" on page 478
- ":RECALL:SETup[:STARt]" on page 472
**SAVE:WAVeform:FORMat**

(see page 886)

**Command Syntax**  
```
:SAVE:WAVeform:FORMat <format>
```

<format> ::= {ASCiixy | CSV | BINary}

The :SAVE:WAVeform:FORMat command sets the waveform data format type:

- **ASCiixy** — creates comma-separated value files for each analog channel that is displayed (turned on). The proper file extension for this format is ".csv".
- **CSV** — creates one comma-separated value file that contains information for all analog channels that are displayed (turned on). The proper file extension for this format is ".csv".
- **BINary** — creates an oscilloscope binary data format file. See the User's Guide for a description of this format. The proper file extension for this format is ".bin".

**Query Syntax**  
```
:SAVE:WAVeform:FORMat?
```

The :SAVE:WAVeform:FORMat? query returns the selected waveform data format type.

**Return Format**

```
<format><NL>
<format> ::= {ASC | CSV | BIN | NONE}
```

When NONE is returned, it indicates that an image file format is currently selected.

**See Also**

- "Introduction to :SAVE Commands" on page 477
- ":SAVE:WAVeform[:STARt]" on page 489
- ":SAVE:WAVeform:LENGth" on page 491
- ":SAVE:IMAGe:FORMat" on page 481
:SAVE:WAVEform:LENGth

N (see page 886)

Command Syntax

:SAVE:WAVEform:LENGth <length>

<length> ::= 100 to max. length; an integer in NR1 format

When the :SAVE:WAVEform:LENGth:MAX setting is OFF, the
:SAVE:WAVEform:LENGth command sets the waveform data length (that is, the
number of points saved).

When the :SAVE:WAVEform:LENGth:MAX setting is ON, the
:SAVE:WAVEform:LENGth setting has no effect.

Query Syntax

:SAVE:WAVEform:LENGth?

The :SAVE:WAVEform:LENGth? query returns the current waveform data length
setting.

Return Format

<length><NL>

<length> ::= 100 to max. length; an integer in NR1 format

See Also

- "Introduction to :SAVE Commands" on page 477
- ":SAVE:WAVEform:LENGth:MAX" on page 492
- ":SAVE:WAVEform[:START]" on page 489
- ":WAVEform:POINts" on page 734
- ":SAVE:WAVEform:FORMat" on page 490
:SAVE:WAVEform:LENGth:MAX

(see page 886)

Command Syntax

:SAVE:WAVEform:LENGth:MAX <setting>

<setting> ::= {{OFF | 0} | {ON | 1}}

The :SAVE:WAVEform:LENGth:MAX command specifies whether maximum number of waveform data points is saved.

When OFF, the :SAVE:WAVEform:LENGth command specifies the number of waveform data points saved.

Query Syntax

:SAVE:WAVEform:LENGth:MAX?

The :SAVE:WAVEform:LENGth:MAX? query returns the current setting.

Return Format

<setting><NL>

<setting> ::= {0 | 1}

See Also

• "Introduction to :SAVE Commands" on page 477
• ":SAVE:WAVEform[:START]" on page 489
• ":SAVE:WAVEform:LENGth" on page 491
**:SAVE:WAVEform:SEGmented**

(see page 886)

**Command Syntax**

```plaintext
:SAVE:WAVEform:SEGmented <option>
```

<option> ::= {ALL | CURRENT}

When segmented memory is used for acquisitions, the
**:SAVE:WAVEform:SEGmented** command specifies which segments are included when the waveform is saved:

- **ALL** — all acquired segments are saved.
- **CURRENT** — only the currently selected segment is saved.

**Query Syntax**

```plaintext
:SAVE:WAVEform:SEGmented?  
```

The **:SAVE:WAVEform:SEGmented?** query returns the current segmented waveform save option setting.

**Return Format**

```plaintext
<option><NL>
```

<option> ::= {ALL | CURRENT}

**See Also**

:SAVE:WMEMory:SOURce

Command Syntax

:SAVE:WMEMory:SOURce <source>

<source> ::= {CHANnel<n> | FUNCTION | MATH | WMEMory<r>}

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= {1 | 2}

The :SAVE:WMEMory:SOURce command selects the source to be saved as a reference waveform file.

NOTE

Only ADD or SUBtract math operations can be saved as reference waveforms.

NOTE

MATH is an alias for FUNCTION. The query will return FUNC if the source is FUNCTION or MATH.

Query Syntax

:SAVE:WMEMory:SOURce?

The :SAVE:WMEMory:SOURce? query returns the source to be saved as a reference waveform file.

Return Format

<source><NL>

<source> ::= {CHAN<n> | FUNC | WMEM<r> | NONE}

See Also

• "Introduction to :SAVE Commands" on page 477
• ":SAVE:WMEMory[:START]" on page 495
• ":RECall:WMEMory<r>[:START]" on page 473
:SAVE:WMEMory[:STARt]

Command Syntax

:SAVE:WMEMory[:STARt] [<file_name>]

<file_name> ::= quoted ASCII string

NOTE

If a file extension is provided as part of a specified <file_name>, it must be ".h5".

See Also

- "Introduction to :SAVE Commands" on page 477
- ":SAVE:WMEMory:SOURce" on page 494

:SAVE Commands
25 :SBUS<n> Commands

Control the modes and parameters for each serial bus decode/trigger type. See:

- "Introduction to :SBUS<n> Commands" on page 497
- "General :SBUS<n> Commands" on page 499
- ":SBUS<n>:CAN Commands" on page 502
- ":SBUS<n>:IIC Commands" on page 519
- ":SBUS<n>:LIN Commands" on page 529
- ":SBUS<n>:SPI Commands" on page 543
- ":SBUS<n>:UART Commands" on page 559

The :SBUS subsystem commands control the serial decode bus viewing, mode, and other options.

These commands are only valid on oscilloscope models when a serial decode option has been licensed.

The following serial bus decode/trigger types are available (see ":TRIGger:MODE" on page 656).

- **CAN (Controller Area Network) triggering**— will trigger on CAN version 2.0A and 2.0B signals. Setup consists of connecting the oscilloscope to a CAN signal. Baud rate, signal source, and signal polarity, and type of data to trigger on can be specified. You can trigger on CAN data and identifier patterns and you can set the bit sample point.

- **IIC (Inter-IC bus) triggering**— consists of connecting the oscilloscope to the serial data (SDA) line and the serial clock (SCL) line, then triggering on a stop/start condition, a restart, a missing acknowledge, or on a read/write frame with a specific device address and data value.

- **LIN (Local Interconnect Network) triggering**— will trigger on LIN sync break at the beginning of a message frame. You can trigger on Sync Break, Frame IDs, or Frame IDs and Data.
- **SPI (Serial Peripheral Interface) triggering** — consists of connecting the oscilloscope to a clock, data (MOSI or MISO), and framing signal. You can then trigger on a data pattern during a specific framing period. The serial data string can be specified to be from 4 to 64 bits long.

- **UART/RS-232 triggering** (with Option 232) — lets you trigger on RS-232 serial data.

**NOTE**

Two I2S buses or two SPI buses cannot be decoded on both SBUS1 and SBUS2 at the same time.

---

**Reporting the Setup**

Use :SBUS<n>? to query setup information for the :SBUS<n> subsystem.

**Return Format**

The following is a sample response from the :SBUS1? query. In this case, the query was issued following a *RST command.

```
:SBUS1:DISP 0;MODE IIC;:SBUS1:IIC:ASIZ BIT7;:SBUS1:IIC:TRIG:TYPE STAR;QUAL EQU;:SBUS1:IIC:SOUR:CLOC CHAN1;DATA CHAN2;:SBUS1:IIC:TRIG:PATT:ADDR -1;DATA -1;DATA2 -1
```
General :SBUS<n> Commands

<td>&lt;mode&gt; ::= {CAN</td>
</tr>
</tbody>
</table>

:SBUS<n>:DISPlay

(see page 886)

Command Syntax
:SBUS<n>:DISPlay <display>

<display> ::= {{1 | ON} | {0 | OFF}}

The :SBUS<n>:DISPlay command turns displaying of the serial decode bus on or off.

NOTE
This command is only valid when a serial decode option has been licensed.

NOTE
Two I2S buses or two SPI buses cannot be decoded on both SBUS1 and SBUS2 at the same time.

Query Syntax
:SBUS<n>:DISPlay?

The :SBUS<n>:DISPlay? query returns the current display setting of the serial decode bus.

Return Format
<display><NL>

<display> ::= {0 | 1}

Errors
- `-241, Hardware missing` on page 849

- "#:STATus" on page 197
:SBUS<n>:MODE

Command Syntax
:SBUS<n>:MODE <mode>

<mode> ::= {CAN | IIC | LIN | SPI | UART}

The :SBUS<n>:MODE command determines the decode mode for the serial bus.

NOTE
This command is only valid when a serial decode option has been licensed.

Query Syntax
:SBUS<n>:MODE?

The :SBUS<n>:MODE? query returns the current serial bus decode mode setting.

Return Format
<mode><NL>

<mode> ::= {CAN | IIC | LIN | SPI | UART | NONE}

Errors
• "-241, Hardware missing" on page 849

:SBUS<n>:CAN:COUNt:ERRor

Query Syntax
:SBUS<n>:CAN:COUNt:ERRor?

Returns the error frame count.

Return Format
<frame_count><NL>
<frame_count> ::= integer in NR1 format

Errors
- "-241, Hardware missing" on page 849

See Also
- ":SBUS<n>:CAN:COUNt:RESet" on page 506

- ":SBUS<n>:CAN Commands" on page 502
:SBUS<n>:CAN:COUNt:TOTal

Query Syntax  :SBUS<n>:CAN:COUNt:TOTal?

Returns the total frame count.

Return Format  <frame_count><NL>
<frame_count> ::= integer in NR1 format

Errors  • "-241, Hardware missing" on page 849

See Also  • "SBUS<n>:CAN:COUNt:RESet" on page 506
• "Introduction to :SBUS<n> Commands" on page 497
• "SBUS<n>:MODE" on page 501
• "SBUS<n>:CAN Commands" on page 502
:SBUS<n>:CAN:COUNt:UTILization

(see page 886)

**Query Syntax**

:SBUS<n>:CAN:COUNt:UTILization?

Returns the percent utilization.

**Return Format**

<percent><NL>

<percent> ::= floating-point in NR3 format

**Errors**

• "-241, Hardware missing" on page 849

**See Also**

• ":SBUS<n>:CAN:COUNt:RESet" on page 506
• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:MODE" on page 501
• ":SBUS<n>:CAN Commands" on page 502
:SBUS<n>:CAN:SAMPlepoint

(see page 886)

Command Syntax

:SBUS<n>:CAN:SAMPlepoint <value>

<value><NL>

<value> ::= {60 | 62.5 | 68 | 70 | 75 | 80 | 87.5} in NR3 format

The :SBUS<n>:CAN:SAMPlepoint command sets the point during the bit time where the bit level is sampled to determine whether the bit is dominant or recessive. The sample point represents the percentage of time between the beginning of the bit time to the end of the bit time.

Query Syntax

:SBUS<n>:CAN:SAMPlepoint?

The :SBUS<n>:CAN:SAMPlepoint? query returns the current CAN sample point setting.

Return Format

<value><NL>

<value> ::= {60 | 62.5 | 68 | 70 | 75 | 80 | 87.5} in NR3 format

See Also

• "Introduction to :TRIGger Commands" on page 647
• "::SBUS<n>::MODE" on page 501
• "::SBUS<n>::CAN:TRIGger" on page 513
:SBUS<n>:CAN:SIGNAL:BAUDrate

Command Syntax
:SBUS<n>:CAN:SIGNAL:BAUDrate <baudrate>

<baudrate> ::= integer from 10000 to 4000000 in 100 b/s increments, or 5000000

The :SBUS<n>:CAN:SIGNAL:BAUDrate command sets the standard baud rate of the CAN signal from 10 kb/s to 4 Mb/s in 100 b/s increments. If you enter a baud rate that is not divisible by 100 b/s, the baud rate is set to the nearest baud rate divisible by 100 b/s.

You can also set the baud rate of the CAN signal to 5 Mb/s. Fractional baud rates between 4 Mb/s and 5 Mb/s are not allowed.

If the baud rate you select does not match the system baud rate, false triggers may occur.

Query Syntax
:SBUS<n>:CAN:SIGNAL:BAUDrate?

The :SBUS<n>:CAN:SIGNAL:BAUDrate? query returns the current CAN baud rate setting.

Return Format
<baudrate><NL>

<baudrate> ::= integer from 10000 to 4000000 in 100 b/s increments, or 5000000

:**SBUS<n>:CAN:SIGNal:DEFinition**

(see page 886)

**Command Syntax**

**:SBUS<n>:CAN:SIGNal:DEFinition <value>**

<value> ::= {CANH | CANL | RX | TX | DIFferential | DIFL | DIFH}

The :SBUS<n>:CAN:SIGNal:DEFinition command sets the CAN signal type when :SBUS<n>:CAN:TRIGger is set to SOF (start of frame). These signals can be set to:

Dominant high signals:
- CANH — the actual CAN_H differential bus signal.
- DIFH — the CAN differential (H-L) bus signal connected to an analog source channel using a differential probe.

Dominant low signals:
- CANL — the actual CAN_L differential bus signal.
- RX — the Receive signal from the CAN bus transceiver.
- TX — the Transmit signal to the CAN bus transceiver.
- DIFL — the CAN differential (L-H) bus signal connected to an analog source channel using a differential probe.
- DIFFerential — the CAN differential bus signal connected to an analog source channel using a differential probe. This is the same as DIFL.

**Query Syntax**

**:SBUS<n>:CAN:SIGNal:DEFinition?**

**Return Format**

<value><NL>

<value> ::= {CANH | CANL | RX | TX | DIFL | DIFH}

**See Also**

:SBUS<n>:CAN:SOURce

Command Syntax

:SBUS<n>:CAN:SOURce <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:CAN:SOURce command sets the source for the CAN signal.

Query Syntax

:SBUS<n>:CAN:SOURce?

The :SBUS<n>:CAN:SOURce? query returns the current source for the CAN signal.

Return Format

<source><NL>

:SBUS<n>:CAN:TRIGger

(see page 886)

Command Syntax  
:SBUS<n>:CAN:TRIGger <condition>

<condition> ::= {SOF | DATA | ERRun | IDData | IDEither | IDRemote | ALLerrors | OVERload | ACKerror}

The :SBUS<n>:CAN:TRIGger command sets the CAN trigger on condition:

- **SOF** - will trigger on the Start of Frame (SOF) bit of a Data frame, Remote Transfer Request (RTR) frame, or an Overload frame.
- **DATA** - will trigger on CAN Data frames matching the specified Id, Data, and the DLC (Data length code).
- **ERRor** - will trigger on CAN Error frame.
- **IDData** - will trigger on CAN frames matching the specified Id of a Data frame.
- **IDRemote** - will trigger on CAN frames matching the specified Id of a Remote frame.
- **ALLerrors** - will trigger on CAN active error frames and unknown bus conditions.
- **OVERload** - will trigger on CAN overload frames.
- **ACKerror** - will trigger on a data or remote frame acknowledge bit that is recessive.

The table below shows the programming parameter and the corresponding front-panel softkey selection:

<table>
<thead>
<tr>
<th>Remote &lt;condition&gt; parameter</th>
<th>Front-panel Trigger on: softkey selection (softkey text - softkey popup text)</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOF</td>
<td>SOF - Start of Frame</td>
</tr>
<tr>
<td>DATA</td>
<td>ID &amp; Data - Data Frame ID and Data</td>
</tr>
<tr>
<td>ERRun</td>
<td>Error - Error frame</td>

</tr>
<tr>
<td>ALLerrors</td>
<td>All Errors - All Errors</td>
</tr>
<tr>
<td>OVERload</td>
<td>Overload - Overload Frame</td>
</tr>
<tr>
<td>ACKerror</td>
<td>Ack Error - Acknowledge Error</td>
</tr>
</tbody>
</table>

CAN Data specification is set by the :SBUS<n>:CAN:TRIGger:PATTern:DATA command.

**Query Syntax**

:SBUS<n>:CAN:TRIGger?

The :SBUS<n>:CAN:TRIGger? query returns the current CAN trigger on condition.

**Return Format**

<condition><NL>

<condition> ::= {SOF | DATA | ERR | IDD | IDE | IDR | ALL | OVER | ACK}

**Errors**

- "-241, Hardware missing" on page 849

**See Also**

- "Introduction to :SBUS<n> Commands" on page 497
- "SBUS<n>:MODE" on page 501
- "SBUS<n>:CAN:TRIGger:PATTern:DATA" on page 515
- "SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth" on page 516
- "SBUS<n>:CAN:TRIGger:PATTern:ID" on page 517

- "SBUS<n>:CAN:SIGNal:DEFinition" on page 511
- "SBUS<n>:CAN:SOURce" on page 512
The :SBUS<n>:CAN:TRIGger:PATTern:DATA command defines the CAN data pattern resource according to the string parameter. This pattern, along with the data length (set by the :SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth command), control the data pattern searched for in each CAN message.

If the string parameter starts with "0x", it is a hexadecimal string made up of hexadecimal and X (don't care) characters; otherwise, it is a binary string made up of 0, 1, and X (don't care) characters.

NOTE
If more bits are sent for <string> than specified by the :SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth command, the most significant bits will be truncated. If the data length is changed after the <string> is programmed, the added or deleted bits will be added to or deleted from the least significant bits.
:SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth

Command Syntax
:SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth <length>

<length> ::= integer from 1 to 8 in NR1 format

The :SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth command sets the number of 8-bit bytes in the CAN data string. The number of bytes in the string can be anywhere from 1 bytes to 8 bytes (64 bits). The value for these bytes is set by the :SBUS<n>:CAN:TRIGger:PATTern:DATA command.

Query Syntax
:SBUS<n>:CAN:TRIGger:PATTern:DATA:LENGth?

Return Format
<count><NL>

<count> ::= integer from 1 to 8 in NR1 format

Errors
- "-241, Hardware missing" on page 849

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":SBUS<n>:CAN:TRIGger:PATTern:DATA" on page 515
- ":SBUS<n>:CAN:SOURce" on page 512
:SBUS<n>:CAN:TRIGger:PATTern:ID

Command Syntax

:SBUS<n>:CAN:TRIGger:PATTern:ID <string>

<string> ::= "nn...n" where n ::= {0 | 1 | X | $}
<string> ::= "0xnn...n" where n ::= {0,..,9 | A,..,F | X | $}

The :SBUS<n>:CAN:TRIGger:PATTern:ID command defines the CAN identifier pattern resource according to the string parameter. This pattern, along with the identifier mode (set by the :SBUS<n>:CAN:TRIGger:PATTern:ID:MODE command), control the identifier pattern searched for in each CAN message.

If the string parameter starts with "0x", it is a hexadecimal string made up of hexadecimal and X (don't care) characters; otherwise, it is a binary string made up of 0, 1, and X (don't care) characters.

NOTE

The ID pattern resource string is always 29 bits. Only 11 of these bits are used when the :SBUS<n>:CAN:TRIGger:PATTern:ID:MODE is STanDard.

A string longer than 29 bits is truncated to 29 bits when setting the ID pattern resource.

Query Syntax

:SBUS<n>:CAN:TRIGger:PATTern:ID?

Return Format

<string><NL> in 29-bit binary string format

Errors

• "-241, Hardware missing" on page 849

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:CAN:TRIGger:PATTern:ID:MODE" on page 518

Command Syntax
:SBUS<n>:CAN:TRIGger:PATTern:ID:MODE <value>

=value= ::= {STANdard | EXTended}

Query Syntax
:SBUS<n>:CAN:TRIGger:PATTern:ID:MODE?

Return Format
<value><NL>

=value= ::= {STAN | EXT}

Errors
- "-241, Hardware missing" on page 849

<tr>
<td>:SBUS&lt;n&gt;:IIC:TRIGger[:TYPE] &lt;type&gt; (see page 527)</td>
<td>:SBUS&lt;n&gt;:IIC:TRIGger[:TYPE]? (see page 527)</td>
<td>&lt;type&gt; ::= {STARt</td>
</tr>
</tbody>
</table>
:SBUS<n>:IIC:ASIZe

Command Syntax
:SBUS<n>:IIC:ASIZe <size>
<size> ::= {BIT7 | BIT8}
The :SBUS<n>:IIC:ASIZe command determines whether the Read/Write bit is included as the LSB in the display of the IIC address field of the decode bus.

Query Syntax
:SBUS<n>:IIC:ASIZe?
The :SBUS<n>:IIC:ASIZe? query returns the current IIC address width setting.

Return Format
<mode><NL>
<mode> ::= {BIT7 | BIT8}

Errors
- "-241, Hardware missing" on page 849

See Also
- "Introduction to :SBUS<n> Commands" on page 497
- ":SBUS<n>:IIC Commands" on page 519
Command Syntax

```
:SBUS<n>:IIC[:SOURce]:CLOCk <source>
```

```
<source> ::= {CHANnel<n> | EXTernal}
```

```
<n> ::= 1 to (# analog channels) in NR1 format
```

The :SBUS<n>:IIC[:SOURce]:CLOCk command sets the source for the IIC serial clock (SCL).

Query Syntax

```
:SBUS<n>:IIC[:SOURce]:CLOCk?
```

The :SBUS<n>:IIC[:SOURce]:CLOCk? query returns the current source for the IIC serial clock.

Return Format

```
<source><NL>
```

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":SBUS<n>:IIC[:SOURce]:DATA" on page 522
:SBUS<n>:IIC[:SOURce]:DATA

(see page 886)

Command Syntax

:SBUS<n>:IIC[:SOURce]:DATA <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:IIC[:SOURce]:DATA command sets the source for IIC serial data (SDA).

Query Syntax

:SBUS<n>:IIC[:SOURce]:DATA?

The :SBUS<n>:IIC[:SOURce]:DATA? query returns the current source for IIC serial data.

Return Format

<source><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:IIC[:SOURce]:CLOCk" on page 521
:SBUS<n>:IIC:TRIGger:PATTern:ADDRess

Command Syntax

<value> ::= integer or <string>
<string> ::= "0xnn" where n ::= \{0,..,9 | A,..,F\}

The :SBUS<n>:IIC:TRIGger:PATTern:ADDRess command sets the address for IIC data. The address can range from 0x00 to 0x7F (7-bit) or 0x3FF (10-bit) hexadecimal. Use the don't care address (-1 or 0xFFFFFFFF) to ignore the address value.

Query Syntax

:SBUS<n>:IIC:TRIGger:PATTern:ADDRess?

Return Format

<value><NL>

<value> ::= integer

See Also

- "Introduction to :TRIGger Commands" on page 647

- ":SBUS<n>:IIC:TRIGger[:TYPE]" on page 527
:SBUS<n>:IIC:TRIGger:PATTern:DATA

(see page 886)

Command Syntax

:SBUS<n>:IIC:TRIGger:PATTern:DATA <value>

/value> ::= integer or <string>

<string> ::= "0xnn" where n ::= \{0,..,9 | A,..,F\}

The :SBUS<n>:IIC:TRIGger:PATTern:DATA command sets IIC data. The data value can range from 0x00 to 0x0FF (hexadecimal). Use the don't care data pattern (-1 or 0xFFFFFFFF) to ignore the data value.

Query Syntax

:SBUS<n>:IIC:TRIGger:PATTern:DATA?

Return Format

<value><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:IIC:TRIGger:PATTern:ADDRess" on page 523
• ":SBUS<n>:IIC:TRIGger:PATTern:DATa2" on page 525
• ":SBUS<n>:IIC:TRIGger[:TYPE]" on page 527
Command Syntax
:SBUS<n>:IIC:TRIGger:PATTern:DATa2 <value>

<value> ::= integer or <string>
<string> ::= "0xnn" where n ::= {0,...,9 | A,...,F}

The :SBUS<n>:IIC:TRIGger:PATTern:DATa2 command sets IIC data 2. The data value can range from 0x00 to 0x0FF (hexadecimal). Use the don't care data pattern (-1 or 0xFFFFFFFF) to ignore the data value.

Query Syntax
:SBUS<n>:IIC:TRIGger:PATTern:DATa2?

Return Format
<value><NL>

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:IIC:TRIGger:PATTern:ADDRess" on page 523
• ":SBUS<n>:IIC:TRIGger:PATTern:DATA" on page 524
• ":SBUS<n>:IIC:TRIGger[:TYPE]" on page 527
:SBUS<n>:IIC:TRIGger:QUALifier

N (see page 886)

Command Syntax

:SBUS<n>:IIC:TRIGger:QUALifier <value>

<value> ::= {EQUal | NOTequal | LESSthan | GREaterthan}

The :SBUS<n>:IIC:TRIGger:QUALifier command sets the IIC data qualifier when TRIGger:IIC:TRIGger[:TYPE] is set to READEprom.

Query Syntax

:SBUS<n>:IIC:TRIGger:QUALifier?

The :SBUS<n>:IIC:TRIGger:QUALifier? query returns the current IIC data qualifier value.

Return Format

<value><NL>

<value> ::= {EQUal | NOTequal | LESSthan | GREaterthan}

See Also

- "Introduction to :TRIGger Commands" on page 647
- "::TRIGger:MODE" on page 656

:**SBUS<n>:IIC:TRIGger[:TYPE]**

### Command Syntax

**SBUS<n>:IIC:TRIGger[:TYPE] <value>**

<value> ::= {STARt | STOP | READ7 | READEprom | WRITe7 | WRITe10 |
NACKnowledge | ANACK | R7Data2 | W7Data2 | RESTart}

The :SBUS<n>:IIC:TRIGger[:TYPE] command sets the IIC trigger type:

- **START** – Start condition.
- **STOP** – Stop condition.
- **READ7** – 7-bit address frame containing (Start:Address7:Read:Ack:Data). The value READ is also accepted for READ7.
- **R7Data2** – 7-bit address frame containing (Start:Address7:Read:Ack:Data:Ack:Data2).
- **READEprom** – EEPROM data read.
- **WRITe7** – 7-bit address frame containing (Start:Address7:Write:Ack:Data). The value WRITe is also accepted for WRITe7.
- **W7Data2** – 7-bit address frame containing (Start:Address7:Write:Ack:Data:Ack:Data2).
- **WRITe10** – 10-bit address frame containing (Start:Address byte1:Write:Ack:Address byte 2:Data).
- **NACKnowledge** – Missing acknowledge.
- **ANACK** – Address with no acknowledge.
- **RESTART** – Another start condition occurs before a stop condition.

### Query Syntax

**SBUS<n>:IIC:TRIGger[:TYPE] ?**

The :SBUS<n>:IIC:TRIGger[:TYPE]? query returns the current IIC trigger type value.

### Return Format

<value><NL>

<value> ::= {STAR | STOP | READ7 | READE | WRITe7 | WRITe10 | NACK | ANAC |
R7D2 | W7D2 | REST}

<td>&lt;base&gt; ::= {BINary</td>
</tr>
</tbody>
</table>
:SBUS<n>:LIN:PARity

N (see page 886)

Command Syntax

:SBUS<n>:LIN:PARity <display>

<display> ::= {{1 | ON} | {0 | OFF}}

The :SBUS<n>:LIN:PARity command determines whether the parity bits are included as the most significant bits (MSB) in the display of the Frame Id field in the LIN decode bus.

Query Syntax

:SBUS<n>:LIN:PARity?

The :SBUS<n>:LIN:PARity? query returns the current LIN parity bits display setting of the serial decode bus.

Return Format

<display><NL>

<display> ::= {0 | 1}

Errors

• "-241, Hardware missing" on page 849

See Also

• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:LIN Commands" on page 529
:SBUS<n>:LIN:SAMPLEpoint

Command Syntax  :SBUS<n>:LIN:SAMPLEpoint <value>

$value$<NL>

$value$ ::= {60 | 62.5 | 68 | 70 | 75 | 80 | 87.5} in NR3 format

The :SBUS<n>:LIN:SAMPLEpoint command sets the point during the bit time where the bit level is sampled to determine whether the bit is dominant or recessive. The sample point represents the percentage of time between the beginning of the bit time to the end of the bit time.

NOTE

The sample point values are not limited by the baud rate.

Query Syntax  :SBUS<n>:LIN:SAMPLEpoint?

The :SBUS<n>:LIN:SAMPLEpoint? query returns the current LIN sample point setting.

Return Format  <value><NL>

$value$ ::= {60 | 62.5 | 68 | 70 | 75 | 80 | 87.5} in NR3 format

See Also

- ":TRIGGER:MODE" on page 656
- ":SBUS<n>:LIN:TRIGGER" on page 537
Command Syntax

:SBUS<n>:LIN:SIGNal:BAUDrate <baudrate>

<baudrate> ::= integer from 2400 to 625000 in 100 b/s increments

The :SBUS<n>:LIN:SIGNal:BAUDrate command sets the standard baud rate of the LIN signal from 2400 b/s to 625 kb/s in 100 b/s increments. If you enter a baud rate that is not divisible by 100 b/s, the baud rate is set to the nearest baud rate divisible by 100 b/s.

Query Syntax

:SBUS<n>:LIN:SIGNal:BAUDrate?

Return Format

<baudrate><NL>

<baudrate> ::= integer from 2400 to 625000 in 100 b/s increments

- "::SBUS<n>:LIN:SOURce" on page 534
SBUS<n>:LIN:SOURce

Command Syntax
:SBUS<n>:LIN:SOURce <source>
<source> ::= {CHANnel<n> | EXTernal}
<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:LIN:SOURce command sets the source for the LIN signal.

Query Syntax
:SBUS<n>:LIN:SOURce?

The :SBUS<n>:LIN:SOURce? query returns the current source for the LIN signal.

Return Format
<source><NL>

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:LIN:TRIGger" on page 537
:SBUS<n>:LIN:STANdard

(see page 886)

Command Syntax
:SBUS<n>:LIN:STANdard <std>

<std> ::= {LIN13 | LIN20}

The :SBUS<n>:LIN:STANdard command sets the LIN standard in effect for triggering and decoding to be LIN1.3 or LIN2.0.

Query Syntax
:SBUS<n>:LIN:STANdard?

The :SBUS<n>:LIN:STANdard? query returns the current LIN standard setting.

Return Format
<std><NL>

<std> ::= {LIN13 | LIN20}

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:LIN:SOURce" on page 534
Command Syntax

:SBUS<n>:LIN:SYNCbreak <value>

<value> ::= integer = {11 | 12 | 13}

The :SBUS<n>:LIN:SYNCbreak command sets the length of the LIN sync break to be greater than or equal to 11, 12, or 13 clock lengths. The sync break is the idle period in the bus activity at the beginning of each packet that distinguishes one information packet from the previous one.

Query Syntax

:SBUS<n>:LIN:SYNCbreak?

The :SBUS<n>:LIN:SYNCbreak? query returns the current LIN sync break setting.

Return Format

<value><NL>

<value> ::= {11 | 12 | 13}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":SBUS<n>:LIN:SOURce" on page 534
Command Syntax  
:SBUS<n>:LIN:TRIGger <condition>

<condition> ::= {SYNCbreak | ID | DATA}

The :SBUS<n>:LIN:TRIGger command sets the LIN trigger condition to be:
- SYNCbreak — Sync Break.
- ID — Frame ID.

Use the :SBUS<n>:LIN:TRIGger:ID command to specify the frame ID.
- DATA — Frame ID and Data.

Use the :SBUS<n>:LIN:TRIGger:ID command to specify the frame ID.

Use the :SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth and
:SBUS<n>:LIN:TRIGger:PATTern:DATA commands to specify the data string
length and value.

Query Syntax  
:SBUS<n>:LIN:TRIGger?

The :SBUS<n>:LIN:TRIGger? query returns the current LIN trigger value.

Return Format  
<condition><NL>

<condition> ::= {SYNC | ID | DATA}

Errors  
- 

See Also  
- "Introduction to :TRIGger Commands" on page 647

- "SBUS<n>:LIN:TRIGger:PATTern:DATA" on page 539
- "SBUS<n>:LIN:SOURce" on page 534
:SBUS<n>:LIN:TRIGger:ID

Command Syntax

:SBUS<n>:LIN:TRIGger:ID <value>

/value> ::= 7-bit integer in decimal, <nondecimal>, or <string>

/from 0-63 or 0x00-0x3f

/nondecimal> ::= #Hnn where n ::= {0,...,9 | A,...,F} for hexadecimal

/nondecimal> ::= #Bnn...n where n ::= {0 | 1} for binary

/string> ::= "0xnn" where n ::= {0,..,9 | A,...,F} for hexadecimal

The :SBUS<n>:LIN:TRIGger:ID command defines the LIN identifier searched for in each CAN message when the LIN trigger mode is set to frame ID.

Setting the ID to a value of "-1" results in "0xXX" which is equivalent to all IDs.

Query Syntax

:SBUS<n>:LIN:TRIGger:ID?

The :SBUS<n>:LIN:TRIGger:ID? query returns the current LIN identifier setting.

Return Format

/value><NL>

/value> ::= integer in decimal

Errors

• "-241, Hardware missing" on page 849

See Also

• "Introduction to :TRIGger Commands" on page 647

• ":TRIGger:MODE" on page 656

• ":SBUS<n>:LIN:TRIGger" on page 537

• ":SBUS<n>:LIN:SOURCe" on page 534
:SBUS<n>:LIN:TRIGger:PATTern:DATA

N (see page 886)

Command Syntax

:SBUS<n>:LIN:TRIGger:PATTern:DATA <string>

<string> ::= "n" where n ::= 32-bit integer in unsigned decimal when <base> = DECimal
<string> ::= "nn...n" where n ::= {0 | 1 | X | $} when <base> = BINary
<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X | $} when <base> = HEX

<string> is specified with the :SBUS<n>:LIN:TRIGger:PATTern:FORMat command. The default <base> is BINary.

The :SBUS<n>:LIN:TRIGger:PATTern:DATA command specifies the LIN trigger data pattern searched for in each LIN data field.

Set a <string> bit to "0" or "1" to set the corresponding bit in the data pattern to low or high, respectively.

Set a <string> bit to "X" to ignore (mask off) that bit in the data pattern.

Use the "$" character to indicate that the value of the corresponding bit will not be changed (the existing bit value is used).

When <base> = DECimal, the "X" and "$" characters cannot be entered. When queried, the "$" character is returned when any bits in the pattern have the value of "X" and <base> = DECimal. When any bits in a given nibble have the value of "X" and <base> = HEX, the "$" character is returned for the corresponding nibble.

The length of the trigger data value is determined by the :SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGTH command.

If more bits are sent for <string> than the specified trigger pattern data length, the most significant bits will be truncated. If the data length size is changed after the <string> is programmed, the added or deleted bits will be added to or deleted from the least significant bits.

Query Syntax

:SBUS<n>:LIN:TRIGger:PATTern:DATA?

Return Format

<string><NL>
See Also

- "Introduction to :TRIGger Commands" on page 647
- ":SBUS<n>:LIN:TRIGger:PATTern:FORMat" on page 542
- ":SBUS<n>:LIN:TRIGger" on page 537
- ":SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGTH" on page 541
:SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth

Command Syntax

:SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth <length>

<length> ::= integer from 1 to 8 in NR1 format

The :SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth command sets the number of 8-bit bytes in the LIN data string. The number of bytes in the string can be anywhere from 1 bytes to 8 bytes (64 bits). The value for these bytes is set by the :SBUS<n>:LIN:TRIGger:PATTern:DATA command.

Query Syntax

:SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth?

The :SBUS<n>:LIN:TRIGger:PATTern:DATA:LENGth? query returns the current LIN data pattern length setting.

Return Format

<count><NL>

<count> ::= integer from 1 to 8 in NR1 format

Errors

- "-241, Hardware missing" on page 849

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":SBUS<n>:LIN:TRIGger:PATTern:DATA" on page 539
- ":SBUS<n>:LIN:SOURce" on page 534
:SBUS<n>:LIN:TRIGger:PATTern:FORMat

(see page 886)

Command Syntax

:SBUS<n>:LIN:TRIGger:PATTern:FORMat <base>

<base> ::= {BINary | HEX | DECimal}

The :SBUS<n>:LIN:TRIGger:PATTern:FORMat command sets the entry (and query) number base used by the :SBUS<n>:LIN:TRIGger:PATTern:DATA command. The default <base> is BINary.

Query Syntax

:SBUS<n>:LIN:TRIGger:PATTern:FORMat?

The :SBUS<n>:LIN:TRIGger:PATTern:FORMat? query returns the currently set number base for LIN pattern data.

Return Format

<base><NL>

<base> ::= {BIN | HEX | DEC}

:SBUS<n>:SPI:BITorder

(see page 886)

Command Syntax

:SBUS<n>:SPI:BITorder <order>

<order> ::= {LSBFirst | MSBFirst}

The :SBUS<n>:SPI:BITorder command selects the bit order, most significant bit first (MSB) or least significant bit first (LSB), used when displaying data in the serial decode waveform and in the Lister.

Query Syntax

:SBUS<n>:SPI:BITorder?

The :SBUS<n>:SPI:BITorder? query returns the current SPI decode bit order.

Return Format

<order><NL>

<order> ::= {LSBF | MSBF}

Errors

• "-241, Hardware missing" on page 849

See Also

• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:MODE" on page 501
• ":SBUS<n>:SPI Commands" on page 543
:SBUS<n>:SPI:CLOCK:SLOPe

Command Syntax
:SBUS<n>:SPI:CLOCK:SLOPe <slope>

<slope> ::= {NEGative | POSitive}

The :SBUS<n>:SPI:CLOCK:SLOPe command specifies the rising edge (POSitive) or falling edge (NEGative) of the SPI clock source that will clock in the data.

Query Syntax
:SBUS<n>:SPI:CLOCK:SLOPe?

The :SBUS<n>:SPI:CLOCK:SLOPe? query returns the current SPI clock source slope.

Return Format
<slope><NL>

<slope> ::= {NEG | POS}

See Also
• "Introduction to :TRIGger Commands" on page 647
• "SBUS<n>:SPI:CLOCK:TIMEout" on page 547
• "SBUS<n>:SPI:SOURce:CLOCK" on page 549
:SBUS<n>:SPI:CLOCK:TIMEout

Command Syntax

:SBUS<n>:SPI:CLOCK:TIMEout <time_value>

<time_value> ::= time in seconds in NR3 format

The :SBUS<n>:SPI:CLOCK:TIMEout command sets the SPI signal clock timeout resource in seconds from 100 ns to 10 s when the :SBUS<n>:SPI:FRAMing command is set to TIMEout. The timer is used to frame a signal by a clock timeout.

Query Syntax

:SBUS<n>:SPI:CLOCK:TIMEout?

