Why You Need Cloud Visibility

Cloud Will Dominate by 2020 and is the Engine of the Digital Economy

50%+ of all IT spending by 2020

6X Faster growth than overall IT from 2015-2020

Priorities: Speed, Scale and Agility

Success requires fast, high-quality service delivery.

Public Cloud Is Increasingly Effective

50% to 66% of applications will be public cloud based by 2020

Warning! Low Visibility Conditions

Clouds can obscure security threats and performance issues.

7 Considerations for Achieving Cloud Visibility

Visibility helps prevent security breaches & optimize user experience.

1. Multi Cloud Access - 74% use at least 1 cloud and 30% use 4-9. Also mobile and cloud sprawl.

2. Hybrid Integration - 63% integrate private cloud with public cloud to deliver hybrid cloud services.

3. Data Delivery - 32% of services will be cloud native by 2020.

4. Single Management Interface - Up to 30% of IT staff time can be spent making interfaces work.

5. Intelligent Data Access - 53% of all users and 64% of mature users are focused on reducing cloud costs.

6. Cloud-Native & Container-Based - 52% of enterprises use containers in production applications.

7. Visibility-as-a-Service - 30% of all IT spending will be via flexible consumption models by 2020.
