E5080B ENA Series Vector Network Analyzer Configurations

This configuration guide describes standard configurations, options, accessories, upgrade kits and compatible peripherals for the Keysight E5080B ENA Series vector network analyzer (VNA). All documentation of the E5080B is available on the product page at: www.keysight.com/find/e5080b

Test set options

Choose one of the frequencies and test set options for the E5080B. Option 2xx indicates two test ports and option 4xx indicates four test ports. To add options to a product, order the corresponding item number (E5080B-xxx).

1. The S96xxxB and S96xxxA offer the same functionalities.
2. The S96xxxB software has six license types, please refer to “Keysight Software Licensing Options Provide Flexibility and Support” for more detail.
3. The S96xxxA software has these software license types: node-locked perpetual (1FP), node-locked 12 month (1FL), transportable perpetual (1TP) and transportable 12 month (1TL). 1FP is the only type that can be ordered as part of the instrument. The other types have to be ordered as separate items and installed from the web after the receipt of the instruments.
4. A 4-port ECal module (i.e. N4431D or N4433D) is recommended for multiport measurements.

Measurement Application Software

Automatic fixture removal (S96007B/A)

Many devices do not have coaxial connectors and are put in fixtures in order to measure them in a coaxial environment. Accurately removing the effects of the fixture is required to get a good measurement of the device under test (DUT). This application adds a powerful application wizard to guide you through characterizing a fixture and removing it from the measurement. Devices can be single-ended or differential. Files can be saved in a variety of formats for later use in ENA, PNA, PXI VNA, USB VNA, ADS, and PLTS.

Time domain analysis (S96010B/A)

This application enables the analyzer to view reflection and transmission responses in time or distance. Use time domain to tune filters, gate out the response of fixtures and cables, characterize the impedance of transmission lines and more.

Enhanced time domain analysis with TDR (S96011B/A)

This application enables the analyzer to perform enhanced time domain analysis for high-speed data applications. All functionality of the S96010B/A are included (TDR/TDT mode). In addition, the S96011B/A enables more detailed measurements and evaluations, such as eye-diagram/mask modes, without adding PLTS software. Jitters and/or emphasis/equalization capabilities enables simulation of real-world signals and environment. The S96011B/A covers up to 53 GHz bandwidth with 8.42 psec rise time. Full calibration is available and the automatic deskew ensures easy removal of fixture and probe effects. To get the best accuracy, mechanical calibration kits or ECal with DC option (i.e. N443xD or N469xD with Option 0DC) are recommended.

Basic pulsed-RF measurements (S96025B/A)

This application enables internal pulse generators that can be used to control the internal pulse modulators, and it provides an integrated pulse application that uses the wideband-detection method. The software requires hardware option 021 pulse modulator hardware.

The pulse application provides an easy way to set up point-in-pulse measurements with pulse width as narrow as 1 us, and pulse-profile measurements with 40 ns minimum timing resolution. Using the built-in pulse modulators, the E5080B is a complete pulsed-RF measurement solution, eliminating the need for external test sets and pulse generators. S96025B/A also controls external pulse generators and modulators and can synchronize to external master pulses. The application I/O connector on the rear panel of the analyzer is recommended if using external master pulses or external pulse modulators.
Noise figure measurements with vector correction (S96029B/A)

This software application enables high-accuracy noise figure and noise-power measurements of amplifiers utilizing Keysight’s unique vector-source-correction technique that uses Keysight N469x series ECal module as a source-impedance tuner\(^1\) to remove the effects of imperfect system-source match. This approach yields accuracy that surpasses that provided by the Y-factor method and other cold-source implementations, especially for in-fixture, on-wafer, and automated-test environments. S96029B/A controls N469x Series ECal modules configured as impedance tuners for use with the E5080B. A scalar-calibrated method is also available that offers less accuracy but is faster and does not require an impedance tuner. This method requires an external switch to isolate the E5080B’s source signal during noise figure measurements. A 50-ohm load must be connected to the DUT’s input using the switch.

The analyzer’s standard receivers are used for noise figure measurements with the S96029B/A. An external preamplifier, filter(s) and switches are required for devices with < 30 dB of excess noise (gain plus noise figure in dB).

