Keysight Technologies
81100 Family of Pulse/Pattern Generators
Simulation of Jittering Synchronization Signals for Video Interfaces

Technical Overview
Version 2.0
This product note describes how R&D engineers in the communication industry use Keysight Technologies, Inc. pulse generators for the development of video interfaces for projection units.

Several data communication companies develop interfaces between Local Clock Oscillators (LCOs) and video, TV, or computers for overhead projection units. It is very important for them to stay up-to-date with the rapidly changing video interfaces in computers, and to have test equipment that can simulate these different interfaces (such as HDTV interfaces). These interfaces vary from 33 MHz to 80 MHz.

A critical indicator of the quality of their design is its sensitivity to a jittering distributed clock signal, both in frequency and amplitude.
Required equipment for Lab 2

- 1 x pulse/pattern generator (81150A or 81160A)
- 1 x Infiniium oscilloscope
- 4 x BNC cables

How to hook up the instruments

- Connect strobe out 2 (pulse/pattern generator) to channel 3 (scope).
- Connect output 1 (pulse/pattern generator) to channel 1 (scope).
- Connect output 2 (pulse/pattern generator) to channel 2 (scope).
- Connect trigger out 2 (pulse/pattern generator) to channel 4 (scope).

Figure 1. The setup of a Keysight pulse generator and Infiniium oscilloscope

Figure 2. Jittering distributed clock signal
To simulate jittering synchronization signals with a pulse generator, we need:

- Two output channels with channel addition

- Programmable bit patterns up to 90 MHz frequency

- Variable delay and variable level

Follow the steps on the next pages to set up the correct parameter values on the front panel. Then review the pulses on the oscilloscope.
STEP 1. First, reset the instrument by pushing Store/Recall and selecting 'Set to default'.

STEP 2. Enable ‘Continuous trigger mode’ (select ‘cont’) and select ‘Pulse Waveform’ (‘Pulse’) for channel 1 and channel 2.

STEP 3. Set channel 1, as shown in Figure 6.

- Frequency: 90 MHz
- Duty cycle: 50%
- LeadE: 5 ns
- High: 1 V
- Low: 0 V

STEP 4. Set channel 2, as shown in Figure 7.

- Frequency: 90 MHz
- Duty cycle: 50%
- LeadE: 5 ns
- High: 950 mV
- Low: 0 V

STEP 5. Choose channel 1; select ‘pattern mode,’ and push ‘Edit Pattern’ to create a new channel.
**STEP 6.** The number of bits are 8. Set the bits by starting with the last bit.

Note: Pattern is 10100010.

![Figure 9. Step 6.](image)

**STEP 7.** Perform steps 5 and 6 for channel 2.

Note: Pattern is 00001000.

![Figure 10. Step 7.](image)

**STEP 8.** Review the signals on channels 1 and 2.

![Figure 11. Step 8.](image)
STEP 9. Press ‘Coupling,’ so that both pulses begin at the same time. Add channels by choosing channel 1, push ‘utility’ and select ‘Output Setup’.

View the pulse on a Keysight MSO9404A Infiniium oscilloscope.

Figure 12. Step 9.

STEP 10. Vary the channel 2 delay and level to jitter the pulse.

STEP 11. View the jittered pulses on a Keysight MSO9404A Infiniium oscilloscope.

Figure 13. Steps 10 and 11.

Register your products to get up-to-date product information and find warranty information.

Keysight Services
www.keysight.com/find/service
Keysight Services can help from acquisition to renewal across your instrument’s lifecycle. Our comprehensive service offerings—one-stop calibration, repair, asset management, technology refresh, consulting, training and more—helps you improve product quality and lower costs.

Keysight Assurance Plans
www.keysight.com/find/AssurancePlans
Up to ten years of protection and no budgetary surprises to ensure your instruments are operating to specification, so you can rely on accurate measurements.

Keysight Channel Partners
www.keysight.com/find/channelpartners
Get the best of both worlds: Keysight’s measurement expertise and product breadth, combined with channel partner convenience.