Return Format

<time_value><NL>

<time_value> ::= time in seconds in NR3 format

See Also

• "Introduction to :TRIGGER Commands" on page 647
• ":SBUS<n>:SPI:CLOCK:SLOPe" on page 546
• ":SBUS<n>:SPI:SOUR:CLE:CLOCK" on page 549
• ":SBUS<n>:SPI:FRAMing" on page 548
:SBUS<n>:SPI:FRAMing

N (see page 886)

Command Syntax

:SBUS<n>:SPI:FRAMing <value>

<value> ::= {CHIPselect | {NCHIPselect | NOTC} | TIMEOUT}

The :SBUS<n>:SPI:FRAMing command sets the SPI trigger framing value. If TIMEOUT is selected, the timeout value is set by the :SBUS<n>:SPI:CLOCK:TIMEout command.

NOTE

The NOTC value is deprecated. It is the same as NCHIPselect.

Query Syntax

:SBUS<n>:SPI:FRAMing?

The :SBUS<n>:SPI:FRAMing? query returns the current SPI framing value.

Return Format

<value><NL>

<value> ::= {CHIP | NCH | TIM}

See Also

• "Introduction to TRIGGER Commands" on page 647
• "TRIGGER:MODE" on page 656
• ":SBUS<n>:SPI:CLOCK:TIMEout" on page 547
• ":SBUS<n>:SPI:SOURce:FRAME" on page 550
:SBUS<n>:SPI:SOURce:CLOCk

N (see page 886)

Command Syntax

:SBUS<n>:SPI:SOURce:CLOCk <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:SPI:SOURce:CLOCk command sets the source for the SPI serial clock.

Query Syntax

:SBUS<n>:SPI:SOURce:CLOCk?

The :SBUS<n>:SPI:SOURce:CLOCk? query returns the current source for the SPI serial clock.

Return Format

<source><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:SPI:CLOCk:SLOPe" on page 546

• ":SBUS<n>:SPI:SOURce:MISO" on page 551
:SBUS<n>:SPI:SOURce:FRAME

Command Syntax

:SBUS<n>:SPI:SOURce:FRAME <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:SPI:SOURce:FRAME command sets the frame source when :SBUS<n>:SPI:FRAMing is set to CHIPselect or NOTChipselect.

Query Syntax

:SBUS<n>:SPI:SOURce:FRAME?

The :SBUS<n>:SPI:SOURce:FRAME? query returns the current frame source for the SPI serial frame.

Return Format

<source><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:SPI:SOURce:CLOCk" on page 549

**:SBUS<n>:SPI:SOURce:MISO**

(see page 886)

**Command Syntax**

`:SBUS<n>:SPI:SOURce:MISO <source>`

`<source> ::= {CHANnel<n> | EXTernal}`

`<n> ::= 1 to (# analog channels) in NR1 format`

The :SBUS<n>:SPI:SOURce:MISO command sets the source for the SPI serial MISO data.

**Query Syntax**

`:SBUS<n>:SPI:SOURce:MISO?`

The :SBUS<n>:SPI:SOURce:MISO? query returns the current source for the SPI serial MISO data.

**Return Format**

`<source><NL>`

:SBUS<n>:SPI:SOURce:MOSI

Command Syntax
:SBUS<n>:SPI:SOURce:MOSI <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:SPI:SOURce:MOSI command sets the source for the SPI serial MOSI data.

You can also use the equivalent :SBUS<n>:SPI:SOURce:DATA command to set the MOSI data source.

Query Syntax
:SBUS<n>:SPI:SOURce:MOSI?

The :SBUS<n>:SPI:SOURce:MOSI? query returns the current source for the SPI serial MOSI data.

Return Format
<source><NL>

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":SBUS<n>:SPI:SOURce:MISO" on page 551

• ":SBUS<n>:SPI:TRIGger:PATTern:MISO:WIDTH" on page 554
• ":SBUS<n>:SPI:TRIGger:PATTern:MOSI:WIDTH" on page 556
**Command Syntax**

```plaintext
:SBUS<n>:SPI:TRIGger:PATTern:MISO:DATA <string>
```

<string> ::= "nn...n" where n ::= {0 | 1 | X | $}

<string ::= "0xnn...n" where n ::= {0,..,9 | A,..,F | X | $}

The :SBUS<n>:SPI:TRIGger:PATTern:MISO:DATA command defines the SPI data pattern resource according to the string parameter. This pattern, along with the data width, control the data pattern searched for in the data stream.

If the string parameter starts with "0x", it is a hexadecimal string made up of hexadecimal and X (don't care) characters; otherwise, it is a binary string made up of 0, 1, and X (don't care) characters.

**Query Syntax**

```plaintext
:SBUS<n>:SPI:TRIGger:PATTern:MISO:DATA?
```

**Return Format**

```plaintext
<string><NL>
```

**See Also**

- ":SBUS<n>:SPI:SOURce:MISO" on page 551

---

*NOTE*

Command Syntax

```
:SBUS<n>:SPI:TRIGger:PATTern:MISO:WIDTh <width>

<width> ::= integer from 4 to 64 in NR1 format
```

The :SBUS<n>:SPI:TRIGger:PATTern:MISO:WIDTh command sets the width of the SPI data pattern anywhere from 4 bits to 64 bits.

NOTE

Query Syntax

```
:SBUS<n>:SPI:TRIGger:PATTern:MISO:WIDTh?
```

Return Format

```
<width><NL>

<width> ::= integer from 4 to 64 in NR1 format
```

:SBUS\langle block\rangle:SPI:TRIGger:PATTern:MOSI:DATA

#### Command Syntax

:SBUS\langle block\rangle:SPI:TRIGger:PATTern:MOSI:DATA <string>

<string> ::= "nn...n" where n ::= \{0 \mid 1 \mid X \mid \$

<string> ::= "0xnn...n" where n ::= \{0,\ldots,9 \mid A,\ldots,F \mid X \mid \$

The :SBUS\langle block\rangle:SPI:TRIGger:PATTern:MOSI:DATA command defines the SPI data pattern resource according to the string parameter. This pattern, along with the data width, control the data pattern searched for in the data stream.

If the string parameter starts with "0x", it is a hexadecimal string made up of hexadecimal and X (don't care) characters; otherwise, it is a binary string made up of 0, 1, and X (don't care) characters.

#### Query Syntax

:SBUS\langle block\rangle:SPI:TRIGger:PATTern:MOSI:DATA?

The :SBUS\langle block\rangle:SPI:TRIGger:PATTern:MOSI:DATA? query returns the current settings of the specified SPI data pattern resource in the binary string format.

#### Return Format

<string><NL>

#### See Also

- "Introduction to :TRIGger Commands" on page 647

:SBUS<n>::SPI:TRIGger:TYPE

Command Syntax
:SBUS<n>::SPI:TRIGger:TYPE <value>

<value> ::= {MOSI | MISO}

The :SBUS<n>::SPI:TRIGger:TYPE command specifies whether the SPI trigger will be on the MOSI data or the MISO data.

When triggering on MOSI data, the data value is specified by the :SBUS<n>::SPI:TRIGger:PATTern:MOSI:DATA and :SBUS<n>::SPI:TRIGger:PATTern:MOSI:WIDTh commands.

When triggering on MISO data, the data value is specified by the :SBUS<n>::SPI:TRIGger:PATTern:MISO:DATA and :SBUS<n>::SPI:TRIGger:PATTern:MISO:WIDTh commands.

Query Syntax
:SBUS<n>::SPI:TRIGger:TYPE?

The :SBUS<n>::SPI:TRIGger:TYPE? query returns the current SPI trigger type setting.

Return Format
<value><NL>

<value> ::= {MOSI | MISO}

:SBUS<n>:SPI:WIDTh

N (see page 886)

Command Syntax
:SBUS<n>:SPI:WIDTh <word_width>

<word_width> ::= integer 4-16 in NR1 format

The :SBUS<n>:SPI:WIDTh command determines the number of bits in a word of data for SPI.

Query Syntax
:SBUS<n>:SPI:WIDTh?

The :SBUS<n>:SPI:WIDTh? query returns the current SPI decode word width.

Return Format
<word_width><NL>

<word_width> ::= integer 4-16 in NR1 format

Errors
- "-241, Hardware missing" on page 849

See Also
- "Introduction to :SBUS<n> Commands" on page 497

</tr>
</tbody>
</table>
:SBUS<n>:UART:BASE

Command Syntax  
:SBUS<n>:UART:BASE <base>

<base> ::= {ASCII | BINARY | HEX}

The :SBUS<n>:UART:BASE command determines the base to use for the UART decode and Lister display.

Query Syntax  
:SBUS<n>:UART:BASE?

The :SBUS<n>:UART:BASE? query returns the current UART decode and Lister base setting.

Return Format  
<base><NL>

<base> ::= {ASCII | BINARY | HEX}

Errors  
• "-241, Hardware missing" on page 849

See Also  
• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:UART Commands" on page 559
:SBUS<n>:UART:BAUDrate

Command Syntax

:SBUS<n>:UART:BAUDrate <baudrate>

<baudrate> ::= integer from 100 to 8000000

The :SBUS<n>:UART:BAUDrate command selects the bit rate (in bps) for the serial decoder and/or trigger when in UART mode. The baud rate can be set from 100 b/s to 8 Mb/s.

If the baud rate you select does not match the system baud rate, false triggers may occur.

Query Syntax

:SBUS<n>:UART:BAUDrate?

The :SBUS<n>:UART:BAUDrate? query returns the current UART baud rate setting.

Return Format

<baudrate><NL>

<baudrate> ::= integer from 100 to 8000000

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:BITorder

(see page 886)

Command Syntax  
:SBUS<n>:UART:BITorder <bitorder>

<bitorder> ::= {LSBFirst | MSBFirst}

The :SBUS<n>:UART:BITorder command specifies the order of transmission used by the physical Tx and Rx input signals for the serial decoder and/or trigger when in UART mode. LSBFirst sets the least significant bit of each message "byte" as transmitted first. MSBFirst sets the most significant bit as transmitted first.

Query Syntax  
:SBUS<n>:UART:BITorder?

The :SBUS<n>:UART:BITorder? query returns the current UART bit order setting.

Return Format  
<bitorder><NL>

<bitorder> ::= {LSBF | MSBF}

See Also  
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656

- ":SBUS<n>:UART:SOURce:TX" on page 572
:SBUS<n>:UART:COUNt:ERRor

(see page 886)

Query Syntax  :SBUS<n>:UART:COUNt:ERRor?

Returns the UART error frame count.

Return Format  <frame_count><NL>

[frame_count] ::= integer in NR1 format

Errors  • "-241, Hardware missing" on page 849

See Also  • ":SBUS<n>:UART:COUNt:RESet" on page 565
  • "Introduction to :SBUS<n> Commands" on page 497
  • ":SBUS<n>:MODE" on page 501
  • ":SBUS<n>:UART Commands" on page 559
:SBUS<n>:UART:COUNt:RESet

(see page 886)

Command Syntax

:SBUS<n>:UART:COUNt:RESet

Resets the UART frame counters.

Errors

• "-241, Hardware missing" on page 849

See Also

• ":SBUS<n>:UART:COUNt:ERRor" on page 564
• ":SBUS<n>:UART:COUNt:RXFRames" on page 566

• ":SBUS<n>:MODE" on page 501
• ":SBUS<n>:UART Commands" on page 559
:SBUS<n>:UART:COUNt:RXFRames

N (see page 886)

Query Syntax

:SBUS<n>:UART:COUNt:RXFRames?

Returns the UART Rx frame count.

Return Format

<frame_count><NL>

[frame_count] ::= integer in NR1 format

Errors

• "-241, Hardware missing" on page 849

See Also

• ":SBUS<n>:UART:COUNt:RESet" on page 565
• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:MODE" on page 501
• ":SBUS<n>:UART Commands" on page 559
:SBUS<n>:UART:COUNt:TXFRames

Query Syntax
:SBUS<n>:UART:COUNt:TXFRames?

Returns the UART Tx frame count.

Return Format
[frame_count]<NL>

[frame_count] ::= integer in NR1 format

Errors
• "-241, Hardware missing" on page 849

See Also
• ":SBUS<n>:UART:COUNt:RESet" on page 565
• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:MODE" on page 501
• ":SBUS<n>:UART Commands" on page 559
SBUS<n>:UART:FRAMing

Command Syntax

:SBUS<n>:UART:FRAMing <value>

<value> ::= {OFF | <decimal> | <nondecimal>}
<decimal> ::= 8-bit integer in decimal from 0-255 (0x00-0xff)
<nondecimal> ::= #Hnn where n ::= {0,...,9 | A,...,F} for hexadecimal
<nondecimal> ::= #Bnn...n where n ::= {0 | 1} for binary

The :SBUS<n>:UART:FRAMing command determines the byte value to use for framing (end of packet) or to turn off framing for UART decode.

Query Syntax

:SBUS<n>:UART:FRAMing?

The :SBUS<n>:UART:FRAMing? query returns the current UART decode base setting.

Return Format

<value><NL>

<value> ::= {OFF | <decimal>}
<decimal> ::= 8-bit integer in decimal from 0-255

Errors

• "-241, Hardware missing" on page 849

See Also

• "Introduction to :SBUS<n> Commands" on page 497
• ":SBUS<n>:UART Commands" on page 559
:SBUS<n>:UART:PARity

Command Syntax

:SBUS<n>:UART:PARity <parity>

<parity> ::= {EVEN | ODD | NONE}

The :SBUS<n>:UART:PARity command selects the parity to be used with each message "byte" for the serial decoder and/or trigger when in UART mode.

Query Syntax

:SBUS<n>:UART:PARity?

The :SBUS<n>:UART:PARity? query returns the current UART parity setting.

Return Format

<parity><NL>

<parity> ::= {EVEN | ODD | NONE}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:POLarity

Command Syntax

:SBUS<n>:UART:POLarity <polarity>

<polarity> ::= {HIGH | LOW}

The :SBUS<n>:UART:POLarity command selects the polarity as idle low or idle high for the serial decoder and/or trigger when in UART mode.

Query Syntax

:SBUS<n>:UART:POLarity?

The :SBUS<n>:UART:POLarity? query returns the current UART polarity setting.

Return Format

<polarity><NL>

<polarity> ::= {HIGH | LOW}

See Also

- "Introduction to TRIGGER Commands" on page 647
- ":TRIGGER:MODE" on page 656
- ":SBUS<n>:UART:TRIGGER:TYPE" on page 578
:SBUS<n>:UART:SOURce:RX

(see page 886)

Command Syntax

:SBUS<n>:UART:SOURce:RX <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:UART:SOURce:RX command controls which signal is used as the Rx source by the serial decoder and/or trigger when in UART mode.

Query Syntax

:SBUS<n>:UART:SOURce:RX?

The :SBUS<n>:UART:SOURce:RX? query returns the current source for the UART Rx signal.

Return Format

<source><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":SBUS<n>:UART:TRIGger:TYPE" on page 578
• ":SBUS<n>:UART:BITorder" on page 563
:SBUS<n>:UART:SOURce:TX

Command Syntax
:SBUS<n>:UART:SOURce:TX <source>

<source> ::= {CHANnel<n> | EXTernal}

<n> ::= 1 to (# analog channels) in NR1 format

The :SBUS<n>:UART:SOURce:TX command controls which signal is used as the Tx source by the serial decoder and/or trigger when in UART mode.

Query Syntax
:SBUS<n>:UART:SOURce:TX?

The :SBUS<n>:UART:SOURce:TX? query returns the current source for the UART Tx signal.

Return Format
<source><NL>

See Also
- "Introduction to :TRIGger Commands" on page 647
- ".:TRIGger:MODE" on page 656
- ".:SBUS<n>:UART:TRIGger:TYPE" on page 578
- ".:SBUS<n>:UART:BITorder" on page 563
:SBUS<n>:UART:TRIGger:BASE

**Command Syntax**

:SBUS<n>:UART:TRIGger:BASE <base>

<base> ::= {ASCII | HEX}

The :SBUS<n>:UART:TRIGger:BASE command sets the front panel UART/RS232 trigger setup data selection option:

- ASCII — front panel data selection is from ASCII values.
- HEX — front panel data selection is from hexadecimal values.

The :SBUS<n>:UART:TRIGger:BASE setting does not affect the :SBUS<n>:UART:TRIGger:DATA command which can always set data values using ASCII or hexadecimal values.

**NOTE**

The :SBUS<n>:UART:TRIGger:BASE command is independent of the :SBUS<n>:UART:BASE command which affects decode and Lister only.

**Query Syntax**

:SBUS<n>:UART:TRIGger:BASE?

The :SBUS<n>:UART:TRIGger:BASE? query returns the current UART base setting.

**Return Format**

<base><NL>

<base> ::= {ASC | HEX}

**See Also**

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:UART:TRIGger:DATA" on page 575
:SBUS<n>:UART:TRIGger:BURSt

N  (see page 886)

Command Syntax  
:SBUS<n>:UART:TRIGger:BURSt  <value>

<value> ::= {OFF | 1 to 4096 in NR1 format}

The :SBUS<n>:UART:TRIGger:BURSt command selects the burst value (Nth frame after idle period) in the range 1 to 4096 or OFF, for the trigger when in UART mode.

Query Syntax  
:SBUS<n>:UART:TRIGger:BURSt?

The :SBUS<n>:UART:TRIGger:BURSt? query returns the current UART trigger burst value.

Return Format  
<value><NL>

<value> ::= {OFF | 1 to 4096 in NR1 format}

See Also  
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:UART:TRIGger:IDLE" on page 576
- ":SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:TRIGger:DATA

N (see page 886)

Command Syntax

:SBUS<n>:UART:TRIGger:DATA <value>

<value> ::= 8-bit integer from 0-255 (0x00-0xff) in decimal, hexadecimal, binary, or quoted_string format

Query Syntax

:SBUS<n>:UART:TRIGger:DATA?

Return Format

<value><NL>

<value> ::= 8-bit integer in decimal from 0-255

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:UART:TRIGger:BASE" on page 573
- ":SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:TRIGger:IDLE

Command Syntax
:SBUS<n>:UART:TRIGger:IDLE <time_value>

<time_value> ::= time from 1 us to 10 s in NR3 format

The :SBUS<n>:UART:TRIGger:IDLE command selects the value of the idle period for burst trigger in the range from 1 us to 10 s when in UART mode.

Query Syntax
:SBUS<n>:UART:TRIGger:IDLE?

The :SBUS<n>:UART:TRIGger:IDLE? query returns the current UART trigger idle period time.

Return Format
<time_value><NL>
<time_value> ::= time from 1 us to 10 s in NR3 format

See Also
- "Introduction to :TRIGger Commands" on page 647
- "::TRIGger:MODE" on page 656
- "::SBUS<n>:UART:TRIGger:BURSt" on page 574
- "::SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:TRIGger:QUALifier

Command Syntax

:SBUS<n>:UART:TRIGger:QUALifier <value>

<value> ::= {EQUal | NOTequal | GREaterthan | LESSthan}

The :SBUS<n>:UART:TRIGger:QUALifier command selects the data qualifier when :TYPE is set to RDATa, RD1, RD0, RDX, TDATa, TD1, TD0, or TDX for the trigger when in UART mode.

Query Syntax

:SBUS<n>:UART:TRIGger:QUALifier?

Return Format

<value><NL>

<value> ::= {EQU | NOT | GRE | LESS}

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":SBUS<n>:UART:TRIGger:TYPE" on page 578
:SBUS<n>:UART:TRIGger:TYPE

(see page 886)

Command Syntax

```
:SBUS<n>:UART:TRIGger:TYPE <value>
```

<value> ::= {RSTArt | RSTOp | RDATa | RD1 | RD0 | RDX | PARityerror | TSTArt | TSTOp | TDATa | TD1 | TD0 | TDX}

The :SBUS<n>:UART:TRIGger:TYPE command selects the UART trigger type.

When one of the RD or TD types is selected, the :SBUS<n>:UART:TRIGger:DATA and :SBUS<n>:UART:TRIGger:QUALifier commands are used to specify the data value and comparison operator.

The RD1, RD0, RDX, TD1, TD0, and TDX types (for triggering on data and alert bit values) are only valid when a 9-bit width has been selected.

Query Syntax

```
:SBUS<n>:UART:TRIGger:TYPE?
```

Return Format

```
<value><NL>
```

<value> ::= {RSTA | RSTO | RDAT | RD1 | RD0 | RDX | PAR | TSTA | TSTO | TDAT | TD1 | TD0 | TDX}

- ":SBUS<n>:UART:TRIGger:QUALifier" on page 577
- ":SBUS<n>:UART:WIDTH" on page 579
:SBUS<n>:UART:WIDTh

N (see page 886)

Command Syntax  
:SBUS<n>:UART:WIDTh <width>

<width> ::= {5 | 6 | 7 | 8 | 9}

The :SBUS<n>:UART:WIDTh command determines the number of bits (5-9) for each message "byte" for the serial decoder and/or trigger when in UART mode.

Query Syntax  
:SBUS<n>:UART:WIDTh?

The :SBUS<n>:UART:WIDTh? query returns the current UART width setting.

Return Format  
<width><NL>

<width> ::= {5 | 6 | 7 | 8 | 9}

See Also

</tr>
</tbody>
</table>
:SEARch:COUNt

N (see page 886)

Query Syntax  :SEARch:COUNt?

The :SEARch:COUNt? query returns the number of search events found.

Return Format  <count><NL>
<count> ::= an integer count value

See Also  • Chapter 26, “:SEARch Commands,” starting on page 581
:SEARch:MODE

(see page 886)

Command Syntax

:SEARch:MODE <value>

<value> ::= {SERial1}

The :SEARch:MODE command selects the search mode.

The command is only valid when the :SEARch:STATe is ON.

Query Syntax

:SEARch:MODE?

The :SEARch:MODE? query returns the currently selected mode or OFF if the :SEARch:STATe is OFF.

Return Format

<value><NL>

<value> ::= {SER1 | OFF}

See Also

• Chapter 26, ":SEARch Commands," starting on page 581
• ":SEARch:STATe" on page 585
:SEARch:STATe

N (see page 886)

Command Syntax
:SEARch:STATe <value>

<value> ::= {{0 | OFF} | {1 | ON}}

The :SEARch:STATe command enables or disables the search feature.

Query Syntax
:SEARch:STATe?

The :SEARch:STATe? query returns the current setting.

Return Format
<value><NL>

<value> ::= {0 | 1}

<td>:SEARch:SERial:CAN:PA TTern:ID? (see page 590)</td>
<td>&lt;string&gt; ::= &quot;0xnn...n&quot; where n ::= {0,..,9</td>
</tr>
<tr>
<td>:SEARch:SERial:CAN:PA TTern:ID:MODE &lt;value&gt; (see page 591)</td>
<td>:SEARch:SERial:CAN:PA TTern:ID:MODE? (see page 591)</td>
<td>&lt;value&gt; ::= {STANdard</td>
</tr>
</tbody>
</table>
:SEARch:SERial:CAN:MODE

N (see page 886)

Command Syntax
:SEARch:SERial:CAN:MODE <value>

<value> ::= {DATA | IDData | IDEither | IDRemote | ALLerrors |
OVERload | ERRor}

The :SEARch:SERial:CAN:MODE command selects the type of CAN information to find in the Lister display:

• DATA - searches for CAN Data frames matching the specified ID, Data, and the DLC (Data length code).
• IDData - searches for CAN frames matching the specified ID of a Data frame.
• IDEither - searches for the specified ID, regardless if it is a Remote frame or a Data frame.
• IDRemote - searches for CAN frames matching the specified ID of a Remote frame.
• ALLerrors - searches for CAN active error frames and unknown bus conditions.
• OVERload - searches for CAN overload frames.
• ERRor - searches for CAN Error frame.

Query Syntax
:SEARch:SERial:CAN:MODE?

The :SEARch:SERial:CAN:MODE? query returns the currently selected mode.

Return Format
<value><NL>

<value> ::= {DATA | IDD | IDE | IDR | ALL | OVER | ERR}

See Also
• Chapter 26, "SEARch Commands," starting on page 581
• "SEARch:SERial:CAN:PATTern:DATA" on page 588
• "SEARch:SERial:CAN:PATTern:ID" on page 590
:SEARch:SERial:CAN:PATTern:DATA

N (see page 886)

Command Syntax

:SEARch:SERial:CAN:PATTern:DATA <string>

<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X}
    for hexadecimal

The :SEARch:SERial:CAN:PATTern:DATA command specifies the data value when searching for Data Frame ID and Data.

The length of the data value is specified using the :SEARch:SERial:CAN:PATTern:DATA:LENGth command.

Query Syntax

:SEARch:SERial:CAN:PATTern:DATA?

The :SEARch:SERial:CAN:PATTern:DATA? query returns the current data value setting.

Return Format

<string><NL>
<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X}
    for hexadecimal

See Also

• Chapter 26, "SEARch Commands," starting on page 581

• "SEARch:SERial:CAN:PATTern:DATA:LENGth" on page 589
:SEARch:SERial:CAN:PA TTern:DATA:LENGth

N (see page 886)

Command Syntax

:SEARch:SERial:CAN:PA TTern:DATA:LENGth <length>

<length> ::= integer from 1 to 8 in NR1 format

The :SEARch:SERial:CAN:PA TTern:DATA:LENGth command specifies the length of the data value when searching for Data Frame ID and Data.

The data value is specified using the :SEARch:SERial:CAN:PA TTern:DATA command.

Query Syntax

:SEARch:SERial:CAN:PA TTern:DATA:LENGth?

The :SEARch:SERial:CAN:PA TTern:DATA:LENGth? query returns the current data length setting.

Return Format

<length><NL>

<length> ::= integer from 1 to 8 in NR1 format

See Also

- Chapter 26, " :SEARch Commands," starting on page 581
- " :SEARch:SERial:CAN:MODE" on page 587

:SEARch:SERial:CAN:PATTern:ID

Command Syntax
:SEARch:SERial:CAN:PATTern:ID <string>

<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X} for hexadecimal

The :SEARch:SERial:CAN:PATTern:ID command specifies the ID value when searching for a CAN event.

The value can be a standard ID or an extended ID, depending on the :SEARch:SERial:CAN:PATTern:ID:MODE command's setting.

Query Syntax
:SEARch:SERial:CAN:PATTern:ID?

Return Format
<string><NL>
<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X} for hexadecimal

See Also
- Chapter 26, ":SEARch Commands," starting on page 581
- ":SEARch:SERial:CAN:MODE" on page 587
- ":SEARch:SERial:CAN:PATTern:ID:MODE" on page 591
The :SEARch:SERial:CAN:PATTern:ID:MODE command specifies whether a standard ID value or an extended ID value is used when searching for a CAN event. The ID value is specified using the :SEARch:SERial:CAN:PATTern:ID command.

Command Syntax

:SEARch:SERial:CAN:PATTern:ID:MODE <value>

<value> ::= {STANdard | EXTended}

Query Syntax

:SEARch:SERial:CAN:PATTern:ID:MODE?

Return Format

,value,<NL>

,value> ::= {STAN | EXT}

</tbody>
</table>
#:SEARch:SERial:IIC:MODE

Command Syntax

#:SEARch:SERial:IIC:MODE <value>

<value> ::= {READ7 | WRITE7 | NACKnowledge | ANACk | R7Data2 | W7Data2 | RESTart | READEprom}

The :SEARch:SERial:IIC:MODE command selects the type of IIC information to find in the Lister display:

- **READ7** — searches for 7-bit address frames containing \texttt{Start:Address7:Read:Ack:Data}. The value \texttt{READ} is also accepted for \texttt{READ7}.
- **WRITE7** — searches for 7-bit address frames containing \texttt{Start:Address7:Write:Ack:Data}. The value \texttt{WRITe} is also accepted for \texttt{WRITE7}.
- **NACKnowledge** — searches for missing acknowledge events.
- **ANACk** — searches for address with no acknowledge events.
- **R7Data2** — searches for 7-bit address frames containing \texttt{Start:Address7:Read:Ack:Data:Ack:Data2}.
- **W7Data2** — searches for 7-bit address frames containing \texttt{Start:Address7:Write:Ack:Data:Ack:Data2}.
- **RESTart** — searches for another start condition occurring before a stop condition.
- **READEprom** — searches for EEPROM data reads.

**NOTE**

The short form of \texttt{READ7} (\texttt{READ7}), \texttt{READEprom} (\texttt{READE}), and \texttt{WRITE7} (\texttt{WRITe}) do not follow the defined Long Form to Short Form Truncation Rules (see page 888).

When searching for events containing addresses, address values are specified using the :SEARch:SERial:IIC:PATTern:ADDRESS command.

Query Syntax

#:SEARch:SERial:IIC:MODE?

The :SEARch:SERial:IIC:MODE? query returns the currently selected mode.

Return Format

<value><NL>

<value> ::= {READ7 | WRITE7 | NACK | ANAC | R7D2 | W7D2 | REST | READE}

See Also

- Chapter 26, "SEARch Commands," starting on page 581

• "**:SEARch:SERial:IIC:QUALifier" on page 598
:SEARch:SERial:IIC:PATTern:ADDRess

(see page 886)

Command Syntax

<value> ::= integer or <string>

<string> ::= "0xnn" n ::= {0,..,9 | A,..,F}

The :SEARch:SERial:IIC:PATTern:ADDRess command specifies address values when searching for IIC events.

To set don't care values, use the integer -1.

Query Syntax
:SEARch:SERial:IIC:PATTern:ADDRess?

Return Format
<value><NL>

<value> ::= integer

See Also
• Chapter 26, " :SEARch Commands," starting on page 581
• " :SEARch:SERial:IIC:MODE" on page 593
:SEARch:SERial:IIC:PATTern:DATA

N  (see page 886)

Command Syntax

:SEARch:SERial:IIC:PATTern:DATA <value>

<value> ::= integer or <string>
<string> ::= "0xnn"  n ::= {0,..,9 | A,..,F}

The :SEARch:SERial:IIC:PATTern:DATA command specifies data values when searching for IIC events.

To set don't care values, use the integer -1.

When searching for IIC EEPROM data read events, you specify the data value qualifier using the :SEARch:SERial:IIC:QUALifier command.

Query Syntax

:SEARch:SERial:IIC:PATTern:DATA?

The :SEARch:SERial:IIC:PATTern:DATA? query returns the current data value setting.

Return Format

<value><NL>

<value> ::= integer

See Also

• Chapter 26, "SEARch Commands," starting on page 581

**:SEARch:SERial:IIC:PATTern:DATA2**

### Command Syntax

`:SEARch:SERial:IIC:PATTern:DATA2 <value>`

- `<value>` ::= integer or `<string>`
- `<string>` ::= "0xnn"  
  
  `n` ::= `{0,..,9 | A,..,F}

The :SEARch:SERial:IIC:PATTern:DATA2 command specifies the second data value when searching for IIC events with two data values.

To set don't care values, use the integer -1.

### Query Syntax

`:SEARch:SERial:IIC:PATTern:DATA2?`

The :SEARch:SERial:IIC:PATTern:DATA2? query returns the current second data value setting.

### Return Format

`<value><NL>`

- `<value>` ::= integer

### See Also

:SEARch:SERial:IIC:QUALifier

(see page 886)

Command Syntax

:SEARch:SERial:IIC:QUALifier <value>

<value> ::= {EQUal | NOTequal | LESSthan | GREaterthan}

The :SEARch:SERial:IIC:QUALifier command specifies the data value qualifier used when searching for IIC EEPROM data read events.

Query Syntax

:SEARch:SERial:IIC:QUALifier?

The :SEARch:SERial:IIC:QUALifier? query returns the current data value qualifier setting.

Return Format

<value><NL>

<value> ::= {EQU | NOT | LESS | GRE}

</tr>
</tbody>
</table>
**:SEARch:SERial:LIN:ID**

N (see page 886)

**Command Syntax**

```
:SEARch:SERial:LIN:ID <value>
```

<value> ::= 7-bit integer in decimal, <nondecimal>, or <string>

from 0-63 or 0x00-0x3f (with Option AMS)

<nondecimal> ::= #Hnn where n ::= {0,...,9 | A,...,F} for hexadecimal

<nondecimal> ::= #Bnn...n where n ::= {0 | 1} for binary

<string> ::= "0xnn" where n ::= {0,...,9 | A,...,F} for hexadecimal

The :SEARch:SERial:LIN:ID command specifies the frame ID value when searching for LIN events.

**Query Syntax**

```
:SEARch:SERial:LIN:ID?
```

The :SEARch:SERial:LIN:ID? query returns the current frame ID setting.

**Return Format**

```
<value><NL>
```

<value> ::= 7-bit integer in decimal (with Option AMS)

**See Also**

- Chapter 26, ":SEARch Commands," starting on page 581
- "`:SEARch:SERial:LIN:MODE" on page 601
:SEARch:SERial:LIN:MODE

(see page 886)

Command Syntax

:SEARch:SERial:LIN:MODE <value>

<value> ::= {ID | DATA | ERRor}

The :SEARch:SERial:LIN:MODE command selects the type of LIN information to find in the Lister display:

- ID — searches for a frame ID.
- DATA — searches for a frame ID and data.
- ERRor — searches for errors.

Frame IDs are specified using the :SEARch:SERial:LIN:ID command.

Data values are specified using the :SEARch:SERial:LIN:PATTern:DATA command.

Query Syntax

:SEARch:SERial:LIN:MODE?

The :SEARch:SERial:LIN:MODE? query returns the currently selected mode.

Return Format

<value><NL>

<value> ::= {ID | DATA | ERR}

See Also

- Chapter 26, " :SEARch Commands," starting on page 581
- " :SEARch:SERial:LIN:ID" on page 600
- " :SEARch:SERial:LIN:PATTern:DATA" on page 602
:SEARch:SERial:LIN:PATTern:DATA

N (see page 886)

Command Syntax
:SEARch:SERial:LIN:PATTern:DATA <string>

When :SEARch:SERial:LIN:PATTern:FORMat DECimal,
<string> ::= "n" where n ::= 32-bit integer in unsigned decimal

When :SEARch:SERial:LIN:PATTern:FORMat HEX,
<string> ::= "0xnn...n" where n ::= \{0,..,9 | A,..,F | X \}

The :SEARch:SERial:LIN:PATTern:DATA command specifies the data value when searching for LIN events.

The number base of the value entered with this command is specified using the :SEARch:SERial:LIN:PATTern:FORMat command. To set don't care values with the DATA command, the FORMat must be HEX.

The length of the data value entered is specified using the :SEARch:SERial:LIN:PATTern:DATA:LENGth command.

Query Syntax
:SEARch:SERial:LIN:PATTern:DATA?

The :SEARch:SERial:LIN:PATTern:DATA? query returns the current data value setting.

Return Format
<string><NL>

When :SEARch:SERial:LIN:PATTern:FORMat DECimal,
<string> ::= "n" where n ::= 32-bit integer in unsigned decimal or "$" if data has any don't cares

When :SEARch:SERial:LIN:PATTern:FORMat HEX,
<string> ::= "0xnn...n" where n ::= \{0,..,9 | A,..,F | X \}

• ":SEARch:SERial:LIN:PATTern:DATA:LENGth" on page 603
:SEARch:SERial:LIN:PATTern:DATA:LENGth

(see page 886)

Command Syntax
:SEARch:SERial:LIN:PATTern:DATA:LENGth <length>

<length> ::= integer from 1 to 8 in NR1 format

The :SEARch:SERial:LIN:PATTern:DATA:LENGth command specifies the length of the data value when searching for LIN events.

The data value is specified using the :SEARch:SERial:LIN:PATTern:DATA command.

Query Syntax
:SEARch:SERial:LIN:PATTern:DATA:LENGth?

The :SEARch:SERial:LIN:PATTern:DATA:LENGth? query returns the current data value length setting.

Return Format
<length><NL>

<length> ::= integer from 1 to 8 in NR1 format

<td>(see page 608)</td>
<td></td>
</tr>
</tbody>
</table>
:SEARch:SERial:SPI:MODE

Command Syntax
:SEARch:SERial:SPI:MODE <value>

<value> ::= {MOSI | MISO}

The :SEARch:SERial:SPI:MODE command specifies whether the SPI search will be on the MOSI data or the MISO data.

Data values are specified using the :SEARch:SERial:SPI:PATTern:DATA command.

Query Syntax
:SEARch:SERial:SPI:MODE?

The :SEARch:SERial:SPI:MODE? query returns the current SPI search mode setting.

Return Format
<value><NL>

<value> ::= {MOSI | MISO}

See Also
• Chapter 26, "SEARch Commands," starting on page 581
• "SEARch:SERial:SPI:PATTern:DATA" on page 607
:SEARch:SERial:SPI:PATTern:DATA

N (see page 886)

Command Syntax

:SEARch:SERial:SPI:PATTern:DATA <string>

<string> ::= "0xnn...n" where n ::= \{0,..,9 | A,..,F | X\}

The :SEARch:SERial:SPI:PATTern:DATA command specifies the data value when searching for SPI events.

The width of the data value is specified using the :SEARch:SERial:SPI:PATTern:WIDTH command.

Query Syntax

:SEARch:SERial:SPI:PATTern:DATA?

The :SEARch:SERial:SPI:PATTern:DATA? query returns the current data value setting.

Return Format

<string><NL>

<string> ::= "0xnn...n" where n ::= \{0,..,9 | A,..,F | X\}

See Also

- ":SEARch:SERial:SPI:PATTern:WIDTH" on page 608
:SEARch:SERial:SPI:PATTern:WIDTh

N (see page 886)

Command Syntax

:SEARch:SERial:SPI:PATTern:WIDTh <width>

<width> ::= integer from 1 to 10

The :SEARch:SERial:SPI:PATTern:WIDTh command specifies the width of the data value (in bytes) when searching for SPI events.

The data value is specified using the :SEARch:SERial:SPI:PATTern:DATA command.

Query Syntax

:SEARch:SERial:SPI:PATTern:WIDTh?

The :SEARch:SERial:SPI:PATTern:WIDTh? query returns the current data width setting.

Return Format

<width><NL>

<width> ::= integer from 1 to 10

**:SEARch:SERial:UART:DATA**

N (see page 886)

**Command Syntax**

:SEARch:SERial:UART:DATA <value>

<value> ::= 8-bit integer from 0-255 (0x00-0xff) in decimal,
<hexadecimal>, <binary>, or <quoted_string> format

<hexadecimal> ::= #Hnn where n ::= {0..., 9 | A..., F} for hexadecimal

<binary> ::= #Bnn...n where n ::= {0 | 1} for binary

<quoted_string> ::= any of the 128 valid 7-bit ASCII characters (or
standard abbreviations)

The :SEARch:SERial:UART:DATA command specifies a data value when searching
for UART/RS232 events.

The data value qualifier is specified using the :SEARch:SERial:UART:QUALifier
command.

**Query Syntax**

:SEARch:SERial:UART:DATA?

The :SEARch:SERial:UART:DATA? query returns the current data value setting.