For calibration, a standard mechanical cal kit or ECal module is required for the S-parameter portion of the cal (an ECal used as a tuner cannot be shared for calibration). To calibrate a standard receiver for noise figure measurements, a power meter is required. All calibration accessories and external hardware must be ordered separately.

Noise figure measurements with the E5080B are verified between 50 MHz and 45 GHz. Noise figure measurements of frequency converting devices are not supported with the S96029B/A.

1. 8509x, N443x or N755xA Series ECal modules are not supported.

Scalar mixer/converter measurements (S96082B/A)

With a simple setup and calibration, this application delivers the highest accuracy for scalar conversion-loss/gain measurements by combining one-port and power-meter calibrations to remove mismatch errors. S96082B/A provides an intuitive and easy-to-use user interface for setting up mixer and converter measurements, with single or dual conversion stages. It can control external signal generators for use as LO signals. Supported external sources include the Keysight ESG, PSG, EXG, and MXG Series, as well as other SCPI-controlled signal generators.

S96082B/A is compatible with S96084B/A, which enables measurements of converters with internal LOs.

Vector and mixer/converter measurements (S96083B/A)

This application includes the scalar mixer/converter plus phase (SMC+Phase) measurement class that provides fully calibrated conversion gain/loss, relative phase, and absolute group delay measurements of mixers and converters without the need for reference or calibration mixers. Eliminating the calibration mixer requires a U9391C/F/G comb generator\(^1\) and an external DC power supply capable of sourcing +15 V and 300 mA for U9391C/F or 800 mA for U9391G. A vector mixer characterization (VMC) is also included for measuring group delay of frequency converting devices. VMC is used to characterize a calibration mixer supplied by the user.
SMC+Phase with the S96083B/A provides an intuitive and easy-to-use user interface for setting up mixer and converter measurements, with single or dual conversion stages. It can control the analyzer’s built-in source(s) as well as external signal generators for use as LO signals. Supported external sources include the Keysight ESG, PSG, EXG, and MXG Series, as well as other SCPI-controlled signal generators. S96083B/A is a superset of S96082B/A, so they should not be installed together. S96083B/A is compatible with S96084B/A, which enables measurements of converters with internal LOs.

1. When a comb generator is used as a phase reference for calibration and the start frequency of the measurement is less than 630 MHz, a user-supplied calibration mixer is required.

**Embedded LO capability (S96084B/A)**

This application tunes the analyzer’s receivers to the output frequency of the converter under test without the need for access to internal LOs or a common reference signal. S96084B/A is intended to work with S96082B/A and S96083B/A measurement applications.

**Gain compression measurements (S96086B/A)**

The gain compression application (GCA) provides input power, output power, gain, and phase at the compression point of an amplifier over a specified frequency range. GCA’s SMART Sweep is very fast and easy-to-use. GCA also includes a guided calibration that corrects for absolute power levels, frequency response, and mismatch errors. Gain compression measurements of frequency converting devices are not supported with the S96086B/A.

**Spectrum analysis (S96090B/A)**

The spectrum analyzer (SA) application adds high-performance microwave spectrum analysis to the analyzer. With fast stepped-FFT sweeps resulting from optimized data processing, the SA application provides quick spurious searches over broad frequency ranges. Simultaneous spectrum measurements can be done using test and reference receivers. This multi-channel SA can be used with the internal swept-signal generators for efficient measurements of spurious signals emanating from mixers and frequency converters. The SA application employs source-power and receiver-response calibration as well as fixture de-embedding, providing in-fixture and on-wafer spectrum measurements with the highest level of accuracy. Accurate and fast noise power ratio (NPR) measurement capability is also included in this software application. It provides the ability of setting up and controlling of external signal generator/arbitrary waveform generators and performing the calibration of the flatness of a wideband signal and distortion signals in notches, and achieving very fast NPR measurements. Optional external attenuators should be connected with the VNA’s test ports to avoid receiver compression when measuring large signals.

The S96090B/A software requires option 09x spectrum analysis hardware of the E5080B.
Multiport calibration assistant (S96552B)

This S96552B provides a tool to flexibly create and manage cal sets for multiport measurements. For example, two cal sets with independent test ports can be combined as one cal set with a greater number of test ports. The software also offers a way to re-calibrate using a certain set of test ports to refresh the cal set.

