

# Network Visibility

## TEN MUST-HAVE FEATURES

The foundation for improving network security and performance

### COMPLETE ACCESS

- 1 Visibility to Virtual & Cloud Traffic**  
Eliminate blind spots

### EASY FILTERING

- 2 Integrated Threat Intelligence**

Automatically update blocking of malicious IP addresses

- 3 Drag-and-Drop Filter Creation**

Eliminate need for programming and staff training

- 4 High Performance Processing**

Run multiple advanced filters at same time

- 5 Context Awareness**

Identify traffic by application, user, or geolocation

### FASTER RESULTS

- 6 Line Rate Delivery**

Get data to tools with no latency and no dropped packets

- 7 Automatic Scaling**

Bring new tools online automatically, without downtimes

### TOTAL SECURITY

- 8 High Availability & Fast Failover**

Ensure your security architecture survives any failure

- 9 Failsafe Inspection**

Protect live network with external bypass switch

- 10 Maintenance Without Downtime**

Use external bypass to maintain security during maintenance
