Known Issues — Nokia 2160 Phone

Scope of Bulletin
This bulletin applies to all TDMA IS-136 SMRTSAM 2, SMRTSAM 2 Plus, PROMAS32, and WALKABOUT systems equipped with the Nokia 2160 phone.

Issue # 1
Data fields in the IS-136 Tracker view are initially blank. No change in a field will occur until an actual change is indicated within a message. This happens because the phone only supplies unsolicited data updates. The initial state of the phone is not reported; only changes are reported.

Workaround Solution
Before starting a test, press the SEND key, wait 3 to 5 seconds, then press the END key.

Issue # 2
Neighbor information is not displayed until the first call is placed. (This is a firmware issue with the test mobile.)

Workaround Solution
Before starting a test, press the SEND key, wait 3 to 5 seconds, then press the END key.