At least one ECAl module is required for the operation of S96552B.

Material measurements

The Keysight N1500A materials measurement suite streamlines the process of measuring complex permittivity and permeability with a vector network analyzer. Various type of measurements, such as transmission line and free space, arch reflectivity, resonant cavity, and coaxial probe are available as options. The easy-to-use software guides the user through setup and measurement, instantly converting S-parameter network analyzer data into the data format of your choice and displaying the results within seconds. Results can be charted in a variety of formats: $\varepsilon'$, $\varepsilon''$, tand, $\mu'$, $\mu''$, tand, $\mu$, and Cole-Cole.

N1930B Physical Layer Test System (PLTS) Software

The PLTS software platform has become an industry standard for calibration, measurement, and analysis of linear passive interconnects such as cables, connectors, backplanes, and printed circuit boards. Utilizing either a vector network analyzer (VNA) or a time domain reflectometer (TDR), fast and accurate measurements can be obtained without in-depth knowledge of microwave measurement techniques. Refer to www.keysight.com/find/plts or the technical overview (literature number 5989-6841EN) for more details.

Automated Measurement Expert (AMX)

This software package is a smart software solution for automated multiport S-parameter measurements with the 4-port E5080B and E5092A. The S94701A AMX test plan builder provides an interactive GUI which helps you edit your multiport DUT test plans and generate test sequence files for the network analyzers. The S94702A and KS8400A software running on the analyzer executes the test sequences according to the optimized test sequence files generated by the S94701A.

A 4-port ECAl module (i.e. N4431D or N4433D) is recommended for calibration wizard.
E5080B Hardware Configurations

Pulse modulation hardware (Option 021)

Internal pulse modulator hardware on Source 1. On the single source models, the pulse modulation works for the port 1 and 2 (on Option 2x0 2 port models) and all four ports (on Option 4x0 4 port models). On the second source models, Option 021 pulse modulation works only for the port 1 and 2. The modulators can be controlled via the Application I/O D-sub connector on the rear panel of the analyzer using an external pulse generator, or by using one of the internal pulse generators. The S96025B/A is required to enable the internal pulse modulators.

Pulse modulation hardware (Option 022)

Internal pulse modulator hardware on Source 2 on the second source models (Option 4x2). Option 022 pulse modulation works for the port 3 and 4. The modulators can be controlled via the Application I/O D-sub connector on the rear panel of the analyzer using an external pulse generator, or by using one of the internal pulse generators. The S96025B/A is required to enable the internal pulse modulators.

High stability time base (Option 1E5)

The option improves specification of frequency accuracy within ± 0.45 ppm.
Internal bias tees (Option 120 or 140)

Broadband internal bias tees are integrated for each test port with Option 120 or 140. Order Option 120 for 2-port options and order Option 140 for 4-port options. DC power can be provided via BNC female connectors on the rear panel of the analyzer for the operation of active components under test such as tower mounted amplifiers (TMAs). Internal bias tees are available on the models with the highest frequency is equal or lower than 20 GHz.

Analog input and output (Option 175)

The E5080B Option 175 adds analog input and output ports with BNC female connectors on the rear panel of the analyzer to enable DC measurements with the E5080B. Two integrated variable DC sources provide ±10 VDC with maximum current of 200 mA. Synchronized DC voltage sweep is performed using the E5080B’s firmware.

For more comprehensive analysis, four analog inputs with BNC female connectors are provided to allow sensing of DC voltages from the DUT.

Device Test I/O

Device test I/O with a 25-pin D-sub connector on the rear panel of the analyzer allows users to control the device under test (DUT) directly with serial or parallel digital interface. Signals from the I/O are applied to select operation modes of the RF front-end module which integrates power amplifiers, switches, low noise amplifiers, duplexer or filters in a single component.

The device test I/O has two independent 8-bit digital I/Os (DIOs). Each 8-bit DIO can provide either 8-bit parallel signals or 4-channels of RFFE-like interface. Output DC voltage or clock rate (25 MHz maximum) are selectable according to the specification of DUTs.

Quick and easy setup of DUT control signals can be done with the E5080B’s firmware, and the operation of the device test I/O is synchronized with the measurement sweep of the analyzer.