**Return Format**

<value><NL>

<value> ::= 8-bit integer from 0-255 (0x00-0xff) in decimal format

**See Also**

- Chapter 26, “:SEARch Commands,” starting on page 581
- "**:SEARch:SERial:UART:MODE" on page 611
- "**:SEARch:SERial:UART:QUALifier" on page 612
:SEARch:SERial:UART:MODE

Command Syntax

```
:SEARch:SERial:UART:MODE <value>
```

<value> ::= {RDATa | RD1 | RD0 | RDX | TDATa | TD1 | TD0 | TDX | PARityerror | AERRor}

The :SEARch:SERial:UART:MODE command selects the type of UART/RS232 information to find in the Lister display:

- **RDATa** — searches for a receive data value when data words are from 5 to 8 bits long.
- **RD1** — searches for a receive data value when data words are 9 bits long and the 9th (alert) bit is 1.
- **RD0** — searches for a receive data value when data words are 9 bits long and the 9th (alert) bit is 0.
- **RDX** — searches for a receive data value when data words are 9 bits long and the 9th (alert) bit is a don't care (X).
- **TDATa** — searches for a transmit data value when data words are from 5 to 8 bits long.
- **TD1** — searches for a transmit data value when data words are 9 bits long and the 9th (alert) bit is 1.
- **TD0** — searches for a transmit data value when data words are 9 bits long and the 9th (alert) bit is 0.
- **TDX** — searches for a transmit data value when data words are 9 bits long and the 9th (alert) bit is a don't care (X).
- **PARityerror** — searches for parity errors.
- **AERRor** — searches for any error.

Data values are specified using the :SEARch:SERial:UART:DATA command.

Data value qualifiers are specified using the :SEARch:SERial:UART:QUALifier command.

Query Syntax

```
:SEARch:SERial:UART:MODE?
```

The :SEARch:SERial:UART:MODE? query returns ...

Return Format

```
<value><NL>
<value> ::= {RDAT | RD1 | RD0 | RDX | TDAT | TD1 | TD0 | TDX | PAR | AERR}
```

- ":SEARch:SERial:UART:QUALifier" on page 612
:SEARch:SERial:UART:QUALifier

Command Syntax

:SEARch:SERial:UART:QUALifier <value>

<value> ::= {EQUal | NOTequal | GREaterthan | LESSthan}

The :SEARch:SERial:UART:QUALifier command specifies the data value qualifier when searching for UART/RS232 events.

Query Syntax

:SEARch:SERial:UART:QUALifier?

The :SEARch:SERial:UART:QUALifier? query returns the current data value qualifier setting.

Return Format

<value><NL>

<value> ::= {EQU | NOT | GRE | LESS}

**Introduction to :SYSTem Commands**

:SYSTem subsystem commands enable writing messages to the display, setting and reading both the time and the date, querying for errors, and saving and recalling setups.
:SYSTem:DATE

(see page 886)

Command Syntax

:SYSTem:DATE <date>

 Excell

<date> ::= <year>,<month>,<day>

<year> ::= 4-digit year in NR1 format

<month> ::= {1,...,12 | JANuary | FEBruary | MARch | APRil | MAY | JUNe

| JULy | AUGust | SEPtember | OCTober | NOVember | DECember}

<day> ::= {1,...,31}

The :SYSTem:DATE command sets the date. Validity checking is performed to ensure that the date is valid.

Query Syntax

:SYSTem:DATE?

The SYSTem:DATE? query returns the date.

Return Format

<year>,<month>,<day><NL>

See Also

• "Introduction to :SYSTem Commands" on page 614

• ":SYSTem:TIME" on page 634
**:SYSTem:DIDentifier**

N  (see page 886)

**Query Syntax**  
`:SYSTem:DIDentifier?`

The :SYSTem:DIDentifier? query returns the oscilloscope's Host ID as (part of) a quoted string.

The oscilloscope's Host ID is needed when redeeming licenses for oscilloscope upgrades or other licensed features.

The exact format of returned string are product-specific. This example returns the model number, serial number, and host ID in a comma-separated format:

"X12345A,US12345678,G1EFDNLPAF2YPLRN"

Portable programs should not attempt to parse the contents of the returned string. Use the *IDN? query instead to get the model number and/or serial number in a defined portable format.

**Return Format**  

<host_id><NL>

<host_id> ::= quoted ASCII string

**See Also**  

- "*IDN (Identification Number)" on page 147
:SYSTem:DSP

(see page 886)

Command Syntax

:SYSTem:DSP <string>

<string> ::= quoted ASCII string (up to 75 characters)

The :SYSTem:DSP command writes the quoted string (excluding quotation marks) to a text box in the center of the display. Use :SYSTem:DSP "" to remotely remove the message from the display. (Two sets of quote marks without a space between them creates a NULL string.) Press any menu key to manually remove the message from the display.

See Also

• "Introduction to :SYSTem Commands" on page 614
:SYSTem:ERRor

Query Syntax  :SYSTem:ERRor?

The :SYSTem:ERRor? query outputs the next error number and text from the error queue. The instrument has an error queue that is 30 errors deep and operates on a first-in, first-out basis. Repeatedly sending the :SYSTem:ERRor? query returns the errors in the order that they occurred until the queue is empty. Any further queries then return zero until another error occurs.

Return Format  <error number>,<error string><NL>

<error number> ::= an integer error code in NR1 format
<error string> ::= quoted ASCII string containing the error message

Error messages are listed in Chapter 34, “Error Messages,” starting on page 847.

See Also

• "Introduction to :SYSTem Commands" on page 614
• "**ESR (Standard Event Status Register)" on page 145
• "**CLS (Clear Status)" on page 142
:SYStem:LOCK

Command Syntax

:SYStem:LOCK <value>

<value> ::= {{1 | ON} | {0 | OFF}}

The :SYStem:LOCK command disables the front panel. LOCK ON is the equivalent of sending a local lockout message over the programming interface.

Query Syntax

:SYStem:LOCK?

The :SYStem:LOCK? query returns the lock status of the front panel.

Return Format

<value><NL>

<value> ::= {1 | 0}

See Also

• "Introduction to :SYStem Commands" on page 614
Command Syntax

:SYSTem:MENU <menu>

<menu> ::= {MASK | MEASure | SEGmented | LISTer}

The :SYSTem:MENU command changes the front panel softkey menu.

N (see page 886)
:SYSTem:PRESet

(see page 886)

Command Syntax :SYSTem:PRESet

The :SYSTem:PRESet command places the instrument in a known state. This is the same as pressing the [Default Setup] key or [Save/Recall] > Default/Erase > Default Setup on the front panel.

When you perform a default setup, some user settings (like preferences) remain unchanged. To reset all user settings to their factory defaults, use the *RST command.

Reset conditions are:

:SYSTem:PROTection:LOCK

N (see page 886)

Command Syntax

:SYSTem:PROTection:LOCK <value>

<value> ::= {{1 | ON} | {0 | OFF}}

The :SYSTem:PROTection:LOCK command disables the fifty ohm impedance setting for all analog channels.

Query Syntax

:SYSTem:PROTection:LOCK?

The :SYSTem:PROTection:LOCK? query returns the analog channel protection lock status.

Return Format

<value><NL>

<value> ::= {1 | 0}

See Also

• "Introduction to :SYSTem Commands" on page 614
:SYSTem:RLOGger

(see page 886)

Command Syntax

:SYSTem:RLOGger <setting>[,<file_name>[,<write_mode>]]

<setting> ::= {{0 | OFF} | {1 | ON}}
<file_name> ::= quoted ASCII string
<write_mode> ::= {CREate | APPend}

The :SYSTem:RLOGger command enables or disables remote command logging, optionally specifying the log file name and write mode.

See Also

• "::SYSTem:RLOGger:DESTination" on page 626
• "::SYSTem:RLOGger:DISPLAY" on page 627

• "::SYSTem:RLOGger:WMODE" on page 631
:SYSTem:RLOGger:DESTination

Command Syntax

:SYSTem:RLOGger:DESTination <dest>

<dest> ::= {FILE | SCReen | BOTH}

The :SYSTem:RLOGger:DESTination command specifies whether remote commands are logged to a text file (on a connected USB storage device), logged to the screen, or both.

NOTE If the destination is changed while remote command logging is running, remote command logging is turned off.

Query Syntax

:SYSTem:RLOGger:DESTination?

The :SYSTem:RLOGger:DESTination? query returns the remote command logging destination.

Return Format

<dest><NL>

<dest> ::= {FILE | SCR | BOTH}

- ":SYSTem:RLOGger:WMODE" on page 631
**:SYSTem:RLOGger:DISPlay**

(see page 886)

**Command Syntax**

`:SYSTem:RLOGger:DISPlay {0 | OFF} | {1 | ON})`

The :SYSTem:RLOGger:DISPlay command enables or disables the screen display of logged remote commands and their return values (if applicable).

**Query Syntax**

`:SYSTem:RLOGger:DISPlay?`

The :SYSTem:RLOGger:DISPlay? query returns whether the screen display for remote command logging is enabled or disabled.

**Return Format**

<setting><NL>

<setting> ::= {0 | 1}

**See Also**

:SYSTem:RLOGger:FNAMe

_N_ (see page 886)

Command Syntax

:SYSTem:RLOGger:FNAMe <file_name>

<file_name> ::= quoted ASCII string

The :SYSTem:RLOGger:FNAMe command specifies the remote command log file name.

Because log files are ASCII text files, the ".txt" extension is automatically added to the name specified.

Query Syntax

:SYSTem:RLOGger:FNAMe?

The :SYSTem:RLOGger:FNAMe? query returns the remote command log file name.

Return Format

<file_name><NL>

See Also

- ":SYSTem:RLOGger" on page 625
- ":SYSTem:RLOGger:DESTination" on page 626
- ":SYSTem:RLOGger:DISPlay" on page 627

- ":SYSTem:RLOGger:WMODE" on page 631
:SYSTem:RLOGger:STATe

(see page 886)

Command Syntax  
:SYSTem:RLOGger:STATe \{0 | OFF} | \{1 | ON}\}

The :SYSTem:RLOGger:STATe command enables or disables remote command logging.

Query Syntax  
:SYSTem:RLOGger:STATe?

The :SYSTem:RLOGger:STATe? query returns the remote command logging state.

Return Format  
<setting><NL>
<setting> ::= \{0 | 1\}

See Also  
• ":SYSTem:RLOGger" on page 625  
• ":SYSTem:RLOGger:DESTination" on page 626  
• ":SYSTem:RLOGger:DISPlay" on page 627

• ":SYSTem:RLOGger:TRANsparent" on page 630  
• ":SYSTem:RLOGger:WMODe" on page 631
:SYSTem:RLOGger:TRANsparent

Command Syntax

:SYSTem:RLOGger:TRANsparent {{0 | OFF} | {1 | ON}}

The :SYSTem:RLOGger:TRANsparent command specifies whether the screen display background for remote command logging is transparent or solid.

Query Syntax

:SYSTem:RLOGger:TRANsparent?

The :SYSTem:RLOGger:TRANsparent? query returns the setting for transparent screen display background.

Return Format

<setting><NL>
<setting> ::= {0 | 1}

See Also

- "::SYSTem:RLOGger" on page 625
- "::SYSTem:RLOGger:DESTination" on page 626

:SYSTem:RLOGger:WMODe

Command Syntax
:SYSTem:RLOGger:WMODe <write_mode>

<write_mode> ::= {CREate | APPend}

The :SYSTem:RLOGger:WMODe command specifies the remote command logging write mode.

Query Syntax
:SYSTem:RLOGger:WMODe?

The :SYSTem:RLOGger:WMODe? query returns the remote command logging write mode.

Return Format
<write_mode><NL>

<write_mode> ::= {CRE | APP}

See Also
• "::SYSTem:RLOGger" on page 625
• "::SYSTem:RLOGger:DESTination" on page 626
• "::SYSTem:RLOGger:DISPlay" on page 627

• "::SYSTem:RLOGger:STATE" on page 629
• "::SYSTem:RLOGger:TRANsparent" on page 630
:SYSTem:SETup

(see page 886)

Command Syntax
:SYSTem:SETup <setup_data>

<setup_data> ::= binary block data in IEEE 488.2 # format.

The :SYSTem:SETup command sets the oscilloscope as defined by the data in the setup (learn) string sent from the controller. The setup string does not change the interface mode or interface address.

Query Syntax
:SYSTem:SETup?

The :SYSTem:SETup? query operates the same as the *LRN? query. It outputs the current oscilloscope setup in the form of a learn string to the controller. The setup (learn) string is sent and received as a binary block of data. The format for the data transmission is the # format defined in the IEEE 488.2 specification.

Return Format
<setup_data><NL>

<setup_data> ::= binary block data in IEEE 488.2 # format

See Also
- "Introduction to :SYSTem Commands" on page 614
- "*LRN (Learn Device Setup)" on page 148

Example Code

' SAVE_SYSTEM_SETUP - The :SYSTEM:SETUP? query returns a program message that contains the current state of the instrument. Its format is a definite-length binary block, for example,
' #800075595<setup string><NL>
' where the setup string is 75595 bytes in length.
myScope.WriteString "*:SYSTEM:SETUP?"
varQueryResult = myScope.ReadIEEEBlock(BinaryType_UI1)
CheckForInstrumentErrors ' After reading query results.

' Output setup string to a file:
Dim strPath As String
strPath = "c:\scope\config\setup.dat"

' Open file for output.
Close #1 ' If #1 is open, close it.
Open strPath For Binary Access Write Lock Write As #1
Put #1, , varQueryResult ' Write data.
Close #1 ' Close file.

' RESTORE_SYSTEM_SETUP - Read the setup string from a file and write it back to the oscilloscope.
Dim varSetupString As Variant
strPath = "c:\scope\config\setup.dat"

' Open file for input.
Open strPath For Binary Access Read As #1
Get #1, , varSetupString ' Read data.
Close #1 ' Close file.
' Write setup string back to oscilloscope using "SYSTEM:SETUP"
' command:
myScope.WriteIEEEBlock "SYSTEM:SETUP ", varSetupString
CheckForInstrumentErrors

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
:SYSTem:TIME

Command Syntax
:SYSTem:TIME <time>

<time> ::= hours,minutes,seconds in NR1 format

The :SYSTem:TIME command sets the system time, using a 24-hour format. Commas are used as separators. Validity checking is performed to ensure that the time is valid.

Query Syntax
:SYSTem:TIME? <time>

The :SYSTem:TIME? query returns the current system time.

Return Format
<time><NL>

<time> ::= hours,minutes,seconds in NR1 format

Introduction to :TIMebase Commands

The TIMebase subsystem commands control the horizontal (X-axis) functions and set the oscilloscope to X-Y mode (where channel 1 becomes the X input and channel 2 becomes the Y input). The time per division, delay, vernier control, and reference can be controlled for the main and window (zoomed) time bases.

Reporting the Setup

Use :TIMebase? to query setup information for the TIMebase subsystem.

Return Format

The following is a sample response from the :TIMebase? query. In this case, the query was issued following a *RST command.

:TIM:MODE MAIN;REF CENT;MAIN:RANG +1.00E-03;POS +0.0E+00
:TIMebase:MODE

(see page 886)

Command Syntax

:TIMebase:MODE <value>

<value> ::= {MAIN | WINDow | XY | ROLL}

The :TIMebase:MODE command sets the current time base. There are four time base modes:

- MAIN — The normal time base mode is the main time base. It is the default time base mode after the *RST (Reset) command.
- WINDow — In the WINDow (zoomed or delayed) time base mode, measurements are made in the zoomed time base if possible; otherwise, the measurements are made in the main time base.
- XY — In the XY mode, the :TIMebase:RANGe, :TIMebase:POSition, and :TIMebase:REFerence commands are not available. No measurements are available in this mode.
- ROLL — In the ROLL mode, data moves continuously across the display from left to right. The oscilloscope runs continuously and is untriggered. The :TIMebase:REFerence selection changes to RIGHT.

Query Syntax

:TIMebase:MODE?

The :TIMebase:MODE query returns the current time base mode.

Return Format

<value><NL>

<value> ::= {MAIN | WIND | XY | ROLL}

See Also

- "Introduction to :TIMebase Commands" on page 636
- "*RST (Reset)" on page 153
- ":TIMebase:RANGe" on page 639
- ":TIMebase:POSition" on page 638
- ":TIMebase:REFerence" on page 640

Example Code

' TIMEBASE_MODE - (not executed in this example)
' Set the time base mode to MAIN, DELAYED, XY, or ROLL.

' Set time base mode to main.
myScope.WriteString ":TIMEBASE:MODE MAIN"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:TIMebase:POSition

Command Syntax

:TIMebase:POSition <pos>

<pos> ::= time in seconds from the trigger to the display reference in NR3 format

The :TIMebase:POSition command sets the time interval between the trigger event and the display reference point on the screen. The display reference point is either left, right, or center and is set with the :TIMebase:REFerence command. The maximum position value depends on the time/division settings.

NOTE

This command is an alias for the :TIMebase:DELay command.

Query Syntax

:TIMebase:POSition?

The :TIMebase:POSition? query returns the current time from the trigger to the display reference in seconds.

Return Format

<pos><NL>

<pos> ::= time in seconds from the trigger to the display reference in NR3 format

See Also

- "Introduction to :TIMebase Commands" on page 636
- ":TIMebase:REFerence" on page 640
- ":TIMebase:RANGe" on page 639
- ":TIMebase:SCAlE" on page 641
- ":TIMebase:WINDow:POSition" on page 643
- ":TIMebase:DELay" on page 843
:TIMebase:RANGe

Command Syntax

:TIMebase:RANGe <range_value>

<range_value> ::= time for 10 div in seconds in NR3 format

The :TIMebase:RANGe command sets the full-scale horizontal time in seconds for the main window. The range is 10 times the current time-per-division setting.

Query Syntax

:TIMebase:RANGe?

The :TIMebase:RANGe query returns the current full-scale range value for the main window.

Return Format

<range_value><NL>

<range_value> ::= time for 10 div in seconds in NR3 format

See Also

- "Introduction to :TIMebase Commands" on page 636
- ":TIMebase:MODE" on page 637
- ":TIMebase:SCALE" on page 641
- ":TIMebase:WINDow:RANGe" on page 644

Example Code

' TIME_RANGE - Sets the full scale horizontal time in seconds. The range value is 10 times the time per division.
   myScope.WriteString """"":TIM:RANG 2e-3"""" ' Set the time range to 0.002 seconds.

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:TIMebase:REferencex

Command Syntax

:TIMebase:REferencex <reference>

<reference> ::= {LEFT | CENTer | RIGHT}

The :TIMebase:REferencex command sets the time reference to one division from the left side of the screen, to the center of the screen, or to one division from the right side of the screen. Time reference is the point on the display where the trigger point is referenced.

Query Syntax

:TIMebase:REferencex?

The :TIMebase:REferencex? query returns the current display reference for the main window.

Return Format

<reference><NL>

<reference> ::= {LEFT | CENT | RIGHT}

See Also

• "Introduction to :TIMebase Commands" on page 636
• ":TIMebase:MODE" on page 637

Example Code

' TIME_REFERENCE - Possible values are LEFT, CENTer, or RIGHT. ' - LEFT sets the display reference one time division from the left. ' - CENTer sets the display reference to the center of the screen. ' - RIGHT sets the display reference one time division from the right.

myScope.WriteString "::TIMebase:REferencex CENTer" ' Set reference to center.

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:TIMebase:SCALe

Command Syntax

:TIMebase:SCALe <scale_value>

<scale_value> ::= time/div in seconds in NR3 format

The :TIMebase:SCALe command sets the horizontal scale or units per division for the main window.

Query Syntax

:TIMebase:SCALe?

The :TIMebase:SCALe? query returns the current horizontal scale setting in seconds per division for the main window.

Return Format

<scale_value><NL>

<scale_value> ::= time/div in seconds in NR3 format

See Also

• "Introduction to :TIMebase Commands" on page 636
• ":TIMebase:RANGe" on page 639
• ":TIMebase:WINDow:SCALe" on page 645
• ":TIMebase:WINDow:RANGe" on page 644
:TIMebase:VERNier

N (see page 886)

Command Syntax

:TIMebase:VERNier <vernier value>

<vernier value> ::= {{1 | ON} | {0 | OFF}

The :TIMebase:VERNier command specifies whether the time base control's vernier (fine horizontal adjustment) setting is ON (1) or OFF (0).

Query Syntax

:TIMebase:VERNier?

The :TIMebase:VERNier? query returns the current state of the time base control's vernier setting.

Return Format

<vernier value><NL>

<vernier value> ::= {0 | 1

See Also

• "Introduction to :TIMebase Commands" on page 636
:TIMebase:WINDow:POSition

Command Syntax

:TIMebase:WINDow:POSition <pos value>

=pos value> ::= time from the trigger event to the zoomed (delayed) view reference point in NR3 format

The :TIMebase:WINDow:POSition command sets the horizontal position in the zoomed (delayed) view of the main sweep. The main sweep range and the main sweep horizontal position determine the range for this command. The value for this command must keep the zoomed view window within the main sweep range.

Query Syntax

:TIMebase:WINDow:POSition?

The :TIMebase:WINDow:POSition? query returns the current horizontal window position setting in the zoomed view.

Return Format

<value><NL>

<value> ::= position value in seconds

See Also

- "Introduction to :TIMebase Commands" on page 636
- ":TIMebase:MODE" on page 637
- ":TIMebase:POSition" on page 638
- ":TIMebase:RANGe" on page 639
- ":TIMebase:SCALe" on page 641
- ":TIMebase:WINDow:RANGe" on page 644
- ":TIMebase:WINDow:SCALe" on page 645
**:TIMebase:WINDow:RANGE**

Command Syntax

```
:TIMebase:WINDow:RANGE <range value>
```

`<range value>` ::= range value in seconds in NR3 format

The :TIMebase:WINDow:RANGE command sets the full-scale horizontal time in seconds for the zoomed (delayed) window. The range is 10 times the current zoomed view window seconds per division setting. The main sweep range determines the range for this command. The maximum value is one half of the :TIMebase:RANGE value.

Query Syntax

```
:TIMebase:WINDow:RANGE?
```

The :TIMebase:WINDow:RANGE? query returns the current window timebase range setting.

Return Format

```
<value><NL>
```

`<value>` ::= range value in seconds

See Also

- "Introduction to :TIMebase Commands" on page 636
- ":TIMebase:RANGE" on page 639
- ":TIMebase:POSition" on page 638
- ":TIMebase:SCALe" on page 641
:TIMebase:WINDow:SCALe

Command Syntax

:TIMebase:WINDow:SCALe <scale_value>

<scale_value> ::= scale value in seconds in NR3 format

The :TIMebase:WINDow:SCALe command sets the zoomed (delayed) window horizontal scale (seconds/division). The main sweep scale determines the range for this command. The maximum value is one half of the :TIMebase:SCALe value.

Query Syntax

:TIMebase:WINDow:SCALe?

The :TIMebase:WINDow:SCALe? query returns the current zoomed window scale setting.

Return Format

<scale_value><NL>

<scale_value> ::= current seconds per division for the zoomed window

Introduction to :TRIGger Commands

The commands in the TRIGger subsystem define the conditions for an internal trigger. Many of these commands are valid in multiple trigger modes.

The default trigger mode is :EDGE.

The trigger subsystem controls the trigger sweep mode and the trigger specification. The trigger sweep (see "TRIGger:SWEep" on page 658) can be AUTO or NORMal.

- **NORMal** mode — displays a waveform only if a trigger signal is present and the trigger conditions are met. Otherwise the oscilloscope does not trigger and the display is not updated. This mode is useful for low-repetitive-rate signals.

- **AUTO** trigger mode — generates an artificial trigger event if the trigger specification is not satisfied within a preset time, acquires unsynchronized data and displays it.

AUTO mode is useful for signals other than low-repetitive-rate signals. You must use this mode to display a DC signal because there are no edges on which to trigger.
29  :TRIGger Commands

The following trigger types are available (see " :TRIGger:MODE" on page 656).

- **Edge triggering** – identifies a trigger by looking for a specified slope and voltage level on a waveform.
- **Nth Edge Burst triggering** – lets you trigger on the Nth edge of a burst that occurs after an idle time.
- **Pulse width triggering** – ( :TRIGger:GLItch commands) sets the oscilloscope to trigger on a positive pulse or on a negative pulse of a specified width.
- **Pattern triggering** – identifies a trigger condition by looking for a specified pattern. This pattern is a logical AND combination of the channels. You can also trigger on a specified time duration of a pattern.
- **TV triggering** – is used to capture the complicated waveforms of television equipment. The trigger circuitry detects the vertical and horizontal interval of the waveform and produces triggers based on the TV trigger settings you selected. TV triggering requires greater than ¼ division of sync amplitude with any analog channel as the trigger source.
- **USB (Universal Serial Bus) triggering** – will trigger on a Start of Packet (SOP), End of Packet (EOP), Reset Complete, Enter Suspend, or Exit Suspend signal on the differential USB data lines. USB Low Speed and Full Speed are supported by this trigger.

**Reporting the Setup**

Use :TRIGger? to query setup information for the TRIGger subsystem.

**Return Format**

The return format for the TRIGger? query varies depending on the current mode. The following is a sample response from the :TRIGger? query. In this case, the query was issued following a *RST command.

```
:TRIG:MODE EDGE;SWE AUTO;NREJ 0;HFR 0;HOLD +60.000000E-09;
:TRIG:EDGE:SOUR CHAN1;LEV +0.000000E+00;SLOP POS;REJ OFF;COUP DC
```

</tbody>
</table>
:TRIGger:FORCe

N (see page 886)

Command Syntax  :TRIGger:FORCe

The :TRIGger:FORCe command causes an acquisition to be captured even though the trigger condition has not been met. This command is equivalent to the front panel [Force Trigger] key.

See Also  • "Introduction to :TRIGger Commands" on page 647
:TRIGger:HFReject

(see page 886)

Command Syntax

:TRIGger:HFReject <value>

<value> ::= {{0 | OFF} | {1 | ON}}

The :TRIGger:HFReject command turns the high frequency reject filter off and on. The high frequency reject filter adds a 50 kHz low-pass filter in the trigger path to remove high frequency components from the trigger waveform. Use this filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.

Query Syntax

:TRIGger:HFReject?

The :TRIGger:HFReject? query returns the current high frequency reject filter mode.

Return Format

<value><NL>

<value> ::= {0 | 1}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger[:EDGE]:REJect" on page 674
:TRIGger:HOLDoff

Command Syntax

:TRIGger:HOLDoff <holdoff_time>

<holdoff_time> ::= 40 ns to 10 s in NR3 format

The :TRIGger:HOLDoff command defines the holdoff time value in seconds. Holdoff keeps a trigger from occurring until after a certain amount of time has passed since the last trigger. This feature is valuable when a waveform crosses the trigger level multiple times during one period of the waveform. Without holdoff, the oscilloscope could trigger on each of the crossings, producing a confusing waveform. With holdoff set correctly, the oscilloscope always triggers on the same crossing. The correct holdoff setting is typically slightly less than one period.

Query Syntax

:TRIGger:HOLDoff?

The :TRIGger:HOLDoff? query returns the holdoff time value for the current trigger mode.

Return Format

<holdoff_time><NL>

<holdoff_time> ::= the holdoff time value in seconds in NR3 format.

See Also

• "Introduction to :TRIGger Commands" on page 647
:TRIGger:LEVel:ASETup

Command Syntax  :TRIGger:LEVel:ASETup

The :TRIGger:LEVel:ASETup command automatically sets the trigger levels of all displayed analog channels to their waveforms' 50% values.

If AC coupling is used, the trigger levels are set to 0 V.

When High and Low (dual) trigger levels are used (as with Rise/Fall Time and Runt triggers, for example), this command has no effect.

See Also  •  ":TRIGger[:EDGE]:LEVel" on page 673
:TRIGGER:LEVEL:HIGH

(see page 886)

**Command Syntax** :TRIGGER:LEVEL:HIGH <level>, <source>

- `<level>` ::= 0.75 x full-scale voltage from center screen in NR3 format for internal triggers
- `<source>` ::= CHANnel<n>
- `<n>` ::= 1 to (# analog channels) in NR1 format

The :TRIGGER:LEVEL:HIGH command sets the high trigger voltage level voltage for the specified source.

High and low trigger levels are used with runt triggers and rise/fall time (transition) triggers.

**Query Syntax** :TRIGGER:LEVEL:HIGH? <source>

The :TRIGGER:LEVEL:HIGH? query returns the high trigger voltage level for the specified source.

**Return Format** `<level><NL>`

**See Also**
- "Introduction to :TRIGGER Commands" on page 647
- ":TRIGGER:LEVEL:LOW" on page 655
- ":TRIGGER:RUNT Commands" on page 693
- ":TRIGGER:TRANSition Commands" on page 704
- ":TRIGGER[:EDGE]:SOURce" on page 676
:TRIGger:LEVel:LOW

(see page 886)

Command Syntax

:TRIGger:LEVel:LOW <level>, <source>

<level> ::= 0.75 x full-scale voltage from center screen in NR3 format for internal triggers

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :TRIGger:LEVel:LOW command sets the low trigger voltage level voltage for the specified source.

High and low trigger levels are used with runt triggers and rise/fall time (transition) triggers.

Query Syntax

:TRIGger:LEVel:LOW? <source>

The :TRIGger:LEVel:LOW? query returns the low trigger voltage level for the specified source.

Return Format

<level><NL>

See Also

- "Introduction to :TRIGger Commands" on page 647
- "::TRIGger:LEVel:HIGH" on page 654
- "::TRIGger:RUNT Commands" on page 693
- "::TRIGger:TRANsition Commands" on page 704
- "::TRIGger[:EDGE]:SOURce" on page 676
:TRIGger:MODE

(see page 886)

Command Syntax

:TRIGger:MODE <mode>

<mode> ::= {EDGE | GLITch | PATTern | TV | DELay | EBURst | OR | RUNT
            | SHOLd | TRANSition | SBUS1 | USB}

The :TRIGger:MODE command selects the trigger mode (trigger type).

Query Syntax

:TRIGger:MODE?

The :TRIGger:MODE? query returns the current trigger mode. If the
:TIMebase:MODE is ROLL or XY, the query returns "NONE".

Return Format

<mode><NL>

<mode> ::= {EDGE | GLIT | PATT | TV | DEL | EBUR | OR | RUNT | SHOL
            | TRAN | SBUS1 | USB}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:SWEep" on page 658
• ":TIMebase:MODE" on page 637

Example Code

' TRIGGER_MODE - Set the trigger mode to EDGE.
myScope.WriteString " :TRIGger:MODE EDGE"

See complete example programs at: Chapter 38, "Programming Examples,"
starting on page 895
**:TRIGger:NREJect**

(see page 886)

**Command Syntax**

```plaintext
:TRIGger:NREJect <value>
```

\(<value> ::= \{(0 | \text{OFF}) | (1 | \text{ON})\}\)

The :TRIGger:NREJect command turns the noise reject filter off and on. When the noise reject filter is on, the trigger circuitry is less sensitive to noise but may require a greater amplitude waveform to trigger the oscilloscope. This command is not valid in TV trigger mode.

**Query Syntax**

```plaintext
:TRIGger:NREJect?
```

The :TRIGger:NREJect? query returns the current noise reject filter mode.

**Return Format**

```plaintext
<value><NL>
```

\(<value> ::= \{0 | 1\}\)

**See Also**

- "Introduction to :TRIGger Commands" on page 647
:TRIGger:SWEep

Command Syntax

:TRIGger:SWEep <sweep>

<sweep> ::= {AUTO | NORMal}

The :TRIGger:SWEep command selects the trigger sweep mode.

When AUTO sweep mode is selected, a baseline is displayed in the absence of a signal. If a signal is present but the oscilloscope is not triggered, the unsynchronized signal is displayed instead of a baseline.

When NORMal sweep mode is selected and no trigger is present, the instrument does not sweep, and the data acquired on the previous trigger remains on the screen.

NOTE

This feature is called "Mode" on the instrument's front panel.

Query Syntax

:TRIGger:SWEep?

The :TRIGger:SWEep? query returns the current trigger sweep mode.

Return Format

<sweep><NL>

<sweep> ::= current trigger sweep mode

See Also

• "Introduction to :TRIGger Commands" on page 647
## :TRIGger:DELay Commands

### Table 97 :TRIGger:DELay Commands Summary

<table>

</tr>
</tbody>
</table>
| :TRIGger:DELay:ARM:SOURce <source> (see page 661) | :TRIGger:DELay:ARM:SOURce? (see page 661) | <source> ::= {CHANnel<n> | DIGital<d>}
| | | <n> ::= 1 to (# analog channels) in NR1 format
| | | <d> ::= 0 to (# digital channels - 1) in NR1 format |
| :TRIGger:DELay:TDELay:TIME <time_value> (see page 662) | :TRIGger:DELay:TDELay:TIME? (see page 662) | <time_value> ::= time in seconds in NR3 format |
| :TRIGger:DELay:TRIGger:COUNt <count> (see page 663) | :TRIGger:DELay:TRIGger:COUNt? (see page 663) | <count> ::= integer in NR1 format |
| :TRIGger:DELay:TRIGger:SLOPe <slope> (see page 664) | :TRIGger:DELay:TRIGger:SLOPe? (see page 664) | <slope> ::= {NEGative | POSitive} |
| :TRIGger:DELay:TRIGger:SOURce <source> (see page 665) | :TRIGger:DELay:TRIGger:SOURce? (see page 665) | <source> ::= {CHANnel<n> | DIGital<d>}
| | | <n> ::= 1 to (# analog channels) in NR1 format
| | | <d> ::= 0 to (# digital channels - 1) in NR1 format |

The :TRIGger:DELay:ARM:SOURce and :TRIGger:DELay:TRIGger:SOURce commands are used to specify the source channel for the arming edge and the trigger edge in the Edge Then Edge trigger.

If an analog channel is selected as a source, the :TRIGger:EDGE:LEVel command is used to set the trigger level.

If a digital channel is selected as the source, the :DIGital<n>:THReshold or :POD<n>:THReshold command is used to set the trigger level.
:TRIGger:DElay:ARM:SLOPe

(see page 886)

Command Syntax
:TRIGger:DElay:ARM:SLOPe <slope>
<slope> ::= {NEGative | POSitive}

The :TRIGger:DElay:ARM:SLOPe command specifies rising (POSitive) or falling (NEGative) for the arming edge in the Edge Then Edge trigger.

Query Syntax
:TRIGger:DElay:ARM:SLOPe?

The :TRIGger:DElay:ARM:SLOPe? query returns the current arming edge slope setting.

Return Format
<slope><NL>
<slope> ::= {NEG | POS}

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:DElay:ARM:SOURce" on page 661
- ":TRIGger:DElay:TDELay:TIME" on page 662
:TRIGger:DELay:ARM:SOURce

N (see page 886)

Command Syntax
:TRIGger:DELay:ARM:SOURce <source>

<source> ::= {CHANnel<n> | DIGital<d>}
<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:DELay:ARM:SOURce command selects the input used for the arming edge in the Edge Then Edge trigger.

Query Syntax
:TRIGger:DELay:ARM:SOURce?

The :TRIGger:DELay:ARM:SOURce? query returns the current arming edge source.

Return Format
<source><NL>
<source> ::= {CHAN<n> | DIG<d>}

:TRIGger:DELa:y:TDELay:TIME

Command Syntax  
:TRIGger:DELa:y:TDELay:TIME <time_value>

<time_value> ::= time in seconds in NR3 format

The :TRIGger:DELa:y:TDELay:TIME command sets the delay time between the arming edge and the trigger edge in the Edge Then Edge trigger. The time is in seconds and must be from 4 ns to 10 s.

Query Syntax  
:TRIGger:DELa:y:TDELay:TIME?

Return Format  
<time_value><NL>

<time_value> ::= time in seconds in NR3 format

- ":TRIGger:DELa:y:TRIGger:COUNT" on page 663
:TRIGger:DELay:TRIGger:COUNt

N (see page 886)

Command Syntax

:TRIGger:DELay:TRIGger:COUNt <count>

<count> ::= integer in NR1 format

The :TRIGger:DELay:TRIGger:COUNt command sets the Nth edge of the trigger source to trigger on.

Query Syntax

:TRIGger:DELay:TRIGger:COUNt?

The :TRIGger:DELay:TRIGger:COUNt? query returns the current Nth trigger edge setting.

Return Format

<count><NL>

<count> ::= integer in NR1 format

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:DELay:TRIGger:SLOPe" on page 664
• ":TRIGger:DELay:TRIGger:SOURce" on page 665
• ":TRIGger:DELay:TDELay:TIME" on page 662
:TRIGger:DELay:TRIGger:SLOPe

(see page 886)

Command Syntax

:TRIGger:DELay:TRIGger:SLOPe <slope>

<slope> ::= {NEGative | POSitive}

The :TRIGger:DELay:TRIGger:SLOPe command specifies rising (POSitive) or falling (NEGative) for the trigger edge in the Edge Then Edge trigger.

Query Syntax

:TRIGger:DELay:TRIGger:SLOPe?

The :TRIGger:DELay:TRIGger:SLOPe? query returns the current trigger edge slope setting.

Return Format

<slope><NL>

<slope> ::= {NEG | POS}

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:DELay:TRIGger:SOURce" on page 665
- ":TRIGger:DELay:TDELay:TIME" on page 662
- ":TRIGger:DELay:TRIGger:COUNt" on page 663
:TRIGger:DELay:TRIGger:SOURce

N (see page 886)

Command Syntax
:TRIGger:DELay:TRIGger:SOURce <source>

<source> ::= {CHANnel<n> | DIGital<d>}

<n> ::= 1 to (# analog channels) in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:DELay:TRIGger:SOURce command selects the input used for the trigger edge in the Edge Then Edge trigger.

Query Syntax
:TRIGger:DELay:TRIGger:SOURce?

The :TRIGger:DELay:TRIGger:SOURce? query returns the current trigger edge source.

Return Format
<source><NL>

<source> ::= {CHAN<n> | DIG<d>}

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:DELay:TRIGger:SLOPe" on page 664
- ":TRIGger:DELay:TDELay:TIME" on page 662
- ":TRIGger:DELay:TRIGger:COUNt" on page 663
- ":TRIGger:MODE" on page 656
The :TRIGger:EBURst:SOURce command is used to specify the source channel for the Nth Edge Burst trigger. If an analog channel is selected as the source, the :TRIGger:EDGE:LEVel command is used to set the Nth Edge Burst trigger level. If a digital channel is selected as the source, the :DIGital<n>:THReshold or :POD<n>:THReshold command is used to set the Nth Edge Burst trigger level.
:TRIGger:EBURst:COUNt

(see page 886)

Command Syntax

:TRIGger:EBURst:COUNt <count>

<count> ::= integer in NR1 format

The :TRIGger:EBURst:COUNt command sets the Nth edge at burst counter resource. The edge counter is used in the trigger stage to determine which edge in a burst will generate a trigger.

Query Syntax

:TRIGger:EBURst:COUNt?

The :TRIGger:EBURst:COUNt? query returns the current Nth edge of burst edge counter setting.

