Agilent 34410A/11A Command Quick Reference

Syntax Conventions

Braces ( { } ) enclose the parameter choices for a given command string. The braces are not sent with the command string.

A vertical bar ( | ) separates multiple parameter choices for a given command string. The bar is not sent with the command string.

Triangle brackets ( < > ) indicate that you must specify a value for the enclosed parameter. For example, the above syntax statement shows the <range> parameter enclosed in triangle brackets. The brackets are not sent with the command string. You must specify a value for the parameter (e.g., "VOLT:DC:RANG 10").

Some parameters are enclosed in square brackets ( [ ] ). The square brackets indicate that the parameter is optional and can be omitted. The brackets are not sent with the command string. If you do not specify a value for an optional parameter, the instrument chooses a default value.