Application I/O

Application I/O with a 15-pin D-sub connector on the rear panel of the analyzer provides required signals for synchronized measurement using the E5080B and external peripherals such as pulse generators, pulse modulators, RF switches, or signal generators.

The N1966A pulse I/O adapter is recommended if using an external pulse generator. The N1966A enables coaxial connections between the Application I/O D-sub connector on the rear panel of the analyzer and the coaxial inputs and outputs of external pulse generators and external pulse modulators. Coaxial connectors are SMB male. A connector saver (P/N: Z2342-37605) and hex standoff (P/N: 0380-5625) are required for the connection of the E5080B and N1966A.
Keysight Software Licensing Options Provide Flexibility and Support

Projects ramp up and down, teams grow and shrink, and projects move location. In such a dynamic environment, you need flexible licensing options that allow you to balance your project’s requirements. Whether your software will be a staple for years to come or you have a short-term need for a leading-edge measurement application, Keysight’s licensing puts you in charge.

Choose your term. Choose your type. Keep control of your budget.

- Select a node-locked, transportable, USB portable or floating license type, depending on how much flexibility you need.
- Select a time-based or perpetual license term, depending on how long you need to use the software.
- Each license is sold with a KeysightCare software support subscription which provides technical support with ensured response time, proactive software updates, enhancements and fixes.

Choose a license term and type that best suits your requirements from the table below.

2. For S96xxxB software, the fixed-perpetual with a 12-months, support subscription (R-A6B-001-L) is the only license type that can be ordered as part of the instrument and installed. The other license types for S96xxxB software must be ordered separately and installed from the web after the receipt of the instrument.
E5092A Configurable Multiport Test Set

The E5092A configurable multiport test set is offered for use with the 4-port E5080B to extend the number of test ports. Multiport measurements from 50 MHz to 20 GHz can be made by connecting the optional interconnect semi-rigid cables to the E5092A’s front panel.

Test set options

Choose Option 020. Option 020 is the only test set option for the E5092A.

¹. Docking plates (P/N: E5092-60105 and E5092-60106) are offered for the connection of the E5080B and E5092A.
Measurement Accessories

A complete list of RF and microwave test accessories is available on our Web site: www.keysight.com/find/mta

Accessories are available in these connector types: 50 Ω Type-N, 3.5 mm, 7 mm, 2.4 mm, 2.92 mm, 1.85 mm, 1.0 mm, and waveguide. Test port cables and a calibration kit should be added for a complete measurement system. A verification kit is used to verify corrected system performance.

Cable and adapter sets

Keysight offers cables in the following types:

- Single cables in semi-rigid and flexible
- Cable sets in semi-rigid and flexible

There are also adapter sets available that protect the test port and convert the port to the desired connector interface. These kits contain:

- One male adapter
- One female adapter

To attain the best mechanical rigidity for device connection, use a single cable and the appropriate special adapter set. To attain the greatest flexibility for device connection, use a cable set.

Calibration kits

Coaxial measurements

Mechanical calibration kits include standards, such as opens, shorts and loads, which are measured by the network analyzer for increased measurement accuracy.

Choose a calibration kit for each connector type to be used.
**Economy**, includes:
- Open standards (male and female)
- Short standards (male and female)
- Fixed-termination standards (male and female)

**Standard**, includes the devices in the economy kit and adds:
- Sliding load standards (male and female) or a series of offset shorts

**Precision**, includes the devices in the economy kit and adds:
- 50 Ω airline(s) for TRL calibration
- TRL adapters

Electronic calibration (ECal) kits replace mechanical calibration standards with one solid-state calibration module that is controlled by the network analyzer via USB, to present many different impedances to the test ports. A full two-port calibration can be performed quickly with a single connection. This technique reduces operator errors and connector wear and abrasion.

For more information about ECal modules, refer to the technical overview 5963-3743E (N4690, 85090, N4430 and N7550 Series).