Return Format

<count><NL>

<count> ::= integer in NR1 format

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:EBURst:SLOPe" on page 669
- ":TRIGger:EBURst:IDLE" on page 668
:TRIGger:EBURst:IDLE

Command Syntax
:TRIGger:EBURst:IDLE <time_value>

<time_value> ::= time in seconds in NR3 format

The :TRIGger:EBURst:IDLE command sets the Nth edge in a burst idle resource in seconds from 10 ns to 10 s. The timer is used to set the minimum time before the next burst.

Query Syntax
:TRIGger:EBURst:IDLE?

Return Format
<time_value><NL>

<time_value> ::= time in seconds in NR3 format

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:EBURst:SLOPe" on page 669
• ":TRIGger:EBURst:COUNt" on page 667
:TRIGger:EBURst:SLOPe

Command Syntax
:TRIGger:EBURst:SLOPe <slope>

<slope> ::= {NEGative | POSitive}

The :TRIGger:EBURst:SLOPe command specifies whether the rising edge (POSitive) or falling edge (NEGative) of the Nth edge in a burst will generate a trigger.

Query Syntax
:TRIGger:EBURst:SLOPe?

The :TRIGger:EBURst:SLOPe? query returns the current Nth edge in a burst slope.

Return Format
<slope><NL>

<slope> ::= {NEG | POS}

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:EBURst:IDLE" on page 668
• ":TRIGger:EBURst:COUNt" on page 667
:TRIGger:EBURst:SOURce

Command Syntax
:TRIGger:EBURst:SOURce <source>

<source> ::= {CHANnel<n> | DIGital<d}  

<n> ::= 1 to (# analog channels) in NR1 format  
<d> ::= 0 to (# digital channels - 1) in NR1 format  

The :TRIGger:EBURst:SOURce command selects the input that produces the Nth edge burst trigger.

Query Syntax
:TRIGger:EBURst:SOURce?

The :TRIGger:EBURst:SOURce? query returns the current Nth edge burst trigger source. If all channels are off, the query returns "NONE."

Return Format
<source><NL>

See Also
- "Introduction to :TRIGger Commands" on page 647
- "::TRIGger:MODE" on page 656
### :TRIGger[:EDGE] Commands

<tbody>
<tr>
<td>:TRIGger[:EDGE]:COUPling {AC</td>
<td>DC</td>
<td>LFReject} (see page 672)</td>
</tr>
</tbody>
</table>
| :TRIGger[:EDGE]:LEVel <level> [,<source>] (see page 673) | :TRIGger[:EDGE]:LEVel? [<source>] (see page 673) | For internal triggers, <level> ::= .75 x full-scale voltage from center screen in NR3 format.  
For external triggers, <level> ::= ±(external range setting) in NR3 format.  
For digital channels (MSO models), <level> ::= ±8 V.  
<source> ::= {CHANnel<n> | EXTernal} for DSO models  
<source> ::= {CHANnel<n> | DIGital<d> | EXTernal} for MSO models  
<n> ::= 1 to (# analog channels) in NR1 format  
<d> ::= 0 to (# digital channels - 1) in NR1 format |
| :TRIGger[:EDGE]:REJec t {OFF | LFReject | HFReject} (see page 674) | :TRIGger[:EDGE]:REJec t? (see page 674) | {OFF | LFReject | HFReject} |
| :TRIGger[:EDGE]:SLOPe <polarity> (see page 675) | :TRIGger[:EDGE]:SLOPe? (see page 675) | <polarity> ::= {POSitive | NEGative | EITHer | ALTernate} |
| :TRIGger[:EDGE]:SOURc e <source> (see page 676) | :TRIGger[:EDGE]:SOURc e? (see page 676) | <source> ::= {CHANnel<n> | EXTernal | LINE | WGEN} for the DSO models  
<source> ::= {CHANnel<n> | DIGital<d> | EXTernal | LINE | WGEN} for the MSO models  
<n> ::= 1 to (# analog channels) in NR1 format  
<d> ::= 0 to (# digital channels - 1) in NR1 format |
:TRIGger[:EDGE]:COUPling

C (see page 886)

Command Syntax

:TRIGger[:EDGE]:COUPling <coupling>

<coupling> ::= {AC | DC | LFReject}

The :TRIGger[:EDGE]:COUPling command sets the input coupling for the selected trigger sources. The coupling can be set to AC, DC, or LFReject.

- AC coupling places a high-pass filter (10 Hz for analog channels, and 3.5 Hz for all External trigger inputs) in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- LFReject coupling places a 50 KHz high-pass filter in the trigger path.
- DC coupling allows dc and ac signals into the trigger path.

NOTE

The :TRIGger[:EDGE]:COUPling and the :TRIGger[:EDGE]:REJect selections are coupled. Changing the setting of the :TRIGger[:EDGE]:REJect can change the COUPling setting.

Query Syntax

:TRIGger[:EDGE]:COUPling?

The :TRIGger[:EDGE]:COUPling? query returns the current coupling selection.

Return Format

<coupling><NL>

<coupling> ::= {AC | DC | LFR}

See Also

- "Introduction to :TRIGger Commands" on page 647
- ".:TRIGger:MODE" on page 656
- ".:TRIGger[:EDGE]:REJect" on page 674
:TRIGger[:EDGE]:LEVel

Command Syntax

:TRIGger[:EDGE]:LEVel <level>

<level> ::= <level>[,<source>]
<level> ::= 0.75 x full-scale voltage from center screen in NR3 format for internal triggers
<level> ::= +(external range setting) in NR3 format for external triggers
<level> ::= ±8 V for digital channels (MSO models)
<source> ::= {CHANnel<n> | EXTernal} for the DSO models
<source> ::= {CHANnel<n> | DIGital<d> | EXTernal} for the MSO models
<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger[:EDGE]:LEVel command sets the trigger level voltage for the active trigger source.

NOTE

If the optional source is specified and is not the active source, the level on the active source is not affected and the active source is not changed.

Query Syntax

:TRIGger[:EDGE]:LEVel? [<source>]

The :TRIGger[:EDGE]:LEVel? query returns the trigger level of the current trigger source.

Return Format

<level><NL>

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger[:EDGE]:SOURce" on page 676
- ":EXTernal:RANGe" on page 296
- ":POD<n>:THReshold" on page 465
- ":DIGital<d>:THReshold" on page 269
:TRIGGER[:EDGE]:REJECT

**Command Syntax**

`:TRIGGER[:EDGE]:REJECT <reject>`

`<reject>` ::= {OFF | LFReject | HFReject}

The :TRIGGER[:EDGE]:REJECT command turns the low-frequency or high-frequency reject filter on or off. You can turn on one of these filters at a time.

- The high frequency reject filter adds a 50 kHz low-pass filter in the trigger path to remove high frequency components from the trigger waveform. Use the high frequency reject filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- The low frequency reject filter adds a 50 kHz high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

**Query Syntax**

`:TRIGGER[:EDGE]:REJECT?`

The :TRIGGER[:EDGE]:REJECT? query returns the current status of the reject filter.

**Return Format**

`<reject><NL>`

`<reject>` ::= {OFF | LFR | HFR}

**NOTE**

The :TRIGGER[:EDGE]:REJECT and the :TRIGGER[:EDGE]:COUPLing selections are coupled. Changing the setting of the :TRIGGER[:EDGE]:COUPLing can change the COUPLing setting.

**See Also**

- "Introduction to :TRIGGER Commands" on page 647
- "TRIGGER:HFReject" on page 651
- "TRIGGER[:EDGE]:COUPLing" on page 672
:TRIGger[:EDGE]:SLOPe

(see page 886)

Command Syntax  
:TRIGger[:EDGE]:SLOPe <slope>

<slope> ::= {NEGative | POSitive | EITHER | ALTername}

The :TRIGger[:EDGE]:SLOPe command specifies the slope of the edge for the trigger. The SLOPe command is not valid in TV trigger mode. Instead, use :TRIGger:TV:POLarity to set the polarity in TV trigger mode.

Query Syntax  
:TRIGger[:EDGE]:SLOPe?

The :TRIGger[:EDGE]:SLOPe? query returns the current trigger slope.

Return Format  
<slope><NL>

<slope> ::= {NEG | POS | EITH | ALT}

See Also  
• "Introduction to :TRIGger Commands" on page 647
• "::TRIGger:MODE" on page 656
• "::TRIGger:TV:POLarity" on page 712

Example Code  
' TRIGGER_EDGE_SLOPE - Sets the slope of the edge for the trigger.

' Set the slope to positive.
myScope.WriteString "::TRIGGER:EDGE:SLOPE POSITIVE"

See complete example programs at: Chapter 38, "Programming Examples," starting on page 895
:TRIGger[:EDGE]:SOURce

(see page 886)

Command Syntax

:TRIGger[:EDGE]:SOURce <source>

<source> ::= {CHANnel<n> | EXTernal | LINE | WGEN} for the DSO models
<source> ::= {CHANnel<n> | DIGital<d> | EXTernal | LINE | WGEN} for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger[:EDGE]:SOURce command selects the input that produces the trigger.

- EXTernal — triggers on the rear panel EXT TRIG IN signal.
- LINE — triggers at the 50% level of the rising or falling edge of the AC power source signal.
- WGEN — triggers at the 50% level of the rising edge of the waveform generator output signal. This option is not available when the DC or NOISE waveforms are selected.

Query Syntax

:TRIGger[:EDGE]:SOURce?

The :TRIGger[:EDGE]:SOURce? query returns the current source. If all channels are off, the query returns "NONE."

Return Format

<source><NL>

<source> ::= {CHAN<n> | EXT | LINE | WGEN | NONE} for the DSO models
<source> ::= {CHAN<n> | DIG<d> | EXTernal | LINE | WGEN | NONE} for the MSO models

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656

Example Code

' TRIGGER_EDGE_SOURCE - Selects the channel that actually produces the edge trigger. Any channel can be selected.
myScope.WriteString ':TRIGger:EDGE:SOURce CHAnnel1"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895

</tbody>
</table>
:TRIGger:GLITch:GREaterthan

(see page 886)

Command Syntax

:TRIGger:GLITch:GREaterthan <greater_than_time>[<suffix>]

<greater_than_time> ::= floating-point number in NR3 format

<suffix> ::= {s | ms | us | ns | ps}

The :TRIGger:GLITch:GREaterthan command sets the minimum pulse width
duration for the selected :TRIGger:GLITch:SOURce.

Query Syntax

:TRIGger:GLITch:GREaterthan?

The :TRIGger:GLITch:GREaterthan? query returns the minimum pulse width
duration time for :TRIGger:GLITch:SOURce.

Return Format

<greater_than_time><NL>

<greater_than_time> ::= floating-point number in NR3 format.

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:GLITch:SOURce" on page 685
• ":TRIGger:GLITch:QUALifier" on page 683
• ":TRIGger:MODE" on page 656
:TRIGGER:GLITCH:LESSThan

(see page 886)

Command Syntax

:TRIGGER:GLITCH:LESSThan <less_than_time>[<suffix>]

<less_than_time> ::= floating-point number in NR3 format

<suffix> ::= {s | ms | us | ns | ps}

The :TRIGGER:GLITCH:LESSThan command sets the maximum pulse width duration for the selected :TRIGGER:GLITCH:SOURCe.

Query Syntax

:TRIGGER:GLITCH:LESSThan?

Return Format

<less_than_time><NL>

<less_than_time> ::= floating-point number in NR3 format.

See Also

• "Introduction to :TRIGGER Commands" on page 647
• ":TRIGGER:GLITCH:SOURCe" on page 685
• ":TRIGGER:GLITCH:QUALifier" on page 683
• ":TRIGGER:MODE" on page 656
:TRIGger:GLITch:LEVel

N (see page 886)

Command Syntax  
:TRIGger:GLITch:LEVel <level_argument>

<level_argument> ::= <level> [, <source>]

<level> ::= .75 x full-scale voltage from center screen in NR3 format for internal triggers
<level> ::= ±(external range setting) in NR3 format for external triggers (DSO models)
<level> ::= ±8 V for digital channels (MSO models)

<source> ::= {CHANnel<n> | EXTernal} for DSO models
<source> ::= {CHANnel<n> | DIGital<d>} for MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:GLITch:LEVel command sets the trigger level voltage for the active pulse width trigger.

Query Syntax  
:TRIGger:GLITch:LEVel?

The :TRIGger:GLITch:LEVel? query returns the trigger level of the current pulse width trigger mode. If all channels are off, the query returns "NONE."

Return Format  
<level_argument><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:GLITch:SOURce" on page 685
• ":EXTernal:RANGe" on page 296
:TRIGger:GLITch:POLarity

(see page 886)

Command Syntax

:TRIGger:GLITch:POLarity <polarity>

<polarity> ::= {POSitive | NEGative}

The :TRIGger:GLITch:POLarity command sets the polarity for the glitch pulse width trigger.

Query Syntax

:TRIGger:GLITch:POLarity?

The :TRIGger:GLITch:POLarity? query returns the glitch pulse width trigger polarity.

Return Format

<polarity><NL>

<polarity> ::= {POS | NEG}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:GLITch:SOURce" on page 685
:TRIGger:GLITch:QUALifier

Command Syntax
:TRIGger:GLITch:QUALifier <operator>

<operator> ::= {GREaterthan | LESSthan | RANGe}

This command sets the mode of operation of the glitch pulse width trigger. The oscilloscope can trigger on a pulse width that is greater than a time value, less than a time value, or within a range of time values.

Query Syntax
:TRIGger:GLITch:QUALifier?

The :TRIGger:GLITch:QUALifier? query returns the glitch pulse width qualifier.

Return Format
<operator><NL>

<operator> ::= {GRE | LESS | RANG}

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:GLITch:SOURce" on page 685
• ":TRIGger:MODE" on page 656
:TRIGger:GLITch:RANGe

Command Syntax

:TRIGger:GLITch:RANGe <less_than_time>[suffix],
   <greater_than_time>[suffix]

<less_than_time> ::= (15 ns - 10 seconds) in NR3 format

<greater_than_time> ::= (10 ns - 9.99 seconds) in NR3 format

[suffix] ::= {s | ms | us | ns | ps}

The :TRIGger:GLITch:RANGe command sets the pulse width duration for the
selected :TRIGger:GLITch:SOURce. You can enter the parameters in any order —
the smaller value becomes the <greater_than_time> and the larger value becomes
the <less_than_time>.

Query Syntax

:TRIGger:GLITch:RANGe?

The :TRIGger:GLITch:RANGe? query returns the pulse width duration time for
:TRIGger:GLITch:SOURce.

Return Format

<less_than_time>,<greater_than_time><NL>

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:GLITch:SOURce" on page 685
• ":TRIGger:GLITch:QUALifier" on page 683

**:TRIGger:GLITch:SOURce**

(see page 886)

**Command Syntax**

```
:TRIGger:GLITch:SOURce <source>
```

```
<source> ::= {DIGital<d> | CHANnel<n>}
```

```
<n> ::= 1 to (# analog channels) in NR1 format
```

```
<d> ::= 0 to (# digital channels - 1) in NR1 format
```

The :TRIGger:GLITch:SOURce command selects the channel that produces the pulse width trigger.

**Query Syntax**

```
:TRIGger:GLITch:SOURce?
```

The :TRIGger:GLITch:SOURce? query returns the current pulse width source. If all channels are off, the query returns "NONE".

**Return Format**

```
<source><NL>
```

:TRIGger:OR Commands

Table 101 :TRIGger:OR Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:OR &lt;string&gt; (see page 687)</td>
<td>:TRIGger:OR? (see page 687)</td>
<td>&lt;string&gt; ::= &quot;nn...n&quot; where n ::= {R</td>
</tr>
<tr>
<td></td>
<td></td>
<td>R = rising edge, F = falling edge, E = either edge, X = don't care.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Each character in the string is for an analog or digital channel as shown on the front panel display.</td>
</tr>
</tbody>
</table>
:TRIGger:OR

N (see page 886)

Command Syntax

:TRIGger:OR <string>

<string> ::= "nn...n" where n ::= {R | F | E | X}

R = rising edge, F = falling edge, E = either edge, X = don't care.

The :TRIGger:OR command specifies the edges to include in the OR'ed edge trigger.

In the <string> parameter, each bit corresponds to a channel as described in the following table:

<table>
<thead>
<tr>
<th>Oscilloscope Models</th>
<th>Value and Mask Bit Assignments</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 analog + 16 digital channels (mixed-signal)</td>
<td>Bits 0 through 15 - digital channels 0 through 15. Bits 16 through 19 - analog channels 4 through 1.</td>
</tr>
<tr>
<td>2 analog + 16 digital channels (mixed-signal)</td>
<td>Bits 0 through 15 - digital channels 0 through 15. Bits 16 and 17 - analog channels 2 and 1.</td>
</tr>
<tr>
<td>4 analog channels only</td>
<td>Bits 0 through 3 - analog channels 4 through 1.</td>
</tr>
<tr>
<td>2 analog channels only</td>
<td>Bits 0 and 1 - analog channels 2 and 1.</td>
</tr>
</tbody>
</table>

Query Syntax

:TRIGger:OR?

The :TRIGger:OR? query returns the current OR'ed edge trigger string.

Return Format

<string><NL>

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
## :TRIGger:PA TTern Commands

### Table 102 :TRIGger:PA TTern Commands Summary

<table>

<td>:TRIGger:PA TTern:QUAL ifier? (see page 692)</td>
<td>&lt;qualifier&gt; ::= ENTERed</td>
</tr>
</tbody>
</table>
:TRIGger:PATTern

(see page 886)

Command Syntax

:TRIGger:PATTern <pattern>

<pattern> ::= <string>[,<edge_source>,<edge>]

<string> ::= "nn...n" where n ::= {0 | 1 | X | R | F} when <base> = ASCII

<string> ::= "0xnn...n" where n ::= {0,...,9 | A,...,F | X | $} when <base> = HEX

<edge_source> ::= {CHANnel<n> | NONE} for DSO models

<edge_source> ::= {CHANnel<n> | DIGital<d> | NONE} for MSO models

<n> ::= 1 to (# of analog channels) in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

<edge> ::= {POSitive | NEGative}

The :TRIGger:PATTern command specifies the channel values to be used in the pattern trigger.

In the <string> parameter, each bit corresponds to a channel as described in the following table:

<table>
<thead>
<tr>
<th>Oscilloscope Models</th>
<th>Value and Mask Bit Assignments</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 analog + 8 digital channels (mixed-signal)</td>
<td>Bits 0 through 7 - digital channels 0 through 7.</td>
</tr>
<tr>
<td></td>
<td>Bits 8 through 11 - analog channels 4 through 1.</td>
</tr>
<tr>
<td>2 analog + 8 digital channels (mixed-signal)</td>
<td>Bits 0 through 7 - digital channels 0 through 7.</td>
</tr>
<tr>
<td></td>
<td>Bits 8 and 9 - analog channels 2 and 1.</td>
</tr>
<tr>
<td>4 analog channels only</td>
<td>Bits 0 through 3 - analog channels 4 through 1.</td>
</tr>
<tr>
<td>2 analog channels only</td>
<td>Bits 0 and 1 - analog channels 2 and 1.</td>
</tr>
</tbody>
</table>

The format of the <string> parameter depends on the :TRIGger:PATTern:FORMat command setting:

- When the format is ASCII, the string Looks just like the string you see on the oscilloscope's front panel, made up of 0, 1, X (don't care), R (rising edge), and F (falling edge) characters.
- When the format is HEX, the string begins with "0x" and contains hex digit characters or X (don't care for all four bits in the nibble).

With the hex format string, you can use the <edge_source> and <edge> parameters to specify an edge on one of the channels.
You can only specify an edge on one channel. When an edge is specified, the :TRIGger:PATTern:QUALifier does not apply.

Query Syntax

:TRIGger:PATTern?

The :TRIGger:PATTern? query returns the pattern string, edge source, and edge.

Return Format

<string>,<edge_source>,<edge><NL>

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:PATTern:FORMat" on page 691
- ":TRIGger:PATTern:QUALifier" on page 692
- ":TRIGger:MODE" on page 656
:TRIgger:PATTern:FORMat

Command Syntax  
:TRIgger:PATTern:FORMat <base>

<base> ::= {ASCii | HEX}

The :TRIgger:PATTern:FORMat command sets the entry (and query) number base used by the :TRIgger:PATTern command. The default <base> is ASCII.

Query Syntax  
:TRIgger:PATTern:FORMat?

The :TRIgger:PATTern:FORMat? query returns the currently set number base for pattern trigger patterns.

Return Format  
<base><NL>

<base> ::= {ASC | HEX}

See Also  
• "Introduction to :TRIgger Commands" on page 647
• ":TRIgger:PATTern" on page 689
:TRIGger:PATTern:QUALifier

N  (see page 886)

Command Syntax  :TRIGger:PATTern:QUALifier <qualifier>

<qualifier> ::= ENTERed

The :TRIGger:PATTern:QUALifier command qualifies when the trigger occurs.
In the InfiniiVision 2000 X-Series oscilloscopes, the trigger always occurs when
the pattern is entered.

Query Syntax  :TRIGger:PATTern:QUALifier?

The :TRIGger:PATTern:QUALifier? query returns the trigger duration qualifier.

Return Format  <qualifier><NL>

See Also  •  "Introduction to :TRIGger Commands" on page 647
### :TRIGger:RUNT Commands

#### Table 103 :TRIGger:RUNT Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:RUNT:POLarit y &lt;polarity&gt;</td>

<td>[suffix] ::= {s</td>
</tr>
</tbody>
</table>
**:TRIGger:RUNT:POLarity**

**Command Syntax**

```plaintext
:TRIGger:RUNT:POLarity <polarity>
```

<polarity> ::= {POSitive | NEGative | EITHer}

The :TRIGger:RUNT:POLarity command sets the polarity for the runt trigger:

- POSitive — positive runt pulses.
- NEGative — negative runt pulses.
- EITHer — either positive or negative runt pulses.

**Query Syntax**

```plaintext
:TRIGger:RUNT:POLarity?
```

The :TRIGger:RUNT:POLarity? query returns the runt trigger polarity.

**Return Format**

```plaintext
<polarity><NL>
```

<polarity> ::= {POS | NEG | EITH}

**See Also**

- "Introduction to :TRIGger Commands" on page 647
- " :TRIGger:MODE" on page 656
- " :TRIGger:LEVEL:HIGH" on page 654
- " :TRIGger:LEVEL:LOW" on page 655
- " :TRIGger:RUNT:SOURce" on page 696
:TRIGger:RUNT:QUALifier

Command Syntax  
:TRIGger:RUNT:QUALifier <qualifier>

<qualifier> ::= {GREaterthan | LESSthan | NONE}

The :TRIGger:RUNT:QUALifier command selects the qualifier used for specifying runt pulse widths:

- GREaterthan — triggers on runt pulses whose width is greater than the :TRIGger:RUNT:TIME.
- LESSthan — triggers on runt pulses whose width is less than the :TRIGger:RUNT:TIME.
- NONE — triggers on runt pulses of any width.

Query Syntax  
:TRIGger:RUNT:QUALifier?

The :TRIGger:RUNT:QUALifier? query returns the runt trigger qualifier setting.

Return Format  
<qualifier><NL>

<qualifier> ::= {GRE | LESS NONE}

See Also  
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":TRIGger:RUNT:TIME" on page 697
**:TRIgger:**RUNT:**SOURce**

Command Syntax

:TRIgger:**RUNT:**SOURce <source>

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :TRIgger:**RUNT:**SOURce command selects the channel used to produce the trigger.

Query Syntax

:TRIgger:**RUNT:**SOURce?

The :TRIgger:**RUNT:**SOURce? query returns the current runt trigger source.

Return Format

<source><NL>

<source> ::= CHAN<n>

See Also

• "Introduction to :TRIgger Commands" on page 647
• "**:TRIgger:**RUNT:**POLarity" on page 694
**:TRIGger:RUNT:TIME**

(see page 886)

**Command Syntax**

```
:TRIGger:RUNT:TIME <time>[suffix]
```

- `<time>` ::= floating-point number in NR3 format
- `[suffix]` ::= {s | ms | us | ns | ps}

When triggering on runt pulses whose width is greater than or less than a certain value (see :TRIGger:RUNT:QUALifier), the :TRIGger:RUNT:TIME command specifies the time used with the qualifier.

**Query Syntax**

```
:TRIGger:RUNT:TIME?
```

The :TRIGger:RUNT:TIME? query returns the current runt pulse qualifier time setting.

**Return Format**

```
<time><NL>
```

- `<time>` ::= floating-point number in NR3 format

**See Also**

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:RUNT:QUALifier" on page 695
### :TRIGger:SHOLd Commands

**Table 104 :TRIGger:SHOLd Commands Summary**

<td>&lt;time&gt; ::= floating-point number in NR3 format</td>
</tr>
<tr>
<td></td>
<td></td>
<td>[suffix] ::= {s</td>
</tr>
</tbody>
</table>
:TRIGGER:SHOLD:SLOPE

Command Syntax

:TRIGger:SHOLD:SLOPe <slope>

<slope> ::= {NEGative | POSitive}

The :TRIGger:SHOLD:SLOPe command specifies whether the rising edge or the falling edge of the clock signal is used.

Query Syntax

:TRIGger:SHOLD:SLOPe?

The :TRIGger:SHOLD:SLOPe? query returns the current rising or falling edge setting.

Return Format

<slope><NL>

<slope> ::= {NEG | POS}

See Also

• "Introduction to :TRIGGER Commands" on page 647
• "TRIGger:MODE" on page 656
• "TRIGger:SHOLD:SOURce:CLOCk" on page 700
• "TRIGger:SHOLD:SOURce:DATA" on page 701
:TRIGger:SHOLd:SOURce:CLOCk

N (see page 886)

Command Syntax
:TRIGger:SHOLd:SOURce:CLOCk <source>

<sourse> ::= {CHANnel<n> | DIGital<d>}

<n> ::= 1 to (# analog channels) in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:SHOLd:SOURce:CLOCk command selects the input channel probing the clock signal.

Query Syntax
:TRIGger:SHOLd:SOURce:CLOCk?

The :TRIGger:SHOLd:SOURce:CLOCk? query returns the currently set clock signal source.

Return Format
<source><NL>

Return Format
<source> ::= {CHAN<n> | DIG<d>}

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:SHOLd:SLOPe" on page 699
:TRIGger:SHOLd:SOURce:DATA

N (see page 886)

Command Syntax

:TRIGger:SHOLd:SOURce:DATA <source>

<source> ::= {CHANnel<n> | DIGital<d>}

<n> ::= 1 to (# analog channels) in NR1 format

<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:SHOLd:SOURce:DATA command selects the input channel probing the data signal.

Query Syntax

:TRIGger:SHOLd:SOURce:DATA?

The :TRIGger:SHOLd:SOURce:DATA? query returns the currently set data signal source.

Return Format

<source><NL>

<source> ::= {CHAN<n> | DIG<d>}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:SHOLd:SLOPe" on page 699
:TRIGGER:SHOLD:TIME:HOLD

Command Syntax
:TRIGGER:SHOLD:TIME:HOLD <time>[suffix]

<time> ::= floating-point number in NR3 format
[suffix] ::= {s | ms | us | ns | ps}

The :TRIGGER:SHOLD:TIME:HOLD command sets the hold time.

Query Syntax
:TRIGGER:SHOLD:TIME:HOLD?

The :TRIGGER:SHOLD:TIME:HOLD? query returns the currently specified hold time.

Return Format
<time><NL>

<time> ::= floating-point number in NR3 format

See Also
• "Introduction to :TRIGGER Commands" on page 647
:TRIGger:SHOLd:TIME:SETup

Command Syntax

:TRIGger:SHOLd:TIME:SETup <time>[suffix]

*time* ::= floating-point number in NR3 format

[suffix] ::= {s | ms | us | ns | ps}

The :TRIGger:SHOLd:TIME:SETup command sets the setup time.

Query Syntax

:TRIGger:SHOLd:TIME:SETup?

The :TRIGger:SHOLd:TIME:SETup? query returns the currently specified setup time.

Return Format

<time><NL>

<time> ::= floating-point number in NR3 format

See Also

• “Introduction to :TRIGger Commands” on page 647
:TRIGger:TRANsition Commands

The :TRIGger:TRANsition commands set the rise/fall time trigger options.

Table 105 :TRIGger:TRANsition Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:TRANsition:QUALifier &lt;qualifier&gt; (see page 705)</td>
<td>:TRIGger:TRANsition:QUALifier? (see page 705)</td>
<td>&lt;qualifier&gt; ::= {GREaterthan</td>
</tr>
<tr>
<td>:TRIGger:TRANsition:SLOPe &lt;slope&gt; (see page 706)</td>
<td>:TRIGger:TRANsition:SLOPe? (see page 706)</td>
<td>&lt;slope&gt; ::= {NEGative</td>
</tr>
<tr>
<td>:TRIGger:TRANsition:SOURce &lt;source&gt; (see page 707)</td>
<td>:TRIGger:TRANsition:SOURce? (see page 707)</td>
<td>&lt;source&gt; ::= CHANnel&lt;n&gt;</td>
</tr>
<tr>
<td>&lt;n&gt; ::= 1 to (# analog channels) in NR1 format</td>
<td></td>
<td></td>
</tr>
<tr>
<td>:TRIGger:TRANsition:TIME &lt;time&gt;[suffix] (see page 708)</td>
<td>:TRIGger:TRANsition:TIME? (see page 708)</td>
<td>&lt;time&gt; ::= floating-point number in NR3 format</td>
</tr>
<tr>
<td>[suffix] ::= {s</td>
<td>ms</td>
<td>us</td>
</tr>
</tbody>
</table>
:TRIGger:TRANsition:QUALifier

(see page 886)

Command Syntax

:TRIGger:TRANsition:QUALifier <qualifier>

<qualifier> ::= {GREaterthan | LESSthan}

The :TRIGger:TRANsition:QUALifier command specifies whether you are looking for rise/fall times greater than or less than a certain time value. The time value is set using the :TRIGger:TRANsition:TIME command.

Query Syntax

:TRIGger:TRANsition:QUALifier?

The :TRIGger:TRANsition:QUALifier? query returns the current rise/fall time trigger qualifier setting.

Return Format

<qualifier><NL>

<qualifier> ::= {GRE | LESS}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:TRANsition:TIME" on page 708
• ":TRIGger:MODE" on page 656
:TRIGger:TRANSition:SLOPe

Command Syntax

:TRIGger:TRANSition:SLOPe <slope>

<slope> ::= {NEGative | POSitive}

The :TRIGger:TRANSition:SLOPe command specifies a POSitive rising edge or a NEGative falling edge.

Query Syntax

:TRIGger:TRANSition:SLOPe?

The :TRIGger:TRANSition:SLOPe? query returns the current rise/fall time trigger slope setting.

Return Format

<slope><NL>

<slope> ::= {NEG | POS}

See Also

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":TRIGger:TRANSition:SOURce" on page 707
:TRIGger:TRANsition:SOURce

Command Syntax
:TRIGger:TRANsition:SOURce <source>

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :TRIGger:TRANsition:SOURce command selects the channel used to produce the trigger.

Query Syntax
:TRIGger:TRANsition:SOURce?

The :TRIGger:TRANsition:SOURce? query returns the current transition trigger source.

Return Format
<source><NL>

<source> ::= CHAN<n>

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:TRANsition:SLOPe" on page 706
:TRIGGER:TRANSITION:TIME

(see page 886)

**Command Syntax**

:TRIGGER:TRANSITION:TIME <time>[suffix]

<time> ::= floating-point number in NR3 format

[suffix] ::= {s | ms | us | ns | ps}

The :TRIGGER:TRANSITION:TIME command sets the time value for rise/fall time triggers. You also use the :TRIGGER:TRANSITION:QUALIFIER command to specify whether you are triggering on times greater than or less than this time value.

**Query Syntax**

:TRIGGER:TRANSITION:TIME?

The :TRIGGER:TRANSITION:TIME? query returns the current rise/fall time trigger time value.

**Return Format**

*time*<NL>

<time> ::= floating-point number in NR3 format

**See Also**

- "Introduction to :TRIGGER Commands" on page 647
- ":TRIGGER:TRANSITION:QUALIFIER" on page 705
### :TRIGger:TV Commands

#### Table 106  :TRIGger:TV Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:TV:LINE &lt;line number&gt; (see page 710)</td>
<td>:TRIGger:TV:LINE? (see page 710)</td>
<td>&lt;line number&gt; ::= integer in NR1 format</td>
</tr>
<tr>
<td>:TRIGger:TV:MODE &lt;tv mode&gt; (see page 711)</td>
<td>:TRIGger:TV:MODE? (see page 711)</td>
<td>&lt;tv mode&gt; ::= {FIELd1</td>
</tr>
<tr>
<td>:TRIGger:TV:POLarity &lt;polarity&gt; (see page 712)</td>
<td>:TRIGger:TV:POLarity? (see page 712)</td>
<td>&lt;polarity&gt; ::= {POSitive</td>
</tr>
<tr>
<td>:TRIGger:TV:SOURce &lt;source&gt; (see page 713)</td>
<td>:TRIGger:TV:SOURce? (see page 713)</td>
<td>&lt;source&gt; ::= {CHANnel&lt;n&gt;}  &lt;n&gt; ::= 1 to (# analog channels) in NR1 format</td>
</tr>
<tr>
<td>:TRIGger:TV:STANdard &lt;standard&gt; (see page 714)</td>
<td>:TRIGger:TV:STANdard? (see page 714)</td>
<td>&lt;standard&gt; ::= {NTSC</td>
</tr>
</tbody>
</table>
:TRIGGER:TV:LINE

N (see page 886)

Command Syntax :TRIGGER:TV:LINE <line_number>

<line_number> ::= integer in NR1 format

The :TRIGGER:TV:LINE command allows triggering on a specific line of video. The line number limits vary with the standard and mode, as shown in the following table.

Table 107  TV Trigger Line Number Limits

<table>
<thead>
<tr>
<th>TV Standard</th>
<th>Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>LField1</td>
</tr>
<tr>
<td>NTSC</td>
<td>1 to 263</td>
</tr>
<tr>
<td>PAL</td>
<td>1 to 313</td>
</tr>
<tr>
<td>PAL-M</td>
<td>1 to 263</td>
</tr>
<tr>
<td>SECAM</td>
<td>1 to 313</td>
</tr>
</tbody>
</table>

Query Syntax :TRIGGER:TV:LINE?

The :TRIGGER:TV:LINE? query returns the current TV trigger line number setting.

Return Format <line_number><NL>

<line_number>::= integer in NR1 format

See Also
- "Introduction to :TRIGGER Commands" on page 647
- ":TRIGGER:TV:STANDARD" on page 714
- ":TRIGGER:TV:MODE" on page 711
:TRIGger:TV:MODE

(see page 886)

**Command Syntax**

:TRIGger:TV:MODE <mode>

<mode> ::= {FIELd1 | FIELd2 | AFIelds | ALINes
          | LFIeld1 | LFIeld2 | LALTernate}

The :TRIGger:TV:MODE command selects the TV trigger mode and field.

Old forms for <mode> are accepted:

<table>
<thead>
<tr>
<th>&lt;mode&gt;</th>
<th>Old Forms Accepted</th>
</tr>
</thead>
<tbody>
<tr>
<td>FIELd1</td>
<td>F1</td>
</tr>
<tr>
<td>FIELd2</td>
<td>F2</td>
</tr>
<tr>
<td>AFIelds</td>
<td>ALLFields, ALLFLDS</td>
</tr>
<tr>
<td>ALINes</td>
<td>ALLLines</td>
</tr>
<tr>
<td>LFIeld1</td>
<td>LINEF1, LINEFIELD1</td>
</tr>
<tr>
<td>LFIeld2</td>
<td>LINEF2, LINEFIELD2</td>
</tr>
<tr>
<td>LALTernate</td>
<td>LINEAlt</td>
</tr>
</tbody>
</table>

**Query Syntax**

:TRIGger:TV:MODE?

The :TRIGger:TV:MODE? query returns the TV trigger mode.

**Return Format**

<value><NL>

<value> ::= {FIE1 | FIE2 | AFI | ALIN | LPI1 | LPI2 | LALT}

**See Also**

- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:TV:STANdard" on page 714
- ":TRIGger:MODE" on page 656
:TRIGger:TV:POLarity

Command Syntax

:TRIGger:TV:POLarity <polarity>

<polarity> ::= {POSitive | NEGative}

The :TRIGger:TV:POLarity command sets the polarity for the TV trigger.

Query Syntax

:TRIGger:TV:POLarity?

The :TRIGger:TV:POLarity? query returns the TV trigger polarity.

Return Format

<polarity><NL>

<polarity> ::= {POS | NEG}

See Also

• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:TV:SOURce" on page 713
:TRIGger:TV:SOURce

Command Syntax
:TRIGger:TV:SOURce <source>

<source> ::= {CHANnel<n>}
<n> ::= 1 to (# analog channels) in NR1 format

The :TRIGger:TV:SOURce command selects the channel used to produce the trigger.

Query Syntax
:TRIGger:TV:SOURce?

The :TRIGger:TV:SOURce? query returns the current TV trigger source.

Return Format
<source><NL>
<source> ::= {CHAN<n>}

See Also
• "Introduction to :TRIGger Commands" on page 647
• ":TRIGger:MODE" on page 656
• ":TRIGger:TV:POLarity" on page 712

Example Code
• "Example Code" on page 676
:TRIGger:TV:STANdard

Command Syntax

:TRIGger:TV:STANdard <standard>

<standard> ::= {NTSC | PALM | PAL | SECam}

The :TRIGger:TV:STANdard command selects the video standard:
- NTSC
- PAL
- PAL-M
- SECAM

Query Syntax

:TRIGger:TV:STANdard?

The :TRIGger:TV:STANdard? query returns the current TV trigger standard setting.

Return Format

<standard><NL>

<standard> ::= {NTSC | PALM | PAL | SEC}
:TRIGger:USB Commands

Table 108 :TRIGger:USB Commands Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Query</th>
<th>Options and Query Returns</th>
</tr>
</thead>
<tbody>
<tr>
<td>:TRIGger:USB:SOURce:D MINus &lt;source&gt; (see page 716)</td>
<td>:TRIGger:USB:SOURce:D MINus? (see page 716)</td>
<td>&lt;source&gt; ::= {CHANnel&lt;n&gt;</td>
</tr>
<tr>
<td>:TRIGger:USB:SOURce:D PLus &lt;source&gt; (see page 717)</td>
<td>:TRIGger:USB:SOURce:D PLus? (see page 717)</td>

</tr>
<tr>
<td>:TRIGger:USB:SPEed &lt;value&gt; (see page 718)</td>
<td>:TRIGger:USB:SPEed? (see page 718)</td>
<td>&lt;value&gt; ::= {LOW</td>
</tr>
<tr>
<td>:TRIGger:USB:TRIGger &lt;value&gt; (see page 719)</td>
<td>:TRIGger:USB:TRIGger? (see page 719)</td>
<td>&lt;value&gt; ::= {SOP</td>
</tr>
</tbody>
</table>
:TRIGger:USB:SOURce:DMINus

N (see page 886)

Command Syntax
:TRIGger:USB:SOURce:DMINus <source>

<source> ::= {CHANnel<n> | EXTernal} for the DSO models
<source> ::= {CHANnel<n> | DIGital<d>} for the MSO models
<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGger:USB:SOURce:DMINus command sets the source for the USB D-signal.

Query Syntax
:TRIGger:USB:SOURce:DMINus?

The :TRIGger:USB:SOURce:DMINus? query returns the current source for the USB D-signal.

Return Format
<source><NL>

See Also
- "Introduction to :TRIGger Commands" on page 647
- ":TRIGger:MODE" on page 656
- ":TRIGger:USB:SOURce:DPLus" on page 717
- ":TRIGger:USB:TRIGger" on page 719
TRIGGER:USB:SOURce:DPLus

(see page 886)

**Command Syntax**

:TRIGGER:USB:SOURce:DPLus <source>

<source> ::= {CHANnel<n> | EXTernal} for the DSO models
<source> ::= {CHANnel<n> | DIGital<d>} for the MSO models

<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

The :TRIGGER:USB:SOURce:DPLus command sets the source for the USB D+ signal.

**Query Syntax**

:TRIGGER:USB:SOURce:DPLus?

The :TRIGGER:USB:SOURce:DPLus? query returns the current source for the USB D+ signal.

**Return Format**

<source><NL>

**See Also**

:TRIGger:USB:SPEed

Command Syntax  
:TRIGger:USB:SPEed <value>

<value> ::= {LOW | FULL}

The :TRIGger:USB:SPEed command sets the expected USB signal speed to be Low Speed (1.5 Mb/s) or Full Speed (12 Mb/s).

Query Syntax  
:TRIGger:USB:SPEed?

The :TRIGger:USB:SPEed? query returns the current speed value for the USB signal.

Return Format  
<value><NL>

:TRIGger:USB:TRIGger

(see page 886)

Command Syntax

:TRIGger:USB:TRIGger <value>

/value> ::= {SOP | EOP | ENTERsuspend | EXITsuspend | RESet}

The :TRIGger:USB:TRIGger command sets where the USB trigger will occur:

- SOP — Start of packet.
- EOP — End of packet.
- ENTERsuspend — Enter suspend state.
- EXITsuspend — Exit suspend state.
- RESet — Reset complete.

Query Syntax

:TRIGger:USB:TRIGger?

The :TRIGger:USB:TRIGger? query returns the current USB trigger value.

Return Format

/value/<NL>

/value> ::= {SOP | EOP | ENTERsuspend | EXITsuspend | RESet}

Introduction to :WAVEform Commands

The WAVEform subsystem is used to transfer data to a controller from the oscilloscope waveform memories. The queries in this subsystem will only operate when the channel selected by :WAVEform:SOURce is on.

Waveform Data and Preamble

The waveform record is actually contained in two portions: the preamble and waveform data. The waveform record must be read from the oscilloscope by the controller using two separate commands, :WAVEform:DATA (see page 731) and :WAVEform:PREamble (see page 738). The waveform data is the actual data acquired for each point in the specified source. The preamble contains the information for interpreting the waveform data, which includes the number of points acquired, the format of acquired data, and the type of acquired data. The preamble also contains the X and Y increments, origins, and references for the acquired data, so that word and byte data can be translated to time and voltage values.

Data Acquisition Types
There are four types of waveform acquisitions that can be selected for analog channels with the :ACQuire:TYPE command (see page 213): NORMal, AVERage, PEAK, and HRESolution. Digital channels are always acquired using NORMal. When the data is acquired using the :DIGitize command (see page 177) or :RUN command (see page 194), the data is placed in the channel buffer of the specified source.

Once you have acquired data with the :DIGitize command, the instrument is stopped. If the instrument is restarted (via the programming interface or the front panel), or if any instrument setting is changed, the data acquired with the :DIGitize command may be overwritten. You should first acquire the data with the :DIGitize command, then immediately read the data with the :WAVEform:DATA? query (see page 731) before changing any instrument setup.

A waveform record consists of either all of the acquired points or a subset of the acquired points. The number of points acquired may be queried using :ACQuire:POINts? (see page 206).

**Helpful Hints:**

The number of points transferred to the computer is controlled using the :WAVEform:POINts command (see page 734). If :WAVEform:POINts MAXimum is specified and the instrument is not running (stopped), all of the points that are displayed are transferred. This can be as many as 4,000,000 in some operating modes or as many as 8,000,000 for a digital channel on the mixed signal oscilloscope. Fewer points may be specified to speed data transfers and minimize controller analysis time. The :WAVEform:POINts may be varied even after data on a channel is acquired. However, this decimation may result in lost pulses and transitions. The number of points selected for transfer using :WAVEform:POINts must be an even divisor of 1,000 or be set to MAXimum. :WAVEform:POINts determines the increment between time buckets that will be transferred. If POINts = MAXimum, the data cannot be decimated. For example:

- :WAVEform:POINts 1000 — returns time buckets 0, 1, 2, 3, 4, ..., 999.
- :WAVEform:POINts 500 — returns time buckets 0, 2, 4, 6, 8, ..., 998.
- :WAVEform:POINts 250 — returns time buckets 0, 4, 8, 12, 16, ..., 996.
- :WAVEform:POINts 100 — returns time buckets 0, 10, 20, 30, 40, ..., 990.

**Analog Channel Data**

**NORMal Data**

Normal data consists of the last data point (hit) in each time bucket. This data is transmitted over the programming interface in a linear fashion starting with time bucket 0 and going through time bucket n - 1, where n is the number returned by the :WAVEform:POINts? query (see page 734). Only the magnitude values of each data point are transmitted. The first voltage value corresponds to the first time bucket on the left side of the screen and the last value corresponds to the
next-to-last time bucket on the right side of the screen. Time buckets without data return 0. The time values for each data point correspond to the position of the data point in the data array. These time values are not transmitted.

**AVERage Data**

AVERage data consists of the average of the first n hits in a time bucket, where n is the value returned by the :ACQuire:COUNt query (see page 204). Time buckets that have fewer than n hits return the average of the data they do have. If a time bucket does not have any data in it, it returns 0.

This data is transmitted over the interface linearly, starting with time bucket 0 and proceeding through time bucket n-1, where n is the number returned by the :WAVeform:POINts? query (see page 734). The first value corresponds to a point at the left side of the screen and the last value corresponds to one point away from the right side of the screen. The maximum number of points that can be returned in average mode is 1000 unless ACQuire:COUNt has been set to 1.

**PEAK Data**

Peak detect display mode is used to detect glitches for time base settings of 500 us/div and slower. In this mode, the oscilloscope can sample more data than it can store and display. So, when peak detect is turned on, the oscilloscope scans through the extra data, picks up the minimum and maximum for each time bucket, then stores the data in an array. Each time bucket contains two data sample.

The array is transmitted over the interface bus linearly, starting with time bucket 0 proceeding through time bucket n-1, where n is the number returned by the :WAVeform:POINts? query (see page 734). In each time bucket, two values are transmitted, first the minimum, followed by the maximum. The first pair of values corresponds to the time bucket at the leftmost side of the screen. The last pair of values corresponds to the time bucket at the far right side of the screen. In :ACQuire:TYPE PEAK mode (see page 213), the value returned by the :WAVeform:XINCrement query (see page 751) should be doubled to find the time difference between the min-max pairs.

**HRESolution Data**

The high resolution (smoothing) mode is used to reduce noise at slower sweep speeds where the digitizer samples faster than needed to fill memory for the displayed time range.

**Data Conversion**

Word or byte data sent from the oscilloscope must be scaled for useful interpretation. The values used to interpret the data are the X and Y references, X and Y origins, and X and Y increments. These values are read from the waveform preamble. Each channel has its own waveform preamble.

In converting a data value to a voltage value, the following formula is used:

\[
\text{voltage} = [(\text{data value} - \text{yreference}) \times \text{yincrement}] + \text{yorigin}
\]
If the :WAVeform:FORMat data format is ASCii (see page 733), the data values are converted internally and sent as floating point values separated by commas.

In converting a data value to time, the time value of a data point can be determined by the position of the data point. For example, the fourth data point sent with :WAVeform:XORigin = 16 ns, :WAVeform:XREFerence = 0, and :WAVeform:XINCrement = 2 ns, can be calculated using the following formula:

\[
\text{time} = [(\text{data point number} - \text{xreference}) \times \text{xincrement}] + \text{xorigin}
\]

This would result in the following calculation for time bucket 3:

\[
\text{time} = [(3 - 0) \times 2 \text{ ns}] + 16 \text{ ns} = 22 \text{ ns}
\]

In :ACQuire:TYPE PEAK mode (see page 213), because data is acquired in max-min pairs, modify the previous time formula to the following:

\[
\text{time} = [(\text{data pair number} - \text{xreference}) \times \text{xincrement} \times 2] + \text{xorigin}
\]

**Data Format for Transfer**

There are three formats for transferring waveform data over the interface: BYTE, WORD and ASCii (see ".:WAVeform:FORMat" on page 733). BYTE, WORD and ASCii formatted waveform records are transmitted using the arbitrary block program data format specified in IEEE 488.2.

When you use the block data format, the ASCII character string ":8<DD...D>" is sent prior to sending the actual data. The 8 indicates how many Ds follow. The Ds are ASCII numbers that indicate how many data bytes follow.

For example, if 1000 points will be transferred, and the WORD format was specified, the block header ":800001000" would be sent. The 8 indicates that eight length bytes follow, and 00001000 indicates that 1000 binary data bytes follow.

Use the :WAVeform:UNSigned command (see page 749) to control whether data values are sent as unsigned or signed integers. This command can be used to match the instrument's internal data type to the data type used by the programming language. This command has no effect if the data format is ASCii.

**Data Format for Transfer - ASCii format**

The ASCii format (see ":.WAVeform:FORMat" on page 733) provides access to the waveform data as real Y-axis values without using Y origin, Y reference, and Y increment to convert the binary data. Values are transferred as ASCII digits in floating point format separated by commas. In ASCii format, holes are represented by the value 9.9e+37. The setting of :WAVeform:BYTEorder (see page 729) and :WAVeform:UNSigned (see page 749) have no effect when the format is ASCii.
WORD format (see ":WAVeform:FORMat" on page 733) provides 16-bit access to the waveform data. In the WORD format, the number of data bytes is twice the number of data points. The number of data points is the value returned by the :WAVeform:POINts? query (see page 734). If the data intrinsically has less than 16 bits of resolution, the data is left-shifted to provide 16 bits of resolution and the least significant bits are set to 0. Currently, the greatest intrinsic resolution of any data is 12 bits, so at least the lowest 4 bits of data will be 0. If there is a hole in the data, the hole is represented by a 16 bit value equal to 0.

Use :WAVeform:BYTeorder (see page 729) to determine if the least significant byte or most significant byte is to be transferred first. The :BYTeorder command can be used to alter the transmit sequence to match the storage sequence of an integer in the programming language being used.

Data Format for Transfer - BYTE format

The BYTE format (see ":WAVeform:FORMat" on page 733) allows 8-bit access to the waveform data. If the data intrinsically has more than 8 bits of resolution (averaged data), the data is right-shifted (truncated) to fit into 8 bits. If there is a hole in the data, the hole is represented by a value of 0. The BYTE-formatted data transfers over the programming interface faster than ASCii or WORD-formatted data, because in ASCii format, as many as 13 bytes per point are transferred, in BYTE format one byte per point is transferred, and in WORD format two bytes per point are transferred.

The :WAVeform:BYTeorder command (see page 729) has no effect when the data format is BYTE.

Digital Channel Data (MSO models only)

The waveform record for digital channels is similar to that of analog channels. The main difference is that the data points represent either DIGital0,...,7 (POD1), DIGital8,...,15 (POD2), or any grouping of digital channels (BUS1 or BUS2).

For digital channels, :WAVeform:UNSigned (see page 749) must be set to ON.

Digital Channel POD Data Format

Data for digital channels is only available in groups of 8 bits (Pod1 = D0 - D7, Pod2 = D8 - D15). The bytes are organized as:

<table>
<thead>
<tr>
<th>:WAVeform:SOURce</th>
<th>Bit 7</th>
<th>Bit 6</th>
<th>Bit 5</th>
<th>Bit 4</th>
<th>Bit 3</th>
<th>Bit 2</th>
<th>Bit 1</th>
<th>Bit 0</th>
</tr>
</thead>
<tbody>
<tr>
<td>POD1</td>
<td>D7</td>
<td>D6</td>
<td>D5</td>
<td>D4</td>
<td>D3</td>
<td>D2</td>
<td>D1</td>
<td>D0</td>
</tr>
<tr>
<td>POD2</td>
<td>D15</td>
<td>D14</td>
<td>D13</td>
<td>D12</td>
<td>D11</td>
<td>D10</td>
<td>D9</td>
<td>D8</td>
</tr>
</tbody>
</table>

If the :WAVeform:FORMat is WORD (see page 733) is WORD, every other data byte will be 0. The setting of :WAVeform:BYTeorder (see page 729) controls which byte is 0.
If a digital channel is not displayed, its bit value in the pod data byte is not defined.

**Digital Channel BUS Data Format**

Digital channel BUS definitions can include any or all of the digital channels. Therefore, data is always returned as 16-bit values. :BUS commands (see page 215) are used to select the digital channels for a bus.

**Reporting the Setup**

The following is a sample response from the :WAVeform? query. In this case, the query was issued following a *RST command.

```
:WAV:UNS 1;VIEW MAIN;BYT MSBF;FORM BYTE;POIN +1000;SOUR CHAN1;SOUR:SUBS NONE
```
:WAVeform:BYTeorder

(see page 886)

Command Syntax

:WAVeform:BYTeorder <value>

<value> ::= {LSBFirst | MSBFirst}

The :WAVeform:BYTeorder command sets the output sequence of the WORD data.

• MSBFirst — sets the most significant byte to be transmitted first.
• LSBFirst — sets the least significant byte to be transmitted first.

This command affects the transmitting sequence only when :WAVeform:FORMat WORD is selected.

The default setting is MSBFirst.

Query Syntax

:WAVeform:BYTeorder?

The :WAVeform:BYTeorder query returns the current output sequence.

Return Format

<value><NL>

<value> ::= {LSBF | MSBF}

See Also

• "Introduction to :WAVeform Commands" on page 723
• ":WAVeform:DATA" on page 731
• ":WAVeform:FORMat" on page 733
• ":WAVeform:PREamble" on page 738

Example Code

• "Example Code" on page 744
• "Example Code" on page 739
:WAVeform:COUNt

Query Syntax

:WAVeform:COUNt?

The :WAVeform:COUNt? query returns the count used to acquire the current waveform. This may differ from current values if the unit has been stopped and its configuration modified. For all acquisition types except average, this value is 1.

Return Format

<count_argument><NL>
<count_argument> ::= an integer from 1 to 65536 in NR1 format

See Also

- "Introduction to :WAVeform Commands" on page 723
- "ACQuire:COUNt" on page 204
- "ACQuire:TYPE" on page 213
:WAVeform:DATA

C (see page 886)

Query Syntax  :WAVeform:DATA?

The :WAVeform:DATA query returns the binary block of sampled data points transmitted using the IEEE 488.2 arbitrary block data format. The binary data is formatted according to the settings of the :WAVeform:UNSigned, :WAVeform:BYTeorder, :WAVeform:FORMat, and :WAVeform:SOURce commands. The number of points returned is controlled by the :WAVeform:POINts command.

In BYTE or WORD waveform formats, these data values have special meaning:
- 0x00 or 0x0000 — Hole. Holes are locations where data has not yet been acquired.
- 0x01 or 0x0001 — Clipped low. These are locations where the waveform is clipped at the bottom of the oscilloscope display.
- 0xFF or 0xFFFF — Clipped high. These are locations where the waveform is clipped at the top of the oscilloscope display.

Return Format  <binary block data><NL>

See Also  • For a more detailed description of the data returned for different acquisition types, see: "Introduction to :WAVeform Commands" on page 723
- ":WAVeform:UNSsigned" on page 749
- ":WAVeform:BYTeorder" on page 729
- ":WAVeform:FORMat" on page 733

- ":WAVeform:PREamble" on page 738
- ":WAVeform:SOURce" on page 743
- ":WAVeform:TYPE" on page 748

Example Code  ' QUERY_WAVE_DATA - Outputs waveform data that is stored in a buffer.

  ' Query the oscilloscope for the waveform data.
  myScope.WriteString "WAVeform:DATA?"

  ' READ_WAVE_DATA - The wave data consists of two parts: the header, and the actual waveform data followed by a new line (NL) character.
  ' The query data has the following format:
  ' <header><waveform_data><NL>
  ' Where:
' <header> = #800001000 (This is an example header)
' The "#8" may be stripped off of the header and the remaining
' numbers are the size, in bytes, of the waveform data block. The
' size can vary depending on the number of points acquired for the
' waveform. You can then read that number of bytes from the
' oscilloscope and the terminating NL character.
'
Dim lngI As Long
Dim lngDataValue As Long

varQueryResult = myScope.ReadIEEEBlock(BinaryType_UI1)
' Unsigned integer bytes.
For lngI = 0 To UBound(varQueryResult) - 20 ' 20 points.
    Step (UBound(varQueryResult) / 20) ' 20 points.
    If intBytesPerData = 2 Then
        lngDataValue = varQueryResult(lngI) * 256 +
                       varQueryResult(lngI + 1) ' 16-bit value.
    Else
        lngDataValue = varQueryResult(lngI) ' 8-bit value.
    End If
    strOutput = strOutput + "Data point " +
                CStr(lngI / intBytesPerData) + ", " +
                FormatNumber((lngDataValue - lngYReference) _
                              * sngYIncrement + sngYOrigin) + " V," +
                FormatNumber(((lngI / intBytesPerData - lngXReference) _
                              * sngXIncrement + dblXOrigin) * 1000000) + " us" + vbCrLf
Next lngI
MsgBox "Waveform data:" + vbCrLf + strOutput

See complete example programs at: Chapter 38, “Programming Examples,”
starting on page 895
:WAVeform:FORMat

Command Syntax

```plaintext
:WAVeform:FORMat <value>
```

<value> ::= {WORD | BYTE | ASCii}

The :WAVeform:FORMat command sets the data transmission mode for waveform data points. This command controls how the data is formatted when sent from the oscilloscope.

- ASCii formatted data converts the internal integer data values to real Y-axis values. Values are transferred as ASCII digits in floating point notation, separated by commas.
- ASCII formatted data is transferred ASCII text.
- WORD formatted data transfers 16-bit data as two bytes. The :WAVeform:BYTeorder command can be used to specify whether the upper or lower byte is transmitted first. The default (no command sent) is that the upper byte transmitted first.
- BYTE formatted data is transferred as 8-bit bytes.

When the :WAVeform:SOURce is the serial decode bus SBUS1, ASCii is the only waveform format allowed.

When the :WAVeform:SOURce is one of the digital channel buses (BUS1 or BUS2), ASCII and WORD are the only waveform formats allowed.

Query Syntax

```plaintext
:WAVeform:FORMat?
```

The :WAVeform:FORMat query returns the current output format for the transfer of waveform data.

Return Format

```plaintext
<value><NL>
```

<value> ::= {WORD | BYTE | ASC}

- ":WAVeform:PREamble" on page 738

Example Code

- "Example Code" on page 744
:WAVeform:POINts

Command Syntax

:WAVeform:POINts <# points>

<# points> ::= {100 | 250 | 500 | 1000 | <points mode>}
    if waveform points mode is NORMal
<# points> ::= {100 | 250 | 500 | 1000 | 2000 | 5000 | 10000 | 20000 |
    50000 | 100000 | 200000 | 500000 | 1000000 |
    <points mode>}
    if waveform points mode is MAXimum or RAW

<points mode> ::= {NORMal | MAXimum | RAW}

NOTE

The <points_mode> option is deprecated. Use the :WAVeform:POINts:MODE command instead.

The :WAVeform:POINts command sets the number of waveform points to be transferred with the :WAVeform:DATA? query. This value represents the points contained in the waveform selected with the :WAVeform:SOURce command.

For the analog or digital sources, the records that can be transferred depend on the waveform points mode. The maximum number of points returned for math (function) waveforms is determined by the NORMal waveform points mode. See the :WAVeform:POINts:MODE command (see page 736) for more information.

Only data visible on the display will be returned.

When the :WAVeform:SOURce is the serial decode bus SBUS1, this command is ignored, and all available serial decode bus data is returned.

Query Syntax

:WAVeform:POINts?

The :WAVeform:POINts query returns the number of waveform points to be transferred when using the :WAVeform:DATA? query. Setting the points mode will affect what data is transferred (see the :WAVeform:POINts:MODE command (see page 736) for more information).

When the :WAVeform:SOURce is the serial decode bus SBUS1, this query returns the number of messages that were decoded.

Return Format

<# points><NL>

<# points> ::= {100 | 250 | 500 | 1000 | <maximum # points>}
    if waveform points mode is NORMal
<# points> ::= {100 | 250 | 500 | 1000 | 2000 | 5000 | 10000 | 20000 |
    50000 | 100000 | 200000 | 500000 | 1000000 |
    <maximum # points>}
    if waveform points mode is MAXimum or RAW
If a full screen of data is not displayed, the number of points returned will not be 1000 or an even divisor of it.

Example Code

```plaintext
' WAVE_POINTS - Specifies the number of points to be transferred using the ":WAVEFORM:DATA?" query.
myScope.WriteString "::WAVEFORM:POINTS 1000"
```

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:WAVeform:POINts:MODE

Command Syntax

:WAVeform:POINts:MODE <points_mode>

<points_mode> ::= {NORMal | MAXimum | RAW}

The :WAVeform:POINts:MODE command sets the data record to be transferred with the :WAVeform:DATA? query.

For the analog or digital sources, there are two different records that can be transferred:

- The first is the raw acquisition record. The maximum number of points available in this record is returned by the :ACQuire:POINts? query. The raw acquisition record can only be transferred when the oscilloscope is not running and can only be retrieved from the analog or digital sources.
- The second is referred to as the measurement record and is a 62,500-point (maximum) representation of the raw acquisition record. The measurement record can be retrieved from any source.

If the <points_mode> is NORMal the measurement record is retrieved.

If the <points_mode> is RAW, the raw acquisition record is used. Under some conditions, such as when the oscilloscope is running, this data record is unavailable.

If the <points_mode> is MAXimum, whichever record contains the maximum amount of points is used. Usually, this is the raw acquisition record. But, if the raw acquisition record is unavailable (for example, when the oscilloscope is running), the measurement record may have more data. If data is being retrieved as the oscilloscope is stopped and as the data displayed is changing, the data being retrieved can switch between the measurement and raw acquisition records.

NOTE

If the :WAVeform:SOURce is not an analog or digital source, the only valid parameters for WAVeform:POINts:MODE is NORMal or MAXimum.

Considerations for MAXimum or RAW data retrieval

- The instrument must be stopped (see the :STOP command (see page 198) or the :DIGitize command (see page 177) in the root subsystem) in order to return more than the measurement record.
- :TIMebase:MODE must be set to MAIN.
- :ACQuire:TYPE must be set to NORMal or HRESolution.
- MAXimum or RAW will allow up to 1,000,000 points to be returned. The number of points returned will vary as the instrument’s configuration is changed. Use the :WAVeform:POINts? MAXimum query to determine the maximum number of points that can be retrieved at the current settings.
Query Syntax

`:WAVEform:POINts:MODE?`

The :WAVEform:POINts:MODE? query returns the current points mode. Setting the points mode will affect what data is transferred. See the discussion above.

Return Format

`<points_mode><NL>`

`<points_mode> ::= {NORMal | MAXimum | RAW}`

:WAVeform:PREAMble

(see page 886)

Query Syntax

:WAVeform:PREAMble?

The :WAVeform:PREAMble query requests the preamble information for the
dselected waveform source. The preamble data contains information concerning
the vertical and horizontal scaling of the data of the corresponding channel.

Return Format

<preamble_block><NL>

<preamble_block> ::= <format 16-bit NR1>,
         <type 16-bit NR1>,
         <points 32-bit NR1>,
         <count 32-bit NR1>,
         <xincrement 64-bit floating point NR3>,
         <xorigin 64-bit floating point NR3>,
         <xreference 32-bit NR1>,
         <yincrement 32-bit floating point NR3>,
         <yorigin 32-bit floating point NR3>,
         <yreference 32-bit NR1>

<format> ::= 0 for BYTE format, 1 for WORD format, 4 for ASCii format;
an integer in NR1 format (format set by :WAViform:FORMAT).

<type> ::= 2 for AVERAGE type, 0 for NORMAl type, 1 for PEAK detect
type; an integer in NR1 format (type set by :ACQuire:TYPE).

<count> ::= Average count or 1 if PEAK or NORMal; an integer in NR1
format (count set by :ACQuire:COUNT).

Example Code

```
' GET_PREAMBLE - The preamble block contains all of the current
' WAVEFORM settings. It is returned in the form <preamble_block><NL>
' where <preamble_block> is:
'    FORMAT     : int16 - 0 = BYTE, 1 = WORD, 4 = ASCII.
'    TYPE       : int16 - 0 = NORMAL, 1 = PEAK DETECT, 2 = AVERAGE
'    POINTS     : int32 - number of data points transferred.
'    COUNT      : int32 - 1 and is always 1.
'    XINCREMENT : float64 - time difference between data points.
'    XORIGIN    : float64 - always the first data point in memory.
'    XREFERENCE : int32 - specifies the data point associated with
'                  x-origin.
'    YINCREMENT : float32 - voltage diff between data points.
'    YORIGIN    : float32 - value is the voltage at center screen.
'    YREFERENCE : int32 - specifies the data point where y-origin
'                  occurs.

Dim Preamble()

lngYReference = Preamble(9)

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
The :WAVeform:SEGmented:COUNt query returns the number of memory segments in the acquired data. You can use the :WAVeform:SEGmented:COUNt? query while segments are being acquired (although :DIGitize blocks subsequent queries until the full segmented acquisition is complete).

The segmented memory acquisition mode is enabled with the :ACQuire:MODE command. The number of segments to acquire is set using the :ACQuire:SEGmented:COUNt command, and data is acquired using the :DIGitize, :SINGle, or :RUN commands.

**Return Format**

<count> ::= an integer from 2 to 250 in NR1 format (count set by :ACQuire:SEGmented:COUNt).

**See Also**

- ":ACQuire:MODE" on page 205
- ":ACQuire:SEGmented:COUNt" on page 208
- ":DIGitize" on page 177
- ":SINGle" on page 196
- ":RUN" on page 194
- "Introduction to :WAVeform Commands" on page 723

**Example Code**

- "Example Code" on page 209

**NOTE**

This command is available when the segmented memory license (SGM) is enabled.
**:WAVeform:SEGMented:TTAG**

Query Syntax

```plaintext
:WAVeform:SEGMented:TTAG?
```

**NOTE**

This command is available when the segmented memory license (SGM) is enabled.

The :WAVeform:SEGMented:TTAG? query returns the time tag of the currently selected segmented memory index. The index is selected using the :ACQuire:SEGMented:INDex command.

**Return Format**

```plaintext
<time_tag> ::= in NR3 format
```

**See Also**

- "ACQuire:SEGMented:INDex" on page 209

**Example Code**

- "Example Code" on page 209
:WAVeform:SOURce

(see page 886)

Command Syntax

:WAVeform:SOURce <source>

<source> ::= {CHANnel<n> | FUNCtion | MATH | WMEMory<r> | SBUS1}
    for DSO models

<source> ::= {CHANnel<n> | POD{1 | 2} | BUS{1 | 2} | FUNCtion
    | MATH | WMEMory<r> | SBUS1}
    for MSO models

<n> ::= 1 to (# analog channels) in NR1 format

<r> ::= {1 | 2}

The :WAVeform:SOURce command selects the analog channel, function, digital pod, digital bus, reference waveform, or serial decode bus to be used as the source for the :WAVeform commands.

Function capabilities include add, subtract, multiply, and FFT (Fast Fourier Transform) operations.

When the :WAVeform:SOURce is the serial decode bus (SBUS1), ASCii is the only waveform format allowed, and the :WAVeform:DATA? query returns a string with timestamps and associated bus decode information.

With MSO oscilloscope models, you can choose a POD or BUS as the waveform source. There are some differences between POD and BUS when formatting and getting data from the oscilloscope:

- When POD1 or POD2 is selected as the waveform source, you can choose the BYTE, WORD, or ASCII formats (see ":WAVeform:FORMat" on page 733).

  When the WORD format is chosen, every other data byte will be 0. The setting of :WAVeform:BYTeorder controls which byte is 0.

  When the ASCII format is chosen, the :WAVeform:DATA? query returns a string with unsigned decimal values separated by commas.

- When BUS1 or BUS2 is selected as the waveform source, you can choose the WORD or ASCII formats (but not BYTE because bus values are always returned as 16-bit values).

  When the ASCII format is chosen, the :WAVeform:DATA? query returns a string with hexadecimal bus values, for example: 0x1938,0xff38,...

Query Syntax

:WAVeform:SOURce?

The :WAVeform:SOURce? query returns the currently selected source for the WAVeform commands.
Return Format

\[
\text{<source><NL>}
\]

\[
\text{<source> ::= \{CHAN<n> \mid \text{FUNC} \mid \text{WMEM}<r> \mid \text{SBUS1}\} for DSO models}
\]

\[
\text{<source> ::= \{CHAN<n> \mid \text{POD}{1 | 2} \mid \text{BUS}{1 | 2} \mid \text{FUNC}}
\]

\[
\text{| WMEM}<r> \mid \text{SBUS1}\} \text{ for MSO models}
\]

\[
\langle n \rangle ::= 1 \text{ to (\# analog channels) in NR1 format}
\]

\[
\langle r \rangle ::= \{1 \mid 2\}
\]

See complete example programs at: Chapter 38, "Programming Examples," 
starting on page 895
:WAVeform:SOURce:SUBSource

Command Syntax

:WAVeform:SOURce:SUBSource <subsource>

<subsource> ::= {{SUB0 | RX | MOSI} | {SUB1 | TX | MISO}}

If the :WAVeform:SOURce is SBUS<n> (serial decode), more than one data set may be available, and this command lets you choose from the available data sets.

When using UART serial decode, this option lets you get "TX" data. (TX is an alias for SUB1.) The default, SUB0, specifies "RX" data. (RX is an alias for SUB0.)

When using SPI serial decode, this option lets you get "MISO" data. (MISO is an alias for SUB1.) The default, SUB0, specifies "MOSI" data. (MOSI is an alias for SUB0.)

If the :WAVeform:SOURce is not SBUS, or the :SBUS<n>:MODE is not UART or SPI, the only valid subsource is SUB0.

Query Syntax

:WAVeform:SOURce:SUBSource?

The :WAVeform:SOURce:SUBSource? query returns the current waveform subsource setting.

Return Format

<subsource><NL>

<subsource> ::= {SUB0 | SUB1}

See Also

- "Introduction to :WAVeform Commands" on page 723
- ":WAVeform:SOURce" on page 743
**:WAVeform:TYPE**

(see page 886)

**Query Syntax**

`:WAVeform:TYPE?`

The :WAVeform:TYPE? query returns the acquisition mode associated with the currently selected waveform. The acquisition mode is set by the :ACQuire:TYPE command.

**Return Format**

```
<mode><NL>
```

```
<mode> ::= {NORM | PEAK | AVER | HRES}
```

**NOTE**

If the :WAVeform:SOURce is POD1 or POD2, the type is always NORM.

**See Also**

- "Introduction to :WAVeform Commands" on page 723
- ":ACQuire:TYPE" on page 213
- ":WAVEform:DATA" on page 731
- ":WAVEform:PREamble" on page 738
- ":WAVEform:SOURce" on page 743
:WAVEform:UNSIGNED

### Command Syntax

:WAVEform:UNSIGNED <unsigned>

<unsigned> ::= {{0 | OFF} | {1 | ON}}

The :WAVEform:UNSIGNED command turns unsigned mode on or off for the currently selected waveform. Use the WAVEform:UNSIGNED command to control whether data values are sent as unsigned or signed integers. This command can be used to match the instrument's internal data type to the data type used by the programming language. This command has no effect if the data format is ASCII.

If :WAVEform:SOURce is set to POD1, POD2, BUS1, or BUS2, WAVEform:UNSIGNED must be set to ON.

### Query Syntax

:WAVEform:UNSIGNED?

The :WAVEform:UNSIGNED? query returns the status of unsigned mode for the currently selected waveform.

### Return Format

<unsigned><NL>

<unsigned> ::= {0 | 1}

### See Also

- "Introduction to :WAVEform Commands" on page 723
- "WAVEform:SOURce" on page 743
:WAVeform:VIEW

Command Syntax
:WAVeform:VIEW <view>

<view> ::= {MAIN}

The :WAVeform:VIEW command sets the view setting associated with the currently selected waveform. Currently, the only legal value for the view setting is MAIN.

Query Syntax
:WAVeform:VIEW?

The :WAVeform:VIEW? query returns the view setting associated with the currently selected waveform.

Return Format
<view><NL>

<view> ::= {MAIN}

See Also
• "Introduction to :WAVeform Commands" on page 723
• "*:WAVeform:POINts" on page 734
**:WAVeform:**XINCrement

---

**Query Syntax**

**:WAVeform:**XINCrement?

The **:WAVeform:**XINCrement? query returns the x-increment value for the currently specified source. This value is the time difference between consecutive data points in seconds.

**Return Format**

<value><NL>

<value> ::= x-increment in the current preamble in 64-bit floating point NR3 format

**See Also**

- "Introduction to **:WAVeform Commands" on page 723
- "**:WAVeform:**PREamble" on page 738

**Example Code**

- "Example Code" on page 739
:WAVeform:XORigin

Query Syntax  :WAVeform:XORigin?

The :WAVeform:XORigin? query returns the x-origin value for the currently specified source. XORigin is the X-axis value of the data point specified by the :WAVeform:XREFerence value. In this product, that is always the X-axis value of the first data point (XREFerence = 0).

Return Format  <value><NL>

<value> ::= x-origin value in the current preamble in 64-bit floating point NR3 format

See Also  •  "Introduction to :WAVeform Commands" on page 723
  •  ":WAVeform:PREamble" on page 738
  •  "WAVeform:XREFerence" on page 753

Example Code  •  "Example Code" on page 739
:WAVeform:XREFerence

Query Syntax  :WAVeform:XREFerence?

The :WAVeform:XREFerence? query returns the x-reference value for the currently specified source. This value specifies the index of the data point associated with the x-origin data value. In this product, the x-reference point is the first point displayed and XREFerence is always 0.

Return Format  

\[ <\text{value}>\text{<NL>}\]

\[ <\text{value}> ::= \text{x-reference value} = 0 \text{ in 32-bit NR1 format}\]

See Also  

- "Introduction to :WAVeform Commands" on page 723

- ":WAVeform:XORigin" on page 752

Example Code  

- "Example Code" on page 739
:WAVEform:YINCcrement

Query Syntax  :WAVEform:YINCcrement?

The :WAVEform:YINCcrement? query returns the y-increment value in volts for the currently specified source. This value is the voltage difference between consecutive data values. The y-increment for digital waveforms is always "1".

Return Format  <value><NL>

<value> ::= y-increment value in the current preamble in 32-bit floating point NR3 format

See Also  • "Introduction to :WAVEform Commands" on page 723
• ":WAVEform:PREamble" on page 738

Example Code  • "Example Code" on page 739
:WAVeform:YORigin

(see page 886)

Query Syntax  
:WAVeform:YORigin?

The :WAVeform:YORigin? query returns the y-origin value for the currently specified source. This value is the Y-axis value of the data value specified by the :WAVeform:YREFerence value. For this product, this is the Y-axis value of the center of the screen.

Return Format  
<value><NL>

<value> ::= y-origin in the current preamble in 32-bit floating point NR3 format

See Also  
• "Introduction to :WAVeform Commands" on page 723
• ":WAVeform:PREamble" on page 738
• ":WAVeform:YREFerence" on page 756

Example Code  
• "Example Code" on page 739
:WAVEform:YREFerence

Query Syntax

:WAVEform:YREFerence?

The :WAVEform:YREFerence? query returns the y-reference value for the currently specified source. This value specifies the data point value where the y-origin occurs. In this product, this is the data point value of the center of the screen. It is undefined if the format is ASCii.

Return Format

:value

:value ::= y-reference value in the current preamble in 32-bit NR1 format

See Also

• "Introduction to :WAVEform Commands" on page 723
• ":WAVEform:PREamble" on page 738

</table>
Introduction to :WGEN Commands

The :WGEN subsystem provides commands to select the waveform generator function and parameters.

Reporting the Setup

Use :WGEN? to query setup information for the WGEN subsystem.

Return Format

The following is a sample response from the :WGEN? query. In this case, the query was issued following the *RST command.

:WGEN:FUNC SIN;OUTP 0;FREQ +1.0000E+03;VOLT +500.0E-03;VOLT:OFFS +0.0E+00;:WGEN:OUTP:LOAD ONEM

Table 110  :WGEN Commands Summary (continued)

<tr>
<td>:WGEN:VOLTage:OFFSET &lt;offset&gt; (see page 786)</td>
<td>:WGEN:VOLTage:OFFSET? (see page 786)</td>
<td>&lt;offset&gt; ::= offset in volts in NR3 format</td>
</tr>
</tbody>
</table>
:WGEN:FREQuency

(see page 886)

Command Syntax

:WGEN:FREQuency <frequency>

<frequency> ::= frequency in Hz in NR3 format

For all waveforms except Noise and DC, the :WGEN:FREQuency command specifies the frequency of the waveform.

You can also specify the frequency indirectly using the :WGEN:PERiod command.

Query Syntax

:WGEN:FREQuency?

The :WGEN:FREQuency? query returns the currently set waveform generator frequency.

Return Format

<frequency><NL>

<frequency> ::= frequency in Hz in NR3 format

### :WGEN:FUNCTION

(see page 886)

**Command Syntax**

```
:WGEN:FUNCTION <signal>
```

<signal> ::= {SINusoid | SQUare | RAMP | PULSe | NOISE | DC}

The :WGEN:FUNCTION command selects the type of waveform:

<table>
<thead>
<tr>
<th>Waveform Type</th>
<th>Characteristics</th>
</tr>
</thead>
<tbody>
<tr>
<td>SINusoid</td>
<td>Use these commands to set the sine signal parameters:</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>The frequency can be adjusted from 100 mHz to 20 MHz.</td>
</tr>
<tr>
<td>SQUare</td>
<td>Use these commands to set the square wave signal parameters:</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:FREQuency&quot; on page 760</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:PERiod&quot; on page 781</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:VOLTage&quot; on page 783</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:VOLTage:OFFSet&quot; on page 786</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:VOLTage:HIGH&quot; on page 784</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:VOLTage:LOW&quot; on page 785</td>
</tr>
<tr>
<td></td>
<td>• &quot;:WGEN:FUNCTION:SQUare:DCYClle&quot; on page 766</td>
</tr>
<tr>
<td></td>
<td>The frequency can be adjusted from 100 mHz to 10 MHz.</td>
</tr>
<tr>
<td></td>
<td>The duty cycle can be adjusted from 20% to 80%.</td>
</tr>
</tbody>
</table>
For all waveform types, the output amplitude, into $50 \, \Omega$, can be adjusted from 10 mVpp to 2.5 Vpp (or from 20 mVpp to 5 Vpp into an open-circuit load).

**Query Syntax**

`:WGEN:FUNCTION?`

The :WGEN:FUNCTION? query returns the currently selected signal type.

**Return Format**