**Waveguide measurements**

For waveguide measurements, Keysight offers mechanical calibration kits that include:
- Waveguide-to-coax adapters (X, P, K, R, Q, U, V)
- Precision waveguide section
- Flush short circuit
- Fixed terminations
- Straight section

Mechanical calibration kits

X-Band

X11644A standard, WR-90: 8.2 to 12.4 GHz. Includes:
- 00896-60008 X-band standard section
- 00910-60003 X-band termination
- 11644-20018 X-band short
- 11644-20021 X-band shim
- X281C adapter (included in calibration kit): WR-90 to 7 mm
P Band

P11644A standard, WR-62: 12.4 to 18 GHz. Includes:
- 00896-60007 P-band standard section
- 00910-60002 P-band termination
- 11644-20017 P-band short
- 11644-20020 P-band shim
- P281C adapter (included in calibration kit): WR-62 to 7 mm

K Band

K11644A standard, WR-42: 18 to 26.5 GHz. Includes:
- 00896-60006 K-band standard section
- 00910-60001 K-band termination
- 11644-20016 K-band short
- 11644-20019 K-band shim

K281C adapter (included in calibration kit): WR-42 to 3.5 mm (f) Option 012 WR-42 to 3.5 mm (m)

R Band

R11644A standard, WR-28: 26.5 to 40 GHz. Includes:
- 00914-20028 R-band termination
- 11644-20005 R-band short
- 11644-20003 R-band shim
- 11644-60001 R-band 10 cm straight waveguide
- 11644-60016 R-band 5 cm straight waveguide

Q Band

Q11644A standard, WR-22: 33 to 50 GHz. Includes:
- 11644-60005 Q-band termination
- 11644-20004 Q-band short
- 11644-20001 Q-band shim
- 11644-60002 Q-band 10 cm straight waveguide
- 11644-60017 Q-band 5 cm straight waveguide

U Band

U11644A standard, WR-19: 40 to 60 GHz. Includes:
- 11644-60006 U-band termination
- 11644-20004 U-band short
- 11644-20002 U-band shim
- 11644-60003 U-band 10 cm straight waveguide
- 11644-60018 U-band 5 cm straight waveguide
Verification kits

All Keysight verification kits include:

- Precision Z0 airline or match thru
- Mismatched airline or mismatch thru
- Fixed attenuators
- Traceable measured data and uncertainties

85051B 45 MHz to 18 GHz 7 mm kit
Includes attenuators, airline and mismatch airline with data on a USB drive for use in confirming calibrated system performance, traceable to national standards. Test procedure is provided in the service manual.

85053B 300 kHz to 26.5 GHz 3.5 mm kit
Includes attenuators, airline and mismatch airline with data on a USB drive for use in confirming calibrated system performance, traceable to national standards. Test procedure is provided in the service manual.

85055A 300 kHz to 18 GHz Type-N kit
Includes attenuators, airline and mismatch airline with data on a USB drive for use in confirming calibrated system performance, traceable to national standards. Test procedure is provided in the service manual.

85057B 45 MHz to 50 GHz 2.4 mm kit
Includes attenuators, airline and mismatch airline with data on a USB drive for use in confirming calibrated system performance, traceable to national standards. Test procedure is provided in the service manual.

85058V 45 MHz to 67 GHz 1.85 mm kit
Includes attenuators, match thru and mismatch thru with data on a USB drive for use in confirming calibrated system performance, traceable to national standards. Test procedure is provided in the service manual.

Accessories

CalPod calibration refresh modules (8553xB/4xA)
CalPod calibration refresh modules allow in-situ calibration refreshes to be performed at the push of a button without removing the DUT or re-connecting calibration standards. CalPods are designed for any measurement situation where it is desirable to ensure that a valid calibration is present before recording measurement data. For example, they are useful for removing environmental effects such as cable movement and thermal-based changes of cables, connectors, and adapters, as well as connector and switch-matrix repeatability errors. The modules are especially useful in temperature, or thermal-vacuum chamber testing. CalPod modules are equipped with 2.92 mm connectors.
- 85530B 20 GHz ambient-temperature CalPod
- 85531B 20 GHz temperature-compensated CalPod
- 85532B 20 GHz thermal-vacuum compatible CalPod
- 85540A 40 GHz ambient-temperature CalPod
- 85541A 40 GHz temperature-compensated CalPod
- 85542A 40 GHz thermal-vacuum compatible CalPod
- 85523B CalPod controller (provides control for up to 4 CalPods)
- 85556A CalPod drive-cable splitter (allows control for up to 12 CalPods)
- 85554A CalPod drive cable extension (10-meter cascadable extension cable)