```
<signal><NL>
<signal> ::= {SIN | SQU | RAMP | PULS | NOIS | DC}
```
See Also · "Introduction to :WGEN Commands" on page 759
Command Syntax

:WGEN:FUNCTION:PULSE:WIDTH <width>

<width> ::= pulse width in seconds in NR3 format

For Pulse waveforms, the :WGEN:FUNCTION:PULSE:WIDTH command specifies the width of the pulse.

The pulse width can be adjusted from 20 ns to the period minus 20 ns.

Query Syntax

:WGEN:FUNCTION:PULSE:WIDTH?

Return Format

<width><NL>

<width> ::= pulse width in seconds in NR3 format

See Also

- "Introduction to :WGEN Commands" on page 759
- ":WGEN:FUNCTION" on page 761
:WGEN:FUNCTION:RAMP:SYMMetry

Command Syntax

:WGEN:FUNCTION:RAMP:SYMMetry <percent>

<percent> ::= symmetry percentage from 0% to 100% in NR1 format

For Ramp waveforms, the :WGEN:FUNCTION:RAMP:SYMMetry command specifies the symmetry of the waveform.

Symmetry represents the amount of time per cycle that the ramp waveform is rising.

Query Syntax

:WGEN:FUNCTION:RAMP:SYMMetry?

Return Format

<percent><NL>

<percent> ::= symmetry percentage from 0% to 100% in NR1 format

See Also

• "Introduction to :WGEN Commands" on page 759
• ":WGEN:FUNCTION" on page 761
:WGEN:FUNCTION:SQUare:DCYCLE

N (see page 886)

Command Syntax  
:WGEN:FUNCTION:SQUare:DCYCLE <percent>

<percent> ::= duty cycle percentage from 20% to 80% in NR1 format

For Square waveforms, the :WGEN:FUNCTION:SQUare:DCYCLE command specifies the square wave duty cycle.

Duty cycle is the percentage of the period that the waveform is high.

Query Syntax  
:WGEN:FUNCTION:SQUare:DCYCLE?

The :WGEN:FUNCTION:SQUare:DCYCLE? query returns the currently set square wave duty cycle.

Return Format  
<percent><NL>

<percent> ::= duty cycle percentage from 20% to 80% in NR1 format

See Also
- "Introduction to :WGEN Commands" on page 759
- ":WGEN:FUNCTION" on page 761
:WGEN:MODulation:AM:DEPTh

Command Syntax

:WGEN:MODulation:AM:DEPTh <percent>

<percent> ::= AM depth percentage from 0% to 100% in NR1 format

The :WGEN:MODulation:AM:DEPTh command specifies the amount of amplitude modulation.

AM Depth refers to the portion of the amplitude range that will be used by the modulation. For example, a depth setting of 80% causes the output amplitude to vary from 10% to 90% (90% – 10% = 80%) of the original amplitude as the modulating signal goes from its minimum to maximum amplitude.

Query Syntax

:WGEN:MODulation:AM:DEPTh?

The :WGEN:MODulation:AM:DEPTh? query returns the AM depth percentage setting.

Return Format

<percent><NL>

<percent> ::= AM depth percentage from 0% to 100% in NR1 format

:WGEN:MODulation:AM:FREQuency

Command Syntax

:WGEN:MODulation:AM:FREQuency <frequency>

<frequency> ::= modulating waveform frequency in Hz in NR3 format

The :WGEN:MODulation:AM:FREQuency command specifies the frequency of the modulating signal.

Query Syntax

:WGEN:MODulation:AM:FREQuency?

The :WGEN:MODulation:AM:FREQuency? query returns the frequency of the modulating signal.

Return Format

<frequency><NL>

<frequency> ::= modulating waveform frequency in Hz in NR3 format

See Also

Command Syntax

:WGEN:MODulation:FM:DEViation <frequency>

<frequency> ::= frequency deviation in Hz in NR3 format

The :WGEN:MODulation:FM:DEViation command specifies the frequency deviation from the original carrier signal frequency.

When the modulating signal is at its maximum amplitude, the output frequency is the carrier signal frequency plus the deviation amount, and when the modulating signal is at its minimum amplitude, the output frequency is the carrier signal frequency minus the deviation amount.

The frequency deviation cannot be greater than the original carrier signal frequency.

Also, the sum of the original carrier signal frequency and the frequency deviation must be less than or equal to the maximum frequency for the selected waveform generator function plus 100 kHz.

Query Syntax

:WGEN:MODulation:FM:DEViation?

Return Format

<frequency><NL>

<frequency> ::= frequency deviation in Hz in NR3 format

See Also

:WGEN:MODulation:FM:FREQuency

(see page 886)

Command Syntax

:WGEN:MODulation:FM:FREQuency <frequency>

<frequency> ::= modulating waveform frequency in Hz in NR3 format

The :WGEN:MODulation:FM:FREQuency command specifies the frequency of the modulating signal.

Query Syntax

:WGEN:MODulation:FM:FREQuency?

Return Format

<frequency><NL>

<frequency> ::= modulating waveform frequency in Hz in NR3 format

See Also

:WGEN:MODulation:FSKey:FREQuency

(see page 886)

Command Syntax

:WGEN:MODulation:FSKey:FREQuency <frequency>

<frequency> ::= hop frequency in Hz in NR3 format

The :WGEN:MODulation:FSKey:FREQuency command specifies the "hop frequency".

The output frequency "shifts" between the original carrier frequency and this "hop frequency".

Query Syntax

:WGEN:MODulation:FSKey:FREQuency?

The :WGEN:MODulation:FSKey:FREQuency? query returns the "hop frequency" setting.

Return Format

<frequency><NL>

<frequency> ::= hop frequency in Hz in NR3 format

See Also

:WGEN:MODulation:FSKey:RATE

Command Syntax
:WGEN:MODulation:FSKey:RATE <rate>

<rate> ::= FSK modulation rate in Hz in NR3 format

The :WGEN:MODulation:FSKey:RATE command specifies the rate at which the output frequency "shifts".

The FSK rate specifies a digital square wave modulating signal.

Query Syntax
:WGEN:MODulation:FSKey:RATE?

The :WGEN:MODulation:FSKey:RATE? query returns the FSK rate setting.

Return Format
<rate><NL>

<rate> ::= FSK modulation rate in Hz in NR3 format

:WGEN:MODulation:FUNCtion

N  (see page 886)

Command Syntax  :WGEN:MODulation:FUNCtion <shape>

<shape> ::= {SINusoid | SQUare| RAMP}

The :WGEN:MODulation:FUNCtion command specifies the shape of the modulating signal.

When the RAMP shape is selected, you can specify the amount of time per cycle that the ramp waveform is rising with the :WGEN:MODulation:FUNCtion:RAMP:SYMMetry command.

This command applies to AM and FM modulation. (The FSK modulation signal is a square wave shape.)

Query Syntax  :WGEN:MODulation:FUNCtion?

The :WGEN:MODulation:FUNCtion? query returns the specified modulating signal shape.

Return Format  <shape><NL>

<shape> ::= {SIN | SQU| RAMP}

See Also  •  ":WGEN:MODulation:AM:DEPTH" on page 767
•  ":WGEN:MODulation:AM:FREQuency" on page 768

•  ":WGEN:MODulation:TYPE" on page 777
:WGEN:MODulation:FUNCtion:RAMP:SYMMetry

(see page 886)

Command Syntax

:WGEN:MODulation:FUNCtion:RAMP:SYMMetry <percent>

<percent> ::= symmetry percentage from 0% to 100% in NR1 format

The :WGEN:MODulation:FUNCtion:RAMP:SYMMetry command specifies the amount of time per cycle that the ramp waveform is rising. The ramp modulating waveform shape is specified with the :WGEN:MODulation:FUNCtion command.

Query Syntax

:WGEN:MODulation:FUNCtion:RAMP:SYMMetry?

Return Format

<percent><NL>

<percent> ::= symmetry percentage from 0% to 100% in NR1 format

See Also

• ":WGEN:MODulation:AM:DEPTh" on page 767
• ":WGEN:MODulation:AM:FREQuency" on page 768
• ":WGEN:MODulation:FM:DEViation" on page 769

• ":WGEN:MODulation:TYPE" on page 777
**:WGEN:MODulation:NOISe**

N (see page 886)

**Command Syntax**

```
:WGEN:MODulation:NOISe <percent>

<percent> ::= 0 to 100
```

The :WGEN:MODulation:NOISe command adds noise to the currently selected signal. The sum of the amplitude between the original signal and injected noise is limited to the regular amplitude limit (for example, 5 Vpp in 1 MOhm), so the range for <percent> varies according to current amplitude.

Note that adding noise affects edge triggering on the waveform generator source as well as the waveform generator sync pulse output signal (which can be sent to TRIG OUT). This is because the trigger comparator is located after the noise source.

**Query Syntax**

```
:WGEN:MODulation:NOISe?
```

The :WGEN:MODulation:NOISe query returns the percent of added noise.

**Return Format**

```
<percent><NL>

<percent> ::= 0 to 100
```

**See Also**

- ":*WGEN:FUNCTION*" on page 761
:WGEN:MODulation:STATe

Command Syntax

:WGEN:MODulation:STATe <setting>

<setting> ::= {{OFF | 0} | {ON | 1}}

The :WGEN:MODulation:STATe command enables or disables modulated waveform generator output.

You can enable modulation for all waveform generator function types except pulse, DC, and noise.

Query Syntax

:WGEN:MODulation:STATe?

The :WGEN:MODulation:STATe? query returns whether the modulated waveform generator output is enabled or disabled.

Return Format

<setting><NL>

<setting> ::= {0 | 1}

See Also

- ":WGEN:MODulation:AM:DEPTH" on page 767
- ":WGEN:MODulation:AM:FREQuency" on page 768

- ":WGEN:MODulation:FUNCtion:RAMP:SYMMetry" on page 774
- ":WGEN:MODulation:TYPE" on page 777
:WGEN:MODulation:TYPE

Command Syntax

:WGEN:MODulation:TYPE <type>

$type ::= \{AM | FM | FSK\}$

The :WGEN:MODulation:TYPE command selects the modulation type:

- **AM** (amplitude modulation) — the amplitude of the original carrier signal is modified according to the amplitude of the modulating signal.
  - Use the :WGEN:MODulation:AM:FREQuency command to set the modulating signal frequency.
  - Use the :WGEN:MODulation:AM:DEPTh command to specify the amount of amplitude modulation.

- **FM** (frequency modulation) — the frequency of the original carrier signal is modified according to the amplitude of the modulating signal.
  - Use the :WGEN:MODulation:FM:FREQuency command to set the modulating signal frequency.
  - Use the :WGEN:MODulation:FM:DEViation command to specify the frequency deviation from the original carrier signal frequency.

- **FSK** (frequency-shift keying modulation) — the output frequency "shifts" between the original carrier frequency and a "hop frequency" at the specified FSK rate.
  - The FSK rate specifies a digital square wave modulating signal.
  - Use the :WGEN:MODulation:FSKey:FREQuency command to specify the "hop frequency".
  - Use the :WGEN:MODulation:FSKey:RATE command to specify the rate at which the output frequency "shifts".

Query Syntax

:WGEN:MODulation:TYPE?

The :WGEN:MODulation:TYPE? query returns the selected modulation type.

Return Format

$type\<NL>$

$type ::= \{AM | FM | FSK\}$

:**WGEN:OUTPut**

### Command Syntax

**WGEN:OUTPut** <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :WGEN:OUTPut command specifies whether the waveform generator signal output is ON (1) or OFF (0).

### Query Syntax

**WGEN:OUTPut?**

The :WGEN:OUTPut? query returns the current state of the waveform generator output setting.

### Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

### See Also

- "Introduction to :WGEN Commands" on page 759
:WGEN:OUTPut:LOAD

N  (see page 886)

Command Syntax  :WGEN:OUTPut:LOAD <impedance>

<impedance> ::= {ONEMeg | FIFTy}

The :WGEN:OUTPut:LOAD command selects the expected output load impedance.

The output impedance of the Gen Out BNC is fixed at 50 ohms. However, the output load selection lets the waveform generator display the correct amplitude and offset levels for the expected output load.

If the actual load impedance is different than the selected value, the displayed amplitude and offset levels will be incorrect.

Query Syntax  :WGEN:OUTPut:LOAD?

The :WGEN:OUTPut:LOAD? query returns the current expected output load impedance.

Return Format  <impedance><NL>

<impedance> ::= {ONEM | FIFT}

See Also  • "Introduction to :WGEN Commands" on page 759
:WGEN:PERiod

Command Syntax 
:WGEN:PERiod <period>

<period> ::= period in seconds in NR3 format
For all waveforms except Noise and DC, the :WGEN:PERiod command specifies the period of the waveform.
You can also specify the period indirectly using the :WGEN:FREQuency command.

Query Syntax 
:WGEN:PERiod?
The :WGEN:PERiod? query returns the currently set waveform generator period.

Return Format 
<period><NL>
<period> ::= period in seconds in NR3 format

See Also
• "Introduction to :WGEN Commands" on page 759
• ":WGEN:FUNCtion" on page 761
• ":WGEN:FREQuency" on page 760
:WGEN:RST

Command Syntax

:WGEN :RST

The :WGEN:RST command restores the waveform generator factory default settings (1 kHz sine wave, 500 mVpp, 0 V offset).

See Also

- ":WGEN:FREQuency" on page 760
**:WGEN:VOLTage**

N  (see page 886)

**Command Syntax**

**:WGEN:VOLTage** <amplitude>

<amplitude> ::= amplitude in volts in NR3 format

For all waveforms except DC, the :WGEN:VOLTage command specifies the waveform's amplitude. Use the :WGEN:VOLTage:OFFSet command to specify the offset voltage or DC level.

You can also specify the amplitude and offset indirectly using the :WGEN:VOLTage:HIGH and :WGEN:VOLTage:LOW commands. For example, an amplitude of 5 V and an offset of 1 V is the same as a high-level voltage of 4 V and a low-level voltage of -1 V.

**Query Syntax**

**:WGEN:VOLTage?**

The :WGEN:VOLTage? query returns the currently specified waveform amplitude.

**Return Format**

<amplitude><NL>

<amplitude> ::= amplitude in volts in NR3 format

**See Also**

- "Introduction to :WGEN Commands" on page 759

- ":WGEN:VOLTage:OFFSet" on page 786
- ":WGEN:VOLTage:HIGH" on page 784
- ":WGEN:VOLTage:LOW" on page 785
:WGEN:VOLTage:HIGH

N (see page 886)

Command Syntax

:WGEN:VOLTage:HIGH <high>

<high> ::= high-level voltage in volts, in NR3 format

For all waveforms except DC, the :WGEN:VOLTage:HIGH command specifies the waveform’s high-level voltage. Use the :WGEN:VOLTage:LOW command to specify the low-level voltage.

You can also specify the high-level and low-level voltages indirectly using the :WGEN:VOLTage and :WGEN:VOLTage:OFFSet commands. For example, a high-level voltage of 4 V and a low-level voltage of -1 V is the same as an amplitude of 5 V and an offset of 1 V.

Query Syntax

:WGEN:VOLTage:HIGH?

The :WGEN:VOLTage:HIGH? query returns the currently specified waveform high-level voltage.

Return Format

<high><NL>

<high> ::= high-level voltage in volts, in NR3 format

See Also

• "Introduction to :WGEN Commands" on page 759
• ":WGEN:FUNCtion" on page 761
• ":WGEN:VOLTage:LOW" on page 785
• ":WGEN:VOLTage" on page 783
• ":WGEN:VOLTage:OFFSet" on page 786
:WGEN:VOLTage:LOW

N (see page 886)

Command Syntax
:WGEN:VOLTage:LOW <low>

<low> ::= low-level voltage in volts, in NR3 format

For all waveforms except DC, the :WGEN:VOLTage:LOW command specifies the waveform's low-level voltage. Use the :WGEN:VOLTage:HIGH command to specify the high-level voltage.

You can also specify the high-level and low-level voltages indirectly using the :WGEN:VOLTage and :WGEN:VOLTage:OFFSet commands. For example, a high-level voltage of 4 V and a low-level voltage of -1 V is the same as an amplitude of 5 V and an offset of 1 V.

Query Syntax
:WGEN:VOLTage:LOW?

The :WGEN:VOLTage:LOW? query returns the currently specified waveform low-level voltage.

Return Format
<low><NL>

<low> ::= low-level voltage in volts, in NR3 format

See Also
• "Introduction to :WGEN Commands" on page 759
• ":WGEN:FUNCTION" on page 761
• ":WGEN:VOLTage:LOW" on page 785
• ":WGEN:VOLTage" on page 783
• ":WGEN:VOLTage:OFFSet" on page 786
:WGEN:VOLTage:OFFSet

Command Syntax

:WGEN:VOLTage:OFFSet <offset>

<offset> ::= offset in volts in NR3 format

The :WGEN:VOLTage:OFFSet command specifies the waveform's offset voltage or the DC level. Use the :WGEN:VOLTage command to specify the amplitude.

You can also specify the amplitude and offset indirectly using the :WGEN:VOLTage:HIGH and :WGEN:VOLTage:LOW commands. For example, an amplitude of 5 V and an offset of 1 V is the same as a high-level voltage of 4 V and a low-level voltage of -1 V.

Query Syntax

:WGEN:VOLTage:OFFSet?

The :WGEN:VOLTage:OFFSet? query returns the currently specified waveform offset voltage.

Return Format

<offset><NL>

<offset> ::= offset in volts in NR3 format

<td>`&lt;r&gt; ::= 1-2 in NR1 format &lt;scale&gt; ::= vertical units per division value in NR3 format [suffix] ::= {V</td>
</tr>
</tbody>
</table>
:WMEMory<r>:CLEar

Command Syntax

:WMEMory<r>:CLEar

<r> ::= 1-2 in NR1 format

The :WMEMory<r>:CLEar command clears the specified reference waveform location.

See Also

- Chapter 32, ":WMEMory<r> Commands," starting on page 787
- ":WMEMory<r>:SAVE" on page 792
- ":WMEMory<r>:DISPlay" on page 790
:WMEMory<r>:DISPlay

(see page 886)

Command Syntax  
:WMEMory<r>:DISPlay <on_off>

<r> ::= 1-2 in NR1 format
<on_off> ::= {{1 | ON} | {0 | OFF}}

The :WMEMory<r>:DISPlay command turns the display of the specified reference waveform on or off.

There are two reference waveform locations, but only one reference waveform can be displayed at a time. That means, if :WMEMory1:DISPlay is ON, sending the :WMEMory2:DISPlay ON command will automatically set :WMEMory1:DISPlay OFF.

Query Syntax  
:WMEMory<r>:DISPlay?

The :WMEMory<r>:DISPlay? query returns the current display setting for the reference waveform.

Return Format  
<on_off><NL>

<on_off> ::= {1 | 0}

See Also  
- Chapter 32, "WMEMory<r> Commands," starting on page 787
- "WMEMory<r>:CLEar" on page 789
- "WMEMory<r>:LABel" on page 791
:WME\text{Mory}<r>:LABel

(see page 886)

Command Syntax

\texttt{:WME\text{Mory}<r>:LABel <string>}

\texttt{<r> ::= 1-2 in NR1 format}

\texttt{<string> ::= quoted ASCII string}

\textbf{NOTE}

Label strings are 10 characters or less, and may contain any commonly used ASCII characters. Labels with more than 10 characters are truncated to 10 characters. Lower case characters are converted to upper case.

The :WME\text{Mory}<r>:LABel command sets the reference waveform label to the string that follows.

Setting a label for a reference waveform also adds the name to the label list in non-volatile memory (replacing the oldest label in the list).

Query Syntax

\texttt{:WME\text{Mory}<r>:LABel?}

The :WME\text{Mory}<r>:LABel? query returns the label associated with a particular reference waveform.

Return Format

\texttt{<string><NL>}

\texttt{<string> ::= quoted ASCII string}

See Also

- Chapter 32, ":\text{WME\text{Mory}<r> Commands,}" starting on page 787
- ":\text{WME\text{Mory}<r>:DISPlay}" on page 790
:WMEMemory<\textgreater r\textless>:SAVE

\textbf{(see page 886)}

**Command Syntax**

\texttt{:WMEMemory\textgreater r\textless}:SAVE \texttt{<source>}

\texttt{<r\textgreater \textless \textgreater \textless} ::= 1-2 in NR1 format

\texttt{<source\textgreater \textless \textless} ::= \{\text{CHANnel}\textless n\textgreater | \text{FUNCTION} | \text{MATH}\}

\texttt{<n\textgreater \textless \textless} ::= 1 to (# analog channels) in NR1 format

The :WMEMemory<\textgreater r\textless>:SAVE command copies the analog channel or math function waveform to the specified reference waveform location.

**NOTE**

Only ADD or SUBtract math operations can be saved as reference waveforms.

**NOTE**

:WMEMemory<\textgreater r\textless>:SAVE is an overlapped command (see "Sequential vs. Overlapped Commands" on page 894).

**See Also**

- Chapter 32, ":WMEMemory<\textgreater r\textless> Commands," starting on page 787
- ":WMEMemory<\textgreater r\textless>:DISPlay" on page 790
:WMEMory<r>:SKEW

N (see page 886)

Command Syntax
:WMEMory<r>:SKEW <skew>

<r> ::= 1-2 in NR1 format
<skew> ::= time in seconds in NR3 format

The :WMEMory<r>:SKEW command sets the skew factor for the specified reference waveform.

Query Syntax
:WMEMory<r>:SKEW?

The :WMEMory<r>:SKEW? query returns the current skew setting for the selected reference waveform.

Return Format
<skew><NL>
<skew> ::= time in seconds in NR3 format

See Also
• Chapter 32, ":WMEMory<r> Commands," starting on page 787
• ":WMEMory<r>:DISPlay" on page 790
• ":WMEMory<r>:YOFFset" on page 794
• ":WMEMory<r>:YRANge" on page 795
• ":WMEMory<r>:YSCale" on page 796
:WMEMory<r>:YOFFset

N (see page 886)

Command Syntax

:WMEMory<r>:YOFFset <offset> [suffix]

<r> ::= 1-2 in NR1 format
<offset> ::= vertical offset value in NR3 format
<suffix> ::= {V | mV}

The :WMEMory<r>:YOFFset command sets the value that is represented at center screen for the selected reference waveform.

The range of legal values varies with the value set by the :WMEMory<r>:YRANge or :WMEMory<r>:YSCale commands. If you set the offset to a value outside of the legal range, the offset value is automatically set to the nearest legal value. Legal values are affected by the probe attenuation setting.

Query Syntax

:WMEMory<r>:YOFFset?

The :WMEMory<r>:YOFFset? query returns the current offset value for the selected reference waveform.

Return Format

<offset><NL>

<offset> ::= vertical offset value in NR3 format

See Also

- Chapter 32, ":WMEMory<r> Commands," starting on page 787
- ":WMEMory<r>:DISPlay" on page 790
- ":WMEMory<r>:YRANge" on page 795
- ":WMEMory<r>:YSCale" on page 796
- ":WMEMory<r>:SKEW" on page 793
**:WMEMory<r>:YRANge**

(see page 886)

**Command Syntax**

```
:WMEMory<r>:YRANge <range>[<suffix>]
```

<r> ::= 1-2 in NR1 format

<range> ::= vertical full-scale range value in NR3 format

<suffix> ::= {V | mV}

The :WMEMory<r>:YRANge command defines the full-scale vertical axis of the selected reference waveform.

Legal values for the range are copied from the original source waveform (that is, the analog channel or math function waveform that was originally saved as a reference waveform).

**Query Syntax**

```
:WMEMory<r>:YRANge?
```

The :WMEMory<r>:YRANge? query returns the current full-scale range setting for the specified reference waveform.

**Return Format**

```
<range><NL>
```

<range> ::= vertical full-scale range value in NR3 format

**See Also**

- "**:WMEMory<r>:SKEW" on page 793
- "**:WMEMory<r>:YSCale" on page 796
:WMEMory<r>:YSCale

(see page 886)

Command Syntax
:WMEMory<r>:YSCale <scale>[<suffix>]

<r> ::= 1-2 in NR1 format
*scale> ::= vertical units per division in NR3 format
<suffix> ::= {V | mV}

The :WMEMory<r>:YSCale command sets the vertical scale, or units per division, of the selected reference waveform.

Legal values for the scale are copied from the original source waveform (that is, the analog channel or math function waveform that was originally saved as a reference waveform).

Query Syntax
:WMEMory<r>:YSCale?

The :WMEMory<r>:YSCale? query returns the current scale setting for the specified reference waveform.

Return Format
<scale><NL>

### Discontinued Parameters

Some previous oscilloscope queries returned control setting values of OFF and ON. The InfiniiVision 2000 X-Series oscilloscopes only return the enumerated values 0 (for off) and 1 (for on).
:CHANnel:ACTivity

(see page 886)

Command Syntax
:CHANnel:ACTivity

The :CHANnel:ACTivity command clears the cumulative edge variables for the next activity query.

NOTE
The :CHANnel:ACTivity command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :ACTivity command (see page 169) instead.

Query Syntax
:CHANnel:ACTivity?

The :CHANnel:ACTivity? query returns the active edges since the last clear, and returns the current logic levels.

Return Format
<edges>,<levels><NL>

<edges> ::= presence of edges (32-bit integer in NR1 format).
<levels> ::= logical highs or lows (32-bit integer in NR1 format).

NOTE
A bit equal to zero indicates that no edges were detected at the specified threshold since the last clear on that channel. Edges may have occurred that were not detected because of the threshold setting.

A bit equal to one indicates that edges have been detected at the specified threshold since the last clear on that channel.
:CHANnel:LABel

Command Syntax
:CHANnel:LABel <source_text><string>

<source_text> ::= {CHANnel1 | CHANnel2 | DIGital<d>}
<d> ::= 0 to (# digital channels - 1) in NR1 format
<string> ::= quoted ASCII string

The :CHANnel:LABel command sets the source text to the string that follows. Setting a channel will also result in the name being added to the label list.

NOTE
The :CHANnel:LABel command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :CHANnel<n>:LABel command (see page 244) or :DIGital<n>:LABel command (see page 266).

Query Syntax
:CHANnel:LABel?

The :CHANnel:LABel? query returns the label associated with a particular analog channel.

Return Format
<string><NL>
<string> ::= quoted ASCII string
:CHANnel:THReshold

**Command Syntax**

:CHANnel:THReshold <channel group>, <threshold type> [, <value>]

- `<channel group>` ::= {POD1 | POD2}
- `<threshold type>` ::= {CMOS | ECL | TTL | USERdef}
- `<value>` ::= voltage for USERdef in NR3 format [volt_type]
  - `[volt_type]` ::= {V | mV (-3) | uV (-6)}

The :CHANnel:THReshold command sets the threshold for a group of channels. The threshold is either set to a predefined value or to a user-defined value. For the predefined value, the voltage parameter is ignored.

**NOTE**

The :CHANnel:THReshold command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :POD<n>:THReshold command (see page 465) or :DIGital<n>:THReshold command (see page 269).

**Query Syntax**

:CHANnel:THReshold? <channel group>

The :CHANnel:THReshold? query returns the voltage and threshold text for a specific group of channels.

**Return Format**

- `<threshold type>` [, `<value>`]<NL>
- `<threshold type>` ::= {CMOS | ECL | TTL | USERdef}
- `<value>` ::= voltage for USERdef (float 32 NR3)

**NOTE**

- CMOS = 2.5V
- TTL = 1.5V
- ECL = -1.3V
- USERdef ::= -6.0V to 6.0V
:CHANnel2:SKEW

(see page 886)

Command Syntax

:CHANnel2:SKEW <skew value>

<skew value> ::= skew time in NR3 format
<skew value> ::= -100 ns to +100 ns

The :CHANnel2:SKEW command sets the skew between channels 1 and 2. The maximum skew is +/-100 ns. You can use the oscilloscope's analog probe skew control to remove cable delay errors between channel 1 and channel 2.

NOTE

The :CHANnel2:SKEW command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :CHANnel<n>:PROBe:SKEW command (see page 249) instead.

NOTE

This command is only valid for the two channel oscilloscope models.

Query Syntax

:CHANnel2:SKEW?

The :CHANnel2:SKEW? query returns the current probe skew setting for the selected channel.

Return Format

<skew value><NL>
<skew value> ::= skew value in NR3 format

See Also

• "Introduction to :CHANnel<n> Commands" on page 237
:CHANnel<n>:INPut

(see page 886)

Command Syntax

:CHANnel<n>:INPut <impedance>

<impedance> ::= {ONEMeg | FIFTy}

<n> ::= 1 to (# analog channels) in NR1 format

The :CHANnel<n>:INPut command selects the input impedance setting for the specified channel. The legal values for this command are ONEMeg (1 MΩ) and FIFTy (50Ω).

NOTE

The :CHANnel<n>:INPut command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :CHANnel<n>:IMPedance command (see page 242) instead.

Query Syntax

:CHANnel<n>:INPut?

The :CHANnel<n>:INPut? query returns the current input impedance setting for the specified channel.

Return Format

<impedance value><NL>

<impedance value> ::= {ONEM | FIFT}
**:CHANnel\(<n>\):PMODe**

(see page 886)

**Command Syntax**

**:CHANnel\(<n>\):PMODe <pmode value>**

- **<pmode value>**: {AUTO | MANual}
- **\(<n>\)**: 1 to (# analog channels) in NR1 format

The probe sense mode is controlled internally and cannot be set. If a probe with sense is connected to the specified channel, auto sensing is enabled; otherwise, the mode is manual.

If the PMODe sent matches the oscilloscope's setting, the command will be accepted. Otherwise, a setting conflict error is generated.

**NOTE**

The :CHANnel\(<n>\):PMODe command is an obsolete command provided for compatibility to previous oscilloscopes.

**Query Syntax**

**:CHANnel\(<n>\):PMODe?**

The :CHANnel\(<n>\):PMODe? query returns AUT if an autosense probe is attached and MAN otherwise.

**Return Format**

- **<pmode value><NL>**
  - **<pmode value>**: {AUT | MAN}
:DISPlay:CONNect

0 (see page 886)

Command Syntax
:DISPlay:CONNect <connect>

<connect> ::= {{ 1 | ON} | {0 | OFF}}

The :DISPlay:CONNect command turns vectors on and off. When vectors are turned on, the oscilloscope displays lines connecting sampled data points. When vectors are turned off, only the sampled data is displayed.

NOTE
The :DISPlay:CONNect command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :DISPlay:VECTors command (see page 284) instead.

Query Syntax
:DISPlay:CONNect?

The :DISPlay:CONNect? query returns the current state of the vectors setting.

Return Format
<connect><NL>

<connect> ::= {1 | 0}

See Also
• ":DISPlay:VECTors" on page 284
:DISPlay:ORDer

Query Syntax :DISPlay:ORDer?

The :DISPlay:ORDer? query returns a list of digital channel numbers in screen order, from top to bottom, separated by commas. Busing is displayed as digital channels with no separator. For example, in the following list, the bus consists of digital channels 4 and 5: DIG1, DIG4 DIG5, DIG7.

NOTE The :DISPlay:ORDer command is an obsolete command provided for compatibility to previous oscilloscopes. This command is only available on the MSO models.

Return Format

<order><NL>
<order> ::= Unquoted ASCII string

NOTE A return value is included for each digital channel. A return value of NONE indicates that a channel is turned off.

See Also

- "::DIGital<d>::POsition" on page 267

Example Code

' DISP_ORDER - Set the order the channels are displayed on the analyzer. You can enter between 1 and 32 channels at one time. If you leave out channels, they will not be displayed.

' Display ONLY channel 0 and channel 10 in that order.
myScope.WriteString "::DISPLAY:ORDER 0,10"

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:ERASe

(see page 886)

Command Syntax :ERASe

The :ERASe command erases the screen.

**NOTE** The :ERASe command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :DISplay:CLEar command (see page 277) instead.
::EXTernal:PMODE

Command Syntax

::EXTernal:PMODE <pmode value>

<pmode value> ::= {AUTo | MANual}

The probe sense mode is controlled internally and cannot be set. If a probe with
sense is connected to the specified channel, auto sensing is enabled; otherwise,
the mode is manual.

If the pmode sent matches the oscilloscope’s setting, the command will be
accepted. Otherwise, a setting conflict error is generated.

NOTE

The ::EXTernal:PMODE command is an obsolete command provided for compatibility to
previous oscilloscopes.

Query Syntax

::EXTernal:PMODE?

The ::EXTernal:PMODE? query returns AUT if an autosense probe is attached and
MAN otherwise.

Return Format

<pmode value><NL>

<pmode value> ::= {AUT | MAN}
:FUNCTION:SOURce

Command Syntax

:FUNCTION:SOURce <value>

/value> ::= {CHANnel<n> | ADD | SUBTract | MULTiply}

<n> ::= 1 to (# analog channels) in NR1 format

The :FUNCTION:SOURce command is only used when an FFT (Fast Fourier Transform), DIFF, or INT operation is selected (see the :FUNCTION:OPERation command for more information about selecting an operation). The :FUNCTION:SOURce command selects the source for function operations. Choose CHANnel<n>, or ADD, SUBT, or MULT to specify the desired source for function DIFF (differentiate), INTEGRate, and FFT operations specified by the :FUNCTION:OPERation command.

NOTE

The :FUNCTION:SOURce command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :FUNCTION:SOURce1 command (see page 328) instead.

Query Syntax

:FUNCTION:SOURce?

The :FUNCTION:SOURce? query returns the current source for function operations.

Return Format

/value><NL>

/value> ::= {CHAN<n> | ADD | SUBT | MULT}

<n> ::= 1 to (# analog channels) in NR1 format

See Also

• "Introduction to :FUNCTION Commands" on page 302
• ":FUNCTION:OPERation" on page 323
:FUNCtion:VIEW

(see page 886)

**Command Syntax**

:FUNCtion:VIEW <view>

<view> ::= {{1 | ON} | {0 | OFF}}

The :FUNCtion:VIEW command turns the selected function on or off. When ON is selected, the function performs as specified using the other FUNCtion commands. When OFF is selected, function is neither calculated nor displayed.

**NOTE**

The :FUNCtion:VIEW command is provided for backward compatibility to previous oscilloscopes. Use the :FUNCtion:DISPlay command (see page 309) instead.

**Query Syntax**

:FUNCtion:VIEW?

The :FUNCtion:VIEW? query returns the current state of the selected function.

**Return Format**

<view><NL>

<view> ::= {1 | 0}
:HARDcopy:DESTination

Command Syntax
:HARDcopy:DESTination <destination>

<destination> ::= {CENTronics | FLOPy}

The :HARDcopy:DESTination command sets the hardcopy destination.

NOTE
The :HARDcopy:DESTination command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :HARDcopy:FILENAME command (see page 815) instead.

Query Syntax
:HARDcopy:DESTination?

The :HARDcopy:DESTination? query returns the selected hardcopy destination.

Return Format
<destination><NL>

<destination> ::= {CENT | FLOP}

See Also
• "Introduction to :HARDcopy Commands" on page 332
:HARDcopy:FILename

Command Syntax

:HARDcopy:FILename <string>

<string> ::= quoted ASCII string

The HARDcopy:FILename command sets the output filename for those print formats whose output is a file.

Query Syntax

:HARDcopy:FILename?

The :HARDcopy:FILename? query returns the current hardcopy output filename.

Return Format

<string><NL>

<string> ::= quoted ASCII string

See Also

• "Introduction to :HARDcopy Commands" on page 332

NOTE

The :HARDcopy:FILename command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :SAVE:FILename command (see page 478) and :RECall:FILename command (see page 469) instead.
:HARDcopy:GRAYscale

0 (see page 886)

Command Syntax

:HARDcopy:GRAYscale <gray>

<gray> ::= {{OFF | 0} | {ON | 1}}

The :HARDcopy:GRAYscale command controls whether grayscaling is performed in the hardcopy dump.

NOTE

The :HARDcopy:GRAYscale command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :HARDcopy:PALette command (see page 345) instead. (".:HARDcopy:GRAYscale ON" is the same as ":HARDcopy:PALette GRAYscale" and ":HARDcopy:GRAYscale OFF" is the same as ":HARDcopy:PALette COlor").

Query Syntax

:HARDcopy:GRAYscale?

The :HARDcopy:GRAYscale? query returns a flag indicating whether grayscaling is performed in the hardcopy dump.

Return Format

<gray><NL>

<gray> ::= {0 | 1}

See Also

• "Introduction to :HARDcopy Commands" on page 332
:HARDcopy:IGColors

Command Syntax

:HARDcopy:IGColors <value>

<value> ::= {{OFF | 0} | {ON | 1}}

The HARDcopy:IGColors command controls whether the graticule colors are inverted or not.

Query Syntax

:HARDcopy:IGColors?

The :HARDcopy:IGColors? query returns a flag indicating whether graticule colors are inverted or not.

Return Format

<value><NL>

<value> ::= {0 | 1}

See Also

• "Introduction to :HARDcopy Commands" on page 332

NOTE

The :HARDcopy:IGColors command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :HARDcopy:INKSaver (see page 337) command instead.
:HARDcopy:PDRiver

Command Syntax

:HARDcopy:PDRiver <driver>

<d> ::= {AP2X | AP21 | AP25 | AP2560 | AP25 | DJ350 | DJ35 | DJ6630 | DJ63 | DJ6Special | DJ6Photo | DJ8Special | DJ8 | DJ9Vip | GIP | DJ9xx | GVIP | DJ55xx | {PS470 | PS47} | {PS100 | PS10} | CLASer | MLASer | LJFastraster | POSTscript}

The HARDcopy:PDRiver command sets the hardcopy printer driver used for the selected printer.

If the correct driver for the selected printer can be identified, it will be selected and cannot be changed.

NOTE

The :HARDcopy:PDRiver command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :HARDcopy:APRinter (see page 334) command instead.

Query Syntax

:HARDcopy:PDRiver?

The :HARDcopy:PDRiver? query returns the selected hardcopy printer driver.

Return Format

<d><NL>

<d> ::= {AP2X | AP21 | AP25 | DJ350 | DJ35 | DJ6630 | DJ63 | DJ6Special | DJ6Photo | DJ8Special | DJ8 | DJ9Vip | GIP | DJ9xx | GVIP | DJ55xx | {PS470 | PS47} | {PS100 | PS10} | CLASer | MLASer | LJFastraster | POSTscript}

See Also

- "Introduction to :HARDcopy Commands" on page 332
:MEASure:LOWer

**Command Syntax**

:MEASure:LOWer <voltage>

The :MEASure:LOWer command sets the lower measurement threshold value. This value and the UPPer value represent absolute values when the thresholds are ABSolute and percentage when the thresholds are PERCent as defined by the :MEASure:DEFine THResholds command.

**NOTE**

The :MEASure:LOWer command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:DEFine THResholds command (see page 386) instead.

**Query Syntax**

:MEASure:LOWer?

The :MEASure:LOWer? query returns the current lower threshold level.

**Return Format**

<voltage><NL>

<voltage> ::= the user-defined lower threshold in volts in NR3 format

**See Also**

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:THResholds" on page 822
- ":MEASure:UPPer" on page 828
:MEASure:SCRatch

Command Syntax: :MEASure:SCRatch

The :MEASure:SCRatch command clears all selected measurements and markers from the screen.

NOTE: The :MEASure:SCRatch command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:CLEAR command (see page 385) instead.
**:MEASure:TDELta**

(see page 886)

**Query Syntax**

**:MEASure:TDELta?**

The :MEASure:TDELta? query returns the time difference between the Tstop marker (X2 cursor) and the Tstart marker (X1 cursor).

\[ T\text{delta} = T\text{stop} - T\text{start} \]

Tstart is the time at the start marker (X1 cursor) and Tstop is the time at the stop marker (X2 cursor). No measurement is made when the :MEASure:TDELta? query is received by the oscilloscope. The delta time value that is output is the current value. This is the same value as the front-panel cursors delta X value.

**NOTE**

The :MEASure:TDELta command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :MARKer:XDELta command (see page 360) instead.

**Return Format**

\(<value><NL>\)

\(<value> ::= \text{time difference between start and stop markers in NR3 format}\)

**See Also**

- "Introduction to :MARKer Commands" on page 354
- "Introduction to :MEASure Commands" on page 381
- ":MARKer:X1Position" on page 356
- ":MARKer:X2Position" on page 358
- ":MARKer:XDELta" on page 360
- ":MEASure:TSTArt" on page 825
- ":MEASure:TSTOP" on page 826
:MEASure:THResholds

Command Syntax

:MEASure:THResholds {T1090 | T2080 | VOLTage}

The :MEASure:THResholds command selects the thresholds used when making time measurements.

Query Syntax

:MEASure:THResholds?

The :MEASure:THResholds? query returns the current thresholds selected when making time measurements.

Return Format

{T1090 | T2080 | VOLTage}<NL>

{T1090} uses the 10% and 90% levels of the selected waveform.

{T2080} uses the 20% and 80% levels of the selected waveform.

{VOLTage} uses the upper and lower voltage thresholds set by the UPPer and LOWer commands on the selected waveform.

See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:LOWer" on page 819
- ":MEASure:UPPer" on page 828

NOTE

The :MEASure:THResholds command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:DEFine THResholds command (see page 386) instead.
:MEASure:TMAX

(see page 886)

Command Syntax

:MEASure:TMAX [<source>]

<source> ::= \{CHANnel<n> | FUNCTION | MATH\}

<n> ::= 1 to (# analog channels) in NR1 format

The :MEASure:TMAX command installs a screen measurement and starts an X-at-Max-Y measurement on the selected waveform. If the optional source is specified, the current source is modified.

NOTE

The :MEASure:TMAX command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:XMAX command (see page 424) instead.

Query Syntax

:MEASure:TMAX? [<source>]

The :MEASure:TMAX? query returns the horizontal axis value at which the maximum vertical value occurs on the current source. If the optional source is specified, the current source is modified. If all channels are off, the query returns 9.9E+37.

Return Format

<value><NL>

<value> ::= time at maximum in NR3 format

See Also

• "Introduction to :MEASure Commands" on page 381
• ":MEASure:TMIN" on page 824
• ":MEASure:XMAX" on page 424
• ":MEASure:XMIN" on page 425
:MEASure:TMIN

(see page 886)

Command Syntax

:MEASure:TMIN [<source>]

<source> ::= {CHANnel<n> | FUNCtion | MATH}

<n> ::= 1 to (# analog channels) in NR1 format

The :MEASure:TMIN command installs a screen measurement and starts an X-at-Min-Y measurement on the selected waveform. If the optional source is specified, the current source is modified.

NOTE

The :MEASure:TMIN command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:XMIN command (see page 425) instead.

Query Syntax

:MEASure:TMIN? [<source>]

The :MEASure:TMIN? query returns the horizontal axis value at which the minimum vertical value occurs on the current source. If the optional source is specified, the current source is modified. If all channels are off, the query returns 9.9E+37.

Return Format

<value><NL>

<value> ::= time at minimum in NR3 format

See Also

- "Introduction to :MEASure Commands" on page 381
- ":MEASure:TMAX" on page 823
- ":MEASure:XMAX" on page 424
- ":MEASure:XMIN" on page 425
:MEASure:TSTArt

Command Syntax

:MEASure:TSTArt <value> [suffix]

<value> ::= time at the start marker in seconds

[suffix] ::= {s | ms | us | ns | ps}

The :MEASure:TSTArt command moves the start marker (X1 cursor) to the specified time with respect to the trigger time.

Query Syntax

:MEASure:TSTArt?

The :MEASure:TSTArt? query returns the time at the start marker (X1 cursor).

Return Format

<value><NL>

<value> ::= time at the start marker in NR3 format

See Also

- "Introduction to :MARKer Commands" on page 354
- "Introduction to :MEASure Commands" on page 381
- "::MARKer:X1Position" on page 356
- "::MARKer:X2Position" on page 358
- "::MARKer:XDELta" on page 360
- "::MEASure:TDELta" on page 821
- "::MEASure:TSTOp" on page 826

NOTE

The short form of this command, TSTA, does not follow the defined Long Form to Short Form Truncation Rules (see page 888). The normal short form "TST" would be the same for both TSTArt and TSTOp, so sending TST for the TSTArt command produces an error.

NOTE

The :MEASure:TSTArt command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :MARKer:X1Position command (see page 356) instead.
:MEASure:TSTOp

(see page 886)

Command Syntax

:MEASure:TSTOp <value> [suffix]

<value> ::= time at the stop marker in seconds

[suffix] ::= {s | ms | us | ns | ps}

The :MEASure:TSTOp command moves the stop marker (X2 cursor) to the specified time with respect to the trigger time.

Query Syntax

:MEASure:TSTOp?

The :MEASure:TSTOp? query returns the time at the stop marker (X2 cursor).

Return Format

<value><NL>

<value> ::= time at the stop marker in NR3 format

See Also

•  "Introduction to :MARKer Commands" on page 354
•  "Introduction to :MEASure Commands" on page 381
•  ":MARKer:X1Position" on page 356
•  ":MARKer:X2Position" on page 358
•  ":MARKer:XDELta" on page 360
•  ":MEASure:TDELta" on page 821
•  ":MEASure:TSTArt" on page 825
:MEASure:TVOLt

Query Syntax

:MEASure:TVOLt? <value>, [<slope>]<occurrence>[,<source>]

<value> ::= the voltage level that the waveform must cross.

<slope> ::= direction of the waveform. A rising slope is indicated by a plus sign (+). A falling edge is indicated by a minus sign (-).

<occurrence> ::= the transition to be reported. If the occurrence number is one, the first crossing is reported. If the number is two, the second crossing is reported, etc.

<source> ::= {<digital channels> | CHANnel<n> | FUNCtion | MATH}
<digital channels> ::= {DIGital<d>} for the MSO models
<n> ::= 1 to (# analog channels) in NR1 format
<d> ::= 0 to (# digital channels - 1) in NR1 format

When the :MEASure:TVOLt? query is sent, the displayed signal is searched for the specified voltage level and transition. The time interval between the trigger event and this defined occurrence is returned as the response to the query.

The specified voltage can be negative or positive. To specify a negative voltage, use a minus sign (-). The sign of the slope selects a rising (+) or falling (-) edge. If no sign is specified for the slope, it is assumed to be the rising edge.

The magnitude of the occurrence defines the occurrence to be reported. For example, +3 returns the time for the third time the waveform crosses the specified voltage level in the positive direction. Once this voltage crossing is found, the oscilloscope reports the time at that crossing in seconds, with the trigger point (time zero) as the reference.

If the specified crossing cannot be found, the oscilloscope reports +9.9E+37. This value is returned if the waveform does not cross the specified voltage, or if the waveform does not cross the specified voltage for the specified number of times in the direction specified.

If the optional source parameter is specified, the current source is modified.

NOTE

The :MEASure:TVOLt command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASure:TVALue command (see page 412).

Return Format

<value><NL>

<value> ::= time in seconds of the specified voltage crossing in NR3 format
:MEASURE:UPPER

(see page 886)

Command Syntax

:MEASURE:UPPER <value>

The :MEASURE:UPPER command sets the upper measurement threshold value. This value and the LOWER value represent absolute values when the thresholds are ABSolute and percentage when the thresholds are PERCent as defined by the :MEASURE:DEFine THResholds command.

NOTE

The :MEASURE:UPPER command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MEASURE:DEFine THResholds command (see page 386) instead.

Query Syntax

:MEASURE:UPPER?

The :MEASURE:UPPER? query returns the current upper threshold level.

Return Format

<value><NL>

<value> ::= the user-defined upper threshold in NR3 format

See Also

• "Introduction to :MEASURE Commands" on page 381
• ":MEASURE:LOWER" on page 819
• ":MEASURE:THResholds" on page 822
:MEASure:VDELta

Query Syntax  :MEASure:VDELta?

The :MEASure:VDELta? query returns the voltage difference between vertical marker 1 (Y1 cursor) and vertical marker 2 (Y2 cursor). No measurement is made when the :MEASure:VDELta? query is received by the oscilloscope. The delta value that is returned is the current value. This is the same value as the front-panel cursors delta Y value.

\[
\text{VDELta} = \text{value at marker 2} - \text{value at marker 1}
\]

NOTE

The :MEASure:VDELta command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :MARKer:YDELta command (see page 367) instead.

Return Format  <value><NL>

<value> ::= delta V value in NR1 format

See Also  
- "Introduction to :MARKer Commands" on page 354
- "Introduction to :MEASure Commands" on page 381
- ":MARKer:Y1Position" on page 363
- ":MARKer:Y2Position" on page 365
- ":MARKer:YDELta" on page 367
- ":MEASure:TDELta" on page 821
- ":MEASure:TSTArt" on page 825
:MEASure:VSTArt

Command Syntax

:MEASure:VSTArt <vstart_argument>

<vstart_argument> ::= value for vertical marker 1

The :MEASure:VSTArt command moves the vertical marker (Y1 cursor) to the specified value corresponding to the selected source. The source can be selected by the MARKer:X1Y1source command.

Query Syntax

:MEASure:VSTArt?

The :MEASure:VSTArt? query returns the current value of the Y1 cursor.

Return Format

<value><NL>

<value> ::= voltage at voltage marker 1 in NR3 format

See Also

- "Introduction to :MARKer Commands" on page 354
- "Introduction to :MEASure Commands" on page 381
- ".:MARKer:Y1Position" on page 363
- ".:MARKer:Y2Position" on page 365
- ".:MARKer:YDELta" on page 367
- ".:MARKer:X1Y1source" on page 357
- ".:MEASure:SOURce" on page 408
- ".:MEASure:TDELta" on page 821
- ".:MEASure:TSTArt" on page 825

NOTE

The short form of this command, VSTA, does not follow the defined Long Form to Short Form Truncation Rules (see page 888). The normal short form, VST, would be the same for both VSTArt and VSTOp, so sending VST for the VSTArt command produces an error.

NOTE

The :MEASure:VSTArt command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :MARKer:Y1Position command (see page 363) instead.
:MEASure:VSTOp

Command Syntax
:MEASure:VSTOp <vstop_argument>

<vstop_argument> ::= value for Y2 cursor

The :MEASure:VSTOp command moves the vertical marker 2 (Y2 cursor) to the specified value corresponding to the selected source. The source can be selected by the MARKer:X2Y2source command.

Query Syntax
:MEASure:VSTOp?

The :MEASure:VSTOp? query returns the current value of the Y2 cursor.

Return Format
<value><NL>

<value> ::= value of the Y2 cursor in NR3 format

See Also
- "Introduction to :MARKer Commands" on page 354
- "Introduction to :MEASure Commands" on page 381
- ":MARKer:Y1Position" on page 363
- ":MARKer:Y2Position" on page 365
- ":MARKer:YDELta" on page 367
- ":MARKer:X2Y2source" on page 359
- ":MEASure:SOURce" on page 408
- ":MEASure:TDELta" on page 821
- ":MEASure:TSTArt" on page 825

NOTE
The short form of this command, VSTO, does not follow the defined Long Form to Short Form Truncation Rules (see page 888). The normal short form, VST, would be the same for both VSTArt and VSTOp, so sending VST for the VSTOp command produces an error.

NOTE
The :MEASure:VSTOp command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :MARKer:Y2Position command (see page 365) instead.
:MTESt:AMASk:{SAVE | STORe}

Command Syntax

:MTESt:AMASk:{SAVE | STORe} "<filename>"

The :MTESt:AMASk:SAVE command saves the automask generated mask to a file. If an automask has not been generated, an error occurs.

The <filename> parameter is an MS-DOS compatible name of the file, a maximum of 254 characters long (including the path name, if used). The filename assumes the present working directory if a path does not precede the file name.

NOTE

The :MTESt:AMASk:{SAVE | STORe} command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :SAVE:MASK[:STARt] command (see page 485) instead.

See Also

• “Introduction to :MTESt Commands” on page 429
:MTESt:AVERage

Command Syntax

: MTESt :AVERage <on_off>

<on_off> ::= {{1 | ON} | {0 | OFF}}

The :MTESt:AVERage command enables or disables averaging. When ON, the oscilloscope acquires multiple data values for each time bucket, and averages them. When OFF, averaging is disabled. To set the number of averages, use the :MTESt:AVERage:COUNt command described next.

NOTE

The :MTESt:AVERage command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :ACQuire:TYPE AVERage command (see page 213) instead.

Query Syntax

: MTESt :AVERage?

The :MTESt:AVERage? query returns the current setting for averaging.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to :MTESt Commands" on page 429

• ":MTESt:AVERage:COUNt" on page 834
The :MTESt:AVERage:COUNt command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :ACQuire:COUNt command (see page 204) instead.
### :MTESt:LOAD

**Command Syntax**

```
:MANDO:LOAD "<filename>
```

The :MTESt:LOAD command loads the specified mask file.

The `<filename>` parameter is an MS-DOS compatible name of the file, a maximum of 254 characters long (including the path name, if used).

**NOTE**

The :MTESt:LOAD command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :RECall:MASK[:STARt] command (see page 470) instead.

**See Also**

- "Introduction to :MTESt Commands" on page 429
- ":MTESt:AMASK:{SAVE | STORe}" on page 832
:MTESt:RUMode

Command Syntax

:MESt:RUMode {FORever | TIME,<seconds> | {WAVeforms,<wfm_count>}}

<seconds> ::= from 1 to 86400 in NR3 format

<wfm_count> ::= number of waveforms in NR1 format

from 1 to 1,000,000,000

The :MTESt:RUMode command determines the termination conditions for the mask test. The choices are FORever, TIME, or WAVeforms.

- FORever — runs the Mask Test until the test is turned off.
- TIME — sets the amount of time in seconds that a mask test will run before it terminates. The <seconds> parameter is a real number from 1 to 86400 seconds.
- WAVeforms — sets the maximum number of waveforms that are required before the mask test terminates. The <wfm_count> parameter indicates the number of waveforms that are to be acquired; it is an integer from 1 to 1,000,000,000.

NOTE

The :MTESt:RUMode command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MTESt:RMODE command (see page 446) instead.

Query Syntax

:MTESt:RUMode?

The :MTESt:RUMode? query returns the currently selected termination condition and value.

Return Format

{FOR | TIME,<seconds> | {WAV,<wfm_count>}}

<seconds> ::= from 1 to 86400 in NR3 format

<wfm_count> ::= number of waveforms in NR1 format

from 1 to 1,000,000,000

See Also

- "Introduction to :MTESt Commands" on page 429
- "*:MTESt:RUMode:SOFailure" on page 837
:MTESt:RUMode:SOFailure

0 (see page 886)

Command Syntax

: MTESt:RUMode:SOFailure <on_off>

<on_off> ::= {1 | ON} | {0 | OFF}

The :MTESt:RUMode:SOFailure command enables or disables the Stop On Failure run until criteria. When a mask test is run and a mask violation is detected, the mask test is stopped and the acquisition system is stopped.

Query Syntax

:MTESt:RUMode:SOFailure?

The :MTESt:RUMode:SOFailure? query returns the current state of the Stop on Failure control.

Return Format

<on_off><NL>

<on_off> ::= {1 | 0}

See Also

• "Introduction to :MTESt Commands" on page 429
• ":MTESt:RUMode" on page 836

NOTE

The :MTESt:RUMode:SOFailure command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :MTESt:RMODe:FACTion:STOP command (see page 450) instead.
:MTESt:{STARt | STOP}

Command Syntax

: MTESt :{START | STOP}

The :MTESt:{START | STOP} command starts or stops the acquisition system.

NOTE
The :MTESt:STARt and :MTESt:STOP commands are obsolete and are provided for backward compatibility to previous oscilloscopes. Use the :RUN command (see page 194) and :STOP command (see page 198) instead.

See Also
• "Introduction to :MTESt Commands" on page 429
:MTESt:TRIGger:SOURce

Command Syntax

:IMATESt:TRIGger:SOURce <source>

<source> ::= CHANnel<n>

<n> ::= 1 to (# analog channels) in NR1 format

The :MTESt:TRIGger:SOURce command sets the channel to use as the trigger.

NOTE

The :MTESt:TRIGger:SOURce command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the trigger source commands (see page 647) instead.

Query Syntax

:IMATESt:TRIGger:SOURce?

The :IMATESt:TRIGger:SOURce? query returns the currently selected trigger source.

Return Format

<source> ::= CHAN<n>

<n> ::= 1 to (# analog channels) in NR1 format

See Also

• "Introduction to :IMATESt Commands" on page 429
:PRINt?

(see page 886)

Query Syntax

:PRINt? [<options>]

<options> ::= [<print option>[..]<print option>]

<print option> ::= {COLor | GRAYscale | BMP8bit | BMP}

The :PRINt? query pulls image data back over the bus for storage.

NOTE

The :PRINT command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :DISPlay:DATA command (see page 278) instead.

:SAVE:IMAGE:AREA

(see page 886)

Query Syntax  
:SAVE:IMAGE:AREA?

The :SAVE:IMAGE:AREA? query returns the selected image area.

When saving images, this query returns SCR (screen). When saving setups or waveform data, this query returns GRAT (graticule) even though graticule images are not saved.

Return Format  
<area><NL>

<area> ::= {GRAT | SCR}

:TIMebase:DELay

0 (see page 886)

Command Syntax

:TIMebase:DELay <delay_value>

<delay_value> ::= time in seconds from trigger to the delay reference point on the screen.

The valid range for delay settings depends on the time/division setting for the main time base.

The :TIMebase:DELay command sets the main time base delay. This delay is the time between the trigger event and the delay reference point on the screen. The delay reference point is set with the :TIMebase:REFerence command (see page 640).

NOTE

The :TIMebase:DELay command is obsolete and is provided for backward compatibility to previous oscilloscopes. Use the :TIMebase:POSition command (see page 638) instead.

Query Syntax

:TIMebase:DELay?

The :TIMebase:DELay query returns the current delay value.

Return Format

<delay_value><NL>

<delay_value> ::= time from trigger to display reference in seconds in NR3 format.

Example Code

' TIMEBASE_DELAY - Sets the time base delay. This delay is the internal time between the trigger event and the onscreen delay reference point.

' Set time base delay to 0.0.
myScope.WriteString ':TIMEBASE:DELAY 0.0'

See complete example programs at: Chapter 38, “Programming Examples,” starting on page 895
:TRIGGER:THRESHOLD

(see page 886)

Command Syntax

:TRIGGER:THRESHOLD <channel group>, <threshold type> [, <value>]

<channel group> ::= {POD1 | POD2}
<threshold type> ::= {CMOS | ECL | TTL | USERdef}
<value>::= voltage for USERdef (floating-point number) [Volt type]
[Volt type] ::= {V | mV | uV}

The :TRIGGER:THRESHOLD command sets the threshold (trigger level) for a pod of 8 digital channels (either digital channels 0 through 7 or 8 through 15). The threshold can be set to a predefined value or to a user-defined value. For the predefined value, the voltage parameter is not required.

NOTE

This command is only available on the MSO models.

NOTE

The :TRIGGER:THRESHOLD command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :POD<n>:THRESHOLD command (see page 465), :DIGITAL<d>:THRESHOLD command (see page 269), or :TRIGGER[:EDGE]:LEVEL command (see page 673).

Query Syntax

:TRIGGER:THRESHOLD? <channel group>

The :TRIGGER:THRESHOLD? query returns the voltage and threshold text for analog channel 1 or 2, or POD1 or POD2.

Return Format

<threshold type> [, <value>]<NL>

<threshold type> ::= {CMOS | ECL | TTL | USER}

CMOS ::= 2.5V
TTL ::= 1.5V
ECL ::= -1.3V
USERdef ::= range from -8.0V to +8.0V.
<value> ::= voltage for USERdef (a floating-point number in NR1.
:TRIGger:TV:TVMode

(see page 886)

**Command Syntax**

```
:TRIGger:TV:TVMode <mode>
```

```text
<mode> ::= {FIELD1 | FIELD2 | ALLFields | ALLLines | LINE | VERTical |
           LFIELD1 | LFIELD2 | LALTernate | LVERTical}
```

The :TRIGger:TV:MODE command selects the TV trigger mode and field. The LVERTical parameter is only available when :TRIGger:TV:STANdard is GENeric. The LALTernate parameter is not available when :TRIGger:TV:STANdard is GENeric (see page 714).

Old forms for `<mode>` are accepted:

<table>
<thead>
<tr>
<th>&lt;mode&gt;</th>
<th>Old Forms Accepted</th>
</tr>
</thead>
<tbody>
<tr>
<td>FIELD1</td>
<td>F1</td>
</tr>
<tr>

<td>LINEAlt</td>
</tr>
<tr>
<td>LINEVert</td>
<td>LINEVert</td>
</tr>
</tbody>
</table>

**NOTE**
The :TRIGger:TV:TVMode command is an obsolete command provided for compatibility to previous oscilloscopes. Use the :TRIGger:TV:MODE command (see page 711) instead.

**Query Syntax**

```
:TRIGger:TV:TVMode?
```

The :TRIGger:TV:TVMode? query returns the TV trigger mode.

**Return Format**

```
<value><NL>
```

```
<value> ::= {FIELD1 | FIELD2 | ALLFields | ALLLines | LINE | VERT | LINEF1 | LINEF2 |
          | LALT | LVERTical}
```

35 Status Reporting

IEEE 488.2 defines data structures, commands, and common bit definitions for status reporting (for example, the Status Byte Register and the Standard Event Status Register). There are also instrument-defined structures and bits (for example, the Operation Status Event Register and the Overload Event Register).

An overview of the oscilloscope's status reporting structure is shown in the following block diagram. The status reporting structure allows monitoring specified events in the oscilloscope. The ability to monitor and report these events allows determination of such things as the status of an operation, the availability and reliability of the measured data, and more.
• To monitor an event, first clear the event; then, enable the event. All of the events are cleared when you initialize the instrument.

• To allow a service request (SRQ) interrupt to an external controller, enable at least one bit in the Status Byte Register (by setting, or unmasking, the bit in the Service Request Enable register).

The Status Byte Register, the Standard Event Status Register group, and the Output Queue are defined as the Standard Status Data Structure Model in IEEE 488.2-1987.

The bits in the status byte act as summary bits for the data structures residing behind them. In the case of queues, the summary bit is set if the queue is not empty. For registers, the summary bit is set if any enabled bit in the event register is set. The events are enabled with the corresponding event enable register. Events captured by an event register remain set until the register is read or cleared. Registers are read with their associated commands. The *CLS command clears all event registers and all queues except the output queue. If you send *CLS immediately after a program message terminator, the output queue is also cleared.
Status Reporting Data Structures

The following figure shows how the status register bits are masked and logically OR'ed to generate service requests (SRQ) on particular events.

The status register bits are described in more detail in the following tables:

- Table 55
- Table 53
The status registers picture above shows how the different status reporting data structures work together. To make it possible for any of the Standard Event Status Register bits to generate a summary bit, the bits must be enabled. These bits are enabled by using the *ESE common command to set the corresponding bit in the Standard Event Status Enable Register.

To generate a service request (SRQ) interrupt to an external controller, at least one bit in the Status Byte Register must be enabled. These bits are enabled by using the *SRE common command to set the corresponding bit in the Service Request Enable Register. These enabled bits can then set RQS and MSS (bit 6) in the Status Byte Register.
Status Byte Register (STB)

The Status Byte Register is the summary-level register in the status reporting structure. It contains summary bits that monitor activity in the other status registers and queues. The Status Byte Register is a live register. That is, its summary bits are set and cleared by the presence and absence of a summary bit from other event registers or queues.

If the Status Byte Register is to be used with the Service Request Enable Register to set bit 6 (RQS/MSS) and to generate an SRQ, at least one of the summary bits must be enabled, then set. Also, event bits in all other status registers must be specifically enabled to generate the summary bit that sets the associated summary bit in the Status Byte Register.

The Status Byte Register can be read using either the *STB? Common Command or the programming interface serial poll command. Both commands return the decimal-weighted sum of all set bits in the register. The difference between the two methods is that the serial poll command reads bit 6 as the Request Service (RQS) bit and clears the bit which clears the SRQ interrupt. The *STB? command reads bit 6 as the Master Summary Status (MSS) and does not clear the bit or have any effect on the SRQ interrupt. The value returned is the total bit weights of all of the bits that are set at the present time.

The use of bit 6 can be confusing. This bit was defined to cover all possible computer interfaces, including a computer that could not do a serial poll. The important point to remember is that, if you are using an SRQ interrupt to an external computer, the serial poll command clears bit 6. Clearing bit 6 allows the oscilloscope to generate another SRQ interrupt when another enabled event occurs.

No other bits in the Status Byte Register are cleared by either the *STB? query or the serial poll, except the Message Available bit (bit 4). If there are no other messages in the Output Queue, bit 4 (MAV) can be cleared as a result of reading the response to the *STB? command.

If bit 4 (weight = 16) and bit 5 (weight = 32) are set, the program prints the sum of the two weights. Since these bits were not enabled to generate an SRQ, bit 6 (weight = 64) is not set.

The following example uses the *STB? query to read the contents of the oscilloscope’s Status Byte Register.

```plaintext
myScope.WriteString "*STB?"
varQueryResult = myScope.ReadNumber
MsgBox "Status Byte Register, Read: 0x" + Hex(varQueryResult)
```

The next program prints 0xD1 and clears bit 6 (RQS) and bit 4 (MAV) of the Status Byte Register. The difference in the output value between this example and the previous one is the value of bit 6 (weight = 64). Bit 6 is set when the first enabled summary bit is set and is cleared when the Status Byte Register is read by the serial poll command.
Example  The following example uses the resource session object's ReadSTB method to read the contents of the oscilloscope's Status Byte Register.

```vbnet
varQueryResult = myScope.IO.ReadSTB
MsgBox "Status Byte Register, Serial Poll: 0x" + Hex(varQueryResult)
```

NOTE  Use Serial Polling to Read Status Byte Register. Serial polling is the preferred method to read the contents of the Status Byte Register because it resets bit 6 and allows the next enabled event that occurs to generate a new SRQ interrupt.
Service Request Enable Register (SRE)

Setting the Service Request Enable Register bits enable corresponding bits in the Status Byte Register. These enabled bits can then set RQS and MSS (bit 6) in the Status Byte Register.

Bits are set in the Service Request Enable Register using the *SRE command and the bits that are set are read with the *SRE? query.

Example

The following example sets bit 4 (MAV) and bit 5 (ESB) in the Service Request Enable Register.

myScope.WriteString "*SRE " + CStr(CInt("&H30"))

This example uses the decimal parameter value of 48, the string returned by CStr(CInt("&H30")), to enable the oscilloscope to generate an SRQ interrupt under the following conditions:

- When one or more bytes in the Output Queue set bit 4 (MAV).
- When an enabled event in the Standard Event Status Register generates a summary bit that sets bit 5 (ESB).
Trigger Event Register (TER)

This register sets the TRG bit in the status byte when a trigger event occurs.

The TER event register stays set until it is cleared by reading the register or using the *CLS command. If your application needs to detect multiple triggers, the TER event register must be cleared after each one.

If you are using the Service Request to interrupt a program or controller operation, you must clear the event register each time the trigger bit is set.
Output Queue

The output queue stores the oscilloscope-to-controller responses that are generated by certain instrument commands and queries. The output queue generates the Message Available summary bit when the output queue contains one or more bytes. This summary bit sets the MAV bit (bit 4) in the Status Byte Register.

When using the Keysight VISA COM library, the output queue may be read with the FormattedIO488 object's ReadString, ReadNumber, ReadList, or ReadIEEEBlock methods.
Message Queue

The message queue contains the text of the last message written to the advisory line on the screen of the oscilloscope. The length of the oscilloscope’s message queue is 1. Note that messages sent with the :SYSTem:DSPl command do not set the MSG status bit in the Status Byte Register.
(Standard) Event Status Register (ESR)

The (Standard) Event Status Register (ESR) monitors the following oscilloscope status events:

- PON - Power On
- URQ - User Request
- CME - Command Error
- EXE - Execution Error
- DDE - Device Dependent Error
- QYE - Query Error
- RQC - Request Control
- OPC - Operation Complete

When one of these events occur, the event sets the corresponding bit in the register. If the bits are enabled in the Standard Event Status Enable Register, the bits set in this register generate a summary bit to set bit 5 (ESB) in the Status Byte Register.

You can read the contents of the Standard Event Status Register and clear the register by sending the *ESR? query. The value returned is the total bit weights of all of the bits that are set at the present time.

**Example**

The following example uses the *ESR query to read the contents of the Standard Event Status Register.

```plaintext
myScope.WriteString "*ESR?"
varQueryResult = myScope.ReadNumber
MsgBox "Standard Event Status Register: 0x" + Hex(varQueryResult)
```

If bit 4 (weight = 16) and bit 5 (weight = 32) are set, the program prints the sum of the two weights.
(Standard) Event Status Enable Register (ESE)

To allow any of the (Standard) Event Status Register (ESR) bits to generate a summary bit, you must first enable that bit. Enable the bit by using the *ESE (Event Status Enable) common command to set the corresponding bit in the (Standard) Event Status Enable Register (ESE).

Set bits are read with the *ESE? query.

**Example**

Suppose your application requires an interrupt whenever any type of error occurs. The error related bits in the (Standard) Event Status Register are bits 2 through 5 (hexadecimal value 0x3C). Therefore, you can enable any of these bits to generate the summary bit by sending:

```plaintext
myScope.WriteString "*ESE " + CStr(CInt("&H3C"))
```

Whenever an error occurs, it sets one of these bits in the (Standard) Event Status Register. Because all the error related bits are enabled, a summary bit is generated to set bit 5 (ESB) in the Status Byte Register.

If bit 5 (ESB) in the Status Byte Register is enabled (via the *SRE command), an SRQ service request interrupt is sent to the controller PC.

**NOTE**

Disabled (Standard) Event Status Register bits respond but do not generate a summary bit. (Standard) Event Status Register bits that are not enabled still respond to their corresponding conditions (that is, they are set if the corresponding event occurs). However, because they are not enabled, they do not generate a summary bit to the Status Byte Register.
Error Queue

As errors are detected, they are placed in an error queue. This queue is first in, first out. If the error queue overflows, the last error in the queue is replaced with error 350, Queue overflow. Any time the queue overflows, the least recent errors remain in the queue, and the most recent error is discarded. The length of the oscilloscope's error queue is 30 (29 positions for the error messages, and 1 position for the Queue overflow message).

The error queue is read with the :SYSTem:ERRor? query. Executing this query reads and removes the oldest error from the head of the queue, which opens a position at the tail of the queue for a new error. When all the errors have been read from the queue, subsequent error queries return "0, No error".

The error queue is cleared when:

- the instrument is powered up,
- the instrument receives the *CLS common command, or
- the last item is read from the error queue.
Operation Status Event Register (:OPERegister[:EVENt])

The Operation Status Event Register register hosts these bits:

<table>
<thead>
<tr>
<th>Name</th>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RUN bit</td>
<td>bit 3</td>
<td>Is set whenever the instrument goes from a stop state to a single or running state.</td>
</tr>
<tr>
<td>WAIT TRIG bit</td>
<td>bit 5</td>
<td>Is set by the Trigger Armed Event Register and indicates that the trigger is armed.</td>
</tr>
<tr>
<td>MTE bit</td>
<td>bit 9</td>
<td>Comes from the Mask Test Event Registers.</td>
</tr>
<tr>
<td>OVLR bit</td>
<td>bit 11</td>
<td>Is set whenever a 50Ω input overload occurs.</td>
</tr>
</tbody>
</table>

If any of these bits are set, the OPER bit (bit 7) of the Status Byte Register is set. The Operation Status Event Register is read and cleared with the :OPERegister[:EVENt]? query. The register output is enabled or disabled using the mask value supplied with the OPEE command.
Operation Status Condition Register (:OPERegister:CONDition)

The Operation Status Condition Register register hosts these bits:

<table>
<thead>
<tr>
<th>Name</th>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RUN bit</td>
<td>bit 3</td>
<td>Is set whenever the instrument is not stopped.</td>
</tr>
<tr>
<td>WAIT TRIG bit</td>
<td>bit 5</td>
<td>Is set by the Trigger Armed Event Register and indicates that the trigger is armed.</td>
</tr>
<tr>
<td>MTE bit</td>
<td>bit 9</td>
<td>Comes from the Mask Test Event Registers.</td>
</tr>
<tr>
<td>OVLR bit</td>
<td>bit 11</td>
<td>Is set whenever a 50Ω input overload occurs.</td>
</tr>
</tbody>
</table>

The :OPERegister:CONDition? query returns the value of the Operation Status Condition Register.
Arm Event Register (AER)

This register sets bit 5 (Wait Trig bit) in the Operation Status Register and the OPER bit (bit 7) in the Status Byte Register when the instrument becomes armed.

The ARM event register stays set until it is cleared by reading the register with the AER? query or using the *CLS command. If your application needs to detect multiple triggers, the ARM event register must be cleared after each one.

If you are using the Service Request to interrupt a program or controller operation when the trigger bit is set, then you must clear the event register after each time it has been set.
Overload Event Register (:OVLRegister)

The Overload Event Register register hosts these bits:

<table>
<thead>
<tr>
<th>Name</th>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel 1 Fault</td>
<td>bit 6</td>
<td>Fault has occurred on Channel 1 input.</td>
</tr>
<tr>
<td>Channel 2 Fault</td>
<td>bit 7</td>
<td>Fault has occurred on Channel 2 input.</td>
</tr>
<tr>
<td>Channel 3 Fault</td>
<td>bit 8</td>
<td>Fault has occurred on Channel 3 input.</td>
</tr>
<tr>
<td>Channel 4 Fault</td>
<td>bit 9</td>
<td>Fault has occurred on Channel 4 input.</td>
</tr>
<tr>
<td>External Trigger Fault</td>
<td>bit 10</td>
<td>Fault has occurred on External Trigger input.</td>
</tr>
</tbody>
</table>
Mask Test Event Event Register (:MTERegister[:EVENT])

The Mask Test Event Event Register register hosts these bits:

<table>
<thead>
<tr>
<th>Name</th>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Complete</td>
<td>bit 0</td>
<td>Is set when the mask test is complete.</td>
</tr>
<tr>
<td>Fail</td>
<td>bit 1</td>
<td>Is set when there is a mask test failure.</td>
</tr>
<tr>
<td>Started</td>
<td>bit 8</td>
<td>Is set when mask testing is started.</td>
</tr>
<tr>
<td>Auto Mask</td>
<td>bit 10</td>
<td>Is set when auto mask creation is completed.</td>
</tr>
</tbody>
</table>

The :MTERegister[:EVENT]? query returns the value of, and clears, the Mask Test Event Event Register.
Clearing Registers and Queues

The *CLS common command clears all event registers and all queues except the output queue. If *CLS is sent immediately after a program message terminator, the output queue is also cleared.
Status Reporting Decision Chart

no

Do you want to do status reporting?

yes

Reboot the instrument and clear the status registers:
myScope.WriteString("RST")
myScope.WriteString("CLS")

no (Your programs can read the status registers instead.)

Send a Service Request (SRQ) interrupt to the controller?

yes

If you want to report events monitored by the Standard Event Status Register:

no

Activate the instrument function that you want to monitor.

Use the following to read the Standard Event Status Register:
myScope.WriteString("ESR?")
varR = myScope.ReadNumber
MsgBox "ESR: 0x" + Hex(varR)

When an interrupt occurs, interrupt handler should serial poll STB with:
varR = myScope.IO.ReadSTB

To read the Status Byte Register, use the following:
myScope.WriteString("STB?")
varR = myScope.ReadNumber
MsgBox "STB: 0x" + Hex(varR)

This displays the hexadecimal value of the Status Byte Register.

Determine which bits in the Status Byte Register are set:

Use the following to read the contents of the status byte:
myScope.WriteString("SB?")
varR = myScope.ReadNumber
MsgBox "SB: 0x" + Hex(varR)

Use the following to see if an operation is complete:
myScope.WriteString("OPC?")
varR = myScope.ReadNumber
MsgBox "OPC: 0x" + Hex(varR)

no

Use the "SRE" common command to enable the bits you want to report events monitored by the Standard Event Status Register.

Use the “SE” common command to enable the bits you want to use to generate the ESB summary bit in the Status Byte Register.

END
36 Synchronizing Acquisitions

When remotely controlling an oscilloscope with programming commands, it is often necessary to know when the oscilloscope has finished the previous operation and is ready for the next command. The most common example is when an acquisition is started using the :DIGitize, :RUN, or :SINGLE commands. Before a measurement result can be queried, the acquisition must complete. Too often fixed delays are used to accomplish this wait, but fixed delays often use excessive time or the time may not be long enough. A better solution is to use synchronous commands and status to know when the oscilloscope is ready for the next request.
Synchronization in the Programming Flow

Most remote programming follows these three general steps:
1. Set up the oscilloscope and device under test (see page 876).
2. Acquire a waveform (see page 876).
3. Retrieve results (see page 876).

Set Up the Oscilloscope

Before making changes to the oscilloscope setup, it is best to make sure it is stopped using the :STOP command followed by the *OPC? query.

**NOTE**

It is not necessary to use *OPC?, hard coded waits, or status checking when setting up the oscilloscope. After the oscilloscope is configured, it is ready for an acquisition.

Acquire a Waveform

When acquiring a waveform there are two possible methods used to wait for the acquisition to complete. These methods are blocking and polling. The table below details when each method should be chosen and why.

<table>
<thead>
<tr>
<th>Use When</th>
<th>Blocking Wait</th>
<th>Polling Wait</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>You know the oscilloscope will trigger based on the oscilloscope setup and device under test.</td>
<td>You know the oscilloscope may or may not trigger on the oscilloscope setup and device under test.</td>
</tr>
<tr>
<td>Advantages</td>
<td>No need for polling.</td>
<td>Remote interface will not timeout</td>
</tr>
<tr>
<td></td>
<td>Fastest method.</td>
<td>No need for device clear if no trigger.</td>
</tr>
<tr>
<td>Disadvantages</td>
<td>Remote interface may timeout.</td>
<td>Slower method.</td>
</tr>
<tr>
<td></td>
<td>Device clear only way to get control of oscilloscope if there is no trigger.</td>
<td>Requires polling loop.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Requires known maximum wait time.</td>
</tr>
<tr>
<td>Implementation Details</td>
<td>See &quot;Blocking Synchronization&quot; on page 877.</td>
<td>See &quot;Polling Synchronization With Timeout&quot; on page 878.</td>
</tr>
</tbody>
</table>

Retrieve Results

Once the acquisition is complete, it is safe to retrieve measurements and statistics.
Blocking Synchronization

Use the :DIGitize command to start the acquisition. This blocks subsequent queries until the acquisition and processing is complete. For example:

```
' Synchronizing acquisition using blocking.
'==================================================================
Option Explicit
Public myMgr As VisaComLib.ResourceManager
Public myScope As VisaComLib/FormattedIO488
Public varQueryResult As Variant
Public strQueryResult As String

Sub Main()
    On Error GoTo VisaComError
    ' Create the VISA COM I/O resource.
    Set myMgr = New VisaComLib.ResourceManager
    Set myScope = New VisaComLib.FormattedIO488
    Set myScope.IO = myMgr.Open("TCPIP0::130.29.69.12::inst0::INSTR")
    myScope.IO.Clear ' Clear the interface.
    ' Set up.
    '--------------------------------------------------------------------------------
    myScope.WriteString ":TRIGger:MODE EDGE"
    myScope.WriteString ":TRIGger:EDGE:LEVel 2"
    myScope.WriteString ":TIMebase:SCALe 5e-8"
    ' Acquire.
    '--------------------------------------------------------------------------------
    myScope.WriteString ":DIGitize"
    ' Get results.
    '--------------------------------------------------------------------------------
    myScope.WriteString ":MEASure:RISetime"
    myScope.WriteString ":MEASure:RISetime?"
    varQueryResult = myScope.ReadNumber ' Read risetime.
    Debug.Print "Risetime: " + _
        FormatNumber(varQueryResult * 1000000000, 1) + " ns"
    Exit Sub
VisaComError:
    MsgBox "VISA COM Error:" + vbCrLf + Err.Description
End Sub
```
Polling Synchronization With Timeout

This example requires a timeout value so the operation can abort if an acquisition does not occur within the timeout period:

```
' Synchronizing acquisition using polling.
' ===================================================================

Option Explicit

Public myMgr As VisaComLib.ResourceManager
Public myScope As VisaComLib.FormattedIO488
Public varQueryResult As Variant
Public strQueryResult As String

Private Declare Sub Sleep Lib "kernel32" (ByVal dwMilliseconds As Long)

Sub Main()

On Error GoTo VisaComError

' Create the VISA COM I/O resource.
Set myMgr = New VisaComLib.ResourceManager
Set myScope = New VisaComLib.FormattedIO488
Set myScope.IO = myMgr.Open("TCPIP0::130.29.69.12::inst0::INSTR")
myScope.IO.Clear ' Clear the interface.

' Set up.
' -----------------------------------------------------------------
' Set up the trigger and horizontal scale.
myScope.WriteString ":TRIGger:MODE EDGE"
myScope.WriteString ":TRIGger:EDGE:LEVel 2"
myScope.WriteString ":TIMebase:SCALe 5e-8"

' Stop acquisitions and wait for the operation to complete.
myScope.WriteString ":STOP"
myScope.WriteString ":*OPC?"
strQueryResult = myScope.ReadString

' Acquire.
' -----------------------------------------------------------------
' Start a single acquisition.
myScope.WriteString ":SINGle"

' Oscilloscope is armed and ready, enable DUT here.
Debug.Print "Oscilloscope is armed and ready, enable DUT."

' Look for RUN bit = stopped (acquisition complete).
Dim lngTimeout As Long ' Max millisecs to wait for single-shot.
Dim lngElapsed As Long
lngTimeout = 10000 ' 10 seconds.
lngElapsed = 0

Do While lngElapsed <= lngTimeout
```
myScope.WriteString "::OPERegister:CONDition?"
varQueryResult = myScope.ReadNumber
' Mask RUN bit (bit 3, &H8).
If (varQueryResult And &H8) = 0 Then
    Exit Do
Else
    Sleep 100 ' Small wait to prevent excessive queries.
    lngElapsed = lngElapsed + 100
End If
Loop
' Get results.
' -----------------------------------------------------------------
If lngElapsed < lngTimeout Then
    myScope.WriteString "::MEASure:RISetime"
    myScope.WriteString "::MEASure:RISetime?"
    varQueryResult = myScope.ReadNumber ' Read risetime.
    Debug.Print "Risetime: " + FormatNumber(varQueryResult * 1000000000, 1) + " ns"
Else
    Debug.Print "Timeout waiting for single-shot trigger."
End If
Exit Sub
VisaComError:
    MsgBox "VISA COM Error:" + vbCrLf + Err.Description
End Sub
Synchronizing with a Single-Shot Device Under Test (DUT)

The examples in "Blocking Synchronization" on page 877 and "Polling Synchronization With Timeout" on page 878 assume the DUT is continually running and therefore the oscilloscope will have more than one opportunity to trigger. With a single shot DUT, there is only one opportunity for the oscilloscope to trigger, so it is necessary for the oscilloscope to be armed and ready before the DUT is enabled.

The blocking :DIGitize command cannot be used for a single shot DUT because once the :DIGitize command is issued, the oscilloscope is blocked from any further commands until the acquisition is complete.

This example is the same "Polling Synchronization With Timeout" on page 878 with the addition of checking for the armed event status.

```
' Synchronizing single-shot acquisition using polling.
' ===================================================================
Option Explicit
Public myMgr As VisaComLib.ResourceManager
Public myScope As VisaComLib.FormattedIO488
Public varQueryResult As Variant
Public strQueryResult As String
Private Declare Sub Sleep Lib "kernel32" (ByVal dwMilliseconds As Long)
Sub Main()
  On Error GoTo VisaComError
  ' Create the VISA COM I/O resource.
  Set myMgr = New VisaComLib.ResourceManager
  Set myScope = New VisaComLib.FormattedIO488
  Set myScope.IO = myMgr.Open("TCPIP0::130.29.69.12::inst0::INSTR")
  myScope.IO.Clear ' Clear the interface.

  ' Set up.
  ' ===================================================================
  ' Set up the trigger and horizontal scale.
  myScope.WriteString ":TRIGger:MODE EDGE"
  myScope.WriteString ":TRIGger:EDGE:LEVel 2"
  myScope.WriteString ":TIMebase:SCALe 5e-8"

  ' Stop acquisitions and wait for the operation to complete.
  myScope.WriteString ":STOP"
  myScope.WriteString "*OPC?"
  strQueryResult = myScope.ReadString

  ' Acquire.
```
' Start a single acquisition.
myScope.WriteString ':SINGle'

' Wait until the trigger system is armed.
Do
  Sleep 100 ' Small wait to prevent excessive queries.
  myScope.WriteString ':AER?'
  varQueryResult = myScope.ReadNumber
Loop Until varQueryResult = 1

' Oscilloscope is armed and ready, enable DUT here.
Debug.Print "Oscilloscope is armed and ready, enable DUT."

' Now, look for RUN bit = stopped (acquisition complete).
Dim lngTimeout As Long ' Max millisecs to wait for single-shot.
Dim lngElapsed As Long
lngTimeout = 10000 ' 10 seconds.
lngElapsed = 0

Do While lngElapsed <= lngTimeout
  myScope.WriteString ':OPERegister:CONDition?'
  varQueryResult = myScope.ReadNumber
  ' Mask RUN bit (bit 3, &H8).
  If (varQueryResult And &H8) = 0 Then
    Exit Do
  Else
    Sleep 100 ' Small wait to prevent excessive queries.
    lngElapsed = lngElapsed + 100
  End If
Loop

' Get results.
'
If lngElapsed < lngTimeout Then
  myScope.WriteString ':MEASure:RISetime'
  myScope.WriteString ':MEASure:RISetime?'
  varQueryResult = myScope.ReadNumber ' Read risetime.
  Debug.Print "Risetime: " + FormatNumber(varQueryResult * 1000000000, 1) + " ns"
Else
  Debug.Print "Timeout waiting for single-shot trigger."
End If

Exit Sub

VisaComError:
  MsgBox "VISA COM Error:" + vbCrLf + Err.Description

End Sub
Synchronizing with an Averaging Acquisition

When averaging, it is necessary to know when the average count has been reached. The :SINGle command does not average.

If it is known that a trigger will occur, a :DIGitize will acquire the complete number of averages, but if the number of averages is large, a timeout on the connection can occur.

The example below polls during the :DIGitize to prevent a timeout on the connection.

' Synchronizing in averaging acquisition mode.
' ===================================================================

Option Explicit

Public myMgr As VisaComLib.ResourceManager
Public myScope As VisaComLib.FormattedIO488
Public varQueryResult As Variant
Public strQueryResult As String

Private Declare Sub Sleep Lib "kernel32" (ByVal dwMilliseconds As Long)

Sub Main()

On Error GoTo VisaComError

' Create the VISA COM I/O resource.
Set myMgr = New VisaComLib.ResourceManager
Set myScope = New VisaComLib.FormattedIO488
Set myScope.IO = myMgr.Open("TCPIP0::130.29.69.12::inst0::INSTR")
myScope.IO.Clear ' Clear the interface.
myScope.IO.Timeout = 5000

' Set up.
' ----------------------------------------------------------------
' Set up the trigger and horizontal scale.
myScope.WriteString ":TRIGger:SWEep NORMal"
myScope.WriteString ":TRIGger:MODE EDGE"
myScope.WriteString ":TRIGger:EDGE:LEVel 2"
myScope.WriteString ":TIMebase:SCALe 5e-8"

' Stop acquisitions and wait for the operation to complete.
myScope.WriteString ":STOP"
myScope.WriteString "*OPC?"
strQueryResult = myScope.ReadString

' Set up average acquisition mode.
Dim lngAverages As Long
lngAverages = 256
myScope.WriteString ":ACQuire:COUNt " + CStr(lngAverages)
myScope.WriteString ":ACQuire:TYPE AVERage"
' Save *ESE (Standard Event Status Enable register) mask
' (so it can be restored later).
Dim varInitialESE As Variant
myScope.WriteString "*ESE?"
varInitialESE = myScope.ReadNumber

' Set *ESE mask to allow only OPC (Operation Complete) bit.
myScope.WriteString "*ESE " + CStr(CInt("&H01"))

' Acquire using :DIGitize. Set up OPC bit to be set when the
' operation is complete.
' -----------------------------------------------------------------
myScope.WriteString " :DIGitize"
myScope.WriteString " *OPC"

' Assume the oscilloscope will trigger, if not put a check here.
' Wait until OPC becomes true (bit 5 of Status Byte register, STB,
' from Standard Event Status register, ESR, is set). STB can be
' read during :DIGitize without generating a timeout.
Do
  Sleep 4000   ' Poll more often than the timeout setting.
  varQueryResult = myScope.IO.ReadSTB
Loop While (varQueryResult And &H20) = 0

' Clear ESR and restore previously saved *ESE mask.
myScope.WriteString " *ESR?"   ' Clear ESR by reading it.
varQueryResult = myScope.ReadNumber
myScope.WriteString " *ESE " + CStr(varInitialESE)

' Get results.
' -----------------------------------------------------------------
myScope.WriteString " :WAVeform:COUNt?"

Debug.Print "Averaged waveforms: " + CStr(varQueryResult)

myScope.WriteString " :MEASure:RISetime"
myScope.WriteString " :MEASure:RISetime?"
varQueryResult = myScope.ReadNumber   ' Read risetime.
Debug.Print "Risetime: " + _
  FormatNumber(varQueryResult * 1000000000, 1) + " ns"
Exit Sub

VisaComError:
  MsgBox "VISA COM Error:" + vbCrLf + Err.Description
End Sub
37 More About Oscilloscope Commands

Command Classifications / 886
Valid Command/Query Strings / 887
Query Return Values / 893
Sequential vs. Overlapped Commands / 894
Command Classifications

To help you use existing programs with your oscilloscope, or use current programs with the next generation of Keysight InfiniiVision oscilloscopes, commands are classified by the following categories:

- "Core Commands" on page 886
- "Non-Core Commands" on page 886
- "Obsolete Commands" on page 886

Core Commands

Core commands are a common set of commands that provide basic oscilloscope functionality on this oscilloscope and future Keysight InfiniiVision oscilloscopes. Core commands are unlikely to be modified in the future. If you restrict your programs to core commands, the programs should work across product offerings in the future, assuming appropriate programming methods are employed.

Non-Core Commands

Non-core commands are commands that provide specific features, but are not universal across all Keysight InfiniiVision oscilloscope models. Non-core commands may be modified or deleted in the future. With a command structure as complex as the one for your oscilloscope, some evolution over time is inevitable. Keysight's intent is to continue to expand command subsystems, such as the rich and evolving trigger feature set.

Obsolete Commands

Obsolete commands are older forms of commands that are provided to reduce customer rework for existing systems and programs. Generally, these commands are mapped onto some of the Core and Non-core commands, but may not strictly have the same behavior as the new command. None of the obsolete commands are guaranteed to remain functional in future products. New systems and programs should use the Core (and Non-core) commands. Obsolete commands are listed in:

- Chapter 33, “Obsolete and Discontinued Commands,” starting on page 797
Valid Command/Query Strings

- "Program Message Syntax" on page 887
- "Duplicate Mnemonics" on page 891
- "Tree Traversal Rules and Multiple Commands" on page 891

Program Message Syntax

To program the instrument remotely, you must understand the command format and structure expected by the instrument. The IEEE 488.2 syntax rules govern how individual elements such as headers, separators, program data, and terminators may be grouped together to form complete instructions. Syntax definitions are also given to show how query responses are formatted. The following figure shows the main syntactical parts of a typical program statement.

Instructions (both commands and queries) normally appear as a string embedded in a statement of your host language, such as Visual Basic or C/C++. The only time a parameter is not meant to be expressed as a string is when the instruction's syntax definition specifies <block data>, such as <learn string>. There are only a few instructions that use block data.

Program messages can have long or short form commands (and data in some cases — see "Long Form to Short Form Truncation Rules" on page 888), and upper and/or lower case ASCII characters may be used. (Query responses, however, are always returned in upper case.)

Instructions are composed of two main parts:
- The header, which specifies the command or query to be sent.
- The program data, which provide additional information needed to clarify the meaning of the instruction.

Instruction Header

The instruction header is one or more mnemonics separated by colons (;) that represent the operation to be performed by the instrument.

".DISPlay:LABel ON" is a command. Queries are indicated by adding a question mark (?) to the end of the header, for example, ".:DISPlay:LABel?". Many instructions can be used as either commands or queries, depending on whether or
not you have included the question mark. The command and query forms of an instruction usually have different program data. Many queries do not use any program data.

There are three types of headers:

- "Simple Command Headers" on page 889
- "Compound Command Headers" on page 889
- "Common Command Headers" on page 889

### White Space (Separator)
White space is used to separate the instruction header from the program data. If the instruction does not require any program data parameters, you do not need to include any white space. White space is defined as one or more space characters. ASCII defines a space to be character 32 (in decimal).

### Program Data
Program data are used to clarify the meaning of the command or query. They provide necessary information, such as whether a function should be on or off, or which waveform is to be displayed. Each instruction’s syntax definition shows the program data, as well as the values they accept. "Program Data Syntax Rules" on page 890 describes all of the general rules about acceptable values.

When there is more than one data parameter, they are separated by commas (,). Spaces can be added around the commas to improve readability.

### Program Message Terminator
The program instructions within a data message are executed after the program message terminator is received. The terminator may be either an NL (New Line) character, an EOI (End-Or-Identify) asserted in the programming interface, or a combination of the two. Asserting the EOI sets the EOI control line low on the last byte of the data message. The NL character is an ASCII linefeed (decimal 10).

### NOTE
**New Line Terminator Functions.** The NL (New Line) terminator has the same function as an EOS (End Of String) and EOT (End Of Text) terminator.

---

### Long Form to Short Form Truncation Rules
To get the short form of a command/keyword:

- When the command/keyword is longer than four characters, use the first four characters of the command/keyword unless the fourth character is a vowel; when the fourth character is a vowel, use the first three characters of the command/keyword.
- When the command/keyword is four or fewer characters, use all of the characters.

<table>
<thead>
<tr>
<th>Long Form</th>
<th>Short form</th>
</tr>
</thead>
<tbody>
<tr>
<td>RANGe</td>
<td>RANG</td>
</tr>
<tr>
<td>PATTern</td>
<td>PATT</td>
</tr>
</tbody>
</table>
In the oscilloscope programmer's documentation, the short form of a command is indicated by uppercase characters.

Programs written in long form are easily read and are almost self-documenting. The short form syntax conserves the amount of controller memory needed for program storage and reduces I/O activity.

### Simple Command Headers

Simple command headers contain a single mnemonic. :AUToscale and :DIGitize are examples of simple command headers typically used in the oscilloscope. The syntax is:

```
<program mnemonic><terminator>
```

Simple command headers must occur at the beginning of a program message; if not, they must be preceded by a colon.

When program data must be included with the simple command header (for example, :DIGitize CHANnel1), white space is added to separate the data from the header. The syntax is:

```
<program mnemonic><separator><program data><terminator>
```

### Compound Command Headers

Compound command headers are a combination of two or more program mnemonics. The first mnemonic selects the subsystem, and the second mnemonic selects the function within that subsystem. The mnemonics within the compound message are separated by colons. For example, to execute a single function within a subsystem:

```
:<subsystem>:<function><separator><program data><terminator>
```

For example, :CHANnel1:BWLimit ON

### Common Command Headers

Common command headers control IEEE 488.2 functions within the instrument (such as clear status). Their syntax is:

```
*<command header><terminator>
```

No space or separator is allowed between the asterisk (*) and the command header. *CLS is an example of a common command header.
Program Data Syntax Rules

Program data is used to convey a parameter information related to the command header. At least one space must separate the command header or query header from the program data.

<program mnemonic><separator><data><terminator>

When a program mnemonic or query has multiple program data, a comma separates sequential program data.

<program mnemonic><separator><data>,<data><terminator>

For example, :MEASure:DELay CHANnel1,CHANnel2 has two program data: CHANnel1 and CHANnel2.

Two main types of program data are used in commands: character and numeric.

Character Program Data

Character program data is used to convey parameter information as alpha or alphanumeric strings. For example, the :TIMebase:MODE command can be set to normal, zoomed (delayed), XY, or ROLL. The character program data in this case may be MAIN, WINDow, XY, or ROLL. The command :TIMebase:MODE WINDow sets the time base mode to zoomed.

The available mnemonics for character program data are always included with the command's syntax definition.

When sending commands, you may either the long form or short form (if one exists). Uppercase and lowercase letters may be mixed freely.

When receiving query responses, uppercase letters are used exclusively.

Numeric Program Data

Some command headers require program data to be expressed numerically. For example, :TIMebase:RANGe requires the desired full scale range to be expressed numerically.

For numeric program data, you have the option of using exponential notation or using suffix multipliers to indicate the numeric value. The following numbers are all equal:

28 = 0.28E2 = 280e-1 = 28000m = 0.028K = 28e-3K.

When a syntax definition specifies that a number is an integer, that means that the number should be whole. Any fractional part will be ignored, truncating the number. Numeric data parameters accept fractional values are called real numbers.

All numbers must be strings of ASCII characters. Thus, when sending the number 9, you would send a byte representing the ASCII code for the character 9 (which is 57). A three-digit number like 102 would take up three bytes (ASCII codes 49, 48, and 50). This is handled automatically when you include the entire instruction in a string.
Duplicate Mnemonics

Identical function mnemonics can be used in more than one subsystem. For example, the function mnemonic RANGE may be used to change the vertical range or to change the horizontal range:

:CHANnel1:RANGE 0.4

Sets the vertical range of channel 1 to 0.4 volts full scale.

:TIMebase:RANGE 1

Sets the horizontal time base to 1 second full scale.

:CHANnel1 and :TIMebase are subsystem selectors and determine which range is being modified.

Tree Traversal Rules and Multiple Commands

Command headers are created by traversing down the command tree. A legal command header would be :TIMebase:RANGE. This is referred to as a compound header. A compound header is a header made of two or more mnemonics separated by colons. The mnemonic created contains no spaces.

The following rules apply to traversing the tree:

- A leading colon (<NL> or EOI true on the last byte) places the parser at the root of the command tree. A leading colon is a colon that is the first character of a program header. Executing a subsystem command lets you access that subsystem until a leading colon or a program message terminator (<NL>) or EOI true is found.

- In the command tree, use the last mnemonic in the compound header as the reference point (for example, RANGE). Then find the last colon above that mnemonic (TIMebase). That is the point where the parser resides. Any command below that point can be sent within the current program message without sending the mnemonics which appear above them (for example, POSITION).

The output statements in the examples are written using the Keysight VISA COM library in Visual Basic. The quoted string is placed on the bus, followed by a carriage return and linefeed (CRLF).

To execute more than one function within the same subsystem, separate the functions with a semicolon (;):

:<(subsystem>:<function><separator><data>;<function><separator><data><terminator>

For example:

myScope.WriteString " :TIMebase:RANGE 0.5; POSITION 0"
The colon between TIMebase and RANGe is necessary because TIMebase:RANGe is a compound command. The semicolon between the RANGe command and the POSition command is the required program message unit separator. The POSition command does not need TIMebase preceding it because the TIMebase:RANGe command sets the parser to the TIMebase node in the tree.

Example 2: Program Message Terminator Sets Parser Back to Root

```plaintext
myScope.WriteString "::TIMebase:REFerence CENTer;POSition 0.00001"
```
or

```plaintext
myScope.WriteString "::TIMebase:REFerence CENTer"
myScope.WriteString "::TIMebase:POSition 0.00001"
```

In the first line of example 2, the subsystem selector is implied for the POSition command in the compound command. The POSition command must be in the same program message as the REFerence command because the program message terminator places the parser back at the root of the command tree.

A second way to send these commands is by placing TIMebase: before the POSition command as shown in the second part of example 2. The space after POSition is required.

Example 3: Selecting Multiple Subsystems

You can send multiple program commands and program queries for different subsystems on the same line by separating each command with a semicolon. The colon following the semicolon enables you to enter a new subsystem. For example:

```plaintext
<program mnemonic><data>;:<program mnemonic><data><terminator>
```

For example:

```plaintext
myScope.WriteString "::TIMebase:REFerence CENTer;::DISPlay:VECTors ON"
```

The leading colon before DISPlay:VECTors ON tells the parser to go back to the root of the command tree. The parser can then see the DISPlay:VECTors ON command. The space between REFerence and CENTer is required; so is the space between VECTors and ON.

Multiple commands may be any combination of compound and simple commands.
Query Return Values

Command headers immediately followed by a question mark (?) are queries. Queries are used to get results of measurements made by the instrument or to find out how the instrument is currently configured.

After receiving a query, the instrument interrogates the requested function and places the answer in its output queue. The answer remains in the output queue until it is read or another command is issued.

When read, the answer is transmitted across the bus to the designated listener (typically a controller). For example, the query :TIMebase:RANGe? places the current time base setting in the output queue. When using the Keysight VISA COM library in Visual Basic, the controller statements:

```vbnet
Dim strQueryResult As String
myScope.WriteString " :TIMebase:RANGe?"
strQueryResult = myScope.ReadString
```

pass the value across the bus to the controller and place it in the variable strQueryResult.

**NOTE**

Read Query Results Before Sending Another Command. Sending another command or query before reading the result of a query clears the output buffer (the current response) and places a Query INTERRUPTED error in the error queue.

**Infinity Representation**

The representation of infinity is +9.9E+37. This is also the value returned when a measurement cannot be made.
Sequential vs. Overlapped Commands

IEEE 488.2 makes the distinction between sequential and overlapped commands:

- **Sequential commands** finish their task before the execution of the next command starts.

  Most oscilloscope commands are sequential.

- **Overlapped commands** run concurrently. Commands following an overlapped command may be started before the overlapped command is completed.

  Some oscilloscope commands are overlapped. For example, the oscilloscope's save and recall commands are overlapped as well as some commands that perform analysis.

  With overlapped commands, you can use the *OPC? query to prevent any more commands from being executed until the overlapped command is complete. This may be necessary when a command that follows an overlapped command interferes with the overlapped command's processing or analysis. For example:

  ```
  :WMEMory1:SAVE CHAN1;*OPC?;:WMEMory2:SAVE CHAN2
  ```

  You can also use the *ESR? query to look at the OPC bit (bit 0) in the Standard Event Status Register to determine when an operation is complete.

  **See Also**

VISA COM Example in Visual Basic

To run this example in Visual Basic for Applications (VBA):

1. Start the application that provides Visual Basic for Applications (for example, Microsoft Excel).
2. Press ALT+F11 to launch the Visual Basic editor.
3. Reference the Keysight VISA COM library:
   a. Choose Tools > References... from the main menu.
   b. In the References dialog, check the "VISA COM 5.9 Type Library".
   c. Click OK.
5. Cut-and-paste the code that follows into the editor.
6. Edit the program to use the VISA address of your oscilloscope, and save the changes.
7. Run the program.

```

VISA COM Example in C#

To compile and run this example in Microsoft Visual Studio 2008:

2. Create a new Visual C#, Windows, Console Application project.
3. Cut-and-paste the code that follows into the C# source file.
4. Edit the program to use the VISA address of your oscilloscope.
5. Add a reference to the VISA COM 5.9 Type Library:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Choose Add Reference....
   c. In the Add Reference dialog, select the COM tab.
   d. Select VISA COM 5.9 Type Library; then click OK.
6. Build and run the program.

For more information, see the VISA COM Help that comes with Keysight IO Libraries Suite.

VISA COM Example in Visual Basic .NET

To compile and run this example in Microsoft Visual Studio 2008:

2. Create a new Visual Basic, Windows, Console Application project.
3. Cut-and-paste the code that follows into the C# source file.
4. Edit the program to use the VISA address of your oscilloscope.
5. Add a reference to the VISA COM 5.9 Type Library:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Choose Add Reference....
   c. In the Add Reference dialog, select the COM tab.
   d. Select VISA COM 5.9 Type Library; then click OK.
   e. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment and choose Properties; then, select "InfiniiVision.VisaComInstrumentApp" as the Startup object.
6. Build and run the program.

For more information, see the VISA COM Help that comes with Keysight IO Libraries Suite.

```csharp
Imports System
Imports System.IO
Imports System.Text
Imports Ivi.Visa.Interop
Imports System.Runtime.InteropServices

VISA COM Example in Python

You can use the Python programming language with the "comtypes" package to control Keysight oscilloscopes.

The Python language and "comtypes" package can be downloaded from the web at http://www.python.org/ and http://starship.python.net/crew/theller/comtypes/, respectively.

To run this example with Python and "comtypes":
1. Cut-and-paste the code that follows into a file named "example.py".
2. Edit the program to use the VISA address of your oscilloscope.
3. If "python.exe" can be found via your PATH environment variable, open a Command Prompt window; then, change to the folder that contains the "example.py" file, and enter:

    python example.py
# # Keysight VISA COM Example in Python using "comtypes"
#******************************************************************************
# This program illustrates a few commonly used programming
# features of your Keysight oscilloscope.
#******************************************************************************

# Import Python modules.
# ---------------------------------------------------------
import string
import time
import sys
import array
from comtypes.client import GetModule
from comtypes.client import CreateObject

# Run GetModule once to generate comtypes.gen.VisaComLib.
if not hasattr(sys, "frozen"):
    GetModule("C:\Program Files (x86)\IVI Foundation\VISA\VisaCom\GlobMgr.dll")
import comtypes.gen.VisaComLib as VisaComLib

# Global variables (booleans: 0 = False, 1 = True).

VISA Example in C

To compile and run this example in Microsoft Visual Studio 2008:

3. In the Win32 Application Wizard, click Next >. Then, check Empty project, and click Finish.
4. Cut-and-paste the code that follows into a file named "example.c" in the project directory.
5. In Visual Studio 2008, right-click the Source Files folder, choose Add > Add Existing Item..., select the example.c file, and click Add.
6. Edit the program to use the VISA address of your oscilloscope.
7. Choose Project > Properties.... In the Property Pages dialog, update these project settings:
   c. Click OK to close the Property Pages dialog.
8. Add the include files and library files search paths:
   a. Choose Tools > Options....
   b. In the Options dialog, under Projects and Solutions, select VC++ Directories.
   c. Show directories for Include files, and add the include directory (for example, Program Files (x86)\IVI Foundation\VISA\WinNT\Include).
   d. Show directories for Library files, and add the library files directory (for example, Program Files (x86)\IVI Foundation\VISA\WinNT\lib\msc).
   e. Click OK to close the Options dialog.
9. Build and run the program.

VISA Example in Visual Basic

To run this example in Visual Basic for Applications:

1. Start the application that provides Visual Basic for Applications (for example, Microsoft Excel).
2. Press ALT+F11 to launch the Visual Basic editor.
3. Add the visa32.bas file to your project:
   a. Choose File > Import File....
   b. Navigate to the header file, visa32.bas (installed with Keysight IO Libraries Suite and found in the Program Files (x86)\IVI Foundation\VISA\WinNT\Include), select it, and click Open.
5. Cut-and-paste the code that follows into the editor.
6. Edit the program to use the VISA address of your oscilloscope, and save the changes.
7. Run the program.

VISA Example in C#

To compile and run this example in Microsoft Visual Studio 2008:

2. Create a new Visual C#, Windows, Console Application project.
3. Cut-and-paste the code that follows into the C# source file.
4. Edit the program to use the VISA address of your oscilloscope.
5. Add Keysight's VISA header file to your project:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Click Add and then click Add Existing Item...
   c. Navigate to the header file, visa32.cs (installed with Keysight IO Libraries Suite and found in the Program Files (x86)\IVI Foundation\VISA\WinNT\Include directory), select it, but do not click the Open button.
   d. Click the down arrow to the right of the Add button, and choose Add as Link.

   You should now see the file underneath your project in the Solution Explorer. It will have a little arrow icon in its lower left corner, indicating that it is a link.

6. Build and run the program.

For more information, see the tutorial on using VISA in Microsoft .NET in the VISA Help that comes with Keysight IO Libraries Suite.

VISA Example in Visual Basic .NET

To compile and run this example in Microsoft Visual Studio 2008:

2. Create a new Visual Basic, Windows, Console Application project.
3. Cut-and-paste the code that follows into the Visual Basic .NET source file.
4. Edit the program to use the VISA address of your oscilloscope.
5. Add Keysight's VISA header file to your project:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Choose Add and then choose Add Existing Item...
   c. Navigate to the header file, visa32.vb (installed with Keysight IO Libraries Suite and found in the Program Files (x86)\IVI Foundation\VISA\WinNT\Include directory), select it, but do not click the Open button.
   d. Click the down arrow to the right of the Add button, and choose Add as Link.
      You should now see the file underneath your project in the Solution Explorer. It will have a little arrow icon in its lower left corner, indicating that it is a link.
   e. Right-click the project again and choose Properties; then, select "InfiniiVision.VisaInstrumentApp" as the Startup object.
6. Build and run the program.

For more information, see the tutorial on using VISA in Microsoft .NET in the VISA Help that comes with Keysight IO Libraries Suite.

VISA Example in Python (PyVISA 1.5 and older)

You can use the Python programming language with the PyVISA package to control Keysight Infinium Series oscilloscopes.

The Python language and PyVISA package can be downloaded from the web at http://www.python.org/ and http://pyvisa.sourceforge.net/, respectively.

To run this example with Python and PyVISA:

1. Cut-and-paste the code that follows into a file named "example.py".
2. Edit the program to use the VISA address of your oscilloscope.
3. If "python.exe" can be found via your PATH environment variable, open a Command Prompt window; then, change to the folder that contains the "example.py" file, and enter:

```
python example.py
```

VISA Example in Python (PyVISA 1.6 and newer)

You can use the Python programming language with the PyVISA package to control Keysight Infinium Series oscilloscopes.

The Python language and PyVISA package can be downloaded from the web at http://www.python.org/ and http://pyvisa.readthedocs.org/, respectively.

To run this example with Python and PyVISA:

1. Cut-and-paste the code that follows into a file named "example.py".
2. Edit the program to use the VISA address of your oscilloscope.
3. If "python.exe" can be found via your PATH environment variable, open a Command Prompt window; then, change to the folder that contains the "example.py" file, and enter:

   python example.py

VISA.NET Examples

These programming examples show how to use the VISA.NET drivers that come with Keysight IO Libraries Suite.

- "VISA.NET Example in C#" on page 982
- "VISA.NET Example in Visual Basic .NET" on page 988
- "VISA.NET Example in IronPython" on page 995

VISA.NET Example in C#

To compile and run this example in Microsoft Visual Studio 2013:

2. Choose FILE > New > Project....
3. In the New Project dialog box, select .NET Framework 4.5.2.
4. Create a new Visual C#, Console Application project.
5. Cut-and-paste the code that follows into the C# source file.
6. Edit the program to use the VISA address of your oscilloscope.
7. Add a reference to the VISA.NET driver:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Choose Add Reference....
   c. In the Reference Manager dialog box, under Assemblies, select Extensions.
   d. In the "Targeting: .NET Framework 4.5.2" list, select the Ivi.Visa Assembly check box; then, click OK.
8. Build and run the program.

For more information, see the VISA.NET Help that comes with Keysight IO Libraries Suite.

VISA.NET Example in Visual Basic .NET

To compile and run this example in Microsoft Visual Studio 2013:

2. Choose FILE > New > Project....
3. In the New Project dialog box, select .NET Framework 4.5.2.
4. Create a new Visual Basic, Console Application project.
5. Cut-and-paste the code that follows into the Visual Basic .NET source file.
6. Edit the program to use the VISA address of your oscilloscope.
7. Add a reference to the VISA.NET 3.0 driver:
   a. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b. Choose Add Reference....
   c. In the Add Reference dialog, select the Browse tab, and navigate to the ScpiNetDrivers folder.
      i. Windows XP: C:\Documents and Settings\All Users\Agilent\Command Expert\ScpiNetDrivers
      ii. Windows 7: C:\ProgramData\Agilent\Command Expert\ScpiNetDrivers
   d. Select the .dll file for your oscilloscope, for example AgInfiniiVision2000X_01_20.dll; then, click OK.
   e. Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment and choose
8 Add a reference to the VISA.NET driver:
   a Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b Choose Add Reference....
   c In the Reference Manager dialog box, under Assemblies, select Extensions.
   d In the "Targeting: .NET Framework 4.5.2" list, select the Ivi.Visa Assembly check box; then, click OK.

9 Specify the Startup object:
   a Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
   b Choose Properties.
   c In the Properties dialog box, under Application, select the Startup object: field and choose Sub Main.
   d Save your change and close the Properties dialog box.

10 Build and run the program.

For more information, see the VISA.NET driver help that comes with Keysight Command Expert.

VISA.NET Example in IronPython

You can also control Keysight oscilloscopes using the VISA.NET library and Python programming language on the .NET platform using:

- IronPython ([http://ironpython.net/](http://ironpython.net/)) which is an implementation of the Python programming language running under .NET.

To run this example with IronPython:

1. Cut-and-paste the code that follows into a file named "example.py".
2. Edit the program to use the address of your oscilloscope.
3. If the IronPython "ipy.exe" can be found via your PATH environment variable, open a Command Prompt window; then, change to the folder that contains the "example.py" file, and enter:

   ipy example.py

- "SICL Example in Visual Basic" on page 1010

SICL Example in C

To compile and run this example in Microsoft Visual Studio 2008:

3. In the Win32 Application Wizard, click Next >. Then, check Empty project, and click Finish.
4. Cut-and-paste the code that follows into a file named "example.c" in the project directory.
5. In Visual Studio 2008, right-click the Source Files folder, choose Add > Add Existing Item..., select the example.c file, and click Add.
6. Edit the program to use the SICL address of your oscilloscope.
7. Choose Project > Properties.... In the Property Pages dialog, update these project settings:
   c. Click OK to close the Property Pages dialog.
8. Add the include files and library files search paths:
   a. Choose Tools > Options....
   b. In the Options dialog, select VC++ Directories under Projects and Solutions.
   c. Show directories for Include files, and add the include directory (for example, Program Files\Agilent\IO Libraries Suite\include).
   d. Show directories for Library files, and add the library files directory (for example, Program Files\Agilent\IO Libraries Suite\lib).
   e. Click OK to close the Options dialog.
9. Build and run the program.

SICL Example in Visual Basic

To run this example in Visual Basic for Applications:

1. Start the application that provides Visual Basic for Applications (for example, Microsoft Excel).
2. Press ALT+F11 to launch the Visual Basic editor.
3. Add the sicl32.bas file to your project:
   a. Choose File > Import File...
   b. Navigate to the header file, sicl32.bas (installed with Keysight IO Libraries Suite and found in the Program Files\Agilent\IO Libraries Suite\include directory), select it, and click Open.
5. Cut-and-paste the code that follows into the editor.
6. Edit the program to use the SICL address of your oscilloscope, and save the changes.
7. Run the program.

SCPI.NET Examples

You can also program the oscilloscope using the SCPI.NET drivers that come with Keysight's free Command Expert software.

While you can write code manually using the SCPI.NET drivers, you can also use the Command Expert software to:

- Connect to instruments and control them interactively using SCPI command sets.
- Quickly prototype and test command sequences.
- Generate C#, VB.NET, or C/C++ code for command sequences.
- Find, download, and install SCPI command sets.
- Browse command trees, search for commands, and view command descriptions.

The Command Expert suite also comes with Add-ons for easy instrument control and measurement data retrieval in NI LabVIEW, Microsoft Excel, Keysight VEE, and Keysight SystemVue.

To download the Keysight Command Expert software, see:
http://www.keysight.com/find/commandexpert

For more on programming with the SCPI.NET drivers, see "Using SCPI.NET Drivers" in the help that comes with Keysight Command Expert.
